

STATE OF TENNESSEE DEPARTMENT OF ENVIRONMENT AND CONSERVATION DIVISION OF WATER RESOURCES

Nashville, Tennessee 37243-0435

DAVID W. SALYERS, P.E. COMMISSIONER

BILL LEE GOVERNOR

MEMORANDUM

TO: Governor Lee

FROM: David W. Salyers, P.E., Commissioner

Department of Environment and Conservation

Jenny Dodd, Director

Division of Water Resources

DATE: September 30, 2023

SUBJECT: Triennial State Capacity Development Program Implementation Report

Prepared by the Division of Water Resources

In accordance with the Federal Safe Drinking Water Act

The submission of the triennial Capacity Development Report to the Governor is a condition set forth by the U.S. Environmental Protection Agency for funding of the Fiscal Year (FY) 2024 Drinking Water State Revolving Fund (DWSRF) grant. This report documents ongoing implementation of: (1) a program to ensure that new community water systems and new non-transient non-community water systems demonstrate adequate technical, managerial, and financial capacity prior to commencing operation; and (2) a strategy to assist existing public water systems in acquiring and maintaining adequate system capacity.

Section 1420(c)(3) of the Safe Drinking Water Act states that "...every 3 years...the head of the State agency that has primary responsibility to carry out this title in the State shall submit to the Governor a report that shall also be available to the public on the efficacy of the [capacity development] strategy and progress made toward improving the technical, managerial, and financial capacity of public water systems in the State."

The State of Tennessee's drinking water program, implemented by TDEC's Division of Water Resources, is recognized as one of the leading agencies in USEPA Region 4. Thank you for time and consideration of the enclosed triennial report. If you have any questions, feel free to call on us.

Subject: TDEC Report: State Capacity Development Program Implementation

Dear Governor Lee,

Please find attached the triennial State Capacity Development Program Implementation Report prepared by TDEC's Division of Water Resources and required to be submitted to your office by the federal Safe Drinking Water Act. This report has been posted to TDEC's webpage: https://www.tn.gov/content/dam/tn/environment/water/drinking-water-unit/wr_wq_dw_triennial-capacity-dev-report-2023.pdf.

If you have any questions at all, please do not hesitate to contact us.

Respectfully,

Blair Beaty

Blair Beaty, Esq. | Director of Legislative Affairs Tennessee Department of Environment and Conservation Tennessee Tower, Second Floor 312 Rosa L. Parks Ave. Nashville, TN 37243 c. 615-664-8159 p. 615-253-1965

Triennial Capacity Development Report

Report Submitted to
Governor Bill Lee
Prepared by the
Tennessee Department of Environment and Conservation
Division of Water Resources
Requirement of Section 1420, Federal Safe Drinking Water Act

September 2023

Executive Summary

In accordance with the Federal Safe Drinking Water Act (SDWA), Section 1420, Tennessee is required to submit a Triennial State Capacity Development Program Implementation Report to the Governor. This report provides an assessment of Tennessee's strategy and efforts toward assessing and improving the technical, managerial, and financial capacity of public water systems within the state. This report is intended to fulfill the requirement of Section 1420(c)(3) of the SDWA.

In response to federal requirements, Tennessee's Drinking Water Rules require all new public water systems to demonstrate technical, managerial and financial capacity (establishing the system as "viable") before serving water to the public. All new water systems are required to develop a Capacity Development Plan including a business plan that demonstrates the system can achieve and maintain compliance with the Safe Drinking Water Act on the day they begin serving drinking water to the public. Water system capacity is the ability to achieve and maintain compliance with all applicable drinking water standards. Tennessee Rules also requires those water systems that do not meet the SDWA requirements may be required to develop a Capacity Development Plan to show viability.

Tennessee's capacity development strategy identifies community and non-community systems in non-compliance with the SDWA and strives to provide such public water systems with technical, financial and managerial assistance and training where appropriate. Further, this regulatory strategy sets the stage for whatever level of enforcement is deemed necessary to ultimately achieve compliance and ensure safe drinking water.

The Need for a Capacity Development Strategy

In accordance with the 1974 Federal Safe Drinking Water Act, states are required to ensure that providers of drinking water systems meet minimum national standards. EPA and the state delegated programs have come to realize that full compliance can only be achieved through capacity development assessments that examine the financial, technical and managerial status of a water system.

The Federal Safe Drinking Water Act Amendments of 1996 mandate that states ensure that all new community water systems (CWS) and all new non-transient, non-community water systems (NTNCWS) demonstrate capacity to implement each drinking water regulation in effect. Section 1420(a) of the Federal Safe Drinking Water Act requires that a state obtain the legal authority or other means to ensure that all new CWS and new NTNCWS commencing operation after October 1, 1999 demonstrate technical, managerial and financial capacity, or lose a portion (20%) of the monies allotted for the state's drinking

water revolving loan fund. In addition, the 1996 amendments require states to prepare a Capacity Development Strategy to identify and prioritize water systems lacking consistent compliance with drinking water regulations.

In addition to assessing newly constructed water systems, Tennessee has adopted a Capacity Development Strategy to address the viability of all existing public water systems. This strategy also closely examines each system's record of regulatory compliance. If needed, Tennessee may require existing public water systems in non-compliance to develop plans showing that sufficient revenue is available and that the water system has adequate management and technical resources to operate in compliance with the SDWA. This requirement accelerates the compliance of existing systems with violations and encourages potentially significant non-compliers to take necessary efforts to achieve a satisfactory compliance status. Additionally, TN worked with EPA in finalizing an Asset Management addendum to the Capacity Development Report (Appendix 9).

Enforcement is utilized as a tool in helping public water systems acquire, maintain, or improve their capacity and become viable water systems. The Environmental Protection Agency's enforcement targeting tool (ETT) is used to determine the level of non-compliance for all public drinking water systems. Appendix 1 includes the most recent list of water systems that have incurred violations scoring a non-compliance value of 11 or above on the ETT list and Appendix 2 includes Tennessee's 2022 Annual Compliance Report.

Compliance reports and Sanitary Surveys are the indicator and guiding mechanism to Tennessee's state capacity development strategy. Compliance reports provide a continuous means by which capacity development issues are identified and addressed. As water systems incur violations, Tennessee can focus on the specific issues of the system and aid in determining corrective actions. Those systems scoring 11 or higher on the ETT list are addressed with formal enforcement action. The enforcement process compels noncompliant systems to address capacity issues or face continuing and escalating enforcement action and financial disincentives in the form of fines. Tennessee's regulatory program is able to issue Notices of Violations (NOVs), engage in court actions, schedule Compliance Review Meetings, and issue Commissioner's Orders and Director's Orders. As part of capacity development, the Division of Water Resources can require existing water systems that have an ETT score of 11 or above and those with high potential for scoring above 11 to submit a capacity development plan identifying specific actions leading to the development of capacity. The plan must document and/or address all compliance issues faced by the system. The Division uses the Capacity Development Plan Guidance Document (Appendix 4) and the Capacity Development - Business Plan, Financial Self-Assessment Manual (Appendix 5) to ensure that public water systems develop a sufficient overall capacity development plan.

To identify water system needs as well as potentially effective compliance mechanisms, the state has established a water system baseline as required by Section 1420(c)(2)(D) the Federal Safe Drinking Water Act. This baseline is used to measure improvements in system capacity. The baseline uses the initial list of community water systems and non-transient, non-community water systems with a history of non-compliance, which was sent to EPA on August 1, 1997. Appendix 3, "Tennessee PWSs with a History of Violations, Compliance Status (1997-June 30, 2007)" shows many of the public water systems that have been identified as Significant Non-Compliers (SNCs) between 1997 and June 30, 2007.

As a summary of compliance in Tennessee during this triennial (state FY2021, FY2022 and FY2023) review, for the period ending June 30, 2023, there were twenty-one (21) water systems with an ETT score of 11 or higher (See Appendix 1). Some of the increase in systems with ETT scores above 11 may be attributed to the Division issuing Notices of Violations for failing to provide public notice as required beginning in 2022. The violations for these systems fall within the following rules:

Violation	Number of Violations
Revised Total Coliform Rule (RTCR) Monitoring and	29
Assessment Violations	
Revised Total Coliform Rule E.Coli MCL	1
Long Term 1 Enhanced Surface Water Treatment Rule	22
Monitoring Violations	
Long Term 1 Enhanced Surface Water Treatment Rule	6
Treatment Technique Violations	
Long Term 2 Surface Water Treatment Rule	9
Treatment Technique Violations	
Consumer Confidence Report Submittal Violations	20
Consumer Confidence Report Content Violations	17
Ground Water Rule Monitoring Violation	18
Stage 1 D/DBP Monitoring Violations	4
Stage 2 D/DBP Maximum Contaminant Level Violations	20
Stage 2 D/DBP Monitoring Violations	16
Public Notification Rule	36
Lead and Copper Rule, Monitoring	14
Lead and Copper Rule, Consumer Notification	14
Chemical Monitoring, VOCs	5
Chemical Monitoring, SOCs	4
Chemical Monitoring, Nitrates	6
Chemical Monitoring, Inorganics	2

For the period ending June 30, 2022, there were twelve (12) water systems that had a score of 11 or higher on the Enforcement Targeting Tool (ETT list). The majority of the violations

amongst water systems with an ETT score of 11 or higher were Public Notice Rule violations. The next highest occurrence were violations of the Revised Total Coliform Rule.

For the period ending June 30, 2021, there were two water systems that had a score of 11 or higher on the Enforcement Targeting Tool (ETT list). The majority of the systems with violations of 11 or higher incurred Ground Water Rule monitoring violations. The next highest occurrence was Stage 2 Disinfection Byproducts (DBP) MCL violations.

State Objectives and Strategy

Tennessee's Capacity Development Strategy process provides a comprehensive assessment of available capacity development resources and demonstrates areas of focus to improve each program's effectiveness. The benefit of the Capacity Development Strategy is that the state is able to review the broad range of efforts (programs and activities) currently offered and undertaken by both the regulatory program and the drinking water system to maintain, develop, or improve compliance.

As an example of outreach and training offered by Tennessee, operator training is provided at TDEC's Fleming Training Center as well as through third party operator training programs offered by the Tennessee Association of Utility Districts (TAUD). The State has also developed a contract with TAUD through the Public Water System Supervision (PWSS) Set Aside with the State Revolving Fund Program (SRF). The goal is to provide targeted technical assistance to distressed or disadvantaged community public water systems to develop and improve managerial, financial and technical capacities and reduce occurrence of health based drinking water violations. This would include workshops including, but not limited to: Asset Management, Water Loss, Water Treatment/Distribution Optimization, Source Water Protection, Emergency Response, Resiliency and assistance as requested by TDEC or the PWS.

