**WATER LINE LEAK RELEASE RESPONSE
HOUSTON WOOD PRESERVING WORKS, HOUSTON, TEXAS
TCEQ SWR NO. 31547; HAZARDOUS SOLID WASTE PERMIT NO. 50343**

Dear Ms. Bernhagen:

Golder Associates, Inc. (Golder) on behalf of the Union Pacific Railroad (UPRR) prepared this summary of the water line leak release and spill response activities that occurred at UPRR Former Houston Wood Preserving Works (HWPW) Site (the Site) located at 4910 Liberty Road in Houston, Texas in Harris County (the Site; Figure 1) on August 10, 2019. The water release occurred due to the opening of a valve to an abandoned water line by a contractor that was working in the Englewood Intermodal Yard. The water line leak occurred underneath the soil cap area at the Site. The soil cap was constructed as part of response actions undertaken in accordance with the Texas Risk Reduction Program (TRRP) to address surface and subsurface soil protective concentration levels exceedance (PCLE) zone at the Site. Soils under the soil cap are impacted with contaminants associated with the former wood preserving operations that occurred at Site. The abandoned water line likely serviced a former fire hydrant that was removed in 2016 during the construction of a soil cap at the Site.

Because the water may have come into contact with contaminated soils, UPRR promptly reported the incident and subsequent release to the Texas Commission on Environmental Quality (TCEQ) (Spill Report No. 20192773 and NRC Report No. 1254765) upon discovery and began the initial spill response actions on August 10, 2019. UPRR personnel, emergency response contractor National Response Corporation (NRC), remediation contractor United States Environmental Services (USES), and Golder personnel mobilized to the Site to respond to the incident. This report briefly summarizes the incident and the response activities conducted to address the release in accordance with the reporting requirements of 30 Texas Administrative Code §327.5(c). Details regarding the release of water and response actions are provided in the following sections. A detailed photographic log and the sample analytical results are provided as Attachments 1 and 2.

Release Information

On August 9, 2019, a contractor opened a valve to an abandoned water line that is located beneath the soil cap at the Site. This led to water emanating from the location of a former fire hydrant prior to the construction of the soil cap (Photo 1). Water flowed through the capped soils, up through the soil cap, and over the soil cap (Photographs 2 and 3) to the south-southeast (Photographs 4 and 5), across an asphalt road (that serves as a cap between the

Golder Associates Inc.

T: +1 512 671-3434 F: +1 512 671-3446

soil cap and railroad tracks) (Photographs 4 and 5), and then to a ditch along the railroad tracks (Photographs 6 and 7). The water flowed down the ditch approximately 200 yards to the northeast to Liberty Road and under the Lockwood Drive Bridge (Photographs 8 and 9). The flowing water extended beyond the intersection of Liberty Road and Lockwood Drive approximately 300 yards northeast on Liberty Road (Photograph 10). Photograph 11 shows the valve to an abandoned water line that was inadvertently opened by a contractor.

The runoff flow direction is illustrated in Figure 1.

Initial Response

UPRR was notified of the water leak on the morning of August 10, 2019 and emergency response activities were initiated. At approximately 9:45 am on August 10, 2019, Golder was on site to evaluate potential environmental concerns related to the water leak. Once the source of the water was identified, the valve was closed at approximately 10:36 am on August 10, 2019. NRC arrived onsite to capture the flowing water using a vacuum truck and remove the water that was leaving the Site and ponding at the intersection of Liberty Road and Lockwood Drive. An absorbent boom was placed in the ditch as a preventative measure in case there were any hydrocarbons present in the flowing water (Photograph 7). No observations of hydrocarbon sheens or odors were noted during the response activities. Approximately 15,000 gallons of water was recovered with the vacuum truck was transferred to a frac tank and staged on-site.

