Mr. Josh Peters On-Scene Coordinator U.S. Environmental Protection Agency, Region 5 Superfund and Emergency Management Division 2565 Plymouth Road Ann Arbor, MI 48105 We are in the process of ensuring this document is accessible to all audiences. If you need assistance accessing this document, or any material on the EPA East Palestine, Ohio emergency response web pages, please contact the Region 5 Public Information Officer on-call at: R5 EastPalestine@epa.gov

Subject: Data Validation Report

E Palestine Site - ER

EPA Contract No.: 68HE0519D0005

Task Order/Task Order Line Item No.: 68HE0520F0032/0001EB201

Document Tracking No. 2179

Dear Mr. Peters:

Tetra Tech, Inc. (Tetra Tech) is submitting this data validation report for 48 air samples (including 4 field duplicate samples, 4 field blank samples and 1 media blank sample) collected at the E Palestine site. The samples were collected on August 12 and 13, 2023, and were analyzed for acrylates by Eurofins Analytics, LLC. The final laboratory data package was received on August 24, 2023.

Analytical data were evaluated in general accordance with the Tetra Tech *Quality Assurance Project Plan, East Palestine Train Derailment Site, East Palestine, Columbiana County, Ohio,* Revision 3 (April 2023), the Tetra Tech *Quality Assurance Project Plan, Superfund Technical Assessment and Response Team (START V), EPA Region 5,* Revision 4 (August 2022), and the *National Functional Guidelines (NFG) for Organic Superfund Methods Data Review* (November 2020).

No qualification or rejection of results was required for these data packages. The results may be used as reported by the laboratory.

If you have any questions regarding this data validation report, please contact me via the project manager. Sincerely,

Celina BarnettDigitally signed by Celina

INTRODUCTION

This checklist summarizes the Stage 2A validation performed on the subject laboratory report, in accordance with the U.S. Environmental Protection Agency (EPA) *Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use* (January 2009). Analytical data were evaluated in general accordance with the Tetra Tech *Quality Assurance Project Plan, East Palestine Train Derailment Site, East Palestine, Columbiana County, Ohio,* Revision 3 (April 2023), the Tetra Tech *Quality Assurance Project Plan, Superfund Technical Assessment and Response Team (START V), EPA Region 5,* Revision 4 (August 2022), and the EPA *National Functional Guidelines (NFG) for Organic Superfund Methods Data Review* (November 2020).

OVERALL EVALUATION

No rejection or qualification of results was required for this data package. The results may be used as reported by the laboratory.

Data completeness:

Within Criteria	Exceedance/Notes
	The results for the field blank and media blank were reported in units of micrograms (μ g) while the other field sample results were reported in units of μ g, milligrams per cubic meter (μ g/m3), and parts per million (μ g) (volume) in the laboratory report and only in units of ppm in the laboratory electronic data deliverable (EDD).
N	The site-specific QAPP specifies analysis of acrylates in air by Eurofins Analytics, LLC standard operating procedure (SOP) IHGC-001-v.22-3. The laboratory confirmed that NIOSH Method 1450M, which is mentioned in the laboratory deliverables, is equivalent to SOP IHGC-001-v.22-3; therefore, these method references may be used interchangeably.
	Note, the following fields in the laboratory EDD may be formatted as date only or as date/time: Date_Collected, Date_Received, Date_Extracted, and Date_Analyzed. The time value was not required to be provided in the EDD. If no time value was provided, then the entered value may appear as date only or with a default time value of 0:00, 00:00, or similar.

Sample preservation, receipt, and holding times:

Within Criteria	Exceedance/Notes
Y	

Method blanks:

Within Criteria	Exceedance/Notes
	Nondetect results for laboratory method blank LMB IHG230815A and laboratory reagent blank LRB IHG230815A were reported as
N	"0" in the laboratory EDD rather than at the reporting limit (RL). The laboratory was contacted on August 28, 2023, and agreed to
	report nondetect laboratory method blank and LRB results at the RL in future laboratory EDDs. No qualifications were applied.

Overall Qualifications:

See results summary pages attached for changes to the laboratory qualifiers based upon this validation. The following is a list of qualifiers and definitions that may be used for the validation of this data package:

1	The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample.
J	
J+	The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample and may be
	biased high.
	The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample and may be
J-	biased low.
NJ	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated value is the approximate
INJ	concentration of the analyte in the sample.
0	The sample result is rejected as unusable due to serious deficiencies in one or more quality control criteria. The analyte may or may not
R	be present in the sample.
U	The analyte was analyzed for, but was not detected at or above the associated value (reporting limit).
UJ	The analyte was analyzed for, but was not detected at or above the associated value (reporting limit), which is considered approximate
	due to deficiencies in one or more quality control criteria.