TAUD offers six conferences a year which include: the Utility Technology Conference, Operator Expo, Business of Running a Utility Conference, Leadership Conference and Administrative Professionals Conference. These conferences are designed to train and provide continuing education credits for all utility personnel including operators, managers, office managers, customer service staff, commissioners, and municipal officials. Conference topics include operations, policies, finance and budgets, etc. The Technology Conference, Operator Expo and Business Conference offer training that is more technical in nature and is approved for all operator licenses and professional engineers. Capacity development is also approached with education training for utility commissioners (now required by law). TAUD has offered a variety of training classes specifically designed for

utility board members and commissioners. State law requires for utility commissioners (gas and water) to attend classes and obtain continuing education credits.

See the following table for FY 2022/2023 Conference results.

Name	Number of Days	Number of Attendees
Utility Technology Conference	2	170
Operator Expo	1	1232
Business of Running a Utility Conference	2	684
Leadership Conference	1	235
Administrative Professionals Conference.	1	110

The TAUD Training Station typically offers over 150 classes each year for operators. These classes are held across the state to make it more convenient for all operators to maintain their continuing education. TAUD offers hands-on, technical training that prepares the utility operator for everyday operations. See the attached table. TAUD's move into virtual training that was hastened by Covid-19 has become a permanent part of their training.

Within the Department of Environment and Conservation is also housed the Operator Certification Board. The Operator Certification Board is in association with the Fleming Training Center responsible for the certification of water and wastewater operators and authority to revoke operator certification for just cause.

The University of Tennessee's Municipal Technical Advisory Service (MTAS) has developed a Training Manual for Water and Wastewater System Board Members, *Water and Wastewater Management: A Training Manual for Board Members.* The classes on the report (Appendix 7) are approved by the State Comptroller/ Water & Wastewater Financing Board for utility credit. MTAS also offers virtual training to elected officials called Elected Officials Academy. The Elected Officials Academy is offered virtually to train municipal staff and officials in the knowledge and self-awareness required for successful management.

The Level I classes cover the essentials of municipal government in Tennessee and covers topics such as Strategic Planning, Charter and Codes and Open Records, Municipal Finance, Council at Work, and Ethics and Open Meetings. Level II Elected Official Academy includes topics such as Fire Review, Human Resources, Police Review, Public Works, and Municipal Risk Management.

Specialty Classes for municipal utility managers and operators are held in various locations throughout the state covering several topics in the technical areas. Other programs include: Administrative Hearing Officer, Certified Municipal Finance Officer, Continuing Municipal Education, Custom Training, Municipal Court Clerk and MTAS Online.

In addition to the classroom training, MTAS provides on-site technical training/assistance for water and sewer system staff per the request of a municipal utility. MTAS also provides help with financial distressed municipal utilities at the request of the city or a referral from the TBOUR.

Implementation of the Strategy – New Systems

The Tennessee Division of Water Resources' legal authority was certified by the Attorney General and Reporter for the State on July 15, 1999. It certifies that the laws of Tennessee provide adequate authority to carry out the capacity development requirements of the Federal Safe Drinking Water Act Section 1420(a), 42 U.S.C. § 300g-9(a).

These laws establish responsibility by the Tennessee Department of Environment and Conservation (TDEC) to review construction projects to ensure that new water systems have the technical capacity to comply with state drinking water requirements. Division of Water Resources Regulation 0400-45-01-.05 outlines the procedures that an applicant must follow for obtaining approval to construct a water system. Regulation 0400-45-01-.05(3) refers to minimum design standards for the construction of groundwater and surface water sources, treatment facilities, storage facilities, and distribution facilities (sources, treatment, storage and piping) to comply with the water quality standards and treatment technique standards specified in Regulations. Further, Division Rule 0400-45-01-.17(37) of the Drinking Water Regulations outlines the required information that must be submitted with the engineering documentation for approval to construct a new system. The regulations were amended to also include a "Business Plan" and "Capacity Development Plan." The definition of each of these plans can be found in Rule 0400-45-01-.04. Section 68-221-704(2)(E) of the Tennessee Safe Drinking Water Act grants the Tennessee Board of Water Quality, Oil and Gas the authority to adopt rules to ensure that all new community water systems and non-transient, non-community water systems commencing operation after October 1, 1999 demonstrate technical, managerial, and financial capacity to comply with the requirements of the Safe Drinking Water Act.

Water loss continues to be an area of focus for the Division of Water Resources and the Tennessee Comptroller of the Treasury (COT). The COT no longer requires utilities to report water loss using the American Water Works Association (AWWA) reporting tool in the utility's annual audit. Water loss information is now gathered through the Utility Annual Information Report found here:

https://comptroller.tn.gov/boards/utilities/utility-reporting/annual-utility-reporting.html

Utilities must report annually the "water purchased or produced" and the "water sold" for the most recent fiscal year in which data is available. Water loss is no longer considered using the "non-revenue water by cost" as previously used from the AWWA reporting tool. Instead, a threshold has been set of non-revenue water by volume at 40%. In short, if utilities report less than 60% of their water sold through the two volumes mentioned above, the COT will issue a water loss board referral for the utility. The utility will then be required to contract with a third party to complete the AWWA 6.0 for further evaluation of their water loss needs.

Control Points

The Tennessee Department of Environment and Conservation (TDEC) has two control points in ensuring that new community and new non-transient, non-community water systems demonstrate the technical, managerial and financial capacity to comply with the Safe Drinking Water Act (SDWA).

- 1.) The first control point is the submission of engineering documents for approval to construct a new water system. TDEC's engineering staff reviews the engineering documents for compliance with the procedures outlined in the regulation and the design standards. The water source must also be tested and approved. The proposal must demonstrate that the system will have the technical, managerial and financial capacity to meet the requirements of the SDWA. If the information contained in the engineering report is satisfactory to the Department, it is approved and the system can proceed with development plans and specifications. Before final approval is granted to begin construction of a new water system, it must develop and submit a Capacity Development Plan to document to the State that the system is a "viable water system." If at any time during this process the State determines the system is not a "viable water system," approval to proceed can be withheld and the project denied.
- 2.) The second control point is final construction approval. Rule 0400-45-01-.17(19) of the State Drinking Water Regulations requires that once construction has been completed, arrangements must be made for an inspection and approval before operations can begin. All new community and non-transient non-community public water systems are required to submit an engineering report summarizing the need for a new system, a summary of alternative solutions, and recommendations regarding sources of water, proposed treatment processes, project sites, distribution system, financing (rates, debt, etc.) and management. State regulations require water systems to obtain written approval from the Tennessee Department of Environment and Conservation to begin operation after construction is completed.

Implementation of the Strategy – Existing Systems Strategy

As discussed earlier, Tennessee has many programs and tools available to help existing public water systems acquire technical, managerial and financial capacity. These include training offered by Fleming Training Center (FTC), third party operator and board member management training offered by the TAUD, the UT Municipal Technical Advisory Service, and others. The Division is also working with Communities Unlimited to assist systems facing potential enforcement action that are struggling with returning to compliance. Communities Unlimited funding comes from EPA and USDA/Rural Development Agency and their assistance is at no costs to the water system. Additionally, the Division conducts on-site inspections and on-site technical assistance. Further, assessments are performed by financial review boards, including the Comptroller of the Treasury's Utility Management Review Board, Water and Wastewater Financing Board and Division of Municipal Audit. A financial self-assessment tool is also offered by the Division of Water Resources. Finally, enforcement of state rules provides definitive guidance relative to capacity needs. Tennessee is now participating in EPA's Area-Wide Optimization Program (AWOP). This program provides tools and approaches to be utilized to aid systems in achieving/maintaining compliance and providing improved water quality to the public through optimization. AWOP is also an important component of efforts to assist systems build capacity and provide enhanced levels of public health protection. The AWOP approach includes performing Comprehensive Performance Evaluations (CPE), Performance Based Trainings (PBT), Distribution System Optimization (DSO) Training, Data Integrity Workshops, and Targeted Technical Assistance (TTA). AWOP is a voluntary program whose primary goal is to maximize public health protection without major capital expenditure, through optimization of existing water treatment and distribution facilities. Optimization of the water system is achieved through enhanced process monitoring and control using existing staff and facilities.

More specifically, programs and tools used to help water systems acquire capacity are offered in various formats and venues. Appendix 7 includes class titles and dates along with number of persons reached. The following list includes additional activities to aid systems in capacity development.

- □ Rule workshop updates provided to operators and system management by Fleming, Division of Water Resources staff and TAUD
- Operator Training at the Division's Fleming Training Center (FTC)
- □ Rulemaking Hearings open to the public and staff of PWSs conducted by Division of Water Resources staff
- Continuing Education Sessions for certified operators provided at American Water Works Association Conferences

- On-site and off-site technical assistance given to system operators and water system staff by Division of Water Resources Environmental Field Office (EFO) staff and Fleming Training Center
- On-site and off-site technical assistance given to system operators and water system staff by TAUD's "circuit riders"
- □ Financial Reviews of Municipal and Utility Districts by the Division of Municipal Audit in the State Comptroller's Office and subsequent action by the TN Board of Utility Regulation.
- □ Elected Officials Training by MTAS (Municipal Technical Advisory Service)
- □ Commissioner Training by TAUD
- □ Division of Water Resources' Financial Self-Assessment Manual
- □ The Division of Water Resources' Sanitary Survey Manual for Community Water Systems (CWSs) and Non-transient Non-community Water Systems (NTNCWSs), Revised February 2019
- □ Published Safe Drinking Water Rules
- □ TDEC Website Resources (Forms, Manuals and Links)
- Certified Laboratory Lists (available from the Division of Water Resources and the State's Website) & Lab Certification
- □ Certified Operator Lists (available from the Division of Water Resources and the Fleming Training Center)
- Sanitary Surveys providing comprehensive assessments of all public water systems
- □ State Revolving Loan Funds and staff technical assistance to eligible systems
- □ Emergency Operations Plan (EOP) Guidance (a/k/a Vulnerability and Security Plans) for all community water systems along with Drought management plans required
- □ Enforcement Targeting Tool (ETT)
- Enforcement Actions and Proceedings against all public water systems in non-compliance (Notices of Violation, Notices of Non-compliance, Show Cause Meetings, Compliance Review Meetings, Letter of Agreements, Commissioner's Orders, Directors Orders, Civil Penalty Assessments, and Contingent Civil Penalty Assessments)

The Fleming Training Center (FTC) offers fundamental and advanced training in water treatment, water distribution systems, laboratory operation, security, wastewater treatment, and wastewater collection systems. Additionally, FTC offer seminars designed to assist operators in obtaining their required continuing education. The Operator Certification Board plays a major role in the certification of qualified operators under the State's Water and Wastewater Operatory Certification Act. The Division of Water Resources supplies the Department of Environment and Conservation Commissioner's designee for the Board. Previously, the Commissioner of Department Environment and Conservation provided the

Director of the Division of Water Resources the authority to revoke operator certification for just cause. However, in July 2013, the legislature modified the Water and Wastewater Operator Certification Act to provide the Commissioner the opportunity to recommend an operator's revocation of certification to the Board while the Board determines revocation.

