BUDGET INFORMATION - Non-Construction Programs

OMB Number: 4040-0006
Expiration Date: 02/28/2025

SECTION A - BUDGET SUMMARY

Grant Program Function or Activity (a)	Catalog of Federal Domestic Assistance Number (b)	Estimated Unobligated Funds		New or Revised Budget		
		Federal (c)	Non-Federal (d)	Federal (e)	Non-Federal (f)	Total (g)
1. ENVIRONMENTAL JUSTICE COLLABORATIVE PROBLEM- SOLVING (EJCPS) COOPERATIVE AGREEMENT PROGRAM	66.306	$	$	$ 500,000.00	$	$ 500,000.00
2.						
3.						
4.						
5. Totals		$	$	$ 500,000.00	$	$ 500,000.00

Standard Form 424A (Rev. 7- 97)
Prescribed by OMB (Circular A -102) Page 1

SECTION B - BUDGET CATEGORIES

6. Object Class Categories	GRANT PROGRAM, FUNCTION OR ACTIVITY (1) ENVIRONMENTAL JUSTICE COLLABORATIVE PROBLEM- SOLVING (EJCPS) COOPERATIVE AGREEMENT PROGRAM	(2)	(3)	(4)	Total (5)
a. Personnel	$ 177,059.79	$	$	$	$ 177,059.79
b. Fringe Benefits	44,264.95				44,264.95
c. Travel	6,586.00				6,586.00
d. Equipment	0.00				0.00
e. Supplies	2,600.00				2,600.00
f. Contractual	75,000.00				75,000.00
g. Construction	0.00				0.00
h. Other	151,330.94				151,330.94
i. Total Direct Charges (sum of 6a-6h)	456,841.68				$ 456,841.68
j. Indirect Charges	43,158.32				$ 43,158.32
k. TOTALS (sum of 6i and 6j)	$ 500,000.00	$	$	$	$ 500,000.00
7. Program Income	$ 0.00	$	$	$	$ 0.00

Authorized for Local Reproduction

14. Areas Affected by Project

This project will focus on Androscoggin County, Maine, United States. The municipalities in Androscoggin County are as follows:

- Auburn
- Durham
- Greene
- Leeds
- Lewiston
- Lisbon
- Livermore
- Livermore Falls
- Mechanic Falls
- Minot
- Poland
- Sabattus
- Turner
- Wales

Project Budget

Resource Investment	Project Activities	Outputs	OUTCOMES		
			November 2023 - June 2024	July 2024 - July 2025	July 2025 - December 2027
Project Management					
*WCFN Coordinator	*Responsible for Project Outcomes in coordination with the evaluator *Maintains communication between coordinators and develops training manual/module *Professional development (education) for Coordinators *Administer & summarize community surveys: 1-Food Insecurity 2-Consumer 3-Pantry *Work with coordinators, and University interns to create business plan for value-added products and compost	*36 strategic workshops for Coordinators (Gleaning, Processing, Composting) *3 Annual survey deployments, present results to Coordinators. *Build long-term database of key metrics including survey results, pounds harvested, and fresh/processed deliveries to all constituents *Formal training Manual/Module for Coordinator Positions	*Access to relevant and recent survey data *Established coordinator job descriptions *Coordinator training manual/module available to future	*Ability to make data and community-driven decisions. *Ability to detect gaps between partnerships and community needs.	*Standardization of survey deployment and routine use of results. *Underrepresented population is leading in decision-making through surveys *Stability of Coordinator positions through use of training manuals/modules. *Continuity of community partnerships and communication *Pantry deliveries respond to client needs/preferences through data-driven decisions based on community survey responses *Financially self-sustaining processing and composting programs. ***Enduring Community Impacts are reduced food insecurity and food waste, increase in community resilience to crisis and climate change.**

Resource Investment	Project Activities	Outputs	OUTCOMES		
			Nov 2023 - June 2024	July 2024 - July 2025	July 2025- December 2027
Reducing Food Waste and Insecurity: Gleaning					
* Gleaning Coordinator	*Recruit and stipend farmers to participate in gleaning efforts, goal to increase by 2 participating farms. *Track amount of produce distributed to each partner *Train/education for 3 Student Farmers to grow and harvest produce for distribution. * Communicate with gleaning farms to inform planting plans (using survey data). *Recruit community advocate gleaners to distribute and produce training manual/module *Develop collaboration with Eastern food pantry (see below).	*2 new farmers gleaning for a total of 6 *3 student farmers gleaning *Formal training manuals/modules for Community Advocates and Farmers *2 Gleaning community advocates are distributing food to pantries and households.	*Farmers plan for and plant culturally relevant food for gleaning (based on survey results) *3 student farmers plan for and plant culturally relevant food for gleaning *Training manual as a permanent and updatable resource *Finalize partnership with Eastern's food pantry	*respond to success of the first year outcomes and work to operationalize the respective responsibilities *e.g.* • *communicating with farmers* • *training student farmers* • *training community advocates* • *using survey data from WCFN coordinator* • *providing data back to WCFN* *Improve farmer economic viability *Increase volume of food delivered to pantry, households and processing (see below) *Provide fresh and processed local food delivered to Eastern's food pantry *implement sustainable farming practices at SVF to supply UCONN food service.	*Formalized process and structure for the Gleaning Network provides continuity of support to the food system, **reduces food waste, addresses food insecurity, and increases community resilience to crisis and climate change.** *Underrepresented population is leading in decision-making through surveys *Student farmers assist to train the next generation of student farmers and educate students involved at the SVF. *Trained community advocates assist to recruit and train the next generation of gleaning advocates. ***Enduring Community Impact: Closed loop of farmer production, distribution, and survey responses ensure appropriate amount and type of food is available to pantries and households and provides economic security to farmers.**

*Student Farmers (3)	*trained to harvest, wash, and transport the gleaned produce from gleaning partner farms. *develop harvest and gleaning manual for SVF students	*10,000 pounds of produce gleaned *Educational manual/modules for student farmers	*manual/modules are long-term resources		
Community Advocates - Distribution (2)	*weekly distribution of food from 7 farms to 35 low-income households and 5 food pantries, and community fridge	*35 low-income households and 5 food pantries, and community fridge are stocked weekly	*reduced food insecurity *increased proportion of desirable food		

Resource Investment	Project Activities	Outputs	OUTCOMES		
			Nov 2023 - June 2024	July 2024 - July 2025	July 2025- December 2027
Reducing Food Waste and Insecurity: Processing for Longevity					
Processing Coordinator	*Recruit community advocate processors *Developing scheduling tool for processing facility *Train 2 community advocates in food processing *Develop community advocate processing training manual *Obtain processing supplies: bags, jars, labels (see budget) *Reserve processing time at CLiCK *Develop collaboration with Eastern food pantry (see below).	*Monthly (36) workshops with community advocates *2 trained community advocate processors *Training manual/module for community advocate processors	*Community advocates with food safety and processing training *Training Manual as a long-term resource *Finalized business plan for shelf-stable food sales strategy to generate revenue	*Increased volume of processed, shelf-stable food delivered to pantries, households, community fridge, and consumer sales. *Processed products informed by community surveys (see WCFN above)	*Financially self-sustaining processing operation through sales to consumers. *Increased capacity for processing excess produce for later distribution **reduces food waste, addresses food insecurity, and increases community resilience to crisis and climate change.**
Community Advocate Stipend-Processors (0 increase to 2)	* staff becomes ServSafe-certified * technical training in food processing	* increased number of hours of kitchen use *increased number of individuals receiving shelf-stable food	* increased capacity to produce shelf-stable food to supply pantries		

Resource Investment	Project Activities	Outputs	OUTCOMES		
			Nov 2023 - June 2024	July 2024 - July 2025	July 2025- December 2027
Further Minimizing Food Waste: Composting					
*Compost Coordinator	*Educate vendors, businesses, and households on compostable products *Serve as the retail outlet for cost-effective compostable products to vendors, businesses, and households *Provide compost buckets to vendors/restaurants to collect prep and post-event food waste *Train interns and community advocates to divert event compostables to CLiCK compost pile. *Train interns to maintain the compost pile. *Collaborate with intern to develop a tracking tool for	*8 local events contracted for waste diversion and sustainability efforts. * 10 local businesses acquire compostable products from CLiCK. *5 local businesses collect prep and post-event compostable waste *10 people trained to collect compostables from community events/food processing *Increase capacity to accept food waste from local restaurants and other sources	*Food vendors for all community events will be knowledgeable about compostable products and waste diversion. *Community businesses will be knowledgeable about compostable products and waste diversion. *University knowledge for university Skills Awareness *Capacity to process compostable dinnerware (supplies include a shredder)	*Increase the number of contracts for waste diversion and sustainability efforts at community events from 3 to 8 to minimize local solid waste generation through source reduction, recycling and reuse or composting. *Increase number of local businesses acquiring compostable products from 5 to 10. *Increase the number of compost hauling accounts with local businesses from 1 to 5 to reduce solid waste generation and increase compost production. *Increase Waste diversion at current community events from 30% to 50% *Increase compost production for viable value added products for purchase by local gardens. *Increase in compostable food waste from events collected	*Develop a community culture (individuals and businesses) of composting to reduce food waste and associated greenhouse gas emissions. *Financially self-sustaining composting operation through: ● Increased event waste-diversion contracts ● Restaurant compost hauling accounts ● Sale of compostable wares ● Sale of compost to consumers *Increased capacity to collect and process compostable products is the last opportunity to **divert food waste thus reducing the community footprint and taking action to combat climate change.** Reduced waste event becomes a revenue generating service

	revenue source development *Recruit event organizers and local businesses to bec *Acquire Compost Supplies *e.g.* shredder, buckets, etc (see budget)	*Outreach/education to community members at events about composting/waste reduction			
Community Advocates - Compost	* 2 community advocates trained to collect food waste from community events and educate community members on-site.	20 people trained to staff events in the community	Knowledge Skills Awareness of composting		
Compost Interns	*Interns trained to collect food waste from community events and educate community members on-site. *Interns trained to maintain compost pile	4 people trained to staff events and tend compost pile	increase the number of people knowing how to compost		

Resource Investment	Project Activities	Outputs	OUTCOMES		
			Nov 2023 - June 2024	July 2024 - July 2025	July 2025- December 2027
Technical Assistance - Institute for Sustainability, Eastern Connecticut State University					
Intern Coordinator	*Recruit, supervise, and evaluate 5 Interns *Campus Educational Events/Initiatives *e.g.* food waste, community gardening, composting) *Collaborate with campus food pantry to accept fresh and processed food (see above). *Launch pilot food waste diversion to CLiCK compost program for residence hall students and Eastern greenhouse waste. *Collaborate with Project evaluator to formally integrate project evaluation into public health curriculum	*5 Interns are knowledgeable about food waste diversion and composting *12 University events increase general campus awareness and knowledge of food waste, alternative food systems, and impact on food insecurity and climate change *Kitchen scrap and greenhouse waste delivered to compost pile weekly *Monthly (36) meetings with WCFN Coordinator *Weekly meetings with Project Evaluator	*Intern job description, placement, and training *Schedule and topics for Campus educational events *One Kick-Off event completed *At least 15 students sign agreements to collect and submit kitchen scraps *Integrated as a working group member with WCFN increases capacity for grant seeking and revenue development *Increased capacity to support project evaluation curriculum	*Increasing awareness of and interest in Intern positions *Increasing awareness of and interest in expanded campus food waste diversion *Increasing awareness of and interest in reducing food insecurity on campus and in the community *Empirically demonstrate effectiveness of programs	*Student Interns gain applicable skills for project evaluation *Disseminate project outcomes to stakeholders *2 generations of Public Health students gain practical experience developing and executing project evaluation methods ***Reduced food insecurity on campus.** ***Increased waste diversion and sustainability efforts on campus minimizing solid waste generation through source reduction, recycling and reuse or composting.**

Interns	*Collect food waste from community events and educate community members on-site *Maintain compost pile *Collect food waste from select campus events and assist educate the university community. *Develop a tool to track	*Knowledge of food system waste and waste diversion methods. *Knowledge of composting methods. *Tracking tool for revenue source development	*Increase in amount of food waste diverted to compost from community events *Increased amount of food waste diverted to compost from campus.		
Project Evaluator	*Collaborate with stakeholders to develop and execute evaluation plan *Join quarterly working group meetings with all Coodinators to measure progress and set goals.	Students conduct small portions of evaluation plan *Collect metrics for all project outputs	*Train public health project evaluation students to increase capacity. *Availability of raw data (project outcome metrics)		

Rooting Deep and Scaling Up: Partnership Agreement

Project Description.
"Rooting Deep and Scaling Up: A Roadmap for Food System Equity and Viability in Eastern CT" is a partnership facilitated by the Windham Community Food Network, FRESH New London, the CT Food System Alliance, and Community Foundation of Eastern CT, that convenes producers, community members, stakeholders and allies to capture community-level food system innovation and momentum and scale it up to strengthen regional food system resilience. ***Specifically, the partnership will explore and develop opportunities that integrate viability for small-scale producers in Eastern CT with equitable access to healthy food and food system decision-making for the diverse residents of the region.***

Purpose of this Agreement.
This agreement sets the values, norms and processes for our partnership: ie, why and how we will go about working together, with the purpose of laying a foundation for collaboration both during and beyond this funding period. It includes Values, 4 "Priorities" for our Food System Network, and then for each Priority, "Actions" and "Measures", that operationalize and hold us accountable to our values and priorities.

How it was Developed.
The Agreement is informed by the *"Whole Measures for Community Food Systems"* planning tool. This draft is based on input from partners from the initial project survey and first convening, as well as discussions among the Planning Team. "Core Partners" - those who are written into the grant proposal - are required to commit to this Agreement. Other partners are encouraged and welcome.

How it Will Be Used.
This Partnership Agreement is a living document that will be amended over the course of the two year funding period. We will check in every six months to revise it and measure how well we are meeting the standards we set for ourselves, using the Tools and Norms Rubric in Section III of the Agreement.

We will focus on the different tools during different stages of the project. For example:

- We are currently in survey mode, so using tools # 1, 2, and 7 to inform our work.
- When we convene in September to analyze data and identify leverage points for our work, and will focus on tools # 4, 5, and 6.
- When we convene working groups in December, we will focus on tool #3…

Partnership Agreement.

I. Partnership Values.

This agreement is rooted in our collective values listed below. *(These values are derived from input from the initial partner survey, first and second convenings, and discussions among the project team. A more detailed explanation is found in the table at the end of this document.)*

- **Dismantling Racism and Being Anti-Racist** in our processes and projects
- **Equitable Access** to food system resources and decision-making power
- **Viability and Sustainability** of producers, projects, partners, and our ecosystem
- **Relationship-Building and Collaboration** among partners, community members, and communities
- **Resourcefulness and Resilience** through mutual aid and leveraging and integrating resources and opportunities
- **Culture-Shift**, within and among individuals, organizations, institutions, communities and systems.

II. Partnership Priorities.

Through our participation in "Rooting Deep, Scaling Up" we are committed to building a Regional Food Network that:

1. **Contributes to healthy communities by improving equitable access to food resources and responding to community food needs.** *We will act on this priority by:*
    - **a.** Being responsive to our communities' definitions of health and well-being.
    - **b.** Capturing, leveraging and re-investing local resources to reduce dependence on outside funding and the non-profit/service infrastructures.
    - **c.** Integrating our work with other sectors and networks that address the intersectional barriers our communities face, so we can build sustainable projects for and by our communities.
    - **d.** Supporting local businesses (that are locally-owned and invest locally).

2. **Promotes viability of small-scale producers in the region.** *We will act on this priority by:*
    - **a.** Supporting projects that support farmers' wellbeing, rights, and financial prosperity.
    - **b.** Centering sustainable practices to create sustainable ecosystems through our projects.
    - **c.** Addressing the need for access to land and resources for new producers, particularly BIPOC producers.
    - **d.** Uplifting opportunities to support existing food system initiatives that center farmer viability, such as EBT at farmers markets and farm to school.

3. **Builds diverse and collaborative relationships, trust, and reciprocity.** *We will act on this priority by:*
    - **a.** Naming and addressing systemic inequities that create and propagate the segregation of our community spaces, institutions, and opportunities; Centering community members' lived experiences with inequitable systems.
    - **b.** Promoting shared work and power through collective decision-making that intentionally increases the connection between community members, local food producers and food projects.
    - **c.** Moving away from White Supremacy Culture, and instead move towards norms and communication that intentionally increase connection and participation and are accessible for the communities being impacted.
    - **d.** Shifting existing norms so they center those outside of spaces in power by holding accountable imposing food system institutions and their privileged participants.

4. **Supports community voice, political empowerment, and local leadership.** *We will act on this priority through:*
    - **a.** Diverse Participation: Building capacity for diverse community members to participate in government and decision-making through recognizing and addressing barriers to participation in our work and food systems change more generally.
    - **b.** Transparency in Decision-Making: Being transparent around decision-making: asking who is there, who is not, who is impacted, what decision is being made, how we are making that decision, and who has power
    - **c.** Relocating Spaces of Power and Decision-Making in the Food System: Restructure existing spaces of power within the food system so they are intentionally made safe for marginalized community members; Building power with other networks and spaces and populations within the community being affected by this project.
    - **d.** Accountability of Public Institutions: Build capacity of institutions and organizations to listen to ensure that public institutions and local businesses support a just community food system.
    - **e.** Advocating at the local, state, and federal levels for comprehensive food systems policy change that aligns with our values.
    - **f.** Contributing our goals, priorities, and values to state-level food action planning.

I commit to the values and priorities of this agreement, and to measuring and improving our shared work according to the Tools and Norms laid out below.

Click here to virtually sign this agreement

III. Tools and Norms to measure our work. *We will use these to self-evaluate during the project.*

1. Community Voice "Legitimacy Test".	**Negative Impact -3**	**Neutral 0**	**Some Impact +3**	**Strong Impact +5**	**Highest Impact 10**	Overall rating:
Results: ● The people who provided input reflect the full diversity of the communities impacted by this work. ● A feedback loop was established so that community members can offer input at various stages of the project. ● Key organizations and project representatives have established strong relationships with leaders and others in the impacted communities. ● The results of surveys, focus groups and other established feedback initiatives were shared with the communities (people) who provided input. ● The programs/projects/policy initiatives created reflect the input from communities most impacted.						
How to approach the community: (We did this by…) ● Participants were surveyed in their native language by people who speak the language, whenever possible ● Feedback opportunities were clear, accessible, and easy to for people to participate ● Transportation/childcare were not barriers to providing input ● Survey and focus group questions reflect projects and ideas that are realistic and actionable. People are not asked to give ideas or opinions that could not be incorporated. ● Participants should provide different levels and media of input (spoken, written, digital…) People could participate in surveys and/or deeper, qualitative data collection. ● Information collected did not include unnecessary, personal details (or at least this part was optional and reasons for these questions were clear). ● We ensured that the survey reflects a clear "ask" and gathers new information that has not been recently collected by other organizations						
When to pursue funding or support for a project or initiative: Does it:						

• Reflect a specific need or opportunity articulated by the community? • Sustain or advance an already-established mission or goal? • Build resilience and sustainable growth?						
This tool is an effective measure						
We have made progress in this norm						

2. Language Accessibility. "Language Justice"	**Negative Impact -3**	**Neutral 0**	**Some Impact +3**	**Strong Impact +5**	**Highest Impact 10**	Overall rating:
Communication (both within the partnership and public-facing): • Is clear and avoids jargon • Is multi-lingual, depending on the community						
This tool is an effective measure						
We have made progress in this area						

3. Rubric for New Project Opportunities.	Negative Impact -3	Neutral 0	Some Impact +3	Strong Impact +5	Highest Impact 10	Overall rating:
Create a checklist for new project opportunities that: • Aligns with project priorities (access, viability) • Aligns with partnership values • Advances needs or opportunities stated by the communit(ies) and farmers involved • Integrates intersectional partners and services • Cultivates local funding opportunities • Explores policy change needs/opportunities • Addresses unjust systems (from Food Justice 101) • Power mapping around barriers and policy changes						
This tool is an effective measure						
We have made progress in this area						

4. New Farmer Opportunities.	Negative Impact -3	Neutral 0	Some Impact +3	Strong Impact +5	Highest Impact 10	Overall rating for this norm:
Projects and initiatives: • Directly address needs and opportunities articulated by farmers and farmworkers. • Expand the definition of who is a farmer: identifying small-scale growers who are outside of the current farmer networks • Expand and strengthen farmer-retail connections						

This tool is an effective measure						
We have made progress in this area						

5. Power Mapping. *This is part of the New Project Rubric.*	**Negative Impact -3**	**Neutral 0**	**Some Impact +3**	**Strong Impact +5**	**Highest Impact 10**	Overall rating for this norm:
The New Project Rubric will include barriers and challenges articulated through surveying, and, for these: • Identify the policies and norms that create those barriers and challenges. • Name the institutions that set those policies and priorities. • Identify individuals who hold power to change or remove those barriers.						
This tool is an effective measure						
We have made progress in this area						

6. Decision-Making Checklist. (ongoing)	Negative Impact -3	Neutral 0	Some Impact +3	Strong Impact +5	Highest Impact 10	Overall rating for this norm:
Decision-making is: **Transparent.** Those who are making decisions: ● Communicate what is at stake in a clear and timely manner. ● Name who is taking power in the decision and in what ways. **Accessible.** Those who are impacted: ● Are informed. ● Are engaged to participate in spaces and contexts and language that are accessible.						
Democratic. ● For simple decisions: thumbs up/5-finger vote ● For complex decisions:* (does anyone already have a process for this?) ○ A clear question is articulated ○ Time and space for individual reflection ○ Input from all participants is gathered before discussion ○ Decisions are time-bound and open to review						
This tool is an effective measure						
We have made progress in this area						

7. Relationship Building. (ongoing)	**Negative Impact -3**	**Neutral 0**	**Some Impact +3**	**Strong Impact +5**	**Highest Impact 10**	Overall rating for this norm:
The partnership prioritizes relationship-building by: ● Within the partnership, through relationship building activities and making space for connecting during "shared work" sessions ● With the community, by engaging and compensating diverse community members to broaden participation and avoid burnout ● Between the partnership and the public, through storytelling that captures the experience of farmers and community members						
This tool is an effective measure						
We have made progress in this area						

8. "Food Justice 101" Resources *that articulate the history and systems that govern our food system.*	**Negative Impact -3**	**Neutral 0**	**Some Impact +3**	**Strong Impact +5**	**Highest Impact 10**	Overall rating for this norm:
Compile a set of "Food Justice 101" resources that: ● Are accessible to partners and the public (on WCFN website - shared with all partners to link or post on their own) ● Are integrated into public-facing education shared by partners through their social media ● Are integrated into our discussions and meeting spaces (the what and why) ● Inform our work - to intentionally address and dismantle this						

history and systems (in the New Project Rubric - for working groups)						
This tool is an effective measure						
We have made progress in this area						

Bridgeport Thermal Loop Phase II: Park Avenue EJ Corridor
Logic Model

(Attachment for 3.0 Environmental Results)

Inputs	Outputs	Outcomes- Impact
Conceptual planning of Thermal Loop	Improved understanding of opportunity	Increased local environmental awareness
Investment in Loop System Design	Improved Indoor Air Quality	Preservation/ expansion of programs/services
Research re: $ Savings and Emissions	Verifiable Cost Savings for Stakeholders	Local support increased for projects of this type
Developer partnership w/ CBO (BEDCO)	Reduction of carbon footprints & GHG	More cost & energy efficient buildings in City
Briefing meetings with Stakeholders	Increased reliability of heating/cooling	Future reductions in emissions and GHG
Private capital attracted & invested		Healthier local populations
4/12/2023		

Thermal Loop Expansion

Project Objectives 1.0: A. Project Summary
Project Title: Stronger Communities Through Healthier Homes **(SCTHH)**
Project Location: Lewiston and Auburn, Maine
Organization Information: Central Maine Community Health (Healthy Androscoggin); 300 Main Street, Lewiston, Maine 04240; Corrie Brown, brownco2@cmhc.org

Brief Description of Applicant Organization
Healthy Androscoggin (HA) is a public health community coalition that focuses on improving the health and quality of life of Androscoggin County, Maine. HA was founded in 1995 by citizens that were witnessing alarming trends in youth tobacco use increasing in the region. Since that time, HA has expanded to focus on five main goals: supporting tobacco-free lifestyles, preventing youth substance use, encouraging physical activity, promoting healthy eating, and preventing childhood lead poisoning. HA works to create a healthier community through ongoing planning, community action, education, and advocacy while addressing emerging public health needs in collaboration with diverse stakeholders.
Project Abstract/ Environmental Issue/Project Type
Stronger Communities Through Healthier Homes (SCTHH) will collaborate with a diverse group of community-based organizations to assess gaps in indoor air quality education, develop interventions to address these gaps, and implement programming which target the issues of lead poisoning, asthma, and mold mitigation with the goal of improving community health and reducing negative health outcomes due to poor indoor air quality and lead exposure. Based upon the requirements for a Quality Assurance Project Plan (QAPP), the proposed project will qualify for a QAPP which will be developed with the support of an evaluation consultant.
Special Considerations - Health Impact Assessment
Healthy Androscoggin focuses on addressing public health issues through a Social Determinants of Health lens. With this approach to our work, we understand the range of community-based issues, including environmental, financial, and physical, that affect a community's health. SCTHH will work to determine the potential effects of the project by engaging diverse and underserved individuals and organizations in our planning, creation of interventions, implementation of programming, and program evaluation. Working with an evaluation consultant and integrating robust evaluation and program improvement activities throughout the process will ensure that any potential side effects to the community of focus will be addressed. In addition, project partners will be included in all evaluation planning as well as distribution of data to affected parties.
List of Project Partners (AKA Project Partnership)
Maine Indoor Air Quality Council,(Maineindoorair.org): The Maine Indoor Air Quality Council (MIAQC) is an interdisciplinary cooperative of professionals formed in 1998 to promote the improvement of all indoor air environments in the state. The mission of the Council shall be "to promote better quality of life through improved indoor environments.
AK Health and Social Services, (akhss.org): AK Health and Social Services (AKHSS) is an ethnic community-based collaborative that brings together resources to address a wide variety of issues that affect the immigrant community including healthcare, advocacy, education, and workforce development.
YWCA of Central Maine, (YWCAmaine.org)YWCA Central Maine seeks to end all forms of oppression and discrimination in the community through education, advocacy, and direct-action including programs in childcare, aquatics, career education and anti-racism programming.

ED_016126_00000037-00001

Project Objectives 1.0: B. Environmental and Public Health Information of the Underserved Community

1. Describe characteristics directly impacted by disproportionate environmental and/or public health harms and risks and how the community is impacted by those harms and risks

The proposed project will focus on the downtown neighborhoods of Lewiston and Auburn, Maine. This area comprises Census Tracts 101-105 in Auburn and 201-205 in Lewiston; the same Census Tracts that designate Lewiston and Auburn (L-A) as Community Development Block Grant (CDBG) Entitlement Communities. L-A is a local service center in the heart of Androscoggin County. Downtown L-A is an environmental justice area of potential concern because of the intersection of several key factors – namely low-income community members living in old and deteriorated housing, with a disproportionate impact on African and Middle Eastern immigrants and refugees who live in these neighborhoods. Approximately two-thirds of the rental housing in the L-A downtown census tracts was built before 1940. The majority of these aging downtown buildings have not been well maintained and their occupants are exposed to a wide variety of home health hazards. For instance, L-A has the highest rate of childhood lead poisoning in the state of Maine.

Between 2017 and 2021, 185 children ages 3 and under were estimated to be lead poisoned in L-A at the previous reference level of 5 µg/dl. Androscoggin County's blood lead test screening percentage for children ages 3 and under in 2021 was 35.1%, below the state average of 37.5%. Maps available from the ME Center for Disease Control and Prevention (ME CDC) demonstrate that these poisonings are concentrated in the downtown census tracts listed above, where the housing is the oldest and least maintained. Not surprisingly, these census tracts are also home to the poorest residents in the state. The elementary school attended by downtown Lewiston residents has the highest free and reduced lunch program participation rate at 100%.

Over the last decade there has been a shift in the population most affected by lead poisoning in our community. According to the ME CDC Childhood Lead Poisoning Prevention staff, historically, low-income Caucasian children in L-A were predominantly those diagnosed with lead poisoning, but as more African immigrants and refugees entered the downtown neighborhoods, lead poisonings in these populations (locally called, "New Mainers") rose sharply. The ME CDC now identifies New Mainers as representing a high-risk group for lead poisoning. Initially, these roughly 6,000 immigrants and refugees were primarily from Somalia, but in recent years, L-A has also become home to people from other African and Middle Eastern countries such as: Democratic Republic of Congo, Syria, Sudan, Iraq, Ukraine, Cuba, Haiti, Iran, Afghanistan, and Central America. As the demographics of the cities continually change, the challenge of educating the public about lead poisoning and home health hazards has become increasingly difficult. Many of the New Mainers who live in dilapidated housing speak little or no English, and many have no concept of lead or asthma triggers as hazards for their children. In addition to our local lead poisoning issue, the health of our community is impacted by high asthma rates. Maine has some of the highest rates of asthma in the country. About 1 in 9 Mainers currently has asthma, compared to 1 in 12 nationally. Lewiston's most recent data from 2016-2020 shows that the rate of asthma emergency department visits was 76 per 10,000 population and Auburn's was 46.7 per 10,000 population, both are higher than the state average of 42.5 per 10,000 population. In 2020, Androscoggin County had the second highest rate of asthma emergency department visits in the state. (data.mainepublichealth.gov/tracking/home)

2. Describe local environmental/public health issue(s) that the project seeks to address
SCTHH will address three public health issues:

- ➔ Reducing lead poisoning in children by:
  - Increasing the number of free lead dust test kits ordered from the ME CDC
  - Increasing the awareness of risks of lead poisoning and mitigation factors
  - Introducing interim controls for safe housing without abatement
  - Increasing positive tenant/landlord communication to address indoor air quality
- ➔ Decreasing incidence of asthma events by:
  - Expanding awareness of asthma triggers in the home
  - Introducing evidence-based prevention strategies and interventions
  - Increasing awareness of risks and mitigation factors
  - Increasing positive tenant/landlord communication to address indoor air quality
- ➔ Mitigating mold that results in poor indoor air quality that impacts overall health of individuals and families by:
  - Increasing awareness of risks and mitigation actions
  - Educating about ventilation strategies
  - Distributing tool kits and resources available for assistance
  - Increasing positive tenant/landlord communication to address indoor air quality

3. Describe the local environmental/public health results the project seeks to achieve and how will the underserved community benefit from those results
SCTHH will:

- Address childhood lead poisoning through assessment of the issue and development and distribution of interventions to improve testing through education
- Address asthma through assessment of the issue and development and distribution of interventions to educate community of focus
- Increase awareness of the dangers of mold in living environments through assessment of the issue through development and distribution of mitigation strategies for tenants, landlords, and homeowners
- Integrate a robust evaluation process in each step of assessing the issue, developing and distributing interventions and information, improvement of programming on an ongoing basis and distribution of resulting data to partners and community members

The underserved community of focus will benefit from the strategies and activities of SCTHH by having access to culturally and linguistically appropriate information to address the issues described above. While there is much information available on the issues of lead poisoning, asthma, and mold, there is still work to be done in collaboration with diverse community members in a way that is easily understood, culturally appropriate AND easily addressed. In addition, engaging tenants, landlords, and homeowners in the assessment and development of interventions and solutions will greatly enhance the efficacy of the program.

Program Objectives 1.0: C. Organization's Historical Connection to Underserved Community

1. History of organizations involvement with the underserved community, including duration of involvement and circumstances that led to your organization's involvement

Healthy Androscoggin (HA) is a public health community coalition that has been working to address health issues in Androscoggin County for over 25 years. HA works to create a community of thriving residents by giving individuals the tools to live a healthy life. More than

ED_016126_00000037-00003

6,000 residents of Lewiston and Auburn are immigrants, most of whom are from Africa but more recently also from a number of countries. To address the health of this diverse local community, we have developed and successfully funded a number of grants specific to meeting their needs.

- In 2010 HA received an Environmental Protection Agency (EPA) Environmental Justice grant to develop and implement a culturally appropriate lead education program. In addition to basic lead education, the curriculum provided information on tenants' rights and how to advocate for a healthy home or apartment.
- In 2013, HA secured funding to collect data on self-reported health needs of New Mainer residents in downtown Lewiston. This project and the employment and training of local immigrants from the community of focus, helped to further cement HA as a partner with local immigrant groups and Ethnic Community Based Organizations (ECBOs). (A Portrait of Health Needs, 2013, available upon request)
- In 2015 we received a four-year US Centers for Disease Control grant; Racial and Ethnic Approaches to Community Health (REACH). This grant focused on addressing issues of inequity in healthcare delivery for the African immigrant population in Lewiston and Auburn. Through the grant, HA employed members of the immigrant community to help develop and implement culturally and linguistically appropriate information about accessing healthcare. In addition, the REACH program worked with healthcare providers including medical assistants and primary care providers to educate them about delivering culturally and linguistically appropriate healthcare.
- In 2018, HA received an EPA Healthy Communities grant to work with a diverse group of community partners to build upon the lead poisoning prevention work that had been done through previous grants to create a new curriculum focused on indoor air quality, specific to asthma. Once again, members of the local immigrant community were trained to deliver the curriculum to individual tenants and homeowners in their own apartments and houses. One outcome of this approach has been training New Mainer partners in data collection and interpretation.

2. How your organization has worked with the underserved community's residents a/o organizations to address local environmental and public health issues currently or in the past and what are some of the results of that work. Include information about recent efforts in the community, if any, that have sought to address the disproportionate issues you described in 1b

HA has collaborated with local ECBOs, healthcare organizations and individuals to develop and implement education and interventions to address the public health needs of Lewiston and Auburn. The focus of these programs has been a result of consultation and data collection with and by these partners. This work has included hiring and supporting staff at HA that reflects our diverse community, training members of underserved communities to deliver health education, and collaborating with communities of focus on data collection and interpretation. With these partners, we have:

- Created curricula, materials and processes for implementing lead poisoning prevention interventions
- Created culturally and linguistically appropriate indoor air quality materials and information
- Implemented a community-lead health assessment
- Developed culturally appropriate tobacco cessation programming
- Participated in local ECBO boards and advisory committees

- Worked with evaluators on each project to ensure program efficacy and distribution of data to the communities of focus in a manner that is useful to them

3. Community Driven Participation – how the underserved community's residents a/or organizations were involved in developing the current project plan and are part of the decision-making process

HA has met with our program partners AK Collaborative, an initiative of AK Health and Social Services, Maine Indoor Air Quality Council, and the YWCA of Central Maine to develop this proposal. We will meet with our partners, including the evaluation consultant, as a collaborative four to five times a year and individually as needed during the implementation of the grant.

Program Objectives 1.0: D. EJCPS Model

Demonstrate how this application utilizes the EJCPS Model. Provide a clear and concise description about which of the seven elements will be undertaken for this project, and the reasonableness and achievability of the associated timeline and milestones for each element selected. This includes how the identified elements will be and/or are being applied to execute the project. If applicable, also describe which EJCPS Model element(s) associated with this project may have already begun or been accomplished.

SCTHH has experience with the EJCPS model through other grant programs that we have implemented as described in HA's Historical Connection to Underserved Communities. Our first focus is always to engage any potential partners in identifying issues that are important and meaningful to the community of focus. Issues are driven by the felt-needs of the community rather than that of the grant host organization. Grant applications are subject to meetings and conversations with partners to ensure that all participants have a vision of the project, from beginning to end, that is aligned with their goals. A specific strategy is developed that lists individual and group goals and how to best achieve them. This intentional process builds the capacity of the community to address issues from a position of strength rather than of deficit.

The grant application process involves building on our strong partnerships that have been established over a number of years. Stakeholders represent diverse communities including immigrants, women, children, local healthcare providers, and ECBOs. There is a conscious effort to understand what resources each partner brings to the proposed program and how best to integrate those resources while helping to develop additional resources for and with partners. Evaluation practices reflect the input of the community of focus and are in response to the individual needs of the community members.

HA has a history of successfully managing complex federal as well as state and local grants. We are adept at determining which issues to focus on that build on our understanding of community history and practice, particularly when it comes to the diverse cultures in Lewiston and Auburn.

Regular facilitated meetings with partners will happen four or five times a year. In addition, there will be meetings with individual staff of partner organizations to help ensure that program activities continue to serve the needs of the community even as needs may change. All notes from planning meetings will be widely distributed and easily accessible. Successes will be celebrated and will inform the work as it progresses.

ED_016126_00000037-00005

Program Objectives 1.0: E. Project Linkages

Briefly describe how the project supports EPA Strategic Plan Goal 2, Objective 2.2. Will be evaluated on how it supports the Strategic Plan and how it relates to the qualified environmental issue identified in Project Summary

SCTHH will use a collaborative approach in all planning, material development and delivery, evaluation, and distribution of data. The partnership will work with communities in ways that are community-driven, coordinated and collaborative, support equitable and resilient community development, and provide for meaningful involvement and fair treatment of communities with environmental justice concerns.

Program Objectives 1.0: F. Partner and Collaborate

Provide a clear and concise description of how the proposed project promotes collaborations with partners from multiple stakeholder groups to develop solutions that will address environmental and/or public health issues

1. Describe how the project will accomplish its goals through the use of appropriate and diverse partnerships from multiple stakeholder groups.
2. Identify and describe all partners involved, including those partnerships that may be under development. Include the following details:
    a. Planned roles of each partner listed in Project Summary. Include which stakeholder group the partner represents and the project activities each partner will be responsible for
    b. How each partner will contribute to the project
    c. What resources each partner brings to the partnership
    d. How the partner has a vest interest in working with this partnership
    e. How the applicant organization plans to maintain and sustain these relationships into the future
    f. Describe how the proposed financial transaction complies with applicable requirements in 2 CFR Part 200 on competitive procurement or for subrecipients EPA's Subaward Policy or EPA Guidance on Participant Support Costs.

YWCA of Central Maine

The YWCA of Central Maine will be an active participant in Healthy Androscoggin's SCTHH program. The YWCA will identify at least one staff member to participate in a maximum of 15 collaborative sessions over the next three years, participate in an environmental scan of existing resources and gaps, support the creation of educational material(s), disseminate educational materials through their many programs, and participate in evaluation efforts throughout the three-year award.

The YWCA brings a unique perspective and partnership to the SCTHH project. Through their childcare programming, they can educate children (with parental permission) about how air can be healthy and/or unhealthy. Age appropriate materials created by the project will be distributed through the children to their families. These materials will be useful to the YWCA child care program now and in the future. According to program records, over 50% of the YWCA's child care participants are considered to be New Mainers. Lead poisoning of children is of widespread concern in this community and working with the childcare program at the YWCA will reach a large number of families as well as help educate children, an effective way to reach parents. The YWCA will receive $45,000 over the three years of the grant to support the project.

Maine Indoor Air Quality Council

As a committed partner in Healthy Androscoggin's SCTHH proposal, the MIAQC will designate one staff person to participate in a maximum of 15 collaborative sessions over the next three years. They will provide resources for the development and creation of educational material(s), disseminate educational materials through their programs and partnerships, and participate in evaluation efforts throughout the three-year award.

MIAQC will help to identify and promote best practices for building and maintaining healthy, energy efficient indoor environments. MIAQC will recommend credible and science-based (peer reviewed whenever possible) resources based on the information available to the Council. Staff will help the SCTHH program raise public awareness of indoor air quality and energy efficiency as they impact quality of life and promote educational activities in accordance with its mission. MIAQC will provide ongoing technical assistance to partners on indoor air quality best practices and health outcomes. Anticipated award over 3 years: $30,000.

AK Health and Social Services

As a committed partner in Healthy Androscoggin's SCTHH proposal, AKHSS will designate one staff person to participate in a maximum of 15 collaborative sessions over the three years of the program. They will provide resources for the development and creation of culturally and linguistically appropriate educational material(s), disseminate educational materials through their programs and partnerships, and participate in evaluation efforts throughout the three-year award.

AKHSS will bring important expertise and community connections to the project. They are an ECBO that collaborates with a diverse group of immigrant advocacy groups. They coordinate a variety of programs for the immigrant community in Lewiston and Auburn. The AKHSS collaborative includes organizations that focus on public health, workforce development, literacy, and nutrition, among others. With this diversity of programming and partnerships, AKHSS will be vital in developing, widely disseminating and evaluating the program in a culturally appropriate manner. Anticipated award over 3 years: $45,000

SCTHH partners are Subrecipients, therefore there does not need to be a competitive process for engaging with them. Healthy Androscoggin will create a MOA (memorandum of agreement) with each project partner to outline roles and responsibilities over the three years, including how often payment will be made.

Long Term Goal: Reduce the health impact of indoor toxins on communities disproportionately affected in Lewiston and Auburn.

Year 1

In collaboration with identified community and project partners, SCTHH will hold 4-5 sessions with the following purposes:

- Identify leading toxins of concern using most currently available data and qualitative data from the identified community
- Create inventory of existing resources and gaps for the identified toxins
- Update or create educational materials to incorporate the specific cultural, literacy, and linguistic needs of the community
- Develop intervention model(s) utilizing evidence-based or informed practices adapted for the specific needs and culture of the identified community
- Develop three-year evaluation plan

Year 2

ED_016126_00000037-00007

In collaboration with identified community and project partners, SCTHH will hold 4-5 sessions for quality improvement activities for identified interventions:

- Plan, implement, and evaluate identified intervention(s)
- Implement program improvement based on program evaluation and community feedback
- Adapt education materials based upon learnings from implementation and short-term evaluation results
- Develop sustainability plan, including tools and resources

Year 3

In collaboration with identified community project partners, SCTHH will hold 4-5 sessions for quality improvement activities for identified interventions:

- Plan, implement, and evaluate identified intervention
- Finalize evaluation results and disseminate to community
- Implement sustainability plan

Project Activities 2.0

1. Project Activities

Provide a clear description of the steps the applicant will take to meet the program objectives and execute the project. Provide clear descriptions and details for each project activity or component and the anticipated products/results associated with each activity.

In collaboration with identified community project partners, SCTHH will hold 4-5 sessions each year of the project with the following purposes:

Year 1

- Define areas of concern using most currently available data and qualitative data from the identified community through culturally and linguistically appropriate outreach
- Create inventory of existing resources and gaps for the identified toxins that address indoor air quality, particularly as it pertains to lead poisoning, asthma, mold and unhealthy indoor air quality
- Update or create educational materials to incorporate the specific cultural, literacy, and linguistic needs of the community
- Develop intervention model utilizing evidence-based or informed practices adapted for the specific needs and culture of the identified community
- Develop evaluation plan

Year 2

- Continue to update and create materials
- In collaboration with identified community partners, hold 3-4 sessions for quality improvement activities for identified interventions
- Plan, implement, and evaluate identified intervention
- Adapt education materials based upon learnings from implementation and short-term evaluation results
- Develop sustainability plan, including tools and resources

Year 3

- In collaboration with identified community partners, hold 3-4 sessions for quality improvement activities for identified interventions
- Plan, implement, and evaluate identified intervention
- Finalize evaluation results and disseminate to community

ED_016126_00000037-00008

- Distribute materials, lessons learned and data to community of focus in a culturally and linguistically appropriate way
- Implement sustainability plan

2. Milestone Schedule

Include a clearly articulated/organized milestone schedule, detailing timeframes and major milestones to complete significant project activities within the 3-year period of performance. It is recommended that you insert a table in your work plan narrative to help organize your milestone schedule.

Activity	**Timeframe**	**Person(s) resources**
Evaluation Consultant hired	Within first 3 months	Program Manager and Program Coordinator
Project Partnership convened	Within first 3 months, then 4-5 meetings in Year 1; 3-4 meetings in Years 2 and 3	Program Coordinator
Environmental scan complete	Within first 6 months	Project Partnership
Evaluation Plan developed	Within first 6 months	Project Partnership, Evaluation Consultant
Materials developed	Within 18 months	Project Partnership
Dissemination Plan developed	Within 18 months	Project Partnership
Implementation of education	Beginning of year 2	Project Partnership
Ongoing evaluation	Ongoing over 3 years	Project Partnership, Evaluation Consultant
Distribution of materials	Year 2-3	Project Partnership
Sustainability Plan developed	By end of year 2	Project Partnership

Environmental Results 3.0

1. Logic Model – See Attachment 2
2. Performance Measurement Plan
    a. Describe the plan to track and monitor project performance and progress throughout the project period (3 years). Evaluated based on extent and quality to which applicant

ED_016126_00000037-00009

demonstrates a sound plan for tracking progress towards achieving the expected outputs, outcomes, and associated timeframes and Evaluation Plan

Evaluation Team

HA will use a request for proposals model to determine a qualified outside evaluation contractor. The evaluators will be an integral part of the project team at each step of the project and will have specific deliverables built into their contract to ensure accountability and transparency of their work. Each year, at least 15% of program funding will be used for evaluation activities. The evaluation plan will include regular meetings, as needed, to:

- Engage stakeholders at each step
- Develop the program in collaboration with the stakeholders
- Focus the evaluation design in response to stakeholder and community feedback
- Gather evidence in collaboration with stakeholders in a culturally and linguistically appropriate way
- Justify conclusions in collaboration with stakeholders- Does this information reflect the experience of the community of focus?
- Share lessons learned in collaboration with stakeholder

Developing the Evaluation and Performance Measurement Plan

In the first six months, the evaluation team will follow the six-step U.S. CDC Evaluation Framework to develop and implement the Evaluation and Performance Measurement Plan, meeting all CDC requirements to: 1. Engage stakeholders, 2. Describe the program, 3. Focus the evaluation design, 4. Gather evidence, 5. Justify conclusions, and 6. Ensure use and share lessons learned. The plan will meet the important standards of feasibility, propriety, utility, and accuracy (Centers for Disease Control and Prevention. Framework for Program Evaluation in Public Health. MMWR 1999;48 No. RR-11). An evaluation representative will be a part of the project partnership, which will also serve as the evaluation stakeholder group composed of the Project Manager, staff, external stakeholders, program partners, and at least one representative of the priority population (step 1). This group will provide input and guidance on plan design, implementation, and reporting. They will meet frequently to review the plan implementation progress, reflect on data, and engage in continuous quality improvement by making program or evaluation adjustments.

The evaluation team will define the program, refine the local evaluation questions, and agree on indicators and measures (steps 2 and 3). The plan will have three components: performance measurement, process improvement and outcome evaluations. It will span the project strategies and assess technical assistance/capacity building and respond to all evaluation questions (federal and local). Performance measurement will track progress on work plan activities. Process evaluation will track the quality of the implementation and outputs of activities, such as the number and type of improvements made and population reached. Outcome measures will track achievement of expected outcomes such as improved access and/or policies and include intermediate and long-term measures from the logic model. The plan will use mixed methods and be a quasi-experimental, repeated measures design, comparing baseline to post activity measures. Qualitative methods will inform context. The evaluators will identify/create a shared performance monitoring system, as a local repository for data, in a platform that meets all confidentiality and security requirements of Central Maine Community Health, EPA, and participants (step 4). The data will be used to answer the key evaluation questions. This evaluation approach has been followed for many of our federal grant activities and we find it feasible, proper, useful, and accurate.

ED_016126_00000037-00010

Evaluation Findings Use, Quality Improvement, Inform Others

After data collection and analysis, the evaluation team will convene key program partners and stakeholders to reflect on lessons learned, plan for continuous program quality improvements, and dissemination of findings (steps 5 and 6). They will engage a broad group to review easy-to-understand and culturally and linguistically appropriate displays of findings using infographics, summaries, and discussions. Based on the input, the team will develop an Evaluation Findings Dissemination Plan so that lessons learned are acted upon and used for program and stakeholder improvement. Annual and periodic evaluation reports will include: Evaluation Plan, Data Management Plan (in the first six months); findings from process and outcome evaluations; six-month updates on performance measures; and on-going plan updates. All data, reports, and presentations will meet state, federal, and local participant requirements for literacy, accessibility, confidentiality, data handling, data standards, accurate descriptions, disclosures, and attribution.

3. Sustainability Plan and Community Vision

Describe plans to utilize the results and momentum of the proposed project to come closer to achieve the community's goals and objectives. Details about current work and initiatives in the community, and how the community has a vested interest in sustaining the project's momentum into the future should also be included. If applicable, applicant should also describe how the activities and results of their project can be replicated and used in communities elsewhere.

HA Project staff will work with representatives from the project partnership to create a Project Sustainability Plan by year two and implement it by year three. Appropriate stakeholders will be convened to form a sustainability workgroup to develop a sustainability timeline by year two to ensure project sustainability throughout the three years and when project funding concludes. Engaging members of the community of focus as well as project partners, will be vital.

Project partners, particularly ECBOs, will look for culturally and linguistically appropriate materials to distribute to their communities about health issues including those that pertain to children. The SCTHH partnership has representation from these groups.
All materials developed will be archived and easily accessible on project partnership web sites. Maine Indoor Air Quality Council will ensure that materials are available at the state level.

In order to ensure that the Lewiston and Auburn communities and others across Maine can learn from the project, HA and partners will develop two success stories per year which will be shared with organizational partners. The project staff will also submit a proposal to host break-out sessions at the Maine Public Health Association Annual Meeting to ensure that materials, activities, data and lessons learned are broadly disseminated.

Programmatic Capability 4.0

1. Organizational Experience

Experience related to the proposed project, and the organization's infrastructure as it relates to their ability to successfully implement the proposed project.

HA's fiscal agent is Central Maine Community Health (CMCH), a division of Central Maine Healthcare. CMCH provides accounting, human resources, information technology, and other support to our organization.

HA stays grounded in the community and draws leadership from our diverse 12-member Advisory Board. In our coalition, we have strong, diversified representation from well-respected community leaders at all levels of our coalition's committees and governance structures. We

ED_016126_00000037-00011

have representations from the following sectors: ethnic based community organizations (EBCOs); healthcare (including both local hospitals and the rural federally-qualified health center); business; higher education; media; public schools; local, state and federal government; law enforcement; fraternal organizations; non-profits; housing authorities; Cooperative Extension; parks and recreation departments; and social service agencies.

Healthy Androscoggin began addressing childhood lead poisoning in 2008 when health data showed that large numbers of local children were poisoned annually and that there was a gap in how local agencies addressed the issue. Since that time, Healthy Androscoggin has successfully applied for and implemented a number of state and federal grants to address the issue of childhood lead poisoning as well as asthma and indoor air quality. These grants include:

- In 2010 HA received an EPA Environmental Justice grant to develop and implement a culturally appropriate lead education program. In addition to basic lead education, the curriculum provided information on tenants' rights and how to advocate for a healthy home or apartment.
- In 2013, HA secured funding to collect data on self-reported health needs of New Mainer residents in downtown Lewiston. This project and the employment and training of local immigrants from the community of focus, helped to further cement HA as a partner with local immigrant groups and Ethnic Community Based Organizations (ECBOs). (A Portrait of Health Needs, 2013, available upon request)
- In 2015 we received a four-year US Centers for Disease Control grant; Racial and Ethnic Approaches to Community Health (REACH). This grant focused on addressing issues of inequity in healthcare delivery for the African immigrant population in Lewiston and Auburn. Through the grant, HA employed members of the immigrant community to help develop and implement culturally and linguistically appropriate information about accessing healthcare. In addition, the REACH program worked with healthcare providers including medical assistants and primary care providers to educate them about providing culturally appropriate healthcare.
- In 2018, HA received an EPA Healthy Communities grant to work with a diverse group of community partners to build upon the lead poisoning prevention work that had been done through previous grants to create a new curriculum focused on indoor air quality, specific to asthma. Once again, members of the local immigrant community were trained to deliver the curriculum to individual tenants and homeowners in their own apartments and houses. One outcome of this approach has been training New Mainer partners in data collection and interpretation.
- From 2017 to 2020, HA participated in an Elmina B. Sewall Foundation three-year Healthy People, Healthy Places community assessment project. The Sewall Foundation is a Maine-based private foundation. This activity engaged over 40 community members representing 25 community organizations in the Lewiston-Auburn area. Through this intense, community driven process, HA was a lead in helping to develop the "Support the Well-Being of People" to address how best to integrate resources to help people lead healthy lives.

2. Staff Experience
    a. Why the project manager and associated staff member are qualified to undertake the project

Lindsay Gannon will serve as the Program Manager for the duration of the SCTHH partnership. Ms. Gannon has experience in research, project coordination, and grant management

ED_016126_00000037-00012

including program design, implementation, evaluation, budgeting, contracting, reporting, and multi-partner collaboration. At Healthy Androscoggin Ms. Gannon manages federal and state grants for healthy eating, physical activity, and lead poisoning prevention programs. She has worked at HA for two years and in her seven years as an evaluator she connected program design and implementation with the complexities of monitoring and evaluation.

Hannah Dieterich will serve as the Program Coordinator for the duration of the program. Currently, Ms. Dieterich is a Health Promotion Coordinator at Healthy Androscoggin. She is the Lead Poisoning Prevention Coordinator at HA. Ms. Dieterich has experience creating culturally and linguistically appropriate marketing materials on lead poisoning prevention for landlords, homeowners and renters. She does in-home resident education to raise awareness of lead poisoning and its prevention. Ms. Dieterich also has experience in using social media and community events to connect with our diverse community. She successfully completed a three - day training through the Building Performance Institute and is now certified as a Healthy Homes Assessor.

b. Illustrates the project manager's ties/historical connection to the community and the applicant organization. Please include detailed descriptions of any activities that the PM has worked on with the community and/or application organization

Lindsay Gannon has been a Program Manager at HA for two years and currently manages federal, state, and foundation funded programming. Prior to that she was an independent contractor for 8 years evaluating HA's various grant programs, including healthy homes and lead poisoning prevention projects. Lindsay is a cultural competency training partner due to the REACH grant activities and continues to work with ECBOs to create cultural bridges in our communities. She serves on the Advisory Committee for AKHSS and is a board member for a local non-profit and sober home that serves vulnerable women and children in Lewiston.

3. Expenditure of Awarded grant funds

Organizations' approach, procedures, and controls for ensuring that awarded grant funds will be expended in a timely and efficient manner

Central Maine Community Health's (CMCH) fiscal management staff has considerable experience managing multi-site projects and ensuring accountability and compliance. CMCH will serve an administrative role to handle grants administration, reporting, and overall project management. CMCH has strong finance, human resource, contracting, and audit/compliance systems in place and has a history of successfully administering half-a-million dollar grants/contracts, including federal and state grants that involve multiple subcontractors.

Internal policies and performance/financial monitoring systems ensure that grant resources are effectively utilized, reports are produced in a timely manner, and all applicable laws and regulations are followed. CMCH / Healthy Androscoggin leadership reviews performance metrics and income and expense statements on a monthly basis, and a qualified independent auditor conducts an audit annually.

The Grant Coordinator will be responsible and accountable for project fiscal management and will make monthly reports on actual versus budgeted expenditures to CMCH / Healthy Androscoggin leadership. Financial administration for all CMCH grants are conducted by the Central Maine Medical Center Finance Department using standard approved accounting practices. The Finance staff with expertise in accounting and fiscal management will implement established systems for fund distribution and reporting, and will present monthly reports to the Grant Coordinator that identify and resolve any variances. CMCH/ Healthy Androscoggin has

ED_016126_00000037-00013

systems in place to track in-kind resources such as staff time and to reconcile accounts for project budgets that involve multiple funding streams.

Past Performance 5.0

List no more 5 federally and/or non-federally funded assistance agreements (grants and cooperative agreements, not contracts) that your organization performed within the past 3 years and must include:

1. Whether and how you were able to successfully complete and manage those agreements
2. History of meeting the reporting requirements under those agreements, whether you adequately and timely reported on your progress towards achieving the expected outputs and outcomes of those agreements, and whether you submitted acceptable final technical reports

Supplemental Nutrition Assistance Program- Education (SNAP- Ed)

HA successfully completed and managed the SNAP-Ed federal grant for over 10 years, and continues to do so at the time of this application. We work collaboratively with Maine's Office of Family Independence and the University of New England, who fund and oversee the program. We consistently meet our goals and receive positive marks for our management and implementation of the program, and we also pass all state audits. We have a history of meeting the reporting requirements under those agreements, we adequately and timely report on our progress towards achieving the expected outputs and outcomes, and consistently submit acceptable final technical reports.

Lead Poisoning Prevention Fund (LPPF)

HA successfully completed and managed the LPPF state contract from the Maine CDC since 2010. Lead Poisoning Prevention Fund, provides high risk areas in the state with funding for community educational outreach programs, media campaigns, and other prevention strategies. We have a history of meeting the reporting requirements under those agreements, we adequately and timely report on our progress towards achieving the expected outputs and outcomes, and consistently submit acceptable final technical reports.

EPA-Healthy Homes

HA successfully completed and managed the EPA Healthy Homes grant. Healthy Androscoggin utilized EPA Healthy Communities funding to expand class offerings to include other important home health hazards, and to create curricula that are culturally appropriate for our diversifying immigrant and refugee populations. We have a history of meeting the reporting requirements under those agreements, we adequately and timely report on our progress towards achieving the expected outputs and outcomes, and consistently submit acceptable final technical reports.

QAPP 6.0

Upon review of the criteria for a QAPP, Healthy Androscoggin anticipates the need to develop a plan with support from the partner collaborative and independent evaluator.

Budget Narrative

PERSONNEL: $114,480

Senior/Key Personnel

Ms. Shelley Lee, Green Beverly Programming Director, Principal Advisor on Award, (5% / 1.80 calendar months). Ms. Lee will serve as principle advisor for the project and will guide and oversee all work done by the Lead Project Manager. She will support outreach and partner communications, support outreach to recruit new/additional partners, participate in the development of agendas for partner planning meetings, and support meeting facilitation as needed. She will also support completion of recommendations, reports, and future implementation planning related to the project.

TBN, Lead Program Manager on Award (50% / 18.0 calendar months).
The Lead Program Manager, To Be Named, will manage all aspects of the project. He/she will coordinate all communications with the partners, manage the timeline/schedule, manage the budget, and escalate as needed. He/she will be involved in the analysis of the data, build business plans, produce recommendations/actions, and complete reports.

Ms. Julia Long, Green Beverly Community Engagement Director, (10% / 3.60 calendar months). Ms. Long will serve as principle advisor for the project as it relates to community stakeholder outreach and engagement.

TBN, Green Beverly Coaches, (10% / 3.60 calendar months). The Green Beverly Coaches will be engaged throughout the project to provide technical input and 1:1 coaching sessions with landlords and tenants.

TRAVEL: $0

SUPPLIES: $284

Estimated meeting supplies and printing costs for 12 quarterly planning meetings as well as other periodic meetings as needed.

CONTRACTURAL COSTS: $2,430

Bookkeeper @ $2,430

TOTAL DIRECT COSTS: $127,104

INDIRECT COSTS: $22,896

IDC Rate Agreement of 20% of Wages and Salaries.

