Announcement: Webinar Postponed

The U.S. EPA Landfill Methane Outreach Program (LMOP) is notifying its Partners and other stakeholders that EPA's webinar, Innovative Organic Waste Management Projects, has been postponed—the revised date will be announced soon.

The registration page link below will continue to be active and accept registrants. If you have already registered for the event you will not need to re-register when the new date is announced.

The webinar slides and recording will be posted on EPA’s website after the event.

AND

EPA's Sustainable Materials Management Program

Rethinking how organic wastes are managed in the United States can achieve significant environmental, public health and economic benefits. When manure, organic materials and food wastes degrade naturally, they release methane - a potent greenhouse gas (GHG) that is 28 to 36 times more effective than carbon dioxide at trapping heat in the atmosphere over a 100-year period. However, management of organic wastes through anaerobic digestion offers a solution that will lower emissions of methane and non-methane organic compounds (NMOCs), reduce odors, minimize leachate generation and conserve landfill space.
Learn what EPA's Landfill Methane Outreach Program (LMOP), AgSTAR and Sustainable Materials Management programs are doing to help reduce methane emissions from landfills, manure and organic wastes. And hear from American Biogas Council's 2022 Biogas Industry Award Finalists and Recipients about their innovative projects and lessons learned along the way to developing successful projects and technologies.

A time for questions from the audience will follow the presentations.

There is no cost to participate in the webinar, but online registration is required – register online at zoomgov.com/webinar/register/WN_Arls71fSRJCL3bGhNp7ugA to receive a confirmation email containing information on how to join the webinar.

To request removal from this email list, please reply to this message. For further information or questions about LMOP, please do not reply to this email message, but rather visit the LMOP website. Thank you.
