Appendix A: List of Materials EPA shared with Small Entity Representatives

Appendix A1. Materials EPA shared with potential SERs before the Pre-Panel Outreach Meeting, June 29, 2021

- Agenda for Pre-Panel Outreach Meeting, June 29, 2021 (page 2)
- Power Point Presentation: An Overview of the Small Business Advocacy Review Panel Process (pages 3 - 13)
- Power Point Presentation: Oil and Natural Gas Sector New Source Performance Standards - Small Entity Representative Pre-Panel Outreach (pages 14 - 45)
- Appendix - Fugitive Cost from 2020 TSD (pages 46 - 52)
EPA’s Pre-Panel Outreach Meeting with Small Entity Representatives for EPA’s Rulemaking, “Oil and Natural Gas Sector New Source Performance Standards”

Tuesday, June 29, 2021 - 3:00 pm to 5:00 pm (Eastern)

3:00  **Welcome, Panel Process Highlights, and Introductions** (EPA Office of Policy)

3:20  **Presentation on Rulemaking** (EPA Office of Air Quality Planning and Standards)

4:00  **Questions and Discussion** (All)

4:50  **Summary and Closing** (EPA Office of Policy)
An Overview of the Small Business Advocacy Review (SBAR) Panel Process

June 2021
The Regulatory Flexibility Act (RFA) as amended by the Small Business Regulatory Enforcement Fairness Act (SBREFA), requires agencies to:

“assure that small entities have been given an opportunity to participate in the rulemaking process” for any rule “which will have a significant economic impact on a substantial number of small entities.”
What is an SBAR Panel?

An EPA SBAR Panel is made up of four managers from three federal agencies:

- EPA’s Small Business Advocacy Chair (EPA’s SBAC is from the Office of Policy)
- A manager from the EPA program responsible for writing the rule
- The Small Business Administration’s (SBA’s) Chief Counsel for Advocacy
- The Administrator of the Office of Management and Budget’s (OMB’s) Office of Information and Regulatory Affairs (OIRA)
What does an SBAR Panel do?

The RFA tasks the Panel with reviewing the material the Agency has available concerning the rulemaking; collecting advice and recommendations from small entity representatives (SERs); and reporting on its findings related to the following four elements:

- Who are the small entities to which the proposed rule will apply?
- What are the anticipated compliance requirements of the upcoming proposed rule?
- Are there any existing federal rules that may overlap or conflict with the regulation?
- Are there any significant regulatory alternatives that could minimize the impact on small entities?
Where does the Panel process fit within the rulemaking process?

- It is EPA’s goal to host SBAR Panels well before a proposed rule is written so there is adequate time to incorporate Panel recommendations into senior management decision-making about the proposed rule.
- SER participation in the Pre-panel and Panel Outreach meetings does not preclude or take the place of participation in the normal public comment period at the time the rule is proposed.
What is the role of a SER in the Panel process?

- SERs are not Panel members, however they consult with the Panel members during the Pre-panel and Panel Outreach meetings.
- SERs are provided this unique opportunity because of their status as a small entity that is expected to be regulated by the proposed rule.
- SER input can inform decisions senior EPA officials make about the forthcoming regulation.
How do SERs participate in the pre-panel phase of the Panel process?

- **EPA** hosts a Pre-panel Outreach meeting with SERs
  - To educate SERs about the Panel process and their role in it
  - To educate SERs about the rulemaking under consideration and the type of information they can provide to help support their advice to EPA and the Panel
  - To learn from SERs how the rule might impact them
  - To hear suggestions about how to minimize that impact

- SERs are invited to supplement the verbal discussion at the Pre-panel Outreach meeting with written comments (due 2 weeks after the meeting)
How do SERs participate in the Panel process?

• Using information from the Pre-panel Outreach discussions with SERs and SER written comments, EPA will work with its Panel partners from OMB and SBA to prepare for convening the formal Panel

• Once formally convened by EPA’s SBAC, the Panel will host a Panel Outreach Meeting with SERs
  ▪ The Panel Outreach meeting discussions will focus on further refining SER advice and recommendations from the Pre-panel Outreach
  ▪ SERs will again be invited to provide written comments they would like the Panel to consider (due 2 weeks after the meeting)
What does the Panel do with the information, advice, and recommendations from SERs?

