2 | High Wind Fugitive Dust Mitigation Plan – Doña Ana and Luna Counties
Purpose

On September 16, 2016, the U.S. Environmental Protection Agency (EPA) finalized revision to the 2007 Exceptional Events Rule, codified in 40 CFR Parts 50 and 51, that provides air quality agencies regulatory relief in situations when exceptional events cause an exceedance of a National Ambient Air Quality Standard (NAAQS). Exceptional events can be caused by human activity unlikely to recur or natural events. In New Mexico, natural events, such as windstorms and wildfires cause exceedances of the particulate matter standards every year. Other exceptional events that may occur in New Mexico include tornadoes, firework displays, and chemical spills.

The revised rule includes requirements for states to prepare mitigation plans (40 CFR 51.930) for areas with recurring events (i.e., three similar events of the same type and pollutant in a three-year period). Luna County and the Anthony, NM PM_{10} nonattainment area (i.e., Doña Ana County) were identified as areas subject to the mitigation plan requirements due to PM_{10} exceedances from high winds. This plan has been developed to mitigate PM_{10} and PM_{2.5} emissions during high wind events in both Luna and Doña Ana counties.

Background

The 3,804 square miles comprising Doña Ana County are topographically diverse and include mountain ranges, hills, valleys and deserts. The elevation range for the county is 3,730 feet at the valley floor in the south to 9,012 feet at the peak of the Organ Mountains. The Organ Mountains lie in a north-south direction along the eastern border of the county, separating the Mesilla Valley from White Sands Missile Range and White Sands National Monument. The western half of Doña Ana County is formed by an elevated desert plateau that extends west through Luna, Grant, and Hidalgo counties along the international border and into Arizona.

Where New Mexico, Texas and Mexico meet, Mount Cristo Rey lays south of Sunland Park between the Franklin Mountains on the east and the Sierra Juárez Mountains to the southwest. Previous air quality studies in the air shed indicate that this complex topography dictates wind flow patterns carrying air masses from El Paso and Ciudad Juárez into southern Doña Ana County.

Doña Ana County has a mild, semi-arid climate with light precipitation, abundant sunshine, low relative humidity, and a large daily and annual temperature range. Annual precipitation averages 9.35 inches, including 3.7 inches of snowfall in Las Cruces.
Luna County covers 2,965 square miles in southwestern New Mexico sharing 54 miles of international border with Mexico. Luna County is within the northern most part of the Chihuahuan Desert, with desert landscape as its most predominant feature. Several mountain ranges are located within the county, including Cooke’s Range, the Florida Mountains, and the Tres Hermanas Mountains. Like Doña Ana County, Luna County has a semi-arid climate with light precipitation and low relative humidity. Annual precipitation averages 9.8 inches, including 1.6 inches of snowfall.

Windstorms are common during the late winter and spring months in both Luna and Doña Ana counties. Due to these high velocity winds, both counties experience the majority of PM$_{10}$ exceedances in the state. Synoptic scale weather activity, and to a lesser extent, mesoscale weather systems drive most of the frequent high wind events in the region. These periods of high wind may result in average hourly wind speeds exceeding 30 miles per hour for several hours and reach peak speeds of 60 miles per hour or more. Blowing dust and soil erosion originate from the numerous exposed and erodible desert areas. Winds predominately blow from the southeast in summer, from the west in winter, and from the west-southwest in spring.

**Air Monitoring Network**

The New Mexico Environment Department, Air Quality Bureau (AQB) regulates air quality to protect public health and the environment in the State of New Mexico, excluding Bernalillo County and tribal lands. Air monitoring data are required by regulation and are used to determine compliance with the NAAQS. The AQB operates a State and Local Air Monitoring Stations Network to measure the concentration of criteria pollutants, with six PM$_{10}$ and three PM$_{2.5}$ monitoring sites in Doña Ana and Luna counties, that track windblown dust in southern New Mexico (Figure 1). These monitoring sites have meteorological monitoring equipment that records wind speed, wind gust, 10 m temperature and 2 m temperature (Table 1).

