HOW TO OBTAIN COPIES

All data tables of this document for the full time series 1990 through 2020, inclusive, will be made available with the final report published by April 15, 2022 at the internet site mentioned above.

RECOMMENDED CITATION

FOR FURTHER INFORMATION

Contact Ms. Mausami Desai, Environmental Protection Agency, (202) 343-9381, desai.mausami@epa.gov, or Mr. Vincent Camobreco, Environmental Protection Agency, (202) 564-9043, camobreco.vincent@epa.gov.

For more information regarding climate change and greenhouse gas emissions, see the EPA web site at https://www.epa.gov/ghgemissions.
Acknowledgments

The Environmental Protection Agency would like to acknowledge the many individual and organizational contributors to this document, without whose efforts this report would not be complete. Although the complete list of researchers, government employees, and consultants who have provided technical and editorial support is too long to list here, EPA would like to thank some key contributors and reviewers whose work has significantly improved this year’s report.

Within EPA’s Office of Atmospheric Programs, development and compilation of emissions from fuel combustion was led by Vincent Camobreco. Sarah Roberts directed the work to compile estimates of emissions from mobile sources. Work on fugitive methane emissions from the Energy sector was directed by Melissa Weitz and Chris Sherry. Development and compilation of emissions estimates for the Waste sector were led by Lauren Aepli and Mausami Desai. Tom Wirth and John Steller directed work to compile estimates for the Agriculture and the Land Use, Land-Use Change, and Forestry chapters with support from Jake Beaulieu (ORD) on compiling the inventories for CO₂ and CH₄ associated with flooded lands. Development and compilation of Industrial Processes and Product Use (IPPU) CO₂, CH₄, and N₂O emissions was directed by Amanda Chiu and Vincent Camobreco. Development and compilation of emissions of HFCs, PFCs, SF₆, and NF₃ from the IPPU sector was directed by Deborah Ottinger, Dave Godwin, Stephanie Bogle, and Kersey Manliclic. Cross-cutting work was directed by Mausami Desai. We thank Bill Irving for general advice, guidance, and cross-cutting review.

We also thank Erin McDuffie (AAAS Science & Technology Policy Fellow hosted by the Office of Atmospheric Programs) for her advice and review in areas such as fugitive oil and gas estimates and assessing uncertainty.

Other EPA offices and programs also contributed data, analysis, and technical review for this report. The Office of Atmospheric Program’s Greenhouse Gas Reporting Program staff facilitated aggregation and review of facility-level data for use in the Inventory, in particular confidential business information data. The Office of Transportation and Air Quality and the Office of Air Quality Planning and Standards provided analysis and review for several of the source categories addressed in this report. The Office of Research and Development conducted field research to support compiling estimates associated with flooded lands. The Office of Land and Emergency Management also contributed analysis and research.

The Energy Information Administration and the Department of Energy contributed invaluable data and analysis on numerous energy-related topics. William Sanchez at EIA provided annual energy data that are used in fossil fuel combustion estimates. Other government agencies have contributed data as well, including the U.S. Geological Survey, the Federal Highway Administration, the Department of Transportation, the Bureau of Transportation Statistics, the Department of Commerce, the Mine Safety and Health Administration, and the National Agricultural Statistics Service.

We thank the Department of Defense (David Asiello, DoD and Matthew Cleaver of Leidos) for compiling the data on military bunker fuel use.

We thank the Federal Aviation Administration (Ralph Lovinelli and Jeetendra Upadhyay) for compiling the inventory of emissions from commercial aircraft jet fuel consumption.
We thank the U.S. Forest Service (Grant Domke, Brian Walters, Jim Smith and Mike Nichols) for compiling the inventories for CO$_2$, CH$_4$, and N$_2$O fluxes associated with forest land.

We thank the Department of Agriculture’s Agricultural Research Service (Stephen Del Grosso) and the Natural Resource Ecology Laboratory and Department of Statistics at Colorado State University (Stephen Ogle, Bill Parton, F. Jay Breidt, Shannon Spencer, Ram Gurung, Ernie Marx, Stephen Williams and Guhan Dheenadayalan Sivakami) for compiling the inventories for CH$_4$ emissions, N$_2$O emissions, and CO$_2$ fluxes associated with soils in croplands, grasslands, and settlements.

We thank the National Oceanic and Atmospheric Administration (NOAA) (Nate Herold, Ben DeAngelo and Meredith Muth), Silvestrum Climate Associates (Stephen Crooks, Lisa Schile Beers), the Smithsonian Environmental Research Center (J. Patrick Megonigal, James Holmquist and Meng Lu), and Florida International University (Tiffany Troxler) as well as members of the U.S. Coastal Wetland Carbon Working Group for compiling inventories of land use change, soil carbon stocks and stock change, CH$_4$ emissions, and N$_2$O emissions from aquaculture in coastal wetlands. We also thank NOAA (Stephen Montzka and Lei Hu) for information on atmospheric measurements and derived emissions of HFCs.

We would also like to thank Marian Martin Van Pelt, Leslie Chinery, Alexander Lataille, and the full Inventory team at ICF including Diana Pape, Robert Lanza, Mollie Averyt, Larry O’Rourke, Deborah Harris, Rebecca Fercheniak, Fiona Wissell, Mollie Carroll, Claire Trevisan, Kyle Herdegen, Deep Shah, Lou Browning, Sarah Whitlock, Erin Asher, Lynn Socha, Neha Vaingankar, Emily Golla, Katie O’Malley, Emily Adkins, Tyler Brewer, Johanna Garfinkel, Zeyu Hu, Alex Da Silva, Shubh Jain, Alida Monaco, Kenny Yerardi, Eliza Puritz, Annie Roberts, Ajay Rabemiariasoa, and Bikash Acharya for technical support in compiling synthesis information across the report and preparing many of the individual analyses for specific report chapters including fluorinated emissions and fuel combustion.

Finally, we thank the RTI International team: Kate Bronstein, Emily Thompson, Jeff Coburn, and Keith Weitz for their analytical support in development of the estimates of emissions from landfills; Jason Goldsmith, Melissa Icenhour, Michael Laney, David Randall, Gabrielle Raymond, Karen Schaffner, Riley Vanek, Ricky Strott, and Libby Robinson for their analytical support in development of IPPU CO$_2$, CH$_4$, and N$_2$O emissions; and Tiffany Moore, Cassy Becker, and Jason Goldsmith for their analytical support on disaggregating industrial sector fossil fuel combustion emissions. We would also like to thank Leslie Pearce, Jeff Coburn, and others at RTI for supporting analyses for certain oil and gas fugitive sources.
Preface

The United States Environmental Protection Agency (EPA) prepares the official U.S. Inventory of Greenhouse Gas Emissions and Sinks to fulfill annual existing commitments under the United Nations Framework Convention on Climate Change (UNFCCC). Under UNFCCC Article 4 and decisions at the First, Second, Fifth and Nineteenth Conference of Parties, national inventories for UNFCCC Annex I parties should be provided to the UNFCCC Secretariat each year by April 15.

In an effort to engage the public and researchers across the country, the EPA has instituted an annual public review and comment process for this document. The availability of the draft document on the EPA Greenhouse Gas Emissions web site was announced via Federal Register Notice. The public comment period covered a 30-day period from February 15 through March 17, 2022, and comments received during the public review period were posted to the docket EPA-HQ-OAR-2022-0001. Comments received after the closure of the public comment period were accepted and will be considered for the next edition of this annual report. Responses to comments are typically posted to EPA’s website 2-4 weeks following publication of the final report in April 2022.