The Panel prepares a Panel Report

- SER information, advice, and recommendations are synthesized into a set of Panel recommendations
- SER comments are summarized, and written comments are included as an appendix
- Submitted to the EPA Administrator
- Considered during senior-management decision-making prior to the issuance of the proposed rule
- Placed in the rule’s docket when the proposed rule is published
Thank You

• We realize that small entities make significant sacrifices to participate in this process

• Thank you for taking time and effort away from your business or organization to assist the Panel in this important work
Lanelle Wiggins, RFA/SBREFA Team Leader

Oil and Natural Gas Sector
New Source Performance Standards

Small Entity Representative Pre-Panel Outreach
June 2021
Overview

► Background
  ► Consultation with Small Entity Representatives
  ► Clean Air Act Section 111 – Emissions Standards
  ► Regulatory History
  ► Executive Order on Protecting Public Health and the Environment
  ► Sector Overview
  ► Methane Emissions in the Oil and Natural Gas Sector
  ► Small Business Size Definitions

► Scope of the 2021 Proposal
  ► Current Applicability and Requirements
  ► Potential Control Strategies
  ► Cost Estimates (2019$)

► Other Federal Regulations

► Schedule

► Input Requested

► Contact information
Consultation with Small Entity Representatives

► EPA is interested not only in information, but also in advice and recommendations from the small entity representations (SERs)

► EPA will use this information to develop a regulatory flexibility analysis, which becomes part of the record for the potential regulation

► Key elements in this analysis:
  ► Number of small entities to which the potential rule would apply
  ► Projected compliance requirements of the potential rule
  ► Identification of all relevant federal rules that may duplicate, overlap or conflict with the potential rule
  ► Any significant alternatives to the potential rule that accomplish the stated objectives and that minimize significant economic impact of the potential rule on small entities
SERs and the Regulatory Process

► We are seeking information on how the options presented might affect your business or organization
  ► Provide specific examples of impacts
  ► Provide cost data, if available
► We are also seeking input on regulatory alternatives that still accomplish the objectives of the Clean Air Act
  ► Suggest other relevant control strategies, including data on their costs, effectiveness, and information on how to ensure compliance
  ► The Regulatory Flexibility Act (RFA) suggests flexibilities, such as exemptions, different compliance timetables, and simplified reporting requirements
► We would like to minimize duplication
  ► Provide information on any potentially duplicative or contradictory federal, state, or local regulations.
Clean Air Act Section 111 – Emissions Standards

For source categories that cause or contribute significantly to air pollution which may reasonably be anticipated to endanger public health or welfare, Section 111 of the Clean Air Act requires that EPA establish standards of performance for new sources and, for certain pollutants, issue regulations under which states establish standards of performance for existing sources.

Standards must be set based on what is achievable through the application of the best system of emission reduction (BSER).

To determine BSER, EPA must consider:

- Cost (must not be “exorbitant,” “greater than the industry can bear,” or “unreasonable”)
- Non-air quality health and environmental impacts
- Energy requirements
- Technology that has been adequately demonstrated

When issuing regulations for existing sources, EPA allows states to take into account the remaining useful life of those sources, and other factors, in applying standards of performance in their state plans.
Regulatory History

► 2012 – NSPS OOOO regulated VOC emissions from several sources in the production and processing segments

► 2016 – NSPS OOOOa added methane as a regulated pollutant and expanded regulations through the transmission and storage segment. NSPS OOOOa also added requirements to cover additional sources; included fugitive emissions monitoring

► 2020 Policy Rule – removed the transmission and storage segment from OOOO and OOOOa and rescinded methane standards in the production and processing segments

