I am an attorney in Raleigh and I have been contacted by several inmates from the North Carolina Correctional Institute for Women. They have claimed that they are being exposed to paint and paint thinner which has caused them serious illnesses and that one woman died earlier this year as a result of exposure. They work in what is known as the tag plant where they make license plates. My client has provided me a copy of her medical records and I have had them reviewed by a friend of mine who is a doctor and the injuries she has described are consistent with the chemicals they claim they have been exposed to. The chemicals which they identified as having been used are: ethyl 3-ethoxypropionate, diethylene glycol monobutyl ether acetate, ethyl hexanol and oxalic acid. They will do work without being required to wear masks. Jane Gilcrest of the North Carolina Attorney General's Office claims that the OSHA act does not apply to prisoners who are doing work. Please let me know if you need any further information.
