**Subject: Data Validation Report
E Palestine Site - ER
EPA Contract No.: 68HE0519D0005
Task Order/Task Order Line Item No.: 68HE0520F0032/0001EB201
Document Tracking No. 1698**

Dear Mr. Peters:

Tetra Tech, Inc. (Tetra Tech) is submitting this data validation report for six soil samples (including one field duplicate pair) collected at the E Palestine Site. The samples were collected on February 22, 2023, and were analyzed for volatile organic compounds (VOC) SW-846 by EPA method 8260D; semivolatile organic compounds (SVOC) SW-846 by EPA method 8270E; diesel range organics/oil range organics (DRO/ORO) SW-846 by EPA method 8015D; polychlorinated biphenyls (PCBs) SW-846 by EPA method 8082A; metals SW-846 by EPA method 6010D; and mercury SW-846 by EPA method 7471B by Eurofins Environment Testing of Barberton, Ohio. The final laboratory data package was received on March 10, 2023.

Analytical data were evaluated in general accordance with the Tetra Tech *Quality Assurance Project Plan, Superfund Technical Assessment and Response Team (START V), EPA Region 5, Revision 4* (August 2022), the *National Functional Guidelines (NFG) for Organic Superfund Methods Data Review* (November 2020), and the *EPA NFG for Inorganic Superfund Methods Data Review* (November 2020).

No rejection of results was required for this data package. The results may be used as qualified based on the findings of this validation effort.

If you have any questions regarding this data validation report, please call me at (312) 201-7435.

Sincerely,

A handwritten signature in black ink that reads 'Taylor M. Cooper'.

INTRODUCTION

This checklist summarizes the Stage 2A validation performed on the subject laboratory report, in accordance with the U.S. Environmental Protection Agency (EPA) *Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use* (January 2009). Analytical data were evaluated in general accordance with the Tetra Tech *Quality Assurance Project Plan, Superfund Technical Assessment and Response Team (START V), EPA Region 5, Revision 4* (August 2022), the EPA *National Functional Guidelines (NFG) for Organic Superfund Methods Data Review* (November 2020), and the EPA *NFGs for Inorganic Superfund Methods Data Review* (November 2020).

OVERALL EVALUATION

No rejection of results was required for this data package. The results may be used as qualified based on the findings of this validation effort.

Data completeness:

| Within Criteria | Exceedance/Notes |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| N | Sample EPD-SA-TB01-022223 was on the chain of custody but did not have results reported. The lab was contacted, and they indicated that the sample could not be analyzed because of matrix (mixed water and methanol). No qualifications were applied. |

**DATA VALIDATION CHECKLIST – STAGE 2A
EPA REGION 5 START CONTRACT**

Sample preservation, receipt, and holding times:

| Within Criteria | Exceedance/Notes |
|-----------------|------------------|
| Y | |

Method blanks:

| Within Criteria | Exceedance/Notes |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| N | <p>Metals 6010D: MB 240-563192/1-A contained 153 milligrams per kilogram (mg/Kg) of sodium. Samples EPD-SA-SL01-022223, EPD-SA-SL02-022223, EPD-SA-SL03-022223, EPD-SA-SL04-022223, and EPD-SA-SL06-022223 had detections for sodium between the method detection limit (MDL) and reporting limit (RL), therefore, sodium results for samples EPD-SA-SL01-022223, EPD-SA-SL02-022223, EPD-SA-SL03-022223, EPD-SA-SL04-022223, and EPD-SA-SL06-022223 were raised to the RL and qualified as non-detect (flagged U).</p> |

Field blanks:

| Within Criteria | Exceedance/Notes |
|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NA | <p>Sample EPD-SA-TB01-022223 was on the chain of custody but did not have results reported. The lab was contacted, and they indicated that the sample could not be analyzed because of matrix (mixed water and methanol). No qualifications were applied.</p> |

Surrogates and labeled compounds:

| Within Criteria | Exceedance/Notes |
|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| N | <p>SVOC 8082A: The percent recovery (%R) for surrogate decachlorobiphenyl (DCB) was outside the QAPP acceptance criteria for sample EPD-SA-SL01-022223, therefore, the detected sample result for Aroclor-1260 was qualified as estimated, possibly biased high (flagged J+).</p> |

**DATA VALIDATION CHECKLIST – STAGE 2A
EPA REGION 5 START CONTRACT**

MS/MSDs:

| Within Criteria | Exceedance/Notes |
|-----------------|------------------|
| NA | |

Laboratory duplicates:

| Within Criteria | Exceedance/Notes |
|-----------------|------------------|
| NA | |