TOTAL COSTS: $150,000

Table 5. North Shore Farm and Food Coalition's Urban Agriculture Planning Project - Timeline and Workplan 2021-2022

WP	Task	Indicators	Year 1												Year 2												Year 3

1	**Create a plan to transition heating/cooling systems to heat pumps**																																				
1.a	Assess target audience																																				
	a) Talk with partner orgs in Beverly to see what community is best	Data compiled																																			
	b) Review data for neighborhoods in Beverly to identify characteristics of neighborhoods	Data compiled																																			
	c) Meet with Community Ambassadors of EJ Communities	Data compiled																																			
	d) Use informtion from above for all partners to agree on community to concentrate on	Final report				M1																															
1.b	Assess financial model																																				
	a) Work with partners to understand incentives available	Data compiled																																			
	b) Work with partners to understand the general cost of products	Data compiled																																			
	c) Work with partners to create equitable financing models	Final Report						M2																													
1.c	Assess technology																																				
	a) Reach out to heat pump companies. Understand their product relative to MA temps	Data compiled																																			
	b) Research how particular products work with incentives	Data compiled									M3																											
2	**Educate tenants and their landlords on the pilot program and benefits**																																				
2.a	Create an outreach and educational plan																																				
	a) Work with Community Ambassadors to create education and outreach plan	Data compiled																																			
	b) A two pronged effort to keep reaching out and then tailor the outreach to what the community representative feels will have the best impact	Neighborhood completely canvased				M4																															
2.b	Implement/Execute the Educational Plan																																				
	a) Create modes of communication to educate owners/renters	Workshops and Mailings				M5																															
	b) Send out outreach/educational materials via priority channels	Distribution																																			
3	**Execute on the Pilot Program**																																				
3.a	Launch Pilot Program																																				
	a) Identify the owners/renters that will convert now (via coaching)	List										M6																										
	b) Identify owners/renters that can not convert now but want to be ready when the time comes (via coaching)	List																																			
3.b	Pre -Installation																																				
	a) Coach owners/renters to put their personal product plan together	Document																M7																				
	b) Coach owners/renters to put their personal financial plan togehter	Document																																			
3.c	Installation																																				
	a) Acquire Quotes (minimum of 3)	Quotes																																			
	b) Installation of heat pumps/completion of weatherization	Product installed																																			
	c)Assess success of process with client - keep track of savings	report																																			
3.d	Final Report/Documentation																																				
	a) Compile report that summarizes the successful actions taken to complete education and installations, as well as the actions that did not work	Report																																			M8

Milestone List

M1 Target Audience Identified
M2 Financial Model Created
M3 Technology Solutions Identified
M4 Outreach Plan Completed
M5 Outreach Commences
M6 Launch Pilot
M7 6-Month Review, Assessment, Pilot Adjustment
M8 Final Report and Scalability/Replication Plan

Green Beverly
Logic Model for EJCPS

Resources	Activities	Outputs	Audience	Short-Term Outcomes	Intermediate Outcomes	Long-Term Outcomes
* Staff Time for Research, Planning, and Pilot Management & Coordination	* Meet with selected partners	* 1:1 meetings with 10+ local partners Create pilot plan * 1:1 meetings with 10+ community representatives	* CBOs, City, Financial Partners, Distributors, Trades Professionals			
* Partner contribution to the Planning/Research Phase * Volunteers	* Meet with community stakeholders	Get support from 5+ for pilot in their community	* Trusted representatives within the various communities/neighborhoods	* hope to have them interested in pursueing this alternative system	* Advocacy in their community	* Advocacy in their community
* Additional Grants (pending) * In-Kind Contributions	* Find/survey community to see how best them want to learn	* Outreach to 500+ households	* Households of EJ communities	* Response from 250+ households		
		* hold quarterly outreach events that are decided on-		* amount carbon reduction	* carbon reduction	* carbon reduction
	* Educate all on heat pumps advantages	could be mailed brochures and then workshops	* Landlords and Tenants	* 25 Landlords show interest	* Landlords of 40% stock show interest	* Landlords of 80% stock show interest
	* Study/educate all on finances of heat pump conversions	* hold quarterly outreach events that are decided on- could be mailed brochures and then workshops	* Landlords and Tenants	* Prove cost savings on landlors and tenant side		
	* coach with interested parties to see if they can convert	* 1:1 Coaching	* Landlords	* Weatherize 50, Hot Water Heaters 25, Convert heat/cool source 15 in year 1	* Weatherize 100, Hot Water Heaters 50, Convert heat/cool source 30 in year 2	
	* coach with interested parties to see if they can convert	* 1:1 Coaching	* Tenants/Households	* Conservation, Dryers, Stovetops		* Indirectly convert appliances and heating systems on their own
			* non-EJ Households	* Visibility with 6,000+ residents		* Create scalable, replicable model

MLCS Logic Model: EPA EJ Problem Solving

Resources/Inputs	Activities	Outputs	Audience	Short-term Outcomes	Intermediate Outcomes	Long term Outcomes
Year 1 -Phase 1 Build the project team, grow community capacity, and develop leaders						
Core Project partners: MLCS, Neighbors United for a Better East Boston (NUBE), Mutual Aid Eastie (MAE), Community volunteers Steering committee of partners NEWMOA City, state, and federal stakholders	Identify a team of 12 community leaders from vulnerable communities in East Boston, a peninsular community. Identify a leadership development CPS model participants to support issue identification, build consensus, facilitate strategic goal setting and leadership development. Through constructive engagement that involves a broader group of residents, the team develops a consensus driven community and coastal resiliency vision that leverages stakeholder partnerships & resources Engage leadership and community in coastal and community resiliency education to develop coastal and community stewardship and emergency preparedness. Engage project team in social and emotional resiliency support, education, and resources.	An equitable grassroots-driven process is developed Resilient leadership reflects most vulnerable community Equitable process is supported Project team committed to community resiliency planning and acting as stewards of our community and coastlines.	Core community partners City and state leaders Community and coastal resilience and emergency preparedness experts City and state community and coastal resiliency officials	Leadership from vulnerable communities is fostered and supported in language of origin (Spanish).	Project team develop skills and knowledge in community and emergency preparedness	Project team lays the ground work for developing a plan that furthers coastal and community resiliency for most affected and vulnerable communities.

MLCS Logic Model: EPA EJ Problem Solving

Dr. Atyia Martin	Engage team in and emergency preparedness education	Project team prepared to do community preparedness trainings in year 2 and 3				
Year 2 - Phase 2 and 3: Assess and Map Vulnerability and Services of Current HUB						
Core project partners Community volunteers Advisory Partners Paid simultaneous translators NEWMOA OTA City, state, and federal stakeholderrs	Using problem solving model, leadership team works together to assess and map vulnerabilities, key services, and to assess current services available though ML as a HUB Technical assistance about hazardous waste dangers provided to core team to help map community problem areas. And an East Boston profile is developed Assessment process includes first responders, local and state government, expertise from resilient power and facilities experts Assessment includes facilities, food and housing services, health care, utility, and other key emergency response services.	Holistic plan that reflects equitable process and planning to best serve most vulnerable community during times of disruption and recovery is developed	Core community partners City and state leaders Community and coastal resilience and emergency preparedness experts City and state community and coastal resiliency officials and experts	Quarterly benchmarks are being met	Evaluation process demonstrating growth in skills and abilities of leadership and youth teams	Planning process is developing with working plan in process and continually updated A group of leaders who can represent the community most affected is developed

MLCS Logic Model: EPA EJ Problem Solving

	Project team promoting coastal and community resiliency and education and leading community engagement sessions where they share maps and conduct emergency preparedness trainings.					
Year 3 – Phase 3 and 4: Evaluate Identify Community Resiliency Solutions						
Public housing residents (Maverick Landing, Shore Plaza) Neighbors United for a Better East Boston (NUBE) Mutual Aid Eastie resident group City of Boston resiliency manager	Engage 12 community resiliency promoters from vulnerable communities (immigrants/public housing residents, youth) in multi-year community resiliency mapping and planning process to identify vulnerable structures and to develop a resource and communications plan to address	A total of 24 meetings per year (bimonthly) 5 meetings dedicated to buildings and structure resilience (mitigating inland flooding, sea level rise, extreme heat and resident injury or illness as a result of these natural hazards)	20 community resiliency promoters Owners of businesses,s	Quarterly benchmarks are being met	Evaluation process demonstrating growth in skills and abilities of leadership and youth teams	Planning process is developing with working plan in process and continually updated A group of leaders who can represent the community most affected is developed

MLCS Logic Model: EPA EJ Problem Solving

HUD citizens participation tookkit		A communications plan to reach owners and residents living in vulnerable structures (businesses, multi family, homes with information about what they can do to make their buildings more resiliency and where to access resources.				
Community members Existing data and assessments (EJ screening tools and maps)	Develop & map inventory of climate and socially vulnerable businesses, multi-family homes/ and other structures and make plan for communicating necessary climate mitigation information and health risks	1-2 experts engaged in community process every quarter. At least 12 community leaders and Youth	Community residents and local leaders Local experts on environmental risks	A short list of vulnerable structures/ areas is developed and contact is made with owners	Increased community awareness of the vulnerability of structures that house people and businesses	Changed economic conditions as businesses and home owners in East Boston peninsula have knowledge

MLCS Logic Model: EPA EJ Problem Solving

		Community Corps of 20 from vulnerable communities engaged in bimonthly meetings to develop map using equitable community problem solving		renters, and other community members. Community develop awareness of the structural vulnerabilities of their buildings and health risks	and risks to their health	and equitable access to resources that support adaptation of physical structures where they own and rent and know about emergency preparedness

Other activities not reflected in logic model

- Monthly Steering Committee Meetings Monthly
- Planning efforts – weekly meetings with cohort and Facilitator/PM
- Participatory Evaluation process driven by community and supported by evaluator – Mary Skeleton Roberts
- At least 1 -2 experiential community field trip per month as part of planning process
- Quarter reporting
- Weekly Youth-led social media and documentation efforts with social media tracking
- Ongoing participatory measures tracking led by cohort and youth

APPENDIX F EJCPS Budget Year 1

	Year 1	
Personnel	55,000	Yearly Salary for Youth Resiliency Cohort Youth Director
Fringe	10,450	Calculated at 19 percent
Travel		
Equipment	6,000	Translation Headsets (25) year 1 Computers/Ipads for cohort and youth leaders in year2 and 3
Supplies	2,000	Materials Printing, paper
Contractual	60,000	30,000 PM & Facilitator 20,000 NUBE 20,000 MAE 12,000 VROCC NEWMOA 12,500 New
Total Direct	133, 450	
Indirect	32,588	
Totals	166,038	166,038

Year 2: 166,038

Year 3: 166,038

TOTAL: 498,114

1.0 PROGRAM OBJECTIVES

a. Project Summary Page

Project Title: Leveraging Pandemic Response Networks and Social Cohesion to Develop a Community Resiliency HUB and Emergency Response Plan for Disadvantaged[i] Communities in East Boston

Project Location: East Boston MA 02128

Applicant Information: Maverick Landing Community Services (MLCS), 31 Liverpool Street, East Boston MA 02128/Main Contact: Rita Lara

Brief Description of Applicant: Founded in 2007, Maverick Landing Community Services (MLCS) has been building an equitable community by uplifting and supporting families and promoting community health in East Boston. MLCS has restored its comprehensive array of supportive family and youth services to pre-pandemic levels while also addressing new needs for services such as a housing support and evictions prevention station it operates in collaboration with NULawLab and a Northeastern Law School evictions defense team In 2020 MLCS pivoted to massive food distribution by tapping into food rescue networks and opening four weekly food markets delivering over half a million pounds of rescued dairy and product at its peak of Covid response operations, becoming the city of Boston's 2020 Community Champion, and to date continues to distribute over 250,000 pounds of diary and produce. By seizing opportunities, doubling its pre-pandemic budget and establishing new collaborative partnerships MLCS has forged its brand as a leader in community resiliency and emergency response.[ii]

Applying to Small CBO Track: No

Project Abstract:

East Boston, a peninsular community[iii] where Maverick Landing the housing development where MLCS is based, surrounding Maverick Square and the waterfront will be largely underwater in the 2070 projected flood maps[iv], is home to Boston Logan International airport which emits thousands of pounds of pollution daily and recently located a substation; it poses environmentally threats that affect the public health of East Boston residents, a majority of whom – 58% are Latino. No comprehensive mapping of the impact of these issues on East Boston's disadvantaged populations exists. The proposed project will build on the existing resiliency network cultivated by core community partners through the pandemic response work over the last three years to facilitate an environmental community problem solving model that identifies a community cohort of 12 community leaders and a youth community resiliency corps of 20 who will participate in an Environmental Justice Collaborative Problem-Solving (EJCPS) to identify and address environmental justice issues that impact community health. The project primary goal is to build and develop a strong leadership cohort that reflects the community, deepens understanding of environmental threats, and effectively engages the broader community in a three year planning process that results in a final

community resilience and pandemic response plan that centers the needs of those whose health are most likely to be disparately impacted by environmental threats.

Project Type(s): A Special Consideration project: health assessment/climate impact

Environmental Issue: flooding, air quality, and chemical hazards

List of Project Partners: Neighbors United for a Better East Boston, Mutual Aid/*Apoyo Mutuo* Eastie (community), Veronica Robles Cultural Center (VROC) (Community-Arts and Culture), Northeast Waste Management Officials Association (Nonprofit Technical Assistance Provider), Office of Technical Assistance and Technology at the Massachusetts Executive Office of Energy and Environmental Affairs (state government); NuLawLab (academic); City of Boston (city government)

b. Environmental and Public Health information of the Underserved Community

Who is the community comprised of and what are the disproportionate environmental and/or public health issues they experience?

The disadvantaged community we seek to support through this targeted emergency preparedness and resiliency-building effort are: 1) residents in public housing who are already impacted by chronic health conditions that shorten lifespan[v] and 2. Latino immigrant communities who are largely living in dangerously overcrowded housing in East Boston.

In Maverick Landing there 1,000 people residing in 402 units in Maverick Landing and in East Boston and in nearby Shore Plaza there are 380 units housing an additional 800 residents. For residents in public housing who are living with many chronic health conditions and experience early mortality, the environmental hazards can have a severe impact.[vi]

Both of these communities are experiencing food and housing[vii] insecurity that are well documented social determinants to health. Ongoing housing and food insecurity are chronic stressors that lead to higher levels of cortisol, sleepless nights, shortened life expectancy and deep level of anxiety and depression. In Boston, Latinos and Blacks experienced the highest levels of food insecurity during the pandemic.[viii]

For example, asthma and respiratory illnesses are of particular concern for both residents as well as hypertension[ix] which damages blood vessels and can harm kidneys, exacerbate diabetic conditions and lead to heart attack stroke or aneurism. There are significant racial disparities among groups who have these conditions. Living near an airport exacerbates these conditions. Children in East Boston are more likely to have Asthma than those living elsewhere and among the Latino population racial disparities in Asthma are well documented.[x]

For immigrants who Latino represent 58% of the East Boston population the environmental hazards are exacerbated by asthma triggering housing conditions.[xi] The

dangers were evidenced in East Boston where Covid infections spread faster than in East Boston than in other communities.[xii]

Flooding is also a concern in East Boston. While there is limited research on the health impacts of flooding specifically among immigrant and public housing residents in East Boston, a study published in the Journal of Public Health Management and Practice found that flooding can have a range of negative health effects, including injuries, infectious diseases, and mental health issues.[xiii]

What are the Environmental Issues that the Project Seeks to Address?

East Boston is a state-designated Environmental Justice Community with a long history of pollution and environmental burdens for flooding, air quality in particular and other potential hazards from industrial accidents or improper storage of hazardous elements

The communities we will be working with reside in East Boston is a peninsular community that appears fully flooded by 2070[xiv] in the area surrounding Maverick Landing, Maverick Square and the waterfront fully flooded due to sea-level rise, coastal storm surge, increased heavy rains, and overwhelmed storm water systems with wastewater that can lead to waterborne illnesses among other accidents. It is home to Boston Logan International airport which emits thousands of pounds of pollution daily; and will be home to a recently sited substation owned by Eversource and adjacent to tidelands that will be subject to flooding in the near future.

On social vulnerability mapping done by the Metropolitan Area Planning Council (MAPC) is a study[xv] of social vulnerability in Greater Boston US Census data across six categories related to social vulnerability: age, race, disability and referenced in the City of Boston 2021 Natural Hazard Mitigation Plan update, In this study, English language proficiency, and income was analyzed and East Boston was among **highest concentrations of climate vulnerable populations.**

EPA's EJSCREEN tool was utilized. According to the tool, large swaths of East Boston, particularly in Maverick Square and Central Square show diesel particulate matter in the 95th to 100th percentile or in the 90th to 95th percentile. Diesel particular matter would exacerbate chronic conditions disparately impacting Latinos and residents in public housing. Air toxics cancer risks are in the 90th to 95th percentiles or 80th to 90th percentiles in Maverick Square, Central Square near Shore Plaza and in Eagle Hill sections of East Boston where there are many Latino residents living in overcrowded conditions and adjacent to industries that are a source of pollutants. Hazardous waste is also in the 90th to 95th percentiles or just below, as is wastewater discharge.

Beyond the dangers caused by very poor air quality or water borne illnesses and trip hazards as the neighborhood succumbs to flooding, over the last 5 years several chemical-related hazards have impacted the community, the most notable, a Level 3 Hazmat incident in the East Boston fire station in 2021 found high traces of Hydrogen cyanide and Hydrogen sulfate in the air.[xvi]

How Project Relates to Special Factors (Section V)

The proposed project will be completely led by the most adversely and disparately impacted communities in East Boston using an EJCPS model and by a facilitator and project manager who understand racial disparities and social determinants to health as well as how environmental injustices impact those outcomes.

Disadvantaged communities have not been centered in this kind of planning in East Boston nor in most neighborhoods and this is partly due to the lack of diversity of EJ organization leading these efforts. While these trends have been changing according to the Green 2.0 Report Card[xvii], a measure of diverse representation in EJ organizational staff, leadership and board, this has not been the case in East Boston, a community whose residents population is 58 percent Latino. Community resiliency events led by many the local EJ organizations are primarily not reflective of this majority nor are they attended by many of the Latino resident population.

This level of equitable planning has not taken place in East Boston and as we move through the pandemic, it is now more critical that we 1. Deepen our understanding of the intersectional nature of the various hazards and their impact on the health of the most disadvantaged people in East Boston whose health and housing conditions have worsened post pandemic by rising housing costs and displacement.[xviii]

c. Organization's Historical Connection to Underserved Community

Since the onset of the pandemic, MLCS has also worked closely with MAE and NUBE to address food and housing insecurity, serving as a HUB in these areas for the most disadvantaged populations in East Boston.

At the onset of the pandemic, MLCS worked with underserved community residents involved with the partnering organizations on this project to address pandemic-related issues. During the pandemic we worked with these partners to support vaccine outreach efforts, supporting 4 vaccination clinics and a social medial campaign led by youth and focused on dismantling disinformation and educating the community about the benefits of vaccination. We also worked the partners on this project to address food and housing related issues as they emerged during the pandemic. We in effect, began the process of creating an ad hoc community resiliency HUB and network. We characterize it as pandemic-driven community resiliency in action. We were responding to community crisis as East Boston has consistently had among the highest Covid counts in Boston during each pandemic wave.

Over the last two years it has also focused on supporting digital skills capacity building for MAE and NUBE community leaders through a grant from the Executive Office of Housing and Economic Development (EOHED) that funds a 6-month long Spanish digital literacy effort to where community leaders develop their digital skills including digital storytelling and GPS tools to support access to tools that help the community to conduct critical research and shift narratives that support socio environmental

educational efforts in the community. In June 2023, we will have graduated over 45 immigrant Spanish speaking community leaders from the digital literacy skills program. They are all people who live in East Boston or in Maverick Landing or Shore Plaza housing developments. They are all Latino immigrants. If funded, we expect to draw leaders from that training for the proposed three-year cohort on this project.

This summer MLCS will be hosting 38 youth, paid for by the city of Boston and working with the same constellation of partners on this project. This core group of young people will be the pool from which we will draw our youth resiliency corps members on this project. By the time funding is announced, they will be seasoned, having spent the summer working with the network of partners. The vast majority of these youth will likely be Latino.

MLCS will also be working with local partners to develop a community visioning process with project partners under a newly awarded $16,000 planning grant from the United Way that will be announced at the end of April 2023 and that will be six months underway if this request is awarded and that will be used as a strong launching pad for this proposed project.

We have been committed to building the capacity of Latino leaders in East Boston to support skill-building, self-determination continue building the capacity of this resiliency network over the next three years as we have done so over the last three, to better address environmental and public health inequities in East Boston, build leadership that reflects the most affected community, be active in resiliency building work and plan for an East Boston where vulnerable communities are leading the efforts to prepare for climate mitigation and future environmental and emergency disruption that disparately impact their health.

MLCS has also worked with technical assistance partners NEWMOA on a past EPA grant that focused on Zero Waste Food education led by youth and community partners and resulting in increased knowledge about sustainable food systems as well as a highly successful sustainable food day event which we have incorporated into our regular array of spring and summer events and hold every August.

Community Driven Participation

Living in East Boston and representing the community you seek to drive participation as well as commitment to community-led participatory processes is critical to the success of this project and reflects how MLCS implements all of its programs, services, and projects. Everyone on this project from PM to staff at MLCS, MAE, and NUBE live in East Boston, are Latino and speak Spanish. The evaluator on this project is also a Spanish-speaking Latina. We all understand the important of a community-driven relationship and participatory process.

The underserved community's residents and organizations have been working together through previous pandemic waves to support the response of MLCS as a community

resiliency hub providing essential services to address food and housing needs and much of this has been community led.

The core project partners will begin working together to develop a visioning process as this request is being decided. The community visioning process is already being supported by a $16,000 grant from the United Way, and if this EPA request is awarded, that process will be six months underway and provide a core foundation for this project. This process too will be community led.

EJCPS Model

The Environmental Justice Collaborative Problem-Solving (EJCPS) Model is an approach to problem solving that focuses on identifying and addressing environmental justice issues in communities.

The model involves the following seven elements: Problem identification and analysis, building collaborative partnerships, public involvement and community outreach, development of collaborative solutions, implementation of collaborative solutions, measuring success and progress, revisiting and re-Evaluating the collaborative Process.

In the context of the project for East Boston, the EJCPS Model will be used to identify vulnerabilities and develop resiliency plans for disadvantaged communities in the area. This work will include all project partners, the leadership cohort, the youth resiliency corps and will be supported by technical assistance providers NEWMOA and OTA and facilitated and managed by the PM.

There will be at least 2 large educational events per year to update the community about progress made to date in large in person venues supported by Veronica Robles Culture Center, a community partner that for over a decade has run the largest Day of the Dead festival on the East Coast. It will also include quarterly media updates on radio, podcasts, and in Spanish Language media El Mundo. These spots will also be secured by VROCC. These events will be used to continue building public involvement and reaching the targeted community.

The process will involve engaging with community members to identify their needs, concerns, and priorities related to emergency preparedness and climate adaptation. These points of engagement are delineated in the monthly timeline included in this proposal. Year 1 will focus on developing leadership, building knowledge, and supporting the cohort of leaders and youth resiliency corps to identify the problems facing disadvantaged community members and to work towards identifying solutions and conducting outreach to gain knowledge and to identify community-driven solutions. This will be an iterative three-year process managed by the Facilitator and Project Manager

This will include conducting outreach to vulnerable populations, such as immigrants and public housing residents, The leadership team itself will be comprised of leaders from

the affected vulnerable populations and will come from NUBE, MAE, and local public housing developments as well as youth. They will be drawn from the digital literacy classes to ensure we continue to build capacity and leadership and have the ability to support a community-led process that is well facilitated. This will ensure their perspectives are incorporated into the planning process and that the right networks will be reached.

Additionally, the EJCPS Model will involve working with technical assistance partners to identify hazards and assess vulnerabilities to disadvantaged communities in East Boston and using knowledge gleaned to develop outreach materials and a support education and engagement in the environmental issues that most impact people's health as well as how they can protect and prepare themselves in order to sustain their health. The EJCPS Model will guide the project team in developing solutions that are tailored to the unique needs of the community, ensuring that the resiliency plans take into consideration the specific hazards of the area, including being adjacent to a local airport, a substation, and smaller industries that may pose chemical hazards and potential disruptions and dangers in the case of any kind of emergency.

Through this collaborative approach, the project aims to build community capacity to prepare for and respond to climate-related disruptions and emergencies and continue strengthening and building a strong community-led HUB of support.

e. Project Linkages: Briefly describe how the project supports EPA Goal 2: Take Decisive Action to Advance Environmental Justice and Civil Rights Obj 2: Embed Environmental Justice and Civil Rights into EPA's Programs, Policies, and Activities

This project advances environmental justice by developing a project that centers the people in East Boston who will be most affected by climate change and who are the majority of residents in the community but who are not reflected in political nor EJ organizational leadership. This project will also greatly grow EPA local program leadership through its leadership development and activities. Any policies that emerge from this three-year process would most certainly reflect the goal to advance Environmental Justice in East Boston and at other levels of community leadership and potentially governance.

f. Partner and Collaborators

As a founding organization of the Mutual Aid Eastie network, MLCS[xix] has sustained the pandemic response network through regular events at Maverick Landing, such as food distribution and community-building activities as well as through a series of pop up events throughout East Boston focused on creating belonging and joy through arts and culture while also providing critical services and information about environmental hazards and the dangers of overcrowded housing. The network was connected through texts, phone calls, monthly peace circles and a series of spring and fall pop up events providing essential services and resources and family entertainment and fun. The success of this model helped to establish a foundation for the development of a more

formal community resiliency network, which can be expanded to address other issues, such as climate adaptation and emergency preparedness. By leveraging the existing network and partnerships developed through pandemic response work, MLCS can continue to engage vulnerable communities in the East Boston area to promote collective resiliency and address environmental justice issues.

The community resiliency hub will continue to strengthen and develop through this planning effort will provide a platform for community members, especially those from disadvantaged backgrounds, to work together and develop a climate adaptation and emergency preparedness plan that aligns with city and state plans and that meet the unique needs of East Boston's disadvantaged residents. The hub we work together to develop will also serve as a resource center for education, outreach, and training on emergency preparedness and climate resiliency. This proposal outlines the goals, activities, and milestones of the project.

The weekly planning process led by a steering committee of core partners will consider the hazards of their overcrowded housing and poverty, as well as local hazards such as the nearby airport and electrical substation.

Community Partners

Community partners Neighbors United for a Better East Boston (NUBE) is a civic education and engagement organization targeting disadvantaged and under-reached voters and boasts a 42 percent voter response rate. Mutual Aid Eastie Both will build on their *vecino* or neighbor to neighbor models and their strong reach in disadvantaged communities in East Boston. Both of these have played a central role in pandemic response over the last three years. To support strong culturally competent media and reach we will also work with the Veronica Robles Cultural Center as a media and events partner who reaches over 10,000 community residents per year through a series of cultural events and media.

Technical Assistance

NEWMOA is a non-profit, non-partisan, interstate association whose membership is composed of the state environment agency programs that address pollution prevention, toxics use reduction, sustainability, materials management, hazardous waste, solid waste, emergency response, waste site cleanup, underground storage tanks, and related environmental challenges in Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Rhode Island, and Vermont. NEWMOA also works collaboratively with non-member states on issues and programs of national importance.

This project will engage a planning committee of East Boston residents in a problem-solving process that deepens leadership and understanding from vulnerable communities and results in the development of a community-· informed East Boston HUB resiliency plan (see support letter for full scope)

The Massachusetts Office of Technical Assistance (OTA)

Created by the 1989 Massachusetts Toxics Use Reduction Act (TURA), the Massachusetts Office of Technical Assistance (OTA) provides free and confidential toxics use reduction and pollution prevention assistance to Massachusetts manufacturers and businesses. Our scope of services includes incorporating chemical safety into climate change and severe weather resiliency planning to reduce the risk of industrial accidents. OTA has provided trainings for first responders and businesses to identify climate change vulnerabilities and chemical risks. When called upon during this effort, OTA will partner with NEWMOA to offer services within our agency scope (See letter)

Public Partners

The city of Boston, state partners such as OTA, and our local state representative constitute our public partners to date and have all submitted support letters, having agreed to support the project with linkages to other vital agencies and organizations.

2.0 Project Activities / Milestone Schedule / Detailed Please describe the following:

a. Project Activities and b. Milestone Schedule

Goals, Activities, and Milestones

Year 1 - Phase 1: Build the Project Team, Grow Community Capacity, and Develop Leaders

Year 2 - Phase 2 Assess Vulnerability and Select HUB Service Sites

Year 3 - Phase 3 and 4: Identifying and Understanding how to Resource Collective Community Resiliency

*A monthly steering committee meeting of leadership cohort and project partners facilitated by the Project Manager (PM) is an assumed activity. Evaluation activities as designed in participatory process by Mary Skelton Roberts, evaluator is also assumed.

Year 1 - Phase 1: Build the Project Team, Grow Community Capacity, and Develop Leaders, and Problem Identification.

Month 1-3:

Develop 3-month ramp up plan for starting up EPA award with guidance from program officers and compliance and observation of all regulatory requirements.

Onboard PM and facilitator (see bio sketch) who will train a group of 12 community leaders and a youth resiliency corps in East Boston from climate-affected disadvantaged populations.

Conduct initial meetings with local organizations such as Neighbors United for a Better East Boston, Mutual Aid Eastie to identify and select participants for the project.

Provide leadership development training for the CPS model participants to support issue identification, build consensus, facilitate strategic goal setting and leadership development.

Organize and conduct a series of focus groups with the 12 local community leaders first to discuss neighborhood risks and vulnerabilities (from their perspective).

Identify and secure social and emotional resiliency support, education, and resources for the project team.

Host soft launch event to share project plans and gather community input

Develop a documentation and social media plan for youth resiliency corps year 1

Month 4-6:

Through constructive engagement that involves a broader group of residents, the team develops a consensus-driven community and coastal resiliency vision that leverages stakeholder partnerships & resources and build on its existing visioning process. Our group of partners will have begun this process at the start of this project should it be funded.

Engage leadership and community in coastal and community resiliency education to develop coastal and community stewardship and emergency preparedness.

Develop a TOT training with leadership cohort that would train them how to help build household resilience and emergency preparedness with the people they engage with in their respective groups and organizations.

Conduct a series of site visits with these leaders around East Boston to areas that are considered environmentally vulnerable leadership knowledge on climate impacts, health hazards and what resilience measures existing plans are addressing and where there is a gap.

Month 7-9:

Engage project team in social media campaigns designed to engage community members in the three-year planning process.

Provide additional technical assistance about hazardous waste dangers to core team to begin mapping community problem areas.

Conduct a series of site visits to identify together the infrastructure that East Boston currently has, such as to existing emergency designated shelters.

Conduct a series of community-building activities in Maverick Landing and one other public housing development to discuss climate resilience, social vulnerabilities, and existing resources vs resources that are lacking to better understand needs of disadvantaged communities in East Boston

Month 10-12:

Leadership team works together to assess and continue map vulnerabilities, key services, and to assess what would be needed to create a stronger HUB site

OTA training to leadership cohort on use of flood mapping tools

Conduct a series of site visits to identify together the infrastructure that East Boston currently has, such as to existing flood areas and to emergency shelters.

Yearly festive event to share updates to date on project with community and to receive community feedback.

Year 2 - Phase 2 Using the Date to Assess Vulnerability

Month 13-15:

Facilitate 2 focus groups with the 12 local community leaders to discuss neighborhood risks and vulnerabilities from their perspective.

Engage local government and first responders to provide input on hazard identification and potential service site locations.

Train the leadership cohort in building household resilience with the people they engage with in their respective groups and organizations and gather qualitative data.

Develop a documentation and social media plan for youth community resiliency corps year 2

Month 16-18

Conduct a technical assistance session with NEWMOA to map out the community hazards and identify areas of concern with NEWMOA developing a profile of chemical and other disruptive hazards specific to East Boston.

Conduct site visits with these leaders around East Boston to areas with stakeholders that are considered vulnerable to flooding and sea level rise to support leadership knowledge on climate impacts and what resilience measures existing plans are addressing and where there is a gap.

Conduct site visits to identify together the infrastructure that East Boston currently has, such as to existing emergency designated shelters.

Conduct site visits to sites and designations that post a hazard in the community profile developed by NEWMOA.

Promote coastal and community resiliency and education deliver 2 community engagement session where the East Boston profile is shared and community feedback is secured.

Month 19-21:

Assess and map vulnerabilities and key services to strengthen HUB site at Maverick Landing in East Boston

Provide technical assistance to the project team about hazardous waste dangers to continue mapping community problem areas and sharing findings with community.

Assess facilities, food and housing services, health care, utility, and other key emergency response services.

Month 22-24:

Work with OTA to provide training to local businesses about storage and maintenance of hazardous chemicals in the case of disruptive emergencies.

Continue promoting coastal and community resiliency and education and lead community engagement sessions where they share maps and conduct emergency preparedness trainings.

Conduct a site visit to another city that is a good example of a climate resilient HUB.

Year 3 - Phase 3 and 4: Identifying and Understanding how to Resource Collective Community Resiliency

Month 25-28:

Conduct a review of best practices for developing urban HUBs for community resiliency, including talking to experts on developing HUBs and understanding the service and facilities needs for community resiliency hubs

Assess the current resources and potential funding streams for developing community resiliency hubs in East Boston, including researching Federal (HUD) and State funding opportunities

Host at least 1 community events to receive input from the community about planning efforts to date and the proposed community resiliency hubs

Engage community leaders and stakeholders in developing a detailed plan for the development of community resiliency HUB at Maverick Landing, including identifying potential locations and needed facilities and services for an urban HUB campus.

Finalize the plan for developing East Boston service and facilities community resiliency hubs, including cost estimates and a timeline for implementation

Develop a documentation and social media plan for youth resiliency corps year 3

Month 33 to 36

Host a press release event to announce the final plan for the development of community resiliency HUB and urban campus of HUBS in East Boston

Conduct a community celebration event with city and state officials to share the final plans and celebrate the accomplishments of the project

Publish and disseminate final plan.

Hold a community forum to discuss the findings and recommendations, and to solicit feedback from residents, community leaders, and local officials.

3.0 Environmental Results – Outputs, Outcomes, and Performance Measures (Logic Model)

a. Environmental Results Logic Model (see attached)

b. Performance Measurement Plan

Performance measurement is essential for tracking the progress of the project and ensuring that the objectives are being achieved. Here's a breakdown of performance measurement plan by year:

Year 1:

Number of community leaders and youth trained in the CPS model for climate adaptation and emergency preparedness plan development.

Number of events and workshops held to educate the community on coastal and community resiliency.

Number of adults and youth engaging in expeditions to environmental sites of concern.

Number of youth and adults receiving emergency preparedness training

Number of youth engaged in social media campaigns to promote community engagement in planning process.

Number of stakeholder partnerships established for resiliency vision development.

Number of community and youth leaders provided with social and emotional resiliency support and resources.

Number of environmental education and emergency preparedness trainings

Year 2:

Number of vulnerabilities mapped and assessed with technical assistance from NEWMOA and OTA.

Number of assessments conducted with first responders, local and state government, and facilities experts.

Number of community engagement sessions conducted for sharing maps and conducting emergency preparedness trainings.

Number of leadership cohort trained to build household resilience with training modules.

Number of site visits conducted with community leaders to vulnerable areas of East Boston to increase knowledge on climate impacts and existing resilience measures.

Number of environmental education and emergency preparedness trainings

Year 3:

Number of community resiliency promoters from vulnerable communities engaged in the multi-year mapping and planning process.

Number of businesses, multi-family homes, and other structures inventoried and mapped.

Amount of funding secured for facilities resiliency assessment and related capital expenses.

Number of community events held to receive input on planning efforts to date.

Number of press release events held to share final plans with city and state officials.

Additionally, the following indicators can be used for measuring the overall success of the project:

Number of environmental education and emergency preparedness trainings

Increased community engagement and participation in planning process.

Improved resiliency knowledge and awareness among community members.

Increased number of resiliency resources available to vulnerable communities.

Increased preparedness for climate-related disruptions and emergencies.

Increased stakeholder partnerships for resiliency planning and implementation.

Increased access to funding and resources for resiliency planning and implementation.

c. Sustainability Plan and Community Vision

MLCS has consistently managed a healthy budget through the pandemic due to a strong internal fundraising team. We will incorporating sustainability planning into the United Way visioning process for the collective work of the community partners on this project. That work will begin next month after the award has been publicly announced.

4.0 Programmatic Capability

a. Organizational Experience related to the proposed project

The lead organization for this project is the Maverick Landing Community Services (MLCS). During the COVID-19 pandemic, MLCS served as a primary service HUB and was recognized as the city of Boston's 2020 community champion by the city in partnership with the Mayor's Office for Immigrant Advancement.[xx] MLCS, located in a housing development that is 77 percent subsidized and in the heart of the densest area of East Boston, delivered over 500,000 of food to East Boston through four markets[xxi] and assessed over 1,000 families for housing insecurity, helped over 250 families to stay in their homes with assistance from its housing lab available to all residents in East Boston and operated in collaboration with a housing support coalition that includes partners such as NULawLab a legal design institute based out of Northeastern and the newly developed Northeastern Law School clinic. MLCS has supported over 3,000 families through every Covid wave of pandemic disruption with direct aid, access to vaccination through onsite pop-up vaccination clinics, support for housing, and food distribution. MLCS has acted as HUB for disadvantaged East Boston residents with the ability to recover and resume daily operations in between and during rapid response. MLCS is well positioned to continue serving as a HUB for future climate adaptation or emergency disruptions.

Together in partnership with core partners MAE and NUBE, MLCS has built an organic community resiliency network that connected neighbors most affected by the pandemic. Operating like an impromptu HUB model, MLCS served as a primary resource for distributing food, adapting its 2,000 square foot community room and adjacent 1,000 square foot makerspace a food artery that delivered over 500,000 lbs. of healthy produce and core staples like beans and rice to families at over 4 markets in 2020

alone, and currently delivers over 200,000 lbs. each year. MLCS is also currently a lead members of the housing support coalition in partnership with NULawLab, an innovative legal design institute based in Northeastern. Through this work a housing legal clinic that is currently operating out of Northeastern Law School with a satellite housing station at MLCS, the only one of its kind in East Boston.

MLCS finance team is prepared to manage this grant. It currently manages a three-year HUD-ROSS self self-sufficiency grant and is in year 2 of that project. Its finance team is comprised of a part-time finance director, a part-time billing specialist, a part-time bookkeeper and a full-time executive director.

b. Staff Experience and Qualifications of Project Manager (PM).

Dr. Luna has extensive experience in managing and facilitating projects that aim to address environmental justice issues through the implementation of the Environmental Justice Collaborative Problem-Solving (EJCPS) Model. Her work is grounded in the principles of community-based participatory research and focuses on building the capacity of vulnerable communities to identify and address environmental and public health concerns. Dr. Luna has worked on numerous projects that involve community outreach, education, and capacity building, such as developing community resiliency plans for disadvantaged communities in East Boston, and building coalitions to address environmental justice issues in the Gulf Coast region. Her approach to project management emphasizes collaboration and inclusivity, and she has a proven track record of successfully engaging and empowering diverse communities to work towards common goals with her expertise in the EJCPS model, Dr. Luna lives in East Boston and is a member of MAE and has known all the community partners for just under a decade. Dr. Luna has served in formal and advisory capacities to community-based organizations, foundations, and public institutions on a variety of racial equity issues.

Kaylee Aguilar will lead the youth resiliency corp. She vast experience supporting strong leadership development. Two of those years were focused on supporting youth-led community resiliency in flood-related climate change mitigation efforts. Her resume is included in the appendix.

Mary Skeleton Roberts is a seasoned evaluator and former program officer at the Barr Foundation.

Dr. Atyia Martin former chief of emergency preparedness for the city of Boston will conduct emergency preparedness training.

c. Expenditure of Awarded Grant Funds

5.0 Past Performance: MLCS has not been the past recipient of an EPA grant but was a subcontract in partnership with NEWMOA on a previous EPA grant on sustainable food.

6.0 Quality Assurance Project Plan (QAPP)

A quality assurance plan is not required for this project but will ensure good progress monitoring to ensure our monthly targets are being met in an efficient and effective manner. We are also willing to supply a quality assurance project plan should the EPA decide we need to have one in place.

---

[i] The term disadvantaged includes the following populations in East Boston: immigrant populations especially those with lack of language access to documentation that is mostly in English; populations living in subsidized housing, many of whom experience complex poverty trauma and are living with chronic conditions that are exacerbated by environmental injustices.

Note: Research supports public housing residents typically have a much lower life expectancy increasing their risk for sickness and early mortality form added environmental injustices that impact health.

April 10th, 2023

Dear Next Leadership Development,

The Black Mass Coalition is writing to express our enthusiastic support for your Resilience Hub Project for the EPA Environmental Justice Collaborative Agreement. We believe that this project is crucial for preparing Black communities for the increase in the number and intensity of disasters that disproportionately impact our people.

As you know, Black communities are often hit hardest by environmental disasters, whether it be hurricanes, floods, or toxic waste spills. These disasters can have devastating impacts on our health, our homes, our families and our communities. Our susceptibility to natural disasters as well as our ability to respond & recover are directly correlated to historical and present day social forces that uphold a hierarchy of human value based on race and class distinctions. This combination of environmental and social conditions require a heightened level of resilience to reduce vulnerability in the immediate, mid and long term. It is essential that we have the tools and resources to prepare for and respond to these disasters, and we believe that your project will be a significant step in that direction.

We are particularly pleased to see that your project will incorporate environmental justice and climate change issues into the planning and implementation. It is critical that we address these issues head-on, as they are inextricably linked to the environmental disasters that we face. By incorporating these issues into the project, we can work towards a more just and equitable future for Black communities.

The Black Mass Coalition is committed to partnering with Next Leadership Development on convening Black organizations and residents to plan and implement the project. We believe that this collaboration will be essential for ensuring that the project meets the needs of our communities and is grounded in our experiences and perspectives.

We look forward to working with you on this important project and are excited to see the positive impact it will have on Black communities.

Sincerely,

Jason Boyd

Director, Black Mass Coalition
One Beacon Street, 15th Floor
Boston, MA 02108

NEXT LEADERSHIP DEVELOPMENT

Black Resilience Hub Project

Inputs

Staff/Contractors: Project Mgr., .5 FTE

Partners: Black Mass Coalition, City Councilor At-Large, and Sesame Solar

Technology: Daily, Mitigation, Response, & Recovery Operations Tools

Funding: Staff, partners, technology, travel, emergency operations

Equipment: Response & recovery equipment, supplies

Research: For/with members for projects, initiatives, grants, and training

Activities

Project Management

Plans Review and Gap Analysis

Government Priorities

Prioritization

Planning

Implementation & Proof of Concept

Outputs

Gaps in Boston Emergency Response Plan identified

Gaps in Boston Emergency Response Plan closed

Black-led organizations educated on climate disaster issues

Black Bostonians educated on climate disaster issues

Black-led organizations equipped with tools for emergency response

Trainings held on new response plan

Community exercise held to support new response plan

Outcomes

Disproportionate health impacts limited

Disproportionate environmental impacts limited

Greenspace in black neighborhoods increased

Heat index in black neighborhoods reduced

Post-incident reinvestment initiatives increased for black residents

Black rate of exposure to environmental hazards minimized

Impacts

Social Resilience

Infrastructure Resilience

Economic Resilience

Environmental Resilience

Governance Resilience

Black Resilience Network Supported

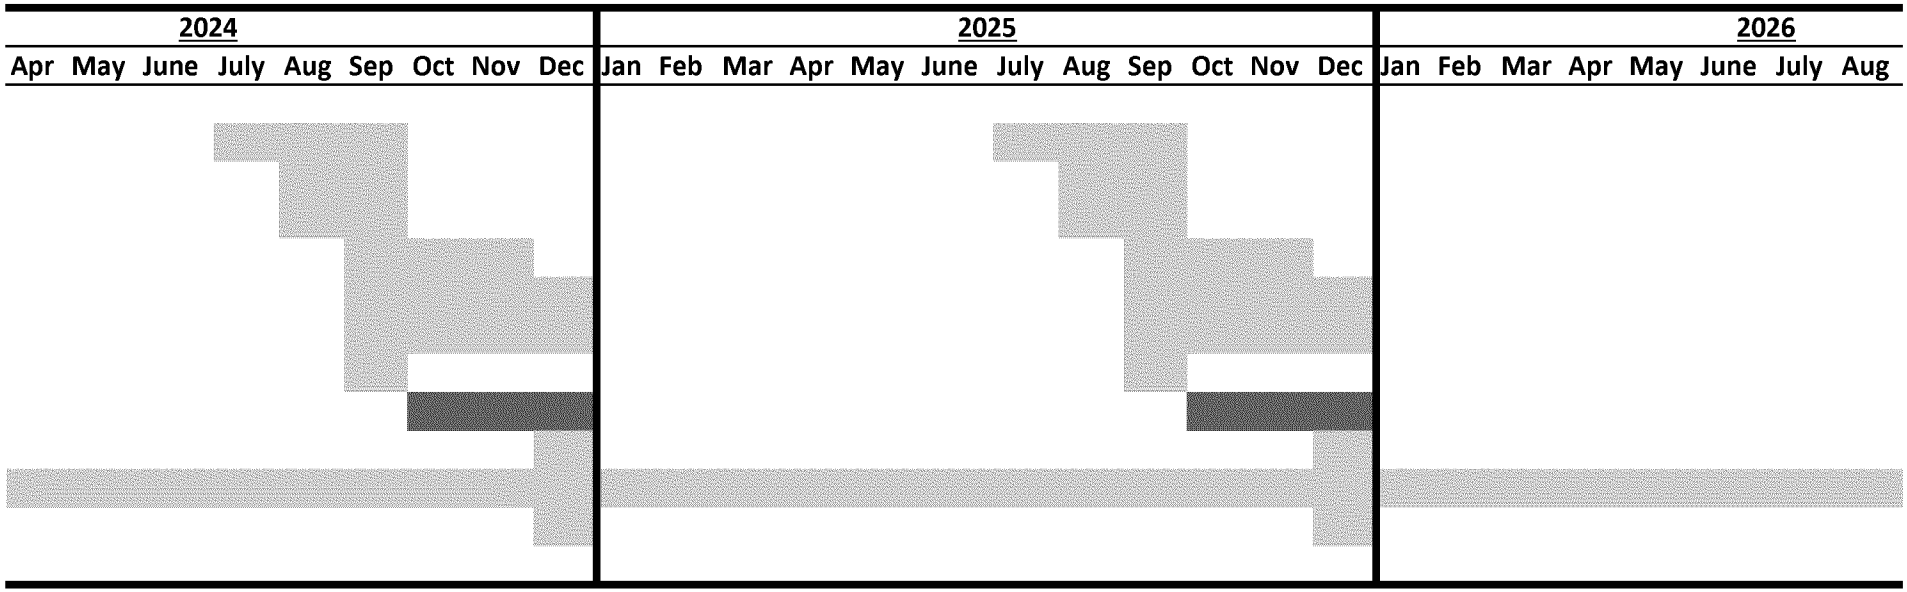
Below is the project plan for Pilot City 1 (City of Brownsville). If funding is secured, the plans for the remaining 2 pilot citie



Activity	2023														
	Jan	Feb	Mar	Apr	May	June	July	Aug	Sep	Oct	Nov	Dec	Jan	Feb	Mar
Planning: final selection & approvals of planting site(s)															
Planning: purchasing tree & planting materials															
Planning: finalize planting plan; maintenance & monitoring plan															
Preparation: site prep and other tasks on-site															
Tree Delivery: trees and planting materials delivered to planting site															
Report: Mid-project update															
Tree Planting (highlight in dark green)															
Report: Planting Completion															
Maintenance & Monitoring															
Report: Year-1 Monitoring & Maintenance															
Report: Year-3 Monitoring & Maintenance															

This is a sample workplan that has been provided as an example. Please modify to fit your specific project, by following these steps:

1) reformat all of the 203-2025 cells to white
2) complete the workplan based on your specific timeline
3) add more rows for any additional tasks

***IMPORTANT NOTE** : For multi-year projects, we will split each calendar year*

es will be similar to below.

into it's own....

Dear Applicant:

We are pleased to inform you that upon review of your application for tax exempt status we have determined that you are exempt from Federal income tax under section 501(c)(3) of the Internal Revenue Code. Contributions to you are deductible under section 170 of the Code. You are also qualified to receive tax deductible bequests, devises, transfers or gifts under section 2055, 2106 or 2522 of the Code. Because this letter could help resolve any questions regarding your exempt status, you should keep it in your permanent records.

Organizations exempt under section 501(c)(3) of the Code are further classified as either public charities or private foundations. We determined that you are a public charity under the Code section(s) listed in the heading of this letter.

Please see enclosed Publication 4221-PC, Compliance Guide for 501(c)(3) Public Charities, for some helpful information about your responsibilities as an exempt organization.

Sincerely,

Robert Choi
Director, Exempt Organizations

EJCPS at Providence Community Libraries

- **Project Location:** Providence, Rhode Island (Primary Libraries impacted by grant: South Providence Library, 02905; Mount Pleasant Library, 02908).

- **Contact Information:** Dr. Nathaniel Ramos Jr., South Providence Library 441 Prairie Ave, Providence, Rhode Island, 02905.

- **Brief Description of Applicant:**

Providence Community Libraries is a non-profit public library system that collaborates with various organizations to best serve our community. As a library, our goal is to support the evolving information needs of our communities and foster learning and exploration. We serve as emergency heating and cooling centers, provide food for children after school, we host informational workshops on gardening, provide information on lead pipes and local mitigation efforts, host testing and vaccination events, and more.

- **Are you applying for the Small CBO Set Aside Track: No**

- **Project Abstract:**
-

The main objectives of this grant application are to facilitate environmental justice partnerships in collaboration with the Health Equity Zone of South Providence and other community organizations, create awareness of air quality and establish a free air quality monitoring program using loanable equipment at libraries across Providence, host citizen science programs that inform the community about various environmental and health issues, and replace old and less efficient HVAC systems at Providence Community Libraries with heat pump HVAC systems along with improving energy efficiency based on an energy audit, which will enable a more resilient community as Providence Community Libraries are emergency heating and cooling centers.

The activities that this grant will enable are hosting various community events through the Health Equity Zone of South Providence and Grounds Work RI. These events will be community events to discuss numerous issues ranging from lead mitigation efforts across Providence, air quality awareness and improvement campaigns, health awareness campaigns, vaccination clinics, and other programs based on community needs. The outcomes of these programs is increased awareness of community resources and community environmental/health issues measured via surveys and community involvement in environmental/health programs. Groundwork RI will also be hosting your development environmental workshops at South Providence Library.

With a new HVAC system at one of the Providence's emergency heating and cooling centers, this grant will improve the community's resiliency in the advent of a disaster. The primary outcome

of a new HVAC system and other energy efficiency improvements is to increase the library's energy efficiency as measured by utility expenses.

- **Project Type:**
  Air quality & asthma, Food access to reduce vehicle travel and fuel emissions, Healthy homes, Emergency preparedness and disaster resiliency, Youth development relating to Environmental Justice

- **Special Considerations:** Included as an attachment

- **Environmental Issue:** Air

- **Include partner name and stakeholder group.**.

City of Providence Emergency Management Agency & Office of Homeland Security

Groundwork Rhode Island

South Providence Health Equity Zone

- City of PVD Healthy Communities Office
- Iglesia Vision Evangelic
- Lifespan Community Institute
- Providence Community Health Centers
- Providence Community Libraries
- Renaissance Adult Day Care Center
- RI Alzheimer Association
- Woman & Infants Hospital

- **Will you need to develop a QAPP for your project? (See Appendix H)**

An additional QAPP is not necessary in this instance. The public library has limits data collection and has a process for managing data, which includes anonymization of data. However, if a QAPP is required upon approval of funding, one can be developed for the few instances, where data is collected and shared.

Environmental and Public Health information of the Underserved Community

One of the areas that will be home to various programs is the South Providence community. The 02905 neighborhood is served the the 02905 Health Equity Zone, which has done a community needs assessment. The 02905 neighborhood is 44% Hispanic and 27% of the community is foreign born, the U.S. average for comparison is 13.6%. Based on the distressed community index, the 02905 community has 18.3% of the population without a high school diploma, versus

ED_016126_00000132-00002

12.3 at the national average, 25% poverty rate vs 13.9% average, a media household income of $43k versus $60.5k nationally, and Providence county as whole has the largest food insecurity in Rhode Island at 12.6%. Aside from having a large portion of an underserved population, poverty, poor education, and food insecurity, 02905 also has poor air quality. 10.9% of children have asthma in Providence, which is 9th highest in the nation and 70% of pediatric asthma emergencies in Providence are children on medicaid. A great deal of Providence's environmental polluters are in South Providence such as a hot-mix asphalt plant, which is located blocks from various high schools.

This project seeks to engage the community with food insecurity issues by teaching them how to grow food at home, which reduces food carbon emissions. However, this project can also help families improve their health and stay active. Programming on air quality will allow people to measure the quality of air in their homes, grow plants to improve air quality, and engage in citizen science. Furthermore, through community partners such as Groundwork RI, we will host a variety of programs including teen environmental justice programs as the library will serve as a rallying point for learning and engagement.

These programs aim to inform the public of the public, engage with them, encourage them to engage with other community partners such as the South Providence Health Equity Zone and other groups. While we are primarily working with the South Providence Health Equity Zone, we also have the HEZ zones such as the Olneyville Health Equity Zone, which we will also engage with. While some programs are centered around the South Providence Library in this grant, many workshops will be held across the city with resources for all of Providence.

That said, both South Providence and Mount Pleasant sit in areas where 90-100% of the community is in close proximity to a superfund site, hazard waste proximity, medically underserved, and are in areas where air toxins are a cancer risk at 80-100% according to the EJScreen Tool.

Organization's Historical Connection to Underserved Community

The libraries in Providence are located across the city and we serve various underserved communities. For example, due to the higher than national average number of people without a high school diploma, we run a free Spanish language GED program that has over 120 students as of April 2023. These classes have been a part of Providence Community Libraries for years as we have had an instructor for over a decade. The oldest library in our system was built in 1934 and has offered people a place to read and learn since the Great Depression. In 2021, our library system did a Spanish Language survey and focus group to learn what we could do better according to Spanish speakers, which number over 40% of the city based on Census statistics, and people wanted more community programing. To which, the library has increased Spanish language offerings and has offered everything from sewing to gardening classes in Spanish. From 1934 to today, our libraries have worked with the poor, underserved, and those needing assistance. For this grant, members of the community have already had their needs heard via a

community needs assessment, but they will continue to be heard as we host new programs based on the the needs and suggestion of our communities.

EJCPS Model

This application has utilized the EJCPS model in a few different ways. In regards to community capacity building, we have informed ourselves on various issues in our community using public data and have partnered with the South Providence Health Equity Zone on conducting a needs assessment. We have also partnered with experts to better serve the community on these issues.

Through this grant, we look to build trust and create new partnerships with other stakeholders. This process will take years, but this grant plays a major component in accomplishing that engagement.

Through the Health Equity Zones in Providence, we will increase our multi-stakeholder partnerships.

Currently, we are in the early stages of building a multi-stakeholder partnership, so we are still in progress in various components, of the EJCPS model, but we have made strides in utilizing the EJCPS model.

Promote Environmental Justice and Civil Rights at the Federal, Tribal, State, and Local Levels

This grant will allow us to promote environmental justice in two ways. First, this grant will allow our libraries to bridge gaps that are disproportionately negatively impacting communities of color. Through informational programs and more generally programming, we can bridge information gaps by providing access to information and offering programming in multiple languages. These programs will also provide us with information so we can better serve the community, create better programming, which in turn encourages people to be active. For example, by creating a mini community farm and providing people with gardening training, we encourage them to build community farms, which impacts food islands, reduces carbon emissions and generally improves health. Second, through community partners, we will be able to host a younger generation of environmental justice advocates and we will be able encourage teens to serve their community by improving the environment, which in turn also helps them physically and helps the improve their health.

Partner Collaborate

This grant allows us to partner and collaborate with existing partners.

With Groundwork RI, we will collaborate on seed farms, gardening and engaging community youth. GroundworkRI specializes in building community gardens and training younger generations the importance of health and the environment. This group often struggles to find

places to meet and the library offers them a place to collaborate, plan, and with this grant we will create something the entire community can benefit from in the form of a community garden.

With the South Providence Health Equity Zone (SPHEZ), we can collaborate in various ways. The SPHEZ does data analysis on the South Providence community and helps organize various community groups. They have organized vaccination and testing sites, health seminars, health programs and more. The South Providence Library works with the SPHEZ and through this grant can hire someone to further improve that collaboration, promote events, create health information graphics, and generally create material in English and Spanish. Often, health information is not created in multiple languages, so having someone who specializes in creating and promoting community events is very much needed. This person would also help grow community engagement by connecting business owners with various groups and other community groups so we can all better support one another.

The Emergency Management Agency and Office of Homeland Security is a partner as we collaborate on providing members of the community access to resources and we serve as an emergency heating and cooling center. All our libraries serve as emergency heating and cooling centers, but we also serve as vaccination sites, testing facilities, we are education centers, food distribution for after school programs, and we bridge information gaps by providing access to Internet. In Olneyville and South Providence, there are huge issues in internet access as noted in the EJScreen tool and the libraries are situated in those zones and provide internet access for all and homework assistance for children.

All partners are consulted for the changing needs of our communities. When a heat wave hits, we work extra hours to serve the community, when there is a pandemic, we work with both emergency management and the HEZ to provide access to medical to vaccinate or test people, and we are always working with community groups to develop new and innovative programs.

Project Activities / Milestone Schedule / Detailed

A. There are three program activities outlined in this program, programming, energy efficiency, and an HVAC unit.
    1. Programming is a major component of what public libraries do. Programming consists creating various projects such as indoor and outdoor gardening workshops based on a community needs assessment done by the South Providence Health Equity Zone. This project will consist of buying outdoor gardening supplies and numerous seed packets. Library will contribute to the project by creating tutorial vides in English and Spanish. This includes the creation of loanable air quality sensors that people can utilize to measure the air quality in their homes and various workshops on how to improve their air quality. This program will also support paying for bilingual presenters to host events at multiple libraries and a specialist to go between various community organizations to promote events and analyze data provided from community feedback. To that end, the programming component of this grant will also make thousands of bilingual flyers and promotional material that will be displayed at numerous community events that inform people about the programs going on in the community. For example, lead pipe abatement

is a project ongoing in Providence with South Providence being one of the targeted communities for the first lead pipe abatement projects. Community members often need applications for funding to pay for lead pipe abatement in their home or simply to inform them that it is an ongoing problem. Part of this grant will allow us to translate those forms or create health information graphics to better explain why it is important to replace pipes. Throughout the first year of the grant, we will track attendance of people at events, flyers made and distributed, and the dozens of programs hosted along with surveys and use all of the information to improve our offerings across the library system.

2. Energy efficiency at South Providence Library has the main objective of improving energy efficiency at one of Providence's emergency heating and cooling centers. The savings on energy efficiency will be approximately $10,000 per year. This estimate was done by an energy efficiency expert and has been provided as part of the this application. These savings can then be used in other energy efficiency programs to further make our libraries more sustainable. However, our energy efficiency story will also be used to program energy efficiency in the community. We will create videos and have displays that will inform the community of how much energy we use and how big of a difference energy efficient lighting is making in our library.
3. Installing a new HVAC unit at Mount Pleasant and/or South Providence will allow our libraries to be more resilient and remain open during heat waves and extremely cold weather events. We did obtain preliminary estimates and there are very different approaches to improving our HVAC situation at both libraries. One method would cost $330k per library and another method would allow us to do both libraries for $340k. Based on the discrepancy, we would need to get more data to determine which approach is more sustainable and functionally better for the library. As we do not have funds to make improvements right now, vendors were not keen on providing estimates, but if approved, we will then talk to vendors, get estimates and do a cost/benefit analysis on each approach and determine which approach would be better for the library.

B. Milestone Schedule

	Q1	Q2	Q3	Q4
Programming	-List Community Outreach Specialist position(s) and begin hiring -Plan future workshops for the year -Begin ordering supplies	-Liaison with community partners -Begin writing scripts for videos -Create video shooting schedule -Create distribution plan for supplies	-Host programs -Find community partners to co-host workshops -Promote programs at community events	-Analyze data -Share data with community partners -Create recommendations for continuation of programs

	Q1	Q2	Q3	Q4
Energy Efficiency	-Contact energy efficiency groups to get updated energy efficiency list with walkthrough of South Providence	-Conduct bids from energy efficiency groups for replacement work -Select awardee -Schedule installation	-Install new lighting at South Providence Library -Track energy results	-Continue to track energy efficiency
HVAC	-Contact vendors regarding grant -Begin walkthroughs of facilities -Meet with Department of Labor and Training and other partners regarding HVAC units and which method is recommended	-Create rubric for decision making on what factors will influence selected HVAC -Begin bidding process for HVAC Units -Select awardee -Schedule installation	-Install new HVAC units and track data	-Install new HVAC units and track data

C. Itemized budget sheet/narrative
- Included as an attachment

Environmental Results

A. Logic model is submitted as an attachment
B. Individual programs will be rated using a Likert scale. Larger projects, such as HVAC installation, will necessitate a milestone approach that is agreed upon with vendors. Due to supply chain issues and the inability for vendors to make guarantees until after orders are submitted, it is important to establish expectations with vendors on item arrival, installation dates, and verifying that the items are installed correctly.
C. The community vision for this program originates with a community needs assessment done by the South Providence Health Equity Zone (SPHEZ). The SPHEZ has identified various community issues that this grant will address.
   4. One of the issues of food insecurity and food islands will be addressed through bilingual gardening workshops. This grant will allow for purchasing of seeds that the community will then be able to use at home or in community gardens. Part of this grant will also be used to build a community garden at South Providence Library. Through community engagement in planning a garden, support from community partners like Groundwork RI, input from master gardeners on staff and feedback from program surveys we will foster community engagement. Having built a small garden at the library and with support of

our library and community groups, community members will be encouraged to create larger community gardens throughout the city.

5. Another example of using results from this grant to continue improvement throughout the city is improving air quality. Providence struggles with air quality issues. In fact, 10.9% of children in Providence have asthma, which is the 9th highest in the nation. In communities of color, this issue is exacerbated as over 70% of pediatric asthma emergency department visits in Rhode Island are children on Medicaid. By having air quality readers that people can borrow for a month at a time at the public library and bilingual tutorial videos to explain the data, we will enable people to learn about their indoor air quality and how to improve it. Feedback and data from this program will enable community members to work towards making their community healthier. This also connects to our food insecurity issue as we will have seeds for various plants, some of which can be planted indoors to improve air quality. People Willa also be able to be citizen scientists and see their indoor air quality before and after they place plants to see the real world impact of plants in their home.
6. Installing a new HVAC unit at Mount Pleasant and/or South Providence Library has multiple benefits to the community. As an emergency heating and cooling site, keeping libraries open benefits the community as it enables us to remain open and host community programs year round. The library is also able to host community groups such as Groundwork RI, health equity zones, and numerous other groups. The library serves as a rallying point for various community functions and constantly hosts remote workers, hobbyists, children, teachers, community groups and more. As an emergency heating and cooling center, staying open allows for more events and more programming that service the community's vision.
7. Improving energy efficiency at South Providence Library is an important need. Improving energy efficiency serves two purposes. First, it is in line with the objectives of this grant to improve the energy efficiency of the community. Second, energy improvements make the library more sustainable, which helps the library remain open and pay for other repairs. Energy efficiency improvements at South Providence Library would save the library nearly $10,000 a year. That $10,000 will allow us to work on other projects such as installing solar panels, which will allow our buildings to further reduce costs and be even more resilient in case of emergencies. Furthermore, showing real world uses of energy efficient lighting along with displays of the energy efficiency savings, this will encourage members of the community to consider the lighting for their uses.

