**Subject: Data Validation Reports  
E Palestine Site - ER  
EPA Contract No.: 68HE0519D0005  
Task Order/Task Order Line Item No.: 68HE0520F0032/0001EB201  
Document Tracking No. 1661**

Dear Mr. Peters:

Tetra Tech, Inc. (Tetra Tech) is submitting these data validation reports for thirteen air samples (including a field duplicate sample) collected at the E Palestine site. The samples were collected on February 4-6 & 8-13, 2023, and were analyzed for VOCs by ALS Environmental. The final laboratory data package was received on February 17, 2023.

Analytical data were evaluated in general accordance with the Tetra Tech *Quality Assurance Project Plan, Superfund Technical Assessment and Response Team (START V), EPA Region 5, Revision 4* (August 2022), and the *National Functional Guidelines (NFG) for Organic Superfund Methods Data Review* (November 2020).

No rejection of results was required for these data packages. The results may be used as qualified based on the findings of this validation effort.

If you have any questions regarding this data validation report, please call me at (770) 598-1808.

Sincerely,

A handwritten signature in black ink that appears to read "Shanna Vasser".

Shanna Vasser, PE

## INTRODUCTION

This checklist summarizes the Stage 2A validation performed on the subject laboratory report, in accordance with the U.S. Environmental Protection Agency (EPA) *Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use* (January 2009). Analytical data were evaluated in general accordance with the Tetra Tech *Quality Assurance Project Plan, Superfund Technical Assessment and Response Team (START V), EPA Region 5, Revision 4* (August 2022), and the EPA *National Functional Guidelines (NFG) for Organic Superfund Methods Data Review* (November 2020).

## OVERALL EVALUATION

No rejection of data was required for this data package. The data can be used with the qualifications indicated in this checklist.

### Data completeness:

<b>Within Criteria</b>	<b>Exceedance/Notes</b>
N	TO-15 SIM results are reported in units of $\mu\text{g}/\text{m}^3$ and ppbV in the analytical data package, however, these results are only reported in units of $\mu\text{g}/\text{m}^3$ in the EDD. No qualifications are required.

**DATA VALIDATION CHECKLIST – STAGE 2A**  
**EPA REGION 5 START CONTRACT**

**Sample preservation, receipt, and holding times:**

Within Criteria	Exceedance/Notes
N	<p>The ending field vacuum pressure listed on the chain-of-custody (COC) form for EPD-DW-B01-020623 was -14" Hg. This large vacuum pressure suggests that the canister filled more slowly than intended over the allotted time, therefore the sample volume is lower than planned. The lower volume may have affected analytical sensitivity (possibly leading to elevated MDL and RL values). Also, the sample may not be representative of the full collection period.</p> <p>There were no custody seals on the canisters/shipping containers. No qualifications are required.</p>

**Method blanks:**

Within Criteria	Exceedance/Notes
Y	

**Field blanks:**

Within Criteria	Exceedance/Notes
NA	

**Surrogates and labeled compounds:**

Within Criteria	Exceedance/Notes
N	TO-15 SIM: Bromofluorobenzene (BFB) was recovered below acceptance criteria in both field samples. All results were qualified as estimated with potential low bias (flagged J-/UJ) in both samples.

**MS/MSDs:**

Within Criteria	Exceedance/Notes
NA	

**DATA VALIDATION CHECKLIST – STAGE 2A**  
**EPA REGION 5 START CONTRACT**

**Laboratory duplicates:**

Within Criteria	Exceedance/Notes
NA	

**Field duplicates:**

Within Criteria	Exceedance/Notes
NA	

**LCSs/LCSDs:**

Within Criteria	Exceedance/Notes
Y	

**Sample dilutions:**

Within Criteria	Exceedance/Notes
Y	Canister dilution factor for EPD-DW-B01-020623 was 2.18 and canister dilution factor for EPD-SR01-020623 was 1.31.

**Re-extraction and reanalysis:**

Within Criteria	Exceedance/Notes
NA	

**MDLs/RRLs:**

Within Criteria	Exceedance/Notes
Y	Detections between the method detection limit (MDL) and reporting limit (RL) were reported and qualified as estimated (flagged J) by the laboratory.