Sample Collection

Golder collected surface water samples from the following locations (shown on Figure 1):

- W-1620-RO-20190810 – surface water run off sample collected where the water runoff was leaving the capped area.
- W-1620-RO-Ditch-20190810 – surface water run off sample collected from the ditch between the asphalt road and railroad tracks; and
- W-1620-Fractank-20190810 - a combination of all the water that was removed from Liberty Road and the drainage ditch, sample collected for waste characterization.
- One surface water sample was collected (labeled W-1620-RO-LibertyRd-20190810 collected from Liberty Road under the Lockwood Bridge overpass (see Photograph 10)) but put on hold pending the analysis of the three other samples.
- One sample of floating solids (see Photograph 7) was collected with a sheen net (labeled W-1620-Sheen-20190810) in the ditch near the absorbent boom. Even though sample W-1620-Sheen-20190810 was labeled "Sheen", no hydrocarbon sheen was observed in the sampled area (noted as floating debris shown on Photograph 7).

The three water samples were analyzed for the following chemicals of concern (COCs):

- Total petroleum hydrocarbons (TPH) by TCEQ Method TX1005;
- Benzene, ethylbenzene, toluene, and total xylenes (BTEX) by EPA Method 8260; and
- Polycyclic aromatic hydrocarbons (PAHs) and phenol by EPA 8270.

Water samples were collected with dip bottles and placed in laboratory-provided sample containers. The sheen net was provided by General Oceanics and the sample was collected by pulling the net through the solids floating on the surface water. Samples were submitted to ALS Environmental (ALS) located in Houston, Texas for the analyses

listed above. Analytical data collected from the Site surface water samples are summarized on Table 1. Analytical data for the waste characterization sample are summarized on Table 2. Laboratory reports are provided in Attachment 2.

Sample Results

Surface Water

Surface water sample results were compared to TCEQ Texas Risk Reduction Program (TRRP) Groundwater Residential (^{GW}GW_{Ing}) Protective Concentration Levels (PCLs) and the TCEQ ecological benchmarks (freshwater surface water acute and chronic values, <https://www.tceq.texas.gov/remediation/eco/eco.html>) to evaluate potential impacts to surface water bodies. The nearest downstream surface water segment in this area is Hunting Bayou above Tidal (1007R), which is a freshwater segment. Table 1 provided the PCLs, benchmarks, and surface water data.

TPH was not detected above the sample detection limits (SDLs) in the two runoff samples (RO and RO-Ditch) collected on the Site. The TPH SDLs are below the ^{GW}GW_{Ing} PCLs. The TCEQ does not have ecological benchmarks for TPH. BTEX parameters were not detected above their respective SDLs in any of the runoff water samples collected from the Site. The SDLs were below the ecological benchmark and groundwater protection values for BTEX. PAH concentrations in runoff sample W-1620-RO-20190810 were below the freshwater benchmark and residential groundwater values. Benzo(a)pyrene is the only PAH that was detected above the freshwater chronic benchmark value (0.000014 milligrams per liter [mg/L]) in the W-1620-RO-Ditch-20190810 sample at a concentration of 0.000068 J mg/L. The J-flag indicates that the concentration is an estimate below the laboratory method quantitation limit. The concentration is below the freshwater acute benchmark value (0.00024 mg/L).

Waste Characterization

TPH concentrations were detected in the sample collected from the frac tank in the Aromatic C₆-C₁₂ and >C₁₂-C₂₈ ranges at reported concentrations of 0.91 mg/L and 0.31 J mg/L, respectively. Ethylbenzene, toluene, and xylenes were detected in the frac tank sample above their respective SDLs at 0.0018 mg/L, 0.045 mg/L, and 0.02 mg/L, respectively. PAHs were detected above their respective SDLs in the frac tank sample, but all concentrations were below the Class 1 toxic constituents' maximum leachable concentrations.

The concentrations of constituents in the frac tank sample are all below the limits for a Class 1 waste.