Programmatic Capability

A. Providence Community Libraries (PCL) operates nine libraries in Providence, Rhode Island. The maintenance team at PCL has maintained the nine libraries for decades when they were a part of Providence Public Library and for over a decade since PCL split off and created

their own library system. Maintenance teams regularly get estimates from local businesses and oversee their work to make sure it is satisfactory.

B. Project Manager Dr. Nathaniel Ramos Jr. has managed a federal grant by the Network for the National Library of Medicine. Prior to joining PCL, Dr. Ramos oversaw the maintenance and management of numerous properties owned by his family business. Since joining PCL, he has fostered relationships with community groups such as the Department of Labor and Training and YouthBuild. Dr. Ramos also has maintenance staff that combined have over 100 years of experience and will be supporting him with supervising the program.

C. The budget for Providence Community Libraries is included in this submission. The library has experience working with private, local, state and federal grants. Upon receiving the grant, the library will work with EPA staff to fulfill documentation needs. Different organizations have different requirements for receiving funds, however, the library is equipped to follow all requirements to make sure funds are distributed properly.

Past Performance Submit a list of federally and/or non-federally funded assistance agreements:

1. -NNLM All of Us Program
   -Completed May 2022
   -Reporting for the All of Us program required regular meetings with NIH staff. Throughout the program, program supervisor, Dr. Nathaniel Ramos, met with federal program managers, kept them updated regarding funding, and collaborated with NIH staff on processing all funds and documents. All reporting requirements were given to Providence Community Libraries at the start of the program and were met on time.

2. -Community Development Block Grant South Providence Wall Repair and Paint
   -Completed
   -The South Providence Library recently received a renovation where badly damaged walls were repaired and painted. The reporting requirements for this grant required the development of selection criteria, a bidding process for vendors, and a review of work done and whether it was sufficient based on the grant requirements. This project was completed in November 2022 and was partially supervised by maintenance supervisor Mike Nickerson and Dr. Nathaniel Ramos.

3. -ARPA Funding Social Worker
   -In Progress
   -As part of ARPA funding, Providence Community Libraries was able to hire a social worker to help work with community needs during the pandemic. This social worker has created numerous group programs and has worked with library staff to better serve the physical and mental health needs of the community. This program is ongoing and will complete in April

2024. The first yearly update is due June 2023. The staff social worker files monthly reports of her ongoing programs and a short analysis on community needs and future programs.

4. -Community Development Block Grant Spanish GED
   -In Progress
   -South Providence Library staff, Dr. Nathaniel Ramos, oversees the Spanish GED program funded by the City of Providence through a CDBG grant. For this grant, library staff provide a quarterly update. This program is one of the few programs in Providence that are free and serve the community by providing those who participate free GED prep in Spanish. Final reports for this program are due in June 2023, but a prior year final report is included in this application.

5. -Community Development Block Grant South Providence Roof Repair
   -In Progress
   In addition to paint work needed at South Providence, the library also needs repair to the roof. The grant process is ongoing. The program was delayed until May 2023, at which point, requests for bids for the repair will be sent out, a roof repair bidder will be selected and the job will be supervised by maintenance supervisor Mike Nickerson and Dr. Nathaniel Ramos.

i. your history of meeting the reporting requirements under those agreements including whether you adequately and timely reported on your progress towards achieving the expected outputs and outcomes of those agreements (and if not, explain why not) and whether you submitted acceptable final technical reports under the agreements.

In evaluating applicants under these factors in Section V, EPA will consider the information provided by the applicant and may also consider relevant information from other sources, including information from EPA files and from current/prior grantors (e.g., to verify and/or supplement the information provided by the applicant). If your organization does **not** have any relevant or available past performance experience related to **federal or non-federal grants**, you should state this explicitly in your application (e.g., *Our organization has no past grants experience*.) Including this statement will ensure you receive a neutral score for these factors (a neutral score is half of the total points available in a subset of possible points). However, if you do not provide any response for these items, you may receive a score of 0 for these factors.

Will you need to develop a QAPP for your project? (See Appendix H)

- An additional QAPP is not necessary in this instance. The public library has limits data collection and has a process for managing data, which includes anonymization of data. However, if a QAPP is required upon approval of funding, one can be developed for the few instances, where data is collected and shared.

To Whom It May Concern:

The South Providence Health Equity Zone (SPHEZ) is a collaborative of community stakeholders that range from hospitals to health and grassroots organizations, neighborhood associations, and residents. Our members come together to address the most pressing health concerns in their neighborhoods. We work cooperatively to address health inequities through strategizing, prioritizing, and enacting plans that impact over 20,000 residents.

South Providence Library has been a committed and active partner in the 02905 Health Equity Zone since its inception. Library staff have attended stakeholder meetings, hosted COVID-19 testing and vaccination clinics, fresh produce deliveries, and aided the HEZ during the 02905 community needs assessment. They are always in great disposition to provide us with a space to conduct meetings or any sort of community event. The library has also supported us in different grant initiatives by providing support letters and expertise in different topics.

The South Providence Library is an invaluable partner for our collaborative and community. More than physical space, it is an opportunity catalyzer. It connects a historically underinvested community with much-needed opportunities. The SPHEZ is proud to present this support letter in support of the South Providence Library and we look forward to working with them on future programs to better serve the 02905 area and the Providence community.

Sincerely,

South Providence Health Equity Zone

Groundwork Rhode Island (GWRI) is a community-based organization helping build healthier, more resilient, and more equitable urban communities in Rhode Island by improving the physical environment and creating economic opportunities for local residents through job training, employment, and social venture programs.

We currently work with Providence Community Libraries in hosting teen workshops where we train teens about gardening and working in their environment to make their area healthier and to create environmental justice leaders. We also work with the library in doing composting, improving heat maps, and building urban farms. Our urban farm is actually next to the South Providence Library and we host workshops at the library regularly.

With this grant, we look to work with the library to serve the community, engage with teens, and host a variety of workshops. We have an existing relationship with the library and we look to continue that collaboration through this grant.

Amelia Rose

Groundwork Rhode Island
1005 Main Street #1223
Pawtucket, RI 02860

Mt. Pleasant Library

Currently there is an existing steam boiler serving various steam coils throughout the library as well as a duct mounted steam coil serving one 7.5 air handling units in the basement. There are also two additional air handling units in the basement. One 5 ton provides cooling only to the basement, the other 7.5 ton provides cooling only to the library. The 7.5 air handler with the steam coil provides heating and cooling to the library. There are two options to upgrade the system.

Option 1: Abandon the two 7.5 ton existing equipment in place and replace the 5 ton basement unit with a new 3 ton heat pump air handling unit. The 3 ton basement heat pump would handle the basement cooling and heating load, a 5 ton unit is not required. The library would be served by 6 ceiling suspended ductless split heat pump units in the open library area, one ductless split in the office area and one ductless in the activities room. This option would be able to provide adequate heating and cooling throughout the building. The problem is providing enough outdoor air required for the library. We could bring in some outdoor air to each of the new ductless units but it wouldn't be enough required by code. And unfortunately the ductless manufacturers do not make a large enough air handler to handle the amount of outdoor air needed. A gas fired furnace with cooling would be required in the basement to tie into the existing fresh air ductwork.

To sum up:
6 Ceiling suspended ductless heat pumps in Library
1 Ceiling suspended ductless heat pump in Activity room
1 Ceiling suspended ductless heat pump in Office
1 Ducted heat pump in basement, tied into existing ductwork
1 Gas furnace/cooling unit to help provide adequate fresh air
Budget Cost: $185,000.00 (you'd need to figure in an electrician and roofer)

Option 2: Abandon the existing steam boiler. Remove and dispose of the existing air handling units and condensers. Install new 95% efficient gas fire furnaces in the basement with new high efficiency condensing units on the roof. Manufacturers don't make a 7.5 ton high efficiency furnace so we propose installing 4-4 ton high efficiency units and twinning them together to make 2-8 ton units. The basement 5 ton unit would be replaced with a 3 ton high efficiency furnace & condenser. The new equipment would tie into the existing ductwork as well as the existing outdoor air duct and would provide adequate outdoor air to the library. One new ceiling suspended ductless unit would be installed near the rear of the library addition. Mike mentioned the existing systems have a hard time getting air down to the far end of that room.

To sum up
4-4 ton high efficiency heating/cooling units combined to act at 2-8 ton units
1-3 ton high efficiency heating/cooling unit for basement
1-Ceiling suspended ductless in rear of Library addition
Budget Cost: $110,000.00 (you'd need to figure in an electrician)

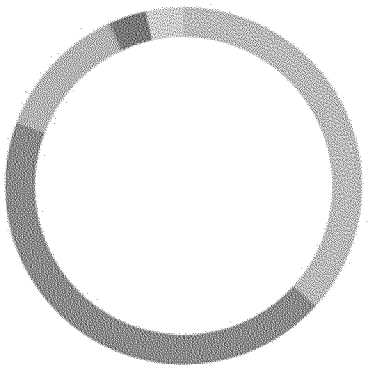
Prairie Library

The current system is made up of multiple rooftop units with duct distribution and zone dampers. Based on the current design and layout of the building, I wouldn't suggest trying to replace the systems with a ductless split type of system. The cost would be exorbitant. I think a better option would be replacing the rooftops with high efficiency rooftop units and maybe an energy recovery unit or two but getting an HVAC engineer to look through the system now and make recommendations would be the best option.

On larger commercial spaces, it's hard to get away from fossil fuels. You can do so with the ductless systems but to handle fresh air requirements most times you need gas to heat the outdoor air in the winter. If it was a brand new building or the space was being gutted and you were starting from scratch, there are some smaller electric heat ERV units but with the layout of the space now, they aren't practical.

Budget to remove all existing HVAC and replace with a ductless system and ERV unit for fresh air: **Budget $650,000 (you'd need to figure an electrician and carpenter to replace ceiling, soffit all the new refrigeration piping, etc)**

Replace existing rooftop equipment with new: **Budget $230,000.00 (you'd need to figure in an electrician) If you wanted to replace some of the rooftops with ERV units (which take tempered exhaust air and mix it with fresh air to pre-warm/pre-cool it (increased energy savings) I'd add another $100,000) An ERV that can do heating & cooling are quite expensive and they still use gas for heat.**



SOUTH PROVIDENCE HEZ COMMUNITY ASSESMENT

Assessment of social, economic, physical, and environmental conditions impacting the health of their respective HEZs and describe the inequities of interest and importance to the community as needed and as advised by the HEZ steering committee.

02905 Community Assessment Summary

Question: What are the greatest health related concerns for residents & stakeholders in 02905?

Community Assessment Actions Completed

Covid-Response Team Data Collection

When: 1/1/21-03/30/21

Surveyors: Community Health Workers of FSRI

Responses: 108 (in-person)

Respondents: 91.7% residents, business owners and CBOS. Remainder being other key stakeholders

02905 HEZ SWOT Analysis

When: Youth Conference & Community resource fair in 02905

Surveyors: Sandra

Responses: 31 Questionnaires Collected

Respondents: Mostly teachers, students and parents attending events

Literature Review

Collected data from current government and .org sites.

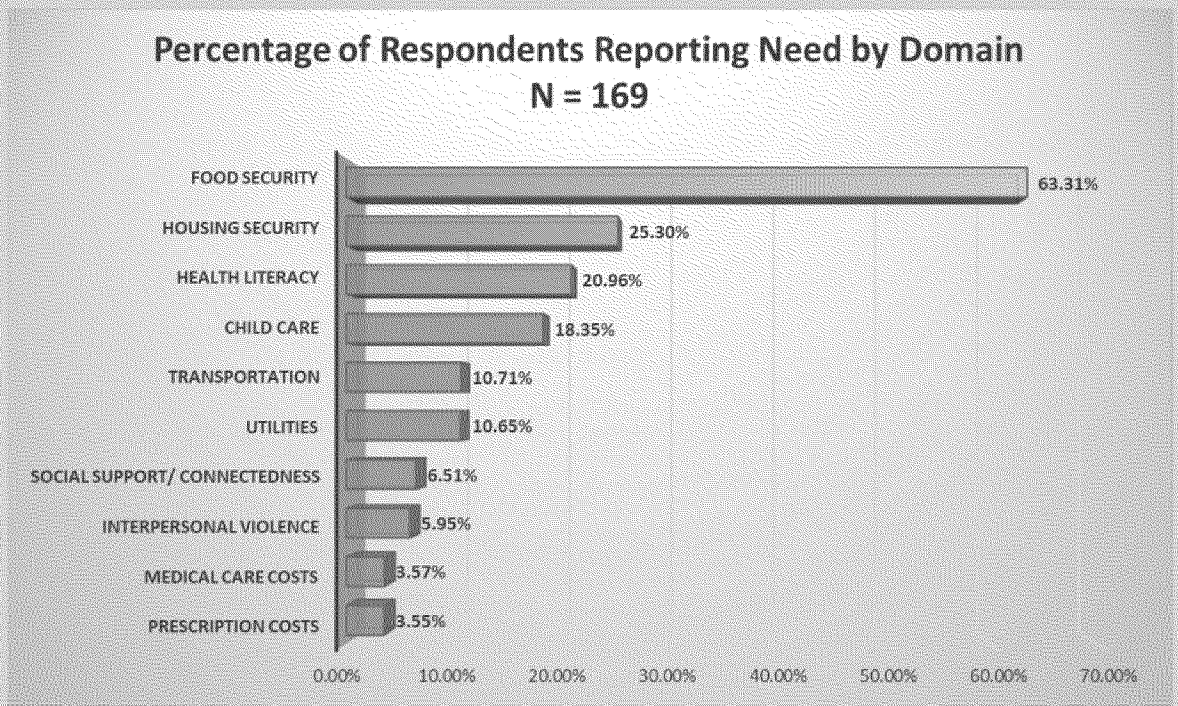
SDoH Data Collected

When: between 10/2020 – 03/2022

Surveyors: Covid-19 Response Team

Responses: 169 SDoH Screenings completed

Perceived Community Strengths



- Strong Sense of Community, Family, and Longevity
- Diversity of languages, food, culture
- Family & friends in proximity, good relationship with neighbors, proximity to businesses and overall supportive community

Collected from Pre-Hez Interviews & SWOT Analysis.

Thought: How do we leverage and integrate these strengths into our approach addressing health inequalities?

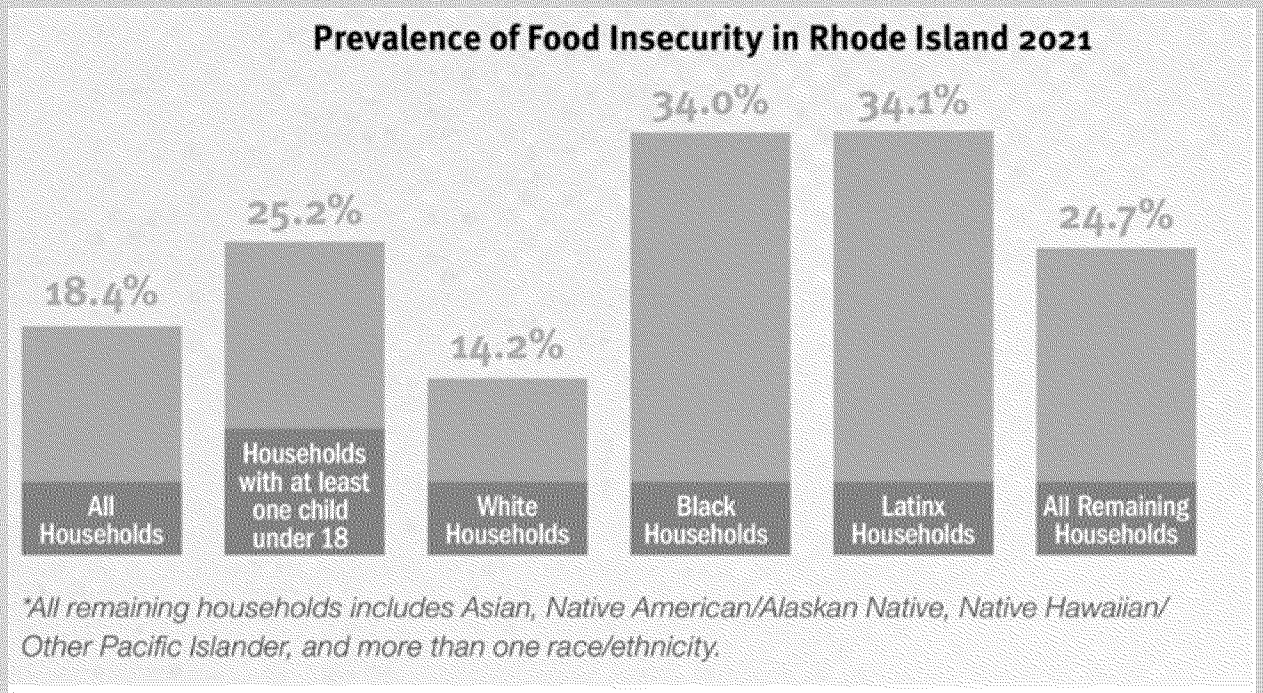
Health-related themes that presented themselves in the community assessment process…

From the Social Determinants of Health Data Collected in 02905

Food Insecurity

Highlights from the Surveys & Lit. Review

- SDOH screening: 107 participants out of 169 identified that in the last 12 months, they ate less than they should because there was not enough money for food. – 63 % reported food insecurity as a main concern for themselves.
  - Food Security, Availability, & Cost: Included responses such as those that noted needing more grocery stores, food prices increasing, food security, and food quality and expense
- Providence County has the highest estimated rate of food insecurity in Rhode Island with (12.6% in 2017)



Food Access Research Atlas - Low-income census tracts where a significant number or share of residents is more than ½ mile or a mile (urban) or 10 miles (rural) from the nearest full service supermarket.

From the Economic Research Service - US Department of Agriculture's Food Access Research Atlas

Resources in Providence..

RI Food Council

Financial Insecurity

Highlights from Surveys

- Financial Stressors & Poverty: Included responses such as those that noted income loss, poverty, prices increasing, and struggling financially.
- Financial concerns included responses such as those that noted the need for utility assistance, bill assistance, internet access, better job opportunities, unemployment support, and the need for a livable income.
- 21.43 % reported that challenges in finding childcare make it difficult to work or study.

https://www.cityhealthdashboard.com/ri/providence/metric-detail?metric=12&metricYearRange=2019%2C+5+Year+Estimate&dataRange=city

Housing Insecurity

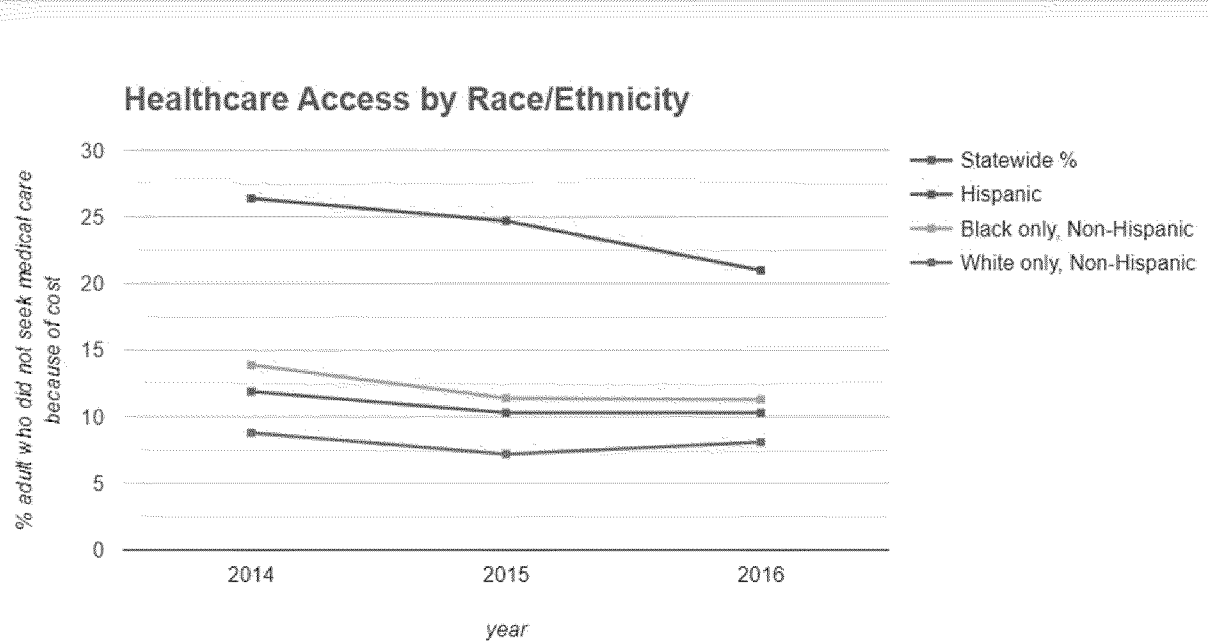
Highlights

- Out of 166 individuals asked during the SDOH Screening about Housing Security, approximately 42 individuals identified to be worried that they might not have stable housing. (25% reported be concerned about the security of their housing (Are you worried in the next 2 months you may not have stable housing?)

Supporting Facts…

- In 02905, 53.2% of households spent more than 30% of their monthly income on rent (compared to 41.3% providence wide) – 02905 spec.
- Central Falls and Providence had the highest total housing cost burden, and in Central Falls more than half (55.92%) of all households were cost burdened.

Waiting Lists for Affordable housing in Providence – PHA



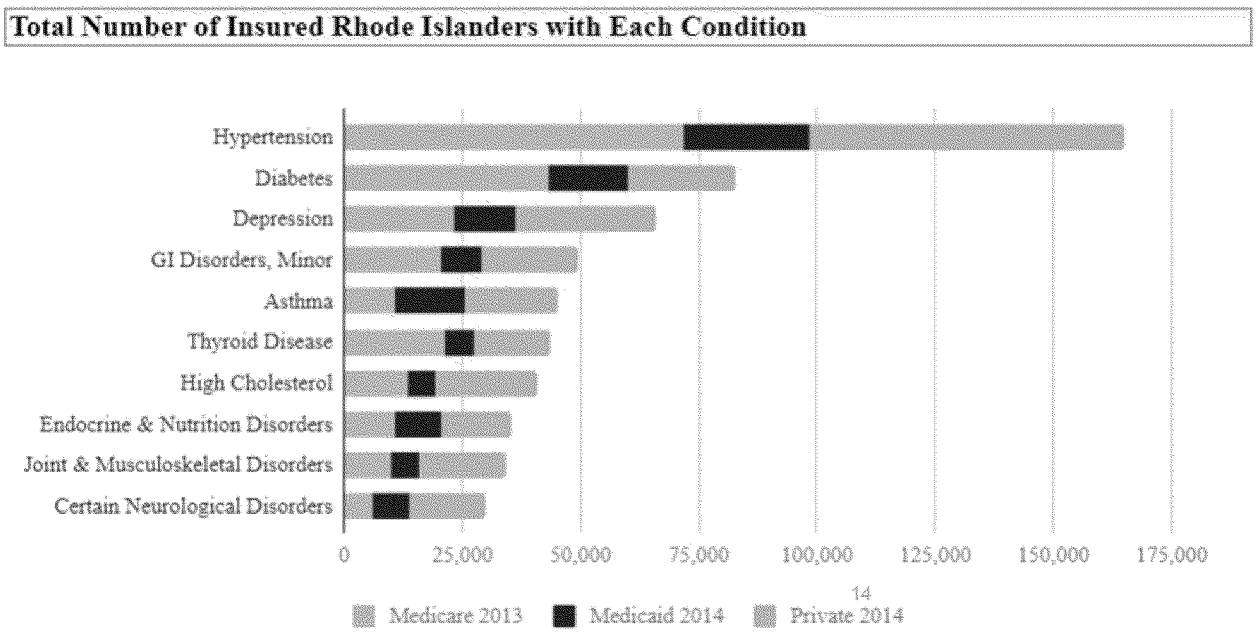
Studio (elderly/disabled only): 2-3 years
One Bedroom (elderly/disabled only): 3-4 years
Two Bedroom (elderly/disabled only): 5-7 years
One to Seven bedroom (family developments): 8-10 years depending on bedroom size
**Waiting periods are subject to change*

Health Care (access & needs)

Highlights from Survey

- The overwhelming theme identified as the most pressing need resulting from the pandemic was Behavioral Health and Social-Emotional Needs.
  - Social Emotional Themes: Depression & Loneliness, Social Isolation & Lack of Activities, Anxiety & Fear were the major themes
  - Health Care Access: 20.% of respondents reported needing help reading information about their medical conditions.
- 45% of residents in Rhode Island in 2019 had Limited English Proficiency. – migrationpolicy.org
- In 2015 There are 278 people to every 1 full-time primary care provider in South Providence – RIDOH 2015 health inventory

Percentage of adults who did NOT seek medical care because of cost



Health Care (Access & Needs)

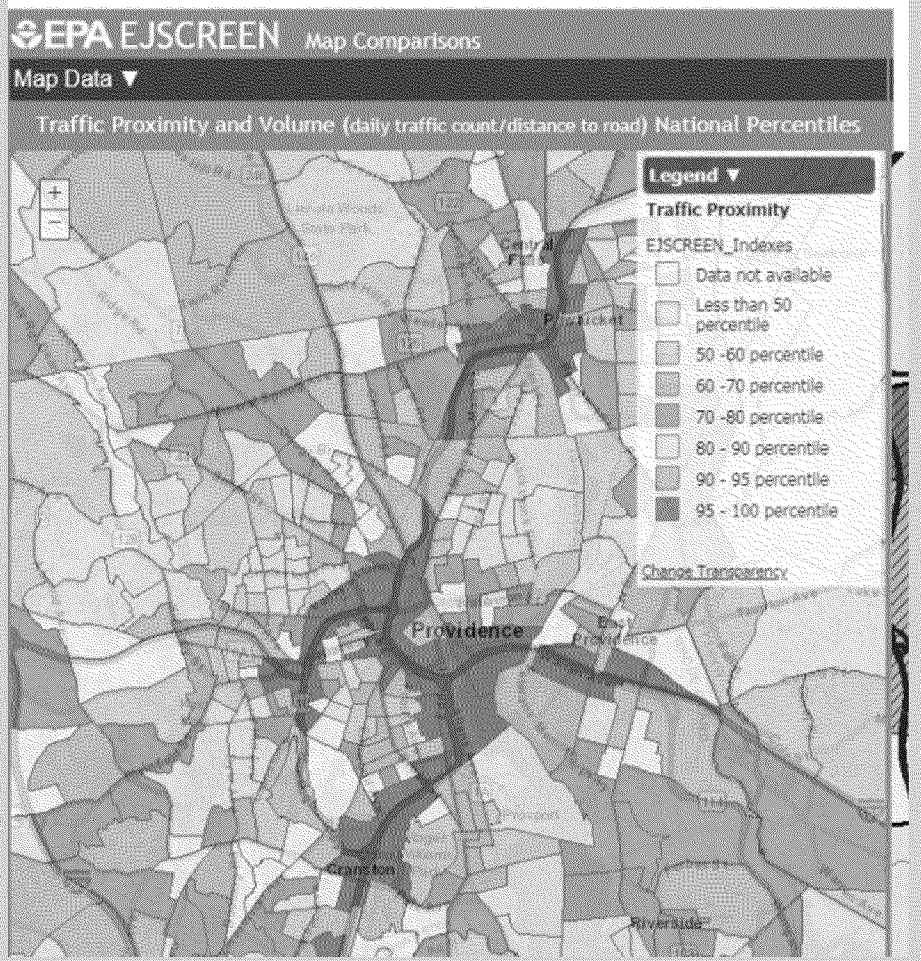
Chronic conditions are medical conditions that last more than a year, require ongoing medical attention and/or limit daily life activities. The number of people living with two or more chronic conditions has increased over the last two decades. Adults with multiple chronic conditions represent one of the highest-need segments of the population, since each of their chronic conditions is likely to require extra medication and monitoring.

High blood pressure and diabetes are both the two most common and two most expensive chronic conditions in Rhode Island.

Depression is the third most common chronic condition among insured residents, with approximately 66,000 Rhode Islanders diagnosed (about 7% of the population), and many others undiagnosed.

Top 10 Most Common Chronic Conditions in Rhode Island

ED_016126_00000140-00014



Street Safety, Community Violence, Noise Level & upkeep in 02905

Highlights from Survey

- Surveys mentioned - Speeding and reckless driving, accidents and traffic, noisy cars, and trash in the streets.
- Safety & Violence: Included responses such as those that noted dangerous people, shootings, alcohol and substance use, and domestic violence
- Building Upkeep & Landlords: Included responses such as those that noted things looking old, not taken care of, fixing things that look bad, and old buildings looking unappealing

Exposure to Traffic (compared to rest of US)

Street Safety, Community Violence, Noise Level & upkeep in 02905

Broad Street as a Sample of impact of high density in 02905..

- 30,000 people live within 1/3 mile of Broad Street (less than a 10 minute walk) and 25% of households do not have a car, which is higher than the statewide average.
- Between 2009 and 2017, Broad Street had the most crashes out of any corridor in Providence, with **104** people walking or biking involved in a car crash between 2009 and 2017. 11 of those crashes resulted in a fatal or serious injury to someone walking or riding a bike.
- According to Census data, 40% of Broad Street community residents today commute via walking, biking, carpooling, or taking the bus.

From Providence Streets Coalition

Environmental Health in 02905

- About a dozen polluters are routinely listed in the Environmental Protection Agency's Toxics Release Inventory for the city's 02905 zip code. This section of Providence contains a greater number of polluting facilities than any other zip code in Providence County.
- Operations along the Allens Avenue waterfront include a hot-mix asphalt plant that emits compounds linked to child development disorders and to cancer, and an oil terminal that emits similar pollutants and other toxins linked to neurological and respiratory disorders.The area is also home to chemical-processing plants. At one facility operated by a packager and distributor of specialty chemicals, some 3 million pounds of chemicals, such as chlorine, ammonium, and formaldehyde, are stored.

- Pawtucket, Central Falls, and Providence have the lowest percentage of tree canopy cover, each with less than 18% of landmass with tree canopy cover

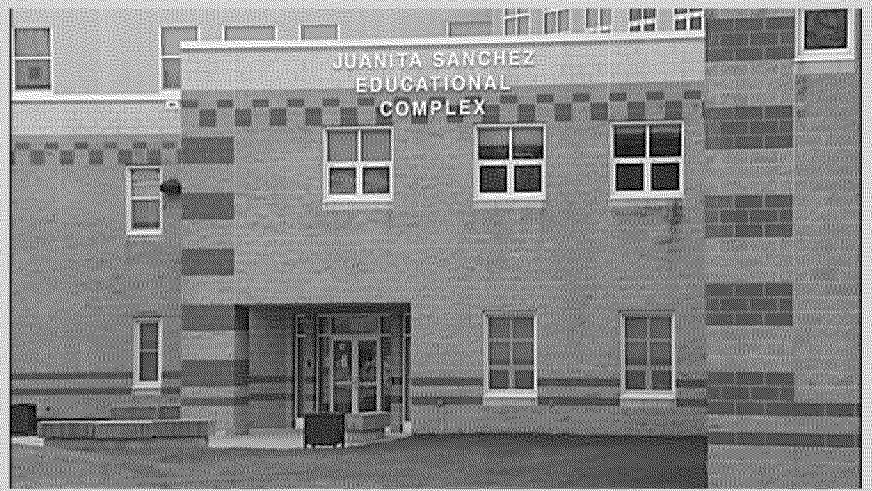
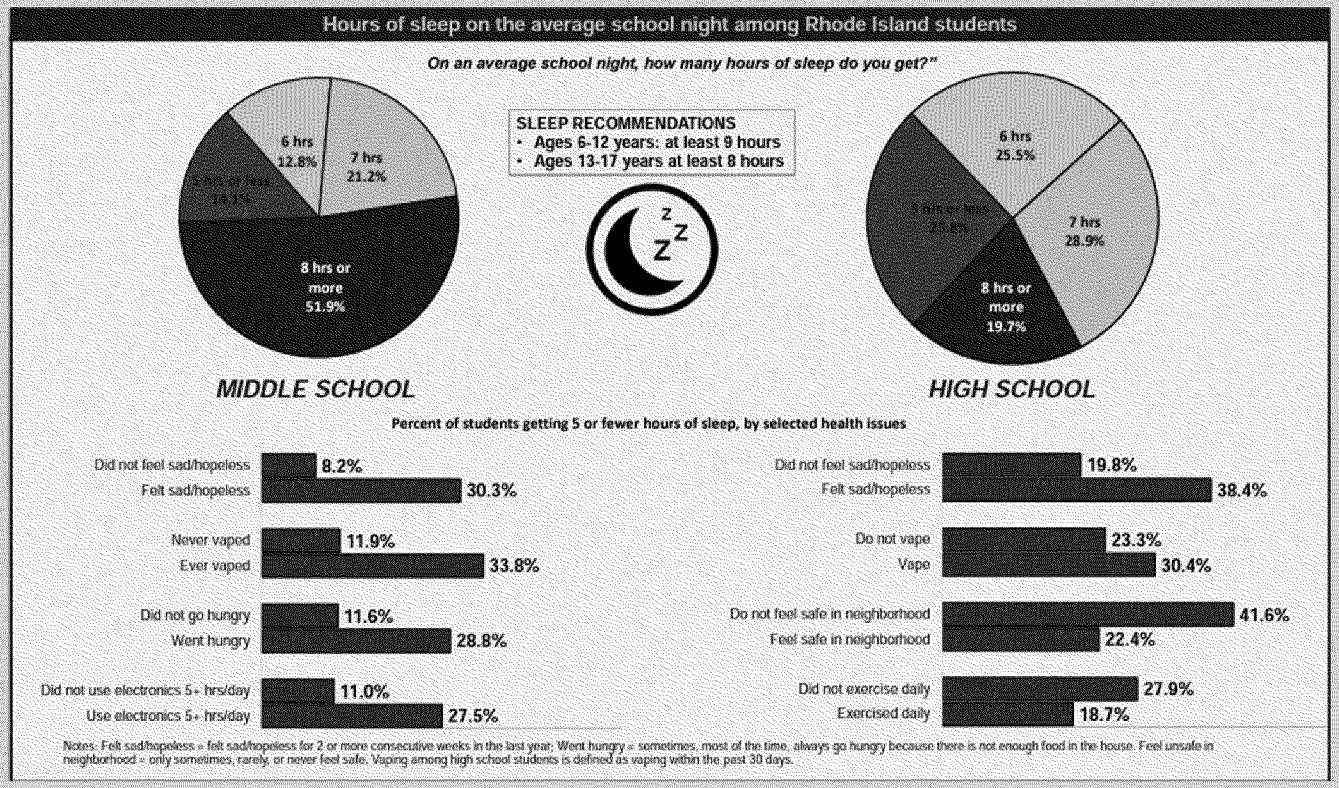
Asthma Hotspot Prevalence in Core Cities



Youth Health

Themes from Literature Review

- Theme from survey “Making Things Better for the Kids”: Included responses such as those that noted lack of things for children to do, schools needing more resources, and updating playgrounds.



Supporting Facts…

- **42%** of **Providence's public school students** were chronically absent, (Cityhealth dashboard) (Missing more than 15 days in 2019)
- 35.1% of children in 02905 live in households earning the federal poverty level. Kids Count
- In State Fiscal Year (SFY) 2021, 29% (31,394) of children under age 19 enrolled in Medicaid/RIte Care had a mental health diagnosis. Of those children with a mental health diagnosis, 18% were ages five and under, 43% were ages six to 12, and 39% were ages 13 to 18. In addition, 42% were females and 58% were males.19 – KIDS COUNT-RHODE ISLAND
- 13.6% of children in Providence are overweight and 22.4% are obese – Kids count

- The graduation rate among economically disadvantaged students in Rhode Island was 76%, compared to 93.4% among students who were not economically disadvantaged.
- Almost half of (49%) high school students have used an e-cigarette and three in ten (30.1%) high school students currently use e-cigarettes.

Next Steps & Reflections

Immediate Reflections

Notes:

How many health priorities do we want?

Notes:

How should we share this information with the public?

Notes:

ED_016126_00000140-00023

Special Considerations:

This application warrants special consideration as Providence Community Libraries is located in Providence, Rhode Island. Providence is located in an area vulnerable to climate change, has a large low income community, has a large ethnic minority community, and the largest expenditure in this application would improve community resiliency. One of the community partners in this grant who has written a letter of support is the City of Providence Emergency Management Agency & Office of Homeland Security. South Providence Library and Mount Pleasant Library are hubs for information distribution, testing and vaccination, and we are open to all 200,000 members of the city. The new HVAC unit will be installed in South Providence, which is an area that serves a predominately Hispanic population. However, all Providence Community Libraries serve the city and its residents.

Under other components of this grant, will work towards addressing health issues through the South Providence Health Equity Zone (SPHEZ). The SPHEZ has conducted a community assessment to analyze the health needs of the South Providence community. As an in-kind donation, the SPHEZ will utilize Health Impact Assessments Guidance to update its existing data.

EJCPS Blank Logic Model

Resources/ Inputs	**Activities**	**Outputs**	**Audience**	**Short-term Outcomes** (6-12 months)	**Intermediate Outcomes** (12-24 months)	**Long-term Outcomes** (2+ years)
• Staff Time • In-kind contributions • South Providence HEZ • Providence Emergency Management Agency (PEMA) • Groundwork Rhode Island	• Replace current HVAC at South Providence with Heat pumps • Charging station installation • Host air quality workshops • Host environmental workshops • Collaborate with HEZ to promote health needs of the community • Work with PEMA to keep library open during emergencies • Host gardening and food/health workshops with Groundwork RI	• Reduced energy usage at South Providence Library • Charging station availability • Host (8) quarterly HEZ workshops on improving health in South Providence • Host an average of (8) workshops on health, nutrition or gardening • Reach 100 people through community programming • Creation of bilingual promotional literature • Have air quality sensors available for checkout at libraries across Providence • Create bilingual tutorial videos for understanding air quality readings • Free seeds for gardeners	• English speaking teens 13-18 in Providence, RI • Spanish speaking teens 13-18 in Providence, RI • English speaking adults 18+ in Providence, RI • Spanish speaking adults 18+ in Providence, RI • Providence Community Libraries Staff	• Increase awareness of indoor air quality • Create more environmental health programming • Increase community stakeholders in HEZ • Improve energy efficiency at South Providence • Increased food/health workshops across Providence • Increase total people reached through programming • Serve as an emergency heating and cooling center	• Increase amount of staff who use electric vehicles • Analyze data from air quality sensors to create more targeted bilingual videos • Maintain food/ environmental/health programming • Further increase people reached through programming • Serve as an emergency heating and cooling center	• Increase average amount of viewers for videos created for this program • Transition staff vehicles to electric vehicles • Serve as an emergency heating and cooling center

Dear Applicant:

We're pleased to tell you we determined you're exempt from federal income tax under Internal Revenue Code (IRC) Section 501(c)(3). Donors can deduct contributions they make to you under IRC Section 170. You're also qualified to receive tax deductible bequests, devises, transfers or gifts under Section 2055, 2106, or 2522. This letter could help resolve questions on your exempt status. Please keep it for your records.

Organizations exempt under IRC Section 501(c)(3) are further classified as either public charities or private foundations. We determined you're a public charity under the IRC Section listed at the top of this letter.

If we indicated at the top of this letter that you're required to file Form 990/990-EZ/990-N, our records show you're required to file an annual information return (Form 990 or Form 990-EZ) or electronic notice (Form 990-N, the e-Postcard). If you don't file a required return or notice for three consecutive years, your exempt status will be automatically revoked.

If we indicated at the top of this letter that an addendum applies, the enclosed addendum is an integral part of this letter.

For important information about your responsibilities as a tax-exempt organization, go to www.irs.gov/charities. Enter "4221-PC" in the search bar to view Publication 4221-PC, Compliance Guide for 501(c)(3) Public Charities, which describes your recordkeeping, reporting, and disclosure requirements.

Project Title: **Lawrence CLEAR Initiative**: Community Learning about Environmental Action and Resources

Project Location: Lawrence, Massachusetts

Applicant Information
Suenos Basketball
2 Linden Street
Lawrence, MA 01841
Joselyn Marte - Grants Manager

Brief Description of Applicant Organization –

Suenos Basketball is a well-established, Latino and Lawrencian-led nonprofit providing hundreds of youth year-round basketball, education, leadership, wraparound and family support services. Suenos was founded in 2015 with the goal to use sports to build the character, exposure and skills of Lawrence youth and their families. Our primary mission is to contribute to the holistic development of the youth of Lawrence through the sport of basketball.

Are you applying for the Small CBO Set Aside Track for $150,000 projects? YES

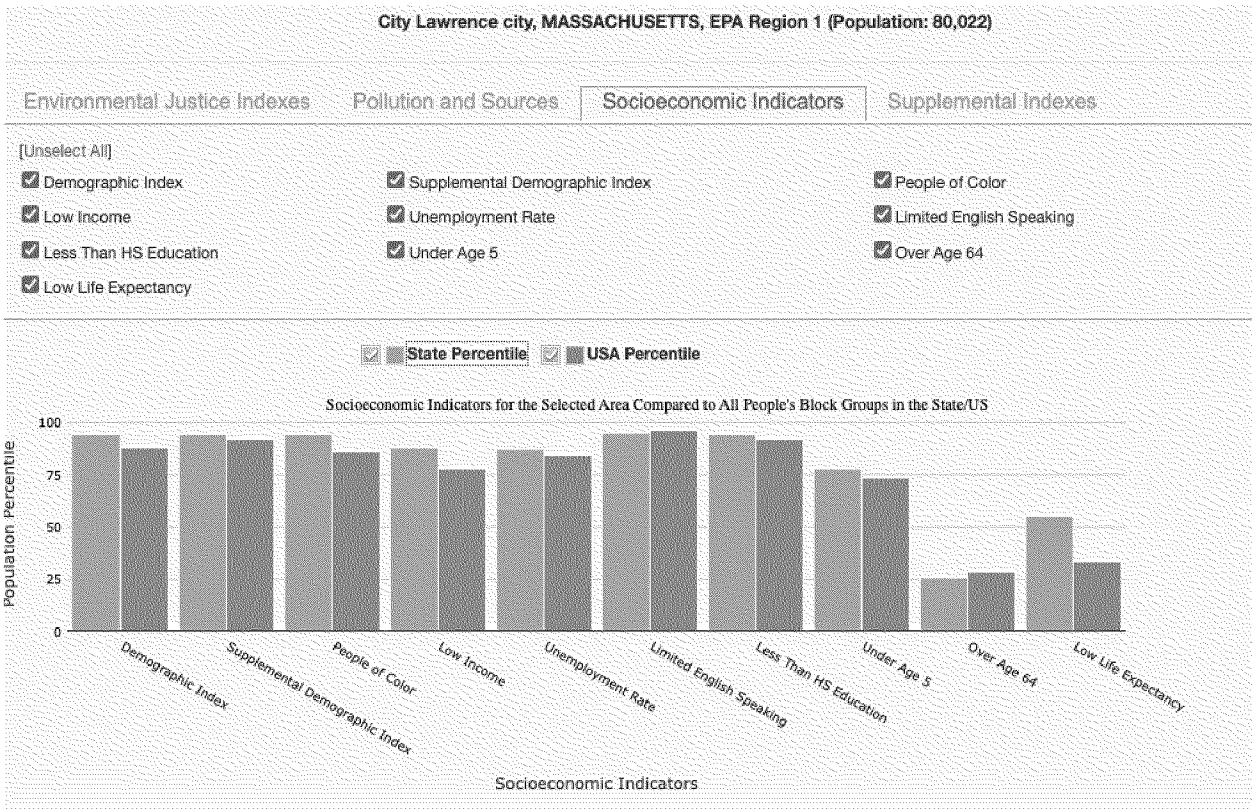
Project Abstract:
The Lawrence CLEAR Initiative is designed to challenge traditional notions of environmental justice (EJ) by leaning on the definitions of EJ set forth by activists on the ground in Warren County North, Carolina. While this movement is largely framed as a "traditional" EJ movement, issues such as race, poverty, and power were actively addressed by the NAACP, local universities, students, and the faith-based community in a multi-racial coalition led by Black and Indigenous people (McGurty, 2007). Though distinctly different, residents of Lawrence, (like those still residing in Warren County), continue to face issues that intersect race and power, additionally complicated by language inaccessibility and ongoing challenges to one's belonging given the high number of individuals in our community born on Caribbean soil.

The CLEAR initiative is a multipronged, community driven movement intended to promote community connection and engagement which will include training, education and learning circles, mentoring, and public policy advocacy. The program will be specifically targeted toward lower income residents whose primary language spoken at home is Spanish. The population will include youth at risk for being involved in the criminal legal system, youth impacted by the criminal legal system, formerly incarcerated individuals, those at risk for incarceration, those dealing with recovery, English language learners, and residents impacted by environmental justice issues. While historically, efforts have been made to engage the community, the work is often done by others who are non-resident, non Spanish speaking individuals who lack connection and cultural competence to provide impactful, sustainable programs for our

residents. The CLEAR initiative partnership involves many resident-based organizations that are aware of the needs of the community through lived experience and non-profit expertise. Suenos Basketball is the lead applicant. Learning activities will include workshops on understanding EPA's EJ screening tool. This program works with at-risk youth by providing sports, academic, and emotional support for students and parents.The Dream Network is a secondary applicant organization that focuses on racial, social, educational, environmental and economic justice through the lens of those impacted by the criminal legal system. Time for Change Ministry is also a secondary applicant and a faith-based organization that works with individuals in recovery from substance use disorders and their families.

The environmental issues to be addressed through public education and policy, co-learning and training programs include the health impacts and risks from polluting facilities and sources disproportionately located in Lawrence and exposing a predominantly immigrant of color community to hazardous waste facilities and other polluting sources, including Risk Management Plan (RMP) facilities, superfund facilities, underground storage tanks, diesel particulate matter sources, lead exposure, and traffic proximity. This circle and mentoring training program will address the harm caused by these sources and will lead to activism and policy change in the grassroots Lawrence community.

Project Type: Training, mentoring, and public education

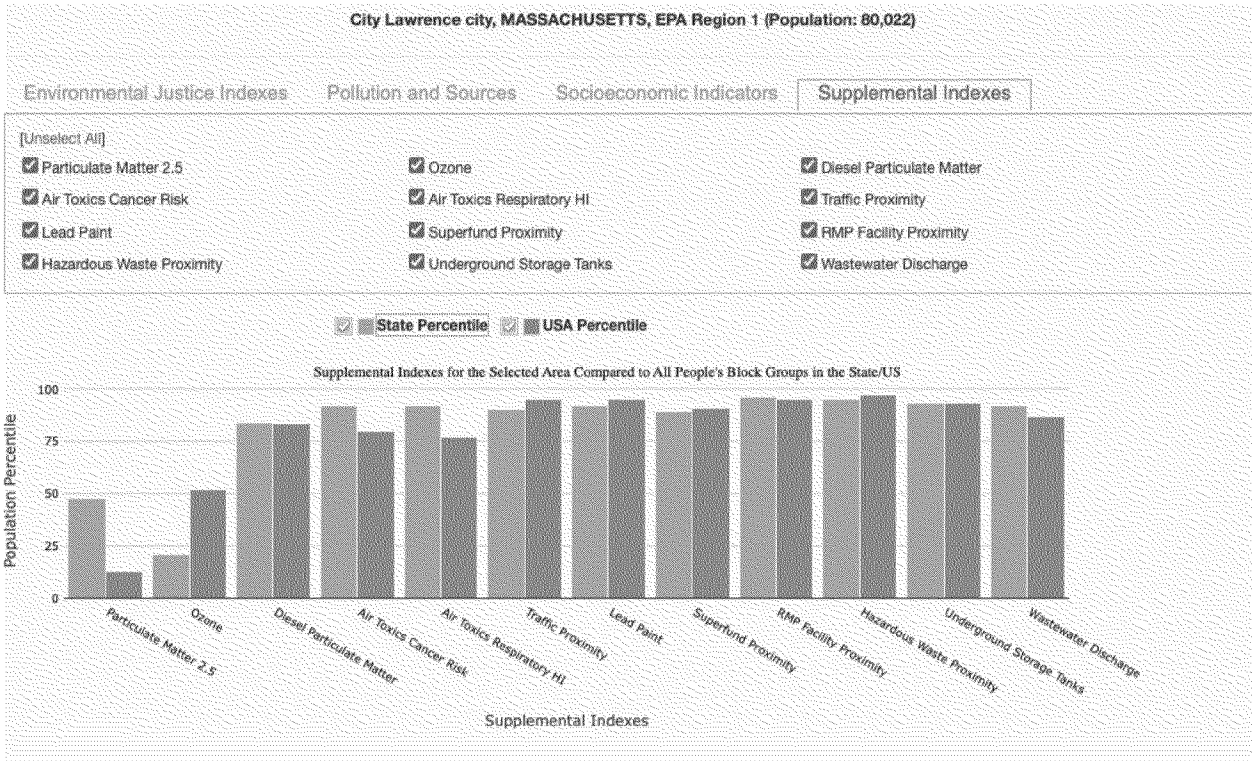


List of Project Partners: Suenos Basketball, Time for Change Ministry, The Dream Network

Describes and characterizes the underserved community directly impacted by disproportionate environmental and/or public health harms and risks and how the community is impacted by those harms and risks (i.e., Who is the community comprised of and what are the disproportionate environmental and/or public health issues they experience?):

Located approximately 25 miles northwest of Boston, Massachusetts, Lawrence sits on the banks of the Merrimack River. Nicknamed the "Immigrant City", Lawrence has been celebrated for being symbolic of the "great melting pot", due in part to its reputation of welcoming eastern European immigrants to the city at the turn of the 20th century. Known for its grit and determination, Lawrence is perhaps best known for its role in sparking the modern-day labor movement through the Bread and Roses strike of 1912 (Ross, 2003). For decades after the strike, Lawrence was celebrated for its multi-ethnic attributes.The city's industrial roots were powered by a network of canals moving water through raceways under the mills and powering the mill machines through a system of belts and wheels. After WWII, however, the city's textile manufacturing power was in decline and experienced widespread disinvestment. Many of the Eastern European immigrants left the city for the surrounding suburbs and a short time later, a small group of Cuban and Dominican Immigrants as well as Puerto Rican residents relocated to the city seeking work in the few remaining mill buildings. By the 1970's significant groups of Caribbean Latinos began moving up from New York, changing the literal face of the beloved "Immigrant City". Lawrence, has had 273 Brownfield sites over the years. This city, renowned for

textile and paper production, saw factories shut down, resulting in jobs leaving town with the demise of the New England manufacturing industry.



Today, Lawrence is one of the most economically distressed areas in Massachusetts. Its reported per capita income was $23,316 in 2020, significantly lower than the state average of $48,617 and notably lower than the national average of $59,763. Approximately 20 percent of Lawrence residents live in poverty. As of 2020, 30 percent of Lawrence residents over 25 years old did not finish high school, making the average Lawrence education level dramatically lower than both the state average (8.8 percent) and the national average (14 percent). Lawrence also has a unique demographic. In Lawrence, the predominant language spoken at home in 2020 was Spanish, among 68% of the population. English-speaking homes in Lawrence make up a mere 25% of all households, a dramatic deviation from the state of Massachusetts, which reported 76% percent English-speaking households, and 80% nationally.

Describes the local environmental/public health issue(s) that the project seeks to address:

The CLEAR project will facilitate educational co-learning environments to explore and provide instruction on the EPA's EJScreening tool. Additionally, we will raise awareness on the health impacts and risks of heightened traffic proximity including asthma onset and aggravation, cardiovascular disease, reduced lung function, impaired lung development in children, preterm and low birth weight infants, childhood leukemia and premature death. Using community

learning circles, mentoring, and ambassadors, the CLEAR initiative seeks to promote awareness, and connection to current environmental stressors and socio environmental factors that exist within the city.

Describes the local environmental/public health results the project seeks to achieve and how will the underserved community benefit from those results

Historically, marginalized and Spanish-speaking Lawrence residents have not had access to environmental, collaborative, co-learning opportunities, nor have they had access to power. More importantly, resident and impacted person-led EJ initiatives and leadership opportunities are limited. The CLEAR initiative seeks to change this dynamic by increasing awareness of justice issues and providing opportunities to promote policy change to improve the quality of life for all residents. Residents will benefit from having increased knowledge, autonomy, and decision making in order to change policy and address inequities that exist in EJ advocacy. Ultimately increased awareness of EJ issues will lead to increases in equity in the social environment. Data will be collected to document increases in group and community efficacy in the city.

If you believe that any of the "other factors" for special consideration in Section V apply include additional details about how your application addresses those factors in this section

The applicant must include relevant information such as demographics, geographic location, and community history. We strongly encourage the use of EPA's EJSCREEN tool (or other EJ-based mapping tool) to help you characterize and describe your target community. Data from other sources (e.g., studies, census, and third-party reports) should also be included to give a more complete picture of the impacted communities and populations. Instructions and resources on how to use EJSCREEN are included at the hyperlink above

Suenos Basketball has worked with over thousands of kids since its inception, many who come from public housing facilities located in the parts of the city that are facing cumulative impacts and the health consequences of multiple polluting facilities sited within the same mile radius. In addition to engaging the kids through the basketball program, Suenos works with their families and communities raising the kids to build consciousness and awareness of their environmental injustices and health inequities. Most of the kids that we work with are immigrants of color from the Caribbean, Latin America and African continent. For example, within the last year, we co-hosted with the Dream Network and Time for Change ministries, a large community meeting focusing on the environmental injustices faced by Suenos kids and their families in the education environment, with Lawrence gas explosion crisis, and small business environment. Suenos kids played a major role in helping facilitate the conversation, translate and provide feedback on behalf of the youth worried about these environmental injustices.

Suenos Basketball invited a Massachusetts Assistant Attorney General for Environmental Justice to facilitate a discussion and reflection about the realities our youth are facing as it relates to environmental injustices in Lawrence. This was a very lively conversation and it involved the kids deconstructing what environmental justice means in their world. Suenos is committed to continuing and expanding these discussions into a series as part of a larger environmental justice leadership program.

The Dream Network (TDN) is a racial, social, environmental and educational justice organization that does our work through the lens of those impacted by the criminal legal system. In the past year, we have reached over 200 residents to facilitate justice conversations, including having a conversation with the AGO's office of Massachusetts to discuss EJ matters. TDN also helps facilitate a statewide, grassroots EJ coalition that aims to connect the impact of disinvestment and racism on marginalized communities across the Commonwealth. One of the impacts of gateway city disinvestment and "so called" urban renewal is the uncontrolled sprawl and simultaneous absence of living wage jobs. Often, our residents don't even get the opportunity to participate in the high-paying union jobs that are created as a part of this "renewal" building boom. To address this issue, TDN partnered with the local workforce development agency, MassHires, to create a job training and safety program for formerly incarcerated individuals. One hundred percent of the participants completed the program, and 92% remained free from incarceration 2-years post program training. We believe EJ is racial, economic, and social justice.

Time for Change Ministry creates a safe space that provides support to individuals and families who have been affected by addictions. Since 2013, Time for Change has helped individuals and their families navigate the complexities of recovery. Time for Change believes that with commitment, love and loving support, addiction can be stabilized and peace restored to individuals, families and communities.

Time for Change support groups are encouraged to be safe places where participants learn the importance of kindness and open-mindedness. Support group participants share their knowledge and experiences to help others survive and succeed. For some, this fellowship is the first time they have experienced unconditional acceptance.

(1) History of your organization's involvement with the underserved community, including duration of involvement and circumstances that led to your organization's involvement;

Suenos Basketball has been serving the youth of Lawrence since 2015. We have developed programming that includes basketball skills and drills, tournaments, both locally and internationally, AAU competition, after school programs, academic support, trauma-informed leadership training, environmental justice project-based learning, assistance with private school and postsecondary institutions application process, summer youth work, internships, family wraparound services and support. We have collaborated with many local organizations in an effort to support our youth that include the Lawrence Police Department, Lawrence Fire Department, Mass Hire Merrimack Valley Career Center, Northern Essex Community College, Ateneo Dominicano, Instituto Cultural de Puerto Rico, The Dream Network, Time for Change Ministry, and the City of Lawrence. As an organization whose main mission is to prepare our youth to take on leadership responsibility within their community, we felt compelled to engage in environmental justice conversation as a way to get them involved and opportunities to lead in the changes their community needs. The specific circumstances that led to more environmental programming were conversations that we held with our youth about the challenges they have observed and experienced in their environment including mental health challenges, community violence, school safety, gas explosion. This feedback from our youth led Suenos to seek an intersectional and cumulative way to assess all of these injustices in different environments under an inclusive lens, an environmental justice lens.

(2) How your organization has worked with the underserved community's residents and/or organizations to address local environmental and public health issues currently or in the past and what are some of the results of that work. Include information about recent efforts in the community, if any, that have sought to address the disproportionate issues you described in 1.b.

One of the ways our organization has worked with the residents of Lawrence to address local environmental and public health issues in the past was when we led a community outcry over a

park design project that was not properly remediated. The youth of the city that played soccer were directly impacted by this matter because they found themselves unable to use a brand new soccer field because it was not completed appropriately and safely. The remediation wasn't completed properly and a lot of toxic materials surfaced when they tried to play in the finished field.

Suenos Basketball, the Dream Network and Time for Change Ministry collaborated to provide a community justice talk on environmental justice in the educational environment, small business environment and the gas/energy environment in Lawrence. Over 150 residents participated and engaged in lively discussion about their concerns while employees of the Massachusetts Attorney General office listened. As a result, our three organizations are committed to continuing to increase awareness about how to remain safe in these environments and the rights the residents have to seek healthier circumstances.

(3) Community Driven Participation - How the underserved community's residents and/or organizations were involved in developing the current project plan and are part of the decision-making process.

By reaching out to youth currently engaged in each respective organization, the CLEAR initiative will engage in an education and mentoring program. Central to this process will be community learning circles that create opportunities for residents to share lived experience knowledge and scientific/academic knowledge in a co-learning space. Because the CLEAR initiative involves organizations that are resident-led, all of the decisions will be made by impacted people. We will use consensus building as a way to make decisions.

Demonstrates that one or more of the seven elements of the EJCPS Model will be undertaken for this project, and the reasonableness and achievability of the associated timeline and milestones for each element selected. This includes how the identified elements will be and/or are being applied to execute the project. If applicable, applicants will also evaluate the extent to which any of the EJCPS Model element(s) associated with this project may have already begun or been accomplished.

The application will be evaluated on the extent and quality to which it:

(1) Supports EPA Strategic Plan Goal 2 (Take Decisive Action to Advance Environmental Justice and Civil Rights), Objective 2.2 (Promote Environmental Justice and Civil Rights at the Federal, Tribal, State, and Local Levels) (2 points)

Refer to link Below: https://www.epa.gov/planandbudget/strategicplan

Under this criterion, applications will be evaluated on the following subcriteria:

a. The quality and extent to which the applicant provides a clear and concise description of how the proposed project promotes collaborations with partners from multiple stakeholder groups, such as industry, business, academia, government, etc., to develop and implement solutions that will address environmental and/or public health issues at the local level. Under this criterion, EPA will evaluate:

The Dream Network has traditionally partnered with other community-based organizations, including Suenos Basketball and Time for Change Ministries, to focus on the connection between the Carceral system, anti-blackness and anti-racist practices. This collaboration has helped build a network of activists focused on systemic change in the community and region. They also worked with Lawyers Clearinghouse and Mass Bail fund to provide information and resources to the community. The Dream Network's vision is to empower our community (and one another) by promoting systems and policies that encourage diversity, inclusive and reflective leadership, and a sense of belonging by addressing economic mobility challenges. We envision a community where individuals and groups have tangible access to economic, political, and occupational opportunities. The Dream Network will contribute to the project by helping facilitate the coalition building efforts, bringing their training expertise in designing environmental workforce programs that have led to many of their participants obtaining and sustaining quality employment, and their expertise in developing and implementing mentoring activities.

Time for Change Ministry is celebrating its 10th anniversary serving individuals and families impacted by substance misuse. They have collaborated closely with both Suenos Basketball and The Dream Network to provide educational workshops to the youths of Suenos and the Dream Network participants. They are also invested in the area of environmental justice and have been an integral partner in the creation of a statewide environmental justice BIPOC warriors coalition that is focusing on challenging systems of oppression and pushing for greater accountability of funding dollars. This coalition has been meeting monthly for the past year and has created a list of environmental justice issues they want their work to focus on.