**DATA VALIDATION CHECKLIST – STAGE 2A**  
**EPA REGION 5 START CONTRACT**

**Tentatively identified compounds:**

Within Criteria	Exceedance/Notes
Y	Several tentatively identified compounds (TICs) were detected in both samples. The known TICs were qualified as tentatively identified (flagged NJ). 2-butoxyethanol and 2-ethylhexyl acrylate in both samples and butyl ester-2-propenoic acid in EPD-SR01-020623 were reported as not detected and qualified as manually searched for, but not found in the sample (flagged U, NF).

**Other [None]:**

Within Criteria	Exceedance/Notes
NA	

**Overall Qualifications:**

See results summary pages attached for changes to the laboratory qualifiers based upon this validation. The following is a list of qualifiers and definitions that may be used for the validation of this data package:

J	The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample.
J+	The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample and may be biased high.
J-	The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample and may be biased low.
NF	The tentatively identified compound was manually searched for but was not found in the sample.
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated value is the approximate concentration of the analyte in the sample.
R	The sample result is rejected as unusable due to serious deficiencies in one or more quality control criteria. The analyte may or may not be present in the sample.
U	The analyte was analyzed for but was not detected at or above the associated value (reporting limit).
UJ	The analyte was analyzed for but was not detected at or above the associated value (reporting limit), which is considered approximate due to deficiencies in one or more quality control criteria.

## INTRODUCTION

This checklist summarizes the Stage 2A validation performed on the subject laboratory report, in accordance with the U.S. Environmental Protection Agency (EPA) *Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use* (January 2009). Analytical data were evaluated in general accordance with the Tetra Tech *Quality Assurance Project Plan, Superfund Technical Assessment and Response Team (START V), EPA Region 5, Revision 4* (August 2022) and the EPA *National Functional Guidelines (NFG) for Organic Superfund Methods Data Review* (November 2020).

## OVERALL EVALUATION

No rejection of data was required for this data package. The data can be used with the qualifications indicated in this checklist.

### Data completeness:

<b>Within Criteria</b>	<b>Exceedance/Notes</b>
N	TO-15 SIM results are reported in units of $\mu\text{g}/\text{m}^3$ and ppbV in the analytical data package, however, these results are only reported in units of $\mu\text{g}/\text{m}^3$ in the EDD. No qualifications are required.

**DATA VALIDATION CHECKLIST – STAGE 2A**  
**EPA REGION 5 START CONTRACT**

**Sample preservation, receipt, and holding times:**

Within Criteria	Exceedance/Notes
N	<p>The ending field-measured canister pressures listed on the chain-of-custody (COC) form were (-3.5" Hg) for EPD-MUNICIPALOFFICE-02042023 and (-2" Hg) for EPD-SR01-230204 (slight vacuum pressures), while canister pressures measured by the laboratory upon receipt were 0.27 psig (0.55" Hg) for EPD-SR01-230204 and 0.29 psig (0.59" Hg) for EPD-MUNICIPALOFFICE-02042023 (slight positive pressures). These pressure discrepancies suggest that either one or more of the pressure gauges used were inaccurate or there is the possibility of canister leaks. Typically, the field gauges tend to be less accurate than lab gauges. If it is assumed that the field gauges were less accurate than the laboratory gauges, then the pressure data collected by the laboratory upon canister receipt suggest that the canisters may have filled more quickly than intended and may have filled up before the end of the intended sampling period. Because it cannot be known when during the sampling period the canisters filled completely, the samples may not be representative of the matrix conditions over the entire sampling period, and the analytical results for the samples should be used with this in mind. If all gauges were measuring pressure accurately, the data suggests the possibility that the canisters had leaks that allowed them to fill up to atmospheric pressure between the end of the sampling event and the time the canisters arrived at the lab. Such leaks could have contaminated, or in the least, diluted the samples with air unintended for sampling. Under either of these circumstances, these sample results should be used with caution because the results may not be representative of sampling conditions over the intended sampling period.</p> <p>There was no custody seal on the sampling/shipping container(s). No qualifications were required.</p>

**Method blanks:**

Within Criteria	Exceedance/Notes
Y	

**Field blanks:**

Within Criteria	Exceedance/Notes
NA	

**DATA VALIDATION CHECKLIST – STAGE 2A**  
**EPA REGION 5 START CONTRACT**

**Surrogates and labeled compounds:**

Within Criteria	Exceedance/Notes
Y	

**MS/MSDs:**

Within Criteria	Exceedance/Notes

**Laboratory duplicates:**

Within Criteria	Exceedance/Notes
NA	

**Field duplicates:**

Within Criteria	Exceedance/Notes
NA	

**LCSs/LCSDs:**

Within Criteria	Exceedance/Notes
Y	

**Sample dilutions:**

Within Criteria	Exceedance/Notes
Y	Canister dilution factor for both samples was 1.23. In EPD-SR01-230204, m+p-xylene was reported from a ten times dilution. All other analytes were reported undiluted.

