

OFFICE OF WASTEWATER MANAGEMENT

WASHINGTON, D.C. 20460

DECISION MEMORANDUM

SUBJECT: Project-Specific Availability Waiver of American Iron and Steel Requirements to the Town of Oswego, New York for 4-Inch Diameter Plug Valves

FROM: Andrew Sawyers, Director

Decision: The U.S. Environmental Protection Agency is hereby granting a project-specific waiver pursuant to the "American Iron and Steel" (AIS) requirements of the Clean Water Act Section 608 under the authority of Section 608(c)(2) to the Town of Oswego, New York (Applicant) for 4-inch diameter plug valves. This waiver permits the use of these plug valves, manufactured outside of the United States, in the BCA Project No. 2018-130 project, because no domestic manufacturers produce alternatives that meet the technical specifications and schedule of the project.

This waiver applies only to the proposed project funded by the Clean Water State Revolving Fund (CWSRF). Any other jurisdiction with projects funded by either the CWSRF, the Drinking Water State Revolving Fund, or the Water Infrastructure Finance and Innovation Act that wishes to use the same product must apply for a separate waiver.

Rationale: Section 608 of the Clean Water Act requires CWSRF assistance recipients for treatment works projects to use specific iron and steel products that are produced in the United States. The EPA has the authority to determine whether it is necessary to waive this requirement based on certain circumstances set forth in Section 608(c) of the Clean Water Act. The provision states that, "[the requirements] shall not apply in any case or category of cases in which the Administrator [of the EPA] finds that – . . . (2) iron and steel products are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality."

Background of Waiver Request: The Applicant provided information to the EPA asserting that there are no domestic manufacturers producing 4-inch diameter plug valves in sufficient and reasonably available quantities and of a satisfactory quality. The plug valves will be installed along the force main as properties with failing septic systems are connected to the sewer system.

Assessment of Waiver Request: The EPA conducted market research and a public comment period on the supply and availability of these 4-inch diameter plug valves. The basis of evaluation included thorough review of the waiver request submission, examination of domestic manufacturer catalogs or other technical data and marketing materials, personal communication with domestic manufacturers, inquiries of state staff, and outreach to contractors and engineers with expertise and familiarity with the project. During market research, the EPA contacted ten (10) manufacturers and suppliers of these plug valves. Two (2) of the manufacturers stated they could make AIS-compliant 4-inch plug valves within 26-30 weeks and over 16 weeks, respectively. However, the Applicant had already experienced a six-month sourcing delay outside its control, and these lead times are long enough that they would cause additional, undue delays for the project, and by extension, for property owners currently impacted by failing septic systems. The EPA received no (zero) public comments to the waiver request.

Finding: Since the Applicant established a reasonable basis to specify the products required for this project, and because the EPA substantiated the Applicant's claim through market research that these products are not available from a manufacturer in the United States, the Town of Oswego, New York is hereby granted a waiver from the AIS requirements. This waiver permits the use of 4-inch diameter plug valves, as documented in the State of New York's waiver request submittal on behalf of the Applicant dated March 19, 2024.