► 2020 Technical Rule – exempted low production well sites from fugitive emissions monitoring, decreased monitoring frequency at compressor stations to semi-annually, allowed compliance with state requirements as an alternative to fugitive emissions requirements
On January 20, 2021, President Biden issued Executive Order 13990, Protecting Public Health and the Environment and Restoring Science to Tackle the Climate Crisis

Among other direction to EPA, the order instructs EPA to consider taking two actions by September 2021 focused on reducing methane emissions from the oil and gas sector:

- Propose strengthening previously issued standards for new sources
- Propose emission guidelines for existing operations in the oil and gas sector

These actions both fall under section 111 of the Clean Air Act
The NSPS has generally characterized industry operations as being composed of four segments:

- Production of Oil and Natural Gas
- Natural Gas Processing
- Natural Gas Transmission
- Natural Gas Storage

In the U.S. there are over 15,000 oil and gas owners and operators and the large majority are small entities:
- Around one million producing onshore oil and gas wells
- About 5,000 gathering and boosting facilities
- Over 650 processing facilities
- About 1,400 transmission compression facilities
- Over 900 transmission pipeline facilities
- Over 400 underground natural gas storage facilities
- Over 100 liquefied natural gas storage or import/export facilities
Oil and Gas Sector Overview

Natural Gas Production & Processing
- Storage tanks
- Well completions
- Pneumatic controllers
- Processing plant leaks
- Compressors
- Equipment leaks
- Pneumatic pumps

Oil Production
- Storage tanks
- Pneumatic controllers
- Well completions
- Equipment leaks
- Pneumatic pumps

Natural Gas Transmission and Storage
- Storage tanks
- Compressors
- Equipment leaks
- Pneumatic controllers

Natural Gas Distribution
- Has never been covered under the NSPS

Crude oil sent to petroleum refinery (not covered by Oil and Gas NSPS)

Source: Adapted from American Gas Association and EPA Natural Gas STAR Program

June 22, 2021
2019 Oil and Gas Methane Emissions by Segment (~197 MMTCO2e)

- Gas Production: 48%
- Oil Production: 20%
- Transmission and Storage: 19%
- Processing: 6%
- Distribution: 7%
2019 Oil and Gas Production (~132 MMTCO2e)

- Pneumatic Controllers: 35%
- Gathering and Boosting Stations: 28%
- Offshore Platforms: 4%
- Chemical Injection Pumps: 4%
- Liquids Unloading: 3%
- Tanks: 2%
- Completions and Workovers: 1%
- Other: 23%
Methane Emissions: Natural Gas Processing

2019 Gas Processing (~12 MMTCO2e)

- Gas Engines: 61%
- Reciprocating Compressors: 9%
- Blowdowns/Venting: 9%
- Centrifugal Compressors: 4%
- Other: 17%
Methane Emissions: Transmission and Distribution

2019 Gas Transmission and Storage (~37 MMTCO2e)

- Reciprocating Compressors: 35%
- Pipelines: 14%
- Station Fugitives: 11%
- Engines: 12%
- Centrifugal Compressors: 9%
- Station Venting: 5%
- Pneumatic Controllers: 4%
- Other: 10%
## Industry Sectors and Their Small Business Size Definitions

- Industry sectors included in the source category as defined by North American Industry Classification System (NAICS)

<table>
<thead>
<tr>
<th>NAICS</th>

<td>1,250 employees</td>
</tr>
<tr>
<td>213111</td>
<td>Drilling Oil and Gas Wells</td>
<td>1,000 employees</td>
</tr>
<tr>
<td>213112</td>
<td>Support Activities for Oil and Gas Operations</td>
<td>$41.5M in annual revenues</td>
</tr>
<tr>
<td>486210</td>
<td>Pipeline Transportation of Natural Gas</td>
<td>$30.0M in annual revenues</td>
</tr>
</tbody>
</table>

Note: The list of NAICS is not exhaustive
Estimated Number of Facilities

- Work is ongoing to determine affected facility counts for the NSPS
- The following table illustrates small business concentrations in the broader oil and natural gas industry