**DATA VALIDATION CHECKLIST – STAGE 2A**  
**EPA REGION 5 START CONTRACT**

**Re-extraction and reanalysis:**

Within Criteria	Exceedance/Notes
NA	

**MDLs/RRLs:**

Within Criteria	Exceedance/Notes
Y	Detections between the method detection limit (MDL) and reporting limit (RL) were reported and qualified as estimated (flagged J) by the laboratory.

**Tentatively identified compounds:**

Within Criteria	Exceedance/Notes
Y	Several tentatively identified compounds (TICs) were detected in both samples. The known TICs were qualified as tentatively identified (flagged NJ). The unknown TIC detected in EPD-SR01-230204 was qualified as estimated (flagged J). In both samples, 2-butoxyethanol and 2-ethylhexyl acrylate were reported as nondetect and qualified as searched for, but not found in the sample (flagged U, NF).

**Other [None]:**

Within Criteria	Exceedance/Notes
NA	

**DATA VALIDATION CHECKLIST – STAGE 2A**  
**EPA REGION 5 START CONTRACT**

**Overall Qualifications:**

See results summary pages attached for changes to the laboratory qualifiers based upon this validation. The following is a list of qualifiers and definitions that may be used for the validation of this data package:

J	The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample.
J+	The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample and may be biased high.
J-	The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample and may be biased low.
NF	The tentatively identified compound was manually searched for but was not found in the sample.
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated value is the approximate concentration of the analyte in the sample.
R	The sample result is rejected as unusable due to serious deficiencies in one or more quality control criteria. The analyte may or may not be present in the sample.
U	The analyte was analyzed for but was not detected at or above the associated value (reporting limit).
UJ	The analyte was analyzed for but was not detected at or above the associated value (reporting limit), which is considered approximate due to deficiencies in one or more quality control criteria.

## INTRODUCTION

This checklist summarizes the Stage 2A validation performed on the subject laboratory report, in accordance with the U.S. Environmental Protection Agency (EPA) *Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use* (January 2009). Analytical data were evaluated in general accordance with the Tetra Tech *Quality Assurance Project Plan, Superfund Technical Assessment and Response Team (START V), EPA Region 5, Revision 4* (August 2022), and the EPA *National Functional Guidelines (NFG) for Organic Superfund Methods Data Review* (November 2020).

## OVERALL EVALUATION

No rejection of data was required for this data package. The data can be used with the qualifications indicated in this checklist.

### Data completeness:

Within Criteria	Exceedance/Notes
N	TO-15 SIM results are reported in units of $\mu\text{g}/\text{m}^3$ and ppbV in the analytical data package; however, the results are only reported in units of $\mu\text{g}/\text{m}^3$ in the EDD. No qualifications are required.

### Sample preservation, receipt, and holding times:

Within Criteria	Exceedance/Notes
Y	There was no custody seal on the container. No qualifications are required.

**DATA VALIDATION CHECKLIST – STAGE 2A**  
**EPA REGION 5 START CONTRACT**

**Method blanks:**

Within Criteria	Exceedance/Notes
Y	

**Field blanks:**

Within Criteria	Exceedance/Notes
NA	

**Surrogates and labeled compounds:**

Within Criteria	Exceedance/Notes
N	TO-15 SIM: Bromofluorobenzene (BFB) was recovered below acceptance criteria in EPD-SA-01-020623. All results were qualified as estimated with potential low bias (flagged J-/UJ).

**MS/MSDs:**

Within Criteria	Exceedance/Notes
NA	

**Laboratory duplicates:**

Within Criteria	Exceedance/Notes
NA	

**Field duplicates:**

Within Criteria	Exceedance/Notes
NA	

**DATA VALIDATION CHECKLIST – STAGE 2A**  
**EPA REGION 5 START CONTRACT**

**LCSs/LCSDs:**

Within Criteria	Exceedance/Notes
Y	

**Sample dilutions:**

Within Criteria	Exceedance/Notes
Y	Canister dilution factor for EPD-SA-01-020623 was 1.47.

