

PQR Planner for FY2024–2028 Cycle**Region #** _____

Program and Permit Quality Reviews (PQRs) are conducted by EPA Regions where the state or territory is the permitting authority and by EPA Headquarters (HQ) where the Region is the permitting authority. PQRs are conducted over the course of a five-year cycle, ensuring that each permitting program is reviewed once per cycle.

At the start of the FY2024-2028 PQR cycle, EPA Regions and HQ should prepare plans identifying the timing of each PQR. Regions are encouraged to work with their states, and EPA HQ with the Regions, in developing timelines for conducting PQRs. Timing and regional topic(s) for review may shift with priorities over the course of this cycle, so the schedules may be modified as needed.

Please also note whether HQ/contractor support is desired. Such support is typically limited to core permit reviews, participation in the state visit, and support developing the background and core sections of the report. Regional topics are expected to be reviewed and relevant sections of the PQR report written by the Region.

Planning State Reviews:

State	FY & Quarter of State Visit	Regional Topic(s)	HQ/Contractor Support for Core Review?