Additional information regarding the Fleming Training Center and the Operator Certification Program in Tennessee is available on Tennessee Department of Environment and Conservation's website (https://www.tn.gov/environment/program-areas/wr-water-resources/fleming-training-center.html). Other operator resources available on the State's website include revised manuals and forms, links to resources, annual violations lists, certified lab lists, construction design criteria, and the current sanitary survey manual.

To aid in consistency of inspections across the State, a Sanitary Survey Workshop was held June 7-9, 2022. Twenty-two division staff from across the State involved with the Drinking Water Program attended a 3 day workshop provided by the division's Drinking Water Fellow and Drinking Water Unit Manager. All in attendance voiced how beneficial it was to gather and discuss the actions involved with sanitary surveys and receiving updates on the regulation changes, etc. The group visited the Gladesville Water Treatment Plant for hands on experience. The next Sanitary Survey training is planned for 2024. Additionally, the Drinking Water Fellow holds monthly meetings to discuss AWOP and sanitary survey topics or issues.

Standard Operating Procedures (SOPs) – The Division of Water Resources requires public water systems to develop and adopt SOPs for operations, maintenance, and troubleshooting for at risk systems. Systems with a history of non-compliance may be required to develop and adopt SOPs and systems whose certified operator(s) cannot be on-site while the system is producing water must have SOPs in-place for use by those individuals designated to operate the water system. Drinking Water rules require all public water systems meeting the definition of a public water system under the State's Water and Wastewater Operator Certification Act to be operated by a certified operator in direct control. The Division of Water Resources has been strongly encouraging systems with surface water treatment plants serving greater than 10,000 persons to have appropriate level certified operators in attendance whenever the plant is in operation.

In May of 2022, the Division created a Lead & Copper page to include on our website. This page can be found <u>here</u> or https://www.tn.gov/environment/program-areas/wr-water-resources/water-quality/drinking-water-redirect/lead-and-copper-rule.html.

The state's Emergency Operations Plan (EOP) requirement includes a Source Water Assessment, Source Water Protection Plan and Drought Management Plan component. This

requirement compels systems to proactively examine and consider their source water, treatment and distribution capacities and build resiliency.

Finally, the Environmental Protection Agency (EPA) approved TN's Asset Management Addendum to this report on March 3, 2023. This addendum or revised strategy is required by Section 2012 of America's Water Infrastructure Act (AWIA). It includes a description of how TN will encourage development by public water systems of asset management plans and assist in training operators or other relevant and appropriate persons in implementing such plans. This addendum can be found in Appendix 9 and is also available on DWR's website at https://www.tn.gov/environment/program-areas/wr-water-resources/water-quality/drinking-water-redirect.html.

Identifying Systems in Need of Capacity

The Division of Water Resources also gives high priority to drinking water state revolving fund (DWSRF) applicants who must meet technical, managerial and financial capacity requirements in order to obtain funding. As described in this document, Tennessee continues to identify systems in need of capacity by monitoring water system compliance with rules and through the sanitary survey process. Systems with an elevated ETT score and that are lacking in capacity face a strategy of programs, actions and enforcement designed to develop system capacity and attain compliance. Tennessee continues to use construction approvals, continuing education for operators, DWSRF loan applications, municipal financial audit reports, reviews by the TBOUR, rule workshops, operator and board member training, sanitary survey assessments, compliance data (ETT list) and enforcement activities to reach systems lacking capacity.

Statewide Capacity Needs and Concerns

The nationwide issue of aging infrastructure is a serious issue in Tennessee. The aging infrastructure replacement needs run into the billions of dollars and far outweighs the available funding. Not replacing critical aging infrastructure creates a domino effect which affects such things as operations, water quality, maintaining compliance and water loss. Additionally, retirement of knowledgeable operators, especially for small rural water systems makes it more difficult to meet technical capacity in running the system.

Review of Capacity Development Strategy

The Division of Water Resources reviews and reports its Capacity Development Strategy annually to EPA.

Tennessee continues to follow its capacity development plan as it was originally developed by initially assisting systems to develop capacity and potentially escalating to enforcement action where appropriate.

Legislative Update:

On May 17, 2023, Governor Lee signed SENATE BILL 845, an Act to amend Tennessee Code Annotated, Title 4; Title 7; Title 8; Title 64; Title 65; Title 67 and Title 68, relative to the management of utility systems. The bill has now been assigned Public Chapter 0463 can be seen here: https://publications.tnsosfiles.com/acts/113/pub/pc0463.pdf. The Act merges the Utilities Management Review Board (UMRB) and Water Wastewater Financing Board (WWFB) into the Tennessee Board of Utility Regulation (TBOUR).

The bill expands the Board's jurisdiction to include municipal, county, and authority gas systems in Tennessee, whereas prior the WWFB only had oversight over the water and sewer systems of municipal, county, and authorities. The former UMRB had oversight of for water, sewer, and gas utilities. So this bill aligns the gas regulation of the former UMRB to the WWFB entities, thus increasing the Board's regulatory authority to all water, sewer, and gas systems for municipals, counties, authorities, and utility districts.

The Tennessee Board of Utility Regulation (TBOUR) and the Division of Local Government Audit conduct financial reviews of water systems and are within the State Comptroller of the Treasury's Department. Water systems with a negative change in net assets after two years are considered by law to be under "financial distress" and subject to board action. Systems are also subject to board action for excessive water loss. The Division of Water Resources supplies the Commissioner's designee for this board. This designee also conducts the division's environmental reviews, drinking water Director's Orders, and works with the technical secretary of the board whenever systems are in financial distress while also making efforts to obtain loans/grants for startups of new utility districts. The oversights of this board, as well as numerous other meaningful regulatory efforts are applied to improve or develop water system capacity in Tennessee. Water systems cases the board is currently reviewing can be found in Appendix 8. TDEC closely coordinates with TBOUR with a designee from the Commissioner on the Board.

Furthermore, this bill enhances the Board's customer complaint authority, as the former UMRB had a limited scope of hearing customer complaints, and the WWFB had no jurisdiction over customer complaints. The TBOUR now has the power to hear customer complaints for any utility under the Board, specifically related to complaints about rates, industry-standard policies, and failure to extend service to customers that have reasonable access to the utility.

The Utility District Revitalization Fund has also undergone expansion and is now called the Utility Revitalization Fund ("URF"). The grants from the URF can now be considered as operating revenue when determining financial distress. This expansion increases the flexibility of the fund's usage, as most grants in Tennessee are typically for capital purchases and do not provide cash for operating expenses. The inclusion of grants as operating revenue in the URF will help ease the merger for the acquiring entity.

Finally, this bill broadens the Board's ordered merger authority. The GA passed a bill last year that allowed for ordered mergers of financially distressed utility districts. This bill extends the Board's ordered merger authority to all utilities under the Board, regardless of financial standing because the mergers can result from an investigation, in addition to financial distress.

Noted Legislative activities within the last triennial period include the following:

- Public Chapter 657. This act makes the following changes to existing law: (1) requires municipal utility officials to file an annual statement of training and continuing education just as utility district and utility authority commissioners are currently required to do; (2) requires that any utility district or utility authority commissioner nominated for re-appointment must certify to the appointing county mayor that he or she has complied with the mandated continuing education requirements before re-appointment; (3) requires that any utility district commissioner seeking reelection must certify to the district that he or she has complied with mandated continuing education requirements before being placed on the ballot; (4) clarifies that municipal utility officials and utility district and utility authority commissioners must file annual training statements even in years where no training has been taken; and (5) requires that any utility district or municipal water utility which purchases more than 50% of its total water for resale must file a copy of the water purchase contract as part of the water utility's annual filing with the former UMRB or WWFB; (6) changes the current requirement for the reporting of water loss from including a water audit in the utility's annual audit to submitting the water loss on a form prepared by the Comptroller with the utility's annual filing with the former UMRB or WWFB. Effective date: March 15, 2022
- Public Chapter 757. This act authorizes the former UMRB to order the merger or consolidation of a financially distressed utility district with another utility district when the following conditions are met: (1) the former UMRB orders the financially distressed utility district to obtain a study from a qualified expert on the feasibility and benefit of the merger or consolidation; (2), a former UMRB representative holds a hearing on the merger or consolidation within the utility district's service area when

the study favors a merger or consolidation; (3) the former UMRB concludes, after an informal hearing, that the merger or consolidation is in the best interest of the public served by the financially distressed utility district and does not harm the public being served by the surviving utility district; (4) the utility districts voluntarily enter into a merger or consolidation agreement approved by the former UMRB or such an agreement is compelled by a local chancery court when no agreement can be reached. When an agreement is reached, the former UMRB will enter a merger or consolidation order similar to the merger of consolidation order issued by a county mayor. County mayor approval of the former UMRB's merger or consolidation order is not required. Existing law and this act authorize the creation of the utility district revitalization fund to mitigate the negative financial impact of such a merger or consolidation to the surviving utility district. The legislature appropriated \$2,000,000 to this fund in this session. Effective date: March 31, 2022.

- A law amendment was passed in the 2023 legislative session regarding cybersecurity for public utilities: Public Chapter 1111 Utilities, Utility Districts As enacted, requires certain utilities to prepare and implement a cyber security plan to provide for the protection of the utility's facilities from unauthorized use, alteration, ransom, or destruction of electronic data and imposes certain requirements on the comptroller in regard to such plans; requires public utilities that provide electric, water, wastewater, or natural gas services to prepare and implement a cyber security plan and imposes certain requirements on the public utilities commission in regard to such plans. Amends TCA Title 4; Title 7; Title 47, Chapter 18; Title 64; Title 65; Title 67 and Title 68. (SB2282/HB2346).
- Public Chapter 1111. This act requires public utilities to prepare and implement a cyber security plan for the protection of the utility's facilities from unauthorized use, alteration, ransom, or destruction of its electronic data. The initial plan must be developed by July 1, 2023. The Comptroller is charged with verifying compliance by the utilities, except for utilities subject to regulation by TPUC. Utilities subject to the former UMRB and WWFB will be referred to these boards for failure to comply and will be subject to reasonable sanctions by these boards for such failure. Effective date: June 1, 2022.