**Re-extraction and reanalysis:**

Within Criteria	Exceedance/Notes
NA	

**MDLs/RRLs:**

Within Criteria	Exceedance/Notes
Y	Detections between the method detection limit (MDL) and reporting limit (RL) were reported and qualified as estimated (flagged J) by the laboratory.

**Tentatively identified compounds:**

Within Criteria	Exceedance/Notes
Y	Several tentatively identified compounds (TICs) were detected in EPD-SA-01-020623. The known TICs were qualified as tentatively identified (flagged NJ). The unknown TIC was qualified as estimated (flagged J). 2-Butoxyethanol and 2-ethylhexyl acrylate were reported as nondetect and qualified as searched for, but not found in the sample (flagged U, NF).

**Other [specify]:**

Within Criteria	Exceedance/Notes
Y	

**DATA VALIDATION CHECKLIST – STAGE 2A**  
**EPA REGION 5 START CONTRACT**

**Overall Qualifications:**

See results summary pages attached for changes to the laboratory qualifiers based upon this validation. The following is a list of qualifiers and definitions that may be used for the validation of this data package:

J	The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample.
J+	The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample and may be biased high.
J-	The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample and may be biased low.
NF	The tentatively identified compound was manually searched for but was not found in the sample.
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated value is the approximate concentration of the analyte in the sample.
R	The sample result is rejected as unusable due to serious deficiencies in one or more quality control criteria. The analyte may or may not be present in the sample.
U	The analyte was analyzed for but was not detected at or above the associated value (reporting limit).
UJ	The analyte was analyzed for but was not detected at or above the associated value (reporting limit), which is considered approximate due to deficiencies in one or more quality control criteria.

## INTRODUCTION

This checklist summarizes the Stage 2A validation performed on the subject laboratory report, in accordance with the U.S. Environmental Protection Agency (EPA) *Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use* (January 2009). Analytical data were evaluated in general accordance with the Tetra Tech *Quality Assurance Project Plan, Superfund Technical Assessment and Response Team (START V), EPA Region 5, Revision 4* (August 2022), and the EPA *National Functional Guidelines (NFG) for Organic Superfund Methods Data Review* (November 2020).

## OVERALL EVALUATION

No rejection of data was required for this data package. The data can be used with the qualifications indicated in this checklist.

### Data completeness:

<b>Within Criteria</b>	<b>Exceedance/Notes</b>
N	TO-15 SIM results are reported in units of $\mu\text{g}/\text{m}^3$ and ppbV in the analytical data package; however, the results are only reported in units of $\mu\text{g}/\text{m}^3$ in the EDD. No qualifications are required.

### Sample preservation, receipt, and holding times:

<b>Within Criteria</b>	<b>Exceedance/Notes</b>
N	There was no custody seal on the container. No qualifications are required.

**DATA VALIDATION CHECKLIST – STAGE 2A**  
**EPA REGION 5 START CONTRACT**

**Method blanks:**

Within Criteria	Exceedance/Notes
N	TO-15 SIM: Method blank P230213-MB contained 1,2,4-Trichlorobenzene at 0.026 µg/m³. 1,2,4-Trichlorobenzene result in EPD-WA-01-020723 was qualified as nondetect (flagged U) at the reporting limit.

**Field blanks:**

Within Criteria	Exceedance/Notes
NA	

**Surrogates and labeled compounds:**

Within Criteria	Exceedance/Notes
Y	

**MS/MSDs:**

Within Criteria	Exceedance/Notes
NA	

**Laboratory duplicates:**

Within Criteria	Exceedance/Notes
Y	

**Field duplicates:**

Within Criteria	Exceedance/Notes
NA	

**DATA VALIDATION CHECKLIST – STAGE 2A**  
**EPA REGION 5 START CONTRACT**

**LCSs/LCSDs:**

Within Criteria	Exceedance/Notes
N	TO-15 SIM: High LCS and LCSD percent recoveries of acrolein, 1,2-dichloroethane, carbon tetrachloride, and cis-1,3-dichloropropene. Acrolein, 1,2-dichloroethane, and carbon tetrachloride results in all three samples were qualified as estimated with possible high bias (flagged J+). Associated cis-1,3-dichloropropene results were nondetect; therefore, no qualification required.