Field duplicates:

| Within Criteria | Exceedance/Notes |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| N | <p><u>Metals 6010D:</u> The field duplicate sample EPD-SA-SL06-022223 exceeded the QAPP acceptance limit for antimony, cadmium, calcium, chromium, cobalt, copper, iron, lead, manganese, nickel, and zinc. Results for the parent sample EPD-SA-SL05-022223 and duplicate sample EPD-SA-SL06-022223 were qualified as estimated (flagged J).</p> <p><u>Mercury 7471B:</u> The field duplicate sample EPD-SA-SL06-022223 exceeded the QAPP acceptance limit for mercury. Results for the parent sample EPD-SA-SL05-022223 and duplicate sample EPD-SA-SL06-022223 were qualified as estimated (flagged J).</p> <p><u>ORO 8015D:</u> The field duplicate sample EPD-SA-SL06-022223 exceeded the QAPP acceptance limit for ORO. Results for the parent sample EPD-SA-SL05-022223 and duplicate sample EPD-SA-SL06-022223 were qualified as estimated (flagged J).</p> <p><u>PCBs 8082A:</u> The field duplicate sample EPD-SA-SL06-022223 exceeded the QAPP acceptance limit for Aroclor-1260. Results for the parent sample EPD-SA-SL05-022223 and duplicate sample EPD-SA-SL06-022223 were qualified as estimated (flagged UJ or J).</p> |

**DATA VALIDATION CHECKLIST – STAGE 2A
EPA REGION 5 START CONTRACT**

Field duplicates (continued):

| Within Criteria | Exceedance/Notes |
|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| N | <p><u>SVOCs 8270E:</u> The field duplicate sample EPD-SA-SL06-022223 exceeded the QAPP acceptance limit for 2-methylnaphthalene, acenaphthene, benzo[a]anthracene, benzo[a]pyrene, benzo[b]fluoranthene, benzo [g,h,i]perylene, benzo[k]fluoranthese, bis(2-ethylhexyl)phthalate, butyl benzyl phthalate, chrysene, dibenz(a,h)anthracene, dibenzofuran, indeno [1,2,3-cd]pyrene, naphthalene, and pyrene. Results for the parent sample EPD-SA-SL05-022223 and duplicate sample EPD-SA-SL06-022223 were qualified as estimated (flagged UJ or J).</p> |

LCSs/LCSDs:

| Within Criteria | Exceedance/Notes |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| N | <p><u>VOC 8260D:</u> LCSD 410-347997/6 exceeded the laboratory acceptance criteria for acetone. Associated sample EPD-SA-SL04-022223 result was qualified as estimated (flagged J).</p> |

Sample dilutions:

| Within Criteria | Exceedance/Notes |
|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Y | <p><u>SVOC 8270E:</u> Sample EPD-SA-SL01-022223 and EPD-SA-SL03-022223 were analyzed and reported at a 2.5-fold dilution for all analytes. Sample EPD-SA-SL02-022223 and EPD-SA-SL04-022223 were analyzed and reported at a 4-fold dilution for all analytes.</p> <p><u>PCBs 8082A:</u> Sample EPD-SA-SL01-022223 was analyzed and reported at a 2-fold dilution for all analytes. Sample EPD-SA-SL02-022223 was analyzed and reported at a 10-fold dilution for all analytes.</p> |

**DATA VALIDATION CHECKLIST – STAGE 2A
EPA REGION 5 START CONTRACT**

Sample dilutions (continued):

| Within Criteria | Exceedance/Notes |
|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Y | <p><u>Metals 6010D:</u> Sample EPD-SA-SL01-022223 and EPD-SA-SL06-022223 was analyzed and reported at a 5-fold dilution for cadmium, copper, iron, manganese, nickel, antimony, vanadium, zinc, arsenic, lead, selenium, and thallium. Sample EPD-SA-SL02-022223 and EPD-SA-SL03-022223 were analyzed and reported at a 5-fold dilution for cadmium, copper, iron, manganese, nickel, antimony, vanadium, zinc, lead, selenium, and thallium.</p> <p><u>Mercury 7471B:</u> Sample EPD-SA-SL02-022223 was analyzed and reported at a 10-fold dilution for mercury.</p> |

Re-extraction and reanalysis:

| Within Criteria | Exceedance/Notes |
|-----------------|------------------|
| NA | |

MDLs/RLs:

| Within Criteria | Exceedance/Notes |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Y | The non-detect results were reported at the MDL values in the electronic data deliverable. Detections between the MDL and the RL were flagged “J” by the laboratory. Non-detect sample results were raised to the RL in the attached data table. |

Tentatively identified compounds:

| Within Criteria | Exceedance/Notes |
|-----------------|------------------|
| NA | |

Other [None]:

| Within Criteria | Exceedance/Notes |
|--------------------|------------------|
| NA | |

Overall Qualifications:

See results summary pages attached for changes to the laboratory qualifiers based upon this validation. The following is a list of qualifiers and definitions that may be used for the validation of this data package:

| | |
|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| J | The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample. |
| J+ | The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample and may be biased high. |
| J- | The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample and may be biased low. |
| NJ | The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated value is the approximate concentration of the analyte in the sample. |
| R | The sample result is rejected as unusable due to serious deficiencies in one or more quality control criteria. The analyte may or may not be present in the sample. |
| U | The analyte was analyzed for, but was not detected at or above the associated value (reporting limit). |
| UJ | The analyte was analyzed for, but was not detected at or above the associated value (reporting limit), which is considered approximate due to deficiencies in one or more quality control criteria. |