Document Tracking No.	2179d		TO/TOLIN NO.	08HEU32UFUU32/UUU1EB2U1	
Laboratory Report No.	B227-137		Laboratory	Eurofins Analytics, LLC – Ashland, VA	
Analyses	2-Ethylhexyl acrylate and n-butyl acrylate by laboratory standard operating procedure (SOP) IHGC-P029				
Samples and Matrix Ten air samples including one field blank a		nd	one field duplicate pair		
Collection Date(s) 08/12/2023					
Field Duplicate Pairs EPD-ST-WA-02-081223-2/EPD-ST-WA-22-081223-2		.223-2			
Field QC Blanks EPD-ST-FB-081223-2					

INTRODUCTION

This checklist summarizes the Stage 2A validation performed on the subject laboratory report, in accordance with the U.S. Environmental Protection Agency (EPA) *Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use* (January 2009). Analytical data were evaluated in general accordance with the Tetra Tech *Quality Assurance Project Plan, East Palestine Train Derailment Site, East Palestine, Columbiana County, Ohio,* Revision 3 (April 2023), the Tetra Tech *Quality Assurance Project Plan, Superfund Technical Assessment and Response Team (START V), EPA Region 5,* Revision 4 (August 2022), and the EPA *National Functional Guidelines (NFG) for Organic Superfund Methods Data Review* (November 2020).

OVERALL EVALUATION

No rejection or qualification of results was required for this data package. The results may be used as reported by the laboratory.

Data completeness:

Within Criteria	Exceedance/Notes
	The results for the field blank were reported in units of micrograms (μ g) while the other sample results were reported in units of μ g, milligrams per cubic meter (m g/ m 3), and parts per million (p pm) (volume) in the laboratory report and only in units of p pm in the laboratory electronic data deliverable (EDD).
N	Rohm & Haas IH9805 was cited in the AIHA certification as "IHGC-P029" and may be cited by the abbreviation "Rohm & Haas IH9805" or "IHGC-P029" interchangeably throughout the laboratory report.
	Note, the following fields in the laboratory EDD may be formatted as date only or as date/time: Date_Collected, Date_Received, Date_Extracted, and Date_Analyzed. The time value was not required to be provided in the EDD. If no time value was provided, then the entered value may appear as date only or with a default time value of 0:00, 00:00, or similar.

Sample preservation, receipt, and holding times:

Within Criteria	Exceedance/Notes
Υ	

Method blanks:

Within Criteria	Exceedance/Notes
N	Laboratory method blank LMB IHG230815E and laboratory reagent blank LRB IHG230815E contained n-butyl acrylate and 2-ethylhexyl acrylate at concentrations less than the reporting limits. The laboratory was contacted on August 28, 2023, and resolved the laboratory method blank and LRB results in future laboratory EDDs. No qualifications were applied because all n-butyl acrylate and 2-ethylhexyl acrylate sample results were nondetect.

Field blanks:

Within Criteria	Exceedance/Notes
Υ	

Surrogates and labeled compounds:

Within Criteria	Exceedance/Notes
NA	

MS/MSDs:

Within Criteria	Exceedance/Notes
NA	

Laboratory duplicates:

Within Criteria	Exceedance/Notes
NA	

Field duplicates:

Within Criteria	Exceedance/Notes
Υ	

LCSs/LCSDs:

Within	Exceedance/Notes					
Criteria	Exceedance/Notes					
N	The recovery of 2-ethylhexyl acrylate in the LCSD was above the laboratory control limit. However, the average recovery met					
	criteria. The sample results were therefore not qualified.					

Sample dilutions:

Within Criteria	Exceedance/Notes
NA	

Re-extraction and reanalysis:

Within Criteria	Exceedance/Notes
NA	

MDLs/RLs:

Within Criteria	Exceedance/Notes
Y	Method detection limits were not reported. Nondetect sample results were reported as less than the reporting limit in the laboratory report and at the reporting limit (flagged U) in the validated EDD and attached analytical results summary.

Tentatively identified compounds:

Within Criteria	Exceedance/Notes				
NA					

Other [None]:

	•	
Wi	ithin	Evenedones /Notes
Cri	iteria	Exceedance/Notes
1	NA	

Overall Qualifications:

See results summary pages attached for changes to the laboratory qualifiers based upon this validation. The following is a list of qualifiers and definitions that may be used for the validation of this data package:

1	The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample.						
J							
J+	The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample and may be						
	biased high.						
J-	The analyte was positively identified; the associated value is the approximate concentration of the analyte in the sample and may be						
	biased low.						
NII	The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated value is the approximate						
NJ	concentration of the analyte in the sample.						
0	The sample result is rejected as unusable due to serious deficiencies in one or more quality control criteria. The analyte may or may not						
R	be present in the sample.						
U	The analyte was analyzed for, but was not detected at or above the associated value (reporting limit).						
	The analyte was analyzed for, but was not detected at or above the associated value (reporting limit), which is considered approximate						
UJ	due to deficiencies in one or more quality control criteria.
