EPA Updates!
HABs News, Research, Resources, and Tools

Prepare for Bloom Season!
Many areas of the country begin to experience cyanobacterial blooms in the spring. Waterbody managers and public water systems that intake from at-risk waters can begin preparing now to prevent and respond to potential blooms. Here are some EPA resources to assist in managing HABs in recreational waters and drinking water:

Drinking and Recreational Waters
- Cyanotoxins Preparedness and Response Toolkit (CPRT)
- EPA HABs Incident Action Checklist
- List of Laboratories Conducting Cyanotoxin Analysis

Drinking Water
- Health Advisories for Cyanotoxins in Drinking Water
- Recommendations for Public Water Systems to Manage Cyanotoxins in Drinking Water
- Analytical Methods for Cyanotoxins
- Treatment Techniques for Cyanotoxins in Drinking Water
- Water Treatment Optimization for Cyanotoxins Document
- Drinking Water Cyanotoxin Risk Communication Toolbox

Recreational Waters
- Recommended Human Health Recreational Ambient Water Quality Criteria or Swimming Advisories for Microcystins and Cylindrospermopsin
- Final Technical Support Document: Implementing 2019 Recommended Recreational Criteria or Swimming Advisories for Microcystins and Cylindrospermopsin
- Recommendations for Cyanobacteria and Cyanotoxin Monitoring in Recreational Waters
- Recreational Water Communication Toolbox for Cyanobacterial Blooms
- Control Measures for CyanoHABs in Surface Waters
**GEOHAB’s *Guidelines to Conduct Climate Change Research Recently Released***

GEOHAB, a joint SCOR-IOC international research programme on the Global Ecology and Oceanography of Harmful Algal Blooms of UNESCO, recently released guidelines to communicate standardized strategies, tools, and protocols to assist researchers who are studying climate change drivers and HAB prevalence in aquatic ecosystems.

These guidelines represent a first step that will help inform HAB scientists, students, and otherscientists seeking to incorporate the study of HABs into larger ongoing ocean and freshwater observational studies.

**Second Annual Virtual Harmful Algal Bloom (HAB) Research Symposium**

The Algal Bloom Action Team of the North Central Region Water Network hosted the 2nd Annual Virtual HABs Research Symposium on January 6th and 7th, 2022.

Watch recordings for the four sessions of the symposium:

- Cyanotoxin Treatment and Detection
- Forecasting and Modeling Harmful Algal Blooms
- Emerging Technologies for Detection and Monitoring
- HAB Monitoring and Ecology
Go to EPA’s interactive [Tracking CyanoHABs Story Map](#) to access the data points underlying the map and for more information.

### Reported Blooms, Beach Closures, and Health Advisories* - January 2022

*Includes blooms, cautions, warnings, public health advisories, closings, and detections over state thresholds due to the presence of algae and/or toxins. This is not a comprehensive list; not all blooms have been reported and/or not all lakes are actively monitored.

Click the state name to see the reported blooms for the month of January 2022:
- California (6);
- Florida (13);
- Kansas (7);
- Montana (2);
- Oregon (1);
- Rhode Island (2);
- South Carolina (1);
- Washington (1)

### Upcoming Virtual Events

**12th International Conference on Toxic Cyanobacteria**
- May 22-27, 2022, Toledo, Ohio
- Abstract Deadline: January 15, 2022
- Early Registration: March 1, 2022

**Pathogens and Natural Toxins e-Conference**
- July 1 - August 31, 2022

**GlobalHAB symposium on automated in situ observations of plankton**
- August 22-26, 2022
- Registration Deadline: March 15, 2022

**U.S. Symposium on Harmful Algae**
- October 23-28, 2022, Albany, New York
- Abstract Deadline: May 6, 2022

### Additional Useful Resources

- February 8, 2022 Benthic HABs Discussion Group Webinar
  - [Agenda](#)
  - [Webinar Registration](#)