<table>
<thead>
<tr>
<th>NAICS</th>
<th>Description</th>
<th>Total firms</th>
<th>Small business percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>211120</td>
<td>Crude Petroleum Extraction</td>
<td>4,461</td>
<td>98.8 – 99.0%</td>
</tr>
<tr>
<td>211130</td>
<td>Natural Gas Extraction</td>
<td>617</td>
<td>92.9 – 93.7%</td>
</tr>
<tr>
<td>213111</td>
<td>Drilling Oil and Gas Wells</td>
<td>1,725</td>
<td>98.1%</td>
</tr>
<tr>
<td>213112</td>

<td>8,487</td>
<td>96.7 – 97.1%</td>
</tr>
<tr>
<td>486210</td>
<td>Pipeline Transportation of Natural Gas</td>
<td>128</td>
<td>31.3 – 39.8%</td>
</tr>
</tbody>
</table>

Notes: Data are from most recent year available, which is 2018 for NAICS codes 211120, 211130, and 213111 and 2017 for NAICS codes 213112 and 486210. Small business percentage ranges reflect overlap between the SUSB Enterprise Size ranges and the SBA size classifications.
2021 Proposal

- As directed by Executive Order 13990, this proposal will include comprehensive new source performance standards for methane and volatile organic compound (VOC) emissions and emission guidelines for methane emissions.
- The proposal will cover exploration and production, transmission, processing, and storage segments.
- New studies and data are available that may indicate the need for EPA to reevaluate the emissions sources considered since the 2015 OOO0a proposal.
- While the Executive Order directs EPA to issue proposals for both new and existing sources, this Panel is focused only on the NSPS because it directly regulates small entities, while the proposed emission guidelines will only provide requirements to states.
  - EPA may convene a separate SBAR Panel on the emission guidelines during development of a Federal Implementation Plan.
Scope of the 2021 Proposal

► Fugitive Emissions
► Centrifugal Compressors
► Reciprocating Compressors
► Pneumatic Controllers
► Pneumatic Pumps
► Equipment Leaks at Natural Gas Processing Plants
► Storage Vessels
► Well Completions
► Reporting and Recordkeeping
Fugitive Emissions (part 1 of 2)

► Applicability
  ► New, modified or reconstructed well sites
    • Well sites are modified when a new well is drilled or an existing well is hydraulically fractured or refractured
    • Exempts wellhead only well sites
  ► New, modified or reconstructed compressor stations
    • Compressor stations are modified when an additional compressor is installed or an existing compressor is replaced with one with greater horsepower
    • Excludes compressors at well sites or processing plants from the definition of a compressor station

► Current requirements
  ► Develop an emissions monitoring plan
  ► Monitoring can be done using optical gas imaging (OGI) or Method 21
  ► Monitoring surveys must be done semi-annually except for facilities on the Alaska North Slope, which have annual monitoring requirements
  ► Exempts low production wells (less than 15 barrels per day)
  ► Leaks must be repaired and resurveyed
  ► EPA has deemed that compliance with state programs in California, Colorado, Ohio, Pennsylvania, Texas, and Utah is equivalent to OOOOa, provided certain conditions are met
Potential control strategies

- Consider new technologies that may identify large emission events (e.g., aircraft, satellites) to target site-level monitoring
- Use site-level emissions to guide monitoring frequency (frequency based on different emission levels instead of production-based frequencies)

Unit-level cost estimates from selected regulatory options in OOOOa

<table>

<td>$3,087</td>
<td>$12,629</td>
<td>$2,632</td>
<td>$732</td>
</tr>
</tbody>
</table>

* Includes monitoring surveys, cost of repair and resurvey, recordkeeping and reporting costs, and the amortized capital cost over 8 years at 7 percent interest
Centrifugal Compressors

Current requirements
- Centrifugal compressors using wet seals must reduce emissions from the wet seal fluid degassing system by routing to a control device or process
- Control devices can include combustion control devices, flares, boilers, process heaters, thermal or catalytic vapor incinerators, and carbon adsorption systems
- Exempt compressors located at well sites