New System Compliance

In state FY 2021, one community water system was established, as a distinct operational area of an existing water system. TN0008295 - CARYVILLE-JACKSBORO UTILITIES #2, services the Stoney Fork community of Campbell county. There were five (5) transient non-community systems, and one (1) non-transient non-community system established.

Transient Non-Community

TN0005213 DOLLAR GENERAL STORE #21718 (Jefferson County)

TN0005214 DOLLAR GENERAL – PIPERTON (Fayette County)

TN0005215 DOLLAR GENERAL #16394 (Chester County)

TN0005216 DOLLAR GENERAL 22484 (Sevier County)

TN0005219 SASQUATCH FARM WATER SYSTEM (Marion County)

Non-Transient Non-Community

TN0005222 HYDRA POOLS (McMinn County)

In FY 2022 (July 2021-June 2022), no community water systems were established in Tennessee. There were two (2) new transient non-community water systems established including: TN0005223 INDIAN CREEK MARKET & DELI and TN0005225 ATHENS STOCKYARD WATER SYSTEM.

In FY 2023 (July 2022-June 2023), two (2) community water systems and five (5) transient non-community water systems were established in Tennessee:

Community

TN0008296 - BACKWOODS CMPGD W.S. (Union County)

TN0008297 - VENUE @ 109 (Wilson County).

Transient Non-Community

TN0005223 - INDIAN CREEK MARKET & DELI (Jefferson Co.)

TN0005228 - HIDDEN ACRES RV PARK (Haywood Co.)

TN0005229 - COUNTRY VIEW RV PARK (Haywood Co.)

TN0005232 - DOLLAR GENERAL OAKLAND (Fayette Co.)

TN0005233 - DOLLAR GENERAL PALMERSVILLE (Weakley Co.)

One (1) of the public water systems established within this triennial period (last 3 fiscal years) and as aforementioned has exceeded the Enforcement Targeting Tool (ETT) score of 11. TN0005222 HYDRA POOLS obtained an ETT score of 17 at the end of March 2022. A Director's Order was issued on 06-JUL-22 and was appealed by the water system on 08-AUG-22.

Conclusion

Despite the challenges facing the water systems and Tennessee's Drinking Water Program, the success of the State's Capacity Development Strategy is encouraging. In fact, the

responses to the statewide drought event of 2007 and 2016 along with the 2010-thousand-year flood event and the 2019 floods, along with the 2020 tornados and 2021 ice storms have encouraged many water systems to work together and increase interconnections, examine regional approaches to water supply issues and collaborate more on compliance issues and new rules. Additionally, the Division's study of potential contaminants such as Harmful Algal Blooms, Legionella and per- and polyfluoroalkyl substances may help to provide assistance to water systems. At the heart of these activities is state oversight and assistance. Undoubtedly, such efforts represent increased opportunities for enhancing the capacity of systems to comply with the Safe Drinking Water Act and to better meet future drinking water needs. The Division also anticipates continuing work alongside the Department through the recommendations developed by subject matter experts and stakeholders to ensure Tennessee has abundant water resources for the future as developed in the 2018 TNH2O water plan, which the Department is reviewing again in fall of 2023.

Glossary:

<u>Community water systems</u> (CWSs) are public water systems which serve at least fifteen (15) service connections used by year-round residents or regularly serve at least twenty-five (25) round-round residents.

<u>Environmental Protection Fund (EPF) Act</u> authorizes the department to assess fees (facility maintenance fees) for services provided.

<u>Non-community water systems (NCWSs)</u> are public water systems that are not community water systems.

<u>Non-transient, non-community water systems</u> (NTNCWs) are non-community water systems that regularly serve at least twenty-five (25) of the same persons over six (6) months per year.

<u>Transient, non-community water systems</u> (TNCWSs) are non-community water systems that regularly serve at least twenty-five (25) individuals daily at least sixty (60) days out of the year. A TNCWS is a public water supply system that generally serves a transient population such as hotels, motels, restaurants, camps, service stations, churches, commercial establishments and rest stops.

Appendix 2 Annual Compliance Report 2022 Safe Drinking Water Act

Attached as separate document

Division of Water Resources

2022 Annual Compliance Report

Foreword

The 1996 Amendments of the Federal Safe Drinking Water Act requires States with drinking water primacy to prepare and submit to EPA an annual report regarding public water system violations. Further, the report is to be published and made available for public review. The Tennessee Department of Environment and Conservation, Division of Water Resources, has prepared this report to provide the required information to EPA and to the general population.

This year's report covers the calendar year 2022 and contains three major sections: a narrative description of the Division's oversight of public drinking water systems; a summary of violations regarding each contaminant (Appendix A); and a detailed listing of public drinking water systems with violations meeting the criteria to be included in the report (Appendix B). Only treatment technique, maximum contaminant level and significant monitoring violations that have not returned to compliance (i.e. violations that have not been corrected) occurring within or extending into 2022 are included.

Most of the water systems and operators in Tennessee are very conscientious about the quality of water provided to their customers. However, situations do occur that result in monitoring violations caused by either an oversight on the part of the water utility or due to newly implemented monitoring requirements or standards. Most of the health-based violations that occurred during 2022 were identified in the disinfection by product rules, where compliance with the standards is location specific.

The Division has worked with water utility managers/owners and operators to address each of the violations included in this report. Site visits and technical guidance are the first steps utilized by the Division to achieve compliance with the regulations. In certain situations, it becomes necessary to initiate formal enforcement action and establish compliance schedules to have a system return to compliance.

The Division hopes this report provides violation information in a concise and easy to understand manner. If you have questions concerning the information contained in this report, please contact your local water utility, the nearest Division's Regional Environmental Field Office at 1-888-891-8332, or the Nashville Central Office at 615-532-0625.

Safe Drinking Water Act

The Federal Safe Drinking Water Act (SDWA) was enacted in 1974 in order to assure that the public is provided with safe drinking water. Pursuant to the Safe Drinking Water Act and Amendments to the Act, national limits or standards were established on contaminant levels in drinking water to ensure that drinking water is safe for human consumption. Such standards are known as Maximum Contaminant Levels (MCLs).

The SDWA also establishes treatment techniques, in lieu of maximum contaminant levels, for certain contaminants that are difficult for laboratories to measure. For example, treatment techniques have been established for giardia lamblia, cryptosporidium, viruses, heterotrophic bacteria, Legionella, and turbidity. In addition, the SDWA regulates how frequently public water systems must monitor and report the results of monitoring for contaminants that may be present in the drinking water, as well as the effectiveness of treatment processes.

A public water system is required to monitor and verify that the levels of contaminants present in the water do not exceed an established maximum contaminant level. If a public water system fails to monitor as required or fails to report monitoring results correctly, then a monitoring or reporting violation occurs. Generally, the larger the population served by a water system, more frequent monitoring and reporting is required. Additionally, the SDWA requires public water systems to notify the public when they have violated these regulations. The 1996 Amendments to the SDWA require public notification to include a clear and understandable explanation of the nature of the violation, its potential adverse health effects, the steps that the public water system is undertaking to correct the violation and the possibility of alternative water supplies.

The SDWA applies to all fifty (50) States and U.S. territories and allows States and Territories to seek EPA approval to administer their own Public Water System Supervision Program. The authority given to a state to operate a Public Water System Supervision Program is called "Primacy". In order to receive primacy, a state must meet certain requirements specified in the SDWA and regulations promulgated pursuant to the Act. The State of Tennessee received primacy in 1977 and assumes primary enforcement responsibility for public water systems operating in Tennessee.

Public Water Systems

The SDWA defines a "public water system" as a system for the provision of water for human consumption through pipes or other constructed conveyances, if such system serves fifteen (15) or more service connections or which regularly serves twenty-five (25) or more individuals daily at least sixty (60) days out of the year. A public water system includes:

- (i) Any collection, treatment, storage, or distribution facility under control of the operator of such system and used primarily in connection with such system; and
- (ii) Any collection or pretreatment storage facility not under such control which is used primarily in connection with such system.

The Division of Water Resources currently possesses regulatory responsibility for approximately 770 public water systems throughout the state. A "Public Water System", as defined above, is either a "community water system" or a "non-community water system".

"Community Water System" means a public water system that serves at least fifteen (15) service connections used by year-round residents. Examples are municipalities and utility districts.

"Non-Community Water System" means a public water system that is not a community water system. This type of water system is further defined as either "Non-Transient", serving the same people each day; and "Transient", which serves a different group of people each day.

Tennessee Public Water Systems

Combined, all of Tennessee public water systems (community, transient and non-transient) serve an estimated population of more than 7,450,000 individuals.

Tennessee Public Water Systems

The 10 largest public water systems in Tennessee serve over 2,660,000 people. In contrast, there are 494 water systems, which serve less than 3,300 people each, providing drinking water to an estimated 289,000 people.

Population Categories

Public water systems utilizing ground water sources are the most prevalent in Tennessee. However, surface water is provided to most of Tennessee's population.

Violation Information

Primacy States, such as Tennessee, submit data to the EPA Safe Drinking Water Information System (SDWIS) on a quarterly basis. Data submissions include public water system inventory statistics, the incidence of Maximum Contaminant Level, Major Monitoring, and Treatment Technique violations, and the enforcement actions initiated against violators.

In addition to the quarterly data submittal to the EPA, the 1996 Amendments of the Federal SDWA require States with primacy to prepare and submit an annual report to EPA regarding public water system violations. Further, states with primacy are required to publish and distribute summaries of their reports. After the submittal of the state reports, EPA evaluates and summarizes the reports in an annual national report.

The Annual Compliance Reports, submitted by the Division to both the public and EPA are required to encompass violations pertaining to (1) maximum contaminant levels, (2) treatment requirements, (3) variances and exemptions, and (4) significant monitoring and reporting violations. This report includes those violation types listed above, that occurred during the 2022 calendar year, or were identified prior to calendar year 2022 and remain uncorrected into 2022. It is important to note that the State of Tennessee does not utilize variances and/or exemptions with respect to primary drinking water regulations.

For the calendar year 2022, a total of 399 individual violations met the criteria to be included in this year's report.

Reviewing the violation data in further detail, indicates that the majority of the violations were incurred by Community Water Systems. The ratio of MCL and Treatment Technique violations to Significant Monitoring and Other violations is relatively consistent between both types of water systems.

Violation Types by System Type

Appendix A to this report provides a summary compilation of violations regarding each contaminant. Appendix B provides a detailed listing of public water systems with significant monitoring, significant reporting, treatment technique and MCL violations.

