

Discussion on Next MSTRS Charge

December 13, 2024

- Place-based emissions reductions/diesel hotspots (funding, tech adoption, etc)
 - Focus more on public health, improve understanding/analysis of these areas, etc
- Next steps for SmartWay (including a non-road focus)
 - Who are the stakeholders? Current SW folks or new group (construction, farmers, etc)?
 - Which new/current technologies are worthwhile for fleets?
- Alternative liquid fuels and cleaner non-road fuels (e.g. marine, aviation)
 - Affordability, accessibility, infrastructure, etc
 - Improvements to alt-fuel certification under the current regulations
- Non-tailpipe emissions (tires, brakes, etc)
- Other ideas based on expertise of new MSTRS membership
