

OFFICE OF WASTEWATER MANAGEMENT

WASHINGTON, D.C. 20460

DECISION MEMORANDUM

SUBJECT: Project-Specific Availability Waiver of American Iron and Steel Requirements to Dorchester County, Maryland for Curb Stop and Swing Check Valve Assemblies

FROM: Andrew Sawyers, Director

Decision: The U.S. Environmental Protection Agency is hereby granting a project waiver pursuant to the “American Iron and Steel” (AIS) requirements of the Clean Water Act Section 608 under the authority of Section 608(c)(2) to Dorchester County, Maryland (Applicant) for curb stop and swing check valve assemblies. This waiver permits the use of these curb stop and swing check valve assemblies (assemblies), manufactured outside of the United States, in the McKeil Point Bermed Infiltration Pond #1 project, because no domestic manufacturers produce alternatives that meet the technical specifications of the project.

This waiver applies only to the proposed project funded by the Clean Water State Revolving Fund (CWSRF). Any other jurisdiction with projects funded by either the CWSRF, the Drinking Water State Revolving Fund, or the Water Infrastructure Finance and Innovation Act that wishes to use the same product must apply for a separate waiver.

Rationale: Section 608 of the Clean Water Act requires CWSRF assistance recipients for treatment works projects to use specific iron and steel products that are produced in the United States. The EPA has the authority to determine whether it is necessary to waive this requirement based on certain circumstances set forth in Section 608(c) of the Clean Water Act. The provision states that, “[the requirements] shall not apply in any case or category of cases in which the Administrator [of the EPA] finds that – . . . (2) iron and steel products are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality.”

Background of Waiver Request: The Applicant provided information to the EPA asserting that there are no domestic manufacturers producing assemblies in sufficient and reasonably available quantities and of a satisfactory quality. The project involves connecting existing homes to the sewer system. The homes are currently served by a failing bermed infiltration pond, which will be discontinued as part of the project. Completion of this project will protect public

health and safety and improve water quality in the Little Choptank River and ultimately the Chesapeake Bay. The assemblies will be used to isolate low pressure sewer laterals from grinder pump systems that will be installed as part of this project. The assemblies must be made of 316 stainless steel and be rated for a pressure of 200 psi at 70 degrees.

Assessment of Waiver Request: The EPA conducted market research and a public comment period on the supply and availability of these assemblies. The basis of evaluation included thorough review of the waiver request submission, examination of domestic manufacturer catalogs or other technical data and marketing materials, personal communication with domestic manufacturers, inquiries of state staff, and outreach to contractors and engineers with expertise and familiarity with the project.

During market research, the EPA contacted eight (8) manufacturers and suppliers of these assemblies. There were no manufacturers who indicated they could provide assemblies that meet the technical specifications of the project and are AIS compliant. Five (5) of the manufacturers responded indicating they could not make the AIS-compliant assemblies. The EPA received no (zero) public comments to the waiver request.

Finding: Since the Applicant established a reasonable basis to specify the products required for this project, and because the EPA substantiated the Applicant's claim through market research that this product is not available from a manufacturer in the United States, Dorchester County, Maryland is hereby granted a waiver from the AIS requirements. This waiver permits the use of assemblies, as documented in the State of Maryland's waiver request submittal on behalf of the Applicant dated December 18, 2024.