Potential control strategies
- Reevaluating the current requirements to determine if they continue to be the best system of emission reduction
- Considering whether applicability is appropriately defined

Unit-level cost estimates from selected regulatory options in OOOO and OOOOa

<table>

<td>$127,844</td>
<td>$41,558</td>
<td>$1,151</td>
</tr>
</tbody>
</table>

* Assumes a 7 percent interest rate over equipment lifetime
Reciprocating Compressors

- **Current requirements**
  - Replace rod packing every 26,000 hours or 36 months, or collect emissions under negative pressure and route to a process
  - Exempt compressors located at well sites

- **Potential control strategies**
  - Reevaluating the current requirements to determine if they continue to be the best system of emission reduction
  - Considering whether applicability is appropriately defined

- **Unit-level cost estimates from selected regulatory options in OOOO and OOOOa**

<table>

<td>$2,326</td>
<td>$3,846</td>
<td>$106</td>
</tr>
</tbody>
</table>

* Assumes a 7 percent interest rate over equipment lifetime
Pneumatic Controllers

► Current requirements
  ► Continuous bleed pneumatic controllers must be zero emissions at natural gas processing plants, and low bleed (<6 scf/hr) at all other locations
  ► Exempt controllers required for functional needs (e.g., response time, safety, positive actuation); however, these controllers have recordkeeping and reporting requirements

► Potential control strategies
  ► Reevaluating the current requirements to determine if they continue to be the best system of emission reduction
  ► Considering whether applicability is appropriately defined

► Unit-level cost estimates from selected regulatory options in OOOO and OOOOa

<td>$362</td>
<td>$10</td>
</tr>
</tbody>
</table>

* Assumes a 7 percent interest rate over equipment lifetime
Pneumatic Pumps

- **Current requirements**
  - Natural gas-driven diaphragm pumps must be zero emissions at natural gas processing plants
  - Pumps at well sites must route emissions to a control device or process, if one is available on site, unless it is technically infeasible
  - Exempt limited use pumps at well sites

- **Potential control strategies**
  - Reevaluating the current requirements to determine if they continue to be the best system of emission reduction
  - Considering whether applicability is appropriately defined

- **Unit-level cost estimates from selected regulatory options in OOOOa**

<table>

</tr>
</tbody>
</table>

* Assumes a 7 percent interest rate over equipment lifetime
Equipment Leaks at Natural Gas Processing Plants

Current requirements

- NSPS VV\text{a} Method 21 monitoring on components in VOC service (<10% by weight VOC) at frequencies based on component type (e.g., quarterly for valves)
- Repair leaks above 500 ppm

Potential control strategies

- NSPS VV\text{a} Method 21 or OGI program for all components

Unit-level cost estimates from selected regulatory options in OOOO

<table>

*Includes initial monitoring and setup, ongoing monitoring surveys, administrative and training costs, and assumes a 7 percent interest rate over equipment lifetime.

June 22, 2021
Storage Vessels

► Current requirements
  ► Storage vessels with a potential to emit (PTE) greater than 6 tons per year of VOC must route emissions to a control device or process
  ► Must determine PTE using the maximum average daily throughput - the earliest calculation of daily average throughput during the 30-day PTE evaluation period employing generally accepted methods
  ► Exempt storage vessels with a capacity greater than 100,000 gallons used to recycle water

► Potential control strategies
  ► Reevaluating the current requirements to determine if they continue to be the best system of emission reduction
  ► Considering whether applicability is appropriately defined

► Unit-level cost estimates from selected regulatory options in OOOO

June 22, 2021
Well Completions

► Current requirements
  ► Subcategory 1 (non-wildcat, non-delineation) wells must conduct a reduced emissions completion (REC) using a completion combustion device, and have a separator onsite during the flowback period of a well completion operation following hydraulic fracturing or refracturing
  ► Subcategory 2 (wildcat, delineation, or low pressure) wells must use a completion combustion device during a well completion operation following hydraulic fracturing or refracturing
  ► Heavy oil wells are exempt from well completion requirements