**Sample dilutions:**

Within Criteria	Exceedance/Notes
Y	Canister dilution factor for EPD-WA-01-020723 was 1.32. Canister dilution factor for EPD-WA-01-020823 was 1.63. Canister dilution factor for EPD-WA-01-020923 was 1.29.

**Re-extraction and reanalysis:**

Within Criteria	Exceedance/Notes
Y	

**MDLs/RRLs:**

Within Criteria	Exceedance/Notes
Y	Detections between the method detection limit (MDL) and reporting limit (RL) were reported and qualified as estimated (flagged J) by the laboratory.

**DATA VALIDATION CHECKLIST – STAGE 2A**  
**EPA REGION 5 START CONTRACT**

**Tentatively identified compounds:**

Within Criteria	Exceedance/Notes
Y	<p>Several tentatively identified compounds (TICs) were detected in all three samples. The known TICs were qualified as tentatively identified (flagged NJ). 2-Butoxyethanol and 2-ethylhexyl acrylate in all three samples and butyl ester-2-propenoic acid in EPD-WA-01-020823 and EPD-WA-01-020923 were reported as nondetect and qualified as searched for, but not found in the sample (flagged U, NF).</p> <p>Sulfur dioxide was tentatively identified in EPD-WA-01-020823. Since EPA Method TO-15 is not an appropriate method for quantifying sulfur dioxide, the laboratory qualified the result as probably biased low. The sulfur dioxide result in EPD-WA-01-020823 was qualified as tentatively identified and possibly biased low (flagged NJ-).</p>

**Other [None]:**

Within Criteria	Exceedance/Notes
NA	

**Overall Qualifications:**

See results summary pages attached for changes to the laboratory qualifiers based upon this validation. The following is a list of qualifiers and definitions that may be used for the validation of this data package:

J	The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample.
J+	The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample and may be biased high.
J-	The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample and may be biased low.
NF	The tentatively identified compound was manually searched for but was not found in the sample.
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated value is the approximate concentration of the analyte in the sample.
NJ-	The tentatively identified compound result is probably biased low because TO-15 is not an appropriate method for quantifying it.
R	The sample result is rejected as unusable due to serious deficiencies in one or more quality control criteria. The analyte may or may not be present in the sample.
U	The analyte was analyzed for, but was not detected at or above the associated value (reporting limit).
UJ	The analyte was analyzed for, but was not detected at or above the associated value (reporting limit), which is considered approximate due to deficiencies in one or more quality control criteria.

## INTRODUCTION

This checklist summarizes the Stage 2A validation performed on the subject laboratory report, in accordance with the U.S. Environmental Protection Agency (EPA) *Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use* (January 2009). Analytical data were evaluated in general accordance with the Tetra Tech *Quality Assurance Project Plan, Superfund Technical Assessment and Response Team (START V), EPA Region 5, Revision 4* (August 2022), and the EPA *National Functional Guidelines (NFG) for Organic Superfund Methods Data Review* (November 2020).

## OVERALL EVALUATION

No rejection of data was required for this data package. The data can be used with the qualifications indicated in this checklist.

### Data completeness:

<b>Within Criteria</b>	<b>Exceedance/Notes</b>
N	<p>TO-15 SIM results are reported in units of <math>\mu\text{g}/\text{m}^3</math> and ppbV in the analytical data package; however, these results were only reported in units <math>\mu\text{g}/\text{m}^3</math> in the EDD. No qualifications are required.</p> <p>The laboratory noted that EPD-WA-02-021123 and EPD-WA-01-021123 were collected using canisters that were batch-certified for method TO-15 scan and not TO-15 SIM. The results should be utilized accordingly.</p>