Table 1. Particulate Matter monitoring network in Doña Ana and Luna Counties.
Public Education and Notification

The AQB will provide prompt public notification as per internal policy and education programs for potentially affected communities whenever PM\(_{10}\) air concentrations exceed or are expected to exceed the NAAQS (40 CFR 51.930(b)(2)(i)). The AQB’s monitoring website provides the public with near real-time air quality conditions at each monitoring site in the state (Figure 2) and can be accessed at [www.env.nm.gov/air-quality/air-monitoring-network-2/](http://www.env.nm.gov/air-quality/air-monitoring-network-2/). Other important uses of the air monitoring data include the production of a daily Air Quality Index, daily air quality forecast reports (e.g., AirNow/EnviroFlash), support of short and long-term health risk assessments, identification of a localized health concerns, and tracking long-term trends in air quality.
Figure 2. Screen shot of the AQB’s monitoring webpage, with green dots indicating monitoring site locations.

The AQB’s Windblown Dust webpage provides another useful source of information and can be accessed at https://www.env.nm.gov/air-quality/dust-main-page/. Here the public can find answers to frequently asked questions, information on the health effects of dust, information on sources of dust and information on dust control methods. Draft and final Exceptional Events Demonstrations are also posted on this page (Figure 3).
Figure 3. Screen shot of AQB’s Windblown Dust webpage.

The AQB will continue to develop educational outreach material aimed at the general public to this Dust Mitigation Plan that will be made available on the website and at multiple locations throughout both Doña Ana and Luna counties.

The AQB issues a press release, Twitter feed, and listserv at the start of each windy season to alert Doña Ana and Luna County residents of the risks associated with dust storms (Figure 4).
#NMED's Air Quality Bureau encourages residents in affected areas in southern #NewMexico to take precautions to protect their health from the hazards of blowing dust, including people with heart/lung disease, the elderly, young children and pregnant women.
Because the AQB does not have a meteorologist on staff, it relies on alerts from the El Paso National Weather Service weather forecast office (Santa Teresa, NM) and the NM Department of Transportation (Figure 5) and relays this information via a Dust Alert listserv, Twitter feed, or press release.

To enhance air quality awareness and reduce exposure to air pollution in the community, the AQB will work with local governments, businesses and school districts to establish air quality alert programs in the two counties. Through this program, local school district’s decisions are made as to limit outdoor activity or reduce school hours along with notifications sent to parents to communicate the air quality hazard and action taken. The alerts correspond to the colors...
used for the Air Quality Index, thereby communicating air quality information to the community. For example, no notification indicates average air quality while a notification indicates poor air quality. Additional details about the programs may be found on the AirNow website at airnow.gov/index.cfm?action=aqibasics.aqi.
Figure 5. Examples of area forecast products and social media alerts issued by the NWS El Paso Office.

The AQB consults with the NM Department of Health to ensure the listserv alerts include appropriate information regarding health advisories and actions to minimize exposure for sensitive populations (e.g., remain indoors, avoid vigorous outdoor activity, and avoid exposure to respiratory irritants). In addition to the Department of Health, the AQB also regularly consults with the EPA Region 6 Border Office and New Mexico State University (whose staff includes the NM State Climatologist) on educating the public in the border region, including supporting ongoing efforts by these agencies. Education and outreach material will be provided to the public in English and Spanish to the greatest extent possible.

Measures to Minimize Contributing Controllable Sources

In developing the mitigation plans, the AQB must take steps to identify, study and implement mitigating measures (40 CFR 51.930(b)(2)(ii)). The AQB completed a Fugitive Dust Micro-Inventory of local sources surrounding the PM$_{10}$ monitoring sites in Doña Ana and Luna Counties. Staff from the AQB used previous emission inventories for Doña Ana County, GIS
mapping, satellite imagery and field data to identify sources within a 2-km radius of each site and potential control measures to include in a Fugitive Dust Control rule (see below). These measures are designed to abate or minimize contributing controllable sources of PM (40 CFR 51.930(b)(2)(ii)(A)).