Conclusions

The findings from the response actions conducted at the Site include:

- The water leak occurred on August 9, 2019 due to the opening of a valve to an abandoned water line that likely lead to a fire hydrant removed in 2016 during the construction of a soil cap at the Site. Water flowed through the capped soils, up through the soil cap, over the soil cap to the south-southeast, to a ditch along the railroad tracks within the Site, and then flowed along the ditch approximately 200 yards northeast to Liberty Road under the Lockwood Drive Bridge. The water flowed from the intersection of Liberty Road and Lockwood Drive to approximately 300 yards northeast on Liberty Road.
- UPRR was notified of the water leak the morning of August 10, 2019. The valve was identified and closed at approximately 10:36 am on August 10, 2019. The water in Liberty Road and the drainage ditch on site

was recovered using a vacuum truck. The water was transferred to a frac tank and staged on-site for off-Site disposal.

- Water samples were collected adjacent to the soil cap, in the ditch adjacent to the railroad tracks, and from the frac tank and analyzed for TPH, BTEX, and PAHs. None of the TPH, BTEX, or PAH concentrations on the two runoff samples exceeded the TRRP ^{GW}GW_{ing} PCLs. Since the two surface water run off samples collected from the Site did not have concentrations detected above the TRRP ^{GW}GW_{ing} PCLs or TCEQ ecological surface water (freshwater) acute values, the two additional samples held were not analyzed. The detections of ethylbenzene, toluene, total xylenes, PAHs, and TPH in the frac tank sample are likely a result of urban run-off from Liberty Road and not as a result of the water leak from the Site.

Based on these findings no further action is necessary at the Site. A follow up submittal documenting the disposition of the waste generated during the response activities will be provided following waste disposal.

If you have any questions or comments, please feel free to contact Kevin Peterburs, UPRR Manager Site Remediation at (414) 267-4164 or us at (512) 671-3434.

Sincerely,
Golder Associates Inc.

Eric C. Matzner, P.G.

CC: Jesse Orth, Jon Lang; Julie Lidstone

Subject: Data Usability Summary
Water Line Leak Sampling Event
Union Pacific Railroad (UPRR) / Houston TX-Wood Preserving Works
Houston, Texas
August 2019

1. Scope of Data Usability Study

This document details a Data Usability Summary (DUS) of analytical results for surface water samples collected in support of the Water Line Leak Sampling Event at the Union Pacific Railroad (UPRR) / Houston TX-Wood Preserving Works site during August 2019. Samples were submitted to ALS Environmental (ALS), located in Houston, Texas and are reported in data package HS19080556. The intended use of the data is to support the Water Line Leak Sampling Event at the site by providing current concentrations of chemicals of concern.

Data were reviewed and validated by Chris G. Knight of GHD, in accordance with Title 30 of the Texas Administrative Code Section 350.54 (30 TAC 350.54) as described in the Texas Commission on Environmental Quality (TCEQ) Regulatory Guidance document entitled "Review and Reporting of COC Concentration Data under TRRP", (RG-366/TRRP-13), revised May 2010, herein referred to as "TRRP-13 Guidance". Evaluation of the data was based on information obtained from the chain of custody forms, the finished report forms, method blank data, recovery data from surrogate spikes/laboratory control samples (LCS)/matrix spikes (MS), duplicate data, field quality assurance/quality control (QA/QC) sample, the laboratory review checklist (LRC), and the laboratory exception report (ER).

A sample collection and analysis summary is presented in Table 1. This summary provides a cross-reference of field sample identification numbers and location identification. Each sample is assigned a unique field identification number.

The validated sample results are presented in Table 2. A summary of the analytical methodology is presented in Table 3.

2. Laboratory Qualifications

The Laboratory's quality assurance program is consistent with the quality standards outlined in the National Environmental Laboratory Accreditation Program (NELAP). This laboratory was accredited under Texas Certification number # TX104704231 at the time the analysis was performed and the certificate is included in Attachment A.

- i) With the exception of reactive cyanide and reactive sulfide, ALS is NELAC-accredited under the Texas Laboratory Program for the analytes, matrices and methods associated with this laboratory data package. Because TCEQ does not offer accreditation for these compounds, the results are flagged with "n" in the analytical report. No further action was.