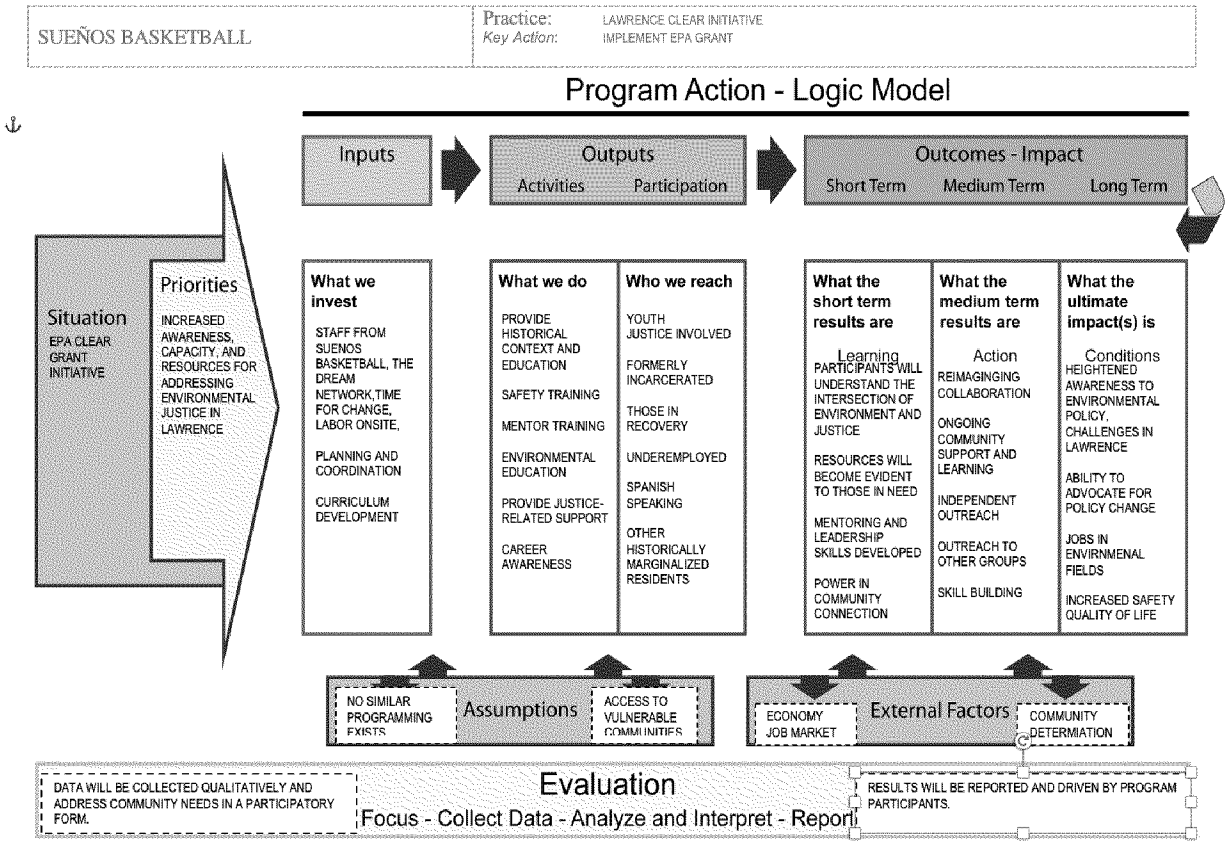
Each partner in this proposal, Suenos Basketball, The Dream Network and Time For Change Ministries, has a vested interest in ensuring that not only this partnership remains viable and vibrant and actually gets the work done. Each of these organizations are led by BIPOC women that reside in the city of Lawrence and have first-hand experience in how the environmental injustice

Letters of commitment:

Clearly identified steps that the applicant will take that will reasonably progress towards achieving the program objectives and a clear description of the detailed project activities

or components and the anticipated products/results associated with each activity as described in Section IV.

A clearly articulated and realistic milestone schedule, including timeframes and major milestones to complete significant project activities within the period of performance. NOTE - The period of performance is 3 years with no extensions



Date	Activity	Outcome
July 1, 2023-December 31, 2023	Coalition meetings Planning for 1st community event Youth and adult recruitment Training Knowledge base building	By December 31st, 2023 Partners will have identified 30 participants that will participate in training, education, and begin engaging in the mentoring process
January 1, 2024-June 30, 2023	Active Teaching Mentoring Circles Established Environmental Training Opportunities Experiential Learning	Youth engagement increases Increased vocational opportunities
July 1, 2024-June 30, 2025	Movement Building EJ advocacy Community Sharing and promotion Sustainability planning	Policy change Increased engagement in the political process EJ advocacy for increased social-environmental knowledge

Reasonable and allowable costs for each component/activity. Applicants must itemize costs into the following budget categories: personnel, fringe benefits, contractual costs, travel, equipment, supplies, other direct costs,indirect costs, and total costs. Describe itemized costs in sufficient detail for EPA to determine the reasonableness and allowability of costs for each work plan component/activity

Applicants will be evaluated on the quality of the expected project outputs and outcomes identified in the application for their project. The expected outputs and outcomes should be effective in achieving the Program Objectives listed in Section I, including developing strategies for addressing local environmental and public health

issues, educating and empowering the community about those issues, and developing approaches to building consensus and setting community priorities in the underserved community.

While not required, including a logic model as part of your application package is strongly encouraged. Applicants may use the logic model template provided in the appendices or use/create one of their own liking. If you choose not to provide a logic model, you must still detail the outputs and outcomes of your project and address how you will measure performance.

Applicants should attach their completed logic model as an "Other Attachment" to their applications so the sheet will not count against the 18-page work plan limit

By receiving this grant, we plan to fill gaps in EJ outreach strategies that exist for marginalized people in Lawrence. This project is unique because the outreach is being co-designed by residents and organizations led by people of color. Sustainability is more attainable by virtue of the fact that we live in the community that is being funded. Our plan is to address youth interest in EJ by co-creating tools that can be used to address injustice. By addressing the

youth, we will also be addressing families. We promote language justice by facilitating processes for residents to address the aforementioned EJ issues in the language they are most comfortable with. Mentoring and learning circles will promote connectedness to one another, but also to natural resources that exist in the city. And education will help us focus on worker safety because regionally, low income and minority workers are disproportionately exposed to environmental toxins while working in environmental careers. Finally, we want to address the environmental impact of the mill transformation renewal boom that provides this false choice between low income rental properties in revitalized mills or nothing. We believe that there are other sustainable housing models that exist that promote home ownership and cooperative land trusts created for the greater good, rather than real estate development and profit. In the final year of the grant, we want to shift our work to policy and advocacy work as we partner with residents to address our communities' multitude of EJ challenges.

Organizational experience related to the proposed project, and the organization's infrastructure as it relates to their ability to successfully implement the proposed project

The applicant will be evaluated on the ability to clearly demonstrate that the selected PM and other staff associated with the project are qualified to successfully perform the project. This will be determined through evaluating the following:

> **(1) How the PM and staff are qualified to undertake the project successfully; (2 points)**
> **(2) Illustrating the PM's ties/historical connection to the community and the applicant organization. Please include detailed descriptions of any activities that the PM has worked on with the community and/or applicant organization. (2 points)**

Under this criterion, applicants will be evaluated based on their approach, procedures, and controls for ensuring that awarded grant funds will be expended in a timely and efficient manner. For all EJCPS projects, but especially for projects greater than $200,000, if the applicant is concerned that they may not have the adequate financial controls, systems, and procedures in place to comply with EPA's Pre-

Leigh W. Shemitz, Ph.D.
leighshemitz@SoundWaters.org

Education:
Yale University, Ph.D. air quality and environmental health, 2004 ***Yale School of Forestry and Environmental Studies,*** M.F.S. in forest ecology, 1992 ***Harvard University,*** A.B., History and Literature, magna cum laude, 1986

Professional History
President. **SoundWaters.** Current. SoundWaters, a regional not-for-profit organization, works to protect Long Island Sound through education, outreach and research. SoundWaters addresses these issues aboard our three-masted schooner and at our two coastal environmental education centers and or more than 100 small boats. As President, responsibilities include setting strategic direction, developing programs, creating partnerships, overseeing operations, and managing the SoundWaters staff and budget.

Research Affiliate. **Yale School of Forestry & Environmental Studies.** Current. Participate in ongoing research, outreach and teaching on a range of environmental topics including forest health, air quality, coastal ecology and urban land management.

Lecturer. **Yale School of Forestry & Environmental Studies.** 2004 Researched the connection between the environment and human well-being. Research focuses on how neighborhood restoration projects can impact the health of local residents. Collaborating with local residents in the research design and implementation.

Environmental Health Researcher. **Yale School of Forestry & Environmental Studies.** 1999-2004 Investigated small-scale variability in particulate pollution in urban areas. Pursued independent research in air pollution and human health. Investigated both biophysical and social variables: sampled particulate levels across city and surveyed city residents about their perspectives on air quality. Compared these different data sets to develop full picture of urban air quality, its variability across a city and its impact upon human health.

Director. **Yale Urban Resources Initiative**. 1992-1999 Coordinated all programming, fundraising, fiscal and administrative activities of this university-community partnership. Projects include natural resources training of community, restoring over 50 community open space projects, creating school-based environmental awareness program. Oversaw combined annual budget of over $300,000 and supervised 15 person staff. In addition, led a local not-for-profit, New Haven/ Urban Resources Initiative and sustained active partnerships with federal, state, local and city agencies and community groups.

Community Forester. **Peace Corps.** Mali, West Africa. 1987-1989 Secured funds for, organized, and implemented tree nurseries in four villages. Created series of trainings for farmers in five villages in grafting techniques. Designed and implemented nutrition and health workshops for four hundred women in five villages.

Awards:
Heinz Scholar in Environmental Research, 2001; Hixon Fellow, 2000; Hutchison Fellow, 2000; Switzer Fellow, 1991-1992; FLAS Fellowship, 1991-1992
Not-for-Profit Board Membership: Currently serves on the Stamford Environmental Protection Board and the Board of Directors of the Bartlett Arboretum and Gardens.

EXPERIENCE

SoundWaters, Inc., Stamford, Connecticut 2014-Present

Vice President, Programs, 2/2019 – Present

Leads all facets of education and marine activities including maintaining focus on mission. Provides leadership and direction in overseeing the performance of professional education team members, captains and crew across diverse functional areas including scientific research, curriculum development and retention.

Director of Marine Operations, 1/2016-1/2019

- Senior manager responsible for overseeing marine operations of nonprofit organization focusing on environmental education.
- Supervise captain and crew of 80' schooner that pro-vides education programs to over 6,000 individuals each year.
- Lead summer sailing program that focuses on character development.
- Develop new SoundWaters harbor facility in West Branch of Stamford Harbor.

Interim Education Director, 8/2015-12/2015

- Manager of land-based education programs while Vice President of Education was on maternity leave.

Relief Captain, 5/2014-present

- Serve as captain of 80' Schooner *SoundWaters.*

Project U.S.E., Newark, New Jersey 2006-2016

Executive Director

- Senior manager of nonprofit education organization based in New Jersey.

Programs include outdoor/adventure education for thousands of children and adults, school-based training in urban classrooms, a residential centers for 74 incarcerated teens and adventure course construction.

- Serving under the Board of Trustees, responsible for all aspects of the $2 million company, including strategic direction, personnel, marketing, budgets and finance.

Wildcat Mountain Wilderness Center Program Director 1991 – 1997

- Overall manager of an outdoor experiential education program.
- Trained and supervised, directly and indirectly, a staff of up to 25 individuals.

Schooner Imagine…!, Annapolis, Maryland 1997-2006

Vice President, Licensed Master

- Conceived of, designed, commissioned, co-owned and operated 76' gaff-rigged Schooner Imagine…!.
- Developed and lead educational programs, multi-day corporate leadership training programs, private cruises, and charters.

Living Classrooms Foundation, Baltimore, Maryland 1997-2005

EDUCATION:

Hartwick College, Oneonta, NY, Bachelor of Arts in Psychology

TRAINING:

United States Coast Guard Master, Auxiliary Sail, Inland to 100 Gross Tons.

The National Outdoor Leadership School - Thirty-five day mountaineering skills course in the Wind River Mountains, Wyoming, 1985.

AWARDS: The National Outdoor Leadership School, 2002 Alumni Service Award.

"Community, Solidarity, Mobilization, Equity, Change"

April 12, 2023

To whom it may concern:

The Dream Network's mission is to promote equity within community by addressing social, racial, economic, environmental and educational justice. We do much of this work thought the lens of those impacted by the carceral system. We are seeking funds for general operating costs to help hire a part time staff member and to grow our community advocacy work. Through our work, we determined that one of the barriers to such improvements were the number of people, primarily Latino males, who are incarcerated, caught up in the school to prison pipeline, or find themselves jobless as a result of a combination of lack of education, training, available work, and criminal records. This year, while switching to a primarily virtual format, we were able to partner with other organization to focus on the connection between the Carceral system, anti-blackness, and anti-racist practices. This resulted in helping to build a network of activists focused on systemic change in the community and region. We also worked with Lawyers Clearinghouse and Mass Bail fund to provide information and resources to the community.

Our vision is to empower our community (and one another) by promoting systems and policies that encourage diversity, inclusive and reflective leadership, and a sense of belonging by addressing economic mobility challenges. We envision a community where individuals and groups have tangible access to economic, political, and occupational opportunities.

We are excited to partner with Suenos Basketball on the EPA grant to address Environmental Justice in our community.

Sincerely,

Stacy Seward, MS

Table 1. Environmental Results Logic Model

Resources	Activities	Outputs	Audience	Short-Term Outcomes	Intermediate Outcomes	Long-Term Outcomes
• Staff time from participating organizations • In-kind contributions from participating and partnering organizations • Existing and new additional grants for staff time • State resources for wraparound services, in the form of grants and reimbursements for members of EJ communities completing clean energy training programs • Existing relationships with partner organizations and constituencies in EJ communities, as well as labor organizations with training programs • Facilities for hosting clean energy career fairs and retreats bringing partners together	• Plan, recruit for, and run clean energy career fairs to connect EJ community job seekers to registered pre-apprenticeship & apprenticeship programs in clean energy trades • Support career fair attendees' placement into and graduation from training programs by connecting them to existing state resources and wraparound services • Convene workforce development partners and experts to assess gaps, barriers, strengths, and opportunities in the overall ecosystem of clean energy career opportunities for people in EJ communities • Liaise with EJ community leaders and residents, labor organizations, and developers of clean energy projects to ensure meaningful participation of EJ communities in project siting/planning, and maximize project benefits for EJ communities, including employment opportunities	• 12 clean energy career fairs hosted by partner organizations in EJ communities • 600 total members of EJ communities attend career fairs • 300 career fair attendees placed into registered pre-apprenticeship or apprenticeship programs with participating labor organizations and connected with supporting services • Convene 20 individuals from labor orgs, EJ communities, and allied NGOs to assess workforce landscape and develop action plan • 12 developers of clean energy projects, totaling 75 MW, identified and approached • 6 community benefit and/or workforce agreements negotiated & projects permitted	• Residents of EJ communities seeking clean energy careers • EJ community leaders • Labor organizations with registered pre-apprenticeship and apprenticeship training programs • Workforce development and allied NGOs • Clean energy project developers • Local and state decision makers with power to permit clean energy projects and/ or provide state resources and wraparound services	• Increase in number of EJ community residents with knowledge about clean energy career pathways • Increase in EJ community members' placement in registered pre-apprenticeship and apprenticeship programs and use of supportive services needed to succeed in their programs • Increase in labor organizations' and project developers' awareness of the workforce potential that exists in EJ communities	• Decrease in barriers for EJ community members succeeding in pre-apprenticeship and apprenticeship • Increase in # of EJ community members graduating from pre-apprenticeship and apprenticeship programs & gaining employment on clean energy projects • Deeper understanding of and action plan to address the gaps, barriers, strengths, and opportunities in the overall ecosystem of clean energy career opportunities for people in EJ communities • Increase in sustained commitment from labor organizations and project developers to training and hiring members of EJ communities • Increase in trust between EJ communities, project developers, and labor organizations	• Increase in # of clean energy projects in EJ communities permitted and completed, & associated decrease in GHG emissions, air pollution, and pressure on natural resources • Increase in # of EJ community members in high-quality, well-paid clean energy careers • Increase in % of all Maine construction workers from EJ communities • Increase in overall capacity of Maine's clean energy workforce • Increase in overall EJ community wealth and associated decrease in economic inequality

Table 1. Environmental Results Logic Model

Existing relationships among organizations partnering on this grant, together with existing and new staff capacity and existing facilities, provide the the foundation for planning, recruiting attendees for, and running regular clean energy career fairs. Career fairs serve as the building block for placing EJ community members into registered pre-apprenticeship and apprenticeship training programs, and connecting these individuals to the requisite wraparound services they need to be successful in their training and graduate into careers as journey-persons in their respective trade. The convening of partners and other experts to assess the gaps, barriers, strengths, and opportunities in the overall ecosystem of clean energy career opportunities for people in EJ communities will allow for adjustments to be made mid-grant, and position project partners to begin pursuing long-term funding to sustain the work.

It is not enough to simply recruit, train and graduate members of EJ communities into clean energy careers without a commensurate effort to secure a steady stream of clean energy work for them. Identifying clean energy projects early in their planning phase, approaching developers, and negotiating community benefit and/or community workforce agreements is a reliable way to secure high-quality work opportunities for EJ community members while simultaneously ensuring that clean energy projects attain sufficient community support to actually get built. We believe that repeated runs through these dual and interrelated trajectories can provide a helpful model and industry norm for how clean energy development proceeds in Maine. Ultimately, if we are successful in all of this, the longterm outcome we expect to see are a significantly larger clean energy workforce (commensurate with the need) that demographically reflects the communities in which it works, more clean energy projects completed on time due to greater community trust and buy-in, and a greater increase in EJ community wealth and decrease in economic inequality. This will result in an overall decrease in GHG emissions, associated air pollution, and pressure on natural resources such as but not limited to fossil fuels.

i. Itemized Budget Sheet

	Description	Total
Personnel	· Year one – ○ MPRC Campaigns Director/ EJPCS Project Manager @ $80,000 annual salary x 25% of time on project = 20,000 ○ MPRC Special Projects Coordinator @ $75,000 annual salary x 25% of time on project = 18,750 ○ MPRC organizer @ $50,000 annual salary x 25% of time on project = 12,500 ○ Canvasser shifts at 24/year at $20/hr = $3,840 ○ MPRC Digital Director at $69,000 @5% of time = $3450 · Year two – ○ MPRC Campaigns Director/ EJPCS Project Manager @ $82,800 annual salary x 25% of time on project = 20,700 ○ MPRC Special Projects Coordinator @ $77,625 annual salary x 25% of time on project = 19,406 ○ MPRC organizer @ $51,750 annual salary x 25% of time on project = 12,937 ○ Canvasser shifts at 24/year at $20.70/hr = $3,571 ○ MPRC Digital Director at $71,415 @5% of time = $3571 · Year three – ○ MPRC Campaigns Director/ EJPCS Project Manager @ $85698 annual salary x 25% of time on project = 21,425 ○ MPRC Special Projects Coordinator @ $80,342 annual salary x 25% of time on project = 20,086 ○ MPRC organizer @ $53,561 annual salary x 25% of time on project = 13,390 ○ Canvasser shifts at 24/year at $21.42/hr = $3,696 ○ MPRC Digital Director at $77,915 @5% of time = $4114	181,839
Fringe Benefits	· 15% of salary (includes medical, dental, retirement) for MPRC Campaigns Director, MPRC Special Projects Coordinator, MPRC Organizer, Canvassers, and MPRC digital director	27,276
Travel	· Local mileage for Project Manager for partner meetings: 1240 miles/yr @ $0.655/mi = $2473 · Local mileage for MPRC Organizer for community outreach efforts: 1120 miles/year @ $0.655/mi = $2,200 · Canvass travel 6 trips at 50 miles =$196	4,869
Supplies	· Miscellaneous supplies for staff on this project = $1,000/year	3,000

Contractual	· **Accountant $25/hr @ 1/2 hr/week @ 156 weeks**	**1,950**
Indirect Costs	· **IDC Rate Agreement of 10% of Salaries and Wages**	**18,184**
Other	· **Sub-award to MCI $5000/yr for $15,000** · **Sub-award to Gateway $5000/yr for $15,000** · **Sub-award to Community Organizing Alliance $5000/yr for $15,000** · **sub-award to Maine AFL-CIO $12,000/yr for $36,000** · **sub-award to Maine Labor Climate Council $60,500/year for $181,500**	**262,500**
Total Project Cost		**499,618**

Budget Narrative:

Maine People's Resource Center will have the MPRC Campaigns Director serve as the EJPCS Project Manager, and she will spend 25% of her time on this project over the three years of the grant, ensuring all partners including MPRC fulfill their commitments. She will be joined by MPRC Special Projects Coordinator, who will provide the administrative support to the project, and an MPRC organizer, who cultivates essential relationships with partners -- both will spend 25% of their time in service of the project. The remaining salary budget will go to 5% of the MPRC digital director who will do digital outreach for the project and to support the time of the door to door canvass team to do 24 shifts a year of outreach for the project. All of these employees receive a benefits package equivalent to 15% of their salary covering fringe benefits like medical, dental, retirement.

The Maine Labor Climate Council will receive the most significant subaward and will use it to leverage other resources and hire a new full-time field organizer who would spend 100% of their time on this project. The new organizer will work as a convener and liaison between EJ communities, labor organizations and their pre-apprenticeship and apprenticeship programs, and developers of clean energy and energy efficiency projects sited in environmental justice communities. We are also making a significant subgrant to the Maine AFL-CIO whose Apprenticeship and Workforce Equity Director is essential the project. He coordinates the Union Construction Academy pre-apprenticeship program, which provides hands-on training and multiple certifications that will help BIPOC individuals, women, formerly incarcerated individuals, people from rural areas, and other underrepresented groups as they enter union jobs in building and construction. The AFL-CIO also manages the logistics of the clean energy career fairs and pays for food and other costs associated with the fairs. We are also working closely with BIPOC-led groups and are budgeting to subgrant $5000 per year each to Maine Community Integration, Gateway Community Services of Maine, and Community Organizing Alliance for them to leverage their relationships with EJ communities in service of the project.

Another significant cost will be mileage reimbursement. MPRC reimburses staff mileage at the rate of .655 for travel to meetings and to do outreach to leaders and coalition partners. We budget that

supplies associated with this project across all the staff participating and the meetings and events will run $1000 per year and cover things like paper, flip charts, markers, and pens for outreach. We contract with The Bottom Line for accounting and expect that they will spend an hour a week supporting this work over the three years. IDC Rate Agreement of 10% of Salaries and Wages has been budgeted for indirect costs.

1.0 Program Objectives

a. Project Summary Page

Project Title: Increasing Community Resilience Across Municipalities, Schools, and Public Land through Education, Planning and Technical Assistance

Project Location: Western Maine Foothills area: Norway, South Paris, Buckfield, Harrison, Hebron, Greenwood, Otisfield, Oxford, West Paris, Sumner, and Waterford

Applicant Information: Scott Vlaun, CEBE, 447 Main St, Norway, ME 04268

Description of Applicant Organization: We are a small 501c3 non-profit with six staff (4.5FTE) working for climate justice in rural western Maine from our Center located on Main Street in the town of Norway. Our mission is "to engage the community in addressing the climate emergency. We organize, educate, take direct action, and implement practical, ecological solutions for a just transition to a thriving, regenerative economy."

Are you applying for the Small CBO Set Aside Track for $150,000 projects? Yes.

Project Abstract: To build community climate resilience and protect the environment, this two-year project will build on partnerships with local towns, our local school district (MSAD17), and local agencies to support communities with education and planning. We will support the town of Norway to implement projects and develop a climate action plan linked to their comprehensive plan. Materials developed in Norway will be shared to help other local municipalities prepare for future projects and funding opportunities. We will also accelerate our work with MSAD17 to transition to renewable energy and make building efficiency upgrades, providing education for the school board, staff, and community members to increase support. Energy costs for our district in FY 2021/22 were $1.3 million, and in FY 2022/23, are projected to exceed $2.3 million. Locally sourced renewable energy will help stabilize costs and increase resilience. Much of our rural area is forested, with private landowners, the school district, land trust, municipalities, and the Oxford County Soil and Water Conservation District (OCSWCD) owning significant parcels. In partnership with OCSWCD, we will offer educational workshops around forest management practices that can generate income while sequestering carbon and protecting watersheds. Partnering with the Western Foothills Land Trust (WFLT) will provide connections to private and land trust-owned properties suitable for demonstration projects. WFLT staff will share model management practices and connect interested landowners to the project. WFLT will support us in identifying landscapes particularly suitable for climate adaptation and potential demonstration projects.

Project Types: Public education, training for municipal officials and community members, demonstration projects, planning support.

Special Considerations: Climate Change/Disaster Resiliency, Rural Areas

Environmental Issues: Climate, forest management, watershed protection, local resilience

List of Project Partners: Oxford Hills School District (Maine School Administrative District 17), Town of Norway, Maine (municipality), Oxford County Soil and Water Conservation District (quasi-governmental organization), Western Foothills Land Trust (nonprofit)

Will you need to develop a QAPP for your project? No

ED_016126_00000224-00001

b. Environmental and Public Health information of the Underserved Community:
Our proposed work will take place in what is now referred to as the Western Maine Foothills region, land formerly stewarded by the Abenaki of the Wabanaki Confederacy. This region includes the Norway-South Paris service center – home to Oxford Hills Comprehensive High School and district office, the Oxford County seat, and Stephens Memorial Hospital – as well as the surrounding villages of Buckfield, Harrison, Hebron, Greenwood, Otisfield, Oxford, West Paris, Sumner, and Waterford. These towns represent the combined service area of the Oxford Hills School District (MSAD 17) and the Western Foothills Land Trust (WFLT). Apart from the urban cluster of Norway-South Paris, this region is considered rural by the Census Bureau's 2020 designation.[1] These eleven towns cover 418 square miles, much of which is forested, with an average population of 2,463 and a density of roughly 65 people per square mile.[2] When excluding Norway and South Paris – which have populations of 5,077 and 5,179, respectively – the nine rurally designated towns have an average population of 1,871.

The Western Foothills are rich with natural resources but have faced degradation. Extensive forests, mineral-rich hills, and ample lakes and rivers supported a long history of extractive and polluting industries. A once-thriving manufacturing industry in Norway has left eight brownfields in and around our small downtown.[3] Paper mills just north of this region fueled heavy logging and sawmills in the Western Foothills, while polluting our watersheds. Over time, manufacturing dwindled. Today, the region's economy is primarily driven by the service industry and has become increasingly reliant on tourism. Several nearby ski mountains draw visitors in the winter, while the lakes and foothills attract tourists and seasonal residents in the summer.

Despite increased tourism, our region remains economically disadvantaged. On average, 30.5 percent of community members live below the poverty line.[4] In Norway, the poverty rate is 39 percent. Median household income is also lower than that of the United States and Maine. Due to lower household incomes and a high reliance on non-grid connected heating fuel with high price volatility like heating oil, residents and municipalities have a much higher energy burden than most Americans. Every community in the Western Foothills, apart from Hebron and Buckfield, has an energy cost burden above the 90th percentile.[5] These vulnerable characteristics are reflected in a number of indexes that validate what we experience as we live and work here. For example, the town of Norway is labeled as disadvantaged according to the Climate and

Economic Justice Screening Tool and the Department of Energy's Energy Justice Dashboard.[6] Across the region, four out of eight tracts are labeled disadvantaged by these tools.

On top of economic stressors, the Western Foothills are a climate change hotspot. Western Maine is one of the fastest-warming regions in the United States; the average annual temperature in interior Maine has increased 3.3°F since 1895, with winters warming faster than any other season.[7] These changes threaten the region's growing winter tourism industry and individuals who rely on those jobs in an employer-sparse area. Our warming climate also threatens the region's lakes. Average lake surface temperatures have increased by nearly 5.5°F since 1984. Higher lake temperatures, in combination with surface runoff from increasingly frequent extreme precipitation events, threaten the health of our lakes with the risk of harmful cyanobacteria and hypoxic conditions.

These impacts jeopardize the health of our economy and the people who call the Western Foothills home. But our local governments are also under-resourced and woefully unprepared to plan for and address these climate impacts. Our small municipalities have no in-house planning staff nor access to professionals with resilience planning experience at the regional level.[8] Many towns are run by volunteer boards and a few staff who are overwhelmed with daily operations.

In our work as a service provider for Maine's Community Resilience Partnership, it has become evident that assistance from dedicated volunteers and community-based organizations (CBOs) like CEBE is a prerequisite for any climate resilience planning or projects in our region. We often find that we have initiated the first discussions of climate change in these towns, who upon completion of the Partnership's resilience self-assessments realize they have taken no actions to address their vulnerability. Once we review the climate data for the region and discuss potential impacts, each of the ten towns we have worked with through the Partnership have expressed that they are concerned about climate-vulnerable residents, particularly elderly and low-income community members who live in remote parts of town. This region is one of the most aged in Maine, the state with the oldest population in the U.S.

Through the Partnership, our region's towns have started to generate community resilience priorities which often include outreach and support for vulnerable populations, transitioning away from antiquated fossil fuel-based heating systems, and watershed protection. However, without ongoing support from CEBE and other CBOs, these priorities cannot be addressed.

As we help our towns and school district address their resilience priorities, results such as the development of climate action plans and vulnerability assessments will center the needs of our vulnerable populations and help communities develop local strategies to reduce climate vulnerability for everyone in the community. Energy efficiency improvements in our schools and municipal buildings will reduce the percentage of energy burden costs that are passed to taxpayers. On a watershed scale, increased or stabilized health due to an increase in regenerative forest and riparian management practices will help maintain our region's healthy drinking water and equitable access to lakes for recreation, even in the face of climate impacts. At the municipal level, protecting our watershed will help us grow a resilient tax base bolstered by lakefront property values and outdoor recreation. The future health of our communities relies on action now, action that CEBE hopes to support through this funding opportunity.

c. Organization's Historical Connection to Underserved Community: The Center for an Ecology-Based Economy was founded in Norway, Maine in 2013, when climate change was politically divisive and rarely considered in our rural communities. Our early work focused on demonstration projects, including a photovoltaic tracker to power public electric vehicle charging stations at Oxford Hills Comprehensive High School, as well as a free community bike share, a publicly-accessible food forest, and community weatherization events. Through a decade of work, we developed a dedicated following in rural western Maine, and have built trust with local and state government, businesses, and agencies. To date, much of the environmental and climate movement (and community-based organizations) in Maine remain centered around coastal, wealthier communities. We find our expertise increasingly sought out by western Maine municipalities wanting to pursue solar power, businesses wanting to install electric vehicle charging, individuals wanting to learn how to better manage their land, and educators wanting support in teaching their students about climate change.

We address environmental issues in our community in six focus areas: food, energy, shelter, transportation, education, and climate action. Our work in the food arena has included a demonstration food forest at the local community garden, as well as a solar-powered irrigation system. We organized and provided support for our local community food council, including management of the Foothills Food Festival which attracted over a thousand people annually to downtown Norway. We've supported farmers through educational workshops, bulk ordering of agricultural products, and swapping seeds. Our work in the energy realm is currently focused on developing a consumer-owned solar cooperative, as well as supporting community members in transitioning to investor-owned community solar and supporting businesses in transitioning to developer-owned solar on a local municipal landfill. In the shelter area, we run programming to empower women and others to learn basic carpentry skills; we offer a free, ongoing community weatherization project to help homeowners increase energy efficiency; we host an annual window-insert community build to provide affordable, energy-efficient solutions to drafty windows; and we are developing a resident-owned, resident-designed housing cooperative to address the urgent need for affordable housing locally. In the transportation realm, we've installed electric vehicle charging stations at twelve public locations, and are moving forward

with adding or upgrading eight more networked locations. We run a free community bike share program, offer educational programming to support bicycling and e-bikes and are working with state and local officials to develop a safe bicycle-pedestrian corridor from our downtown business district to nearby recreational facilities. We host an annual solar and electric vehicle expo to allow neighbors to share their experiences with clean transportation and renewable energy options. Other educational efforts include film screenings and public workshops on a variety of topics related to the climate crisis and taking action to protect the local environment. We also provide support to K-12 teachers looking to teach sustainability, use outdoor classrooms, and deliver climate change-related curriculum. Our climate action team helps connect community members through book clubs and meetings to inspire individual action.

Over the past year, we have worked with the town of Norway and nine other municipalities as a Service Provider for the Maine Community Resilience Partnership (CRP). Through the Partnership, we worked directly with elected officials and town staff to convene sixteen community engagement meetings to assess current climate readiness and facilitate a decision-making process for town priorities for Community Action Grants. We supported Norway in applying for their first community action grant, and are now providing support in implementation. We have a strong relationship with elected officials as well as the town's newly-formed climate committee. Town residents have made it clear they value this work, yet their elected officials and town manager have had little capacity to pursue it on their own, causing them to miss the second round of Community Action Grants available through the CRP. This project would allow us to continue to provide wrap-around services to build on the momentum and interest Norway has taken in protecting their vulnerable populations and critical infrastructure from increasing climate impacts, while building overall resilience and transitioning to clean renewable energy

At the request of the MSAD17 school board, our staff have been providing pro bono support in conducting preliminary energy assessments of all of the district's buildings and transportation infrastructure and outlining a draft plan to transition the MSAD17 to renewable energy while also implementing energy-saving measures across their buildings and transportation. While these projects will ultimately save the district and taxpayers significant amounts of money, as well as keeping money local through supporting local electricity generation, to garner support for the initial investments will require education for the school board and community members, as well as assistance in navigating forthcoming funding opportunities. The school board and committees will continue to be heavily involved in the decision-making process as we strive to present options that will be wise investments to strengthen the resiliency of the community and prepare school buildings for our climate future.

We've had a several-year long relationship with the Oxford County Soil and Water Conservation District (OCSWCD), providing keynote speakers for their events on topics related to agroforestry and climate-positive forest management practices. Through this project, OCSWCD would support us in providing towns and others with resources to better manage their forests and watersheds for climate resilience and as nature-based climate solutions.

We've partnered with WFLT since our founding, supporting their events and collaborating on projects, including building a greenhouse with youth at their educational facility, and designing a campus for educational and public programming including a center for regenerative agriculture. We have also taught workshops for adults and middle school students at their Robert's Farm campus and co-hosted educational events in our downtown office.

d. EJCPS Model: During this project, we are focusing on the second and third steps of the EJCPS Model. We've completed step one through various efforts, including our previous work with the town of Norway to enroll in the Community Resilience Partnership and identify priority actions for building community resilience and addressing climate change; moving through the early phases of approval from the school board to pursue a transition to renewable energy; and working with OCSWCD to provide assistance to towns looking to use their forests and watersheds as nature-based climate solutions.

In Norway, we've begun community capacity building by supporting the formation of their climate committee. Through training for committee members and members of the selectboard, we'll continue to increase leadership capacity and depth of understanding of the challenges the community faces and the opportunities for cost-effective solutions. This capacity building helps boost regional momentum as surrounding towns gain inspiration from Norway's leadership and seek out support to pursue similar actions in their own towns. The long-term results of this project will be that town residents see their community taking action on climate change and local youth will see their schools adapting to climate change and doing their part to mitigate it.

While MSAD17 has institutional support for continuing to do things the way they've been done, it has become clear that procuring fossil fuels to heat their buildings and paying wildly-fluctuating market rates for electricity is unaffordable and prohibits accurate budgeting. Increasing summer temperatures are driving a need for cooling in buildings that haven't previously needed it, creating an additional energy burden. These escalating costs create a serious financial burden on local municipalities in MSAD17 already burdened by increasing energy costs and climate impacts to infrastructure such as roads and culverts. Through this project, CEBE will help build the MSAD17's capacity to understand alternative energy sources and energy efficient HVAC and DHW systems and the financial pay-offs available. We will help position the school district to be ready to leverage resources by applying for additional grant funding for implementation when it becomes available.

With OCSWCD, we've begun community capacity building by sharing knowledge around food forests and agroforestry practices, and will continue to build the community's knowledge base through ongoing workshops and hands-on opportunities. By inviting town officials, local residents, students, CEBE's own audience, and OCSWCD's and WFLT's regular audience to come together to attend workshops and trainings, we will leverage resources to design climate-resilient forests and watersheds that can help sequester carbon and protect critical habitat and water supplies. Working together, we will reach a much broader segment of the community than if one partner sought to develop this project on their own. We will connect OCSWCD to

individual towns looking for technical assistance and design recommendations specific to their town-owned forests, riparian areas, and other assets.

e. Project Linkages: Ten of the eleven towns in the region defined in the proposal rank either high or medium on Maine's Social Vulnerability Index[9]. This project promotes environmental justice by working to increase the resilience of this economically challenged and underserved rural community that has historically faced large-scale resource extraction and pollution from manufacturing, including heavy logging and leather tanning. Previous (and current) funding opportunities that pit small municipalities and underfunded school districts against well-resourced cities and coastal communities, or are disbursed on a first-come, first-served basis, have disproportionately impacted our rural area, excluding it from fair competition. This project seeks to expand the capacity and knowledge base of Norway and surrounding communities to be more competitive in future grants, while also following through on supporting implementation and maintenance of existing projects.

f. Partner and Collaborate: This project promotes collaboration in increasing our community's resilience through multiple, simultaneous avenues. Our ongoing partnership with the town of Norway will result in model climate change adaptation measures being taken or prepared for at a municipal level. At the same time, our school district will continue to prepare for its transition to renewable energy and the localized grid of the future where power can be generated and consumed locally, free from the constraints of foreign investors or distant superstorms. Community members will learn and have access to community food forests as well as biodiversity enhancing, carbon-sequestering forest management practices to implement on their own properties, on town properties, and potentially on land owned by the school district. The result of this project will be that community members observe climate change being addressed all around them, in different aspects of their lives, in public, educational, solution-oriented ways, through the work of local organizations in partnership.

Town of Norway (municipality): will support their staff and elected officials in attending trainings hosted by CEBE on climate resiliency projects, will provide meeting space and help publicize public meetings to develop a town climate action plan. The town brings the asset of their mailing list and official communications channels, a trusted platform that will reach individuals not reached by other organizations' email lists. Through our work in the Community Resilience Partnership, the town of Norway has become invested in partnering with CEBE to pursue climate resiliency. Elected officials, the town's employees, and climate committee members are invested in continuing to partner with CEBE as they build capacity to pursue climate adaptation work on their own, and they believe it to be critical to the town's financial wellbeing as their tax base relies on clean and thriving lakes and watersheds threatened by warming waters and nutrient runoff. They've also seen the large turnout of community members

[9] Community Resilience Partnership (n.d.). *Social Vulnerability Index for Maine Communities*. Retrieved from https://www.maine.gov/future/sites/maine.gov.future/files/inline-files/SVI%20Communities%20Map%20and%20List_2021-12-01_1.pdf

at other public engagement meetings held by CEBE on climate resilience, and heard from citizens at selectboard meetings that they support this kind of work. This relationship will be sustained by CEBE continuing to follow through on its commitments, and by continuing to share opportunities with Norway where town officials understand the benefits to their community of taking action. We will continue our work with Norway to help them access resources and develop projects to create models to share with other communities as templates. Through this project we will provide a minimum of four presentations to elected officials and committee members on climate resiliency projects and host two public meetings in addition to regular meetings of the newly-formed climate committee to develop a town climate action plan which will be incorporated into comprehensive plan development.

Oxford Hills School District (MSAD 17): MSAD17 will encourage their board of directors and committee members to attend public engagement sessions held by CEBE to share information about the proposed projects and solicit input, and will continue to provide time during existing meetings for school officials to learn more about the options available and associated the costs and benefits. MSAD17 administration will publicize engagement sessions and ground-breaking or other celebratory events to parents, students, and school faculty, reaching an audience broader than CEBE would on our own. The school board will provide a meeting space, their communications platform for sharing information with families and staff, and they will provide funding for implementation of projects developed through this partnership. The school board has a vested interest in continuing to work with CEBE to transition to renewable energy as they understand the financial savings and stability this offers the district in the future, and they've seen their current model become rapidly unsustainable. The school administration is also supportive of addressing climate change, and the Oxford Hills Comprehensive High School has been the host site for our photovoltaic solar tracker powering three public EV chargers for the last six years. We will maintain our relationship with MSAD17 going forward by continuing to support implementation as we are able, sharing our expertise, serving on their Technical School board to help develop workforce training programs in renewable energy and other trades critical to transitioning to a green economy, and by engaging with faculty and youth in the schools to support them in learning about climate change and feeling comfortable talking to their elders about their concerns for the climate and actions they'd like to see their schools take.

Through this project CEBE proposes to conduct at least four public engagement sessions to share information about funding opportunities and proposed projects, cover financial models and solicit input; provide at least 150 hours of continued support for the school board and committees to understand the options available and support them to make informed decisions; and organize a public event like a ground-breaking or other celebration to mark the transition to clean renewable energy and educate the public as possible and appropriate.

Oxford County Soil and Water Conservation District (OCSWCD): OCSWCD, a quasi-governmental organization, will provide trainings, educational resources, and design support to town officials and others interested in managing town-owned forests and their local watersheds for resilience to the effects of climate change. OCSWCD staff will also help educate community

members on forest management practices and watershed management tools to support carbon sequestration. They will provide both introductory workshops on the topic, as well as site-specific recommendations for towns and others interested in developing projects.

The Western Foothills Land Trust (WFLT) is a community-based nonprofit organization that both owns a large amount of land in the area, and has connections to landowners in the area through conservation and trail easements. WFLT has developed educational curriculum and outreach materials for landowners to use nature-based solutions to protect forests and watersheds. WFLT will connect regional landowners to the project, including those who may be interested in developing demonstration projects on their land. WFLT will support us in identifying landscapes particularly suitable for climate adaptation and potential demonstration projects. The WFLT also has an ongoing relationship with the MSAD 17, providing an environmental educational facility for students on a WFLT property. As CEBE shares an office building with WFLT, we have a strong relationship that includes sharing equipment, knowledge, and resources in both directions. Both partners are invested in maintaining and strengthening this relationship.

2.0 Project Activities / Milestone Schedule / Detailed

a. Project Activities: We will post, hire, and train a Project Coordinator to work on the program, under the supervision of the Project Manager. The coordinator will be the primary point of contact for partnering organizations, manage project timelines and budgets with CEBE staff, create educational materials and templates, design and facilitate workshops and events, and generate marketing materials, press releases and social media content related to the program.

For the town of Norway, we will provide support to implement projects, develop a climate action plan, incorporate climate concerns into their comprehensive plan, and build on existing efforts to identify vulnerable populations. We will consult with the town manager and select board to provide on-demand technical support for grant writing and project implementation, the specifics of which may vary as new resilience project opportunities arise. The anticipated result of this technical support is an increase in resilience project implementation in Norway. We will also support development of the town's climate action plan through collaboration with the Norway Climate Action Advisory Committee (NCAAC). To do so, we will attend NCAAC meetings, research other model plans, finalize and present results of infrastructure and social vulnerability assessments that are currently underway, facilitate a robust public engagement process to be co-designed with NCAAC, and provide writing assistance. Anticipated results of the Norway climate action plan and associated vulnerability assessments are an increase in resilience of the town's municipal operations and vulnerable populations, and incorporation of climate concerns into the comprehensive plan, which will act as a roadmap for building resilience across various sectors of town management as the community grows.

Using Norway as a model, we will extend this support to the other ten communities in the defined region. To do so, we will share template documents for addressing climate change through municipal government based on the process used in Norway. These template and

guideline documents will include climate action plans specific to our rural inland towns, vulnerable population assessments, vulnerable infrastructure assessments, and guidelines for developing landfill solar. We will continue strengthening relationships with and between surrounding municipalities to help them leverage these templates for project implementation in their own communities. We will also offer support for the other ten municipalities in forming and maintaining climate committees and identifying and sharing pertinent resources such funding opportunities, contractors, and consultants. Anticipated results are lower barriers for other towns to achieve their climate goals, greater collaboration between towns, and increased climate resilience across the region.

In partnership with the WFLT and OCSWCD, we will conduct trainings and create educational materials for town officials, school board members, and community members on renewable energy, forest management strategies for carbon sequestration, watershed protection, and other topics. We will also work with landowners (including towns, MSAD17, and WFLT properties) to help design projects to increase soil carbon, decrease erosion, conserve biodiversity and diversify potential income streams. Anticipated results include increased deployment of renewable energy systems in the region, healthier forest ecosystems with increased carbon sequestration, and cleaner lakes, ponds, rivers and streams.

We will continue work to prepare energy assessments for school buildings, prepare reports on energy-efficiency and weatherization projects, prepare reports on renewable energy options and provide guidance on renewable energy contracts and projects; assist in pursuing opportunities to electrify vehicle fleets. Anticipated results include a more stable energy budget for MSAD17, reduction in air pollution in the district from fossil fuel burning, and a healthier educational environment for students, teachers and staff.

b. Milestone Schedule: We anticipate this project being completed in a two-year timeframe, from November 1, 2023-November 1, 2025.

November 2023 - January 2024	Job description for Project Coordinator position developed and posted
	Notify partners, stakeholder meeting to share timelines
	Applicants interviewed and PC position is filled
	Schedule first public trainings on land management practices for community members and town officials
	Outreach to towns explaining services available and upcoming training opportunities with OCSWCD and WFLT
	Support Norway Climate Committee in continuing monthly meetings and

	begin to draft town climate action plan
	Continue building an energy transition roadmap for the school district, identify and prepare for available funding opportunities.
February 2024-April 2024	Conduct first trainings with OCSWCD and/or WFLT
	Schedule second round of trainings and public workshops
	Schedule public engagement sessions for Norway residents to gather input for town climate action plan
	Identify weatherization and energy retrofit projects in schools to be completed and present to buildings committee
May 2024-July 2024	Hold public engagement sessions for Norway residents on town climate action plan
	Outreach to other towns to use model documents and practices from Norway to develop their own climate committees, climate action plans, and incorporate climate change planning into their comprehensive plans
	Hire contractors to continue to delve further into energy usage in school buildings and identify further opportunities for energy conservation, conduct energy audits
August 2024-October 2024	Identify sites for renewable energy projects to be located on school properties, and get initial quotes to present to school board, continue to identify and seek funding opportunities.
	Stakeholder meeting to share best practices, evaluate progress, return to visioning where necessary
	Finalize Norway climate action plan; town of Norway adopts the climate action plan
	Attend town selectboard meetings to continue outreach and support climate committees being formed
	Support towns in implementing land and water conservation projects
November 2024-January 2025	Schedule third round of trainings and public workshops for municipal officials, community members, and school board members
	Schedule public engagement sessions for community members and school board members to learn and share input on renewable energy projects to be owned by MSAD17

ED_016126_00000224-00011

	Contractors present final findings to school board to reduce energy consumption in school buildings
	Outreach to additional towns explaining services available and upcoming training opportunities with OCSWCD and WFLT
February 2025-April 2025	Hold third round of trainings for municipal officials, community members, and school board members
	Support mentorship between town officials in Norway and those in other local towns interested in taking similar steps to address climate change as a municipality
	Hold public engagement sessions for community members and school board members to share input on renewable energy projects to be owned by MSAD17
May 2025-July 2025	Support additional towns and landowners in implementing land and water conservation projects
	Support school board with any additional training required to make informed decisions about developing on-site renewable energy projects, and developing purchasing contracts to supplement with off-site renewable energy as needed.
August 2025-October 2025	Hold ribbon-cutting or other public event to mark progress of MSAD17 in address climate change
	Stakeholder meeting to evaluate progress during grant term, set goals for future collaborations, share lessons learned
	Keep template documents publicly available online for towns interested in pursuing climate resiliency planning

c. Itemized Budget Sheet / Budget Narrative: See attachment

3.0 Environmental Results – Outputs, Outcomes, and Performance Measures

a. Environmental Results (Logic Model): See attachment

b. Performance Measurement Plan: Using a shared project management software, CEBE will assign initial tasks to our partners, making a clear division of labor and developing a timeline that shows which tasks depend upon initial tasks being completed. CEBE will convene quarterly meetings with partners to assess progress, troubleshoot challenge areas, and evaluate if strategies are working. CEBE will place benchmark deadlines in each area of the project to help partners stay on track. CEBE will use online registration and sign-in sheets to tabulate the number and type of community members being reached through engagement sessions and public meetings, and whether these are new community members or the same core group of citizens showing up

repeatedly. Regularly-scheduled school board meetings provide a pre-existing timeline for presenting progress on the energy audits and renewable energy work.

Through online analytics, CEBE can track web page visits, email opens, and social media reach to see if events, reports, plans, and opportunities are reaching a broader audience over the course of the project. In our experience, the follow-through with municipalities and landowners is more challenging than the initial engagement. Whether the projects are EV chargers or fruit and nut trees, they require ongoing maintenance to survive. CEBE will schedule regular check-ins with municipalities and landowners over the course of the grant to keep projects at the forefront and ensure success. To prevent the good intentions of landowners and town officials from getting overwhelmed, CEBE will help stakeholders form a habit of checking in, and a community of others engaged in the work to help replenish inspiration and hold accountable as needed.

CEBE, in combination with other stakeholders, will develop a map of projects being undertaken in the region to address climate change, and continue to add data points to other existing mapping efforts from the state and for specific projects, like EV charging. These visual representations will show progress and help community members understand the scale and scope of the project, as well as highlighting any gaps or challenge areas as they occur.

CEBE will continue to use the EJCPS model to manage performance throughout the project, especially evaluating whether the project activities are working as planned to achieve desired outputs and outcomes, and returning to identifying issues and visioning if they are not.

Internally, CEBE has existing protocols in place to support staff in meeting their goals, through regular staff meetings and check-ins where staff can ask for more resources and feedback.

c. Sustainability Plan and Community Vision: CEBE has built relationships with area towns and schools over the past 10 years, through educational events, teacher trainings with public schools, installing a regional EV charging network, and most recently through our work as a Service Provider in Maine's Community Resilience Partnership (CRP). As part of Maine's Climate Action Plan, *Maine Won't Wait*, the CRP helps municipalities access funding to address the climate crisis. We have enrolled, or are in the process of enrolling, ten local municipalities in the Partnership, and are working on adding a new cohort of five more area towns for the next round of funding. One of the essential aspects of our work with municipalities is a community visioning process which helps communities identify priorities for climate action grants across a broad range of interrelated areas. These include: accelerating the transition to electric vehicles and reducing vehicle miles traveled; reducing emissions through clean energy innovation, protecting natural and working lands and waters; modernizing Maine's buildings; and increasing public awareness of climate change impacts and opportunities to take action.

Unfortunately, our work as a Service Provider is funded by the State only to enroll the community and help write their first grant for the program. It doesn't help with project implementation, writing grants for successive rounds of CRP funding, or assuring that these mostly under-served and under-resourced communities have continued access to other available resources to carry forward the vision for community resilience developed in the CRP community

engagement process. This requested grant funding will not only help communities access additional resources in the short term, but it will also help build capacity in each community to continue evolving their vision and carry it forward. This will happen both through developing skillsets of municipal officials and increasing citizen capacity and awareness within the towns. Norway's nascent climate action committee is such an example. As towns have successes (and failures) pertaining to certain projects, that information will be shared across the network of towns to increase collective knowledge and foster success. Through our larger state-wide networks, CEBE also shares our experiences at numerous conferences, convergences, workshops and webinars annually. The increased capacity and activity provided through this project will benefit not only the towns and partners affiliated directly with this project, but the entire climate action ecosystem across Maine.

As we build collective capacity in our towns, we will also be providing technical assistance to our school district to respond to opportunities for decreasing their carbon footprint through transitioning to clean renewable energy, electrifying building infrastructure and vehicle fleets, and weatherizing buildings. In this process, we will build institutional knowledge and increase the ability of MSAD17 staff and board members to continue this decarbonization work in alignment with Maine's climate action goals.

4.0 Programmatic Capability:

a. Organizational Experience: For the past 10 years, the Center for an Ecology-Based Economy, a community-based 501c3 NPO, has been working with area communities, often in collaboration with other regional organizations, on numerous projects and initiatives across the interrelated areas of food, shelter, energy, transport and education. These projects have ranged from installing solar powered electric vehicle charging infrastructure and a community food forest, to hosting hundreds of educational events on a broad range of climate-related topics, from solar power to regenerative agriculture.

Our recent work as a Service Provider for Maine's Community Resilience Partnership, in which we have engaged extensively with ten area municipalities, has given us valuable experience and helped develop and strengthen critical relationships, both within the towns and with a growing network of contractors in the renewable energy, green building and HVAC fields.

Members of our Energy Working Group, along with a contracted expert in the field, have been working with MSAD17 to identify increased efficiency opportunities within our area schools and have begun to develop a long-range plan for transitioning the district to fully decarbonize its operations by 2045, in line with Maine's landmark climate action plan, *Maine Won't Wait.*

Unlike most other climate-focused organizations in Maine, CEBE maintains a storefront office on Main Street in downtown Norway, which is open to the public on a daily basis. This Center can accommodate 30-40 people for public events and meetings, of which we have hosted hundreds. We also have state of the art technology to conduct remote and hybrid meetings in the space to make meetings more accessible.

b. Staff Experience and Qualifications of Project Manager (PM): With two full- and four part-time staff, a ten-member board of stewards, a broadly experienced advisory board, and participation in many statewide environmental and climate networks, CEBE is uniquely positioned in our region to leverage this funding to assist our rural, traditionally-underserved communities to begin their journey to building resilience to the accelerating impacts of the climate crisis on their people, infrastructure, and ecosystems.

Scott Vlaun is the Executive Director of CEBE and will be the PM. He currently manages the CEBE staff in the execution of our role as Service Provider for Maine's Community Resilience Partnership, production of major statewide convenings such as CEBE's annual 2030 Vision Climate Convergence and Solar & EV Expo, as well as projects such as a growing network of electric vehicle charging stations, a community weatherization project, community solar projects and an affordable housing cooperative.

Prior to his experience as CEBE's founding Executive Director, Mr. Vlaun was a principal partner in Moose Pond Arts and Ecology where he managed a staff of up to eight employees. The company produced major publishing projects in the organic seed industry for Seeds of Change Organic Seeds and others both in print and digital formats. These complex projects included producing seed catalogs on critical deadlines, working with dozens of contributors, vendors and printers. The company also produced an e-newsletter which he edited, websites and other print and digital materials for the industry and numerous other clients across a variety of sectors, one of which was the Western Foothills Land Trust, a partner on this project.

Seal Rossignol, CEBE's Programming and Education Director, will be supervising the education aspects of this project. She has decades of experience in education, both in a public school setting and in outdoor leadership. A founding member of the organization, Ms. Rossignol has organized dozens of events for CEBE and is currently managing our Community Weatherization Project. This program helps homeowners who are experiencing lower incomes to work together to weatherize their homes while gaining important skills to continue maintenance on what are often old and inefficient buildings. Seal holds a masters degree in education and a certificate in outdoor leadership.

Renee Igo has been CEBE's Communication and Project Coordinator since 2020. For this project, she will be responsible for overseeing the creation of a broad range of communication materials including written documents for our newsletter, posters and other printed materials, and social media campaigns. She is a writer, educator and sheep farmer. Ms. Igo holds a BA from Middlebury College in Environmental Studies with a focus in nonfiction writing and was an instructor for Outward Bound for eight years.

Claire McGlinchey is CEBE's Climate Resiliency Program Manager. She specializes in community engagement, grant writing, and qualitative research and spatial analysis, particularly in the fields of climate resilience and environmental justice. In her current role, Ms. McGlinchey manages CEBE's work as a Service Provider for Maine's Community Resilience Partnership (CRP). She coordinates with town officials and volunteers to complete enrollment materials;

plans, promotes, and facilitates public engagement meetings to discuss climate change and prioritize resilience actions; and collaborates with town officials, CEBE staff, and contractors to write grants for resilience projects. She will work directly with the PM and the entire team as a liaison between the CEBE team and towns that we are currently working with through the CRP. Claire graduated summa cum laude from Temple University with a dual major in Environmental Studies and Communication Studies. She is pursuing an M.S. in Natural Resources from the University of New Hampshire, where her thesis explores how environmental justice mapping tools are developed and used for equitable outcomes.

Tony Giambro is CEBE's Municipal Resiliency Coordinator. He is the former owner and operator of Paris Autobarn, the state's only automotive sales and service business specializing in electric vehicles. He achieved ASE certification as an advanced level specialist in hybrid and electric vehicles and has nearly two decades of experience in the automotive industry. Tony brings a wealth of knowledge to CEBE regarding electric vehicles and charging infrastructure as well as solar energy. Tony will work with the project team to help develop and manage EV charging and solar projects in local communities.

c. Expenditure of Awarded Grant Funds: CEBE has multiple ways in which to ensure that funds for this award will be expended efficiently according to the work plan. Firstly, the organization will create an individual project in our Quickbooks accounting system to track all expenditures for the project. These will be checked against the project budget and schedule that will be monitored within our project management system. Finances will be tracked and balanced by our in-house bookkeeper, and reviewed regularly by CEBE's Executive Director and finance committee which is comprised of members of our board of directors. Accuracy in our accounting methods for the project will be assured by an annual review of the organization's finances at the end of the fiscal year by our accounting firm.

5.0 Past Performance:

- 2021, Elmina B. Sewall Foundation: $42,000, (operating support)
    - CEBE successfully expended the funds as part of our annual budget and met the reporting requirements for the grant as we have every year since our first grant from the Sewall Foundation in 2015. As these yearly grants are typically distributed in late spring, we have yet to report on our 2022 funding which is part of a three year grant, designed to reduce application and reporting burdens on recipients.
- 2021, Onion Foundation: $10,000, (operating support)
    - CEBE successfully expended the funds as part of our annual budget and met the reporting requirements for the grant in a timely fashion
- 2022, Governor's Office of Policy Innovation and the Future (Maine), $50,000, (Service Provider grant for Maine's Community Resilience Partnership)

    - CEBE successfully completed the requirements for this grant by providing services to five area towns to enroll them in the Community Resilience Partnership and write their first Community Action grant for the program. All reporting has been satisfactorily completed on schedule.
- 2021, Stifler Family Foundation, $20,000, (matching operating support)
    - CEBE successfully matched this grant through community donations and expended the funds as part of our annual budget. Reporting requirements for the grant were met in a timely fashion.
- 2022, Plug In America, $3,000, (Support for CEBE annual Solar & EV Expo)
    - CEBE successfully completed this agreement by executing our seventh annual EV ride and drive event, engaging over 100 area residents in learning about the benefits of solar energy and electric cars, trucks and bicycles. Detailed records of all expenditures were kept and all reporting requirements were met in a timely fashion.