**Mandatory Measures**

**Local Dust Control Ordinances**

The City of Las Cruces, Doña Ana County, and Luna County have existing dust ordinances for which the AQB has provided consultation. This Dust Mitigation Plan and associated Fugitive Dust Rule, discussed below, will enhance these ordinances, and provide coverage where there are gaps.

**20.2.23 NMAC, Fugitive Dust Control**

The AQB developed a Fugitive Dust Control rule in conjunction with the original Dust Mitigation Plan. The Environmental Improvement Board adopted the rule into the New Mexico Administrative Code in September 2018 with the rule becoming effective on January 1, 2019. The rule applies to certain sources of fugitive dust that are not required to obtain a construction permit from the AQB and is applicable in any area of the state that experiences recurring high wind events where the PM$_{10}$ and/or the PM$_{2.5}$ NAAQS is exceeded. Sources of fugitive dust included in the rule are disturbed surface areas equal to or greater than 1.0 acre from construction/demolition activities, and earthmoving (including weed abatement activities). Control measures are required to stabilize surfaces to ensure emissions are not crossing the property line or exceeding opacity limits. Commercial and industrial bulk material handling and storage also require the use of control measures. A list of potential sources of emissions and associated control measures are included in Table 2 below.

**Table 2. Candidate sources and associated control measures for fugitive dust control.**
Voluntary Measures

Agricultural Conservation Measures

The AQB relies on the conservation measures outlined by the United States Department of Agriculture Natural Resources Conservation Service (NRCS) Dust Mitigation Handbook to mitigate particulate matter emissions from agricultural cropland, rangeland, natural areas, and unpaved surfaces. When properly implemented, NRCS-approved conservation systems and activities may achieve levels of control comparable to those required by EPA for marginal PM$_{10}$ nonattainment areas. Implementation of conservation measures are coordinated with producers, landowners, operators, state agencies, NRCS, and EPA to determine the most suitable and effective conservation measures for the counties. Control measures include:

- Maintaining soil surface cover;
- In-field pass reductions;
- Soil conditioning and timing of operations modifications;
- Windbreak/vegetative barriers;
- Equipment modifications;
- Unpaved roadway management;
- Land application; and
- Pasture and range management

Unpaved Travel Surfaces

The AQB will consult with the New Mexico Department of Transportation to develop guidance for dust control best management practices for maintenance of existing unpaved roadways. Alternatives to paving will also be explored where material, chemical and administrative treatment methods may be applied for dust control.

Minimize Public Exposure to High Concentrations of PM

Mitigation plans must include methods to minimize public exposure to high concentrations of PM (40 CFR 51.930(b)(2)(ii)(B)). The AQB will accomplish this through public notification, outreach education, air quality alerts, Fugitive Dust Control compliance education, inspections, and enforcement actions.

Processes to Collect and Maintain Data Pertinent to the Event

The AQB has established an internal process to collect and maintain data pertinent to exceptional events flagging, which includes close coordination between the AQB’s Quality Assurance and Control Strategies sections (40 CFR 51.930(b)(2)(ii)(C)). This process is included in the Ambient Air Monitoring Quality Assurance Project Plan, which is reviewed annually. The AQB Quality Assurance Section has developed an Exceptional Events Documentation Standard.
Operating Procedure that will provide detailed procedures for documenting information on possible exceptional events beginning with the monitoring site operator through the quality assurance of monitored data.

For those data that are subsequently determined to have regulatory significance, the AQB Environmental Analyst in the Las Cruces field office will begin the data collection process to support an exceptional events demonstration. This data includes monitored PM concentrations, wind data, weather information, satellite data, and event reports.

**Consultation with Other Air Quality Managers**

Often the same weather systems are responsible for dust storms and road closures along the Interstate 10 corridor in Arizona, New Mexico and Texas, highlighting the need for intrastate consultation. The AQB will continue to engage with other air quality management agencies (40 CFR 51.930(b)(2)(ii)(D)), primarily the Texas Commission on Environmental Quality (TCEQ) and the Arizona Department of Environmental Quality (ADEQ), to share exceptional event data and coordinate demonstrations for events that may affect the entire region. Contact information for TCEQ and ADEQ may be found below.