3. Project Objectives

3.1 Sampling/Analytical QA/QC Objectives

The QA/QC program was designed to identify contamination resulting from the sampling, sample transport and analytical process through the analysis of a trip blank sample and method blanks. The QA/QC program was designed to evaluate the quality of the resulting data with respect to bias and precision through analysis of LCS, MS, and laboratory duplicate analyses.

4. Data Review/Validation Results

4.1 Sample Holding Time and Preservation

Samples were shipped with a chain of custody and the paper work was filled out properly. Samples were properly preserved, delivered on ice, and stored by the laboratory at the required temperature (0-6°C).

The sample chain of custody documents and the analytical report were used to determine sample holding times. Samples were prepared and analyzed within the required holding times with the following exception (see Table 4):

- i) W-1620-Fractank-20190810 was analyzed outside of the established holding time for pH analysis and was qualified as estimated; biased low.

4.2 Sample Containers

Sample containers used were certified pre-cleaned glass and plastic containers provided by the laboratory. These containers meet or exceed analyte specifications established in the United States Environmental Protection Agency (USEPA) *Specifications and Guidance for Contaminant-free Sample Containers*.

4.3 Calibrations

According to the LRC, initial calibration and continuing calibration data met the criteria for the selected method.

4.4 Laboratory Method Blank Analyses

Method blanks are prepared from a purified matrix and analyzed with investigative samples to determine the existence and magnitude of sample contamination introduced during the analytical procedures. As these were not discrete samples handled in the field, these blanks are not listed on the sample identification cross-reference list found in the data package.

For this study, laboratory method blanks were analyzed at a minimum frequency of one per twenty investigative samples and/or one per analytical batch and results are reported in the laboratory data package.

The method blank results were non-detect or below the method quantitation limit (MQL), indicating that laboratory contamination was not a factor for this investigation.

4.5 Internal Standard and Surrogate Spike Recoveries

Recoveries of internal standards are addressed in the LRC of the data package. All internal standard recoveries associated with the compounds of interest were acceptable per the LRC.

In accordance with the methods employed, all samples, blanks, and QC samples analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs) and total petroleum hydrocarbons (TPH) are spiked with surrogate compounds prior to sample extraction and/or analysis. Surrogate recoveries provide a means to evaluate the effects of laboratory performance on individual sample matrices. The recovery ranges established by the laboratory are adopted as the acceptance criteria for the project. Each individual surrogate compound is expected to meet the laboratory control limits. According to the TRRP-13 Guidelines, one outlying surrogate is acceptable for methods with multiple surrogate spike compounds as long as the recovery is at least ten percent.

Surrogate recoveries were assessed against laboratory control limits and/or the guidance in TRRP-13. All surrogate recoveries met the above criteria.

4.6 Laboratory Control Sample Analysis

LCS or LCS/laboratory control sample duplicate (LCSD) are prepared and analyzed as samples to assess the analytical efficiencies of the methods employed, independent of sample matrix effects. The relative percent difference (RPD) of the LCS/LCSD recoveries is used to evaluate analytical precision. The recovery ranges established by the laboratory are adopted as the acceptance criteria for the project.

For this study, LCS or LCS/LCSD were analyzed at a minimum frequency of one per twenty investigative samples and/or one per analytical batch.

The LCS or LCS/LCSD contained all analytes specified in the methods. All LCS recoveries and/or RPDs were within the laboratory control limits, demonstrating acceptable analytical accuracy and precision (where applicable).

4.7 Matrix Spike Analysis

To evaluate the effects of sample matrices on the preparation process, measurement procedures, and accuracy of a particular analysis, samples are spiked with known concentrations of the analytes of interest and analyzed as MS/matrix spike duplicate (MSD) samples. The RPD between the MS and MSD is used to assess analytical precision.

The laboratory performed MS/MSD analyses on non-site samples. This cannot be used to assess accuracy and precision for the site samples.