► Potential control strategies
  ► Reevaluating the current requirements to determine if they continue to be the best system of emission reduction
  ► Considering whether applicability is appropriately defined

► Unit-level cost estimates from selected regulatory options in OOOO and OOOOa

<table>

</tr>
</tbody>
</table>

*One-time event. Annual costs are assumed to be the same as capital costs.
The 2020 Technical Rule successfully reduced recordkeeping and reporting burden by streamlining and removing several requirements:

- Recordkeeping and reporting requirements for well completions
- Digital photo for each monitoring survey performed
- Number and type of fugitive emissions components or digital photo of fugitive emissions components that are not repaired during the monitoring survey
- Name or ID of operator
- Number and type of difficult-to-monitor and unsafe-to-monitor components
- Ambient temperature, sky conditions, and maximum wind speed
- Date of successful repair
- Type of instrument used for resurvey

This streamlining resulted in an annualized reduction of burden of approximately 30 percent for well sites and gathering and boosting stations.

EPA finalized the E-reporting template in April 2021

Other Federal Regulations

► Several federal agencies have regulations that impact oil and gas development, but we haven’t identified any overlap or conflict with OOOO and OOOOa
  ▶ Department of the Interior - Bureau of Land Management
  ▶ Department of Transportation - Pipeline and Hazard Materials Safety Administration
  ▶ Department of Energy - Federal Energy Regulatory Commission
► Are there other federal rules that apply to small businesses that may overlap with this action?
► Are there any other federal agencies that impact your business (e.g., Department of Labor – Occupational Safety and Health Administration requirements for equipment)?

Input Requested

- Is there any information that would improve our understanding of the number of small entities that could be affected by this action?
- What recommendations do you have for reducing recordkeeping and reporting burden on small businesses?
- Are there other federal rules that apply to small businesses that may overlap with this action?
- What can you tell us about the OOOOa control technologies, their costs, and their effectiveness at reducing emissions? Are there any other technical considerations we should be aware of?
- What are the characteristics of a small business that makes it different from a large business?
- What recommendations do you have for small business flexibilities?
- Do you have any other feedback for EPA?
How to comment

► To the extent possible, please provide specific data, costs, and actionable information on your experience with OOOOa or these control technologies
  ► Remember, you are the expert in your business!
► When providing specific data or information on impacts, please differentiate which rule (new source or existing source) your comments apply to
  ► While the Executive Order directs EPA to issue proposals for both new and existing sources, this Panel is focused only on the NSPS

Appendix
Capital Cost estimates from OOOO and OOOOa

- Centrifugal Compressors
  - Routing emissions to control device - $80,000 per compressor
  - Converting to dry seals - $89,000 per compressor

- Reciprocating Compressors
  - Rod packing replacement - $5,000 - $9,000 per compressor

- Pneumatic Controllers
  - Installing low bleed in place of high bleed - $200 per controller
  - Converting to instrument air - $13,000 - $95,000 per controller dependent on size, power supply needs, labor and other equipment
  - Installing mechanical and solar powered systems - $1,000 – $11,000 per controller
  - Enhanced maintenance – variable based on labor, time and location

- Natural Gas Processing Plants
  - NSPS VVa Method 21 program - $9,569 per processing plant
Capital Cost estimates from OOOO and OOOOa

► Pneumatic Pumps
  ► Converting to solar - $2,600 per pump
  ► Converting to electric - $2,000 - $6,000, plus $300 annually per pump
  ► Converting to instrument air - $11,000 - $80,000 per compressor, compressor size dependent on number of pumps, power supply needs, labor and other equipment
  ► Routing to control device - $6,000 (existing), $56,000 (new) per pump
  ► Routing to gas capture system - $6,000 (existing), $40,000 (new) per pump

► Storage Vessels
  ► Installing vapor recovery unit - $117,000 per storage vessel
  ► Installing combustor - $38,000 per storage vessel

► Well Completions
  ► Reduced Emissions Completion - $15,000 per completion
  ► Completion Combustion Device - $4,000 per completion