**DATA VALIDATION CHECKLIST – STAGE 2A**  
**EPA REGION 5 START CONTRACT**

**Sample preservation, receipt, and holding times:**

Within Criteria	Exceedance/Notes
N	<p>The ending field-measured canister pressure listed on the chain-of-custody (COC) form for EPD-WA-01-021023 is (-2" Hg) (slight vacuum pressure), while the canister pressure measured by the laboratory upon receipt is 0.31 psig (0.63" Hg) for EPD-WA-01-021023 (slight positive pressure). This pressure discrepancy suggests that either one or more of the pressure gauges used were inaccurate or there is the possibility of canister leaks. Typically, the field gauges tend to be less accurate than lab gauges. If it is assumed that the field gauge was less accurate than the laboratory gauge, then the pressure data collected by the laboratory upon canister receipt suggests that the canister may have filled more quickly than intended and may have filled up before the end of the intended sampling period. Because it cannot be known when during the sampling period the canister filled completely, the sample may not be representative of the matrix conditions over the entire sampling period, and the analytical results for the sample should be used with this in mind. If both gauges were measuring pressure accurately, the data suggests the possibility that the canister had a leak that allowed it to fill up to atmospheric pressure between the end of the sampling event and the time the canister arrived at the lab. Such a leak could have contaminated, or in the least, diluted the sample with air unintended for sampling. Under either of these circumstances, this sample results should be used with caution because the results may not be representative of sampling conditions over the intended sampling period.</p> <p>There were no custody seals on the sample/shipping containers. No qualifications were required.</p>

**Method blanks:**

Within Criteria	Exceedance/Notes
Y	

**Field blanks:**

Within Criteria	Exceedance/Notes
NA	

**Surrogates and labeled compounds:**

Within Criteria	Exceedance/Notes
Y	

**DATA VALIDATION CHECKLIST – STAGE 2A**  
**EPA REGION 5 START CONTRACT**

**MS/MSDs:**

Within Criteria	Exceedance/Notes
NA	

**Laboratory duplicates:**

Within Criteria	Exceedance/Notes
NA	

**Field duplicates:**

Within Criteria	Exceedance/Notes
N	The relative percent difference for the toluene and tetrachloroethene results in field duplicate pair EPD-WA-01-021123 and EPD-WA-02-021123 exceeded 50% acceptance criterion. Toluene and tetrachloroethene results in EPD-WA-01-021123 and EPD-WA-02-021123 were qualified as estimated (flagged J).

**LCSs/LCSDs:**

Within Criteria	Exceedance/Notes
N	TO-15 SIM: High LCS and/or LCSD percent recoveries of acrolein, carbon tetrachloride, and cis-1,3-dichloropropene. Acrolein and carbon tetrachloride results were qualified as estimated with possible high bias (flagged J+) in all five samples. No qualification is required for cis-1,3-dichloropropene because the average percent recovery was within acceptance criteria and all associated sample results are nondetect.

**Sample dilutions:**

Within Criteria	Exceedance/Notes
Y	Canister dilution factor for EPD-MG-01-021223 is 1.35. Canister dilution factor for EPD-WA-01-021023 is 1.23. Canister dilution factor for EPD-WA-01-021123 is 1.39. Canister dilution factor for EPD-WA-01-021223 is 1.41. Canister dilution factor for EPD-WA-02-021123 is 1.33.

**DATA VALIDATION CHECKLIST – STAGE 2A**  
**EPA REGION 5 START CONTRACT**

**Re-extraction and reanalysis:**

Within Criteria	Exceedance/Notes
NA	

**MDLs/RRLs:**

Within Criteria	Exceedance/Notes
Y	Detections between the method detection limit (MDL) and reporting limit (RL) were reported and qualified as estimated (flagged J) by the laboratory.

**Tentatively identified compounds:**

Within Criteria	Exceedance/Notes
Y	Several tentatively identified compounds (TICs) were detected in all five samples. The known TICs were qualified as tentatively identified (flagged NJ). Unknown TICs were qualified as estimated (flagged J). 2-butoxyethanol and 2-ethylhexyl acrylate in all five samples and butyl ester-2-propenoic acid in EPD-MG-01-021223 were reported as nondetect and qualified as searched for, but not found in the sample (flagged U, NF).

**Other [None]:**

Within Criteria	Exceedance/Notes
NA	

**DATA VALIDATION CHECKLIST – STAGE 2A**  
**EPA REGION 5 START CONTRACT**

**Overall Qualifications:**

See results summary pages attached for changes to the laboratory qualifiers based upon this validation. The following is a list of qualifiers and definitions that may be used for the validation of this data package:

J	The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample.
J+	The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample and may be biased high.
J-	The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample and may be biased low.
NF	The tentatively identified compound was manually searched for but was not found in the sample.
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated value is the approximate concentration of the analyte in the sample.
R	The sample result is rejected as unusable due to serious deficiencies in one or more quality control criteria. The analyte may or may not be present in the sample.
U	The analyte was analyzed for, but was not detected at or above the associated value (reporting limit).
UJ	The analyte was analyzed for, but was not detected at or above the associated value (reporting limit), which is considered approximate due to deficiencies in one or more quality control criteria.