Information regarding exceptional events and dust mitigation will also be shared through the triannual meetings of the Joint Advisory Committee (JAC) for the improvement of air quality in the Paso del Norte Region (El Paso/Cd. Juárez/Doña Ana County). The JAC is a bi-national committee charged with facilitating pilot projects and identifying priority issues for consideration by the Air Policy Forum of EPA’s Border 2020 program. The committee was established under the environmental treaty between the United States and Mexico, commonly referred to as the "La Paz" agreement. Its membership includes federal, state, and local government officials along with private citizens, university officials, and non-governmental organizations. The JAC has a total membership of twenty-two, with eleven members each from the United States and Mexico. More information about participating agencies and past activities of the JAC can be found at [www.cccjac.org](http://www.cccjac.org).
On the local level, biannual workshops will be held before the start of the spring windy season and after the monsoon season to foster communication amongst environmental, transportation, public safety, public health, weather and academia officials. In person or virtual meetings facilitate enhanced stakeholder cooperation and discussion of health and safety issues, enforcement of local rules, communication, research, mitigation projects, etc. A preliminary list of entities that will be invited to participate include the city of Las Cruces, city of Deming, Doña Ana County, Luna County, New Mexico Department of Public Safety, New Mexico Department of Transportation, State Climatologist/New Mexico State University, University of Texas of El Paso, National Weather Service, EPA El Paso Border Office, Natural Resource Conservation Service, and the Bureau of Land Management. If resources allow, this could expand into a multi-day workshop where outreach and education efforts can be focused on and extended to the public and regulated community.

**Periodic Review and Evaluation**

The AQB will review and evaluate this Dust Mitigation Plan and its implementation and effectiveness on average every three years (40 CFR 51.930(b)(2)(iii)), less or more if the need arises. If additional particulate matter rulemaking occurs within the three-year period, the Dust Mitigation Plan will be updated accordingly and submitted to EPA Region 6 after the consideration of public comment.

**Public Comment Documentation**

The draft Dust Mitigation Plan was posted on the AQB website on October 7, 2020 for an initial thirty-day public comment period. Stakeholders were notified via listserv on October 7, 2020, that the draft for public comment was posted on the AQB website and the department concluded the public comment period on November 6, 2020 (40 CFR 51.930(b)(2)(iii)(A)(1)). Appendix A will contain copies of all public notices, listserv announcements, public comments (40 CFR 51.930(b)(2)(iii)(A)(2)), and the AQB’s responses to comments (40 CFR 51.930(b)(2)(iii)(A)(3)).

**Submission of Mitigation Plans**

The AQB initially submitted the Dust Mitigation Plans for Doña Ana and Luna Counties on September 28, 2018, meeting the required deadline of September 30, 2018 (40 CFR 51.930(b)(3)(i)). EPA intends to review each plan to ensure required components are included and will notify the AQB upon completion of such review (40 CFR 51.930(b)(3)(ii)). This updated Dust Mitigation Plan will be submitted to the EPA after a formal 30 public comment period (40
CFR 51.930(b)(3)). EPA does not intend to formally approve mitigation plans or require them as part of the New Mexico State Implementation Plan.
Appendix A – Public Notices
STATE ENVIRONMENT DEPARTMENT SEEKS PUBLIC COMMENT ON DRAFT DUST MITIGATION PLAN

(Santa Fe, NM) – The New Mexico Environment Department (NMED) Air Quality Bureau has completed the draft revised dust mitigation plan for Doña Ana and Luna Counties in southern New Mexico. Dust mitigation plans are required by the U.S. Environmental Protection Agency (U.S. EPA) in areas where recurring natural high wind blowing dust events cause exceedances of the National Ambient Air Quality Standards (NAAQS) for Particulate Matter. NMED must conduct periodic review of this plan and to evaluate its implementation and effectiveness.

Required elements of the draft dust mitigation plan include: steps to identify and study sources of dust, mandatory or voluntary control measures to reduce source impacts, public education or notification programs aimed at reducing exposure to vulnerable populations, and the public review and periodic evaluation of the mitigation plan.