Definitions

To aid in the interpretation and understanding of the data included in this year's report, the following definitions are offered:

- Consumer Confidence Report (CCR): By July 1st of each year, every community public water system is required to prepare and distribute a CCR to customers served by the system. The report is required to contain information including the system's source of water, contaminants detected in the water, potential health effects information, mechanisms for customers to influence decisions made by the water system and any violations of drinking water standards that may have occurred during the previous calendar year.
- Ground Water Rule (GWR): Establishes requirements to ensure protection from microbiological pathogens in true ground water sources.
- "Ground water under the direct influence of surface water" means any water beneath the surface of the ground with (1) significant occurrence of insects or other macroorganisms, algae, or other large diameter pathogens such as Giardia lamblia, or (2) significant and relatively rapid shifts in water characteristics such as turbidity, temperature, conductivity, or pH which closely correlate to climatological or surface water conditions. Direct influence must be determined for individual sources.
- Inorganic Contaminants: Non-carbon-based compounds such as metals, nitrates, and asbestos. These contaminants are naturally occurring in some water but can gain access through farming practices, chemical manufacturing, and other human activities.
- Long Term 1 Enhanced Surface Water Treatment Rule (LT1 ESWTR): Establishes criteria that water systems supplied by surface water or ground water under the direct influence of surface water must meet.
- Long Term 2 Enhanced Surface Water Treatment Rule (LT2 ESWTR): Expands on the LT1 rule with microbiological pathogen monitoring at the source, prior to treatment.
- "Maximum Contaminant Level (MCL)" means the maximum permissible level of a contaminant in water which is delivered at the free flowing outlet of the ultimate user of a public water system, except in the case of turbidity and other contaminants so designated where the maximum permissible level is measured at the point of entry into the distribution system. Contaminants added to the water under circumstances controlled by the user, except those resulting from corrosion of piping and plumbing caused by water quality, are excluded from this definition.

- Monitoring Waiver: Permission or consent conveyed to a public water system by the Division of Water Resources upon satisfactory completion of criteria established and necessary to obtain such waiver.
- Organic Contaminants: Carbon based compounds, such as industrial solvents and pesticides. These contaminants generally gain access to water through runoff from cropland or discharge from factories.
- Public Notification Rule: Violations of the Safe Drinking Water Act require public water systems to notify their customers. Violations are categorized by Tier level, and public notice is required to be issued within 24 hours for Tier 1 violations (Acute MCL and certain Treatment Technique violations), within 30 days for Tier 2 violations (Non-Acute MCL and most Treatment Technique violations) and within 1 year for Tier 3 violations (Monitoring, Reporting and Recordkeeping). Failure to issue a Public Notice as required will result in a violation of the Rule.
- Revised Total Coliform rule: Effective on April 1, 2016, revisions to the existing Total Coliform Rule required water systems to revise their bacteriological sampling plans, modified the existing Total MCL to an E.coli MCL, added treatment technique violations, and assessment requirements following certain conditions.
- "Significant Monitoring Violations" are generally defined as a monitoring violation that occurred when no samples were taken, or no results were reported during a compliance period.
- Stage 1 Disinfection/Disinfectant Byproducts Rule (DBP): Establishes requirements to provide protection from microbiological pathogens and limit the amount of disinfection byproducts delivered to the consumer.
- Stage 2 Disinfection/Disinfectant Byproducts Rule (ST 2 DBP): Expands on the Stage 1 rule by requiring a comprehensive distribution system analysis and monitoring at specific locations.
- Surface Water Treatment Rule (SWTR): Establishes criteria under which water systems supplied by surface water or ground water under the direct influence of surface water must provide filtration as a treatment technique.
- Treatment Technique: A water treatment process or procedure that is required instead of a maximum contaminant level for contaminants that laboratories cannot adequately measure.
- Trihalomethanes (THMs) and Haloacetic Acids (HAAs): Disinfection by-products produced as a result of the interaction of a disinfectant (chlorine) with naturally occurring organic material that may be present in the water.

MICROBIOLOGICAL DATA

Microbiological contaminant sampling is conducted by all public water systems in Tennessee to detect biological contaminants that may be present in drinking water. All community public water systems (CWSs) must conduct monitoring on a monthly basis with the number of samples based on the population served. At a minimum, non-community water systems (NCWSs) must monitor each calendar quarter. Non-community systems that serve more than one thousand (1,000) persons, utilize a ground water source under the direct influence (GWUDI) of surface water or utilize surface water in total or in part must monitor on a monthly basis.

The Revised Total Coliform Rule became effective April 1, 2016 and modified several elements of the bacteriological sampling and monitoring requirements. The rule established Treatment Technique violations based on total coliforms and the presence of E.coli, and an MCL for E.coli. Assessments and corrective actions are required based on monitoring results reported, and seasonal Non-Community water systems are required to perform startup procedures prior to opening for the season.

All samples containing total coliforms must be analyzed for the presence of E.coli bacteria. The results of all routine and repeat samples are included in determining compliance with treatment techniques, which may identify the need for corrective actions and assessments. The maximum contaminant level is based on the presence or absence of E.coli in a sample.

If any repeat sample is E.coli-positive, or if any repeat sample is total coliform-positive following an E.coli-positive routine sample, an E.coli MCL violation is incurred. For systems which collect forty (40) or more samples per month, if greater than five (5) percent of samples collected yield total coliform-positive results, the water system is required to perform a Level 1 assessment. Further, for systems collecting fewer than forty (40) samples per month, if more than one (1) sample collected yields a total coliform-positive the water system is required to perform a Level 1 assessment. For systems that incur an E.coli MCL violation, a Level 2 assessment must be conducted.

Failure by a public water system to perform the required monitoring, corrective action, or assessment constitutes a significant monitoring violation.

During the calendar year 2022, one (1) water system incurred an MCL Treatment Technique violation under the Total Coliform Rules. Appendix B provides detail information for significant monitoring violations of the Total Coliform Rules.

SURFACE WATER TREATMENT RULES

The Enhanced Surface Water Treatment Rule (ESWTR), the Long Term 1 Enhanced Surface Water Treatment Rule (LT1 ESWTR) and the Long Term 2 Surface Water Treatment Rule (LT2SWTR) utilizes and establishes treatment techniques in lieu of maximum contaminant levels for Giardia lamblia, cryptosporidium, viruses, heterotrophic plate count bacteria, Legionella, and turbidity. Treatment techniques are water treatment processes employed for the treatment and/or removal of contaminants in lieu of establishing a Maximum Contaminant Level for contaminants that are very difficult to measure. In accordance with such requirements, water systems supplied by surface water or ground water sources under the direct influence of surface water must utilize water treatment processes (filtration and disinfection) that will achieve removal of cryptosporidium and/or inactivation of Giardia lamblia cysts and viruses. Water systems must perform analyses of the water in order to ensure the proper operation and effectiveness of the filtration and disinfection treatment.

In accordance with the Enhanced Surface Water and Long Term 1 Enhanced Surface Water Treatment Rules, water systems must monitor the water for turbidity (cloudiness of the water) and disinfectant residual. If a water system fails to conduct required monitoring or fails to monitor and report less than ninety (90) percent of the required samples, as determined by population served and duration of water plant operation, then a significant monitoring violation is incurred. If a water system conducts required monitoring and reporting and the results reveal that less than ninety-five (95) percent of samples collected met the turbidity standard or disinfectant residual standard, then a treatment technique violation is incurred. Additionally, if a water system utilizing surface water or ground water under the direct influence of surface water fails to meet all criteria to avoid filtration treatment and does not install the necessary filtration treatment within the allowable eighteen (18) month deadline, then a violation is incurred regarding the failure to filter requirement.

The goal of the Long Term 2, Surface Water Treatment Rule is to reduce the risk of disease caused by Cryptosporidium and other microorganisms by identifying those systems at the greatest risk for source water contamination. Under this rule, most filtered systems were required to conduct an initial round of sampling of their untreated source water for the presence of Cryptosporidium and/or E.coli bacteria. Results from this initial round were used to determine if additional treatment of the source water was required. The second round of source water monitoring is complete for most public water systems in Tennessee.

Treatment technique and significant monitoring violations pertaining to any of the applicable Surface Water Treatment Rules are included in the detailed listing of violations provided in Appendix B.

INORGANIC CONTAMINANTS VIOLATIONS

Inorganic contaminant sampling is conducted by all public water systems in Tennessee to detect inorganic contaminants such as metals, nitrates or asbestos that may be present in the drinking water. Maximum contaminant levels have been established for inorganic contaminants and monitoring determines compliance with such standards. Monitoring intervals for inorganic contaminants are determined considering the type of source water utilized by the public water system with the exceptions of nitrate and asbestos. Monitoring to determine compliance with the maximum contaminant level for nitrate may be conducted no less frequently than annually. Monitoring to determine compliance with the maximum contaminant level for asbestos is conducted with consideration to population served and the vulnerability of the system to asbestos contamination (asbestos-cement piping, etc.).

During the calendar year 2022, there were no public water systems that incurred a maximum contaminant level violation regarding inorganic contaminants. Significant monitoring violations pertaining to any of the inorganic contaminants are included in the detailed listing of violations provided in Appendix B.

ORGANIC CONTAMINANTS VIOLATIONS

Organic contaminant sampling is conducted by all community and certain non-community public water systems in Tennessee, which have not received a waiver of the monitoring requirements, to detect any organic contaminants such as solvents or pesticides which may be present in the drinking water. Maximum contaminant levels have been established for organic contaminants and monitoring determines compliance with such standards. Monitoring intervals for organic contaminants are determined considering the type of source water utilized and the type of population served by the public water system. Water systems that conduct monitoring for organic contaminants and do not detect a contaminant may reduce the sampling frequency regarding organic contaminants or request permission from the State to reduce sampling frequency.

During the calendar year 2022, there were no public water systems that incurred a maximum contaminant level violation regarding organic contaminants. Significant monitoring violations pertaining to any of the organic contaminants are included in the detailed listing of violations provided in Appendix B.

DISINFECTION BY-PRODUCT and BY-Product PRECURSOR VIOLATIONS

Trihalomethane (THM) and haloacetic acid (HAA5) sampling is conducted by all community public water systems in Tennessee. Trihalomethanes and haloacetic acids are disinfection by-products that are produced as the disinfectant (chlorine) reacts with naturally occurring organic matter, such as leaf litter, which may be present in the water. Monitoring is conducted to detect the presence of trihalomethanes or haloacetic acids in the drinking water. A maximum contaminant level has been established for both total trihalomethanes and total haloacetic acids and monitoring determines compliance with the standards. Monitoring is conducted for both TTHMs and HAA5 generally on a quarterly basis and on each water treatment plant used by a system. Other monitoring schedules may be followed depending on the size of the system and the type of source water.

