Dear Dr. Tejada, Ms. Engleman-Lado, Ms. Dorka, Dr. Hoang & Ms. Garcia, (Cc: et al.),

In my legal/bureaucratic naivete I mistakenly thought that after long having put the issue of magico-religious mercury exposure to EPA's Office of Environmental Justice, and in particular, to Ms. Garcia and Dr. Tejada, and having no substantive response from them, that I ought to try my hand with EPA's Office of Civil Rights. I was evidently mis-taken, and am now once again, putting the issue, this time a very well defined and specific aspect of it, to the Office of Environmental Justice and External Civil Rights.

All the points made, and documents submitted to the OCR in my email of this morning are equally, in fact even more applicable to the OEJECR and the leadership of EPA R2.

By way of coincidence, Ms. Dorka, grew up in Union City, NJ, the site of the attached NJDEP's attached research, whose suppressed findings form the centerpiece of my civil rights complaint.

Another coincidence is that Dr. Hoang and I corresponded some years ago, in her role in the EJ Report of the NYC Mayor's Office, which she and her EJ associates omitted to mention the issue of magico-religious mercury contamination of Caribbean and Latino housing, as well as the larger environment, about which I had submitted copious documentation.

However, that aside, I am again submitting my Civil Rights and Environmental In-Justice concerns and accusations to you all, at the recommendation of Dr. Hunt, in the expectation that you will assess the facts, and act on them, in order to prevent the ongoing domestic mercury vapor exposure in Union City and West New York, NJ, as well as in similar Caribbean and Latino communities in the continental United States and especially in Puerto Rico.

I am formally requesting that the Office of Environmental Justice and External Civil Rights investigate my complaint and respond in a timely manner with *substantive findings*.

Sincerely yours,

(b)(6) Privacy, (b)(7)(C) Enf. Privacy

Subject: RE: 1: A CIVIL RIGHTS VIOLATION: OCCUPANTS OF APARTMENTS FOUND CONTAMINATED WITH MERCURY IGNORED BY EPA

Good afternoon, all,

(b)(6) Privacy, (b)(7)(C) Enf. Privacy, thank you for contacting EPA's Office of Civil Rights (OCR). OCR addresses civil rights employment issues of EPA employees and persons applying for employment at EPA. Because the issue you raised in your email to OCR is not an EPA employment related matter, OCR cannot address it.

I started to forward your concern to EPA's Office of Environmental Justice and External Civil Rights (OEJEER) and to Region 2. However, I noticed that in the email you sent to me and OCR Deputy Director Cynthia Darden you included leadership from OEJEER and Region 2. Moreover, in reviewing your communication to OCR, I observed that on February 13, 2023, OEJEER Deputy Assistant Administrator Matthew Tejada sent you an email regarding this matter. Nonetheless, I still wanted to reply to acknowledge receipt of your email.

In closing, I appreciate you reaching out to EPA, OCR regarding this matter. That said, OCR does not have jurisdiction to review this issue.

Sincerely,

JuanCarlos M. Hunt
Director, Office of Civil Rights
U.S. Environmental Protection Agency
1200 Pennsylvania Avenue, NW
Washington, DC 20460
Phone: 202-564-0077

From: (b)(6) Privacy, (b)(7)(C) Enf. Privacy

Dear Director Hunt & Deputy Director Darden,

I'm contacting the Office of Civil Rights, regarding a series of longstanding civil rights violations relating to elemental mercury contamination of primarily ethnically Caribbean and Latino homes, consequent to magico-religious / ritualistic / cultural mercury use; most specifically, and most problematically, the ritualistic sprinkling of elemental mercury on floors of homes, in unit weights of ~10 grams, frequently repeatedly

applied, in the (possibly misguided) belief, that elemental mercury attracts good and repels evil.

The EPA has been aware of these practices since I initially described them in the journal *Nature* in 1990 (attached), and despite having given lip-service to assessing and addressing them, from a *substantive* perspective, nothing has been done to assess the threat of mercury vapor inhalation, mostly at second-hand, and to protect these minority communities from their ongoing exposure, in particular to developmentally neurotoxic levels of mercury vapor in their homes. (attached: (b)(6) Privacy, (b)(7)(C) Enf. P LANCET NEURO corrected 06 16 14)

The magnitude of the problem can be seen from the attached 1996 study of ritualistic mercury sales in The Bronx, (NY ZAYAS & OZUAH 1996 AJPH); and elevated urinary mercury levels in Bronx children believed due to the ritualistic use of mercury (OZUAH ET AL AMBULATORY PEDS ART JAN FEB 03). Responding to this and other research, the ATSDR, in its March 1999 Toxicological Profile for Mercury (excerpts attached ATSDR TOX PROFILE1999 EXCERPTS) stated:

A unique exposure pathway that has received little research attention is the exposure to children from religious and ethnic uses in homes and cars or in remedies containing metallic mercury (ATSDR 1997; Johnson [in press]; (b)(6) Privacy, (b)(7)(C) Enf. P 1990, 1991). In some religious practices of Latin American or Caribbean origin, there are traditional rituals or remedies that involve mercury. These include intentional sprinkling of liquid elemental mercury on the floor, burning candles made with mercury, using mercury in baths, adding it to perfume, or wearing small containers of mercury around the neck for good luck. **There is an urgent need to obtain information on the levels of exposure from these practices to determine if children or adults are at risk.** Mercury vapor concentrations may be much higher after use during the winter months when the heat is turned on and the windows are closed, so data that reflect a variety of possible exposure scenarios are also needed. (p. 480)