Revisions to the dust mitigation plan focus on the need for increased public education and event based notification efforts, partnering with agencies for promoting dust controls such as the United States Department of Agriculture Dust Mitigation Handbook for agricultural dust sources, and the adoption and implementation of 20.2.23 New Mexico Administrative Code for fugitive dust sources.

The New Mexico Environment Department is seeking public comment on the draft document through November 6, 2020. The document is available for review at the Environment Department’s field offices and website at www.env.nm.gov/air-quality/ or by contacting the Department at (505) 476-4300.

NMED does not discriminate on the basis of race, color, national origin, disability, age or sex in the administration of its programs or activities, as required by applicable laws and regulations. NMED is responsible for coordination of compliance efforts and receipt of inquiries concerning non-discrimination requirements implemented by 40 C.F.R. Part 7, including Title VI of the Civil Rights Act of 1964, as amended; Section 504 of the Rehabilitation Act of 1973; the Age Discrimination Act of 1975, Title IX of the Education Amendments of 1972, and Section 13 of the Federal Water Pollution Control Act Amendments of 1972. If you have any questions about this notice or any of NMED’s non-discrimination programs, policies or procedures, or if you believe that you have been discriminated against with respect to a NMED program or activity, you may contact: Kristine Yurdin, Non-Discrimination Coordinator, NMED, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, NM 87502, (505) 827-2855, nd.coordinator@state.nm.us.

For more information and to submit comments, please contact Armando Paz, Environmental Analyst, NMED Air Quality Bureau at (575) 288-2050 or at [armando.paz@state.nm.us](mailto:armando.paz@state.nm.us).
EL DEPARTAMENTO DE MEDIO AMBIENTE DEL ESTADO BUSCA COMENTARIOS PÚBLICOS SOBRE LA PLAN DE MITIGACIÓN POR POLVO

(Santa Fe, NM) – La Oficina de Calidad del Aire del Departamento de Medio Ambiente de Nuevo México (“NMED” por sus siglas en inglés) ha completado una revisión de borrador de plan de mitigación por polvo de Doña Ana y Luna condados en sur de Nuevo México. Es necesario por los planes de polvo por La Agencia de Protección de Medio Ambiente (“U.S. EPA” por sus siglas en inglés) en áreas donde los eventos naturales recurrentes de polvo con fuertes vientos causan excedencias al Estándar Nacional de Calidad del Aire Ambiental (“NAAQS” por sus siglas en inglés) por material particulado. NMED debe realizar una revisión periódica de este plan para evaluar su implementación y efectividad.

Elementos necesarios por un borrador de plan de mitigación incluir: pasados de identificación y estudiar fuentes de polvo, obligatorio o voluntario medidas de controlar a reducir impactos de fuente, educación de público o los programas de notificación apuntado a reducir exposición a poblaciones de vulnerable, y la revisión de público y evaluación de periódico de el plan de mitigación.

Las revisiones al plan de mitigación del polvo se centran en la necesidad de aumentar la educación pública y los esfuerzos de notificación basados en eventos, asociándose con agencias para promover controles de polvo como el Manual de mitigación de polvo del Departamento de Agricultura de los Estados Unidos para fuentes de polvo agrícola, y la adopción e implementación de 20.2.23 Código administrativo de Nuevo México (“NMAC” por sus siglas en inglés) para fuentes fugitivas de polvo.

El Departamento de Medio Ambiente de Nuevo México está buscando comentarios públicos sobre el borrador del documento hasta el 6 de noviembre de 2020. El documento está disponible para su revisión en las oficinas locales y en el sitio web del Departamento de Medio Ambiente en www.env.nm.gov/air-quality/ o comunicándose con el Departamento al (575) 449-2983

STATE ENVIRONMENT DEPARTMENT SEEKS PUBLIC COMMENT ON HIGH WIND FUGITIVE DUST MITIGATION PLAN

(Santa Fe, NM) – The New Mexico Environment Department (NMED) has completed the draft revised dust mitigation plan for Doña Ana and Luna Counties in southern New Mexico. Dust mitigation plans are required by the U.S. Environmental Protection Agency (U.S. EPA) in areas where recurring high wind blowing dust has been identified as a violation of the National Ambient Air Quality Standards (NAAQS) for Particulate Matter. NMED must conduct public review of this plan and to evaluate its implementation and effectiveness.

