**RE: MONTHLY STATUS UPDATE – ENGLEWOOD INTERMODAL YARD – NAPL COLLECTION SYSTEM/CONCRETE CAP REPAIRS  
UNION PACIFIC RAILROAD HOUSTON WOOD PRESERVING WORKS FACILITY  
4910 LIBERTY ROAD FACILITY, HOUSTON, TEXAS  
POST-CLOSURE CARE PERMIT NO. HW-50343; INDUSTRIAL SWR NO. 31547**

Dear Ms. Hatfield:

Golder Associates, Inc. (Golder), on behalf of Union Pacific Railroad Company (UPRR), is pleased to provide this monthly status update for July 2020 for the implementation of the cap repairs identified in the Updated Post-Response Action Care Report (PRACR) dated January 16, 2018 for the UPRR Houston Wood Preserving Works Facility (the Site). Monthly status updates were requested by the Texas Commission on Environmental Quality (TCEQ) in a letter dated March 20, 2018. A brief description of the current status of the repairs is provided below:

The non-aqueous phase liquid (NAPL) Collection System was installed in the Englewood Intermodal Yard to address the tar-like substance seeps within parking slots B100 to B109 (for container trailers). The following is a summary of the observations from the weekly inspections of the NAPL Collection System and Englewood Intermodal Yard concrete pavement near the collection system for July 2020 (photographs of from the weekly inspections are provided in Attachment A):

- Less than 0.5 gallons of dense NAPL (DNAPL) were recovered from NAPL Collection Sump 1 (B099/B100 slots) during the month of July. No significant amount of NAPL has been visually observed or recovered from Sump 2 (B103/B104 slots) or Sump 3 (B107/B108 slots). Water continues to accumulate in the NAPL collection sumps. To slow water accumulation from surface runoff, new manhole covers without holes were installed on the NAPL collection sumps and new inflow protectors have been ordered.
- Water continues to collect more rapidly in Sump 1 compared to Sumps 2 or 3 following pump down events. All three Sumps were pumped down on July 1, 2020. The water level in the sump returned to the surface by the July 23<sup>rd</sup> weekly inspection and has remained at the top of the sump through July 31, 2020. Whereas water levels in Sumps 2 and 3 have recovered to 11 inches and 10 inches from

the top of the sumps respectively as of July 31, 2020. The water in Sumps 1, 2, and 3 was observed as being brown in color but with no odor observed. A sheen was noted on the water in Sump 3 during the July 8, 2020 weekly inspection, and in Sump 1 during the July 15, 2020 weekly inspection.

- No seeps were noted during the month of July 2020 around the NAPL Collection Systems, except for a small amount of tar-like NAPL immediately adjacent to the NAPL Collection System in slot B103 on July 23, 2020 (see photolog). For areas outside the NAPL Collection System, very small amounts of tar-like material were noted on the concrete surface in stalls A010, A021, A022, B057, B096, B101, B102, B103, B105, and B108 where previous seeps have been observed. A new seep was observed in stall B042 during the July 23, 2020 inspection. While the amount of tar-like material seeping through the cracks and joints on a weekly basis varied, the overall amount of material recovered during July 2020 was similar to June 2020 with less than 1 gallon of the tar-like material recovered.
- Beginning in May 2020, brown staining and seep water was observed along asphalt joints and cracks throughout the B-Row (predominately in the B090 – B098 area) but was also observed within the A-Row. UPRR Contractor United States Environmental Services (USES) pressure washed the areas in May and collected the fluids, which were placed in a tote on site next to the frac tank used to temporarily store water pumped from the NAPL Collection sumps. A sample of the water in the tote was collected on June 11, 2020 for waste characterization. A copy of the analytical report is provided in Attachment B. However, no wide-spread seep water was observed during the weekly inspections in June or July 2020, and no pressure washing activities were conducted. UPRR will continue to have USES pressure wash the areas where the brown staining and seeps are observed as needed.
- During the week of July 13, 2020, Golder, on behalf of UPRR, coordinated with USES to excavate seven test pits in areas where historical NAPL seeps had been observed in the Englewood Intermodal Yard (Test Pits (TP) TP-01 (Slot B108), TP-02 (Slot A098), TP-03 (Slot B096), TP-04 (Slot B057), TP-05 (Slot A021), TP-06 (Slot B013), and TP-07 (Slot A010) (see Figure 1). Each test pit was dug to approximately 4 feet below ground surface and was approximately 5 feet long by 2 feet wide. The objectives for conducting the test pit excavations were to:
  - Evaluate the NAPL in the subsurface immediately below where the small NAPL surface seeps are located;
  - Evaluate the areas where brown water seeps had been observed, and
  - Assess if the NAPL surface seeps return following removal of the NAPL in the shallow subsurface at the test pit locations.