RI-001, RI-002

EJCPS Logic Model: Childhood Lead Action Project 11/1/23-10/31/26				
Resources/Inputs	Activities	Outputs	Audience	Long-termOutcomes (3+ years)
Existing CPS group including all project partners, expertise around building and housing code (project partner DIS), HUD-funded lead abatement program and lead safety repairs (project partner HCD), extensive knowledge about RI's lead poisoning prevention and landlord tenant laws (project partner CFJ), knowledge about lead poisoning community data and medical support (project partner RIC), data, technical support, and expertise around statewide lead poisoning prevention efforts (project partner DOH), community leadership and advocacy (CLAP/applicant), existing RI lead laws requiring lead certificates for most pre-1978 rental housing, existing housing code enforcement authority, system, and data (project partner DIS); Experienced staff to coordinate and facilitate meetings (CLAP/applicant)	CPS group meets quarterly, create list of noncompliant rental properties, create compliance work plan, carry out and evaluate work plan	1) CPS stakeholder group coordinates education, assistance, and enforcement activities and identifies list of 100 rental properties noncompliant to target together to bring into compliance with lead safety requirements (Targets: 10 meetings held, 1 list of properties generated, 1 work flow chart updated).	Owners of pre-1978 properties not in compliance w/ RI lead laws; tenants in pre-1978 properties	a decrease in the incidence of lead poisoning among children under 6 in Providence
Experienced, bilingual staff time (CLAP/applicant), existing network of community members engaged in trainings and support meetings (CLAP, project partner RIC, project partner CFJ), proven model for community engagement and community-driven planning and decision-making (CLAP/applicant)	Community leadership group has quarterly training/support meetings, returning and new members engaged, new members recruited, community members trained on various relevant topics, community members participate in CPS group and/or outreach/education activities	2) Community residents develop environmental knowledge and skills (Targets: 10 training/support meetings held, 20 community members participate incl. 10 new members, 10 community members participate as leaders in additional CPS stakeholder meetings and/or community outreach/education).	Community members/leaders, especially tenants and parents of children under 6 at high risk for lead exposure	multi-stakeholder partnerships among community members and local entities with resources and power to improve environmental conditions strengthened
Experienced, bilingual community educators's time (CLAP/applicant), active community member volunteer base/live in neighborhood, existing effective multilingual educational materials (CLAP, project partner RIDOH), comprehensive citywide noncompliant rental address list produced by project partner RIDOH; free legal assistance (project partner CFJ); Experienced, bilingual staff time (CLAP/applicant), existing 12hr interactive FHV/CHW lead safety curriculum w/ proven pre/post outcomes	Update door-to-door resource packet, conduct door-to-door outreach, train 2 cohorts of community health workers recruited by project partner RIDOH through Family Home Visiting program	3) Families and tenants at high risk for exposure to lead hazards, and community members who serve them educated about lead prevention resources and tenants rights through door-to-door outreach, and community health worker workshops (Targets: 1 resource packet updated, 100 homes visited, 50 conversations held, 150 info packets distributed, 16 community health workers educated, 2 workshop series (5 sessions each) held).	Tenants at high risk for lead exposure, parents of children under 6, community health workers serving those populations	increased capacity among Providence parents, tenants and homeowners to decrease lead hazards at home through use of lead-safe cleaning methods and interim controls and by accessing existing lead abatement assistance programs
CLAP (applicant) RRP training license, curriculum, supplies, site; experienced bilingual training staff, management; existing successful marketing materials/proven recruitment strategy, current high demand for class/word of mouth referrals (oldest/only Spanish language RRP provider in state)	Update RRP promotional flyer, promote RRP classes, schedule and carry out RRP classes, train Spanish-speaking painting and repair specialists to comply with EPA regulation	4) Latino renovation and repair specialists receive training on the EPA Lead Paint Renovation, Repair and Painting Rule and lead-safe work practices (Targets: 1 updated promotional flyer, 10 businesses/venues display flyer, 6 RRP classes held, 40 completion certificates issued to participants).	Spanish-speaking renovation and repair specialists who routinely work on pre-1978 housing units and/or childcare facilities	improved compliance with state EPA lead-safe work practices training requirements by contractors and others undertaking home or child care facility renovations.
$5.7 million HUD lead hazard reduction funds to abate homes in Providence, RI/successful program administered directly by project partner City of Providence (5y grant, renewal received every round for decades/to be requested); targeted enforcement by Providence Department of Inspections and Standards (project partner); technical support from CLAP staff, City staff, other partners; expertise and experience input from community members	Coordinated multi-stakeholder outreach, assistance programs, and enforcement, as guided by community members, to bring target properties into compliance	5) Local homes made lead-safe due to coordinated multi-stakeholder outreach, assistance programs, and enforcement, as guided by community members (25 housing units on target property list issued lead safety certificates).	Owners of pre-1978 properties not in compliance w/ RI lead laws; tenants in pre-1978 properties	a greater supply of lead-safe housing for Providence residents

Project Title: Building Capacity for Disadvantaged Working Waterfront Communities to Engage Constructively in Offshore Wind Development in the Gulf of Maine
Project Location:
Portland, ME 04101; Pleasant Point, ME 04667; Stonington, ME 04681; Hampton, NH 03842; Gloucester, MA 01930; New Bedford, MA 02740
Applicant Information: Gulf of Maine Research Institute, Portland, ME, 04101
GMRI Description: We are an independent, objective nonprofit organization dedicated to the resilience of the Gulf of Maine ecosystem and the communities that depend on it. We leverage the Gulf of Maine to test and develop solutions to ocean challenges around the world. Our interdisciplinary approach combines world-class marine research with robust community and education programming to understand how natural, social, and economic systems interact.
Abstract: This project will build capacity for disadvantaged working waterfront communities to have meaningful involvement in the offshore wind (OSW) development process in the Gulf of Maine. This project will create a community of practice that focuses on constructive engagement in the development process and collaborative problem-solving to create community benefit arrangements. In Objective 1, we will build a shared understanding of communities' informational and engagement needs to tailor outreach resources. We will develop resources and opportunities that inform and prepare communities to participate in the OSW process from the identified knowledge gaps and areas for support (e.g., OSW impacts, procedural process clarity, case studies of success, and engagement in public comment periods), and will share our work through our network of community partners positioned within project communities. In Objective 2, we will build the capacity for communities to engage in community benefit arrangements through collaborative problem-solving and co-creation. We will facilitate workshops to co-design response measures that mitigate or minimize adverse impacts of OSW development on communities. The project team believes that the most equitable form of OSW development emphasizes an optimized, shared use of marine resources and promotes shared success for working waterfront communities' long-term sustainability and resilience. We will build genuine and trusting relationships between developers, government, and communities to ensure that the community of practice persists beyond the project's period of performance.
Project Type: Public education; training
Special Considerations: Climate Change Resiliency; Rural Areas
Environmental Issue: Environmental Information and Location; Greener Living; Science; Climate Change
Project Partners: Maine Coast Fishermen's Association (Maine groundfish community); Maine Lobstermen's Association (Maine lobster community); Massachusetts Lobstermen's Association (Massachusetts lobster community); New England Fisheries Management Council (fisheries management body); Ready Seafood (shoreside seafood community), Red's Best (fish processor and distributor)
We will not develop a QAPP; We are not applying for the Small CBO Set Aside Track

Program Objectives

Environmental and Public Health Information of the Underserved Community

OSW development in the Gulf of Maine presents immense decarbonization and economic opportunity by capitalizing on the region's enormous ocean wind resource while also creating

ED_016126_00000249-00001

new jobs, investment, and tax revenues.[1] However, these opportunities can only be achieved through navigating a complicated process that involves a multitude of agencies and entities - all with differing authorities, motivations, and roles. From the wide-ranging impacts of climate change,[2] specific fisheries management actions in response to declining fish stocks,[3] and the protection of North Atlantic Right Whales,[4] working waterfront communities must adapt to many external processes and systemic changes. OSW development adds another layer of uncertainty and fundamental changes to navigate.

There is a strong need to build capacity for the inclusion of voices and knowledge of working waterfront communities early in the OSW development process meaningfully and equitably. An equitable process includes enabling all voices and diverse perspectives to engage in dialogue about decision-making.[5] We will focus our efforts within six working waterfront communities: Pleasant Point, Stonington, and Portland in Maine; Hampton in New Hampshire; and Gloucester and New Bedford in Massachusetts. Each year of the project we will hold listening sessions and workshops to understand communities' needs to build capacity for stakeholders to engage in the federal OSW process. These six disadvantaged communities were prioritized for involvement in this project because they rely on the marine resources that may be impacted by OSW development. Marine resources in the Gulf of Maine represent some of the most productive and valuable fisheries in the United States, accounting for almost a quarter of the nation's landings by value[6]. In addition, NOAA's Social Indicator tool ranks each of the communities as being at high risk for impacts to marine resources due to their direct engagement in fisheries and associated labor force vulnerabilities[7]. Thus, adverse impacts on these working waterfront communities represent a significant risk to the local and regional economy.

While OSW presents a potential change to the management of regional marine resources, it is also a key strategy in the US[8] for reducing the carbon emissions associated with climate change, the effects of which are an important source of vulnerability for working waterfront communities. This issue is particularly acute in the Gulf of Maine, where Sea Surface

Temperatures (SST) are rising faster than 99% of the global ocean[9]. Among other things, rising SSTs have been associated with declines in regionally important commercial fisheries species, such as lobster and cod. Projections of marine resources in the Gulf of Maine indicate that commercially fished species could decline by 62% if SST rises by 2°C in the Gulf of Maine[10]. The loss of landing values due to this rise in SST could have a devastating effect on the Gulf of Maine's commercial fishing industry. In addition to the risks climate change places on these important marine resources, the six identified communities also face several vulnerabilities identified in the EPA's Environmental Justice Screening and Mapping Tool (EJ Screen)[11] and Climate and Economic Justice Screening Tool[12]. Those vulnerabilities and how this project addresses them are outlined below:

- **Workforce Development:** Three of the six communities (Gloucester, MA; Portland, ME; and New Bedford, MA) face acute workforce development vulnerabilities due to a high proportion of residents without a high school education or equivalent (greater than 10%) and a low median income. This project seeks to address this issue by creating resources and engagement opportunities that are accessible to the target communities. We will do this by working with the community members to tailor the project resources to their needs. In addition, OSW is projected to create employment and income opportunities. Responsible development of OSW will protect heritage industries, such as fishing while creating new opportunities for employment and income generation.
- **Climate Change**: One community (Hampton, NH) was identified as having a high vulnerability to projected sea level rise and the associated increase in flood risk. However, it is noted that EJScreen does not take into account warming SSTs. Therefore, there is a risk to all communities given warming SSTs as they have a large impact on the economic resources that all communities rely on. This project addresses these issues by working towards OSW development as a key solution in the fight against climate change.
- **Energy**: Two of the communities (Pleasant Point and Stonington, ME) are afflicted by the combined effects of low income and high energy costs. This project will address these issues by creating a pathway to responsible OSW development, which is projected to create employment opportunities for working waterfront communities. Further, the addition of renewable energy from OSW is expected to decrease the cost of the regional electric supply, meaning lower electricity costs for the communities we work with.
- **Environmental Justice:** All six communities rank high in Environmental Justice scoring criteria with each community facing high rates of poverty, ranging from 13.1-23.5%. Additionally, each of the communities is affected by a combination of high ozone

concentration, high particulate matter, and high air toxic respiratory hazard index. All of these hazards have elements that trace back to the burning of fossil fuels, including those used to create energy for the electric grid. By focusing on building a responsible pathway for OSW development in conjunction with working waterfronts, this project seeks to mitigate these environmental justice issues by aiding in the transition to cleaner energy sources.

Key Risk factors Identified in EJ Screen, Climate and Economic Justice Screening Tool, and NOAA's Social Vulnerability Indicator.							
	Vulnerability Metric	**Gloucester, MA**	**New Bedford, MA**	**Hampton, NH**	**Stonington, ME**	**Pleasant Point, ME**	**Portland, ME**
NOAA Social Indicator Tool	Poverty	Low	High	Low	Medium	High	Medium

	Traffic Proximity						
	Air Toxic Respiratory Hazard Index						
	Particulate Matter						
EPA Climate and Economic Justice	Energy						
	Education						
	Housing						
	Health						
	Legacy Pollution						
	Climate Change						
	Transportation						
	Water and Wastewater						
	Workforce Development						
	Income/poverty						

Table 1: Key risk factors identified with EJ Screen, Climate and Economic Justice Screening Tool, and NOAA's Social Vulnerability Indicator.

The six working waterfront communities also experience other vulnerabilities as identified by the EJ Screen such as Health, Transportation, Legacy Pollution, and Housing. While these vulnerabilities are not directly targeted by this project, the underlying issues of low income and poverty are addressed. By working with these communities, this project will help empower the

communities to protect their heritage industries and create a mutually beneficial pathway for an industry that is projected to create jobs and reduce energy prices at a regional level[13].

Organization's Historical Connection to Underserved Community

We engage deeply in complex ocean challenges by being evidence-based, transparent, and nonpartisan. GMRI has been advancing cooperative research and collaborative solutions with diverse stakeholders to better understand the Gulf of Maine since the early 1990s. GMRI successfully engages with working waterfront communities to provide information on topics including fisheries management, climate adaptation, and supply chain development. Our decades of experience building capacity within communities to engage in federal fisheries management and science affirm that there is attainment in our approach.

GMRI has successfully supported working waterfront communities to build the capacity to engage in fisheries management through the Marine Resource Education Program (MREP). MREP empowers fishers from working waterfront communities to better understand how to engage in fisheries science and management through a series of workshops in seven of the eight US fisheries management regions. MREP has transformed the way that stakeholders engage in management as they have achieved success through workshop participants routinely becoming voting council members. This details the transformation of a concerned community member to one who maximized their impact in federal fisheries management.

The Fisheries Technical Assistance Program (FTAP) provides a range of convening and innovation programs to New England's fishing industry to promote the long-term prosperity of local fisheries and communities. FTAP has supported working waterfront communities to adapt to external changes during the shift towards sector management by serving as a boundary organization to stakeholders and managers. FTAP facilitated a series of convenings that encouraged the fishing industry to assess, prepare for, and thrive under change with partners and communities included in this project. This work created neutral spaces where marine stakeholders could freely share ideas, resources, and experiences to inform better management practices and regulations under a new system.

The Climate Center supports Maine's rural working waterfront communities by growing their capacity to plan and prepare for coastal climate impacts through the Community Resilience Training program. This program empowers communities with the knowledge, skills, and relationships to create data-driven and community-informed climate resilience plans. These trainings were conducted with Owls Head, South Thomaston, St George, Rockland, Rockport, and Camden, Maine which represent areas with similar demographics to the communities listed in this project. The Business Climate Action Program expands on community-centric work by growing capacity in the regional blue economy to mitigate and adapt to the impacts of climate change. The respect and trust that these communities have in GMRI is built upon these programs and is foundational in our mission to support the working communities that depend on the Gulf of Maine.

Community-driven participation is integral across all departments at GMRI. The current project plan was developed in response to our project partners and communities calling out the gap between their communities and the OSW development process. Each partner sees GMRI as a bridging organization that has successfully developed programs that build capacity for their stakeholders to engage in management processes in the past, therefore, this is a role that GMRI is well suited for. As OSW development presents both a solution for climate change and a

---

[13] *WINDExchange: Wind Energy's Economic Impacts to Communities*. (n.d.). Retrieved April 7, 2023, from https://windexchange.energy.gov/projects/economic-impacts

challenge to current marine resources, GMRI's involvement in this space directly aligns with our mission to identify collaborative solutions to global ocean challenges.

Our project partners, The New England Fisheries Management Council (NEFMC), Maine Coast Fishermen's Association (MCFA), Maine Lobstermen's Association (MaineLA), Massachusetts Lobstermen's Association (MassLA), Reds Best, and Ready Seafood represent diversity within working waterfront communities as they include the groundfish and lobster communities across all regions, the seafood supply sector, as well as the fisheries management body. GMRI has worked closely with Reds Best and Ready Seafood through our efforts to improve seafood quality and infrastructure in the Gulf of Maine. Additionally, we have worked closely with NEFMC through our staff serving on advisory committees as well as presenting on fisheries research at council meetings. MaineLA and MassLA are new partners to GMRI for this project. These new partnerships show an increased need for collaboration across working waterfront sectors to come together to build capacity for OSW engagement. While each of our project partners has a geographical footprint that aligns with the six communities we plan to engage in, we have a specific connection to Pleasant Point, Maine through GMRI's Indigenous Partnerships Manager, who is a member of the Passamaquoddy Tribe and will serve as a conduit between this project and tribal communities and needs.

Before the start of this proposed project, GMRI will be working with MCFA to support fishing communities engage with the current phase of the BOEM process. This work will focus on using existing fisheries data and local fishers' knowledge to best inform stakeholders' feedback and comments on where the most suitable boundaries are for OSW development. MCFA will provide direct connections with their fishing members and GMRI will provide science translation and training to enable community members to directly engage with the federal process. This work will serve as a stepping stone and catalyst for this project.

EJCPS Model

1. Issue Identification, Community Vision, and Strategic Goal Setting

The first element of the EJCPS Model underpins our intention for seeking funding for this work. Our network of working waterfront community partners approached GMRI with several requests to develop a portfolio of work that serves as a bridge between their communities and the information and resources they need to successfully engage in OSW development. The project will be guided by strategic advisors who will be selected by our community partners and represent existing leadership from diverse backgrounds within working waterfront communities. These strategic advisors will engage with the project during decision and evaluation points to ensure that the project aligns with the needs of their community. We focus on issue identification in *Objective 1.1: Build an understanding of the informational, educational, cultural, and engagement needs regarding OSW development from strategic advice from community members.* Through a series of workshops in the six focus communities that will occur each year, we will identify what topics are the highest priority for developing resources that will support our stakeholders' informational and resource needs. By revisiting these topics each year we will be reflexive to the changing needs of the community. *Objective 2: Build capacity for stakeholders to engage in community benefit conversations through facilitated workshops to co-design future scenarios to mitigate or minimize adverse impacts of OSW development* focuses on building a community vision for the development of community benefit arrangements. We refer to Community Benefit Agreements (CBA) and Power Purchasing Agreements (PPA) collectively as community benefit arrangements. Through foresighting workshops, community members will

ED_016126_00000249-00006

identify shared values and concerns to inform co-created strategies and solutions for building community benefit arrangements with OSW developers.

2. Community Capacity-Building and Leadership Development

The overall goal of this project is to build capacity for working waterfront communities to engage in the OSW development process. Our network of partners has engaged in the OSW development process but has remained frustrated with poor federal outreach, lack of clarity on OSW impacts, and misunderstood avenues to provide influence in the process. We will work with the communities to fill information gaps, provide training on how to engage in the federal process, and foster relationships directly with community members and decision-makers. Our workshops will provide training on tangible ways for community members to influence the federal process, whether that be through supporting them with the best available science to back their feedback, or by working with them to develop key talking points or draft letters to be submitted during periods of public comment.

3. Consensus Building and Dispute Resolution

We will find effective ways of making group decisions through Objective 2 and our foresighting workshops and trainings. Each stakeholder group must be involved in co-creating solutions to be used in community benefit arrangements to fully represent working waterfront communities. Through Objective 2, we will work with our partners to build consensus through the foresighting approach to identify future scenarios in which OSW development may impact the community. From these future scenarios, community members will be tasked with co-creating solutions and strategies to mitigate the impacts. In these workshops, GMRI will serve as a neutral third party to support dispute resolution.

4. Multi-Stakeholder Partnerships and Leveraging of Resources

Our network of lobster and groundfish fishing industry, fisheries management, and seafood supply chain community partners represent multiple stakeholder groups within working waterfront communities. These partners have been engaged in the development of this proposal and will be engaged early and thoroughly throughout the project. As our network of partners have deep connections within their stakeholder groups and communities, they have committed to sharing resources and opportunities that we create within their networks. This will leverage our work and focus our efforts directly within our intended audience to further build working waterfront communities' capacity to engage. Community partners called out in this proposal are not fully comprehensive as we plan to engage with other working waterfront stakeholder groups as OSW development becomes a focus area for other relevant stakeholders. These future partners could include the aquaculture industry, port authorities, town government, and other marine resource stakeholders. As new partners are identified, we will be reflexive to changing community needs.

BOEM will be hosting several stakeholder meetings to solicit public comment throughout the OSW development process. These stakeholder meetings are critical touchpoints between the federal agency and the stakeholders for influencing the outcome of critical decisions in the development process. We plan to leverage these existing federal meetings with our stakeholders by providing additional outreach to bring more stakeholders to the meetings, providing resources for stakeholders to reference with their public comments, and providing training on how to constructively engage. By leveraging these meetings we are enhancing the dialogues that lead to partnerships between these groups and the decision-makers.

5. Constructive Engagement by Relevant Stakeholders

Community benefit arrangements are required and approved by BOEM and exist between OSW companies and communities. These arrangements will require constructive engagement from OSW developers to agree to provide the requested resources and services to communities that their work will impact. These arrangements will be designed through conversations between community members and developers and require high levels of cooperation. We will support community members with these conversations by identifying when they will take place, ensuring that diverse stakeholders represent the community and that the stakeholders are prepared with a shared understanding and vision for what they would like to achieve with the community benefit arrangement. The future scenarios that the foresighting workshops will build from will be guided by our resource economist and other research institutions to provide a clear analysis of the future impacts of OSW development. Objective 2 emphasizes effective relationships with researchers and developers to achieve a solution space for community members.

6. **Sound Management and Implementation**

Objective 1.1 will identify the topics for which we will create resources and develop strategies tailored to the target communities' assets and deficits. We will revisit these topics each year to be reflexive to changing community needs. Our communication structure outlined in Objective 1.2 will be guided by our strategic advisors and community partners. Our community partners have committed to sharing resources that GMRI creates. In addition to providing a bridge between their community and our project, their roles will be more clearly defined as the workshops begin to identify their strengths and areas for needed support. Evaluation will be conducted each year by the strategic advisors to ensure that the project is on track to support the community goals. We will provide further evaluation of Objective 2 to identify if the co-created strategies and solutions are being implemented in community benefit arrangements. If our evaluations identify shortcomings in the project, we will work with strategic advisors to be reflexive and shift our priorities to better meet the needs of the communities.

7. **Evaluation, Lessons Learned, and Replication of Best Practices**

Our progress will be evaluated by our strategic advisors on an ad-hoc basis and annually at workshops defined in Objective 1.1. At the onset of this project, we will use the lessons learned from regions that are further along in the OSW development process, such as Southern New England, to inform our own stakeholder engagement and community benefit arrangement processes. As tasks to achieve each objective repeat in years two and three, we will use our evaluation of progress to develop best practices to carry forward throughout the project. We plan to leverage the success of our project through our Marine Resource Education Program (MREP), by having this project serve as a model for capacity building in OSW development for other regions of the country.

Project Linkages

Our project directly connects to EPA Strategic Plan Goal 2, Objective 2.1: Promote Environmental Justice and Civil Rights at the Federal, Tribal, State, and Local Levels by aiding working waterfront communities to become increasingly organized, informed, and equipped to develop their visions of wellbeing and resilience, advocate for change, and influence the OSW development process.

Through this project, working waterfront communities will be...

- **More organized** through our efforts to inform them of when and how to engage in the federal OSW development and leasing process (Project Objective 1.1 and Objective 1.2).

ED_016126_00000249-00008

- **Equipped to develop their visions** of well-being and resilience through our foresighting workshops that will co-develop solutions to be used in community benefit arrangements that advance their vision of fair mitigation of OSW developments' impact on their community (Project Objective 2). Additionally, the resources we develop during this project will be guided by the needs of the community and aligned with their priorities (Project Objective 1.1 and Objective 1.2).
- **Enabled to advocate for change** through our creation of resources based on their needs to better understand both the science and process of OSW development. By encouraging community members to engage in community benefit arrangement conversations with their co-created solutions and strategies, there is a higher potential for changing traditional mitigation measures to ones that promote the long-term sustainability of the community.
- **Encouraged to influence** the OSW development process as our developed resources, workshops, and training will prepare them for constructive and effective engagement. Our project will create communities of practice and develop direct connections between communities and decision-makers, to bridge the gap between the communities' vision and the outcome of OSW development.

This work will achieve progress for disadvantaged communities and promote fair treatment and meaningful involvement in developing and implementing OSW leases in the Gulf of Maine. As working waterfront communities are reliant on marine resources, they will be one of the first groups to experience the impacts of climate change. This project maximizes protection for these communities as OSW development can be a solution to reduce carbon emissions and mitigate climate impacts, but also because the community will influence the changes that OSW development will bring to marine resource management.

Partner and Collaborate

Our project partners initiated and are interested in this project because their stakeholders feel underrepresented, unheard, and overwhelmed by the OSW decision-making process. MCFA, MaineLA, MassLA, Ready Seafood, and Reds Best each bring trusted connections with their stakeholder group and associated community. Our partnership with NEFMC allows us to access and leverage the federal fisheries management process. We plan to maintain these relationships with ongoing communication throughout the project as community partners will be invited to participate in all listening sessions, workshops, and trainings, and be asked to share resources we create with their networks.

Our community partners will drive participation in the project as they will identify the five strategic advisors that will be compensated for their active engagement and advice on project direction. Strategic advisors will come from various working waterfront backgrounds (i.e. fishers from lobster and groundfish industries, port authority members, and the seafood industry) to represent the diverse interests. Our strategic advisors will meet at the onset of, and actively throughout, the project to identify the top needs of their representative communities as well as strategies to appropriately engage each community in the project.

This project promotes collaboration among our community partners as multiple marine resource stakeholders, with various needs and visions, will work together to co-create solutions and strategies for community benefit arrangements. With lobster, groundfish, and shoreside community members involved in co-creating solutions, community benefit arrangements will be comprehensive of community needs rather than tailored just for one stakeholder group.

ED_016126_00000249-00009

Community Partner	Stakeholder Group / Community	Reach	Planned Role/Contribution
Maine Coast Fishermen's Association	Groundfish community / Maine working waterfront	500+	Recommend strategic advisors; identify topics of concern; share resources and opportunities with their community through newsletters, dock talks, podcasts, and website
Maine Lobstermen's Association	Lobstering community / Maine working waterfront	1,200+	Recommend strategic advisors; advice on specific lobster industry concerns and desires; share information produced by GMRI with industry networks.
Massachusetts Lobstermen's Association	Lobstering community / Massachusetts working waterfront	1,700+	Recommend strategic advisors; identify topics of concern; share resources and opportunities to their community through newsletters, website, annual meetings
New England Fisheries Management Council	Connecticut, Rhode Island, Massachusetts, New Hampshire, and Maine fisheries managers and researchers / New England	1,000+	Recommend strategic advisors; invitations to present to council committees and advisory panels; serve as a convening space for discussions; share resources at meetings and outreach channels; disseminate developed educational resources in press releases; identify information needs and opportunities for engagement; guide workshops
Ready Seafood	Lobster harvesters and processors / Maine working waterfront	200+	Recommend strategic advisors; identify communities' emerging concerns; leverage education, outreach, and sustainability programs to share resources
Reds Best	Seafood processor and distributor (shoreside seafood industry) / Massachusetts working waterfront	100+	Recommend strategic advisors; identify concerns around the impact on shoreside infrastructure and supply chain; participate in workshops on community benefit agreements; share GMRI information resources and engagement opportunities

Project Activities / Milestone Schedule

Objective Overview

Objective 1 focuses on building an understanding of the communities' informational needs to empower them with the tools for constructive engagement in the decision-making process. We will create independent resources and opportunities that inform and prepare fishing

ED_016126_00000249-00010

communities to participate in the OSW process from the identified knowledge gaps (e.g., OSW impacts, procedural process clarity, case studies of success, and engagement in public comment periods) and share these resources through our network of community partners.

Objective 2 focuses on the process that weighs tradeoffs and tensions and moves toward a just energy transition by co-creating solutions to be incorporated into formal community benefit arrangements or as informal actions developers can take to support communities. We will design the engagement process and facilitation tools by following the 'foresighting approach', a participatory process that enables stakeholders to co-investigate possible future scenarios based on the best available knowledge.[14]

Fishing communities and other stakeholders will develop plausible future scenarios and discuss tradeoffs associated with each scenario. This process will generate the most likely scenarios from OSW development. We will use these scenarios to discuss and identify the strategies and solutions that foster sustainability in these communities which will then be used in community benefits arrangements. When communities engage in these conversations it is an opportunity for bidirectional deliberate learning, as fishing communities will become aware of the developer's requirements and motivations and the developer will become aware of the communities' concerns about potential impacts and strategies for mitigation.

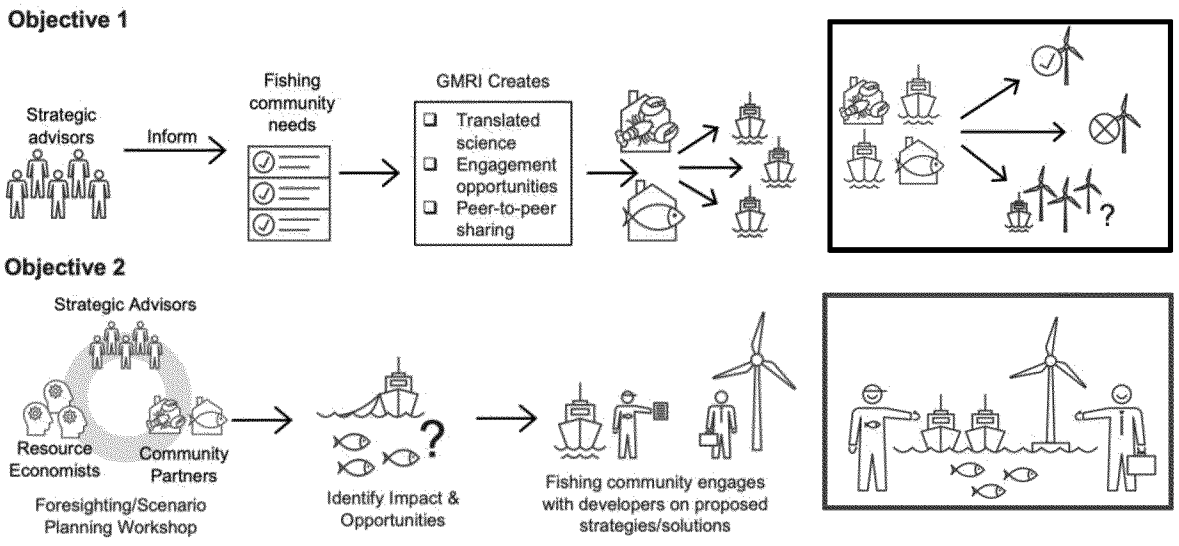

Figure 1. The process of Objective 1 is outlined to showcase how GMRI will create and share resources based on the needs of the communities. The box shows the anticipated impact of communities having the capacity to engage in the decision-making process. The process of Objective 2 is outlined showing how we will build the capacity for stakeholders to engage in community benefit agreements. The box represents the anticipated impact of the communities and developers reaching a shared vision.

Workplan

[14] Kelly, R., Foley, P., Stephenson, R.L., Hobday, A.J., Pecl, G.T., Boschetti, F., Cvitanoviv, C., Fleming, A., Fulton, E.A., Nash, K.L., Neis, B., Singh, G.G., & van Putten, E.I. (2022) Foresighting future oceans: considerations and opportunities, Marine Policy, 140, Article 105021

BOEM plans to advance commercial OSW in the Gulf of Maine by designating Wind Energy Areas by the end of 2023 and holding a lease auction before the end of 2024. Formal comment periods will be held throughout the process including after the designation of draft Wind Energy Areas (WEAs), during the draft Environmental Assessment process for WEAs, and at the Proposed Sale Notice. After the lease auction, and within this project period, developers will be engaging with fishing communities around fisheries monitoring plans and survey operations. Our efforts will align with and adapt to the federal process in all three years.

Objective 1.1: Build an understanding of the informational, educational, cultural, and engagement needs regarding OSW development from strategic advice from community members. *Outcome: List of needs regarding the information and mechanisms in which they would like to receive resources to influence the project deliverables.*

In the first year of the project, Objective 1.1 will focus on identifying the top five topics/areas related to OSW development to build capacity for community engagement. We will do this by leveraging relationships with community partners to receive nominations that identify five strategic advisors to represent various sectors of the fishing community (Milestone 1). The strategic advisors will identify key topics for an agenda for listening sessions that GMRI will host in Pleasant Point, Stonington, and Portland, Maine; Hampton, New Hampshire; and Gloucester and New Bedford, Massachusetts (Milestone 2). Our community partners will support outreach for the listening sessions by encouraging their members to participate. Through these listening sessions, we will identify existing resources the community is using to inform their understanding of OSW science and management and where these resources fall short. We will compile a list of needs and concerns discussed at all workshops. We will work with strategic advisors to prioritize the list to inform the top five topics that will guide project deliverables. Strategic advisors will also decide what mechanisms working waterfront communities would like to receive information (e.g., email, text alerts, newsletters, zoom meetings, or other channels).

During the second and third years of the project, we will reevaluate and update the top five topics/areas related to OSW development based on the communities' needs. We will hold listening sessions and workshops in each of the communities to be responsive to their changing needs concerning OSW development. Following these workshops, we will work with strategic advisors to refine and align the priorities to guide project deliverables.

Objective 1.2: Develop resources and opportunities that align with working waterfront communities' needs that are informative and prepare stakeholders to engage in the OSW process. *Outcome: Communities are supported with the best available information and resources to effectively engage in the federal OSW development process.*

In the first year of the project, Objective 1.2 will focus on developing educational and informational assets based on the five topics identified in Objective 1.1. We will compile, synthesize, analyze, and translate information on the five topic areas and provide ongoing updates to this information as more information is available and the federal process unfolds. This could include updated information on federal engagement opportunities, key takeaways from relevant reports, and translation of environmental impact statements and other materials that will be published throughout this process. We will receive input from strategic advisors to provide iterations and refinement of resources that meet communities' needs before distribution. Strategic advisors will determine what resource mechanisms are most effective (e.g. holding informative sessions, structured dialogues on issues of concern, and media assets including

ED_016126_00000249-00012

newsletters, websites, text messages, and print). GMRI and community partners will distribute created resources to working waterfront community members (Milestone 3). We will create direct communication channels between the communities, wind developers, and federal and state agencies to discuss the topics that the resources inform through leveraging existing public comment and stakeholder engagement opportunities.

In the second and third years of the project, we will update and develop additional educational and informational assets based on the reevaluated five topics. We will continue to compile, synthesize, analyze, and translate information and provide ongoing updates to this information that aligns with the BOEM development process. Strategic advisors will continue to be engaged to refine resources to meet needs before distribution. We will work with strategic advisors to reevaluate what resource mechanisms are most effective to reach specific communities. GMRI and community partners will continue to distribute created resources and create direct communication channels between the communities, wind developers, and agencies.

Objective 2: Build capacity for stakeholders to engage in community benefit conversations through facilitated workshops to co-design future scenarios to mitigate or minimize adverse impacts of OSW development. *Outcome: The fishing community is empowered to influence community benefit arrangements by reframing fisheries mitigation as an opportunity to revitalize working waterfront communities.*

In the first year of the project, we will work to achieve Objective 2 by building an understanding of community benefit arrangements. We will identify when developers begin to have conversations regarding community benefit arrangements to inform our project timeline.

During the first year of the project, we will also conduct baseline research and a literature review of successful community benefit arrangements and fisheries mitigation strategies that have been employed in other regions where OSW actively occurs. As part of this work, resource economists will conduct literature reviews, and economic forecasting and use the best available data on the economic impact that OSW development may have on fishing communities. We will produce a report for communities to use in workshops.

We will hold foresighting workshops with community members to co-identify and evaluate future scenarios. These scenarios will inform strategies, including innovative solutions outside of traditional financial compensation, that can minimize the impacts of negative future scenarios. At the end of the workshops, communities will have co-created at least three solutions that address tradeoffs for fishing community members to use in community benefit arrangement conversations. We will facilitate connections between wind developers and working waterfront communities to engage in these conversations and encourage community members to use the strategies developed in the workshops (Milestone 4).

In the second year of the project, we will hold a training session with strategic advisors and other key community members to empower them in dialogues with wind developers (Milestone 5). This training will focus on strategies to integrate the co-created solutions into community benefit arrangements. We will consult with strategic advisors on what type of training is the most effective, and be reflective of lessons learned from other regions or any community benefit conversations that took place in the first year of the project.

Throughout the second and third years of the project, we will track the development of confirmed community benefit arrangements to identify how the solutions from the workshops have informed the plans. We will evaluate how conversations are being held and provide updated guidance for communities to engage. We will continue to facilitate connections between wind

ED_016126_00000249-00013

developers and the fishing community to develop community benefits. If community benefit plans are in place, we will work with fishing communities to evaluate if the plans are being implemented effectively. Throughout the entire project will facilitate direct connections between community members and developers to address discrepancies and opportunities to engage in community benefit arrangement conversations.

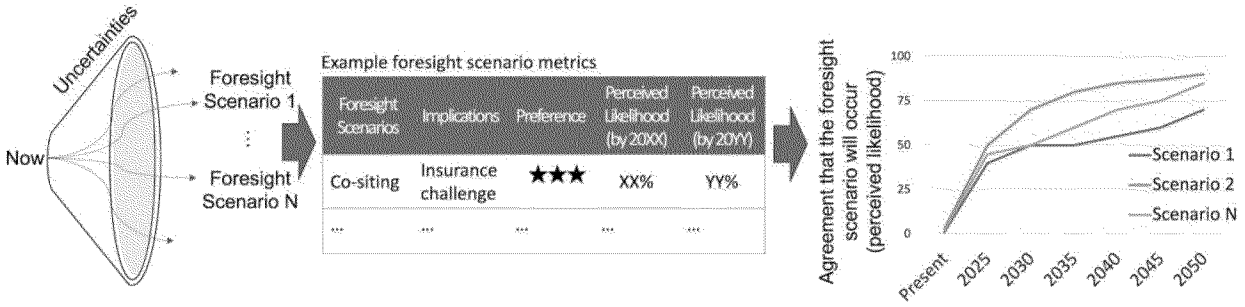

Figure 2: Example foresighting scenarios and metrics

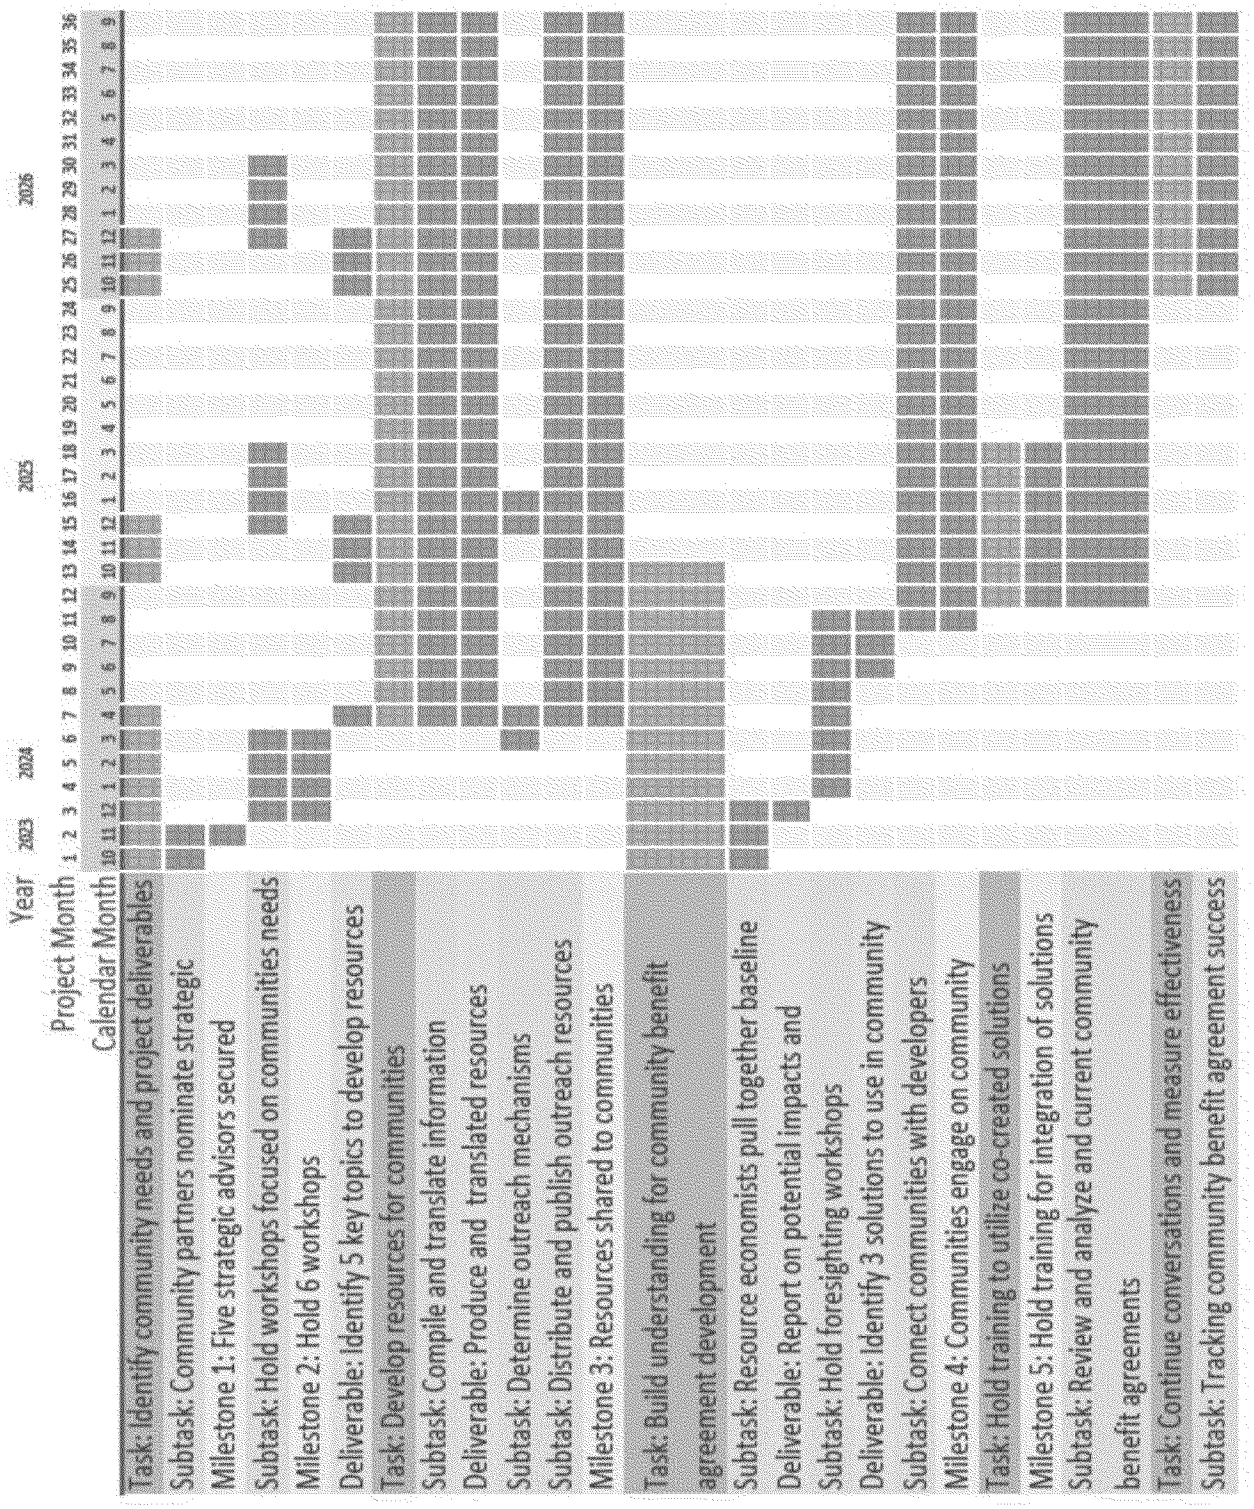
Environmental Results - Outputs, Outcomes, and Performance Measures

Performance Measurement Plan

We plan to measure our project performance and progress by having checkpoints with our strategic advisors at multiple stages of the project. These checkpoints will occur at changes in the BOEM process phases to be reflexive to relevant development advancement and annually at listening sessions and workshops to reevaluate the community needs. Strategic advisors will be tasked with marking milestones as complete, in progress, or needing revision at each checkpoint. As this project is embedded in community participation, community members must be evaluating the project to best meet their needs and desired outcomes.

Sustainability Plan and Community Vision



We will develop informational resources, workshops, and training that will be used by working waterfront communities to better understand the offshore wind development process and build their capacity to engage and influence decision-making. These resources will drive the momentum for these communities to engage in OSW development to achieve their shared community visions and face future challenges. As OSW development and operation will exist far into the future, these resources and developed relationships will provide communities the building blocks to understanding the process and science behind OSW to continually engage. The development of community benefit arrangements with co-created solutions will build relationships between the various stakeholders to achieve a shared vision that will be carried forward into the future. This work will establish relationships between these communities and OSW developers that will be integral to sustainable shared use of ocean space well into the future.

Our work and resources created will be leveraged in GMRI's MREP program, which offers workshops for fishers to learn about marine fisheries science and management and the tools and insights into how to engage effectively. As MREP plans to integrate OSW topics into future programming, this project can serve as an example to other fisheries management regions on how to build capacity for other working waterfront communities across the country. Overall, this project will bring together multiple stakeholders to reach a common goal of building capacity for their engagement in the federal offshore wind process. We anticipate that these

ED_016126_00000249-00014

connections will create a community of practice that is equipped to further collaborate on other environmental justice and resource-related topics in the future.

Milestone Schedule

Programmatic Capability

Organizational and Staff Experience

(OBJ)Jonathan Labaree has extensive background working with the fishing community through his convening work focused on transitioning the groundfish industry to sectors. He will commit up to twenty hours per year to guide and supervise Hannah MacDonald. MacDonald leads FTAP and facilitates workshops and cooperative research with fishers in the Gulf of Maine. She will commit up to five months per year to manage and deliver the project. MacDonald has built trusted relationships with fishers in the region from her experience working specifically with the industry on enhancing electronic monitoring, and collaborative research to improve seafood quality. She has experience directly relevant to OSW development from her previous employment working for Consensus Building Institute under a contract from BOEM to facilitate the Gulf of Maine Task Force Meeting in May of 2022. Labaree and MacDonald will provide program leadership for this project for the duration of the project period.

Laura Taylor Singer, founder of SAMBAS Consulting LLC, will serve as project advisor and commit up to 1 month/year to this project. She is a facilitator, project manager, and community engagement consultant, with a focus on building collaboration among diverse interests. She brings nearly three decades of experience working at the nexus of coastal and ocean policy, science, and resource use considerations. Singer has worked in OSW since 2013 when she was hired by Statoil (now Equinor) to organize and facilitate conversations between the developer and affected fishermen to assess potential impacts and understand their concerns and interests r to build relationships and inform design options for a pilot floating OSW project in the Gulf of Maine. From 2016-2019 she facilitated dialogue among Monhegan community members that resulted in a CBA with the developer for a planned OSW pilot project. Her work involved serving as a resource for the island's fishing industry to provide information and guidance to understand the project and assess potential implications and impacts on fishing operations. Since 2020, Singer has worked with the Maine Governor's Energy Office (GEO), Department of Marine Resources (DMR), and Department of Inland Fish and Wildlife (MDIFW) to co-design and facilitate a series of discussions related to the Maine Offshore Wind Research Array. In partnership with the Consensus Building Institute, she completed an 18-month process to support the planning of the Maine Offshore Wind Roadmap. As a key member of the project management team, she contributed to the planning, agenda development, and facilitation of Advisory Committee meetings and drafting components of the final Roadmap. Singer was hired by GEO to serve as interim Program Manager (part-time) for the Maine Offshore Wind Research Consortium and is responsible for the establishment, function, and oversight of the Advisory Board and the Steering Committee in partnership with Carbon Trust.

GMRI's Climate Center. Dr. Dave Reidmiller, Climate Center Director, will provide strategic advice to this project and commit up to twenty hours per year. Dr. Reidmiller brings a wealth of experience bridging the climate science and policy domains through various senior positions in the federal government. He served in the State Department's climate office for five years under the Obama Administration, where he led U.S. engagement in the Intergovernmental Panel on Climate Change and was the lead U.S. science and technology negotiator for the Paris Agreement. He subsequently led the Fourth National Climate Assessment under the White House Office of Science & Technology Policy during the Trump Administration. Soon after joining GMRI, Dr. Reidmiller served as a climate advisor to the Biden-Harris Presidential Transition Team, helping to formulate climate priorities for the incoming Administration.

Integral to his work at GMRI is ensuring the best available science is used appropriately to inform decisions facing communities.

Jared Wildwistle is the Program Manager for the Business Climate Action Program. His capability in this role stems from his experiences starting a successful business offering both business-to-business and business-to-consumer products, working at the Small Business Development Center providing technical assistance and consultation to a variety of businesses, and managing a research project that engaged with national and local businesses. Wildwistle's primary focus during this project will be to engage with wind developers and adjacent businesses and commit up to two months per year.

Co-PI and Chief Scientific Officer, Dr. Janet Duffy-Anderson, will provide oversight and coordination on our project with emphasis on bridging our work with the National Academy of Sciences Standing Committee on Offshore Wind and Fisheries through her appointment and commit up to twenty hours per year to this project. Duffy-Anderson has extensive experience and expertise in marine science and climate-ecosystem interactions. For over two decades, she has worked to develop mechanistic approaches to understanding how climate mediates fisheries population variability, trophic shifts, and ecosystem change. She applies that understanding to the sustainable management of fisheries and ecosystems.

Resource economist, Dr. Kanae Tokunaga, will provide her insight and expertise on the potential economic impacts and relevance to fishing communities and commit up to one week per year to this project. This expertise is key for our future scenario planning objective to support the development of community benefit packages. She will also support the alignment of our community-engagement approaches with best practices matched to current research on community participation.

The Communications Team will support all aspects of external communication associated with the project and will commit up to two weeks per year to this project. This will include the creation of a project web page on gmri.org; promotion of the project on social media channels; media relations support; print production management; graphic design project and process management. Additionally, this team will support the development of fishing community targeted outreach, which may build upon our database of stakeholders and include distributing resources like newsletters and relevant updates.

Expenditure of Awarded Grant Funds

GMRI has a Finance team and Sponsored Projects Office with both formal training in, and extensive experience with, federal grants management. We currently are managing $13,892.781.49 in active federal awards. The organization has achieved over fifteen straight years of unqualified accounting opinions on our financials and clean audits with no management letters.

Past Performance:

The Gulf of Maine Research Institute has successfully stewarded many federal awards to completion within the last three years. Below are five examples.

Real World, Real Science: Using NASA Data to Explore Weather and Climate: Awarding Agency: NASA, Award # NNX16AB94A, Total Award $6,665,873, Period of Performance – January 2016-December 2020.

The objective of this award was to deliver NASA Earth system data into the hands of middle school students and teachers. GMRI partnered with six subaward organizations to help

ED_016126_00000249-00017

successfully complete the project deliverables within the five-year award period, as well as complete all reporting requirements. Due to the success of this project, GMRI secured another award with NASA in January 2021 to continue this work throughout the state of Maine.

REU Site: Integrated Studies in a Rapidly Warming Fishery Ecosystem: Awarding Agency: National Science Foundation, Award #1757856, Total Award $227,418, Period of Performance – July 18,2018-June 30, 2021.

The objective of the REU program was to host and mentor seven college students during the summer months to carry out independent research projects in the fisheries/marine science field. GMRI successfully completed this program, including all reporting requirements, and secured another award with NSF to continue this internship program through 2024.

Farm to School Grant Program: Increasing Local Seafood Access and Consumption in New England Schools: Awarding Agency: USDA Food and Nutrition Service, Award #CN-F2S-IMPL-20-ME-3, Total Award $130,376, Period of Performance – July 15, 2020 – June 30, 2022.

The goal of the Farm to School project was to increase the amount of New England seafood served and consumed in 10 school districts around New England, with results that could inform a successful sea-to-school program in districts across the region. The project was successful in improving access to local foods in eligible schools and by implementing a comprehensive sea-to-school program that will improve the local seafood procurement and seafood education efforts in schools. GMRI successfully completed this project with the local school districts, completed all reporting requirements, and closed out the award on time.

Development of Robust Management Strategies for Northeast Groundfish Fisheries in a Changing Climate: Awarding Agency: NOAA, Award #NA17OAR4310272, Total Award $1,122,745, Period of Performance – September 1, 2017 – August 31, 2020 (NCE was granted

This project simulation tested a range of misreported catch scenarios for the groundfish fishery. It also leveraged the MSE framework to test the performance of alternative harvest control rules. GMRI was successful in managing this award, however, a no-cost extension was granted due to the impact of COVID on the industry. The project was completed and all reporting requirements were met.

Marine Resource Education Program Northeast: Fostering Trust and Shared Information in Fisheries Science Management: Awarding Agency: NOAA (Pass-through Entity Woods Hole Oceanographic Institution), Award #NA14OAR4320158, Total Award $546,927, Period of Performance – September 1, 2015 – August 31, 2018 (the project is ongoing, currently mid-5-year cycle).

The Marine Resource Education Program offers courses, workshops, and discussion panels to fishermen in the Northeast Region. GMRI was successful in managing this award and has been granted additional funding through NOAA to expand the MREP program into many regions around the country. The original installment of the award was completed and all reporting requirements were met.

18.				
19.				
20. TOTAL (sum of lines 16 - 19)	$ 206,688.85	$ 150,372.22	$	$

SECTION F - OTHER BUDGET INFORMATION

21. Direct Charges: 466755.97

22. Indirect Charges: 33244.03

23. Remarks: HRiA's provisional federal indirect rate of 21.5% is charged on Personnel expenses.

EJCPS Budget Detail

Project Title: Building on HEAL (Healthy Environments Advance Learning)

HRiA respectfully requests $500,000 to support the expansion of HEAL over a three-year period. Funding from the EPA will cover the Project costs including:

Personnel: Total is $123,471.04. FTEs are listed as an average over the 3-year project period.

Staff Position	Annual Salary	Average FTE % on Project	Total Cost to Grant
Project Director	$123,583	.11	$40,652
Program Manager	$77,520	.21	$51,185
Public Health Associate	$56,107	.11	$18,700
Associate Director Health Communications	$106,080	.02 *(2 years only)*	$6,178
Senior Research Analyst	$91,017	.02 *(2 years only)*	$3,976
Web Associate	$63,648	.02 *(2 years only)*	$2,780

Fringe Benefits: Total is $31,152.31. This includes payroll taxes, health insurance, retirement, life/long-term disability insurance, workers' compensation insurance, unemployment insurance, etc., and is budgeted at 25.23% of salaries.

Travel: Total is $1,000 and includes approximately mileage at .655/mile and tolls (approximately 1400 miles). Travel is to school district sites for capacity building and TA sessions (estimated 8 – 10 trips). This also includes travel to the Environmental Health in Schools Summit for Staff members working on the Project.

Contractual: Total is $31,000 and includes:
Honorariums: $10,000 will be utilized for speakers at the Summit (6 stipends at $300/each for a total of $1,800). $8,200 will be given in stipends for Summit attendees from EJ districts (to help cover travel and time for parents/guardians and students) and CNE and/or PDP expenses post Summit for nurses and/or teachers from EJ communities. The exact amount is to be determined (estimate between $200/eligible person for 41 people). Not all attendees will be eligible.

Consultants: Total is $21,000 and includes Consultants who will provide additional services to support schools ($12,000). Additionally, it includes technical support for livestreaming and recording of the Summit ($9,000). HRiA will procure services according to EPA guidelines and regulations.

Other: Total is $280,132.59 and includes:

Allocated Expenses ($9,160.59) includes allocated program expenses such as office supplies, rent, utilities and maintenance, phone and internet, copying, etc. Expenses are allocated by FTE ($6,350.37) on a monthly basis. This formula-based approach has been approved by the EPA office. Budget includes a projected 2% cost increase year over year.

Summit Expenses ($3,600) includes facility rental for the Summit estimated at $1,800 (accommodating up to 100 people). Catering for the Summit is estimated at $1,800 for breakfast, lunch, and coffee breaks served to attendees.

Food and Refreshments ($872) estimated at $145/meeting for 6 meetings on-site with HEAL Champions at their district.

Subawards ($266,500) includes:

- Metropolitan Area Planning Council (MAPC): $44,000
- Public Health Institute of Western Massachusetts: $7,500
- Undaunted K-12: $1,000
- Yale School of Public Health (Dr. Krystal Pollitt): $9,000
- Northeastern University School Health Academy: $5000
- Grants to Schools: $200,000. We will provide grants between $60,000 to $100,000 to two to three school districts to carry out their identified project and to provide stipends to HEAL Champion leaders and committee members. We will work with each district to determine their budget. For example, a district may decide to provide: a) $5,000 to a school nurse to lead the project; b) $100/meeting for stipends for other participants for engagement and planning; this helps to build equity for engagement; c) funding for an engineer to help develop a plan for a new roof and contractors to implement; or d) fees for CNEs and PDPs. The amount per district will be determined based on the number of districts participating (two – three) and their selected project. HRiA and MAPC will assist them in researching needed contractors for services. HRiA will follow all EPA Contracting guidelines through this process.

Indirect Costs: Total is $33,244.03 and is calculated at 21.5% of personnel expenses (HRiA's current provisional federal indirect rate).

Income: HRiA will earn no income on HEAL.

	Description	Total
Personnel	• Project Director @$123,583 salary, .11 average FTE per year (3 years) = $40,652 for three years • Program Manager @$77,520 salary, .21 average FTE per year (.2 in year 1, .26 in year 2, .18 in year 3) = $51,185 for three years • Public Health Associate @$56,107 salary, .11 average FTE per year (.07 in year 1, .11 in year 2, .14 in year 3) = $18,700 • Associate Director Health Communications @$106,080 salary, .02 FTE in years 2 and 3 only = $6,178 for two years • Senior Research Analyst @$91,017 salary, .02 FTE in years 2 and 3 only= $3,976 for two years • Web Associate @$63,648 salary, .02 FTE in years 2 and 3 only=$2,780 for two years *Note: all budgeted salaries include an anticipated 4% salary increase for each staff member in years 2 and 3*	**$123,471.07**
Fringe Benefits	Includes payroll taxes, health insurance, retirement, life/long term disability insurance, workers' compensation insurance, unemployment insurance, etc., and is budgeted at 25.23% of salaries	**$31,152.31**
Travel	Approximately 1,400 miles @ .655/mile (HRiA will use current federal rate). This for 8-10 trips to schools and travel to the Environmental Health in Schools Summit for budgeted personnel.	**$1,000.00**
Equipment	N/A	
Supplies	N/A	
Contractual	Honorariums ($10,000) for speakers at Summit 6 stipends @ $300 each = $1,800. Stipends for attendees traveling to the Summit and/or for school nurses/teachers 41 stipends @$200 each = $8,200	**$31,000.00**

	Consultants ($21,000) this includes $9,000 for technical assistance at the Summit and $12,000 for Consultants to provide support services. *Note: HRiA will follow all EPA guidelines when procuring services.*	
Construction	N/A	
Indirect Costs	Calculated at 21.5% of personnel expenses (HRiA's provisional federal indirect rate)	**$33,244.03**
Other	• Allocated expenses at $6,350.37 per FTE (year 1 FTE= .38, year 2 FTE= .54, year 3 FTE= .49) for organization wide program expenses, such as office supplies, rent, utilities and maintenance, phone and internet, copying, etc. This formula- based practice has been approved by the EPA office. This is budgeted with a 2% cost increase (per year, in years 2 and 3). Total allocated expenses for 3 years is $9,160 • Food and Refreshments includes 6 meetings with HEAL Champions in their district @ $145 per meeting totaling $872 • Summit Expense $3,600. Includes facility rental and catering • Subaward to Metropolitan Area Planning Council (MAPC) for technical assistance and program outreach= $45,000 • Subaward to Public Health Institute of Western MA for outreach activities and program advisement= $7,500 • Subaward to Undaunted K-12 for content expertise= $1,000 • Subaward to Yale University of Public Health for content expertise= $9,000 • Grants to Schools at $200,000 for 2-3 schools. Amounts will vary based on # of schools selected and project selected	**$280,132.59**
		$500,000

EPA-R-OEJECR-OCS-23-01
Logic Model
Project: Building on HEAL (Healthy Environments Advance Learning)
Applicant: Health Resources in Action (HRiA)

Resources/ Inputs	**Activities**	**Outputs**	**Audience**	**Short-term Outcomes** (6-12 months from grant start)	**Intermediate Outcomes** (12-24 months - from grant start)	**Long-term Outcomes** (2+ years from grant start / post grant)
• HRiA Staff and project management • Project Partners (see letters of commitment) • MA Strategic Plan for Asthma • MAAP Healthy Schools Committee • Clearing the Air: An Asthma Toolkit for Schools	• Identify and engage advisors/TA providers (in addition to partners) with expertise on program design, content, implementation, outreach • Identify existing resources to support project and include on website • Develop invitation-only application process for priority school districts participating in HRiA/MAAP's current HEAL Ambassadors cohort, as part of HEAL: Building Capacity for Resilient Schools in MA, funded by EPA.	• List of advisors, TA providers, and other resources • Inventory of resources to include on website and/or disseminated via other avenues. • Two to three school districts selected to participate; contracts executed. • Capacity building services, wrap around TA and funding for project provided to HEAL Champion teams. • 20 participants attend each of four workshops • Up to 100 participants attend Environmental Health in Schools Summit	• School districts across MA, with priority of EJ communities (2-3 of which will be selected to receive support) • School representatives including teachers, school nurses, other school health staff, janitorial, administration, parents, students, and school leadership • Community-based organizations • Boards of Health • Municipal facilities planners	• Increase in engagement and knowledge from school stakeholders (HEAL Champion Teams) in environmental health in two to three districts • Increase in capacity amongst HEAL Champions to identify and plan for environmental health projects in their district. • Increase in utilization of resources available via the MAAP website	• Increase in knowledge from at least 20 webinar participants of environmental hazards and strategies that can be implemented in schools. • Development and/or implementation of project plans by HEAL Champion teams.	• Expansion of knowledge among school/district and municipal leaders, staff, parents/guardians, and students of environmental health hazards and available state and federal resources to mitigate environmental hazards. • Mitigation of environmental hazards due to implementation of grant-supported projects, leading to improvement in air quality, reduction of environmental asthma triggers, reduction of extreme heat, or other health benefits.