Required elements of the draft dust mitigation plan include: to identify and study sources of dust, mandatory or voluntary control measures to reduce dust impacts, public education or notification programs aimed at reducing exposure to vulnerable populations, and the public review and periodic evaluation of the mitigation plan.

Revisions to the dust mitigation plan were needed to increase public education and participation in notification efforts, partnering with agencies for promoting dust controls such as the United States Department of Agriculture Dust Mitigation Handbook for agricultural dust sources, and the adoption and implementation of 20.2.23 New Mexico Administrative Code for fugitive dust sources.

The New Mexico Environment Department is seeking public comment on the draft document through November 6, 2020. The document is available for review at the Environment Department’s field offices and website at www.env.nm.gov/air-quality or by contacting the Department at (505) 476-4300.

NMED does not discriminate on the basis of race, color, national origin, disability, age or sex in the administration of its programs or activities, as required by applicable laws and regulations. NMED is responsible for coordination of compliance efforts and receipt of inquiries concerning non-discrimination requirements implemented by 40 C.F.R. Part 7, including Title VI of the Civil Rights Act of 1964, as amended; Section 504 of the Rehabilitation Act of 1973; the Age Discrimination Act of 1975, Title IX of the Education Amendments of 1972, and Section 13 of the Federal Water Pollution Control Act Amendments of 1972. If you have any questions about this notice or NMED’s non-discrimination policies, you may contact Kristine Yurzin, Non-Discrimination Coordinator, NMED, 1190 St. Francis Dr., Suite N400, P.O. Box 5469, Santa Fe, NM 87502, (505) 827-2855, nd.coordinator@state.nm.us. You may also visit our website at www.env.nm.gov/non-employee-equal-opportunity - complaint-page/ to learn how and where to file a complaint of discrimination.

For more information and to submit comments, please contact Armando Paz, Environmental Analyst, NMED Air Quality Bureau at (575) 288-2000 or armando.paz@state.nm.us.

EL DEPARTAMENTO DE MEDIO AMBIENTE DEL ESTADO BUSCA COMENTARIOS DEL PÚBLICO SOBRE EL PLAN DE MITIGACIÓN DE POLVO

(Santa Fe, NM) – La Oficina de Calidad del Aire del Departamento de Medio Ambiente de Nuevo México (NMED), por sus siglas en inglés) ha completado el borrador de plan revisado de mitigación de polvo para los condados de Doña Ana y Luna en sur de Nuevo México. Los planes de mitigación de polvo son requeridos por la Agencia de Protección Ambiental de los Estados Unidos (U.S. EPA) en áreas donde eventos naturales recurrentes de viento fuerte que suplan polvo causan que se rebasen los Estándares Nacionales de Calidad del Aire Ambiental (NAAQS), por sus siglas en inglés) para materia particulada. El NMED debe llevar a cabo una revisión periódica de este plan y evaluar su implementación y efectividad.

Los elementos requeridos del borrador del plan de mitigación de polvo incluyen: pasos para identificar y estudiar las fuentes de polvo, medidas de control obligatorias o voluntarias para reducir los impactos de las fuentes, programas de educación pública o de notificación dirigidos a reducir la exposición a poblaciones vulnerables, la revisión pública y la evaluación periódica del plan de mitigación.

Las revisiones del plan de mitigación de polvo se centrarán en la necesidad de aumentar la educación pública y los esfuerzos de notificación basados en eventos, asociándose con organismos para promover los controles de polvo como el Manual de Mitigación de Polvo del Departamento de Agricultura de los Estados Unidos para fuentes de polvo agrícola y la adopción y aplicación del 20.2.23 Código Administrativo de Nuevo México para fuentes de polvo fugitivos.

