

Please join us for our upcoming webinar:

2024 State Asset Management Initiatives

Wednesday, June 26th, 2024

12:00-1:00 p.m. ET

Utilizing asset management ensures water systems across the nation can achieve a future of sustainable, safe drinking water while also building the resilience of their communities. This webinar will highlight new initiatives states have adopted in response to recent amendments to the Safe Drinking Water Act. These are part of EPA's 2024 State Asset Management Initiatives Document. EPA will present how the Document can help states and technical assistance (TA) providers identify the state resources and initiatives that communities can take advantage of when working to build their system capacity.

In addition, EPA is excited to welcome Michael Grange from the State of Utah who will present their asset management programs they are promoting and implementing across their state. Attendees will receive a brief introduction and history to Utah's programs and then learn how they have responded to the new America's Water Infrastructure Act requirement.
