

# EPA Oversight of RED HILL Bulk Fuel Storage Tank Closure

EPA continues to oversee the **Phase I Closure** of the Red Hill Bulk Fuel Storage Tanks and is committed to ensuring all Underground Storage Tanks are cleaned and closed in a manner protective of human health and the environment.

## EPA:

- Reviewed and commented on Navy's Pipeline Removal Plan, which describes the deconstruction and removal of 56,800+ feet of fuel lines
- Oversaw degassing of Tanks 3–8 and removal of sludge from Tanks 5–8
- Reviewed operation plans related to the removal, handling, & disposal of residual fuel, sludge, & wash water from tank cleaning
- Reviewed and approved Navy's Principal Physical Modifications Plan, to ensure interior components are drained of residual fuel and/or removed from tanks
- Oversaw pressure washing of Tanks 7/8

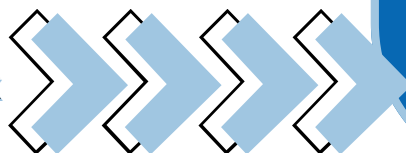

**Completed/Ongoing Work**

## EPA will:

- Review Tank 7/8 cleaning quality validation reports
- Continue oversight of tank degassing and air quality monitoring, sludge removal from tank bottoms, pressure washing of tank interior, and final tank disposition
- Begin oversight of pipeline removal work
- Review Facility Closure Design Plan, which will describe the final closure of Red Hill fuel facility
- Conduct Interim Closure Inspections for tanks that have undergone pressure washing and modification to interior components

**Upcoming Work**