El NMED no discrimina por motivos de raza, color, origen nacional, discapacidad, edad o sexo en la administración de sus programas o actividades, según lo exigen las leyes y reglamentaciones aplicables. NMED es responsable de la coordinación de los esfuerzos de cumplimiento y la recepción de consultas sobre los requisitos de no discriminación implementados por 40 C.F.R. Partes 5 y 7, incluido el Título VI de la Ley de Derechos Civiles de 1964, según enmienda; Segunda Parte 504 de la Ley de Rehabilitación de 1973, la Ley de Discriminación por Edad de 1975, el Título IX de las Enmiendas de Educación de 1972 y la Sección 13 de las Enmiendas de la Ley de Control de la Contaminación del Agua de 1972. Si tiene alguna pregunta sobre este aviso o alguno de los programas, políticas o procedimientos de no discriminación de NMED o si cree que ha sido discriminado con respecto a un programa o actividad de NMED, puede comunicarse con: Kristine Yurzin, coordinadora de no discriminación, NMED, 1190 St. Francis Dr., Suite N400, P.O. Box 5469, Santa Fe, NM 87502, (505) 827-2855, nd.coordinator@state.nm.us. STATE ENVIRONMENT DEPARTMENT SEeks PUBLIC COMMENT ON DRAFT DUST MITIGATION PLAN

(Santa Fe, NM) – The New Mexico Environment Department (NMED) Air Quality Bureau has completed the draft revised dust mitigation plan for Doña Ana and Luna Counties in southern New Mexico. Dust mitigation plans are required by the U.S. Environmental Protection Agency (U.S. EPA) in areas where dust events cause exceedances of the National Ambient Air Quality Standards (NAAQS) for Particulate Matter. NMED must conduct periodic review of this plan and to evaluate its implementation and effectiveness.

Required elements of the draft dust mitigation plan include: steps to identify and study sources of dust, mandatory or voluntary control measures to reduce source impacts, public education or notification programs aimed at reducing exposure to vulnerable populations, and the public review and periodic evaluation of the plan.

Revisions to the dust mitigation plan focus on the need for increased public education and event-based notification efforts, partnering with agencies for promoting dust controls such as the United States Department of Agriculture Dust Mitigation Handbook for agricultural dust sources, and the adoption and implementation of 20.2.23 New Mexico Administrative Code for fugitive dust sources.

The New Mexico Environment Department is seeking public comment on the draft document through November 15, 2020. The draft document is available for review at the Environment Department’s field office and website at www.env.nm.gov/air-quality or by contacting the department at (505) 478-4300.

NMED does not discriminate on the basis of race, color, national origin, disability, age or sex in the administration of its programs or activities, as required by applicable laws and regulations. NMED is responsible for coordination of compliance efforts and receipt of inquiries concerning nondiscrimination requirements implemented by 40 C.F.R. Part 7, including Title VI of the Civil Rights Act of 1964, as amended, Section 504 of the Rehabilitation Act of 1973, the Age Discrimination Act of 1975, Title VI of the Education Amendments of 1972, and Section 13 of the Federal Water Pollution Control Act Amendments of 1972. If you have any questions about this notice or the content of NMED’s non-discrimination programs, policies or procedures, or you believe that you have been discriminated against with respect to a NMED program or activity, you may contact: Kristine Yurdin, Non-Discrimination Coordinator, NMED, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, NM 87502, (505) 827-2895, ndCoordinator@state.nm.us. You may also visit our website at www.env.nm.gov/air-quality/complaint-page to learn how and where to file a complaint of discrimination.

EL DEPARTAMENTO DE MEDIO AMBIENTE DEL ESTADO BUSCA COMENTARIOS DEL PUBLICO SOBRE EL PLAN DE MITIGACION DE POLVO

(Santa Fe, NM) – La Oficina de Calidad del Aire del Departamento de Medio Ambiente de Nuevo México (NMED, por sus siglas en inglés) ha completado el borrador de plan revisado de mitigación de polvo para áreas marginadas en Doña Ana y Luna, el cual es la primera vez que se presenta un plan de mitigación de polvo en las áreas de Doña Ana y Luna.

