

Enhanced LMOP National Map Launches!

The U.S. EPA Landfill Methane Outreach Program (LMOP) is pleased to announce that an enhanced [National Map of Landfill Gas \(LFG\) Energy Projects and Municipal Solid Waste \(MSW\) Landfills](#) has been published on the LMOP website.

LMOP's National Map is a visual tool that accompanies the LMOP database of U.S. landfills and associated energy projects. The **newly published version incorporates layers for Tribal lands and environmental justice demographic data** so that users can identify areas where LFG energy projects may warrant additional consideration, analysis or outreach to surrounding communities.

Example screen capture of LMOP National Map.

The data sources for the National Map are:

- EPA [LMOP database](#)
- EPA [Environmental Justice Screening and Mapping Tool \(EJScreen\)](#)
- EPA [Tribal data layers](#)

The map provides operational LFG energy project data in four separate layers by project type (electricity, direct use, renewable natural gas (RNG)-pipeline injection, and RNG-local use), and MSW landfill data in three layers (candidate landfills, landfills with projects, and other landfills). Selecting an individual data point displayed on the map opens a small pop-up window with data for the project or landfill.

The map includes seven demographic indicators and two demographic indices from EJScreen. Each indicator or index is displayed as a national percentile. To see the EJScreen layers, zoom into an area of the map at the state level or closer. Ten types of EPA Tribal data are also included.

Please let us know of any comments or questions about the new map, or updates for the LMOP data, via our [Contact Us form](#).

To request removal from this email list, please reply to this message. For further information or questions about LMOP, please do not reply to this email message, but rather visit the [LMOP website](#). Thank you.
