More HABs information is available on EPA's [CyanoHABs in Water Bodies website](#)

Getting Ready: What To Do Before, During, and After a CyanoHAB

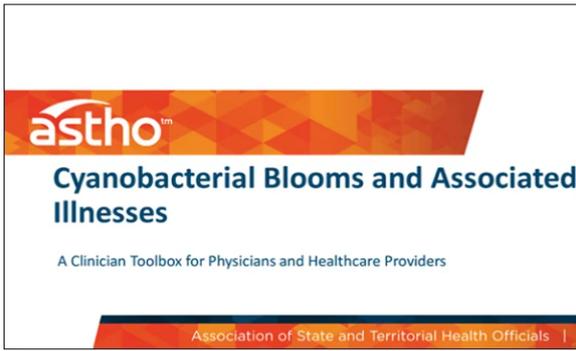

EPA's *Cyanotoxins Preparedness and Response Toolkit (CPRT)* is an online tool containing resources that drinking water systems and waterbody managers can use to be prepared before a cyanoHAB event, and to respond to cyanotoxins in drinking water and/or cyanobacteria and their toxins in recreational waters. The CPRT includes:

- Cyanobacteria/Cyanotoxins Management Plan template, including worksheets and checklists to plan before and during a bloom event;
- Frequently Asked Questions on cyanoHABs, Drinking Water Health Advisories, and EPA's Recommended Recreational Water Quality Criteria or Swimming Advisories for Microcystins and Cylindrospermopsin;
- Links to communication tools for effective risk communication during cyanotoxin events;
- CyanoHABs incident response questionnaire to use when a cyanotoxins event is suspected or confirmed; and
- Post-incident technical support questionnaire to evaluate the effectiveness of the response.

The resources in the toolkit can be filled out electronically, downloaded, and shared.

The CPRT is available to download on [EPA's CPRT webpage](#)

Cyanobacterial Blooms and Associated Illnesses: A Clinician Training Module for Physicians and Healthcare Providers

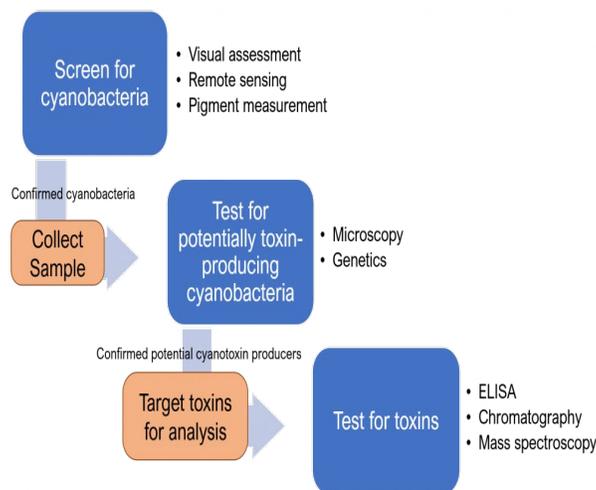

The Association of State and Territorial Health Officials (ASTHO) recently posted online a clinician **toolbox** intended for use by health agency staff when providing training about cyanobacterial blooms to health care providers. The training module is aimed to help clinicians recognize signs and symptoms associated with cyanobacterial bloom-associated illnesses; describe how to diagnose cyanobacterial bloom-associated illnesses, including cyanotoxin exposures; know where to find cyanobacterial bloom advisories; and explain the importance of reporting cyanobacterial bloom-associated illnesses to the state health agency.

ITRC's Strategies for Preventing and Managing Harmful Cyanobacterial Blooms Interactive Tools

The ITRC guidance includes useful interactive tools for monitoring and managing cyanobacterial blooms:

Monitoring Tool: Provides monitoring methods for cyanobacteria and cyanotoxins

Management Criteria Tool: Helps evaluate in-lake management strategies that prevent future HCBs or intervene in active blooms.

Select the criteria that describes your needs, situation and/or water body:

Strategy Type	Waterbody Type	Type of HCB
<input type="checkbox"/> Intervention	<input type="checkbox"/> Pond	<input type="checkbox"/> Planktonic
<input type="checkbox"/> Prevention	<input type="checkbox"/> Lake or Reservoir	<input type="checkbox"/> Benthic
	<input type="checkbox"/> River	

Management Strategy	Documented Effectiveness	Depth	Surface Area	Trophic State	Turbidity
Acidification	Planktonic - Limited; Benthic - Limited	Shallow	Small	Any Trophic Status	Generally Clear
Artificial circulation and mechanical mixers	Planktonic - Substantial; Benthic - Not Applicable	Deep	Small or Large	Any Trophic Status	Clear to Turbid
Barley and rice straw	Planktonic - Substantial; Benthic - Limited	Shallow or Deep	Small or Large	Any Trophic Status	Clear to Turbid
Clay and surfactant flocculation	Planktonic - Substantial; Benthic - Limited	Shallow or Deep	Small or Large	Any Trophic Status	Clear to Turbid
Copper algaecides	Planktonic - Substantial; Benthic - Substantial	Shallow or Deep	Small or Large	Any Trophic Status	Clear to Turbid
Dredging	Planktonic - Limited; Benthic - Limited	Shallow or Deep	Small or Large	Any Trophic Status	Clear to Turbid
Floating wetlands	Planktonic - Limited; Benthic - Limited	Shallow	Small or Large	Eutrophic	Clear to Turbid
Food web manipulation	Planktonic - Substantial; Benthic - No Available Data	Shallow or Deep	Small or Large	Any Trophic Status	Clear to Turbid
Hydraulic flushing	Planktonic - Substantial; Benthic - Limited	Shallow	Small or Large	Eutrophic	Clear to Turbid
Hydrodynamic cavitation	Planktonic - Emerging; Benthic - No Available...	Shallow	Small	Any Trophic Status	Clear to Turbid

Reported Blooms, Beach Closures, and Health Advisories* - April 2022

**Includes blooms, cautions, warnings, public health advisories, closings, and detections over state thresholds due to the presence of algae and/or toxins. This is not a comprehensive list; not all blooms have been reported and/or not all lakes are actively monitored.*

Go to EPA's interactive [Tracking CyanoHABs Story Map](#) to access the data underlying the map points and for more information.

Click the state name to see the reported blooms for the month of April 2022:
[California \(9\)](#); [Florida \(17\)](#); [Kansas \(1\)](#); [New Jersey \(2\)](#); [Oregon \(1\)](#); [Rhode Island \(2\)](#); [South Carolina \(2\)](#)

Upcoming Virtual Events

[12th International Conference on Toxic Cyanobacteria](#)
May 22-27, 2022 in Toledo, Ohio

[Benthic HABs Discussion Group Webinar](#)
June 1, 2022 from 12:30pm - 2:00pm PDT

[Pathogens and Natural Toxins e-Conference](#)
July 1- August 31, 2022

[GlobalHAB symposium on automated in situ observations of plankton](#)
August 22-26, 2022

[U.S. Symposium on Harmful Algae](#)
October 23-28, 2022 in Albany, NY