The standard or maximum contaminant level for TTHMs is 80 parts per billion (ppb) while the standard for HAA5 is 60 ppb. Compliance with MCLs is determined at each sampling location individually and is calculated as a running annual average of the results reported for the current and prior 3 quarters.

MCL and significant monitoring violations pertaining to disinfectants, disinfection by-products and disinfection by-product precursors are included in the detailed listing of violations provided in Appendix B.

LEAD AND COPPER VIOLATIONS

Lead and Copper sampling is conducted by all community and certain non-community public water systems in Tennessee at high-risk sites to detect excessive levels of lead and/or copper in drinking water. The maximum allowable concentrations of lead and/or copper in drinking water are denoted as "action levels". Treatment techniques have been established that include requirements for corrosion control treatment, source water treatment, lead service line replacement and public education for systems which exceed the action levels for lead and/or copper. Tap water monitoring determines compliance with such standards. The results for each location are required to be presented to the property owner within 30 days of receipt. Initial tap water monitoring is conducted for lead and copper on six (6) month monitoring intervals. If a water system meets the action levels for lead and copper during each of two (2) consecutive six (6) month monitoring periods, or maintains optimal corrosion control, the system may request and be granted reduced monitoring frequencies.

Violations for failure to monitor under the Lead and Copper Rule during the calendar year 2022, are included in the detailed listing of violations provided in Appendix B.

CONSUMER CONFIDENCE REPORT VIOLATIONS

Beginning in 1998, community public water systems were required to furnish a report to customers with information about the water being furnished. Included in this report is the source of water for the local water utility, certain health effects language, information concerning contaminants detected, and information on violations that may have occurred during the previous calendar year. There is also information on the time and location of any board meetings to promote public participation in the decision-making process of the water utility.

All systems serving 10,000 or more persons are required to furnish a copy of the report to each customer and the Division of Water Resource by July 1 each year. Systems serving less than 10,000 persons are given the option to notify their customers that the report will be published in a newspaper serving the local area. Even though the report is published in the paper, the water utility is required to furnish an individual copy of the report to any person requesting a copy.

During the calendar year 2022, there were 6 public water systems that incurred a significant reporting violation under the Consumer Confidence Report rule.

RADIONUCLIDE VIOLATIONS

Public water systems are required to monitor for certain naturally occurring and manmade radionuclides to ensure the water being provided to their customers meet standards. Radionuclide samples are collected every quarter with the results being the average of all the quarterly samples.

During the calendar year 2022, one (1) public water system incurred a significant monitoring violation for Radionuclide parameters.

GROUND WATER RULE

The Ground Water Rule is part of the "Microbial-Disinfectants/Disinfection Byproducts Cluster" (M-DBP Cluster), intended to improve control of microbial pathogens while minimizing public health risks of disinfectants and disinfection byproducts (DBPs). The GWR builds upon the Total Coliform Rule by addressing the health risks of fecal contamination in community and non-community water systems that use ground water. Key provisions of the rule include; compliance monitoring to ensure that treatment technologies installed to treat drinking water reliably achieves at least 99.99 percent (4-log) inactivation or removal of viruses; triggered source water monitoring to test for the presence of fecal indicators; and, requirements to correct significant deficiencies and eliminate fecal contamination through specified actions.

During the calendar year 2022, two (2) water systems incurred treatment technique violations, and five (2) water systems incurred significant monitoring violations under the GWR.

DIVISION OF WATER RESOURCES ENFORCEMENT ACTION SUMMARY

The Department of Environment and Conservation and the Division of Water Resources are both granted authority by the Tennessee Safe Drinking Water Act, to initiate enforcement action and issue administrative orders regarding violations of the Tennessee Safe Drinking Water Act.

In order to address non-compliance issues the Division of Water Resources utilizes a number of enforcement mechanisms which include: Compliance Status Notifications, Notices of Violation (NOVs) and/or Notices of Non- Compliance (NONCs); technical assistance and training; Compliance Review (CRM) and/or Show Cause meetings (SCM); and issuance of administrative orders and assessments which contain monetary civil penalties.

The Division initially attempts to assist water systems with violations achieve compliance through a system of official notifications, technical assistance and training, on-site inspections, and compliance review meetings. Under certain circumstances, water systems are provided the opportunity to execute a Letter of Agreement (LOA) indicating an understanding of noncompliance issues and conveying an agreement to undertake the necessary actions to prevent a recurrence of non-compliance. In situations where the division has issued notifications, conducted technical assistance and/or on-site inspections or conducted compliance assessment meetings and violations are not addressed by the water utility or are not addressed in a timely manner, enforcement action in the form of an Administrative Order (AO) is customarily recommended and/or initiated. Such Administrative Orders contain monetary civil penalties assessed for violations and mandate that compliance be achieved.

Most violations incurred by water utilities are addressed and corrected prior to the necessity for issuance of an Administrative Order. With technical assistance and training provided by the division, most water systems can return to compliance. However, there are water systems that incurred violations that were not adequately addressed or corrected making an Administrative Order warranted. The Administrative Orders encompassed a variety of violations including those contained in this Annual Report of Violations.

State of Tennessee Division of Water Resources 2022 Annual Compliance Report Violations Summary Appendix A

^{1.} Although a public water system may be out of compliance with more than one contaminant group or rule, when calculating totals, it's counted no more than once. Consequently, the sum of the number of water systems in violation, over the various contaminant groups or rules, may not add up to the total.

TA – Technical Assistance

Appendix 4 Capacity Development Plan Guidance Document

Pursuant to Tennessee Code Annotated Sections 68-221-706 and 68-221-707 the Department shall exercise general supervision over the construction, operation and maintenance of public water systems throughout the State of Tennessee. As one aspect of such general supervision, all new community public water systems shall submit a **Capacity Development Plan** for review and approval by the Department. Components of the Capacity Development Plan include an **Operation and Maintenance Plan**, an **Emergency Operations Plan**, a **Bacteriological Site Sampling Plan**, a **Business Plan**, etc. Together, these plans when followed assure continuous satisfactory operation of a water system. The submittal should be submitted to the Department's Division of Water Resources (DWR) and shall include, at minimum, the following information:

- Name, address and telephone number of the owner(s) or ultimate responsible party of the facility or
 public water system. Leaseholders or business owners may be responsible for managing and
 operating the facility on a day-to-day basis and included in list to obtain correspondence, but they
 are not the ultimate responsible party. The ultimate responsible party is (are) the property owners.
- Agreement to retain the services of a properly certified operator.
- Proof of retention of certified operator (copy of signed Operator Agreement).
- Name, address and telephone number of the certified operator in direct charge of the public water system. The certified operator also may be held responsible for violations incurred as a result of his/her oversight.
- An Operation and Maintenance Plan must be developed. The plan shall include information on staffing and organizational structure, accountability; and the system's fiscal management and controls. The plan shall identify Environmental Field Office (EFO) contacts, certified labs and lab contacts, the location of all operational component plans and the names and phone numbers of those responsible for implementing those plans, data management systems used, routine activity and facility maintenance schedules, training programs, and safety procedures and guidelines in effect.
- Agreement and statement of understanding indicating that Plans and Specifications shall be prepared and submitted for approval for any change, alteration or construction regarding the public water system. These include changes in process that affect water quality, hydraulic conditions, or the function of a process. These must be submitted and approved by the DWR. Projects that are being funded with Drinking Water State Revolving Funds (DWRRF) are submitted to the State Revolving Fund Loan Program (formerly the Division of Community Assistance or DCA). Such approval shall be obtained prior to initiation of the proposed project. "As-Builts" shall be submitted on completion of a project. A long-range system plan, including capital improvements plan is not required by the DWR, but may be desirable to the system.

- A Source Water Assessment and Protection Plan and/or Wellhead Protection Plan must be developed and submitted to the DWR for approval.
- Prepare and submit for review and approval a Monitoring Plan to the Division of Water Resources based on rules, and guidelines provided by the Division. Such plan will identify all parameters to be monitored (including Benzo(a)pyrene and asbestos) and a schedule for conducting that monitoring. Such plan will include all bacteriological contaminants and chemical parameters required by and in accordance with Division rules. One component of the Monitoring Plan will be a Bacteriological Site Sampling Plan (Information and guidance material is available upon request). The plan should address the number and location of follow-up sampling, public notification, etc. The Monitoring Plan should include (or execute) a consolidation agreement with parent water systems (where applicable) for the monitoring of lead and copper tap water. The Monitoring Plan should also note any parameters waived and when a parameter waiver expires.
- Establish and submit an Emergency Operations Plan (and Drought Management Plan if appropriate) for review and approval by the Division. The system may enter into an agreement indicating the intent to cooperate with the parent water system in the event of an emergency that interrupts water service and conveying its willingness to supply alternative potable water during a state of emergency if needed. (information and guidance material available upon request). An Emergency Operations Plan will outline system options, responses, conservation plans and other provisions in case of flooding, power outage, major fire, contamination, major line break, source contamination, drought, chemical release, etc.
- Develop a Customer Complaint File regarding water related issues to be maintained on site.
 Customer complaints with CWSs which relate to financial and/or managerial issues should have a
 UMRB or SRF number assigned. The file must contain customer name and address, date of
 complaint, nature of complaint, and action(s) taken to resolve the complaint. A Customer Relations
 plan is not required by the DWR, but may be desirable to the system.
- Agreement and statement of understanding indicating that Monthly Operation Reports (MORs) shall be submitted to the Division no later than ten (10) days following the end of the month being reported. The MOR shall accurately reveal the operation and performance of the water system during the reporting period.
- A Cross Connection Control Program Plan for the detection and elimination of cross connections
 must be submitted and approved by the Division of Water Resources (Information and guidance
 material is available upon request).
- A **Record Keeping Plan** shall be developed and maintained. Records kept shall include storage tank inspection and maintenance reports, Individual facility maintenance records, flushing records with beginning and ending chlorine residuals, chlorine residuals at new taps, facility security records (including vandalism, break-in, theft, and trespass), equipment maintenance and repair records (maintenance, calibrations, dates out-of-service, and repairs of pumps, meters, feeders and alarms), line breaks maintenance and repair, distribution maps. Other records that must be kept include: bacteriological sample analyses, cross connection plans and inspection records, chemical analysis, sanitary surveys, actions to correct violations, turbidity records, daily worksheets and shift logs used to produce MORs, lead and copper related records, and public notices.