4.8 Duplicate Sample Analyses

Analytical precision is evaluated based on the analysis of laboratory duplicate samples. For this study, duplicate samples were prepared and analyzed by the laboratory as specified in Table 1 for ignitability and pH analyses. The RPDs established by the laboratory are adopted as the acceptance criteria for the project.

The duplicate analysis performed was acceptable, demonstrating acceptable analytical precision.

The laboratory also performed additional duplicate analyses on non-site samples. These cannot be used to assess precision for the site samples.

4.9 Field QA/QC Sample

The field QA/QC consisted of one trip blank sample.

To evaluate contamination from sample collection, transportation, storage, and analytical activities, one trip blank sample was submitted to the laboratory for VOCs analysis. All results were non-detect for the compounds of interest.

4.10 Field Procedures

Golder Associates, Inc. collected surface water samples in accordance with their Standard Operating Procedures (SOP) for sample collection.

4.11 Analyte Reporting

The laboratory reported detected results for each analyte down to the sample detection limit (SDL), which is defined as the method detection limit (MDL) with sample-specific adjustments for dilutions, aliquot size, volumes, etc. Positive analyte detections less than the MQL but greater than the SDL were qualified as estimated (J) in Table 2 unless qualified otherwise in this memorandum.

The detectability check standard (DCS) results supported the laboratory MDL.

5. Conclusion

Based on the assessment detailed in the foregoing, the data summarized in Table 2 are usable for the purpose of supporting the Water Line Leak Sampling Event at the site by providing current concentrations of chemicals of concern with the specific qualification noted herein.

Attachment A

Laboratory NELAP Certificate

Texas Commission on Environmental Quality

NELAP - Recognized Laboratory Fields of Accreditation

ALS Laboratory Group, Environmental Services Division (Houston, Texas)

10450 Stancliff Road, Suite 210
Houston, TX 77099-4338

Certificate:

T104704231-19-23

Expiration Date:

4/30/2020

Issue Date:

5/1/2019

These fields of accreditation supercede all previous fields. The Texas Commission on Environmental Quality urges customers to verify the laboratory's current accreditation status for particular methods and analyses.

Matrix: *Drinking Water*

Method EPA 1613

Analyte	AB	Analyte ID	Method ID

Laboratory Results for: Houston TX-Wood Preserving Works

Dear Eric,

ALS Environmental received 6 sample(s) on Aug 10, 2019 for the analysis presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "Dane J. Wacasey".

**TRRP Laboratory Data
Package Cover Page**

This data package consists of all or some of the following as applicable:

This signature page, the laboratory review checklist, and the following reportable data:

- R1 Field chain-of-custody documentation;
- R2 Sample identification cross-reference;
- R3 Test reports (analytical data sheets) for each environmental sample that includes:
 - a) Items consistent with NELAC Chapter 5,
 - b) dilution factors,
 - c) preparation methods,
 - d) cleanup methods, and
 - e) if required for the project, tentatively identified compounds (TICs).
- R4 Surrogate recovery data including:
 - a) Calculated recovery (%R), and
 - b) The laboratory's surrogate QC limits.
- R5 Test reports/summary forms for blank samples;
- R6 Test reports/summary forms for laboratory control samples (LCSs) including:
 - a) LCS spiking amounts,
 - b) Calculated %R for each analyte, and
 - c) The laboratory's LCS QC limits.
- R7 Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including:
 - a) Samples associated with the MS/MSD clearly identified,
 - b) MS/MSD spiking amounts,
 - c) Concentration of each MS/MSD analyte measured in the parent and spiked samples,
 - d) Calculated %Rs and relative percent differences (RPDs), and
 - e) The laboratory's MS/MSD QC limits.
- R8 Laboratory analytical duplicate (if applicable) recovery and precision:
 - a) the amount of analyte measured in the duplicate,
 - b) the calculated RPD, and
 - c) the laboratory's QC limits for analytical duplicates.
- R9 List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix.
- R10 Other problems or anomalies.
The Exception Report for each "No" or "Not Reviewed (NR)" item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

**TRRP Laboratory Data
Package Cover Page**

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the attached exception reports. By my signature below, I affirm to the best of my knowledge, all problems/anomalies, observed by the laboratory have been identified by the laboratory in the Laboratory Review Checklist, and no information affecting the quality of the data has been knowingly withheld.