As the data available from the aforementioned published studies prior to March 1999 made clear, there was significant ritualistic use of elemental mercury in representative Caribbean communities, and therefore, if the measurements that the ATSDR deemed “an urgent need” were to be made in such communities, there would be a virtual certainty that dwellings with mercury vapor levels at or above 20µgHg/m³, would be found. These contaminated dwellings would then have to be evacuated, precipitating intense media coverage, leading to the public becoming aware of their potential peril, and suggesting to concerned parents, and in particular, to parents-to-be, to visit their health care providers, requesting that they and their children be tested for elevated biomarker mercury levels, as they suspected that their homes were likely contaminated by current or historical ritualistic mercury spills. The number of individuals with elevated biomarker levels would snowball as more were found and the media would belatedly report.

To obviate this scenario, it *appears* that researchers at the New Jersey Department of Environmental Protection (NJDEP)'s Division of Science Research & Technology, (whose logo states that its role is “Linking Science to New Jersey’s Environmental Decision Making”), devised a clever, (albeit unethical) work-around of the ATSDR’s recommendations. Instead of measuring mercury vapor levels *inside* occupied dwelling units, they decided to measure vapor levels *outside*, in the unoccupied public hallways and vestibules of multi-family apartment buildings. They, and the IRB/s that vetted their research proposal, evidently were of the *opinion* that as no human subjects were *directly* involved, it would be acceptable practice that occupants of apartments emitting problematic levels of mercury vapor into hallways, need not be informed of their peril. In order to further reinforce this *misguided* and *unethical* NJDEP research design, the Office of Minority Health (OMH), of the New Jersey Department of Health (NJDOH), instructed the NJDEP researchers to keep their findings of elevated mercury vapor levels emanating from under the doors of apartments and into hallways from the occupants of those apartments!

This at the very least **appears to be a violation of the civil rights** of occupants of homes found to be contaminated by state agencies (NJDEP & NJDOH), as well as by the failure of oversight by the EPA, whose senior leadership was aware of this suppression of information, yet failed/refused to intervene and safeguard the health of the aforementioned occupants of mercury-contaminated apartments.

I am therefore formally requesting that the Office of Civil Rights investigate my complaint, and respond in a timely manner with *substantive* findings.

Sincerely yours,

(b)(6) Privacy, (b)(7)(C) Enf. Privacy

PS: I will be sending one or more numbered emails with follow-up and background information on EPA's

substantive suppression of this issue, over a period of >30 years.

=====
=====
=====

Was it a **violation of the Precautionary Principle**, for the New Jersey Department of Environmental Protection (NJDEP), having identified apartments in Union City, NJ, and West New York, NJ, emitting problematic levels of mercury vapor into their common hallways and vestibules, yet not inform occupants of the health risks this posed to them, their fetuses, infants and children?

Was it **antithetical to the principles of Environmental Justice**, for NJDEP researchers, having located apartments emitting problematic levels of mercury vapor into public hallways, failing to inform occupant/s that their homes mercury contamination posed a significant health risk?

Was it a **violation of professional ethics**, for the NJDEP researchers having identified apartments emitting problematic levels of mercury vapor, but not informing occupant/s of those mercury-contaminated apartments?

Was it simply **immoral**, for these researchers to have been aware of apartments emitting problematic levels of mercury vapor, yet not informing occupant/s of the health threat this presented?

Was it a **civil rights violation / criminal act**, for a team of NJDEP researchers, employed to measure mercury vapor levels in occupied apartment buildings, who either *prior to* their locating numerous apartments emitting problematic levels of mercury vapor, *or after* locating such contaminated apartments, were specifically instructed by the Office of Minority Health (OMH) of the New Jersey Department of Health (NJDOH) not to notify occupants of mercury-contaminated apartments, and not offer to have their apartments mercury vapor levels measured, and their health status ascertained.

Was it a **civil rights violation / criminal act**, for an official or officials of the OMH, to order the NJDEP researchers to refrain from informing occupants of their apartment's elevated, and likely dangerous, mercury vapor levels?

Senior leadership of the Environmental Protection Agency, Region 2 (EPA R2), specifically Regional Administrator Judith Enck, and Mark Maddaloni, DPH, senior

toxicologist and Regional Risk Assessment Coordinator in the Office of the Regional Administrator for EPA R 2) were aware of the aforementioned

NJDEP findings of elevated apartment mercury vapor levels, and of the failure of the NJDEP and NJDOH to inform occupants, and assess their

indoor apartment mercury vapor levels. Did their **individual and collective indifference** to ensuring that the health of the occupants of said

apartments was protected by acting to notify occupants of elevated mercury vapor levels, offering to test their dwellings for elevated mercury vapor

levels, and when necessary to decontaminate dwellings found with actionable levels (evacuation indoor Hg⁰ vapor level 20µgHg/m³, reoccupation

level 1µgHg/m³); fall into any of the aforementioned **violations of acceptable conduct** and/or **civil rights violations** of individuals in their position?

=====

As is evident from the documentation below, EPA has been aware of the mercury contamination of housing for several decades, yet has made no *substantive* effort to assess and address it.