The New Mexico Environment Department (NMED) Air Quality Bureau has completed the draft revised dust mitigation plan for Doña Ana and Luna Counties in southern New Mexico. Dust mitigation plans are required by the U.S. Environmental Protection Agency (U.S. EPA) in areas where recurring natural high wind blowing dust events cause exceedances of the National Ambient Air Quality Standards (NAAQS) for Particulate Matter. NMED must conduct periodic review of this plan and to evaluate its implementation and effectiveness.

Required elements of the draft dust mitigation plan include: steps to identify and study sources of dust, mandatory or voluntary control measures to reduce source impacts, public education or notification programs aimed at reducing exposure to vulnerable populations, and the public review and periodic evaluation of the mitigation plan.

The New Mexico Environment Department is seeking public comment on the draft document through November 6, 2020.

Subject: High Winds Blowing Dust Events in Doña Ana & Luna Counties: Public Review Draft

Mr. Paz,

The New Mexico Farm and Livestock Bureau (NMF&LB) is the state’s largest and oldest agriculture organization with over 19,500-member families statewide. We represent all aspects of agriculture. Our mission is to protect and promote agriculture in the great State of New Mexico. NMF&LB submit the following comments regarding the New Mexico Environment Department’s effort to address the Dust Mitigation Plan for Doña Ana and Luna Counties.

The Southern New Mexico region experiences non-attainment status due in part to natural events such as “high wind.”. The geography of the region is a large contributing factor. Dust created by both westerly and easterly high winds funnel though the Mesilla Valley registering high particulate matter. Doña Ana County’s proximity to Juarez, Mexico also negatively affects its attainment designation. This is seen by many as the root cause for Doña Ana County’s nonattainment status and should be considered heavily before new rules are adopted that impact New Mexico citizens and businesses that often result in little to no improvement of the area’s air quality.

Agriculturalists understand the importance of natural resource conservation not only for the environment but for their livelihood. Our agriculture producers are the best conservationists in the state, continually using erosion mitigation and best management practices. Agriculturalists in the region who participate in United States Department of Agriculture, Natural Resources Conservation Services (NRCS) conservation programs become contractually responsible to undertake soil erosion practices which reduce soil erosion and positively contributes to dust mitigation. For example, one of the Environmental Quality Incentive Program (EQIP) National Priorities (7 CFR Part 1466.4) is: “Reduction of emissions, such as particulate matter, nitrogen
oxides, volatile organic compounds, and ozone precursors and depleters that contribute to air quality impairment violations of the National Ambient Air Quality Standards.” Another example is: “Reduction in soil erosion and sedimentation from unacceptable levels on agricultural land.” Agriculturalist who do not participate in these programs still conduct Best Management Practice (BMP’s) to prevent topsoil loss. Soil retention goes hand in hand with soil health and is of utmost importance to all agriculturalists. Additional efforts to mitigate dust can also be used. Such efforts include working with the Dona Ana and Luna County Public Works Departments to maintain and pave public dirt roads.

NMFLB does not support additional regulations to manage particulate matter since local high particulate matter indicators do not coincide with farming activities such as listing, seed planting, cultivating and harvesting during the year. Marginal profit farmers cannot afford additional regulation, especially if new regulations do nothing to address the problem. We look forward to our continued involvement in this process and appreciate the opportunity to submit comments. We respectfully request they be taken into consideration.

Tiffany Rivera
Director of Government Affairs
The New Mexico Environment Department (NMED), Air Quality Bureau, appreciates the comment letter provided by the New Mexico Farm & Livestock Bureau proposing no additional regulations to the agricultural sector.

NMED agrees at this time with the comment letter’s proposal supporting no additional rules or regulations to be implemented for agriculturalists, the draft dust mitigation plan does not propose to implement any additional rules and regulations for agricultural operations at this time. The dust mitigation plan does reference the United States Department of Agriculture, Natural Resource Conservation Services (NRCS), newly released Dust Mitigation Handbook to effectively achieve Best Available Control Methods (BACM) for a marginal PM$_{10}$ nonattainment area. NMED encourages active outreach to agriculturalists by all stakeholders to not only improve the air quality for the betterment of the resident’s health but to also preserve the precious natural resources that contributes to New Mexico’s beauty.
