

## Save the Date! LMOP Webinar on September 14, 2021

### Save the Date!

The U.S. EPA Landfill Methane Outreach Program (LMOP) is pleased to announce an upcoming **Innovative and Emerging Landfill Gas Energy Project Types** webinar on **Tuesday, September 14, 2021, from 2:00 – 3:00 PM (EDT)**. During this webinar, learn how two companies are using landfill gas (LFG) as a feedstock to produce hydrogen, methanol and ethanol.

BayoTech's hydrogen generators can use biomethane derived from LFG as a feedstock for hydrogen production. Stewart Stewart will present how BayoTech is achieving low-cost renewable hydrogen production. By utilizing modular units in compact sizes, BayoTech units tap into co-located biogas resources to site hydrogen production at the point of use, eliminating the cost and emissions of liquification and transportation.

GasTechno Energy & Fuels (GEF) is the developer of the patented GasTechno® Mini-GTL® technology. John Baker will discuss how the GasTechno® Mini-GTL® technology produces renewable methanol, ethanol and hydrogen from LFG and anaerobic digester gas. The GasTechno® Mini-GTL® technology uses a patented direct homogenous partial oxidation process to allow for conversion of biogas into high-value liquid chemicals and fuels in a single step.

**There is no cost to participate in the webinar**, but online registration is required – **register online** at [zoomgov.com/webinar/register/WN\\_sHPM60N9TtqOc1TkfuFtpQ](https://zoomgov.com/webinar/register/WN_sHPM60N9TtqOc1TkfuFtpQ) to receive a confirmation email containing information on how to join the webinar. A time for questions from the audience will follow the presentations.