- A Public Notifications and Public Education File should be maintained. Efforts to inform
 customers of violations, Boil Water Advisories, and community education should be kept in a file.
 Further, Community Water Systems (CWSs) must prepare and submit a Consumer Confidence
 Report (CCR) annually.
- Agreement to remit annual Facility Maintenance Fees to the Division plus any penalties and interest charges which have accrued due to late or non-payment of the annual facility maintenance fee. Public water systems must also submit a Business Plan. The plan shall identify source(s) of income or revenue sufficient to meet expenses over a three (3) year period. The business plan will identify costs related to retaining a certified operator, estimated annual infrastructure repair cost, depreciation, facility maintenance fees, estimated annual monitoring costs, estimated costs of providing public notices, estimated administrative costs, and any other operational, treatment, and related costs (e.g. chemicals and other supplies used to treat water, etc.). The business plan must include the re-payment of borrowed and amortized funds.
- Agreement to comply with any and all laws, rules and/or regulations which are necessary or applicable to the public water system.

Appendix 5

Capacity Development - Business Plan (Financial Self-Assessment Manual)

The purpose of a business plan for a water system is to show that the proposed or continued operation of a water system will be viable from a financial standpoint. Business Plans can be/are a means of determining/assuring the viability of water systems from a financial standpoint. Operating a water system is like operating any business, and for any business to be successful, it needs to have a "business plan." The attached worksheet (or Financial Self-Assessment Manual) provides a framework to summarize and evaluate your business. Three columns are provided in order to show anticipated income and expenses over the next three years. "Year One" should cover the system's current business year. Columns are provided for listing "Income" and "Expenses" for the second and third years, if different, otherwise the figures shown in "Year One" will be assumed as intended. The "Total" or bottom line of the plan should combine "Total of all Expenses" and the "Total of all Income." If "Expenses" exceeds "Income" then rates, fees and/or other income must be increased or expenses must decrease in order for the system to be viable. If the cost of operating the water system is unacceptable, the water system may want to consider what alternatives are available. If drinking water, which meets Safe Drinking Water Act requirements is available or can be made available from another public water system at a reasonable cost it may be possible to deactivate the water system. Other options may exist if the water system is extremely small and water use is minimal. Your Environmental Field Office (EFO) must be consulted in this event (1-800-523-4873).

In addition, operating a water system requires two additional plans: a facility and specifications plan (technical), **and** an operation and maintenance plan (technical and managerial capacity), in addition to a business (financial) plan. In summary, a viable water system is "a public water system which has the commitment and the financial, managerial and technical capacity to consistently comply with the Tennessee Safe Drinking Water Act and these regulations." A water system is determined to be "non-viable" if it cannot meet state requirements.

Definitions:

Sales of Water (Conn x Rate x Min Mo Water Use) – The amount of income derived from water revenues. Such revenue typically is based on the number of connections, the rate or cost of water, and the minimum amount an account is allowed to be charged.

Tap Fees, Reconnect Fees and Bad Check Fees – Fees derived from setting new taps; fees collected after service is discontinued and there is a reconnection; and fees related to checks returned due to insufficient funds, etc.

Interest Earned – Revenue derived from interest accrued from system bank accounts, etc.

Other – Monies earned from rental or sale of equipment, services provided to other agencies or businesses, etc.

Cost of Water – If purchased from a PWS (Public Water System), royalties due to water rights holders, etc.

O&M – Expenses related to Operations and Maintenance. These would include the cost of chemicals (chlorine, lime, etc.), power, fuel (gas, gasoline and diesel fuel), transportation and communication expenses (vehicles and vehicle maintenance, repair equipment, mobile phones, etc.), monitoring costs (sample collection and lab costs), materials and supplies, normal repairs to lines and filters, and salaries and benefits of employees.

Administrative Costs – Insurance, office supplies, postage, legal, accounting, telephone, salaries and benefits for managers, and clerical workers.

Facility Maintenance Fee – Fee payable to the Division of Water Resources (DWR), Tennessee Department of Environment and Conservation (TDEC) on or about October 1 of each year.

A/E & Professional Services, Fees (including Billing Services) — Architectural and Engineering Fees, Professional Service Fees, including the cost of contracted billing services, etc.

Contracts – Backflow Prevention Testing, Certified Operators (on contract), etc.

Taxes or Payments in Lieu of Taxes – Payments of local, state and/or the federal government.

Debt Repayment – Loan Debt Service

Capital Improvements – The cost of physical improvements made to the facility. Capital improvements specifically related to a water system include the addition of filtration equipment, pumps to improve flows, the extension of the piping system.

Other Expenses - Public Notification (PN), public relations costs, employee training, civil penalties, etc.

Operating Cash Reserves – Funds available to meet expenses from a cash flow standpoint. Invariably there will be times when expenses will exceed anticipated revenues, whose obligations must be met prior to receiving additional income.

Emergency Reserves – Funds which are available to replace, repair, or meet unexpected new additional requirements, etc. which are unexpected due to a variety causes, including thief, fire, flood, vandalism, etc.

Appendix 9 TN Capacity Development Plan Asset Management Addendum

Attached as separate document

Tennessee Capacity Development Plan Asset Management Addendum

The America's Water Infrastructure Act of 2018 requires, in part, that states incorporate into their capacity development strategies approaches to encourage the development of Asset Management Plans (AMP) at public water systems (PWS) and assist in training appropriate personnel in implementing such plans. To fulfill this requirement, the Tennessee Department of Environmental and Conservation (TDEC) has prepared this addendum to its Capacity Development Plan Strategy approved by EPA in 2000. The strategy consists of short- term temporary efforts and includes long-term permanent efforts to ensure future PWS asset management plan development and implementation. TDEC utilized a contract with the Tennessee Association of Utility Districts (TAUD) to develop a framework for Asset Management Plans and to conduct training sessions, specifically for small and disadvantaged systems, in different regions of the state during 2022. Training included sessions on requirements of the five core elements and resources available to water systems to develop an Asset Management Plan. TAUD will also be providing training for the Tennessee Infrastructure Scorecard ver. 2.0 which is designed to benchmark technical, operational, managerial, and financial performance of utility systems. The Infrastructure Scorecard contains an AMP module for systems to self-assess any AMP gaps or needs.

To create the AMP guidance document, TDEC gathered small working groups from TDEC programs along with TAUD (rural water) and brought in drinking water, engineering services wastewater program as well as the State Revolving Fund (SRF) program to lay out the various AMP requirements across TDEC's Division of Water Resources (DWR) programs. In addition, we sought input and feedback from private industry. TDEC also referenced EPA resources and pulled from state programs around the nation. This approach took best practices from both the public and private sector to build a comprehensive AMP standard. TDEC's goal was to establish a unified AMP framework that could satisfy the drinking water program, wastewater program, and State Revolving Fund program while acknowledging the importance of a scalable standard for systems large and small. TDEC looked at Indiana, North Carolina (asset inventory and assessment protocol) and Southwest Environmental Center for AMP examples.

Our first step in creating a cross program standard was to solicit feedback from the AMP working group on the Infrastructure Scorecard module. This approach gave the state flexibility to incorporate the 5 AMP categories outlined by EPA while developing water system specific questions in each category. TDEC then rolled up the AMP module into a prioritized list of critical AMP needs. When a system completes the module, the Scorecard Summary will red flag any deficiencies with their AMP.

Figure 1: Example AMP summary from Infrastructure Scorecard

The second step is to have the system follow the AMP guidance framework. The framework is a combination of a guidance document and an excel spreadsheet. The spreadsheet consists of asset inventory and condition assessments as well as assets criticality based on probability and consequence of failure. This information rolls up to a final spreadsheet in the workbook that lists capital needs in order of critical, risk of failure importance. TDEC worked with a third-party consulting group specializing in AMP (Blue Cyprus) to complete the recommended changes in the final AMP guidance framework, which included adding a section one the "Level of Service" component.

Short Term efforts

To assist in deployment of American Rescue Plan (ARP) funding, the Division of Water Resources (DWR) has established a contract with the Tennessee Association of Utility Districts (TAUD) who built a customizable framework for Integrated (using a common framework) Asset Management Plans (IAMP). IAMPs will assist entities with developing a long-term funding plan for the management and upkeep of assets. IAMP's will include drinking water and another water infrastructure (i.e., stormwater, wastewater). AMP's will include a single water structure type.

In support of IAMPs, TAUD will provide the following to entities eligible for ARP grant dollars, as approved by the State.

- 1. Direct technical assistance and support to aid in completion and review of IAMPs to ensure, among other goals, that entities' IAMPs will comply with ARP grant requirements;
- 2. Webinar series on multiple topics related to IAMPs as approved by the State. The Contractor (TAUD) will provide at least fifteen webinars over the Term of this Contract. In 2022, TDEC focused on ARP grants and developing the AMP framework. TDEC with TAUD delivered 2 classes in 2022 and TAUD will perform webinars in 2023;
- 3. Assistance in developing up to fifty long-term funding plans for small or disadvantaged communities by completing for each community:
 - A businessaction plan;
 - A capital improvement plan;
 - A financial strategy plan; and
 - Updates and maintenance to IAMPs and long-term funding plans as needed; and Direct and indirect technical assistance as needed.

Members of the stakeholders' group such as the Tennessee Association of Utility Districts and Communities Unlimited conducted training sessions in different regions of the state during 2022. Training included sessions on requirements of the five core elements and resources available to water systems to develop an Asset Management Plan. TAUD also provided training for the Tennessee Infrastructure Scorecard ver. 2.0 which is designed to benchmark technical, operational, managerial, and financial performance of utility systems. These scorecards identify critical needs in several areas including asset management summarizing of what is reflective of TMF. The Tennessee Infrastructure Scorecard ver. 2.0 was complete on November 1, 2021. Hundreds of public drinking water systems have completed their Scorecard and submitted it to TDEC for review. Systems are using the Scorecard to support requests for Water Infrastructure Investment Plan grants issued through the State Water Infrastructure Grants program. The Scorecard identifies (5) areas of critical needs for drinking water systems. These critical areas include asset management plans, significant noncompliance, water loss, aging infrastructure passed its useful life, and failing infrastructure (including capacity issues).

Attached is a PDF sample of the Infrastructure Scorecard. PWSs are required to submit a summary as part of the application to demonstrate critical needs and justify spending decisions. An additional deliverable of a Capital Improvement Needs Inventory from their AMP is also required prior to grant close out. These self-assessment materials assist systems identify where best to spend grant and loan dollars. The State Water Infrastructure Grant (SWIG) program, Community Development Block Grant (CDBG), and SRF will continue to use this tool into the future to support funding awards. In addition, the Bureau of Environment (BOE) and Tennessee Emergency Management (TEMA) are interested in using the reported Risk and Resiliency module for funding priorities to help systems improve their emergency preparedness.

The development and modification of the TN Infrastructure Scorecard was executed using a project management plan style of development.

