

LMOP's March 10th Webinar Presentations Available Online

Webinar Presentations Posted

On March 10, 2022, the U.S. EPA Landfill Methane Outreach Program (LMOP) hosted a webinar with two LMOP Partners providing **information about the development of renewable natural gas (RNG) projects at small and mid-sized landfills**. Currently, most landfill gas (LFG) energy projects producing RNG are at large landfills, but smaller landfills are beginning to be used as well to leverage their untapped LFG potential.

The **presentation slides and webinar recording are available** on the LMOP website at epa.gov/lmop/webinar-leveraging-untapped-landfill-gas-potential.

The speakers were:

Charles Tremblay, Cofounder and CEO, Sysgaz Inc.

Charles has more than 25 years of experience in landfill assessment and LFG energy project validation, development and management. He leads the contractual, financing and partnership aspects of RNG projects at Sysgaz.

Tanguy Largeau, Business Development and Commercial Vice President, Waga Energy, Inc.

Tanguy leads the commercial development for Waga Energy in the United States. He is responsible for the company's LFG-to-RNG project development activities as well as offtake negotiations.

Jason Pennypacker, Project Developer, Waga Energy, Inc.

Jason reinforces the Waga Energy team with more than 16 years of U.S.-based LFG energy project experience. He is responsible for providing technical project development and commercial support for LFG-to-RNG projects.

If you have any topics you'd like to see a presentation on or would like to present on yourself during an LMOP event, please email lmop@epa.gov.

To request removal from this email list, please reply to this message. For further information or questions about LMOP, please do not reply to this email message, but rather visit the [LMOP website](https://epa.gov/lmop). Thank you.