ED_016126_00000261-00001

Resources/ Inputs	Activities	Outputs	Audience	Short-term Outcomes (6-12 months from grant start)	Intermediate Outcomes (12-24 months - from grant start)	Long-term Outcomes (2+ years from grant start / post grant)
	• Districts apply. Select 2-3 school districts for participation. • Provide TA, capacity building, and grant funding to two-three selected school districts (jointly up to $200,000) • Hold four virtual workshops on prevention/ mitigation strategies for schools. • Organize and host Environmental Health in Schools Summit • Develop case studies. • Disseminate resources and educational information	• Updated MAAP Healthy Schools Web page, 2-3 case studies developed and disseminated broadly. • HRiA presentations at a minimum of two forums (national or statewide)				• School districts and municipal leaders better understand connections between indoor air quality, building operations (including cleaning and ventilation), and extreme heat • Reduction in exposure to environmental hazards for both students and school staff, including through improvement in school thermal conditions and/or ability to plan for and manage extreme heat • Reduction in the onset of asthma and asthma attacks for both students and school staff

Childcare, translation and interpretation services	Translation of engagement materials and interpretion at community meetings	$8,000.00				$8,000.00
Tree Transport - Truck rental for transport/delivery of trees to individual residential planting sites during 3 wk planting period.	$600/week for 9 weeks	$5,400.00				$5,400.00
Photo/Video documentation and storytelling related to the project			$1,300.00	TNC		$1,300.00
Indirect Cost	TNC Fiscal Year 2023 (July 1, 2022 - June 30, 2023) NICRA is 22.40% per the agreement negotiated with our Cognizant Agency, the Department of Interior. TNC is opting to cap the indirect at 6.16% and record the unrecovered indirect (remaining 16.24% of direct costs) as match.	$29,017.00				$29,017.00
Unrecovered Indirect	See above		$76,483.00			$76,483.00
TOTAL		**$500,000.00**	**$344,321.00**		**$10,500.00**	**$854,821.00**

Collaborating for Tree Equity in Providence RI
Logic Model

Resources/Inputs	Activities	Outputs	Audiences	Outcomes		
				Short-Term	Medium-Term	Long-Term
				(6-12 months)	(12-36 months)	(3+ years)
- 1 staff person - Supervision by Providence Neighborhood Planting Program - Steering Committee recruitment and promotion of position	**Hire PVD Tree Plan Collaboration Coordinator**	Staff capacity to coordinate partners and projects of the PVD Tree Plan	Person with skills in community engagement, systems development, and logistics management	- Development of shared tracking systems for practitioner organizations - Onboarding of first cohort of Community Tree Ambasssadors - Launch of series of Community Forums	- Alignment of community partners in implementing tree planting and management programs - Public and residential tree planting informed by community	- All partner practitioner organiztions function more effectively and led by community priorities
- stipends - training - Coordination with partner organization projects	**Engage up to 20 Community Tree Ambassadors**	Presentations to community organizations, neighborhood meetings, door-to-door outreach	Residents of 33 low canopy census blocks	- Identify participants for residential tree planting program - Recruit participation in Community Tree Planning Forums	- Skilled ambassadors developing location specific community engagement strategies	- Robust community participation in developing tree equity strategies and programs
- Project partner staff - Stipends to community representatives	**Coordinate a BIPOC-led Steering Committee to govern implemetation of all PVD Tree Plan initiiatives**	- Monthly meetings to coordiante all aspects of *Collaborating for Tree Equity* and ensuring community-centered decision making, engagement, and implementation	- Black, Indigenous and people of color residents engaged ias tree practitioners, environmental justice advocates, community leaders	- Training and onboarding of new members	- Robust community engagement and development of community-centered programs and practices	- Long term sustainability of PVD Tree Plan implementation to advance tree equity
- 1 staff person - 20 Community Tree Ambassadors - Childcare, refreshments and interpretaion services	**Community Tree Planning Forums in focus low canopy neighborhoods**	- 6-9 community forums each attended by 20-30 community residents - 150 residents identify localized planting and tree priorities	Residents of 33 low canopy census blocks	- Residents of low canopy neighborhoods define tree planting and care priorities - Identify issues and barriers	- Implementation of tree planting as preferred by the community - Test strategies to address issues and barriers identified	- Residents support and benefit from newly planted trees and become more engaged in future actions
- Collaboration Coordinator - Steering Committee members	**Engage in dialogue with industry and institutional stakeholders**	- Sector specific stakeholder meetings to develop potential partnerships in implementing the PVD Tree Plan	Tree care industry, public utilities, major health and academic institutions	- Identify early opportunities for partnerships and collaboration to implement community priorities - Identify obstacles and challenges to plan implementation	- Test implementation of early opportunities - Use EJCPS method to address obstacles and challenges - Develop new approaches - Build stronger partner relationships through collaborative problem solving	- Scale implementation of successful partnerships with stakeholders
- PNPP staff - Ambassadors - 100 resident volunteers - 125 trees and related services	**Develop and implement a Residential Yard Tree Planting Pilot Project**	-Planting 125 trees in residential yards	Residents of 33 low canopy census blocks	- Planting locations identified - Planting begins	- Planting continues and residential pilot refined from lessons learned	- Direct benefits to residents of planting location and improved canopy benefits to neighborhood including reduced heat islands and ir pollution and climate resilience
- PNPP Street Tree Planting Program staff - City Forestry staff - Ambassadors - 200 volunteers - 825 trees and related services provided in-kind	**Use the Neighborhood Street Tree Award Program to implement community planting priorities**	- Coordination of 25 street tree planting projects of 825 trees in areas defined by Community Forum participants	Residents of 33 low canopy census blocks	- Planting locations identified by neighborhood residents - Planting begins	- Planting continues in community priority locations	- Neighborhood benefits from more equitable tree canopy including health, resilience and recreation
- Steering Committee - Ambassadors	**Review and adapt programs**	- Ongoing review of program implementation - Annual all partners review	- Steering Committee - Ambassadors - All partnersa	- Establish culture of learning and adaptation to evolving events	- Adjustments of practices and programs as needed to center community priorities.	- Enhanced ability to respond and adapt to community priorities - Trust established among project partners and community - Foundation set to substantially scale programs in next phase of implementing the plan

INDEPENDENT AUDITOR'S REPORT

The Board of Directors
United Charitable

Opinion

We have audited the financial statements of United Charitable (the Organization), which comprise the statements of financial position as of December 31, 2021 and 2020, the related statements of activities, functional expenses, and cash flows for the years then ended, and the related notes to the financial statements.

In our opinion, the accompanying financial statements present fairly, in all material respects, the financial position of the Organization as of December 31, 2021 and 2020, and the changes in its net assets and its cash flows for the years then ended, in accordance with accounting principles generally accepted in the United States of America.

Basis for Opinion

We conducted our audits in accordance with auditing standards generally accepted in the United States of America (GAAS). Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report. We are required to be independent of the Organization and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements relating to our audits. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Responsibilities of Management for the Financial Statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with accounting principles generally accepted in the United States of America, and for the design, implementation, and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the Organization's ability to continue as a going concern within one year after the date that the financial statements are issued or available to be issued.

ED_016126_00000404-00003

Auditor's Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with GAAS will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the financial statements.

In performing an audit in accordance with GAAS, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.
- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Organization's internal control. Accordingly, no such opinion is expressed.
- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the financial statements.
- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about the Organization's ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control–related matters that we identified during the audit.

NOTES TO FINANCIAL STATEMENTS

Note 1. Nature of Activities and Significant Accounting Policies

United Charitable (the Organization), operates exclusively as an organization authorized to engage in religious, charitable, scientific, literary or educational activities by consolidating the administration of these activities through fiscally sponsored programs and donor advised funds.

Any person or corporation, with approval from the Organization's Board of Directors, may establish a Charitable Program at the Organization to engage in activities compatible to the mission objectives of the Organization. Charitable Programs are held and administered by the Organization. Assets donated to the Organization in support of the purposes of specific charitable programs operated by the Organization are treated as net assets with donor restriction dedicated to those specific purposes, and that only the sponsorship fees, interest and charges paid to the general fund of the Organization shall be treated as net assets without donor restriction. The Organization observes the charitable trust doctrine to maximize the protection of restricted assets from potential general creditors of the Organization. Final approval of the use of all Charitable Program Funds rests with the Organization and its Board of Directors.

Donor Advised Funds at the Organization are administered under restrictions set forth in the 2006 Pension Protection Act. Donors may make recommendations on the investment of or the use of donated funds, which are restricted to qualified charities in the United States and abroad. Donors may also organize a scholarship program with the Organization and recommend to disburse funds to the college or university of a scholarship recipient. As with its Charitable Programs, the Organization maintains final oversight on all donations and scholarship requests for its Donor Advised Funds.

A summary of the Organization's significant accounting policies follows:

Basis of accounting: The financial statements of the Organization have been prepared in accordance with accounting principles generally accepted in the United States of America (U.S. GAAP), whereby revenues are recorded when earned and expenses are recorded when obligations are incurred.

Cash and cash equivalents: The Organization considers highly liquid investments purchased with maturities of less than three months to be cash equivalents. The Organization maintains its cash in checking and savings accounts with financial institutions. Such deposits are insured by the Federal Deposit Insurance Corporation (FDIC) up to $250,000 per bank. The Organization has not experienced any losses in any accounts and does not believe it is exposed to significant credit risk with these deposits.

Grants receivable: Grants receivable that are expected to be collected in less than one year are reported at net realizable value. Grants receivable that are expected to be collected in more than one year are recorded at fair value at the date of promise. That fair value is computed using a present value technique applied to anticipated cash flow. Amortization of the resulting discount is recognized as contribution revenue. There was no bad debt expense related to grants and other receivables for the years ended December 31, 2021 and 2020.

***Investments accounted for using the equity method*:** The Organization receives CFLP/LLC contributions, where donors establish a CFLP/LLC, contribute various assets, many of which are security instruments, and then donate a percentage of the membership units to the Organization. The donor is the general partner and the Organization is a limited partner of the CFLP/LLC. As such, the Organization cannot and does not exercise any management authority over the operation of these entities.

Note 1. Nature of Activities and Summary of Significant Accounting Policies (Continued)

CFLP/LLCs are recorded at estimated fair value as of the date of donation, and are subsequently reported using the equity method. CFLP/LLC donations to the Organization for the years ended December 31, 2021 and 2020 were $3,991,982 and $2,414,054, respectively.

Investments accounted for using fair value: Investments are originally recorded at cost if purchased or estimated fair value on the date of donation. Subsequently, investments are carried at fair value. Net investment income (loss) is reported in the statement of activities and consists of interest and dividend income, realized and unrealized capitals gains and losses, less external investment expenses.

Split-interest agreements: Split-interest agreements consist of charitable remainder trusts. Under charitable remainder trusts, donors establish and fund trusts with specified distributions to be made to beneficiaries over the trusts' terms. The Organization records charitable remainder trusts for which it is not the trustee at the net present value of the projected cash flows.

Property and equipment: Property and equipment includes land, buildings, furniture, fixtures and equipment that are used in charitable activities of the Organization's Charitable Programs. These assets are recorded at cost or, if donated, at net realizable value at the date of donation. Depreciation is computed on the straight-line basis over the estimated useful lives of 3 to 30 years.

All acquisitions of property and equipment of $5,000 or more, and all expenditures for major renewals and betterments that extend the useful lives of property and equipment, are capitalized. Expenditures for maintenance and repairs are charged to expense as incurred.

Income taxes: The Organization is exempt from federal and state income taxes under Section 501(c)(3) of the Internal Revenue Code; accordingly, the accompanying financial statements do not reflect a provision or liability for federal and state income taxes.

The most significant tax positions of the Organization are its assertion that it is exempt from income taxes and its determination of whether any amounts are subject to unrelated business tax. The Organization adopted the provisions of accounting for uncertainty in income tax positions as required by Financial Accounting Standards Board (FASB) Accounting Standard Codification (ASC) Topic 740, *Income Taxes*; however, management does not believe it is exposed to any such positions as defined in this guidance, nor do they expect this to change significantly over the next 12 months. The Organization files Form 990, *Return of Organization Exempt from Income Tax*, annually with the United States Department of the Treasury. Such returns are subject to examination by taxing authorities, generally for a period of three years from the date the returns are filed.

Net assets*:* Net assets, revenues, gains, and losses are classified based on the existence or absence of donor or grantor imposed restrictions. Accordingly, net assets and changes therein are classified and reported as follows:

Net assets without donor restrictions: Net assets available for use in general operations and not subject to donor (or certain grantor) restrictions.

Note 1. Nature of Activities and Summary of Significant Accounting Policies (Continued)

Net assets with donor restrictions: Net assets subject to donor (or certain grantor) imposed restrictions. Some donor-imposed restrictions are temporary in nature, such as those that will be met by the passage of time or other events specified by the donor. Other donor imposed restrictions are permanent in nature, where the donor stipulates that resources be maintained in perpetuity. Gifts of long-lived assets and gifts of cash restricted for the acquisition of long-lived assets are recognized as revenue when the assets are placed in service. Donor imposed restrictions are released when a restriction expires, that is, when the stipulated time has elapsed, when the stipulated purpose for which the resource was restricted has been fulfilled, or both.

Revenue recognition: The Organization does not currently have significant revenue from contracts with customers, although this may change in the future.

Support:

Contributions: Non-cash contributions are recorded at fair value on the date of donation. Contributions are recorded when received as net assets without donor restrictions or net assets with donor restrictions, depending on the existence and/or nature of any donor restrictions. All donor-restricted support is reported as an increase in net assets with donor restrictions. When a restriction expires, that is, when a stipulated time restriction ends or a purpose restriction is accomplished, net assets with donor restrictions are reclassified to net assets without donor restrictions and reported in the statements of activities as net assets released from restrictions.

Gain or loss from equity method investee: The Organization's share of the net income or loss of CFLP/LLC will be recognized in the Organization's statements of activities and added to the investment balance, and dividends received from CFLP/LLC will be treated as a reduction of the investment balance.

Functional allocation of expenses: Certain costs of providing various program services and other activities have been summarized on a functional basis in the statements of activities. The statements of functional expenses present the natural classification detail of expenses by function. Accordingly, certain costs have been allocated among the programs and supporting services. Expenses that can be identified with a specific program or supporting service are allocated directly. Other expenses that are common to several functions are allocated by various statistical bases.

Use of estimates: The preparation of financial statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could vary from the estimates that were used.

Commitments and contingencies: The Organization may periodically be involved in various legal proceedings. It is the Organization's policy to accrue amounts related to these legal matters if it is probable that a liability will be incurred and an amount is reasonably estimable. The Organization believes that any legal proceedings in which it is involved will not materially affect its financial position, future operating results or cash flows. However, it is reasonably possible that management's estimate could change in the future.

Note 1. Nature of Activities and Summary of Significant Accounting Policies (Continued)

Upcoming accounting pronouncements: In February 2016, the FASB issued ASU 2016-02, *Leases* (Topic 842), which sets out the principles for the recognition, measurement, presentation and disclosure of leases for both parties to a contract (i.e. lessees and lessors). The new standard requires lessees to apply a dual approach, classifying leases as either finance or operating leases based on the principle of whether or not the lease is effectively a financed purchase by the lessee. This classification will determine whether lease expense is recognized based on an effective interest method or on a straight-line basis over the term of the lease. A lessee is also required to record a right-of-use asset and a lease liability for all leases with a term of greater than 12 months regardless of their classification. Leases with a term of 12 months or less will be accounted for similarly to existing guidance for operating leases today. The new standard requires lessors to account for leases using an approach that is substantially equivalent to existing guidance for sales-type leases, direct financing leases and operating leases. The new standard is effective for fiscal years beginning after December 15, 2021, and interim periods within fiscal years beginning after December 15, 2022. The Organization is currently evaluating the impact of the adoption of the new standard on its financial statements.

In September 2020, the FASB issued ASU 2020-07, *Presentation and Disclosures by Not-for-Profit Entities for Contributed Nonfinancial Assets*. Not-for-profits will be required to provide additional information on the contributions of nonfinancial assets they receive under a new accounting standard issued. Contributed nonfinancial assets can include fixed assets such as land, buildings, and equipment; the use of fixed assets or utilities; materials and supplies, such as food, clothing, or pharmaceuticals; intangible assets; and recognized contributed services. The new ASU requires a not-for-profit to present contributed nonfinancial assets as a separate line item in the statement of activities, apart from contributions of cash or other financial assets. The standard also requires a not-for-profit to disclose contributed nonfinancial assets recognized within the statement of activities, disaggregated by category that depicts the type of nonfinancial assets. For each category of contributed nonfinancial assets recognized, the standard requires a not-for-profit to disclose qualitative information about whether the contributed nonfinancial assets were either monetized or utilized during the reporting period. If they were utilized, a description of the programs or other activities in which those assets were used is required. The not-for-profit's policy (if any) about monetizing rather than utilizing contributed nonfinancial assets must also be disclosed as well as a description of any donor-imposed restrictions associated with the contributed nonfinancial assets. The FASB is requiring the standard to be applied retrospectively. The amendments take effect for annual reporting periods beginning after June 15, 2021, and interim periods within annual reporting periods beginning after June 15, 2022. Early adoption is permitted. The Organization is currently evaluating the full effect that the adoption of this standard will have on the financial statements.

Subsequent events: The Organization has evaluated all subsequent events through December 2, 2022, which is the date these financial statements were available to be issued. See Note 11 for a discussion of subsequent events.

NOTES TO FINANCIAL STATEMENTS

Note 2. Liquidity and Availability of Resources

The Organization's financial assets available within one year of the combined statement of financial position date for general expenditures, were comprised of the following at December 31, 2021:

Cash and cash equivalents	$ 4,606,301
Grants receivable, current portion	101,790
Other receivables	7,121
Financial assets available to meet cash needs for general expenditures within one year	**$ 4,715,212**

The Organization has a policy to structure its financial assets to be available as its general expenditures, liabilities and other obligations become due.

The Organization is supported by contributions with donor restrictions. Because a donor's restriction requires resources to be used in a particular manner or in a future period, the Organization must maintain sufficient resources to meet those responsibilities to its donors. These resources with a donor restriction may not be available for general expenditure within one year of the statements of financial position date.

Note 3. Investments Accounted for Using the Equity Method

The financial position and results of operations of the investments accounted for using the equity method as of and for the year ended December 31, 2021 are summarized below:

Condensed Balance Sheet Information as of December 31, 2021

	Investees holding commercial real estate	Investees holding financial assets	Investees holding nonfinancial assets
Total assets	$ 23,485,321	$ 100,548,178	$ 53,944,446
Total liabilities	$ 395,383	$ 600,649	$ 500,846
Equity	23,089,938	99,947,529	53,443,600
Total liabilities and equity	$ 23,485,321	$ 100,548,178	$ 53,944,446

Results of Operations for Year Ended December 31, 2021

Results of operations	$ 1,977,576	$ 5,952,068	$ 1,371,832

ED_016126_00000404-00016

Note 3. Investments Accounted for Using the Equity Method (Continued)

The financial position and results of operations of the investments accounted for using the equity method as of and for the year ended December 31, 2020 are summarized below:

Condensed Balance Sheet Information as of December 31, 2020

	Investees holding commercial real estate	Investees holding financial assets	Investees holding nonfinancial assets
Total assets	$ 17,405,835	$ 117,655,047	$ 53,089,020
Total liabilities	$ 87,126	$ 940,076	$ 500,171
Equity	17,318,709	116,714,971	52,588,849
Total liabilities and equity	$ 17,405,835	$ 117,655,047	$ 53,089,020

Results of Operations for Year Ended December 31, 2020

Results of operations	$ 940,124	$ 5,990,068	$ 3,576,098

Note 4. Investments Held at Fair Value and Investment Return

Investment return consists of the following at December 31:

	2021	2020
Interest and dividends	**$ 690,022**	$ 562,363
Net realized gains	**2,033,267**	382,888
Net unrealized gains	**36,492**	1,152,145
Change in value of split-interest agreements	**(16,880)**	(14,575)
Investment fees	**(225,847)**	(184,784)
Total investment return	**$ 2,517,054**	$ 1,898,037

FASB ASC 820, *Fair Value Measurements*, establishes a framework for measuring fair value. That framework provides a fair value hierarchy that prioritizes the inputs to valuation techniques used to measure fair value. The hierarchy gives the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3). The three levels of the fair value hierarchy under FASB ASC 820 are described as follows:

Level 1: Inputs to the valuation methodology are unadjusted quoted prices for identical assets or liabilities in active markets that the Organization has the ability to access.

Note 4. Investments Held at Fair Value and Investment Return (Continued)

Level 2: Inputs to the valuation methodology include: quoted prices for similar assets or liabilities in active markets; quoted prices for identical or similar assets or liabilities in inactive markets; inputs other than quoted prices that are observable for the asset or liability; inputs that are derived principally from or corroborated by observable market data by correlation or other means.

If the asset or liability has a specified (contractual) term, the Level 2 input must be observable for substantially the full term of the asset or liability.

Level 3: Inputs to the valuation methodology are unobservable and significant to the fair value measurement.

The asset's or liability's fair value measurement level within the fair value hierarchy is based on the lowest level of any input that is significant to the fair value measurement. Valuation techniques used must maximize the use of observable inputs and minimize the use of unobservable inputs.

The Organization believes its valuation methods are appropriate and consistent with other market participants, the use of different methodologies or assumptions to determine the fair value of certain financial instruments could result in a different fair value measurement at the reporting date. There have been no changes in the techniques and inputs used at December 31, 2021 and 2020.

Following is a description of the valuation methodologies used for assets measured at fair value. There have been no changes in the techniques and inputs used at June 30, 2022 and 2021.

Mutual funds: Mutual funds are valued at the daily closing price as reported by the fund. Mutual funds held by the Organization are open-end mutual funds that are registered with the Securities and Exchange Commission (SEC). These funds are required to publish their daily NAV and to transact at that price. The mutual funds held by the Organization are deemed to be actively traded.

Money fund accounts: Shares of money funds are valued at quoted market prices that represent the net asset value (NAV) of shares held by the Entity at year-end.

Exchange traded funds (ETF): The fair value of ETFs is the market value in trades in active markets.

Real estate investment trust (REIT): The fair value of REITs is the market value in trades in active markets.

Equity securities: Securities listed on US and global exchanges generally are valued at the last sale price on the exchange on which the security is principally traded. The value of securities listed on the NASDAQ Stock Market, Inc. is generally the NASDAQ Official Closing Price. Listed foreign equity securities for which the latest sale prices are not available generally are valued at the average of the latest bid and ask price as of the closing of the primary exchange where such securities are normally traded. Unlisted securities generally are valued at the last sale price.

Annuities: The fair value of annuities is derived from the underlying value of the contracts.

Note 4. Investments Held at Fair Value and Investment Return (Continued)

The following table sets forth by level, within the fair value hierarchy, the Organization's assets at fair value as of December 31, 2021:

	Fair Value Measurements as of December 31, 2021			
	(Level 1)	**(Level 2)**	**(Level 3)**	**Total**
Investments, fair value				
Mutual funds	**$ 8,660,110**	**$ -**	**$ -**	**$ 8,660,110**

Split-Interest agreements	**-**	**-**	**1,796,439**	**1,796,439**
Total assets in the fair value hierarchy	**$ 28,532,749**	**$ 327,134**	**$ 1,796,439**	**$ 30,656,322**

The following table sets forth by level, within the fair value hierarchy, the Organization's assets at fair value as of December 31, 2020:

	Fair Value Measurements as of December 31, 2020			
	(Level 1)	(Level 2)	(Level 3)	Total
Investments, fair value				
Mutual funds	$ 7,979,723	$ -	$ -	$ 7,979,723
Money fund accounts	393,814	-	-	393,814
ETF	11,992,195	-	-	11,992,195
REIT	210,864	-	-	210,864
Equity securities, publicly traded	2,006,675	-	-	2,006,675
Annuities	-	346,196	-	346,196
Total investments, fair value	22,583,271	346,196	-	22,929,467
Split-Interest agreements	-	-	1,813,319	1,813,319
Total assets in the fair value hierarchy	$ 22,583,271	$ 346,196	$ 1,813,319	$ 24,742,786

Note 4. Investments Held at Fair Value and Investment Return (Continued)

The following table summarizes the changes during the year to Level 3 investment instruments for the years ended December 31:

	2021	2020
	Split-Interest Agreements	
Balances, beginning of year	**$ 1,813,319**	$ 1,565,694
Additional contributions	**-**	262,200
Realized and unrealized gains (losses)	**(16,880)**	(14,575)
Balances, end of year	**$ 1,796,439**	$ 1,813,319

Note 5. Property and Equipment

Property and equipment consists of the following at December 31:

	2021	2020
Furniture, fixtures & office equipment	**$ 31,532**	$ 31,532
Less accumulated depreciation	**(25,799)**	(20,680)
Property and equipment, net	**$ 5,733**	$ 10,852

Note 6. Net Assets with Donor Restrictions

Net assets with donor restrictions consist of the following at December 31:

	2021	2020
Purpose Restricted		
Charitable Programs	**$ 201,148,985**	$ 187,729,275

Net assets released from restriction during the years ended December 31, 2021 and 2020 through satisfaction of the following purpose restrictions:

	2021	2020
Purpose Restricted		
Charitable Programs	**$ 10,730,885**	$ 9,338,136

ED_016126_00000404-00020

Note 7. Charitable Programs and Donor Advised Funds

Each program approved by the Organization's Board becomes a Charitable Program. At December 31, 2021 and 2020, the Organization had approximately 100 and 121 Charitable Programs, respectively. The Program Manager, who is not a contributor, may nominate contributions or gifts received by the Organization for a particular charitable use.

At December 31, 2021 and 2020, the Organization had approximately 432 and 410 donor advised funds, respectively. Net assets primarily represent the initial contribution made by the founder and contributions and fees received for donor advised funds approved by the Board. The donor may nominate contributions or gifts received by the Organization for a particular charitable use. Unexpended amounts are treated as net assets with donor restriction.

Note 8. Retirement Plan

All Organization employees who have been employed by the Organization for thirty days are eligible to participate in a 401(k) plan. The Organization made retirement plan contributions of $24,248 and $23,592 for the years ended December 31, 2021 and 2020, respectively.

Note 9. Leases

The Organization leased office space in McLean, Virginia in February 2016, which expired in December 2021. The terms of the lease agreement required base monthly payments of $7,136, increasing three percent each year. The lease was also subject to operating cost increases and real estate tax increases. During the year ended December 31, 2021, the Organization entered into a new office space lease in Ashburn, Virginia, to commence January 1, 2022 and expire December 31, 2026 with the option to renew for an additional five years. The terms of the lease agreement require base monthly payments of $5,400, increasing approximately three percent each year.

Future minimum lease payments as of December 31, 2021 are as follows:

Years Ending December 31,		Amount
2022	$	64,800
2023		66,744
2024		68,748
2025		70,800
2026		72,924
Total minimum lease payments	$	344,016

Rent expense was $178,780 and $174,867 for the years ended December 31, 2021 and 2020, respectively. This expense includes month-to-month and one-time rentals related to the Organization's programs.

Note 10. Related Party Transactions

The Organization is supported by National Heritage Foundation (NHF). NHF is organized exclusively for the benefit of United Charitable, and contributed of $334,683 and $67,446 for the years ended December 31, 2021 and 2020, respectively. The Organization had an amount due from the supporting organization of $317,008 and $306,555 for the years ended December 31, 2021 and 2020.

The Organization has issued a $1,000,000 line of credit to the supporting organization, which is unsecured and due on demand. There was no outstanding balance at December 31, 2021 and 2020. Interest is at two percent. Related interest income was $-0- for the years ended December 31, 2021 and 2020.

Note 11. Paycheck Protection Program

As part of the Coronavirus Aid, Relief, and Economic Security (CARES) Act, the Organization received Paycheck Protection Program (PPP) loans in the amounts of $187,517 and $180,633, during the years ended December 31, 2021 and 2020, respectively. The Organization accounted for the PPP loans as contributions in the years ended December 31, 2021 and 2020 as the conditions for PPP loan forgiveness had been fully or substantially met. The PPP loans were forgiven in full in May 2021 and 2022, respectively.

SECTION F - OTHER BUDGET INFORMATION

21. Direct Charges: 523700

22. Indirect Charges: 12920

23. Remarks: Leveraged non federal resources estimated at 2,083,200. Have not included as In-kind but rather as leveraged. This can be adjusted with input from Grant Officer as needed.

Budget Narrative and Justification:

PROJECT OBJECTIVE/ACTIVITY	FFY2024	FFY2025	FFY2026	HOURLY RATE	GRANT REQUEST	LEVERAGE
OBJECTIVE 1 - DEVELOP TRAINING/AGENDA ENVIRONMENTAL TECHNICAL CONTENT FOR AFE EVENT						
Activity 1: General coordination, marketing, event management, and planning.	520	520	520	85		132,600
Activity 2: Develop annual event content in collaboration with over 30 existing partnering organizations. Partner time averaging 120 hours/year as leveraged organizational contribution based upon estimate hourly rate.	4,120	4,120	4,120	85		1,050,600
Objective 1 - Subtotal	**4,640**	**4,640**	**4,640**		**0**	**1,183,200**
OBJECTIVE 2 - PROVIDE APPLICATION PROCESS FOR FINANCIAL SUPPORT VIA SCHOLARSHIPS FOR EJ IMPACTED COMMUNITIES						
Activity 3: create online application process and provide clear criteria for selection	320	40	40	85	34,000	
Activity 4: process scholarships and verify reimbursement requests	320	260	260	85	71,400	
Objective 2 - Subtotal	**640**	**300**	**300**		**105,400**	
OBJECTIVE 3 – GRANT ADMINISTRATION, REPORTING, MEASUREMENT						
Activity 5: Provide quarterly/mid-year/final reports to EPA	160	160	160	85	13,600	
Activity 6: financial management by staff to include invoicing, billing, recordkeeping, expense reports, staff training	120	120	120	85	10,200	
Objective 3 Subtotal	**280**	**280**	**280**		**23,800**	
Personnel					**129,200**	

Personnel

Personnel costs are identified (above) by programmatic activity, hourly rate, and hours needed to complete the project goals and objectives. Alaska Forum Staff responsible for completing these tasks. Activities 3-6 depend upon the workload produced in Activities 1 and 2 which are provided as leveraged (indicated by yellow shaded background). Hourly rate provided includes all employee costs and fringe is not applied in addition. Activity 2 is calculated as 520 hours of Alaska Forum staff time per year and estimating 30 partners contributing 120 hours each peer year.

Activities 3-4 are additional hours required to establish and process activities funded solely by this proposal to provide access to training and education for rural Alaskans through travel scholarships. In the first year (FFY2024) additional time to initially create applications systems and process will allow efficiencies and reduced in years FFY2025-26 as the process has been established.
Activities 5-6 are basic requirements to ensure proper grant reporting and fiscal responsibility.

Travel (mileage, airfare, lodging)*	125,000	125,000	125,000		375,000	
Equipment					0	
Supplies	6,500	6,500	6,500		19,500	45,000
Facility	120,000	120,000	120,000			360,000
Audio/Visual	50,000	50,000	50,000			150,000
Virtual Hosting	60,000	60,000	60,000			180,000
Contractual	55,000	55,000	55,000		0	165,000
Other						
Indirect Costs @10% of personnel					12,920	
				Project Total	**536,620**	**2,083,200**

Travel

Travel is specifically allocated for participant travel as scholarships. Staff will not be traveling using these funds. In some of our past federal grants, participant travel is allocated into the Other category which we would be able to adjust based upon grant officer review.

***TRAVEL BUDGET DETAIL**	**airfare**	**registration**	**hotel**	**stipend**	**local transport**	**anticipated # scholarships**
Attend AFE in 2024	750	600	800	250	100	50
Attend AFE in 2025	750	600	800	250	100	50
Attend AFE in 2026	750	600	800	250	100	50
total	375,000					

The associate travel costs provided for scholarships is provided in more detail in the table above. This is an estimate of course as travel from each community can very substantially in airline costs, or mileage. Our experience indicates this is a reasonable effort. Any surplus travel in each category would be allocated to additional scholarships as possible. Registration costs are included based upon estimate cost burden of each participant on the event expenses. For example, added fees for each registrant are incurred through our registration software platform. Name badges, printed programs, staff phone support are other incurred costs per participant.

Other

There are no costs established in the "Other" category. however, as noted above, grant officers may request that scholarships be applied to the Other category instead of Travel.

Supplies

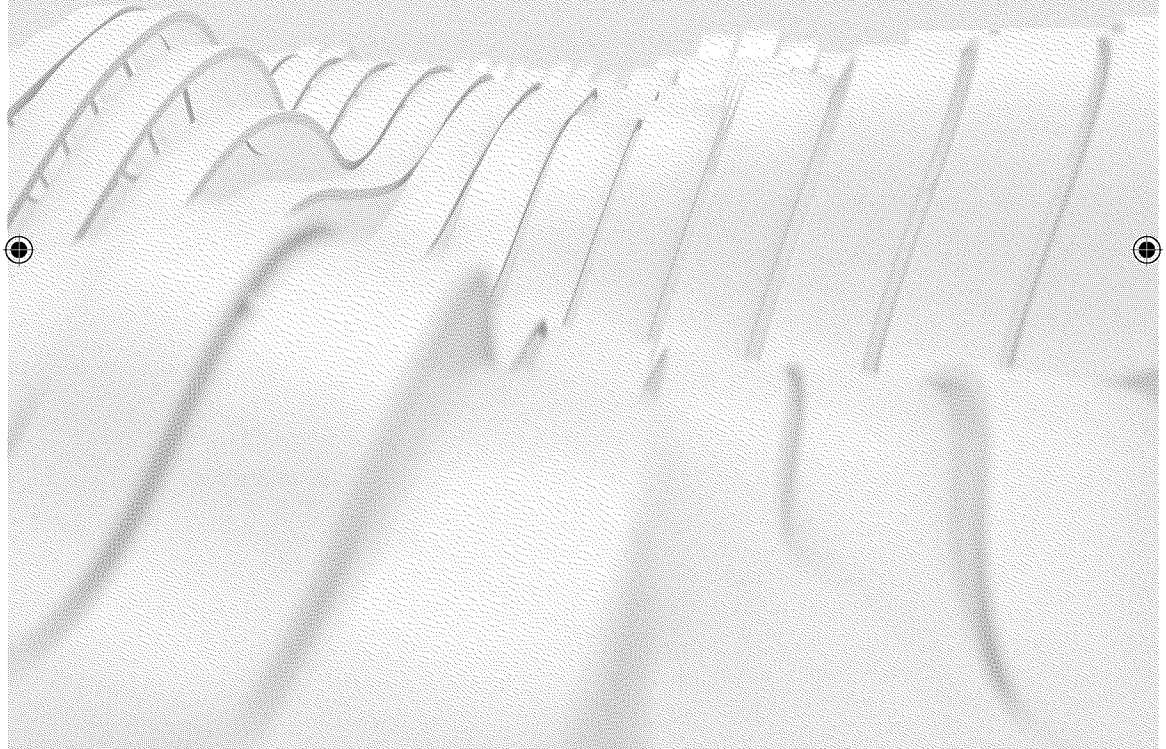
**SUPPLIES BUDGET DETAIL	Cost
laptop and display	4,000
printer	500
software	3,000
cell phone reimbursement monthly @ 125/month	4,500
paper, misc. office supplies	2,500
materials printing/production	5,000
total	**19,500**

The anticipated costs for supplies to ensure project success are provided in the budget detail above. These costs are provided to cover the full span of this grant period.

Equipment

There are no costs established in the Equipment category

Indirect Costs



The Alaska Forum does not have an established indirect rate and has applied the 10% rate only to personnel costs in the budget. As we have not requested indirect in any of our previous EPA grants, we have done this conservatively here and are open to input from EPA on the application of this cost.

Facility, Audio Visual, Virtual Hosting, and Contracts

We have provided a summary of our annual cost burden to accomplish the AFE Event to demonstrate the scope of leverage EPA gains in funding this proposal.

Budget Narrative

Personnel

Project Manager. For this specific project, the Project Manager oversees other program staff and provides project direction. Generally, the Project Manager is responsible for the management,

coordination, development, and implementation of economic and environmental development projects and programs deemed necessary to foster community and tribal economic development and environmental response. They coordinate with and manage projects in conjunction with other department coordinators, supervisors and managers, liaisons with necessary agencies, outside partners, and contractors to facilitate project or program success. The Project Manager identifies and defines project scope, resource needs, tracking mechanisms, implementation or business models, and desired outcomes. Oversees and manages applicable grants and grant staff related to economic development, including Tribal operations when necessary. Lastly, the Project Manager assists Village Governments in identifying Economic Development needs and priorities in response to the climate crisis. In overseeing the Kodiak Food Systems Vulnerability Assessment, the Project Manager will develop a strategic view of the assessment and ensure other staff remains on track with delineated objectives, milestones, deliverables, and measures of success. 7.5 hours/week x $55/hour x 104 weeks (project period) = **$42,900 to fund the Project Manager under this project.**

Kodiak Regional Capacity Development Coordinator. This individual will provide grant seeking, writing, and management support for Tribes. Additionally, they will work diligently to aid in capacity building efforts, as regard economic development and environmental justice projects. 26.25 hours/week x $27/hour x 104 weeks = **$73,710**.

Environmental and Economic Development Specialist. The Environmental and Economic Development Specialist manages all aspects of the project, in developing the Kodiak Food Systems Vulnerability Assessment. The Environmental and Economic Development Specialist works closely with the Environmental Coordinator and Project Manager to ensure all project tasks and objectives are met. They also work alongside the Project Manager to serve as a liaison between necessary agencies, outside partners, and contractors to facilitate project or program success. They assist in handling projects to ensure scope, resource needs, tracking mechanisms, implementation or business models, and desired outcomes are documented and in compliance with funder requirements. Under this project, the Environmental and Economic Development Specialist will attend a workshop, conference or training focused on climate change and adaptation in Alaska or another rural location that faces similar issues to coastal Alaska. They will attend this to gain skills and knowledge about food security, building resiliency, and vulnerability assessments. They will compile what was learned and discussed and include a report in the Kodiak Food Systems Vulnerability Assessment. 30 hours/week x $27/hour x 104 weeks = **$84,240 to fund the Environmental and Economic Development Specialist under this project.**

Personnel costs total $200,850

Fringe

KANA's fringe benefits include: FICA (7.65%), Employee selected health insurance (variable depending on the level of coverage selected), Workers' Compensation (variable depending on position), Unemployment Insurance Employer Paid Life Insurance (variable depending on employee age), Employer Paid Disability Insurance (part of life insurance benefit), Employer Paid Retirement (7%), Discretionary Leave (3%), and Holidays. Fringe expenses requested are both reasonable and customary for the State of Alaska. A significant portion of the fringe

benefits supports employee-selected health insurance which includes medical, dental, and vision. Fringe is calculated at 35.17% for each of the aforementioned positions. $200,850 x 35.17% = $70,639

Fringe costs total $70,639

Travel

Tribal & Partner Participants to Kodiak Food Systems Vulnerability & Economic Stability Workshop

In year one of the proposed project, KANA will host a Food Systems Vulnerability and Economic Stability Workshop. On day one of the workshop, Alaska Sea Grant will guide the discussion and provide expertise in talks with local Tribes. This facet of the workshop will also be supported by the Kodiak Food Cooperative, as they offer additional knowledge of subsistence resources and locally-grown foods. Day two of the workshop, however, will consist of a grants symposium that will advance Tribes' understandings of how to pursue and execute supportive, culturally-conscious funding opportunities. Through this symposium, we aim to help Tribes grow grant revenues, build and maintain thriving communities, and constitute their own success.

Airfare: $300 roundtrip airfare from village to Kodiak x 15 participants = $4,500
Per Diem: $65/day x 3 days x 15 participants = $2,925
Lodging: $200/night x 4 nights x 15 participants = $12,000

Total: $19,425

Village Travel for Staff

These funds will support sending KANA staff to villages for the gathering of needs assessment and grant support-related information, as well as provide relevant technical assistance.

Airfare: $300 x 2 staff x 6 village trips = $3,600
Per Diem: $45 x 2 days x 2 staff x 6 village trips = $1,080

Total: $4,680

Local Expert to Villages

Local Expert, Gayla Pederson, will collaborate and assist KANA with providing and gathering local Traditional Ecological knowledge based on my experience and interviews with others. She will also assist with creating educational content about harvesting and processing subsistence foods from Kodiak.

Airfare: $300 x 1 x 6 village trips = $1,800
Per Diem: $45 x 2 days x 6 village trips = $540

Total: $2,340

Federal Subsistence Board Meeting

Travel to and from the Federal Subsistence Board Meeting in Anchorage by the new hires under this project is supported by this line item. The Federal Subsistence Board is the decision-making body that oversees the Federal Subsistence Management Program. It is made up of the regional directors of the U.S. Fish and Wildlife Service, National Park Service, Bureau of Land Management, Bureau of Indian Affairs, the U.S. Forest Service, and there are three public members appointed by the Secretaries of the Interior and Agriculture: two represent rural subsistence users and one is the Federal Subsistence Board chairman. The Secretaries have delegated the authority to manage fish and wildlife for subsistence uses on Federal public lands and waters in Alaska to the Federal Subsistence Board. Staff will attend their meeting in order to express and receive relevant information.

Airfare: $300 roundtrip airfare from Kodiak to Anchorage x 2 staff = $700
Per Diem: $65/day x 2 days x 2 staff = $260
Lodging: $200/night x 2 nights x 2 staff = $800

Total: $1,760

One Health Meeting

Three KANA staff will attend the One Health meeting in Fairbanks at the following cost. At the meeting, hosted by the University of Alaska Fairbanks, we will engage in dynamic conversations and networking opportunities through hands-on workshops, individual/panel presentations, posters, and plenary sessions. This is expected to be the largest circumpolar One Health conference held in the United States in 2023, with participation anticipated from across the Arctic region.

Airfare: $550 roundtrip airfare from Kodiak to Fairbanks x 3 staff = $1,650
Per Diem: $65/day x 3 days x 3 staff = $585
Lodging: $200/night x 3 nights x 3 staff = $1,800

Total: $4,035

Travel costs total $32,240

Supplies

Workshop Supplies. Supplies for our workshop will include items such as eco-friendly binders, notebooks, and handouts. The estimated cost for this is $800

Workshop Refreshments. Refreshments for our workshop such as coffee, light snacks, and eco-friendly cups and utensils, will be necessary. These items are estimated to cost $800.

Report Booklet Supplies. $5/booklet x $75 = $375.

Community Outreach & Mini Workshop Supplies. The supplies under this line item will support village workshops, the co-op and camp events. We are budgeting $300/event for relevant supplies and estimate about ten events, totaling $3,000.

Canva Subscription. $110/year for two years = $220

Supplies costs total $5,195

Contractual

Local Subsistence Expert. A Local Subsistence Expert will be hired under this project to assist with relevant outreach, education, and traditional sharing of knowledge. While exact details are still being sorted out, this is estimated to cost the grant and project $14,440.

Alutiiq Museum. The Alutiiq Museum and our organization will collaborate on outreach, archiving materials, and creating an agriculture education box—activities that are anticipated to cost $10,591.

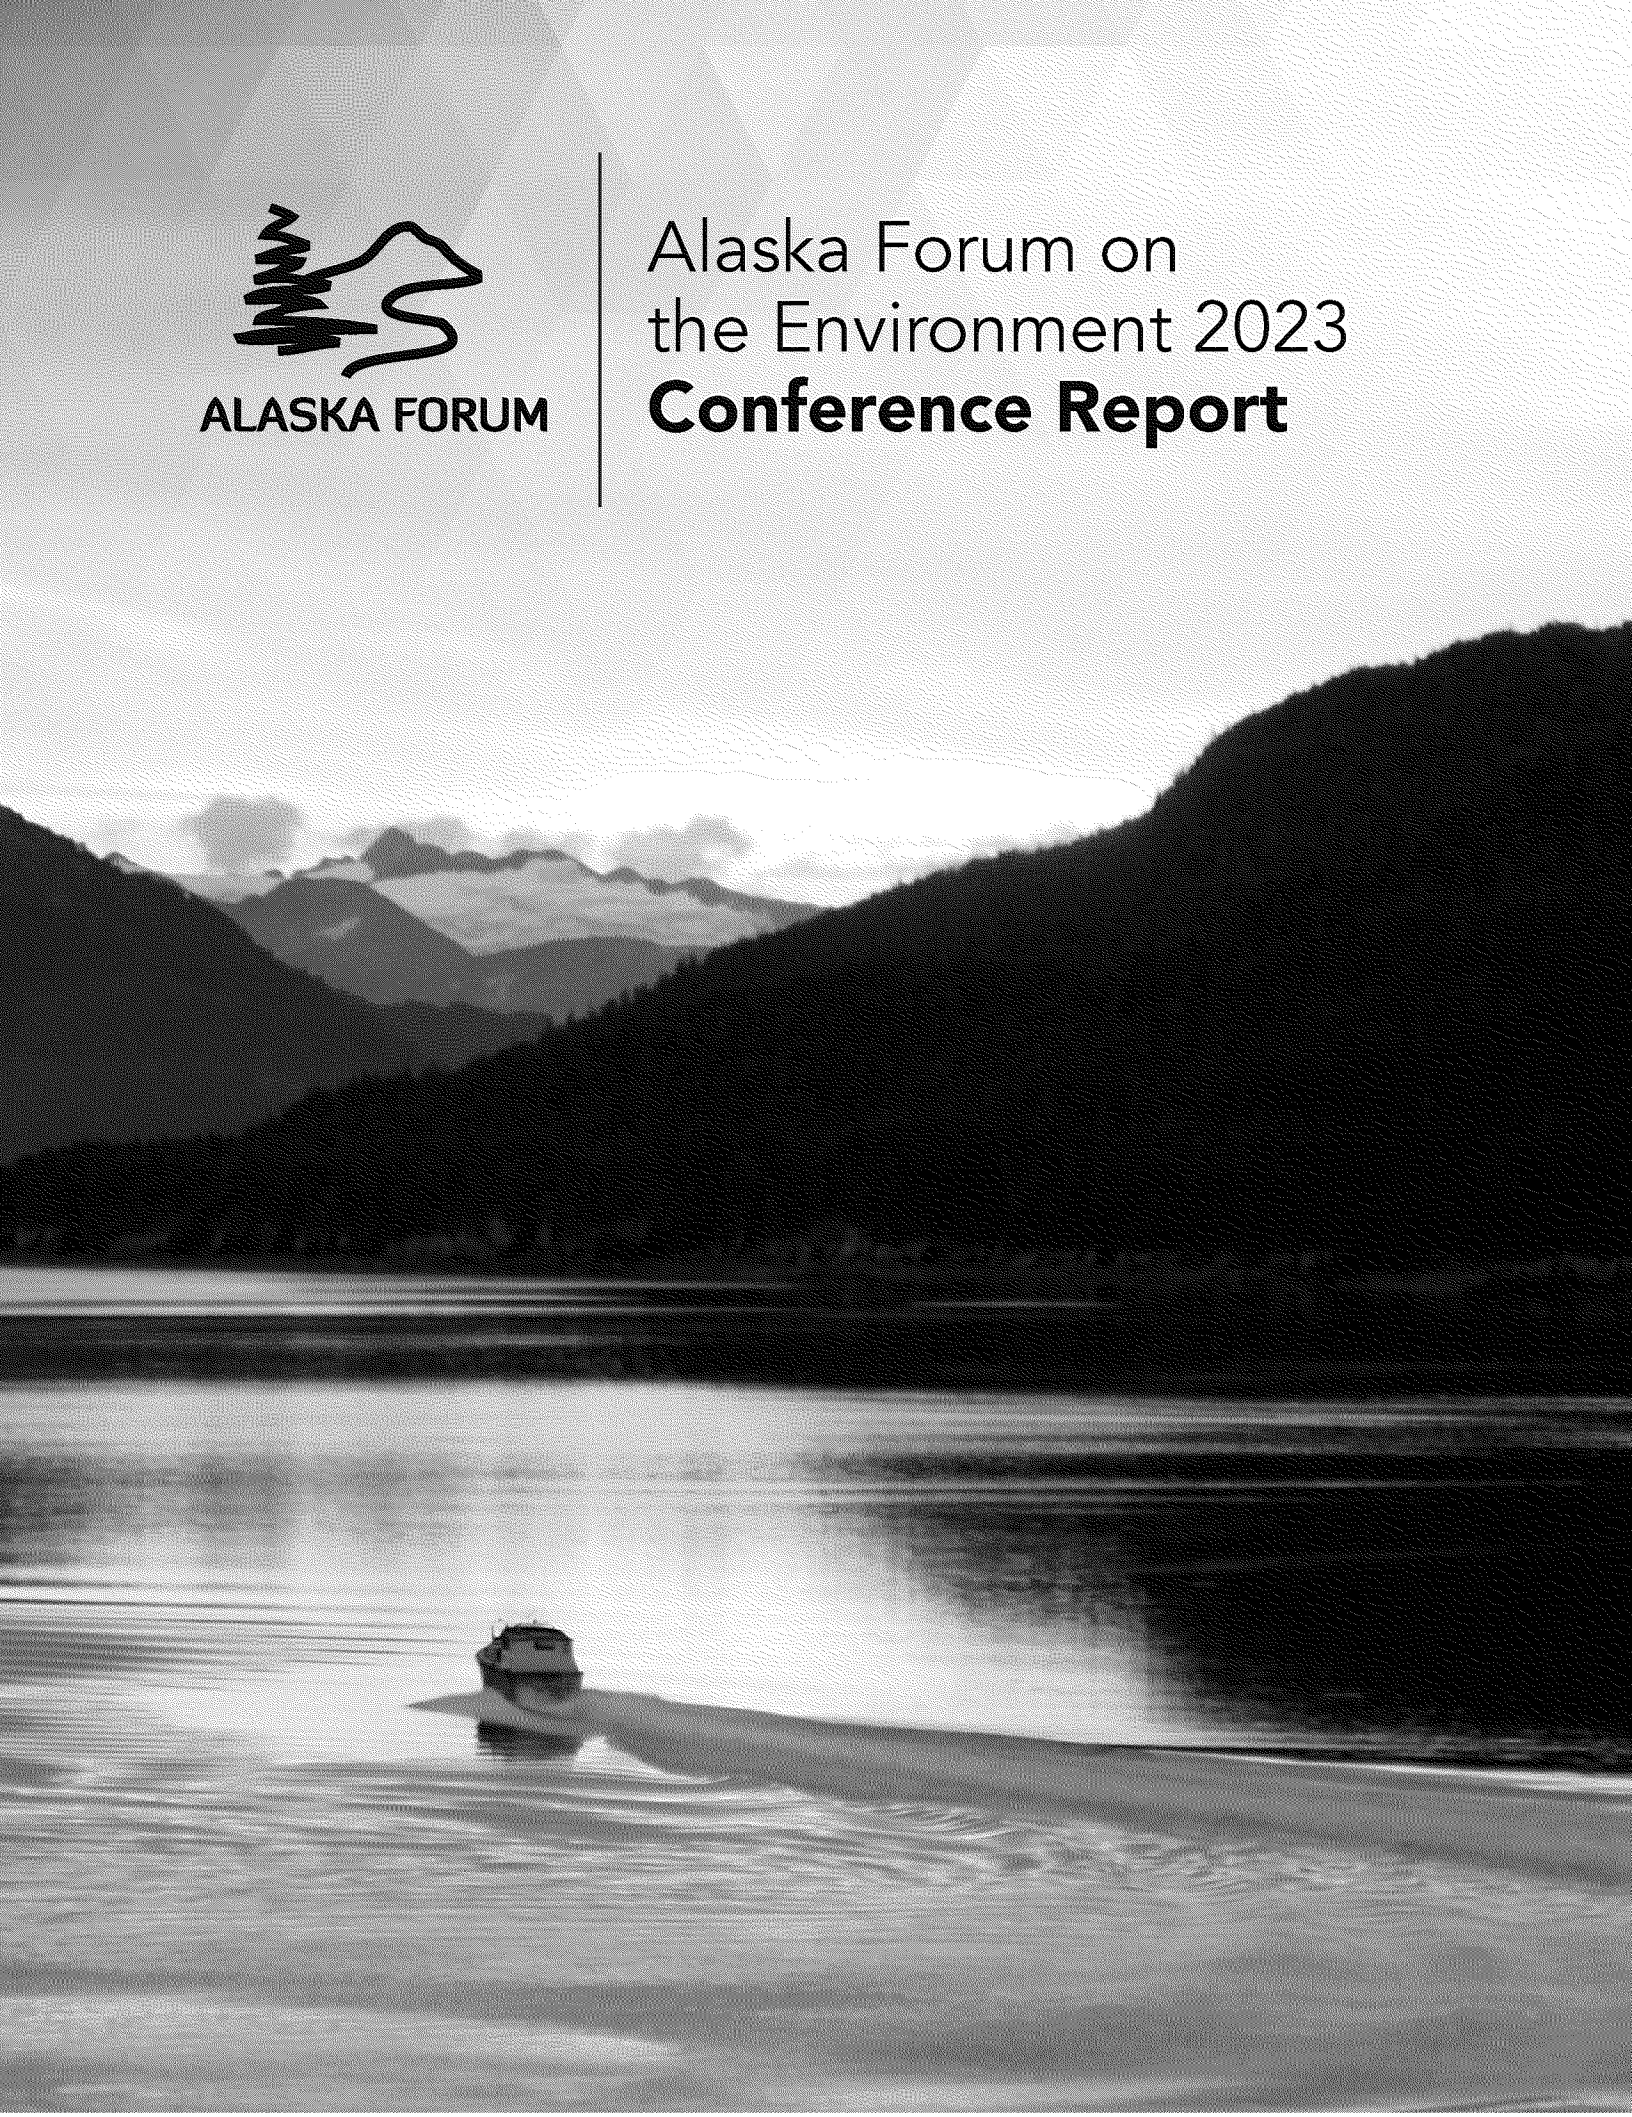
Kodiak Archipelago Leadership Institute. Under this project, KALI is committing to assisting KANA in conducting relevant surveys and outreach, at a cost of $95/hour, for an estimated need of 90 support hours. $95/hour x 90 hours = $8,850

ADF&G Longitudinal Assessment on Subsistence Data. Under this project, the Alaska Department of Fish and Game, Division of Subsistence, will conduct a Subsistence Survey to quantify the use of subsistence foods on the island. The data is used to inform education and policy. However, no longitudinal assessments of the data have been done. If funded, in Year 2, the Alaska Department of Fish and Game, Division of Subsistence, will analyze five decades of existing subsistence harvest and use data from the Kodiak communities and Kodiak City, helping us translate important and notable trends. Following similar work conducted on communities in Prince William Sound (http://www.adfg.alaska.gov/techpap/TP471.pdf), this household-level analysis will focus on trends in key subsistence species, and changes in resource use patterns. The Division will produce tables, figures, and interpretive text from these analyses, The Division will work closely with KANA staff to produce clear and digestible data summaries that can be distributed to tribal members and other members of the public. These data will help inform future research and regulatory decisions. This will cost an estimated $20,771.

Contractual costs total $54,532

Direct costs total $363,456

Indirect



44.2%. KANA's Federally Negotiated Indirect Cost Rate Agreement warrants a 44.2% rate for indirect costs affiliated with this project. As the EPA does not allow for indirect to be charged to contractual items, this rate will be calculated from full direct costs - contractual costs. $363,456 - $54,532 = $308,924 x .442 = $136,544

Indirect costs total $136,544

TOTAL REQUEST: $500,000

ALASKA FORUM

Alaska Forum on the Environment 2023 **Conference Report**

ED_016126_00000431-00001

Summary

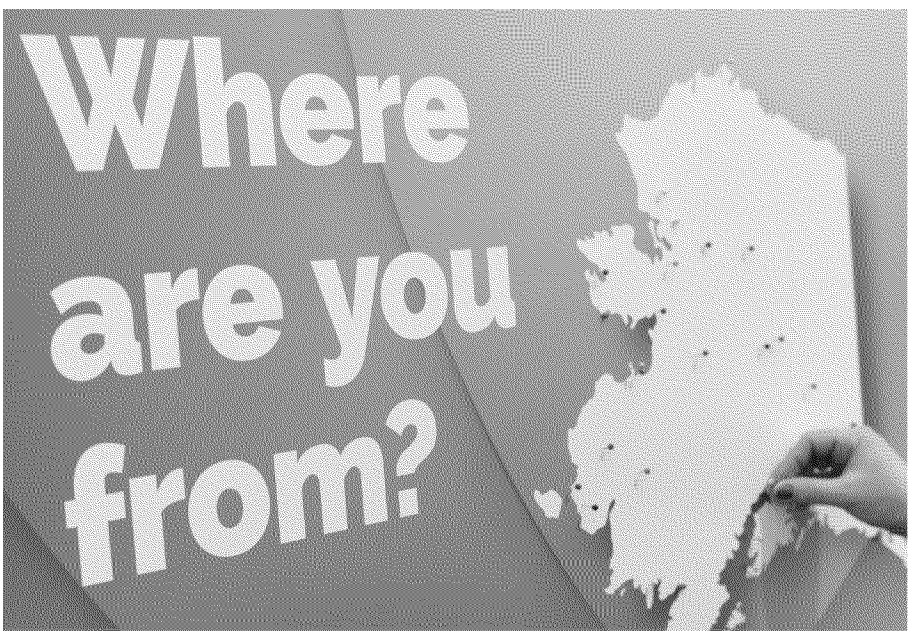
2023

In February 2023, the Alaska Forum on the Environment (AFE) conference celebrated its 25th year by hosting an in-person event, the first time since 2020 and the Covid-19 pandemic. Registration options were offered for both in-person and virtual attendees. As an organization, we were eager to be able to gather in-person again for this conference after two years of virtual events, and it was evident our attendees were too, with AFE 2023 setting a record of over 1200 people registered for the event. Of the more than 1200 attendees registered, 80% of attendees opted to attend in-person.

AFE 2023 saw recording setting attendance, as well as enhancements throughout the conference. Some new features at AFE included;

- Going more paperless with an easy-to-use mobile app and agenda
- Quick and efficient check in with iPads and onsite name badge printers
- A commemorative AFE 25th anniversary mug for all attendees
- Virtual Attendee Hub access for both in-person and virtual attendees
- A fun Wednesday night networking event in the exhibitor hall
- And so much more!

With help from our generous partners, including Knik Tribe, AFE was able to live stream or record every in-person technical session, making all 65+ sessions available in AFE's Virtual Attendee Hub for all attendees to watch live or post-event. AFE will continue with the year-round training model that was developed in 2021 by hosting bi-weekly virtual technical sessions throughout the remainder of the 2023, available to all registered attendees. All session recordings are also available through the end of the year in the Virtual Attendee Hub.



The Alaska Forum, the nonprofit organization that hosts the Alaska Forum on the Environment Conference, has a goal to cover the costs of the event through registrations, exhibitor's booth sales, and sponsorships/partners. We are happy to report that even with the increase of costs in nearly all categories and adding in the virtual event option, AFE was able to break even, covering all costs associated with the event.

AFE Training Takes Place All-Year Long!

During the Covid-19 Pandemic, AFE was forced to pivot to a virtual only training. Thanks to our partnership with Knik Tribe, we created the Alaska Connect online training platform which hosted AFE 2021, AFE 2022 and weekly technical trainings throughout each year.

The online training platform that we developed also allowed for AFE to continue environmental trainings throughout the year, as well as showcasing all session recordings all-year long. Even though we're able to host in-person events again, the year-round virtual training platform remains, adding value to AFE attendees throughout the year.

AFE energizes attendees. We are excited to continue to host virtual bi-weekly technical training sessions to keep up the momentum all year long. And provide access to recorded sessions from AFE 2023 through the end of the year for all attendees! As happy as we are to be back in-person, the virtual training platform is an added benefit for everyone.

RE: Letter of Commitment for Kodiak Area Native Association to the FY23 Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program Application

Dear Mr. Burney,

The Kodiak Harvest Food Cooperative (KHFC), operating in Kodiak, Alaska, is submitting this letter of Commitment to support its FY23 Environmental Justice Grant proposal, *Kodiak Tribal Food Security and Economic Stability Initiative.*

KHFC's Mission is to "Provide Kodiak communities with quality food choices that are locally sourced, economically sustainable, and environmentally responsible while promoting education and engagement." As of this date, we have 620 members and operate an 1800 square foot retail operations, selling organic produce, Alaska Grown produce, a wide selection of Alaskan value-added food products, and an array of additional food items.

The food available in the local grocery store is limited, is high cost, and often of low inventory. Living in the village communities, which are only further accessible by boat or plane, offer even more significant costs and burdens for food. The main source of local food in Alaska is subsistence gathering. Locally grown and harvested foods are a significant component of regional food security. Understanding how important foods that are grown and harvested on the Island will be impacted by climate change is not only important to food security in the region but the nutritional, cultural, economic and spiritual well-being of Kodiak Tribes. KHFC supports the need for dependable subsistence and locally grown food access and exploration of climate change impacts so we can ensure reliable and available food sources into the future. KHFC is committing to the project as follows:

Support for staff time and our retail storefront space to collaborate with KANA to participate in the workshops and events that are components of the proposed project and identify important subsistence resources and locally grown foods. The co-op will also work with KANA and Kodiak Tribes to host educational events in our space on local food growing, processing, and preservation methods.

PO Box 8110, Kodiak, AK 99615
info@kodiakharvest.org

KODIAK HARVEST FOOD CO-OP

KHFC will benefit from the project through information gathered from the Food System Vulnerability Assessment and the results from the hoop house inventory and utilization analysis to assess our inventory offerings, better work with our local agricultural producers to understand the impacts of climate change on growing conditions, and better address food security issues in our region.

Thank you for considering our FY23 Environmental Justice Grant Proposal.

Respectfully,

Stephanie Mason, KHFC Chair

Resources/ Inputs	Activities	Outputs	Audience	Short-Term Outcomes (6-12 months)	Intermediate Outcomes (1-2 years)	Long-Term Outcomes (2+ years)
Staff time Partnerships Grant and financial support Contractors Local experts Volunteers	Create steering committee Conduct survey and outreach in order to gather actionable information for the needs assessment Assess climate change impacts on food Engage with harvesters and growers Hire Kodiak Regional Capacity Development Coordinator	The Kodiak Food Systems Vulnerability Assessment (KFSVA): a vulnerability assessment on both subsistence and locally grown food in Kodiak Improve economic opportunity and stability in the region. Increased partnerships with Tribal, local, state and regional entities	Alaska Native populations of Kodiak Island: city of Kodiak, and seven outlying Alaska Native Villages of Akhiok, Karluk, Larsen Bay, Old Harbor, Ouzinkie, Chiniak, and Port Lions	Increase number of residents in the Kodiak Archipelago who have access to reliable food systems, technical support, economic resources, grants-seeking knowledge–healthy and productive environments Increase stakeholder engagement Increased data development and sharing through participant and community observations on the EJSCREEN tool and LEO network. Bring resources to Tribes and municipalities to address needed infrastructure improvement, food security, environmental challenges, climate change adaptation and economic development	Increase sustainable funding for subsistence, environmental justice, and relevant programs Increase the health of local environments and therefore communities, proffering healthier individuals and wildlife Support programmatic and reporting functions on successfully funded projects Economic Assessment for program capacity within Tribes and municipalities that can be utilized to fill gaps and create long term solutions.	Improve the health and vitality of our environment via local subsistence and food systems and therefore the health of the Alaska Native population on Kodiak island Decrease health disparities Increased continuity of environment-human health-wildlife health and justice systems Increased capacity within Tribes and municipalities to assume funding procurement, programmatic and reporting functions internally.