- **Goal:** Assist small and/or disadvantaged public drinking water systems improve technical, managerial, and financial capacity.
- Objective: Develop tools
- Pre-Development: Gathered stakeholder group (Technical Assistance Advisory Committee) of drinking water leaders from the drinking water program, engineering services at TDEC, TDEC policy leaders, management from the Drinking Water State Revolving Fund, TN Comptroller's Office, Community Block Development Grant, USDA Rural Development, TN's Rural Water Association (TAUD) and select technical staff from DWR. We connected with approximately 25 individuals from 10 different agencies/organizations (public and private) for predevelopment. TDEC received feedback from stakeholders. TDEC conducted 2 rounds of comments on draft AMP framework and completed comments from the independent consulting firms KCI and Blue Cypress.
 - Establish a list of chronic issues and technical assistance needs
- **Tool Development:** Workwith Advisory Committee
 - o Assigned small working group of experts for each of the critical needs category
 - Created a timeline for small task execution; develop a simple, quick, quantitative suite of questions or an equation focused on critical need
 - Brought all working group results together to draft an initial tool based on best practices methods used from previously developed stream morphology condition assessment.
 - Draft TN Infrastructure Tool was tested and edited by Advisory Committee members and technical staff at DWR.
 - Final tool completed by TAUD
- Launch TN Infrastructure Scorecard ver. 1.0: Selected 30 small and disadvantaged communities with systems that are struggling. The Opportunities List sorted data from small and disadvantaged systems to prioritize assistance for those systems with significant TMF issues, including non-compliance. TAUD worked with the 30 systems to complete the excel based, multi-worksheet self-assessment tool. Systems review their financial status over the past three years, population served, rates, age of treatment and distribution systems, water treated, purchased, and sold, source water, treatment type, unaccounted water loss, failing elements of treatment and distribution, energy and water conservation practices, status of asset management plans, and risk and resilience for emergencies.

- **Evaluate:** TDEC evaluated the impact and benefits the TN Infrastructure Scorecard may have for the systems and the agencies. Systems were given full reports and spreadsheets on the data. The state aggregated the data from the Scorecards to determine if there was a need and pattern to small system issues. TDEC found asset management plans, aging and failing infrastructure, and water loss were issues for the majority of the systems.
 - Feedback loop-DWR gave presentations on the process and results to many local, state, and national groups looking for feedback.
- **Improve:** TDEC regathered the Technical Advisory group to discuss the results of the yearlong beta-testing. All agencies and members agreed the data was valuable. But to improve the usability for systems we needed to create a Summary module.
 - Correct all issues and bugs found in version 1.0.
 - o Improve questions and quantitative assessment of questions
 - o Structure a summary based on most relevant components and connect needs to a plan to improve utility systems over time
 - Establish a framework to guide systems on how to create a comprehensive asset management plan that meet SRF requirements and Drinking Water Program requirements as it applies to the SDWA expectations
 - Improve the user interface and ability to aggregated data and evaluate results on a local and statewide scale.
- Re-launch TN Infrastructure Scorecard ver. 2.0: TDEC was set to relaunch the Scorecard through the SRF's Small and Disadvantaged Community Technical Assistance program funded through the PWSS set-aside dollars in fall of 2021. Simultaneously, TDEC secured \$1.35 billion in ARPA stimulus funds for drinking water and wastewater infrastructure. DWR, with the support of the drinking water program and SRF, offered the use of the TN Infrastructure Scorecard as a self-assessment tool for all systems to identify critical needs for water infrastructure projects. Use of the Scorecard was supported by TDEC and the Governor's team to ensure best use of funds as well as maximize return on investment.
 - **Pivot:** Quickly work to right-size the tool for use by any size system and accessed through a web-based portal.
 - Stakeholder outreach ad engagement deployed statewide
 - Training of hundreds of water system officials/operators for use of Scorecard and Evaluation of Summary, incorporate results into planning for ARP noncompetitive grant if Summary showed critical needs; education and outreach focusing on small and disadvantaged communities
 - Over 450 systems have completed the Scorecard. At least half of them are drinking water systems.
- TN Scorecard is in use now on every ARP grant application as a decision-making tool for use of funds. The grantees will also be obligated to submit a final Scorecard Summary so the state can quantify any return on investment of ARP dollars for addressing critical needs.
- TDEC will be working with Community Development Business Grant (CDBG) and Bureau of Environment (BOE) as well as former Technical Advisory members to build on lessons learned in version 2.0 for the update to Scorecard version 3.0 in fall of 2023.
- TDEC is still exploring the options to pursue other components of the state's approach to asset management – including regulation updates and incorporating asset management into state regulations, sanitary surveys, and enforcement by looking at other states rules.

- 76% of Public Water Systems did not have a comprehensive AMP based on infrastructure scorecard results.
- In April of 2022 TDEC launched a \$1 billion dollar water and wastewater infrastructure grant with American Rescue Plan funds. The grant contract requires all participating systems to complete an Infrastructure Scorecard to identify critical needs and every system must demonstrate they comply with the AMP guidance template by the end of the grant term, September 30, 2026.
- DWR received approximately 350 applications with \$990M in requests for water, wastewater, and stormwater infrastructure funding to address critical needs. Drinking water systems in all 95 counties are participating in this program.

Long Term efforts

DWR will continue utilizing the infrastructure scorecard to help drive funding assistance for development and implementation of AMP once ARP funding expires.

TN Public Water Systems rule change. TDEC plans to modify rule 0400-45-01-.04(6) to ensure the definition of Capacity Development Plan includes an Asset Management Plan (AMP) component. This would be required of all public water systems. TDEC plans to consider adopting regulatory revisions during the next rule change based on EPA's LCR rule revisions.

[0400-45-01-.04 (6) "Capacity Development Plan" means a document(s) identifying what actions a public water system is taking or shall take to become a "viable water system." Such plan shall include information concerning retention of a Certified Operator in direct charge; system ownership and accountability; staffing and organizational structure; fiscal management and controls, source water assessment and protection plan; "business plan", <u>asset management plan</u> and any and all other information identifying any further action that shall be taken.]

Sanitary Survey Manual Revision. TDEC plans the inclusion of asset management as an item to be addressed in the Sanitary Survey inspections. The existence of an Asset Management Plan would be discussed during the survey and addressed in the narrative section of the report. PWS identified as in need of developing an AMP would be directed to the TDEC/SRF website where resources such as the template would be available. Revisions to the Sanitary Survey Manual are expected within the next 1-3 years.

State Revolving Fund Loan Program. The DWR SRF program will include an Asset Management Plan question to the Capacity Development Review Checklist. This ensures systems receiving SRF funds have a CDP and an AMP that complies with the minimum standard established by TDEC. SRF does not have a point system for AMPs in the ranking criteria. However, in January of 2023, SRF will be meeting with EPA Region 4 to specifically discuss needed improvements to the DWSRF ranking system. We will inquire with Region 4 on the potential to add AMP points to the ranking system. This would encourage PWSs to develop AMPs and ensure that systems receiving SRF funds have evaluated its assets with regard to financial capacity. Priority checklists for SRF will include language that the PWS must have a Capacity Development Plan which includes an Asset Management Plan. TDEC is working with EPA to discuss modifications of the priority ranking list in 2023.

DWR Compliance and Enforcement staff will consider and prescribe the development of asset management plans in enforcement orders when it is determined that the systems lack financial capacity is contributing to the non-compliance issues. It is possible that TDEC will use the list from the Comptroller's WWFB and UMRB financial distress list which is based on annual audits and the boards require asset management plans in orders for those systems. TDEC could also request an AMP with every system on the financial distress list or simply request this document from the Comptroller's Office if they have required it of the system. DWR also checks the financial distress list on all the environmental reviews.

TDEC DWR will develop a web presence for Asset Management Plan information which will include the IAMP developed by TAUD and other resource links for reference. TDEC will include this information under our Capacity Development program once finalized. We should have a dedicated AMP page by summer of 2023.

The implementation strategies, as described above, will ensure that systems in immediate need for AMPs will be identified via the Tennessee Infrastructure Scorecard. The ongoing regulatory activities such as the inclusion of AMP in sanitary surveys, review of finances during audits by the comptroller's office, and inclusion of AMPs in enforcement orders will assist in identifying systems that my need AMP or AMP revisions. Lastly, the inclusion of the AMP as a component of the SRF priority ranking will be a subsequent check and will incentivize PWS who do not have an AMP that is current to do so. All PWSs in TN will be required to maintain AMPlans; training will be provided for new PWSs.

The TN Office of the Comptroller requires annual financial audits of local governments, which includes governmental water and wastewater systems. The annual audits are reviewed to ensure the utility is in compliance with applicable state laws and regulations. When a water or wastewater system has a statutory decrease in net position for two consecutive fiscal years, the utility is referred to the Water and Wastewater Financing Board or Utility Management Review Board. Both Boards are tasked with rectifying the financial, technical, and managerial issues of the utility. For these problems to be corrected, a comprehensive financial assessment is necessary to generate a corrective plan moving forward. An important aspect of this assessment is a review of the utility's rates and asset management initiatives. Generally, the Boards order the utility to contract with a third party to complete the assessment needed to ensure the utility is on the best path forward.

Once a comprehensive AMP is developed, the utility should treat the AMP as a "living" document. The AMP should be updated annually as assets age, new assets are added, maintenance is performed, and the level of desired service mandates the replacement of assets. The original AMP and annual updates to the AMP give a utility's management and governing board important and relevant information on the maintenance and replacement of aging water infrastructure. This information can be used in capital budget planning to ensure that the utility's financial resources are used efficiently and effectively to maintain and improve the utility's infrastructure. We will be in touch with our training partners providing ongoing communications.

Education and outreach are always a challenge. The understanding of what an AMP is and how it needs to be a living document is low across the state. To combat this barrier, TDEC will continue to partner with TAUD to provide direct and indirect technical assistance on AMPs. We will also develop a website and host AMP workshops if warranted.

In addition, funding AMP is also a barrier. Recently, TDEC spent 6 months negotiating with the Comptroller of the Treasury on the permissibility of awarding SRF loans for AMP. SRF lost the argument based on the Comptroller's expectation that AMPs are operation and maintenance activities. While this may be true for systems that have an AMP in place, it is not the case for 76% of the systems across the state. In 2023, TDEC intends to release AMP specific grants with SRF money, effectively improving the funding assistance for systems to complete their AMP. Although the state would have preferred a loan product, we are overcoming that barrier by switching to a grant. Those are the two primary barriers to implementing AMP plans statewide. We are working diligently to overcome them.

TDEC will determine the efficacy and progress of asset management efforts by summarizing the number of systems that completed an AMP through the American Rescue Plan grants and have applied for and were awarded a DWSRF loan. These funding programs are supporting this important and developing regulation/requirement for AMPs. Proposed tracking information will be presented in the Triennial Report to the Governor.