Check, if applicable: [NA] This laboratory meets an exception under 30 TAC §25.6 and was last inspected by [] TCEQ or [] _____ on (enter date of last inspection). Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

Dane J. Wacasey

Laboratory Review Checklist: Reportable Data							
Laboratory Name: ALS Laboratory Group		LRC Date: 08/22/2019					
Project Name: Houston TX-Wood Preserving Works		Laboratory Job Number: HS19080556					
Reviewer Name: Dane Wacasey		Prep Batch Number(s): 144039,144041,R344125,R344268,R344271,R344272,R344324					
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵
R1	OI	Chain-of-custody (C-O-C)					
		Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X				
		Were all departures from standard conditions described in an exception report?	X				
R2	OI	Sample and quality control (QC) identification					
		Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X				
		Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X				
R3	OI	Test reports					
		Were all samples prepared and analyzed within holding times?		X			1
		Other than those results < MQL, were all other raw values bracketed by calibration standards?	X				
		Were calculations checked by a peer or supervisor?	X				
		Were all analyte identifications checked by a peer or supervisor?	X				
		Were sample detection limits reported for all analytes not detected?	X				
		Were all results for soil and sediment samples reported on a dry weight basis?			X		
		Were % moisture (or solids) reported for all soil and sediment samples?			X		
		Were bulk soils/solids samples for volatile analysis extracted with methanol per SW-846 Method 5035?				X	
		If required for the project, TICs reported?				X	
R4	O	Surrogate recovery data					
		Were surrogates added prior to extraction?	X				
		Were surrogate percent recoveries in all samples within the laboratory QC limits?	X				
R5	OI	Test reports/summary forms for blank samples					
		Were appropriate type(s) of blanks analyzed?	X				
		Were blanks analyzed at the appropriate frequency?	X				
		Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X				
		Were blank concentrations < MQL?	X				
R6	OI	Laboratory control samples (LCS):					
		Were all COCs included in the LCS?	X				
		Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X				
		Were LCSs analyzed at the required frequency?	X				
		Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?	X				
		Does the detectability data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	X				
		Was the LCSD RPD within QC limits?	X				
R7	OI	Matrix spike (MS) and matrix spike duplicate (MSD) data					
		Were the project/method specified analytes included in the MS and MSD?	X				
		Were MS/MSD analyzed at the appropriate frequency?		X			2
		Were MS (and MSD, if applicable) %Rs within the laboratory QC limits?	X				
		Were MS/MSD RPDs within laboratory QC limits?	X				
R8	OI	Analytical duplicate data					
		Were appropriate analytical duplicates analyzed for each matrix?	X				
		Were analytical duplicates analyzed at the appropriate frequency?	X				
		Were RPDs or relative standard deviations within the laboratory QC limits?	X				
R9	OI	Method quantitation limits (MQLs):					
		Are the MQLs for each method analyte included in the laboratory data package?	X				
		Do the MQLs correspond to the concentration of the lowest non-zero calibration standard?	X				
		Are unadjusted MQLs and DCSs included in the laboratory data package?	X				
R10	OI	Other problems/anomalies					
		Are all known problems/anomalies/special conditions noted in this LRC and ER?	X				
		Were all necessary corrective actions performed for the reported data?	X				
		Was applicable and available technology used to lower the SDL and minimize the matrix interference affects on the sample results?	X				
		Is the laboratory NELAC-accredited under the Texas Laboratory Program for the analytes, matrices and methods associated with this laboratory data package?	X				3