RE: Letter of Commitment for Kodiak Area Native Association (KANA) to the FY23 Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program Application

Dear Mr. Burney,

For many years Sun'aq Tribe of Kodiak has actively participated in advocating for the protection and sustainable management of subsistence resources. Therefore, we are pleased to provide this letter of Commitment for the FY23 Environmental Justice Grant proposal, *Kodiak Tribal Food Security and Economic Stability Initiative.*

The Alutiiq people were the original stewards of the lands, waters, and resources of the Kodiak Archipelago before the arrival of the Russians, the Americans, and the creation of the State of Alaska. With nearly 2,000 members, Sun'aq represents the largest Native community in the western Gulf of Alaska. A central focus of our Tribe is to safeguard and enhance the lands, waters and natural resources that sustained our ancestors – and to this day continue to sustain our people and the communities of Kodiak who all rely on the same resources for economic support, subsistence opportunities, and cultural identity.

The Buskin Watershed has consistently supported one of the largest sockeye salmon returns along the Kodiak Road System, as well as being per-capita the most important subsistence sockeye fishery in the entire area represented by the Kodiak / Aleutians Subsistence Regional Advisory Council. Therefore, creating support for evaluations of the potential impacts caused by climate change to subsistence food resources is of critical importance for our Tribes. This proposal perfectly aligns with the natural resource stewardship and conservation values of Sun'aq Tribe of Kodiak, and its successful award will be of immense benefit to Kodiak's Tribes, our Tribal Members, and all others who similarly rely on the health and vitality of our food resources.

The Sun'aq Tribe of Kodiak is committing to the project as follows:

Collaboration with Kodiak Area Native Association (KANA) and Alaska Department of Fish and Game to access and review their Kodiak Tribes Seafood Consumption Assessment surveys to develop a more specific survey to help better understand how and where residents source their food and if there are any key species of interest or concern. Additionally, we will work with KANA to host at least one educational and/or outreach event on food security and subsistence harvesting.

Thank you for considering our FY23 Environmental Justice Grant Proposal.

Respectfully,

Daniel J. Smith
Tribal Biologist, Sun'aq Tribe of Kodiak

Latino Community Fund - Wildfire Resiliency Project for Latinx/e Community in Yakima - Performance Measurement Plan

Activity 1: Community Outreach

Objectives	Output or Outcome Mesure Description	Target/Goals	Measure Definition	Data Collection Method	Data Collection Frequency	Person(s) Responsible for Collecting Data
By the end of the 2-year project period, LCF and partners have attended 50 community events to share resources	- Number of events and outreach actions taken	50 events	Number of events	Tracked using excel sheets and supplied disseminated	Per quarter	Project Manager
By the end of the 2-year project period, 5,000 Latinx/e community members outreached to at local community outreach events, through social media, radio spots to share wildfire and emergency prepardeness resources, education, and opportunities for engagement	- Number of community members who have received material and created their wildfire preparedeness/emergency plans and kits	5,000 community members	Number of community members	Tracked using data pulled from sign up forms, radio outreach, phone calls received, conversations logged	Per quarter	Project Manager

Activity 2: Engage and Train Latinx/o/a (Limited-English) community members in wildfire preparedness. LCF will work with partners to continue to develop long-term avenues for engagement and partnership to ensure integration of statewide fire resilience group with input and leadership from Latinx/e organization(s).

Objectives	Output or Outcome Mesure Description	Target/Goals	Measure Definition	Data Collection Method	Data Collection Frequency	Person(s) Responsible for Collecting Data
By the end of the 2-year project period, 100 new Latinx/e community members will have been Recruited and Trained in wildfire resilience and preparedeness cohort	- Number of trained community members who have completed series of wdilfire preparedeness training	100 community members	Number of new community members	Tracked using excel sheets, online tracking of curruculum progress, and sign in sheets	Per cohort (weekly)	Project Manager
By the end of the 2-year project period, 100 new Latinx/e community members will have been received resources for creating individual and family wildfire preaprendess kits	- Number of community members who have received material and created their wildfire preparedeness/emergency plans and kits	100 community members	Number of kits assembled and distributed and putinto use	Tracked using excel sheets and supplied disseminated	Per cohort completion (every 6 months)	Project Manager

Activity 3: Community Actions & Outreach

Task	Output or Outcome Mesure Description	Target/Goals	Measure Definition	Data Collection Method	Data Collection Frequency	Person(s) Responsible for Collecting Data
By the end of the 2-year project period, LCF and partners will have hosted 4 community actions, including clean up days, community-led wildfire prepardness presentations, CPR trainings	- Number of community actions recorded with attendance and outcomes (what behaviour changes have occurred)	4 community actions	Number of actions / Tracking of attendance and any behavour changes/new skills gained	Track using event check in forms, surveys, and certification completions, and any media impressions	Per activity	Project Manager and Executive Director (Indiviual parnters track their conversations and share across partnership)

Activity 4: Project Management

Task	Output or Outcome Mesure Description	Target/Goals	Measure Definition	Data Collection Method	Data Collection Frequency	Person(s) Responsible for Collecting Data
By the end of the 2-year project period, LCF will have coordinated ongoing meetings, check-ins with partners to track project deliverables, share resources, and implement project	- Number of meetings with partners, quality of conversations, resources shared, project alignment and depth of relationships to share information	- At minimum quarterly conversations - Monthly and bi-weekly conversations during project implementation	Number of meetings and types of conversations	Track using excel and also collect resources shared in a report and evaluation	As needed	Project Manager and Executive Director (Indiviual parnters track their conversations and share across partnership)

Activity 5: Evaluation

Task	Output or Outcome Mesure Description	Target/Goals	Measure Definition	Data Collection Method	Data Collection Frequency	Person(s) Responsible for Collecting Data

By the end of the 2-year project period, LCF will develop an evaluation report	- Evaluation Report	Minmum of 1 evaluation report, with cross sharing of successes and lessons learned among parterns on different channels (annual reports, government report backs	Material shared	Track in report	Halfway and Final Report	Project Manager and Executive Director (Indiviual parnters track their conversations and share across partnership)

	Description	Total
Personnel	Project Manager @ $60,000 annual salary 100% of time on project = $120,000 for two years Executive Director supporting @ $90,000 annual salary 10% of time on project = $18,000 for two years	$138,000.00
Fringe Benefits	Project Manager 20% of salary (includes medical, dental, life insurance) = $24,000 for two years Executive Director 20% of salary (includes medical, dental, life insurance) = $3,600 for two years	$27,600.00
Travel	Local mileage for Project Manager for partner meetings and outreach: 30 miles round trip @ $0.65/mi. X 4 meetings/month X 10 months = $1,560 for two years	$1,560.00
Equipment	N/A	$0.00
Supplies	Monthly materials for CIL and outreach – pencils, handouts, notepads, prints @ $20.00/person (total of 100 people per year). Total $4,000 for two years Community local solutions @ $3,000 per local solution. Total $12,000 for two years Emergency Preparendess (wildfire) kits - $1,500 per cohort for 4 cohorts = $12,000 for two years	$28,000.00
Contractual	Facilitation + Training +Media + Communications Contract = $50,000 per year	$100,000.00
Other	Subaward to local community organization @ $80,000/year (meeting logistics, printing cost, AV, capacity building). Total $160,000 for two years Participant Support Costs (stipends for community members attending meetings at $50 per attendee X 100 attendees)	$170,000.00
Sub-Total		**$465,160.00**
Indirect Costs	IDC Rate Agreement of 20% of Salaries and Wages	$33,120.00
Total		**$498,280.00**

ENVIRONMENTAL JUSTICE COLLABORATIVE PROBLEM-SOLVING (EJCPS) COOPERATIVE AGREEMENT PROGRAM

1.0 PROGRAM OBJECTIVES

a. **Project Summary Page** – Recommended one-page summary document **(does count as part of 18-page workplan limit).** Summary includes:

• Project Title Wildfire Resiliency

• Project Location (including community/neighborhood(s), city, state, and zip code) Yakima County

• Applicant Information (name, address, main contact information)
Latino Community Fund of Washington State
Seattle Office : 1225 S Weller St, Suite 410, Seattle, WA 98144
Mailing Address: PO Box 30669, Seattle, WA 98103
Yakima Office: 1106 W. Lincoln Avenue, Suite B, Yakima, WA 98902

• Brief Description of Applicant Organization -- Provide a brief description (100 words or less) of the applicant organization, including its mission and key ongoing projects/activities in which it is involved.
The Latino Community Fund (LCF) cultivates new leaders, supports cultural and community based non-profit organizations, and improves the quality of life for all Washingtonians. LCF was funded by a group of Washington residents of HIspanic/Latino/a/x heritage to address the growing needs of the Latino community.

LCF's approach is to capitalize on the Latino community's best resource, its people, to identify, share and advocate for successful culturally relevant and linguistically appropriate programs and policies that build community resilience for a warming planet.. LCF's projects include our Wildfire Adaptation Leadership Program.

• Are you applying for the Small CBO Set Aside Track for $150,000 projects? (Yes/No) If yes, ensure you submit documentation with your application (such as an employee roster) verifying the number of full-time employees on staff and the associated hours per week and salary/wage details for each full-time employee.
No

• Project Abstract -- Brief description (250 words or less) of the main objective, activities, and outputs/outcomes of the project, including the specific geographic areas of focus.
LCF will provide a bilingual community education, emergency preparedness/awareness through the wildfire leadership and capacity cohorts, will offer technical assistance to train community members and leaders on wildfires and environmental issues with a focus on emergency preparedness in rural communities (Yakima). With this project LCF's will continue to advocate for the well-being of the Latino population in rural/Central WA that gets affected by climate change effects, extreme heat waves, bigger wildfires and other smoke pollution that affects the everyday life of its community members.

• Project Type(s) -- such as training, monitoring, demonstration, small-scale construction, public education
LCF's project involves training, community education, public education, leadership training and local actions.

• Special Considerations - If applicable to your project, which special considerations do you believe your project qualifies for? (Climate Change/Disaster Resiliency, Rural Areas, Health Impact Assessments, and/or other factors identified in Section V)
LCF's project qualifies for Climate Change/Disaster Resiliency, Rural Areas

• Environmental Issue – e.g., Air, Water, Waste, etc.
Air

• List of Project Partners -- include partner name and stakeholder group. For example, CBOs, State University (academic); County commissioner (local government); Houses of worship (faith-based); Corporate or local companies (business/industry); etc.
Nuestra Casa (local nonprofit), Sachamama (nonprofit), Yakima Department of Health (local government agency), Department of Natural Resources (statewide government agency), Senator Patty Murray (elected office)

• Will you need to develop a QAPP for your project? (See AppendixH) N

b. Environmental and Public Health information of the Underserved Community

• Describe and characterize the underserved community directly impacted by disproportionate environmental and/or public health harms and risks and describe **how** the community is impacted by those harms and risks (i.e., Who is the community comprised of and what are the disproportionate environmental and/or public health issues they experience?)

Yakima County is located in South Central Washington (lower valley), and according to the U.S Census Bureau, Yakima County has a population of 256,728; of that, 50.7% is Hispanic or Latino residents which is a third of the hispanic/latino population in Washington state. Many of these residents are immigrants who have limited to non English language skills, live below poverty levels and low education levels.

The region is characterized by small towns and surrounded by productive and active farmland, irrigation agriculture and dairy farming are the main source of income for these communities. This is where Latino farm workers find part time and full time employment, they either live near or in farmlands. Latinos in this area are facing big health risks with every year rising due to direct exposure to low air quality and/or asthma that results in longer and poor health stability. With this program we aim to increase the education access on wildfire adaptation, information and resources that can change and make a big difference in their lives while building leadership among a cross-generational community.

• What are the environmental/public health issue(s) that the project seeks to address?

The environmental health issues relate to direct impacts of wildfires, as well as air quality issues related to wildfires and climate impacts. As the EJ SCREEN Tool shows, communities across Yakima County are at a high risk of wildfires. This is exasperated for communities in rural parts of Yakima County, including where we work in Selah, Naches, and Sunnyside, where communities are living in more rural areas. Within these geographic areas, communities are characterized as being low-income (in the 95-100 percentile), Limited English Speaking (80-100 percentile), more likely to have Asthma (80-100 percentile). In addition, Yakima and nearby Selah face a higher wildfire risk (95-100 percentile) than other parts of Yakima County. Our project seeks to bring resources, education, and action that address these issues in collaboration with communities.

• What are the environmental/public health results the project seeks to achieve and how will the underserved community benefit from those results?

LCF and partners in this program seek to achieve outcomes of a more informed and organized Latinx community in the Yakima Valley about ways to mitigate the negative impacts and harms of wildfires and low air quality. Our communities are resilient, and through this program the benefits include stronger networks among families, community members and local organizations/entities, as well building a network of climate leaders that will be ready to assist their communities when needed. We decrease the direct impacts of wildfires on communities, by creating action plans and education resources that build strong community networks, preventative measures, and emergency preparedness tools that community members put into use and share with their families and broader community.

Special Considerations
This project brings together key government and community partners to address issues impacting rural communities in Yakima County, as well as bring resources and education to communities disproportionately impacted by climate change. Two key areas we are reaching communities include Selah and Sunnyside. According to 2021 Census data, population counts were 8,000 in Selah and 16,000 in Sunnyside and 8,000 (www.census.gov). Selah is also adversely affected by wildfire risk (95-100 percentile). Additionally, we are reaching other communities in Yakima County, including: Tieton (pop. 2,000), Parker (pop. 105), Prosser (pop. 6,000), Grandview (pop. 10,000). (https://censusreporter.org/). Communities in these areas are characterized as having less access to information in Spanish and lacking the option to move during wildfires. Also of great concern is the need for community members to continue working and making the choice between a paycheck and their safety during wildfire season, which puts them at higher vulnerability for having time to leave the area during wildfire to socioeconomic status.

c. Organization's Historical Connection to Underserved Community
• The history of your organization's involvement with the underserved community, including the duration of involvement and circumstances that led to your organization's involvement
Latino Community Fund (LCF) has been working in Yakima County for the past ten years. Our work has directly served Latino communities, including primarily Limited English Speaking communities, low-income communities, and Latinx/e communities.

As an organization primarily focused on Latino communities, we began work in Yakima County because of the high percentage of Latinos in Central WA, with the intersection of health and socioeconomic issues impacting those communities. We have worked more directly with communities in Selah, Naches, and Sunnyside - including Warehouse Workers in Selah. Our work has historically involved doing direct outreach at health fairs, hosting educational workshops on environmental justice issues, training communities in leadership skill building, and connecting individuals directly to resources.

In 2020, our team responded to wildfires in Brewster, WA that forced nearly 200 farmworkers to evacuate from their homes because of wildfires and were left to sleep in a park. Our team took sleeping bags and supplies to the community. Following that, our work on wildfires has expanded to working in Yakima County and Sunnyside, as well as partnering with groups in Moses Lake to share information about wildfires, provide wildfire kits, and lead training and outreach.

• How the organization has worked with the underserved community's residents and/or organizations to address local environmental and public health issues currently or in the past **and** what are some of the results of that work. Include information about recent efforts in the community, if any, that have sought to address the disproportionate issues you described in 1.b.
LCF has worked addressing and approaching solutions based projects about local environmental and public health issues within the underserved communities in Yakima county. In the past years and currently LCF has partner with different local organizations to bring different resources to this communities like:

- Over 20 Vaccine clinics and Health Fairs, where over 2,000 community members were able to be vaccinated and 10,000 community members learned of or received other resources.
- CPR and first aid training. We held over 20 cpr and first aid workshops in 2022, we reached over 350 community members with these workshops.
- Wildfire Adaptation Leadership Program two years in a row (two cohorts) reaching over 100 attendees.
- Youth Leadership programs, over 6 youth leadership summits in the past 3 years (with over 200 youth attending)
- Oral Hygiene. We held around 15 oral hygiene educational workshops in 2022, and we distributed over 250 oral care kits to the workshop participants.
- Diabetes education. We held over 15 educational workshops on diabetes care in 2022 and reached over 250 community members.
- Financial Assistance (During Covid-19 pandemic only), we distributed over 1.2 million in 2020 alone to needy families struggling with food insecurities and rental assistance. ,

Capacity Building to Community Based Organizations (CBO's). We have regranted over 12 small grants in efforts to help build CBO's capacity and ability to continue their work.in efforts to help build CBO's capacity and ability to continue their work.

• Community Driven Participation

Community members are integral in the preparation of agendas. We often ask and engage in dialogue with community members about the issues that are most relevant to them. This has included hosting listening sessions, survey feedback, small group discussions, and one on one discussions. Community has developed our agenda and work, informing and contributing their ideas and brilliance to this work.

d. EJCPS Model

LCF and partners are utilizing the EJCPS model as follows:

1. Issue Identification, Visioning, and Strategic Goal-Setting:

Latino Community Fund is working in Yakima County, a community in Central Washington with a population of 96,000, of which 47% are Latinx/e. The start of our Wildfire Resilience work in Yakima County was borne from our community engagement work (providing direct services including rental and partnerships with local nonprofits serving Latinx communities and our work with youth leaders in Yakima County. In addition, two key community engagements have shaped this work to develop our goals.

1) In 2020, unprecedented fires burned WA State, impacting air quality and safety for community members. "In September, the Labor Day windstorm fanned numerous fires across Washington. More than 500,000 acres burned in less than a 36-hour period, which included one civilian fatality and the loss of most structures in the communities of Malden and Pine City." (DNR December 2020 report) We provided direct support to community members impacted by wildfires in Yakima County, which led to deeper conversations about the local needs for creating long-term solutions and a vision for

Latinx/e community members to be more informed and engaged in emergency preparedness.

2) In 2021, we hosted listening sessions with over 40 community members and nonprofit leaders in Yakima, Wenatchee, Moses Lake, Spokane, and the Tri-Cities. During these conversations, we heard from leaders about local challenges they faced, changes they wanted to see, and what local actions were already in motion. Top issues identified were lack of representation of Latinx/e communities in leadership, education, workforce, and health. And from those sessions in Yakima, people noted that "Yakima is at the bottom of all indicators for a thriving community." In addition, community members had previously noted in our outreach work the need to have trusted sources of information during health and environmental crisis.
3) In 2021, we also worked with partner nonprofits in Yakima County to better understand the EJ Latino landscape in Central WA. Outreach to 30 stakeholders led to 19 one on one conversations, as well as two group listening sessions with community members and LCF staff to further discuss and develop collective solutions through an EJ strategy. "The main themes presented by groups were clean air (air pollution, wildfires), clean water (water contamination from the dairy industry), and farmworker's rights (lack of information and unjust workers conditions). From the communities' perspective, when talking about these issues; lack of organizational capacity - funding, no representation in government entities, access to bilingual resources, and lack of community engagement were the main challenges highlighted in the conversation." (2021 Report)

2. Community Capacity-Building and Leadership Development

During 2020 - 2022, along with engaging in dialogue with communities, LCF worked with partners Nuestra Casa, CAFE (in Wenatchee), and Sachamama to host a series of educational trainings and community actions to build wildfire resilience in Latinx/e communities. Trainings bring together 20-25 in each cohort to learn about wildfires and ways to build community resilience. And while we have started this leadership development, we will continue doing this together with partners to reach more communities across Yakima County in rural areas and who have not accessed wildfire educational material. With over 100 community members on waitlists, we will expand this work to provide more disaster preparedness trainings in Spanish, developing more train the trainer pathways, and bringing more resources and stronger connections to local government agencies for Latinx/e communities.

3. Consensus Building and Dispute Resolution

In our work with Nuestra Casa, Sachamama, and CAFE (Wenatchee), we have built working agreements to continue expanding on this work. We have discussed and agreed on certain values related to Power Dynamics, Qualities of the Space, How we take care of each other, and How we engage in Collaboration. Our Values as a partnership are: ***Accountability, Equity, Caring, Co-creation/collaborations, Integrity***.

We will also work to establish clear goals and visions in our work with local government agencies and the Yakima Health District as we build out our plans to bring this work to scale on a broader level and we establish clear long-term partnerships with local agencies. As we understand new issues with air quality and how the continued presence of wildfires in Central WA are impacting our Latinx/e communities, we are going to be expanding our work with agencies and thus create more established systems of support beyond our own institutional capacities

4. Development of Multi-Stakeholder Partnerships and Leveraging of Resources
Our work with Nuestra Casa in Sunnyside has been collaborative and in deep relationship over the past 3-5 years - this has included building collective budgets and reporting metrics so that we are working together to define a clear workplan we are each accountable for.

In this next iteration and expansion of this work, we are building new partnerships with government agencies and the Yakima Health Distrcit to bring in more resources and information sharing for community members. It has been important to build these partnerships in new ways and we will continue developing new ways to work together.

In the past, we have worked with the Yakima Health District to bring emergency resources to rural and low-income communities during the Covid-19 crisis. We helped translate material into Spanish, share resources online and on radio, and attend health outreach fairs to bring more resources to communities. That relationship is now developing with an environmental lens with the increase of wildfires and their impacts on Latinx/e communities across Yakima County.

In addition, through our partnership with DNR we are working with DNR staff to build a collection of resources for Latinx/e community members to access, in addition to bringing information to DNR about where there are gaps.

5. Constructive Engagement with Other Stakeholders
We have identified collaboration opportunities in our conversations with DNR, which we will further explore through this project and build out resources. This relationship needs to move beyond a rapid response approach, which is why this will be key to better define clear plans and timelines that are responsive to the demands and true timelines of our community - in more rural communities this means responding to labor demands - during agricultural seasons, community members have less time to attend trainings and engage in learning and dialogue which is why we need to have a clear timeline so that we are having these conversations much further ahead than wildfire season. We know we also need to be responsive to the fact that wildfire season has extended and shifted - we need to be quicker to respond and agencies also need to be quicker to

respond - together we will identify where government agencies (starting with DNR) can support further technical assistance.

6. Sound Management and Implementation
Through this project, we have developed clear timelines we will implement with partners. Brining together different stakeholders our plan is to leverage the unique resources and knowledge that each partner brings to build strong evaluation along the way. Each partner will host a lead to ensure the continued commitment and coordination between our groups.

In addition, we are meeting regularly with partners (monthly calls) to identify what is working (celebrating wins along the way), identifying points of improvement (what is not working as successfully that we need to shirt), and bring in the correct and most effective resources (is there data, education material, tech tools that will help us be more effective and better serve the needs of community and reach out intended goals).

7. Evaluation
While we are already evaluating projects on short term outcomes (did people attend, did people get information, did we build some leaders through trainings, did people take action) - we will be moving this to a more robust evaluation. This will include documented results, points of reflection to share learnings, and an ongoing list of lessons learned to capture the full view of the project and how it aligns with long-term goals.

Part of this will be publishing lessons learned on our website and partner website, while also mirroring this with live evaluations that provide spaces for community members to ask questions and reflect.

e. Project Linkages: EPA Strategic Plan Goal 2, Objective 2.1
This program is rooted and intended for and with communities directly affected by wildfires and smoke issues, and is why the program has been developed based on their feedback through different dialogues. We are centering the protection of their health, lives and the communities they live in. We're putting emphasis on having underserved Latino families more informed, active and taking the lead on executing projects that help to mitigate these issues. The more informed communities are, the more engaged they will be in taking the lead in any efforts to help mitigate climate change and environmental justice programs that will lead to an increase of projects led by communities relating to the causes, effects, reduction and elimination of air pollution due to wildfires in Central washington.

f. Partner and Collaborate
This project brings together local nonprofit organizations, environmental and climate change trainers, government agencies, and the local health district to achieve our goals to build Latinx/e

fire-adapted communities in the Yakima Valley, developing resilient communities and reducing the risk of loss of life during wildfire events. Together, we bring resources, trusted relationships, community driven solutions and ideas, and a broad reach that identifies areas of intersection to bring this education to communities. As developed together, we are bringing information and resources from DNR, outreach opportunities and health data with Yakima Health District, and trainers and outreach staff that are trusted in the community from LCF, Nuestra Casa, and Sachamama.

• Identify and describe all partners involved, including those partnerships that may be under development. Include details about each of your partners.

Our partnership model below accounts for roles, resources, and interest of partners to achieve our goals. In addition, these partnerships have developed from shared interest in building fire-resilient communities in Central WA with Latinx/e communities. This shared vision will support us to sustain these relationships as we continue working together on this project and having ongoing evaluation and community engagement past the grant dates. We have used procurement policies for subrecipients and for subawards - as we will lay this out in MOUs.

Partner	**Planned Role**	**Stakeholder Group**	**Project Activities / Contributions**	**Vested Interest**	**Resources**	**Funding**
LCF	Implement Project, bring partners together, provide trainings	Nonprofit (CBO)	Running cohorts Coordination of project Implement ongoing efforts - Outreach, Educating	Build Latinx fire-adapted communities in Yakima Valley, forging safer and more resilient neighborhoods and reducing the risk of loss of life during wildfire events. 	directly with legislators on community needs and solutions		gain insight into community needs and solutions for addressing issues		can apply to for sustaining work	

2.0 Project Activities / Milestone Schedule / Detailed Please

LCF and partners plan to build Latinx fire-adapted communities in Yakima Valley, forging safer and more resilient neighborhoods and reducing the risk of loss of life during wildfire events. Our proven program is designed to reduce the risk of wildfire damage by teaching communities to create defensible space around homes, using fire-resistant materials, and wildfire-resistant landscaping. Additionally, it fosters a greater sense of community engagement and resilience, by working together to prepare for wildfires, building emergency kits, and learning about evacuation plans and emergency alert systems.

Project milestones cover a two-tear timeline (November 1, 2023 - November 1, 2025). Project activities are outlined to build on previous work as a partnership and implementation is tracked by lead applicant (Latino Community Fund) with developed check ins and progress reports for partners.

Project activities include:

- Community Outreach (Engage)
  - Phone calls, emails, outreach at in person events to share information about wildfire resilience project and engage community members to sign up for more information about wildfire preparedness and to participate in resilience trainings
  - Attend and engage community at health fairs, local events, and in one to one outreach with program participants and service recipients
- Wildfire Resilience Trainings (Educate)
  - Train community members in wildfire resilience and emergency preparedness using 7 week curriculum (hybrid model of online and in person)
  - Develop community trainers to participate in cohort, and disseminate information and resources to their communities
  - Survey communities to develop local priorities at street and community level for participants to take action and disseminate information to others in their community
  - Build emergency kits with communities, develop evacuation plans, and identify access to emergency alert systems
- Community Action (Empower)
  - Plan and develop community Clean up days (previously identified as a community need)

    - Provide CPR training options for emergency preparedness (identified and further exploration to provide additional resources for communities to prepare their families for emergencies)
    - Leverage partnership reach and resources to develop further community actions as identified by communities in wildfire resilience trainings and
- Project Management
    - Coordinate meetings with partners to calendar and assign individual roles
    - Meet on a regular basis (weekly, monthly, quarterly) to track project progress and share resources
- Evaluation
    - Bi-annual report to track big lessons learned and opportunities for improvement

Milestone Schedule

- November 1, 2023 - December 2023
    - Partners meet to assign individual roles and responsibilities
    - CBOs initiate outreach efforts in community at local outreach events and end of year health and holiday fairs
- January 2024 - March 2024
    - Launch Wildfire Resiliency Training (these dates identified ideal for community members given summer work schedules in Yakima County this provides a higher chance of engaging more community members earlier in the process)
- April 2024
    - Implementation of community actions (one action centered and bolstered by Earth Day communication and activities) - Clean Up Day with local city planned
- May 2024 - June 2024
    - Launch in person Wildfire Resiliency Training
    - Lead CPR Trainings as community action for community members to lead skills training
    - Meet with all partners for project evaluation and resources sharing
- July 2024 - August 2024
    - Implement community action and do outreach at local health fairs
- September - November 2024
    - Leadership Summit featuring community presentation and resource sharing as led by local leaders and training participants
    - Outreach and emergency response actions with community members (as wildfire season reaches peak)

YEAR 2

- November 2024 - December 2024
    - Partners gather for end of Year 1 Evaluation
    - Create Year 1 Report and update outreach material
    - CBOs continue outreach efforts in community at local outreach events and end of year health and holiday fairs
- January 2025 - March 2025
    - Launch 2 Wildfire Resilience Trainings (these dates identified ideal for community members given summer work schedules in Yakima County this

provides a higher chance of engaging more community members earlier in the process)
- April 2025
    - Implementation of community actions (one action centered and bolstered by Earth Day communication and activities) - Clean Up Day with local city planned
- May 2025 - June 2025
    - Launch in person Wildfire Resiliency Training
    - Meet with all partners for project evaluation and resources sharing (host half day meeting)
- July 2025 - August 2025
    - Implement community action and do outreach at local health fairs
- September - November 2025
    - Outreach and emergency response actions with community members (as wildfire season reaches peak)
- November 2025
    - Final report of project
    - Bring partners together for next steps and continued expansion of project

Activity	**Timeframe**	**Stakeholder Involvement**	**Results**
Community Outreach (Engage)	November 2023 - December 2023	LCF Nuestra Casa	New community members engaged in learnings
Wildfire Resilience Trainings (Educate)	January 2024 - June 2025	LCF Nuestra Casa Sachamama	100 community members trained in wildfire resilience
Community Action (Empower)	April 2024 - November 2025	LCF Nuestra Casa Sachamama Yakima Health District Department of Natural Resource (DNR)	Local community actions leading to behavior changes and fire resilient communities
Project Management	Ongoing	LCF	Clear project goals achieved
Evaluation	Year 2	All partners	Evaluation and Lessons Learned Shared

Activity 1: Community Outreach						
Objectives	**Output or Outcome Mesure Description**	**Target/Goals**	**Measure Definition**	**Data Collection Method**	**Data Collection Frequency**	**Person(s) Responsible for Collecting Data**
By the end of the 2-year project period, LCF and partners have attended 50 community events to share resources	- Number of events and outreach actions taken	50 events	Number of events	Tracked using excel sheets and supplied disseminated	Per quarter	Project Manager
By the end of the 2-year project period, 5,000 Latinx/e community members outreached to at local community outreach events, through social media, radio spots to share wildfire and emergency prepardeness resources, education, and opportunities for engagement	- Number of community members who have received material and created their wildfire prepareden ess/emerge ncy plans and kits	5,000 comm unity memb ers	Num ber of com muni ty mem bers	Tracked using data pulled from sign up forms, radio outreach, phone calls received, conversations logged	Per quarter	Project Manager
Activity 2: Engage and Train Latinx/o/a (Limited-English) community members in wildfire preparedness. LCF will work with partners to continue to develop long-term avenues for engagement and partnership to ensure integration of statewide fire resilience group with input and leadership from Latinx/e organization(s).						
Objectives	**Output or Outcome Mesure**	**Target/Goals**	**Measure Defi**	**Data Collection Method**	**Data Collection Frequency**	**Person(s) Responsible for**

	Description		nition			Collecting Data
By the end of the 2-year project period, 100 new Latinx/e community members will have been Recruited and Trained in wildfire resilience and preparedeness cohort	- Number of trained community members who have completed series of wdilfire prepareden ess training	100 community members	Number of new community members	Tracked using excel sheets, online tracking of curriculum progress, and sign in sheets	Per cohort (weekly)	Project Manager
By the end of the 2-year project period, 100 new Latinx/e community members will have been received resources for creating individual and family wildfire preaprendess kits	- Number of community members who have received material and created their wildfire prepareden ess/emerge ncy plans and kits	100 community members	Number of kits assembled and distributed and putin to use	Tracked using excel sheets and supplied disseminated	Per cohort completion (every 6 months)	Project Manager
Activity 3: Community Actions & Outreach						
Task	**Output or Outcome Mesure Description**	**Target/Goals**	**Measure Definition**	**Data Collection Method**	**Data Collection Frequency**	**Person(s) Responsible for Collecting Data**

By the end of the 2-year project period, LCF and partners will have hosted 4 community actions, including clean up days, community-led wildfire prepardness presentations, CPR trainings	- Number of community actions recorded with attendance and outcomes (what behaviour changes have occurred)	4 community actions	Number of actions / Tracking of attendance and any behaviour changes/new skills gained	Track using event check in forms, surveys, and certification completions, and any media impressions	Per activity	Project Manager and Executive Director (Indiviual parnters track their conversations and share across partnership)
Activity 4: Project Management						
Task	**Output or Outcome Mesure Description**	**Target/Goals**	**Measure Definition**	**Data Collection Method**	**Data Collection Frequency**	**Person(s) Responsible for Collecting Data**
By the end of the 2-year project period, LCF will have coordinated ongoing meetings, check-ins with partners to track project deliverables, share resources, and implement project	- Number of meetings with partners, quality of conversations, resources shared, project alignment	- At minimum quarterly conversations - Monthly and	Number of meetings and types of conversations	Track using excel and also collect resources shared in a report and evaluation	As needed	Project Manager and Executive Director (Indiviual parnters track their conversations and share across partnership)

	and depth of relationships to share information	bi-weekly conversations during project implementation				
Activity 5: Evaluation						
Task	**Output or Outcome Mesure Description**	**Target/Goals**	**Measure Definition**	**Data Collection Method**	**Data Collection Frequency**	**Person(s) Responsible for Collecting Data**
By the end of the 2-year project period, LCF will develop an evaluation report	- Evaluation Report	Minmum of 1 evaluation report, with cross sharing of successes and lessons learned among parter	Material shared	Track in report	Halfway and Final Report	Project Manager and Executive Director (Indiviual parnters track their conversations and share across partnership)

		ns on different channels (annual reports, government report backs				

c. Sustainability Plan and Community Vision

This project is the result of direct communication and engagement with local community members and partners who have identified the need for a strong network of Latinx fire-adapted communities in Yakima Valley. Together, working across nonprofits, government agencies, local communities, and with elected offices, we are working to build long-term solutions that will lift up, resource, and empower local communities to not only be educated but to take action.

Currently, communities in collaboration with local organizations are building leadership pipelines and investing in train the trainer models that will serve to invest in more leaders in the community. Following the intersection of crises in 2020 to now (Covid-19, wildfires, communities being disconnected from resources), this project serves to get at the root of that crisis and put the community into leadership roles.

Already, we have waitlists of over 100 people who are hearing about this work and want to participate, learn, and take actions in their communities to prepare for wildfires, mitigate the impacts of pollution, wildfire smoke and other air toxics impacting the health of Latinx/e families across Yakima County. We are exploring how to bring these trainings and lessons learned into other parts of WA State with high Latinx/e populations that are impacted by wildfires.

4.0 Programmatic Capability

We have previously hosted trainings on wildfire resiliency and emergency preparedness, as well as CPR trainings in Central WA. In addition our team and our community partner, Nuestra Casa, are in constant conversations with community members to share information, hear about local issues, and develop leadership skills. In 2020, LCF managed Census Outreach work (which led us to also engage in developing collective goals with community about air quality and wildfires in Yakima County). We led outreach efforts online and in person during the Covid-19 crisis and have a deep understanding of the connection of public health and environment issues, especially in talking with Latinx/e community members.

b. Staff Experience / Qualifications of Project Manager (PM)

Our outreach team is based out of Yakima and have long histories of serving our communities and develop[ing avenues for leadership through skills building, leadership trainings, and listening sessions. The PM has a long history of bringing community together in Yakima County and partnering with local leaders to create programs, and long-lasting change. The PM has a history of working, living, and building deep relationships with Latinx/e community members in Yakima and across WA State. In particular, the PM has existing relationships in the farmworking communities in Yakima. They provided Covid response services to over 1,000 people and continue to build strong relationships with the Yakima Health Department and DNR. As led by the work of the PM, LCF received the Hero's Award from the Yakima Health Department in 2021 for the team's work to bring resources and information to Latinx/e and Spanish speaking communities during the Covid-19 crisis.

Key personnel include

- Cristina Ortega: Project Manager
- Lilliane Ballesteros: Executive Director, Project Support

Given the deep connection the PM has with the community and her relationship with the applicant she's worked in different capacities within the community. She has brought health fairs, vaccine clinics, helped with the distribution of Covid response services like rental & utility assistance, PPE, food. PM has a long history of providing civic engagement education to the communities she works with. In 2021, the Project Manager received the Hero's Award from the Yakima Health Department for her work in the community.

5.0 Past Performance

LCF's relevant past performance includes funding from WA DNR, and WA Dept of Commerce. We completed reporting requirements, project deliverables, and management of funds. In addition, our team has managed government grants, regranting and subcontracting, and we have a deep understanding of working in partnerships. Most of our work is developed and implemented in coalition and in partnership with a cross sector approach.

EJCPS Logic Model: Mother Africa Safer Healthy Homes Program						
Resources/Inputs	**Activities**	**Outputs**	**Audience**	**Short-Term Outcomes (6-12 months)**	**Intermediate Outcomes (12-24 months)**	**Long Term Outcomes (2+ years)**
Staff time	Program design and planning	320 non-toxic cleaning kits distributed	Cleaning product companies	Increase community members' awareness of toxics in household cleaning products	Increase household selection of greener, non-toxic cleaning products when shopping for supplies	Improved household health due to decreased toxics usage
Partnering organizati	Staff hiring, onboarding, and training	16 community environmental education sessions hosted	African and Middle Eastern immigrant and refugee families	Increase community members' awareness of local environmental impact of improper toxics and medication disposal and of proper disposal techniques	Increase in utilization of proper disposal techniques and reduction of improper disposal into wastewater	Decreased toxics concentration in local water systems
In-kind donations	Community outreach and local recruitment	320 family disaster preparedness plans generated	Puget Sound residents	Increase families' awareness of the need for disaster preparedness	Increase families' continued maintenance and revision of disaster plans and supply stocks	Increased local refugee and immigrant families' confidence to persist safely through disaster
Multi-lingual staff capacity and cultural competencies	Staff disaster preparedness training (with Office of Emergency Management)	320 pre- and post-surveys conducted	Local government	Increase community members' awareness of potential lead exposures and its adverse impacts	Increase families' lead level blood testing	Increased referrals to lead poisoning support providers
	Staff team meetings	960 1:1 family coaching sessions	Local partners	Increase community members' awareness of potential lead exposures and its adverse impacts	Increase data on which household products contain high lead content	Decreased use of products that often include high lead content
	Product testing for lead	320 unique households served through four six-month cohorts		Increase community members' awareness of mold growth conditions and adverse impacts of mold exposure	Increase community members' household mold prevention	Maintenance or reduction of participating families' reported respiratory conditions

RE: Letter of Commitment for Mother Africa's EPA Environmental Justice Collaborative Problem-Solving (EJCPS) Cooperative Agreement Project

Dear Mr. Burney,

The King County Department of Natural Resources and Parks (DNRP) is pleased to partner with Mother Africa for the EPA EJCPS project. This project aims to develop a culturally relevant, multilingual climate resilience and healthy homes assessment program for immigrant and refugee communities in King County, Washington. This project will enhance connections between frontline communities and current knowledge, resources, and decision-making spaces in climate action and preparedness.

DNRP serves the most populous county in Washington State (2.5 million in 2021) working in support of sustainable and livable communities and a clean and healthy natural environment. Our mission is to foster environmental stewardship and to strengthen communities by providing regional parks, protecting the region's water, air, land and natural habitats, and reducing, safely disposing of and creating resources from the wastewater and solid waste. DNRP is also a key partner on the implementation of the King County Strategic Climate Action Plan (SCAP), updated every five years. The 2020 SCAP launched the first climate equity framework for King County in a new section entitled *Sustainable and Resilient Frontline Communities* (SRFC) which guides climate equity and community-driven policy. The SRFC works in parallel with the GHG Emissions Reduction and the Climate Preparedness sections of the SCAP. SRFC and Preparedness section leads have long partnered Mother Africa in development and implementation of SCAP priorities. These include developing multi-language climate communications, connecting on a development of a Countywide heat mitigation strategy, and participating in ongoing climate-related projects across King County departments.

For Mother Africa's EJCPS project, the SRFC and Preparedness leads will serve as thought-partners and share our technical expertise and any relevant materials to support and guide introduction of climate resilience and preparedness content and messaging. We will also participate as part of the project's stakeholder group, either as regular steering committee members or in topic-specific work groups. We look forward to partnering to expand and deepen the impacts of community-led climate action.

If you have any questions, please feel free to contact me at vraya@kingcounty.gov.

Vicky Raya

FIRE Rx

Oakridge-Westfir Community Film Screening + Panel Discussion

Meet Our Guest Speaker & Film Discussion Panelists

Guest Speaker: James Johnston of Oregon State University will summarize results from an ongoing study of fire over the past 500 years in the western Oregon Cascades. Long-term records of natural ignitions and native peoples' use of fire in the western Oregon Cascades will help forest managers develop strategies to protect communities from large and costly fires, adapt forests to future climate and disturbance regimes, and protect sensitive habitat.

Anne Trapanese, Fuels Planner for the Middle Fork Ranger District of the Willamette National Forest. Anne has 18 years of experience with fire, fuels and planning.

Justin Patten, Fire Planning Forester with Oregon Department of Forestry South Cascade District, East Lane Unit. Justin has held a variety of positions with the agency since 2012 and has been involved in wildland fire since 2009.

Sarah Altemus-Pope, Director for the Southern Willamette Forest Collaborative, a community based organization that brings people together for healthy forests and communities. Sarah spent many years working as a Forest Service wildland firefighter and smokejumper in Oregon and Montana.

November 30th, 6PM

Guest Speaker: James Johnston of Oregon State University will summarize results from an ongoing study of fire over the past 500 years in the western Oregon Cascades. Long-term records of natural ignitions and native peoples' use of fire in the western Oregon Cascades will help forest managers develop strategies to protect communities from large and costly fires, adapt forests to future climate and disturbance regimes, and protect sensitive habitat.

December 8th, 6PM

Fred Levitan, USDA Forest Service Burned Area Emergency Response team lead, will present about the team's findings from the Cedar Creek burned area analysis including forest burn severity, recreational infrastructure impacts, safety and more.

Molly Juillerat, USDA Forest Service Middle Fork District Ranger will share about an Environmental Assessment for Cedar-Gales Roadside Risk Reduction. This project seeks to reduce the risks posed by fire-killed and injured trees that have fallen across or remain standing along important access routes of the Cedar Creek and Gales fire-affected road system so that access to and through the burned area can be restored. The Forest Service is seeking input on the roads included in the proposed action and any impacts of concern that the District should consider in the environmental assessment.

Equipment

For this project's research component, we will purchase 22 units of the 4 set of Emporia Smart Plugs for deployment at each of the 22 partnered local esports lounges in a manner as described by Section 2 of this application. The Emporia Smart Plug is particularly qualified and specially for use in this project's research component as it is space-effective, non-intrusive, and user-friendly for non-technical users. Emporia Corp.'s dedicated information system for use with its Smart Plug is also specially and uniquely qualified for use in the research component.

Given that this project's research component will be conducted within pre-existing commercial spaces with no compensation to the space's owners, space efficacy and non-intrusive design are critical to any watt monitor. Additionally, the owners and operators of the partnered local esports venues are not technically qualified to operate complex watt monitors, which also makes this product attractive.

Finally, Emporia Smart Plugs seamlessly integrate with Emporia Corp's information system to which data are transmitted in real time and which can be accessed by authorized users on demand. This will ensure that the owners and operators of the partnered local esports venues have maximal control over data collection from their companies' operations and that the AEA and USEA can effectively oversee data collection, as appropriate.

Emporia Corp.'s information system further allows for authorized users to download data collected in pre-determined measurement periods as CSV files. This functionality is unique among many watt monitors that read directly from outlets and not breakers. This functionality also integrates well with Greenly, which is the proposed dedicated information system for data analysis and GHG emissions reporting, as described below.

A 4 set of Emporia Smart Plugs costs $47.99, without discounts or other savings offered by Emporia from time to time. Emporia Energy offers free USPS Priority Mail shipping to the contiguous United States. This totals $1,055.78 for the performance period. Based on our research of qualified products, we believe the Emporia Smart Plug, and its unit bundling coupled with cost savings, sufficiently and uniquely match our requirements for such a product for use in the research component and find its price to be reasonable and competitive.

Supplies

We intend to spend a total $9,720 on information technology expenses, including a dedicated information system for this project's research component and a dedicated website and domain name for all components of this project.

Greenly

For this project's research and voluntary consensus components, we will purchase an annual subscription to Greenly. Greenly is a GHG emissions reporting software that allows for local infrastructural integrations and periodic and on-demand consultation with sectoral experts for the purpose of optimizing use of the platform. We have an

active quote from Greenly for use of the platform at $3,100 per year. This price point includes coverage for Scopes 1 and 2 at $1,550 per year, coverage for Scope 3 business data at $775 per year, and coverage for Scope 3 financial data at $775 per year.

For the research component, we will integrate the watt readers, deployed at the partnered local project sites, into Greenly and record data collected there. We will also record venue-level electricity data collected from partnered local project sites on Greenly. For the voluntary consensus component, we will continuously use Greenly for reporting local partner sites' GHG emissions and estimating other emissions based on electricity consumption data.

Based on our research of other qualified products, we believe that the combination of Greenly's in-house technical and subject-matter support, infrastructural integrations, and overall ease-of-use to be strongly competitive for use in the research and voluntary consensus components. For this reason, and given our experience with similar procurements, we believe this expense is necessary, appropriate, and cost-effective.

esports.eco Domain

For all components of this project, we will develop and maintain a public website at the domain name, esports.eco. The USEA presently uses this domain name in relation to a landing site for the esports.eco program synopsis and lite paper. The website's purpose is described by the following Supplies expense for an annual WordPress Business Plan. This expense supports the unique branding of this project and ensures that partners are unified programmatically and in messaging, unifying esports ecology under esports.eco. Based on our experience with program development among our target audience and our previous and present work with public and private non-endemic stakeholders, we believe this expense is appropriate.

WordPress Business Plan

For all components of this project, we will develop and maintain a public website at the domain name, esports.eco. The purpose of this website is threefold:

1. To public key programmatic materials at a central location,
2. To promote transparency and accountability to the general public, and
3. To support this project's sustainability following the performance period.

WordPress' Business Plan is the first subscription tier that offers access to WordPress' plug-in marketplace. We intend to use this marketplace to enhance the website with accessibility and multi-language features, in the interest of civil rights and civil liberties. Access to these features in an integrated and easy-to-use setting is unique among similar products, and therefore, WordPress is competitive in this regard. Collectively, this expense supports the above purposes as well as maximizes cost efficiency in respect of public access and community engagement with public processes. Based on our research of qualified products, we believe this expense is reasonable and appropriate.

Contractual

We intend to spend a total $115,600 on subawards and contracts for the performance of services in support of all components of this project.

Project Manager

We intend to contract with Sarah Han, who is the USEA's present Managing Director of Communications and secondary point of contact for the USEA's previous federal financial award, for the performance of project management services. Sarah would be responsible for leading the execution of this project in all parts, which includes but is not limited to coordination of project activities by proposed partners, management of the procurement process for subawards and contracts, oversight and approval of deliverables from subawards and contracts made, and service as principal point of contact between the USEA and EPA.

Sarah has 10+ years of paid work experience in client management, community development, and event management. In this time, Sarah worked for more than four (4) years in wealth management for UBS, which is a globally recognized bank, in client support for managing portfolios totaling at least $10 million in assets; led the development of a community esports organization at California State University, Long Beach; and has over two (2) years of experience in the esports and gaming industries. Sarah is also instrumental to the day-to-day operations of the USEA, which she supports collaboratively with the Managing Director of Operations who serves as the organization's executive director.

In consideration of services performed, given Sarah's unique intersection of skills and knowledge and her long tenure of success in related positions, we intend to enter into an independent contractor agreement with Sarah at a rate of $50 per hour for two (2) hours per week per year (for a total 104 hours per year) for the performance period. This totals $5,200 paid per year and $15,600 over the performance period. Given experience with similar procurements and compensation arrangements, we believe this compensation is adequate and appropriate in light of all relevant factors.

Partner Manager

We intend to make a subaward to the AEA for services in support of this project's research and education components. We anticipate that the AEA will contract with Wyatt Pursley, who is the AEA's present CEO, for the performance of partner management services. Wyatt would be responsible for leading the execution of this project's research component, liaising with partnered local esports venues, managing the procurement process for contracts made by the AEA under their proposed subaward, overseeing and approving of deliverables from contracts made, and serving as principal point of contact between the USEA and AEA and between the AEA and partnered local esports venues.

Wyatt is the AEA's founder and chief executive. As such, Wyatt has led the AEA into being the largest network of independent or franchised local esports venues and community-based esports clubs across the United States as well as the only nonprofit organization organizing community-based esports competitions in this way. Given Wyatt's position within the organization, he has unique and special relationships with the owners and operators of the partnered local esports venues. We anticipate that this positive report will foster streamlined and efficient execution with partnered local esports venues throughout all parts of this project, especially the research component.

In consideration of services performed, given Wyatt's unique and special competencies and relationships as well as proven capacity for success in partner management, we intend to enter into an independent contractor agreement with Wyatt at a rate of $25 per hour for 2,000 hours per year, which approximates a full-time-equivalent agreement. This totals $25,000 per year for years 1-2 and $50,000 over the performance period. Given experience with similar compensation arrangements, we believe this compensation is adequate and appropriate in light of all relevant factors.

Data Specialist

We intend to make a subaward to the AEA for services in support of this project's research and education components. We anticipate that the AEA will contract with Ethan Ley, who is the AEA's present CFO, for the performance of data science and analysis services. Ethan would be responsible for managing the inflow of data collected from the deployment of watt monitors at partnered local esports venues and analyzing data, in accordance with the project design as per Section 2 of this application.

Ethan is pursuing a BS in Business Administration with a concentration in Finance from Oklahoma State University, has academic experience in data and business analytics as such, and has work experience with dedicated data analysis information systems, such as Tableau and Microsoft Excel. Ethan also has two (2) years of collegiate esports managerial experience for the varsity esports program at Oklahoma State University.

In consideration of services performed, given Ethan's relevant work experience, subject-matter experience, and prior experience with the AEA's operations, we anticipate that the AEA will enter into an independent contractor agreement with Ethan at a rate of $25 per hour for 200 hours per year. This totals $5,000 per year for years 1-2 and $10,000 over the performance period. Given the moderate degree of technical skills required and Ethan's prior work and familiarity with the AEA and esports activities, we believe this compensation is adequate, reasonable, and appropriate in light of all relevant factors.

Designer / Marketer

We intend to make a subaward to the AEA for services in support of this project's research and education components. We anticipate that the AEA will enter into two contracts for the performance of marketing and design services. The recipients of these contracts will be responsible for creating and disseminating strategic communications to

partnered local esports venues, creating and disseminating marketing materials to proximal stakeholders about this project and its alignment with climate goals and EPA priorities, and formatting key programmatic materials prior to publication.

We anticipate that the AEA will contract with Isabella Bice, who is the AEA's present Media Director, and Branson Evans, who is the AEA's present Communications Director, under separate marketing and design service agreements. Isabella previously led the esports program at Oklahoma State University as President, after having served as its Social Media Manager, and she has experience coaching young people in community-based esports competition. Branson previously worked as an esports commentator, specializing in explaining esports activities to non-endemic stakeholders, especially parents, and has experience in strategic communications in relation to local esports events.

In consideration of services performed, given Isabella's and Ethan's relevant work experience, subject-matter experience, and experience with the AEA's operations, we anticipate that the AEA will enter into an independent contractor agreement with both people at a rate of $750 per month for 12 months per year. This totals $9,000 per year. We anticipate that the AEA will contract with Isabella and Ethan for one (1) year each, Isabella for year 1 and Ethan for year 2. Therefore, compensation to either person totals $9,000 for the performance period and $18,000 for this expense overall. Based on our research experience with similar compensation agreements, we believe this compensation is adequate, appropriate, and reasonable in light of all relevant factors.

Climate Specialist

We intend to contract with Victoria Johnson, who was instrumental in the development of the USEA's esports.eco program throughout 2021, for the performance of specialist services in relation to this project's education and voluntary consensus components. Victoria would be responsible for providing subject-matter expertise in the development of educational-informational materials and webinars within the education component as well as the development of the voluntary consensus organization and advisory of the governing body of the voluntary consensus organization on relevant subject matter within this project's voluntary consensus component.

Victoria earned a BS in Geophysics from the University of Washington in Spring of 2021 and had her thesis research accepted for the Fall 2021 meeting of the American Geophysical Union. While her particular area of study differs from climate science per se, Victoria's experience with data analysis and modeling of seismic data is substantially relevant to this project's technical demands. From her work on esports.eco to date, Victoria has familiarized herself with the Corporate Standard and has supported research in development by the USEA as to esports' ecological impact, with a focus on sustainable business models and alternative frameworks for conceptualizing esports emissions.

In consideration of services performed, given Victoria's technical experience with environmental data and her familiarity with esports.eco, we intend to enter into an independent contractor agreement with Victoria at a rate of $2,500 per month for one

(1) year, which totals $30,000 over the performance period. Given experience with similar compensation arrangements and familiarity with Victoria's work output, we believe this compensation is adequate and appropriate in light of all relevant factors.

Other

We intend to spend a total $15,000 on expenses related to accreditation and participation in ANSI for this project's voluntary consensus component.

ANSI Annual Membership

For this project's voluntary consensus component, we will have the voluntary consensus organization apply for membership in ANSI. Given the type and size of the organization, the public rate for annual membership is $5,000. ANSI membership will expose the organization to the work of ANSI and ISO throughout the United States and make the organization eligible for application as a national standards developer. Therefore, this expense is a prerequisite for ANSI Accredited Standards Developer status, which is one part of this project's voluntary consensus component.

ANSI Accredited Standards Developer Application Fee

For this project's voluntary consensus component, we will have the voluntary consensus organization apply for ANSI Accredited Standards Developer (ASD) status. ANSI ASD status will allow the organization to make ANSI-accredited organizational standards, propose American national standards, and participate in the national processes for the development of ISO standards. As this level of access to voluntary consensus processes is central to the success of this project's voluntary consensus component, we believe this expense, in addition to the prerequisite ANSI membership fee, is appropriate.

Part 3A: Logic Model

	Resources	Activities	Outputs	Audience	Short-Term Outcomes	Intermediate Outcomes	Long-Term Outcomes
Research	- Time - Money - Partners - Equipment	- Deploy 3 watt monitors per partner site - Collect data at 1-5 second intervals - Clean & store data weekly	- 2 years of data collected at 1-5 second intervals - 24 monthly blog posts on esports ecology	- Partners - Industry stakeholders - The public	- Knowledge of esports' Scope 2 emissions by industry stakeholders	- Reduction in esports' electricity consumption via increased energy efficiency	- Enhanced quality of life from emissions reduction via increased energy efficiency
Education	- Time - Money - Partners - Supplies	- Translate research into educational materials and actionable informational toolkits	- 1 annual industry & academic report on esports' Scope 2 emissions - 6 quarterly webinars on esports ecology and energy efficiency	- Partners - Industry stakeholders - The public	- Knowledge of esports' Scope 2 emissions by industry stakeholders	- Reduction in esports' electricity consumption via increased energy efficiency	- Enhanced quality of life from emissions reduction via increased energy efficiency

Voluntary Consensus	- Time - Money - Partners	- Form a nonprofit - Write governing documents that comply with ANSI requirements - File for ANSI membership - Apply for ANSI ASD status	- ANSI ASD status - Adoption of 1 standard mitigating esports' ecological impact	- Partners - Industry stakeholders - The public	- Convened 22 stakeholders to garner consensus	- Maintain and apply consensus-based standards - Coordinated esports climate action in a public forum	- Enhanced quality of life from application of best practices

EXPERIENCE

Esports Administration

Chief Executive Officer - Amateur Esports Association *May 2021-Present*

- Serve as a leader to the administration team and staff.
- Lead outreach efforts and manage growth strategy.
- Manage B2B relationships and partnerships.
- Oversee the acquisition of sponsorships and grants.
- Coordinate between department administrators to ensure operational success.

Overwatch Esports Coordinator - Oklahoma State University *Aug. 2018-Dec. 2022*

- Manage player schedules and set up practices for each team.
- Manage all players schedules and find scrims that fit best in everyone's schedule.
- Spearhead recruitment of players into the program.

Overwatch Coaching

Macro Coach - Team Requiem *Oct. 2019-June 2020*

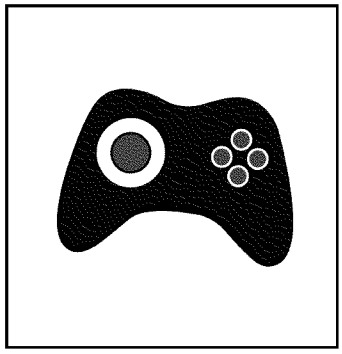
- Served as the team's Macro Coach, providing feedback during scrimmages and VOD Reviews related to the team's positioning and rotations.
- Provided players with short written reports based on their gameplay after matches

Head Coach - OATH League *June 2020-June 2021*

- Coordinated and evaluated the efforts and practices of subordinate coaches.
- Assisted in the creation of program planning to ensure the growth of players for attributes both in and out of game.
- Served as the program's Varsity Coach, providing players with feedback and assistance in regular scrimmages.

EDUCATION

- Graduated from Jenks High School *Aug. 2014-May 2018*
- Graduated from the Advanced Pre-Engineering Program at Tulsa Technology Center *Aug. 2016-May 2018*
- OSHA General Industry Safety and Health Certified
- Graduate from Oklahoma State University in Strategic Communications *Aug. 2018-Dec. 2022*



PROFICIENCIES

- Operational strategy, organizational leadership and project management.
- Video editing software, such as Premiere Pro, Shotcut, and others.
- Technological literacy in basic web tools such as Microsoft Office, Google Workspace and Wix.

Dear Eliot J. Oreskovic and Wyatt Pursley,

My name is Joel Robe, and I am the Owner of the Desh Gaming Lounge, which is a Video Game Lounge located in Burleson, Tx. The Desh is excited to support the United States Esports Association's application for the 2023 EJCPS cooperative agreement opportunity with the federal EPA.

We are committed to working with both the United States Esports Association and the Amateur Esports Association throughout the performance period as required by your application. In particular, we accept our roles and responsibilities as a project partner as follows:

- We will conduct metering at our location and share venue electricity consumption data;
- Our staff will participate in educational-informational workshops, as organized; and
- We will participate as a founding partner in the voluntary consensus organization.

The Desh has a prior non-financial relationship with the Amateur Esports Association as a member club in their club-based esports competitions. We are deeply committed to the success of Burleson and the wellbeing of our residents. To support the community, we have sponsored BISD eSports events starting in 2017. My staff and I also believe in promoting a positive atmosphere for young adults to socially gather and have fun, while including a healthy environment for competitive gaming.

If selected, The Desh will participate in your project in the manner described above. We look forward to supporting this foundational effort towards making local esports an anchor institution for all communities and supporting the development of esports ecology.

Thank you,

Joel Robe

Dear Eliot J. Oreskovic and Wyatt Pursley,

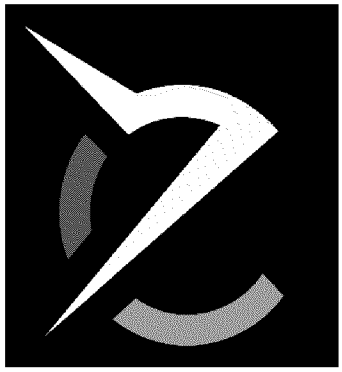
My name is Michael Chapman, and I am the Director of Operations of Contender Esports, which is a LAN Center Franchising Company with facilities in Springfield MO, Hudson Valley NY, Tulsa OK, Gilbert AZ, and Fort Collins CO. Contender Esports is excited to support the United States Esports Association's application for the 2023 EJCPS cooperative agreement opportunity with the federal EPA.

We are committed to working with both the United States Esports Association and the Amateur Esports Association throughout the performance period as required by your application. In particular, we accept our roles and responsibilities as a project partner as follows:

- We will conduct metering at our location and share venue electricity consumption data;
- Our staff will participate in educational-informational workshops, as organized; and
- We will participate as a founding partner in the voluntary consensus organization.

Contender Esports has a prior financial relationship with the Amateur Esports Association as a member club in their club-based esports competitions. We are deeply committed to the success of all our local communities and the wellbeing of our residents. To support the community, we work with the local school districts, and workforce development centers to grow a techfluent base of residents. My staff and I also believe in the ability for local esports to contribute to a better future for all our local residents.

If selected, [Contender Esports] will participate in your project in the manner described above. We look forward to supporting this foundational effort towards making local esports an anchor institution for all communities and supporting the development of esports ecology.



Thank you,

Dear Eliot J. Oreskovic and Wyatt Pursley,

My name is Connor Stilwell, and I am the Owner/CEO of The Esports Cave, which is an esports center with locations in Austin, TX and Cedar Park, TX. The Esports Cave is excited to support the United States Esports Association's application for the 2023 EJCPS cooperative agreement opportunity with the federal EPA.

We are committed to working with both the United States Esports Association and the Amateur Esports Association throughout the performance period as required by your application. In particular, we accept our roles and responsibilities as a project partner as follows:

- We will conduct metering at our location and share venue electricity consumption data;
- Our staff will participate in educational-informational workshops, as organized; and
- We will participate as a founding partner in the voluntary consensus organization.