The test pits were excavated, left open for a few hours (or overnight), inspected for mobile NAPL entering into the test pit excavation, and backfilled and covered with a concrete patch. Soil samples were also collected from one of the sidewalls of each test pit. Since the excavation and backfilling of the test pits (July 13-16) through the July 31, 2020 inspection, no NAPL seeps have been observed at the test pits locations. The test pit locations will be inspected on a weekly basis and Golder, on behalf of UPRR, will prepare a summary report of the test pit findings including weekly inspections for three months for submittal to the TCEQ.

Weekly site inspections of the NAPL Collection System and Englewood Intermodal Yard concrete pavement near the collection system will continue to be conducted. In response to the TCEQ letter dated August 9, 2019, a notation on the presence of NAPL in each sump and tabulation of depth and thickness of NAPL if detected, and a tabulation of total mass of NAPL recovered from each sump is provided. The requested information is provided

on the enclosed Table 1. Through July 2020, no measurable NAPL has been detected in the sumps using the interface probe.

If you have any questions or need additional information, please feel free to call us at (512) 671-3434 or Mr. Kevin Peterburs of UPRR at (414) 267-4164.

Sincerely,

**Golder Associates Inc.**

Round Rock, TX 78664

Work Order: **HS20060631**

Laboratory Results for: **Houston TX-Wood Preserving Works IDW**

Dear Eric Matzner,

ALS Environmental received 1 sample(s) on Jun 11, 2020 for the analysis presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested. Results are expressed as "as received" unless otherwise noted.

QC sample results for this data met EPA or laboratory specifications except as noted in the Case Narrative or as noted with qualifiers in the QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained by ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

If you have any questions regarding this report, please feel free to call me.

Sincerely,

A handwritten signature in black ink, appearing to read "Dane J. Wacasey".

**SAMPLE SUMMARY**

Lab Samp ID	Client Sample ID	Matrix	TagNo	Collection Date	Date Received	Hold
HS20060631-01	WG-1620-IDWW01-20200611	Water		11-Jun-2020 12:00	11-Jun-2020 17:15	<input type="checkbox"/>

**Client:** Golder Associates Inc.  
**Project:** Houston TX-Wood Preserving Works IDW  
**Work Order:** HS20060631

**CASE NARRATIVE****Work Order Comments**

- Sample received outside method holding time for pH. pH is an immediate test. Sample results are flagged with an "H" qualifier.
- The temperature at the time of pH is reported. Please note that all pH results are already normalized to a temperature of 25 °C.

**GC Semivolatiles by Method TX1005****Batch ID: 154500**

- The test results meet requirements of the current NELAP standards, state requirements or programs where applicable.

**GCMS Semivolatiles by Method SW8270****Batch ID: 154506**

**Sample ID: HS20060638-01MS**

- MS and MSD are for an unrelated sample

**Sample ID: WG-1620-IDWW01-20200611 (HS20060631-01)**

- The GCMS semi-volatile extract of this sample was run at a dilution due to a high level of matrix interference.

**GCMS Volatiles by Method SW8260****Batch ID: R363574**

**Sample ID: HS20060522-01MS**

- MS and MSD are for an unrelated sample

**Metals by Method SW7470****Batch ID: 154572**

- The test results meet requirements of the current NELAP standards, state requirements or programs where applicable.

**Metals by Method SW6020****Batch ID: 154557**

**Sample ID: HS20060577-01MS**

- MS and MSD are for an unrelated sample

**Sample ID: WG-1620-IDWW01-20200611 (HS20060631-01)**

- Sample ran at a 2X dilution due to sample matrix.

**WetChemistry by Method SW9040C****Batch ID: R363579**

- The test results meet requirements of the current NELAP standards, state requirements or programs where applicable.

**WetChemistry by Method SM4500 S2-F****Batch ID: R363578**

- The test results meet requirements of the current NELAP standards, state requirements or programs where applicable.

**Client:** Golder Associates Inc.

**QUALIFIERS,  
ACRONYMS, UNITS**

<b>Qualifier</b>	<b>Description</b>
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte detected below quantitation limit
M	Manually integrated, see raw data for justification
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL/SDL

<b>Acronym</b>	<b>Description</b>
DCS	Detectability Check Study
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
MBLK	Method Blank
MDL	Method Detection Limit
MQL	Method Quantitation Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PDS	Post Digestion Spike
PQL	Practical Quantitaion Limit
SD	Serial Dilution
SDL	Sample Detection Limit
TRRP	Texas Risk Reduction Program

<b>Unit Reported</b>	<b>Description</b>
mg/L	Milligrams per Liter