Laboratory Review Checklist: Supporting Data								
Laboratory Name: ALS Laboratory Group			LRC Date: 08/22/2019					
Project Name: Houston TX-Wood Preserving Works			Laboratory Job Number: HS19080556					
Reviewer Name: Dane Wacasey			Prep Batch Number(s): 144039,144041,R344125,R344268,R344271,R344272,R344324					
# ¹	A ²	Description	Yes	No	NA ³	NR ⁴	ER# ⁵	
S1	OI	Initial calibration (ICAL)						
		Were response factors and/or relative response factors for each analyte within QC limits?	X					
		Were percent RSDs or correlation coefficient criteria met?	X					
		Was the number of standards recommended in the method used for all analytes?	X					
		Were all points generated between the lowest and highest standard used to calculate the curve?	X					
		Are ICAL data available for all instruments used?	X					
		Has the initial calibration curve been verified using an appropriate second source standard?	X					
S2	OI	Initial and continuing calibration verification (ICCV and CCV) and continuing calibration blank (CCB)						
		Was the CCV analyzed at the method-required frequency?	X					
		Were percent differences for each analyte within the method-required QC limits?	X					
		Was the ICAL curve verified for each analyte?	X					
		Was the absolute value of the analyte concentration in the inorganic CCB < MDL?				X		
S3	O	Mass spectral tuning:						
		Was the appropriate compound for the method used for tuning?	X					
		Were ion abundance data within the method-required QC limits?	X					
S4	O	Internal standards (IS):						
		Were IS area counts and retention times within the method-required QC limits?	X					
S5	OI	Raw data (NELAC section 1 appendix A glossary, and section 5.12 or ISO/IEC 17025 section						
		Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X					
		Were data associated with manual integrations flagged on the raw data?	X					
S6	O	Dual column confirmation						
		Did dual column confirmation results meet the method-required QC?				X		
S7	O	Tentatively identified compounds (TICs):						
		If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?				X		
S8	I	Interference Check Sample (ICS) results:						
		Were percent recoveries within method QC limits?				X		
S9	I	Serial dilutions, post digestion spikes, and method of standard additions						
		Were percent differences, recoveries, and the linearity within the QC limits specified in the method?				X		
S10	OI	Method detection limit (MDL) studies						
		Was a MDL study performed for each reported analyte?	X					
		Is the MDL either adjusted or supported by the analysis of DCSs?	X					
S11	OI	Proficiency test reports:						
		Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X					
S12	OI	Standards documentation						
		Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources?	X					
S13	OI	Compound/analyte identification procedures						
		Are the procedures for compound/analyte identification documented?	X					
S14	OI	Demonstration of analyst competency (DOC)						
		Was DOC conducted consistent with NELAC Chapter 5C or ISO/IEC 4?	X					
		Is documentation of the analyst's competency up-to-date and on file?	X					
S15	OI	Verification/validation documentation for methods (NELAC Chap 5 or ISO/IEC 17025 Section 5)						
		Are all the methods used to generate the data documented, verified, and validated, where applicable?	X					
S16	OI	Laboratory standard operating procedures (SOPs):						
		Are laboratory SOPs current and on file for each method performed?	X					

Items identified by the letter "R" must be included in the laboratory data package submitted in the TRRP-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period.
O = Organic Analyses; I = Inorganic Analyses (and general chemistry, when applicable);
NA = Not Applicable;
NR = Not Reviewed;
R# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).

Laboratory Review Checklist: Exception Reports	
Laboratory Name: ALS Laboratory Group	LRC Date: 08/22/2019
Project Name: Houston TX-Wood Preserving Works	Laboratory Job Number: HS19080556

**QUALIFIERS,
ACRONYMS, UNITS**

Qualifier	Description
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte detected below quantitation limit
M	Manually integrated, see raw data for justification
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL/SDL

Acronym	Description
DCS	Detectability Check Study
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
MBLK	Method Blank
MDL	Method Detection Limit
MQL	Method Quantitation Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PDS	Post Digestion Spike
PQL	Practical Quantitaion Limit
SD	Serial Dilution
SDL	Sample Detection Limit
TRRP	Texas Risk Reduction Program

Unit Reported	Description
mg/L	Milligrams per Liter