The Esports Cave has a prior non-financial relationship with the Amateur Esports Association as a member club in their club-based esports competitions. We are deeply committed to the success of the greater Austin area and the wellbeing of our residents. Our core goals with our endeavor was to create a space that would be safe to anyone of any age or gender, facilitate the "minor leagues" of esports, and to be available as a fun hangout to promote growth in key skills for relationships and careers. Some of the things The Esports Cave has done to accomplish these goals is host paid and free tournaments in games like Smash, Valorant, and Fortnite, host talks about online safety, and provide summer camps in film production.

If selected, The Esports Cave will participate in your project in the manner described above. We look forward to supporting this foundational effort towards making local esports an anchor institution for all communities and supporting the development of esports ecology.

Thank you,

Connor Stilwell

Dear Eliot J. Oreskovic and Wyatt Pursley,

My name is Agragati Siegel and I am the owner of GameSync, which is an esports gaming center located in San Diego, California. GameSync is excited to support the United States Esports Association's application for the 2023 EJCPS cooperative agreement opportunity with the federal EPA.

We are committed to working with both the United States Esports Association and the Amateur Esports Association throughout the performance period as required by your application. In particular, we accept our roles and responsibilities as a project partner as follows:

- We will conduct metering at our location and share venue electricity consumption data;
- Our staff will participate in educational-informational workshops, as organized; and
- We will participate as a founding partner in the voluntary consensus organization.

GameSync has a prior non-financial relationship with the Amateur Esports Association as a member club in their club-based esports competitions. We are deeply committed to the success of the esports community and the wellbeing of our residents. To support the community, we have stayed active by integrating training programs, events and tournaments, and other activities, within our local region. We have also connected with high school and collegiate esports teams and have supported their practicing and coaching at our venue. My staff and I also believe in the power of competitive gaming as a tool to bring diverse groups of people together in a harmonious way, irrespective of race or social background. We feel that there is an opportunity in the sector to continue to grow the ecosystem that supports young people's passions.

If selected, GameSync will participate in your project in the manner described above. We look forward to supporting this foundational effort towards making local esports an anchor institution for all communities and supporting the development of esports ecology.

Thank you,

Agragati Siegel

Dear Eliot J. Oreskovic and Wyatt Pursley,

My name is Leighton LaPoint, and I am co-owner of Laughing Coffin L C, an Esports Arena located in Tanetown, MD. I am writing you, to express our excitement in supporting the United States Esports Association's application for the 2023 EJCPS cooperative agreement opportunity with the federal EPA.

As a project partner, Laughing Coffin is committed to working closely with both the United States Esports Association and the Amateur Esports Association throughout the performance period, as outlined in your application. We are ready to fulfill our roles and responsibilities, which include conducting metering at our venue to share electricity consumption data, participating in educational-informational workshops as organized, and serving as a founding partner in the voluntary consensus organization.

In addition to our prior financial relationship with the Amateur Esports Association as a member club in their club-based esports competitions, we are deeply committed to the success of our community and the wellbeing of our residents. At Laughing Coffin, we have actively promoted community development through hosting local tournaments, organizing charity events to raise funds for local causes, and providing opportunities for local talent to showcase their skills and pursue careers in the gaming and esports industry.

We believe that local esports can serve as an anchor institution for all communities, fostering economic impact through revenue generation and job creation, promoting social inclusion by providing a platform for diverse communities to connect, facilitating skill development and education, promoting community engagement by bringing people together, creating education and career pathways, and contributing to philanthropic endeavors.

If selected, Laughing Coffin will participate in your project in the manner described above. We eagerly anticipate actively supporting this foundational effort towards establishing local esports as an anchor institution for all communities, and fostering the development of a robust esports ecology.

Thank you for considering our support, and we look forward to the opportunity to collaborate with the United States Esports Association and the Amateur Esports Association.

Sincerely,
Leighton LaPoint

Dear Eliot J. Oreskovic and Wyatt Pursley,

My name is Juanrean Cooper, and I am the CEO and Founder of the Legacy Gaming Community.LLC, which is a Gaming Lounge located in Seattle, WA. Legacy Gaming is excited to support the United States Esports Association's application for the 2023 EJCPS cooperative agreement opportunity with the federal EPA.

We are committed to working with both the United States Esports Association and the Amateur Esports Association throughout the performance period as required by your application. In particular, we accept our roles and responsibilities as a project partner as follows:

- We will conduct metering at our location and share venue electricity consumption data;
- Our staff will participate in educational-informational workshops, as organized; and
- We will participate as a founding partner in the voluntary consensus organization.

Legacy Gaming Community has a prior non-financial relationship with the Amateur Esports Association as a member club in their club-based esports competitions. We are deeply committed to the success of Seattle, Wa and the wellbeing of our residents. To support the community, we have signed up for many community service events, volunteered free gaming time, and given out many gift certificates as well as provided multiple Internships for our local youth. My staff and I also believe in the way local eSports serves our community and youth by giving them the ability to resocialize, network with others like minded, and participate in fair healthy competition.

If selected, Legacy Gaming Community will participate in your project in the manner described above. We look forward to supporting this foundational effort towards making local esports an anchor institution for all communities and supporting the development of esports ecology.

Thank you,

Juanrean Cooper

Dear Eliot J. Oreskovic and Wyatt Pursley,

My name is Chris Perez, and I am the Co-owner of the Warguts, Inc., which is an esports business located in Tulsa, Ok Warguts, Inc. is excited to support the United States Esports Association's application for the 2023 EJCPS cooperative agreement opportunity with the federal EPA.

We are committed to working with both the United States Esports Association and the Amateur Esports Association throughout the performance period as required by your application. In particular, we accept our roles and responsibilities as a project partner as follows:

- We will conduct metering at our location and share venue electricity consumption data;

- Our staff will participate in educational-informational workshops, as organized; and

- We will participate as a founding partner in the voluntary consensus organization.

Warguts, Inc. has a prior non-financial relationship with the Amateur Esports Association as a member club in their club-based esports competitions. We are deeply committed to the success of esports gaming community and the wellbeing of our residents. To support the community, we have been involved in the local esports for the schools in our area and we have been used as a pickup for diapers and formulas for troubled families. My staff and I also believe in getting kids into esport programs so they can apply for scholarships to get into college along with team building exercises, problem solving, and conflict resolution.

If selected, Warguts, Inc. will participate in your project in the manner described above. We look forward to supporting this foundational effort towards making local esports an anchor institution for all communities and supporting the development of esports ecology.

Thank you,

April 11, 2023

Dear Eliot J. Oreskovic and Wyatt Pursley,

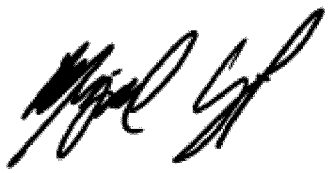
My name is Caleb, and I am the Owner of the Triangle Esports Academy, which is a hands on Gaming, Esports & STEM education provider with a physical brick and mortar located in Cary, North Carolina. Triangle Esports Academy is excited to support the United States Esports Association's application for the 2023 EJCPS cooperative agreement opportunity with the federal EPA.

We are committed to working with both the United States Esports Association and the Amateur Esports Association throughout the performance period as required by your application. In particular, we accept our roles and responsibilities as a project partner as follows:

- We will conduct metering at our location and share venue electricity consumption data;
- Our staff will participate in educational-informational workshops, as organized; and
- We will participate as a founding partner in the voluntary consensus organization.

Triangle Esports Academy has a prior non-financial relationship with the Amateur Esports Association as a member club in their club-based esports competitions. We are deeply committed to the success of youth in our community and the wellbeing of our residents. To support the community, we have been involved with local schools, parks & rec, nonprofit organizations and other businesses to provide gaming, esports, and STEM services all across the Raleigh-Durham area. My staff and I also believe that esports brings people together and offers an innovative way of learning that cannot be found in traditional education.

If selected, Triangle Esports Academy will participate in your project in the manner described above. We look forward to supporting this foundational effort towards making local esports an anchor institution for all communities and supporting the development of esports ecology.



Thank you,

Caleb Smith

	  ○ One day annual training with AV ($250) and room rental ($500).
		$212,250

Total		$497,291

EJCPS Logic Model

Alaska Coastal Resilience

Resources / Inputs	Activities	Outputs	Audience	Short-term Outcomes
Partners	Conduct Health Impact Assessment in communities	25 communities will receive technical assistance for resilience funding	Local governments	Increased opportunity for regional partnerships
Access to resources	Host monthly resilience calls	25 climate resilience plans produced	Regional nonprofits	Increased awareness of social determinants of health
Staff time	Provide asset management training	Model health impact assessment shared with 165 local governments	Tribal governments	More familiarity with asset management
AML members	Establish community advisory board	Model climate resilience plan shared with 165 local governments	Utilities	Local governments with more access to resilience resources
Technical expertise	Establish local resilience planning committees	Alaska asset managament materials produced	Community planners	
	Provide technical planning assistance to communities	2,500 rural residents receive information from project participants about resilience as it applies to environmental justice		
	Conduct outreach for funding opportunities	25 LRPCs formed in coastal communities		

Intermediate Outcomes	Long-term Outcomes
Increased competitiveness for federal investment	Increased awareness of environmental justice, and support for related initiatives
More planning tools available for communities	Project readiness for climate action
Progress on updating or developing hazard mitigation plans	Climate resilience plans implemented by local governments
Increase in number of local government officials with EJ training	Hazard mitigation plans implimented by local governments

Spokane, WA 99201

Amateur Esports Association
922 N 2nd St.
Jenks, OK 74037

Dear Eliot J. Oreskovic and Wyatt Pursley,

My name is Israel Derrick, and I am the General Manager of Legacy Airsoft and Gaming, which is an Esports venue with 42PCs and 24 consoles / Indoor Airsoft arena located in Amarillo,TX. Legacy Airsoft and Gaming is excited to support the United States Esports Association's application for the 2023 EJCPS cooperative agreement opportunity with the federal EPA.

We are committed to working with both the United States Esports Association and the Amateur Esports Association throughout the performance period as required by your application. In particular, we accept our roles and responsibilities as a project partner as follows:

- We will conduct metering at our location and share venue electricity consumption data;
- Our staff will participate in educational-informational workshops, as organized; and
- We will participate as a founding partner in the voluntary consensus organization.

Legacy Airsoft and Gaming has a prior non-financial relationship with the Amateur Esports Association as a member club in their club-based esports competitions. We are deeply committed to the success of Amarillo and the wellbeing of our residents. To support the community, we have held multiple events to help not only esport grow in the highschool and in our area but have decided ourselves to put Amarillo on the Map as a premiere place to experience Esports. My staff and I also believe in how local esports can unify and help the community and bring opportunities to the youth of this area.

If selected, Legacy Airsoft and Gaming will participate in your project in the manner described above. We look forward to supporting this foundational effort towards making local esports an anchor institution for all communities and supporting the development of esports ecology.

Thank you,

Israel Derrick

Introduction

What is Health Impact Assessment?

A health impact assessment (HIA) is a structured planning and decision-making process that analyzes the potential positive and negative impacts of programs, projects, and policies on the public's health. Health impact assessments are performed *prior* to program, project, or policy implementation.

The HIA process has several key characteristics:

- Focused: evaluates a specific policy, program, or project proposal
- Balanced: considers potential positive and negative health impacts
- Multi-dimensional: considers many dimensions of population health, including both outcomes and determinants
- Multidisciplinary: incorporates information from many disciplines that influence health
- Flexible: evaluates actions of varying size and complexity, in a variety of settings
- Adaptable: the scope can be wide ranging or focused on a limited set of issues of particular concern; similarly, some aspects of a project may require in-depth evaluation and field studies, while others may only require a desktop analysis
- Transparent: the process is open and transparent to the public

In Alaska, funding and completion of an HIA is strictly voluntary. Neither Alaska law nor federal law mandates the completion of an HIA for any purpose, including for major resource development projects, new programs, or policies.

The goal of this toolkit is to help HIA practitioners prepare high-quality documents that inform decision makers about potential impacts to human health. The toolkit also helps help state and federal agency policy-makers and project applicants understand when an HIA may be helpful and how to integrate an HIA with the regulatory process and with the decision-making process. Because HIAs are voluntary, anyone can propose or perform one in Alaska. However, this document is intended to be a technical resource for HIA practitioners and provide details regarding the general HIA process in the Alaskan context.

Why perform HIAs in Alaska?

Alaska has a rich and widespread distribution of natural resources throughout the state. Alaska also has many communities located in rural areas throughout the state that are highly dependent on subsistence hunting and gathering. Resource development has the potential to bring substantive changes to rural and indigenous communities that are located in close proximity to the project. These changes can include revitalization of communities through economic growth and community projects, and/or they can include environmental exposure to toxins, interference with subsistence activities, and disruption to communities. Because the interaction between natural resource development and human health is dynamic and complex, HIAs provide an opportunity to identify both the health benefits and the potential health risks in any proposed resource development project, public policy, or new public program. When project applicants and policy makers invest time and resources to understand health impacts in advance, they enable opportunities to contribute to improving health status in communities,

ED_016126_00000547-00005

reducing future health care costs, and lowering potential mitigation costs. They can also provide some assurance that human health has been carefully considered in decisions that affect the public.

HIA is an important tool that can help developers and policy-makers understand both negative and positive health effects of a proposed project. It can help developers create plans to enhance positive effects and reduce negative effects in a manner that fits Alaska's unique environmental, cultural, social, and public health context. Resource development is not the only area in which HIA is applicable. Other areas where HIA may be useful in Alaska include food policy, development of transportation infrastructure, emergency preparedness planning, and climate change response planning.

Here are some key aspects of HIA in Alaska:

- HIAs for resource development in Alaska are typically done as part of the National Environmental Policy Act (NEPA) process, when a lead federal agency determines that the impacts to human health should be evaluated as part of an Environmental Impact Statement (EIS) process.The primary goal of the HIA process is to address human health as part of resource development projects in Alaska. Generally, laws, regulations, and environmental standards are already in place for permits that are intended to protect human health. It is not the intent of the HIA to duplicate or undermine these.
- HIA is collaborative and is always done in close cooperation with all of the stakeholders and permitting agencies that are involved in a particular project, to help ensure that all permits are consistent and not conflicting with each other.

Alaska depends heavily on its natural resources for its economy, and therefore the health and economic well-being of its people. This HIA toolkit is a resource that will assist HIA practitioners in preparing high-quality, focused HIAs that inform stakeholders in detail regarding human health impacts, both positive and negative.

What is the history of HIA in Alaska?

The earliest HIAs in Alaska were written for an extension of the Red Dog Mine and a federal lease sale permit for the National Petroleum Reserve Alaska (NPR-A). These HIAs addressed key health considerations that the public raised during scoping for EISs during the NEPA and permitting processes. These early efforts, however, were lengthy, complex processes that revealed the need for technical guidance to support future HIAs in the state.

During September 8–10, 2008, the Alaska Native Tribal Health Consortium (ANTHC), the Alaska Department of Health and Social Services (ADHSS), and the U.S. Centers for Disease Control and Prevention (CDC) jointly hosted a workshop on HIA in Anchorage, Alaska. At the conclusion of this workshop, attendees were invited to participate in a working group, which convened regularly to guide the development of this HIA guidance document (also known as the "Alaska HIA Toolkit"). The working group reviewed a wide variety of scientific literature and HIA guidance documents, including the International Finance Corporation (IFC) "HIA Toolkit", which informs several sections of this guidance document.

The working group inserted Alaska-specific concerns where needed, such as subsistence nutrition and stakeholder engagement. To meet an operational need to maintain and update the HIA toolkit and coordinate the working group, ADHSS and the Alaska Department of

Natural Resources (ADNR) volunteered to accept a co-leadership role by jointly funding an HIA program. ADNR and ADHSS also serve a role in initiating and facilitating HIAs in parallel with the regulatory process for natural resource development projects.

The ADHSS HIA program is not a regulatory entity, but rather exists as a state resource to guide the development of HIA activities in Alaska. ADHSS maintains the Alaska HIA Toolkit and provides the most current version on the HIA Program website. ADHSS, including through the use of third party consultants, can also play the role of lead HIA practitioner for a project. Alternately, to provide flexibility for applicants or other agencies to lead the development of HIAs, ADHSS's role may be to review HIAs developed by other parties.

While ADHSS serves in this organizational leadership role, the HIA Program relies on robust participation from all partners affected by HIA-related projects. The Office of Project Management and Permitting (OPMP) at ADNR, which coordinates the review of larger scale projects in the State, facilitates multi-agency involvement in the scoping process and in the review of any HIA draft documents that may be being prepared. Involvement of these agencies brings in specific environmental and health expertise and ensures that the HIA is fully informed of all regulations, policies, and programs already in place to protect human health.

How can HIAs be developed simultaneously with the NEPA process?

The National Environmental Policy Act (NEPA) process requires a federal agency to evaluate the relevant environmental effects from actions that fall within its jurisdiction, such as issuing regulations, issuing permits, and making land management decisions. Agencies comply with NEPA via three different pathways. Categorical Exclusions (CEs) apply to categories of actions that the agency has decided do not individually or cumulatively have a significant effect. Federal agencies develop Environmental Assessments (EAs) to evaluate specific projects that are not expected to have significant environmental impacts. EISs are prepared for major federal actions that have the potential to significantly affect the environment. Large natural resource development projects typically involve preparation of an EIS.

NEPA mandates that federal agencies responsible for preparing EISs do so in cooperation with state and local governments (including tribal governments) and other federal agencies with jurisdiction by law or special expertise. Cooperating agencies assist the lead agency in developing the EIS. EISs for natural resource development projects will often include a number of agencies that are formally designated as cooperating agencies. The State of Alaska generally accepts cooperating agency status, with ADNR Office of Project Management and Permitting (OPMP) acting as the lead state agency in coordinating the input of other state agencies.

When the ADHSS HIA program develops an HIA for a project, ADHSS functions as part of the state interagency team that is coordinated by ADNR/OPMP. ADHSS brings its expertise to the team, along with the subject matter experts from the other state agencies, typically the departments of Natural Resources, Fish and Game, Environmental Conservation, Transportation and Public Facilities, and Commerce and Community Development.

Documentation
The purpose of NEPA is "to promote efforts which will prevent or eliminate damage to the environment and biosphere and stimulate the health and welfare of man" (National Environmental Policy Act, 1969; Sec. 2 [42 USC § 4321]). The EIS is documentary evidence

that the requirements of NEPA have been satisfied.

Where the assessment of health impacts has been raised as an issue that needs to be addressed in the EIS, the lead federal agency may request that an HIA be developed to evaluate potential public health impacts. As discussed above, assessment of health using HIA methodology was included in several past EISs (Point Thomson, Red Dog Aqqaluk and NPR-A). An HIA was not developed for the more recent Greens Creek Mine Supplemental EIS. The determination of whether or not to evaluate health impacts and the methodology to do so is based on project-specific considerations.

Where an HIA is developed during the EIS process, the HIA may be a "stand-alone" HIA document to be included as an appendix to the draft or final EIS or it may be included in the Administrative Record as a reference. The federal agency, as the lead agency for developing the EIS, will make these decisions. "Stand-alone" means that the HIA remains as a single document that can be read from start to finish, with its own table of contents and internal logic and reference structure. EIS contractors can use the stand-alone HIA for technical information to inform the overall EIS or to create a specific health section within the EIS. The HIA program can also advise the EIS contractor how to interpret the HIA and integrate the technical information into its document.

Schedule

For a large natural resource or other infrastructure development project, the start of the NEPA public review process typically occurs when a federal agency publishes a notice of intent to prepare an EIS in the federal register. Prior to the notice of intent, a project proponent conducts a number of environmental studies in support of its initial application to a federal agency; much of these baseline data and analyses are used by the lead federal agency's EIS contractor for the analysis of potential impacts. During this period, some federal agencies may conduct a highly formal and public process, require submission of study plans, and hold public comment periods on the study plans. Other federal agencies allow this baseline period to unfold in an informal manner, without study plans or public review cycles, until the statement of intent is filed. If an HIA is also to be prepared for a project, it is important for the lead federal agency to request an HIA practitioner (e.g., the Alaska HIA Program, a private contractor, a tribal government or agency, etc.) and integrate the HIA and EIS processes as early as possible in the schedule. As such, the lead federal agency should work with the State in planning the HIA process before preparation of the notice of intent if possible. In addition, coordination of data collection activities to meet the needs of the EIS and HIA ideally occurs during the baseline data collection period. This typically involves early and frequent communication with the project proponent. This early coordination promotes cooperative planning of field studies and data gathering with other environmental baseline studies, which reduces survey fatigue in communities and the overall cost of field work, decreases the risk of delays, and provides an opportunity for health input into the creation of project "alternatives."

Assuming that the HIA is planned to be included as an appendix or reference for the EIS, a draft HIA should be available concurrent with publication of the draft EIS. If revisions are required, the revised HIA should be available along with the final EIS.

Recommendations

When completed, the HIA may provide recommendations that address the potential benefits and adverse impacts discovered during the study. Formal decisions regarding health recommendations, if any are identified, belong to the lead federal agency and would be included in the public health sections of the EIS. Ultimately, the federal agency decides

whether health impacts are significant, whether recommended actions are appropriate, and which actions, if any, are included as stipulations in a record of decision.

How does an HIA incorporate information from Economic and Social Impact Analyses?

An HIA relies, in part, on data from economic and social impact assessments and attempts to avoid duplicative research efforts whenever possible. Information from these assessments, such as income, employment, education, and local economic profiles is then used in the HIA to examine a series of health impacts known as the Social Determinants of Health (SDH). This will be described in further detail in Section 4.

What are the objectives of this HIA toolkit?

- To explain the general context and history of HIA in Alaska
- To suggest methodologies that assess potential community health impacts of resource development projects in the State of Alaska
- To help HIA programs or independent practitioners develop a scope of work and/or specific work plans
- To guide HIA practitioners in implementing an Alaska-specific best practices approach to performing field studies and stakeholder engagement activities, rating potential impacts, and making final recommendations
- To allow the inclusion of potential human health impacts during the social and environmental impact assessment process
- To define the roles and responsibilities of project proponents, HIA practitioners, and the State, in the overall health impact process

What are the limitations of this toolkit?

The toolkit does not address "inside the fence" workplace safety and health issues. The toolkit does consider "cross-over" issues where workforce behaviors produce interactions with local communities. The toolkit also addresses the benefits and risks of workforce influx such as off-duty recreation, leisure activities, housing needs, and economic benefits to the local community.

The toolkit currently focuses on natural resource development projects, rather than on general policy or program impact assessment. The toolkit could be updated or expanded to cover areas outside of natural resource development as program or policy health impact assessments are performed in Alaska.

This toolkit is not intended to replace or supersede established protocols, but is designed to establish a consistent framework for examining potential health impacts when these impacts are considered in existing regulatory or planning processes.

Who is the intended audience of the HIA toolkit?

The HIA toolkit is primarily intended as a technical resource for HIA practitioners, but was also designed to be a useful reference document for other stakeholders, including federal and state

ED_016126_00000547-00009

regulatory agencies; local, state, tribal, and federal health agencies/departments; non-governmental entities; project proponents; and the public.

About This Document

Section 1 addresses a general background of the overall HIA practice. The critical role that the State of Alaska and the relevant tribal government health departments and tribal health organizations play in the overall process is described. General definitions of the different types of impacts (direct, indirect, and cumulative) within a health analysis are discussed.

Section 2 discusses how to decide whether to conduct an HIA. Some of the critical project features that can potentially produce health impacts are presented.

Section 3 describes the different types of HIAs. This section also discusses how to determine which type of HIA is appropriate for a given project.

Section 4 describes key health effect categories (HECs). These categories are similar to the environmental health areas (EHAs) concept that is widely discussed in the published international HIA literature. HECs are a key framework for organizing and analyzing the most likely types of potential impacts from a project. "Alaska-specific health effects" were developed as part of the collaborative work group effort.

Section 5 describes the scoping process for HIA, including how to coordinate the involvement of all relevant state agencies, and how to develop an appropriate work plan.

Section 6 considers the role of health-specific stakeholder engagement. Advance planning with the NEPA environmental and social teams to avoid duplication of effort is discussed.

Section 7 addresses baseline data collection and uses, including issues related to community surveys. The profound and ongoing baseline demographic shifts that are occurring in rural and urban Alaska are reviewed. The implications for positive or negative health impacts are considered. Available databases are presented along with their strengths and limitations.

Section 8 focuses on assessing and ranking health impacts and presents a standard qualitative model that is typically used in HIA. The section also describes the more quantitative aspects of chemical risk evaluation used by toxicologists and other health professionals.

Section 9 discusses how an HIA makes health recommendations, influencing the process for developing measures to avoid, minimize, rectify, reduce, or compensate for potentially significant impacts. Means to ensure that health prevention and promotion efforts are transparent, open, and considered throughout the overall HIA are discussed. The development of a Health Action Plan (HAP) is described including how the HAP may present verification processes to document success or failure in the achievement of key performance indicators (KPIs).

Section 10 provides a general discussion of monitoring and evaluation. The development of a reasonable and appropriate set of KPIs is a complex and difficult task that often requires technical assistance from the relevant public health authorities.

Section 11 focuses on the resources needed for conducting HIAs.

Section 1: General Background

Overview of HIA

This section of the toolkit introduces key terms, describes the HIA process, and explains the basic steps in an HIA. While many of these terms are useful for any type of HIA, this section is especially relevant to HIAs prepared for major natural resource development projects in Alaska.

Key Terms

Several key terms have a specific meaning in this guidance:

Health
For the purposes of this toolkit, health means "the reduction in mortality, morbidity and disability due to detectable disease or disorder, and an increase in the perceived level of health." This definition is from the World Health Organization (WHO) Regional Office for Europe "Health21" policy framework publication (WHO, 1999). As pointed out in this WHO publication, the WHO constitution in 1946 defined "health" as "*A state of complete physical, mental and social wellbeing and not merely the absence of disease or infirmity*." The 1946 WHO definition expresses an ideal that should guide all health development activities. But when it became clear that it was difficult to measure progress towards this ideal, WHO officials determined that they needed a narrower definition which recognized the difference between "aspirations" (striving for ideals of human health) and "operations" (striving to maintain and advance current human health status). The final phrase in the new definition still allows for the importance of one's perceived level of health.

Environmental Health
Environmental health is "the body of knowledge concerned with the prevention of disease through control of biological, chemical, or physical agents in the air, water, and food, and the control of environmental factors that may have an impact on the well-being of people." Environmental health encompasses the human living environment and stresses primary prevention based on engineering and design improvements (World Bank; Listorti, 1996).

This toolkit also understands environmental health to include human factors such as the social, economic, and physical context in which people live, work, and recreate. These environmental factors are referred to as the social determinants of health (SDH) and will be discussed in Section 4.

Impacts and Effects
"Impact" and "effect" are used interchangeably in this toolkit. Both beneficial and detrimental impacts will be considered, and they are usually classified into three types:

- **Direct** – an impact caused by an action and occurring at the same time and/or place
- **Indirect** – an impact that involves more than one causal step and often occurs later in time or farther removed in distance, but still reasonably foreseeable. In this toolkit, indirect impacts may arise from the way in which project features influence behavioral choices made by affected populations.
- **Cumulative** – caused by an action and when added to other past, present and

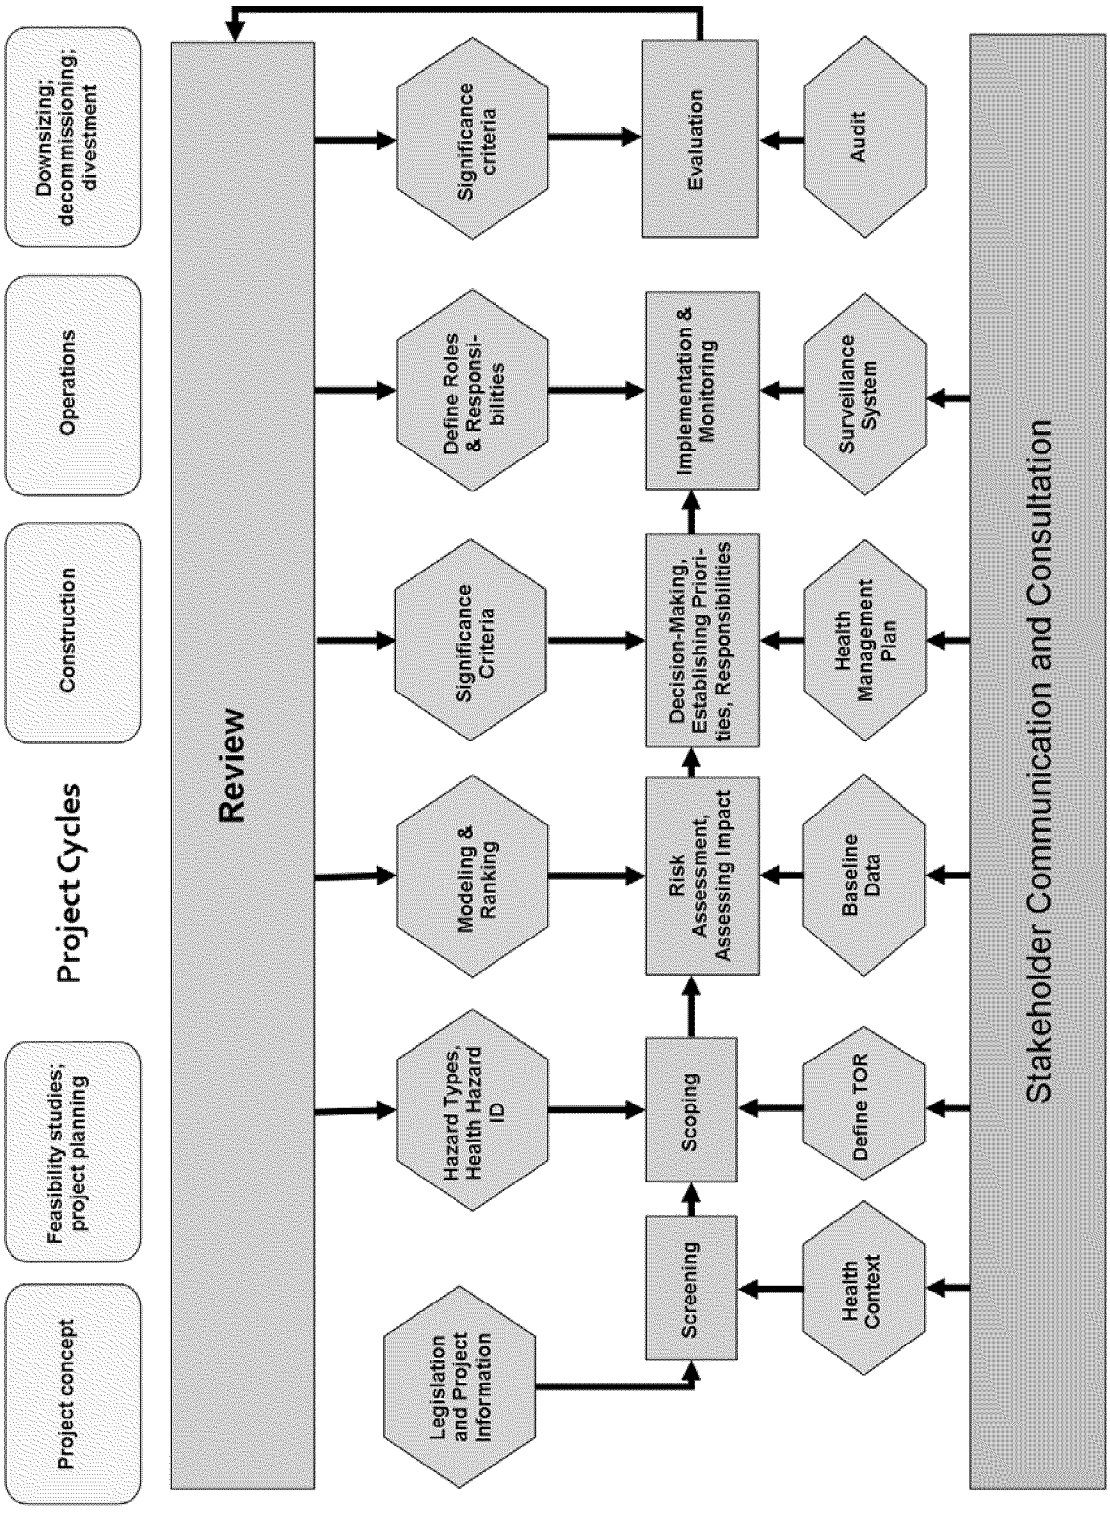
ED_016126_00000547-00011

reasonably foreseeable actions, may become collectively significant over a period of time. Cumulative impacts must be confined to periods of time that can be estimated or predicted with reasonable accuracy to maintain meaning and provide a constructive function.

The following definitions have been developed for the National Environmental Policy Act (NEPA), but are also useful for health impact analysis because of the emphasis on place and timing.

Affected Environment
The "affected environment" as used in the NEPA process refers to an area where impacts may be created by the project and alternatives under consideration by the lead agency. The HIA toolkit will adopt the same alternatives as used in the NEPA process.

Significance
In a NEPA analysis, "significance" is a level of impact that is determined by a federal regulatory agency, taking into account the context and intensity of the proposed action, and which triggers certain requirements under federal law. "NEPA significance" is defined in federal regulations under 40 CFR § 1508.27.



In the HIA document, however, "significance" has a broader meaning that is tied to recommendations in the HIA. Health impacts deemed to have a certain level of significance (usually Category 2 or higher, see Section 8) may act as a signal for the HIA practitioner, in consultation with the state agencies, to propose recommendations if relevant actionable recommendations exist. It is possible that a potential impact could be significant in the context of a stand-alone HIA, but not be deemed significant in the EIS under NEPA regulations.

Finally, it is important to underscore that the word "significance" as used in NEPA and HIA documents should not be confused with "statistical significance" used in scientific literature to describe the reliability of a statistical test result, which has a different meaning.

Social Determinants of Health (SDH)
The HIA toolkit adopts the CDC definition of SDH as "the circumstances in which people are born, grow up, live, work, and age, as well as the systems put in place to deal with illness. These circumstances are in turn shaped by a wider set of forces: economics, social policies, and politics." There are a variety of SDH models that are available including those from the WHO (2008).

HIA Process
The typical flow of the HIA process is represented in Figure 1.1 on the next page.

Figure 1.1 The HIA Roadmap (IFC, 2008)

ED_016126_00000547-00013

In the HIA roadmap, the yellow "project cycles" blocks illustrate the typical phases of resource development projects. The elements of an HIA may or may not follow the timing of the project sequence. The orange bar entitled "stakeholder communication and consultation" illustrates that stakeholders should have input throughout the entire process (see Section 6 for detailed comments on stakeholder engagement). The beige boxes indicate key activities performed during the various steps of an HIA. The blue boxes in the center are the main steps of the HIA process, which include:

- **Screening –** Preliminary evaluation to decide whether a project poses any noteworthy health questions, whether an HIA is warranted, and if so, what size HIA is appropriate.

- **Scoping –** During NEPA scoping, a vast array of health issues of potential concern can be considered or examined through project review, health data review, and stakeholder engagement. All available and relevant baseline health data is also gathered and summarized during this phase. Baseline health data collection is described in greater detail in Section 7. Near the close of the scoping phase, the HIA practitioner should be able to identify finite plausible health impacts, if any, and any existing data gaps. Scoping is described in more detail in Section 5 and Section 6.

- **Impact Ranking –** After the key health impacts are identified during the scoping process, the impacts can be ranked. The HIA toolkit uses a semi-quantitative method that accounts for the intensity, geographic extent, duration, and likelihood of health impacts. (See Section 8)

- **Health Action Plan (HAP) –** Based on the impact rankings developed in the risk assessment, the HIA practitioner can develop an HAP that makes recommendations to address important impacts. These recommendations can suggest ways to further maximize the health benefits or minimize identified health risks. (See Section 9)

- **Implementation and Monitoring –** After the HAP is developed, key stakeholders (including the project proponents) may develop action frameworks, allocation of resources, and monitoring systems that track progress towards the goals of the HAP. The monitoring plan should define appropriate key performance indicators. (See Section 10)

Section 2: Screening—Deciding to Conduct an HIA

The Screening phase determines if an HIA is appropriate for a project and, if so, what level of HIA is needed (i.e., desktop, rapid appraisal, comprehensive; see Section 3). Screening is typically the first phase of the HIA process, which may happen through formal or informal conversations or may be captured in brief documents that explain the rationale behind screening choices.

Currently most HIAs are developed as part of the NEPA process for a specific project. The lead federal agency typically makes the decision whether an HIA is appropriate for the project, and how it should be incorporated into the Environmental Impact Statement. The goal is to ensure that a discussion of human health impacts is brought into the NEPA process, as appropriate, and ultimately an actual HIA may not be necessary.

How are screening decisions made?

The proposed project plan is reviewed for factors that are known to influence human health. Because resource development projects are extremely diverse; there is not a rigid set of screening rules for an HIA. Instead, this toolkit suggests a number of indicators that may point to the fact that an HIA is needed, such as project design features, environmental contaminants of concern, social concerns, or community concerns.

What resources inform HIA screening decisions?

Screening decisions are based on the best available knowledge about the project and the best available information on human health in the affected areas. If an applicant has produced an initial health review, this may be useful in the screening process, along with an initial project description. Widely accepted best practices in the field are reflected in *Improving Health in the United States: The Role of Health Impact Assessment (National Research Council, 2011)* and *Practice Standards for Health Impact Assessment* (North American HIA Practice Standards Working Group, 2009). Additionally, several industry trade associations (e.g., International Council on Mining and Metals [ICMM] and International Petroleum Industry Conservation Association [IPIECA]) have detailed screening chapters in the HIA guidance documents for their members.

What if a governmental agency contacts the HIA practitioner?

Typically, a governmental agency (usually the lead federal agency for the NEPA process) will decide to conduct an HIA prior to finding someone to perform the study. After reviewing the decision of the requesting agency, the next step for the HIA practitioner is to determine the level of effort required for the HIA by gathering key screening information about the project. This screening review should succinctly state the likelihood of potential impacts and propose whether additional analysis is required. Since HIAs are voluntary studies, it is possible that an HIA could be performed in the absence of regulatory frameworks.

ED_016126_00000547-00015

What principles guide screening decisions?

The level of effort should be appropriate to the various aspects of the proposed project. Not all aspects of a project will necessarily require the same level of effort. The precise terminology that describes the level of HIA (i.e., desktop, rapid appraisal, comprehensive, see Section 3) is less critical than performing systematic and reproducible analyses. The agencies and the HIA practitioner should analyze every project using the same basic approach so that proponents and agencies can anticipate the steps and scale of the overall HIA process and plan accordingly. The screening process should be as transparent as possible.

What factors invite more in-depth health impact analysis?

The screening process reviews indicators that might include environmental, social, economic, and community concerns, as well as project characteristics.

Project characteristics

Prominent and new linear features with an emphasis on transport linkages

New linear features include airstrips, railway lines, power transmission lines, pipelines, roads, and rivers used as transportation conduits, where transportation conduits were not previously available or sufficiently developed. Linear features can create impacts because they allow new exposures between ecological and human communities, but can also bring significant benefits to the affected communities.

Impacts from new linear features are primarily related to increased access. New transportation routes can provide communities with greater access to medical and mental health facilities, educational and training facilities, and employment opportunities. Improved transportation also improves access to better and/or lower cost markets for goods and services and an increased range for subsistence activities.

Increased transportation access could also increase the potential for vehicular accidents and related injuries, expose communities to increased levels of dust and vehicle emissions, and provide new routes for the influx of alcohol and drugs. New travel routes could also change disease transmission patterns as workers stop in various communities along the route.

Linear features can also present physical barriers with the potential to change wildlife migration patterns, altering human accessibility to subsistence species. In some cases, linear barriers may also pose an impediment that limits human access within the region.

Large footprint facilities

Projects may require a large constellation of engineered facilities (e.g., tailings dams, ponds, roads, pipelines, and storage tanks) that are referred to as the physical footprint. For human health impacts, the project footprint may include communities affected by the movement of supplies and personnel, as well as locations where these entities interface with the public. The size of the project footprint is an important screening consideration.

Large projects in rural settings

When large projects occur in rural Alaskan settings the potential impacts are a complex mix. Large projects often bring substantial change to the economic, social, and physical factors that affect human health. These changes include local tax revenue, with subsequent effects on the overall standard of living, with monies potentially available for schools and new infrastructure. Personal incomes may also increase. The choices individuals make on how to spend their personal incomes are also complex; money may lead to increased drug and alcohol use, or it may enable the purchase of fresh produce and needed medications. A large project in a rural setting may also have profound effects on population in-migration, out-migration and family structure; opportunity for income may prevent families from having to separate in search of work, or it may bring increased pressure on local families asked to house distant relatives moving back into the region for work. The influx of new people into the communities may put increased pressure on existing local services, or it could mean an expansion of available services either directly provided by the project proponent or supported by new tax revenues.

Subsistence practices may benefit from increased access to subsistence use areas and financial resources for purchases of better transportation and hunting equipment. However, detrimental impacts to subsistence could include loss of subsistence use areas, animal avoidance of traditional use areas due to noise from a development project, and/or increased hunting competition.

The influx of a large workforce into a rural area can produce impacts as the new group of workers interfaces with small rural communities. Influx of new people may vitalize a community, or strain its services and infrastructure.

Project design and project policies may include measures to mitigate negative effects. Many rural facilities are fly in/fly out projects; employees are flown directly to the site and housed at the site to avoid any interface with the nearby communities. Additionally, rural projects often impose policies that prohibit hunting and fishing to minimize impacts of subsistence resources.

Local governance may also play an important role in how a development project impacts their communities. Zoning ordinances and policies for management of tax revenues will influence community outcomes.

Construction phase related influx

Potential impacts from the construction phase should also be examined in screening for an HIA. Construction activities may, in some cases, involve a greater influx of workers, and/or use temporary ‘camp conditions’ that differ from the operating project.

Exploration phase related influx

In general, exploration has the potential for health impacts related to access roads, helicopter noise, seismic activity, fuel storage, and personnel support.

In the typical rural Alaskan setting, the local population will be considered for employment or workers from other locations will be brought in via a fly in/fly out system. Exploration employees may be housed in remote camps or may utilize existing local lodges and other accommodations.

This may bring needed income to rural areas, particularly outside of the tourist season, and/or it may impose pressure on existing facilities and infrastructure. Some indirect impacts to the community could occur via influx of extended family job seekers.

In most cases, exploration activity occurs long before a project is defined for evaluation by an HIA, and is therefore not likely to be incorporated within a project HIA. Exploration, in and of itself, is unlikely to be of sufficient size and scope to warrant an EIS or an HIA.

Environmental concerns

Potential for hazardous material exposure

If a project has the potential to elevate human exposure to hazardous materials, this will usually indicate the need for a more in-depth HIA. The HIA practitioner should be aware that Alaska-specific exposure scenarios for chemicals are often different from those upon which federal standards are based. For example, rural residents eating a subsistence diet may be exposed to higher than expected levels of methyl mercury because fish constitutes a very large portion of their daily dietary intake. Consumption of fatty tissues from marine mammals (whale, seals, shark, and porpoise) is also common among Alaska Native peoples and may produce higher exposures to bio-accumulated compounds. This potential risk of elevated exposure levels may indicate a more in-depth environmental and human sampling for substances such as methyl mercury.

Air quality

Air emissions that are in compliance with permits are presumed to be protective of human health. Air quality issues associated with projects that may have unregulated emissions may invite the need for a more in-depth human health evaluation. For example, particulate deposition from fugitive dust that contains heavy metals or other potentially toxic substances may affect berries and other wild plants consumed in large quantities by local residents and subsistence species.

Water resources – quality, quantity and access

As with air, water emissions that are in compliance with permits are presumed to be protective of human health. Water access is a very important issue due the role it plays in subsistence issues, as well as community health and hygiene. Project features (e.g., dams, stream diversion, de-watering wells, drilling activities, etc.) that are likely to challenge water access or strain water delivery infrastructure may indicate the need for more in-depth health analysis. Also, projects can help to improve access to water. Many rural villages struggle to maintain adequate quantity and access to potable water supplies and depend heavily on clean water for their subsistence practices.

Subsistence resources, harvest, and practices

Project features that will affect subsistence resources are a key topic in rural settings that host Alaska Native communities. Subsistence concerns are cross-cutting because they affect the physical environment, social relationships, emotional well-being, and health behaviors. Projects that may influence key questions related to Alaskan subsistence practices are:

- **Quality** – Does the proposed project increase or decrease contaminant levels in subsistence resources (e.g., increased heavy metal concentrations)?

- **Access** – Does the proposed project limit or promote community access to subsistence resources for traditional user groups? Does the proposed project limit or promote access for new user groups, affecting competition for the resource?

- **Quantities** – Does the proposed project increase or decrease the quantity of the resources? Do changes in access benefit or negatively impact subsistence resource quantities?

Social Concerns

In addition to environmental concerns, some social issues may also identify the need for an in-depth HIA. Social analysis is often focused on these major areas:

Influx of workers or other individuals to a region

Influx can occur due to job seeking, commercial opportunities, small-scale trading, or extended-family in-migration. Significant influx may strain fragile local infrastructures, introduce new diseases, or disrupt social patterns, but could also revitalize a community where extensive outmigration has occurred due to a previous lack of employment opportunities. Increases in population can lead to the re-opening of schools that closed due to outmigration. The return of extended families can also reinstate traditional subsistence sharing practices, strengthen traditional practices, and strengthen familial bonds.

Screening decisions regarding the influx of workers should consider the size of the workforce, local hire commitments including training opportunities, and whether or not the work force will be housed at site on fly in/fly out basis.

Resettlement or relocation of villages or individuals

While unlikely in Alaska, resettlement and/or relocation can have significant direct, indirect, and cumulative health impacts. Impacts can vary from social and cultural disruption to changes in access to subsistence resources, for better or for worse. It is important for the HIA screening process to consider the distance and the characteristics of relocation. In circumstances where villages or individual homes are in areas subject to severe flooding or erosion, relocation may allow a village to maintain its functional existence within the region in lieu of outmigration to other villages and distant cities.

Economic concerns

Significant changes in income and expenditures for housing, food items, vehicles, and fuel may create a diverse array of positive and negative health effects. The range of potential effects is complex and very diverse. Projects that plan substantial recruiting from local populations may bring notable changes in income.

Equity

Equity involves the distribution of impacts for various community groups, identification of

potentially vulnerable populations, and identification of environmental justice (EJ) issues. EJ is the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.

If screening and scoping indicates the possibility that there could be disproportionate health impacts or benefits to vulnerable populations, then an HIA may be useful to assess health effects. Federal agencies are required to address EJ during NEPA analyses. Council on Environmental Quality (CEQ) guidance recommends that federal agencies evaluate health and include an examination of relevant public health data as part of the EIS EJ analysis (CEQ 1997). EPA identifies HIA as a possible method for evaluating health in compliance with EJ requirements. While an HIA is not required to perform an EJ analysis, results of an HIA can inform the EJ analysis.

Community concerns

Strongly held community concerns may also serve as a reason for more in-depth HIA analyses. In many situations, especially concerning the fate and transport of potentially hazardous materials, stakeholders may voice concerns that arise from their experiences and perceptions. Regardless of the absolute validity of the concerns, it is important to provide information that reassures stakeholders that their issues will be addressed during the HIA. If strong community concerns overlap with a known gap in health data, this may be a reason to actively gather information from field studies or surveys.

ED_016126_00000547-00020

Section 3: Types of HIAs

For this toolkit, the key descriptive terms for the types of HIA are:

- Desktop
- Rapid appraisal
- Comprehensive

Each type requires a different approach to baseline data collection and stakeholder engagement, and requires different amounts of time (see Table 3.1).

Desktop HIA

The desktop HIA is a qualitative assessment and is most appropriate for projects with few anticipated health impacts. The desktop HIA ideally requires two to four weeks and it often does not warrant extensive stakeholder engagement, although some engagement may be useful. If a screening study is warranted, the desktop HIA can be a useful tool for these purposes.

In a desktop analysis, the following elements should be covered:

- Project background
- Scope of the HIA
- Brief project description including (i) location, (ii) site access, and (iii) schedule
- Potentially impacted areas (geography)
- Potentially affected communities (if any)
- Review of available subsistence data
- Community and/or external stakeholder concerns or comments
- Brief baseline analysis
- Potential health benefits and effects
- Risk and benefit analysis based on the standard health effects categories
- Recommendations
- Monitoring options for Key Performance Indicators (KPI)

Rapid Appraisal HIA

A rapid appraisal HIA is more in-depth than a desktop HIA and uses available or accessible health information *without* conducting new field survey work. What differentiates a rapid appraisal HIA from a desktop HIA is the inclusion of stakeholder and key informant analysis, as outlined in Table 3.1. Examples of data sources for a rapid appraisal include peer-reviewed scientific literature, health department databases, and tribal health service data sources. The rapid appraisal will review the elements of the desktop HIA in more detail.

ED_016126_00000547-00021

Comprehensive HIA

The hallmark of the comprehensive HIA is the collection of new field study data. Field studies address data gaps identified during the scoping process. A comprehensive HIA may be appropriate for large, complex projects that involve the following:

- Resettlement of existing communities
- Significant population influx
- Major disruption of subsistence practices
- Significant impacts, both positive and negative, to key SDH
- Information gaps related to a well-known aspect of a project

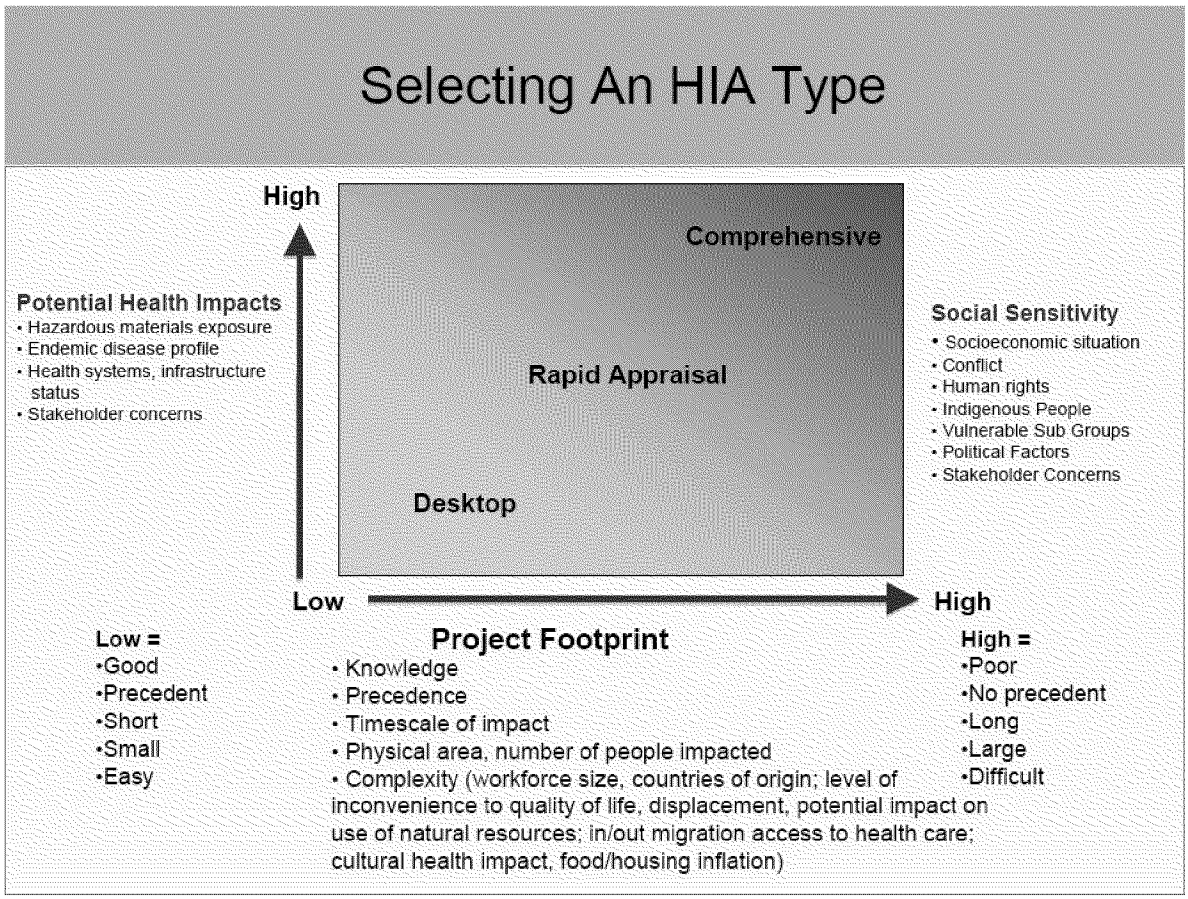


Table 3.1 Levels and Characteristics of HIAs

Level of HIA	Characteristics
Desktop HIA	Broad overview of possible health impacts Analysis of existing and accessible data No new data collection Usually takes an experienced assessor 2-4 weeks to perform the appropriate literature searches, analysis, and write-up
Rapid Appraisal HIA	Provides more detailed information of possible health impacts Analysis of existing data Stakeholder engagement, as warranted Stakeholder and key informant analysis No new data collection Typically takes a team of two experienced assessors 10-14 days in the field, followed by 4-8 weeks of analysis and document preparation, with literature (desktop) searches performed prior to the field work
Comprehensive HIA	Provides a comprehensive assessment of potential health impacts Robust definition of impacts Extensive stakeholder engagement New data collection Participatory approaches involving stakeholders and key informants Requires approximately 2-4 weeks of field work. In Alaska, community surveys often require a minimum of 4-6 months of pre-work to coordinate field studies with local communities. Field work in Alaska is heavily dependent on seasonal subsistence patterns.

How to Determine the Type of HIA

While there is no formal algorithm used to select the level of HIA, Figure 3.1 provides key factors to consider and a schematic for decision-making. As the size and nature of the project footprint increases, as the number of socially sensitive issues increases, and as the intensity of potential impacts increases, the level (desktop→rapid appraisal→comprehensive) of the HIA required increases. Projects that have just a few potential impacts, a small footprint, and few socially sensitive issues may be better served by a desktop HIA.

Figure 3.1 Selecting an HIA Type (IFC, 2008)

Section 4: Health Effects Categories (HECs)

A Health Effect Category (HEC) groups similar health effects so that they can be studied and discussed more easily. A health effect can be a health outcome (a documented health event, such as a clinic visit or the birth of an infant) or a health determinant (a social, environmental, or economic reality that influences health outcomes, such as education level or income). HECs supply the fundamental framework for scoping discussions and allow the HIA practitioner to systematically review each human health area in the light of a project design, a policy description, or a program description.

The HIA practitioner must always be mindful that the goal of the HIA for a resource development project, especially in rural Alaska, is to look at all possible health effects, both positive and negative. Resource development projects have the potential to bring significant positive benefits to a community if they are designed properly.

The table below presents a list of HECs that are relevant for natural resource development projects in Alaska. The HECs can be used for desktop, rapid appraisal, and comprehensive HIAs. It is important to note that the health outcomes and determinants in each category may be reduced (i.e., improved) or intensified (i.e., worsened) by the project.

Table 4.1 Health Effects Category Table

Health Effects Category	Pathway Description
Social Determinants of Health (SDH)	The SDH are the conditions in which people are born, grow, live, work and age. These circumstances are shaped by the distribution of money, power, access, and resources at global, national, state, regional, and local levels. The SDH are mostly responsible for health inequities -- the unfair and avoidable differences in health status seen within the state. This category reviews outcomes and determinants related to mental health, maternal and child health, substance use, social exclusion, psychosocial distress, historical trauma, family dynamics, economic status, educational status, social support systems, and employment status.
Accidents and Injuries	This category contains health outcomes and determinants related to accidents and injuries. The key outcomes considered are increases and decreases in intentional and unintentional injuries with fatal and nonfatal results. The key determinants in this category include items such as the presence of law enforcement, traffic patterns, alcohol involvement, distance to emergency services, and the presence of prevention programs.

Exposure to potentially hazardous materials	This category contains health outcomes and determinants that may arise from exposure to hazardous materials. The key health outcomes considered are increases and decreases in documented illnesses or exacerbation of illnesses commonly associated with pollutants of potential concern. These may be mediated through inhalation, ingestion, or physical contact.
Food, Nutrition, and Subsistence Activity	This category includes health outcomes and determinants related to food security, dietary choices, and the consumption of subsistence foods. The key health outcomes considered are nutrient levels, malnutrition or improvements in nutrient intake, and the subsequent increases or decreases in related diseases. The key determinants include diet composition, food security, and the consumption of subsistence foods.
Infectious Disease	This category includes health outcomes and determinants that result from infectious diseases. The key health outcomes include rates of increase or decrease for a range of infectious diseases, such as sexually transmitted infections (STI), respiratory illness, or skin infections. Important health determinants may include immunization rates, and the presence of infectious disease prevention efforts.
Water and Sanitation	This category includes changes to access, quantity, and quality of water supplies. Key determinants reviewed may include distance to clean water, water fluoridation, indoor plumbing, water treatment facilities, adequate volume of water resources, and the existence of community facilities, such as a washeteria and/or community showers.
Non-communicable and Chronic Diseases	This category includes health outcomes and determinants related to chronic disease. Important outcomes include increases or decreases in mortality and morbidity rates of cancer, cardiovascular and cerebrovascular diseases, diabetes, respiratory diseases, and mental health disorders. Key determinants for chronic diseases may include smoking rates, rates of alcohol and drug abuse, physical activity levels, presence of recreation centers, as well as cancer screening rates.

Health Services Infrastructure and Capacity	This category considers health outcomes and determinants related to health care access and health care infrastructure. Important outcomes include the increase or decrease in the number of medical evacuations, clinics or hospital visit trends, health expenditures, and medication usage. Health determinants may include distance to health facilities, medevac facilities/aircraft, the presence of community health aides, and the frequency of physician visits to the area.

Additional information on the Social Determinants of Health

It is widely accepted that human health is strongly influenced by a constellation of factors, such as political change, impoverishment, educational opportunity, family dynamics, historical trauma, and social integration. Social and health scientists often refer to these factors as "determinants" because their influence on health is so strong. The WHO definition describes the SDH as "the circumstances in which people are born, grow up, live, work and age, and the systems put in place to deal with illness." In rural Alaskan settings, communities often suffer from high rates of illness due to poor water quality and quantity, poor sanitation, inadequate shelter, indoor air pollution, limited access to appropriate medical care, and the inability to control exposure to infectious agents. Because these factors are complex and evidence may be sparse, it is important to make reasonable predictions about project effects on the SDH and to identify measurable outcomes.

Psychosocial Issues

The term psychosocial refers to social situations that produce psychological distress or psychological relief. Many adverse health behaviors are selected to cope with psychological distress just as many beneficial health choices are engaged during periods of psychological optimism and relief. In Alaska, poverty, rural isolation, urban isolation, cultural change, outmigration, historical trauma, and a host of other social factors can produce psychological distress. Project features should be reviewed with psychosocial issues in mind and overt sources of psychosocial distress should be identified. Some of the most challenging health issues for Alaskans are social and cultural changes that produce psychological distress resulting in adverse health behaviors (especially substance abuse and addictive behaviors) followed by depression and, in some cases, suicide. Psychological benefits are also important for project development as Alaskans realize opportunities for employment, economic growth, and personal development. There may be instances when a project's features clearly exacerbates or ameliorates a psychosocial issue and the associated health outcomes. The most common examples are community fear that a project will affect their subsistence foods and the hope that a new project will improve access to rural locations, lower costs of living, provide jobs, and improve economic status.

Individual Factors

Many SDH are strongly influenced by individual factors, such as genetic traits, lifestyle choices, and personal circumstances. Examples of individual determinants include gender, age, dietary intake, exercise patterns, alcohol and tobacco use, educational attainment, and employment. The causal relationship between a project and SDH for any given individual is very complex, but some level of causality can be predicted for subgroups within a community that share

certain individual traits (e.g., pregnant women).

Institutional Factors

Institutional factors refer to infrastructure and address the adequacy of public sector services, such as health care facilities, schools, transportation resources, sanitation, and communications infrastructure. It is especially important for the HIA practitioner to understand the project's potential impacts on the local health system since a large influx of workers can overwhelm already understaffed local health clinics, police departments, fire departments, emergency response services, and other critical public health and safety services. Positively, many large projects have their own internal medical services and have developed outreach programs with local clinics to benefit community health service delivery. In addition, projects can improve local economies, and one desirable outcome is better health care facilities and health program delivery. Finally, as part of their business practices, many project proponents encourage safe and healthy behaviors among their employees and these behaviors can serve as models for others in the workers' communities.

ED_016126_00000547-00027

Section 5: Scoping—Developing an Appropriate Work Plan

HIA scoping identifies the HECs to be evaluated and should focus on the key health concerns related to the project. Scoping also establishes the geographical, chronological, and demographic boundaries for the HIA. Before scoping occurs, the HIA practitioner should obtain general knowledge of the project, including its location, size, workforce, affected communities, operations, and likely exposures. A field visit to the project site and surrounding communities is standard practice to provide context for the HIA practitioner. The scoping process may result in a scoping summary and an HIA work plan that clarifies what issues will be considered and how work will be completed.

If the HIA is being developed under an EIS, then the analysis (scope) of health effects is generally limited to those that are potentially significant. The scope will need to address not just the proposed action, but alternatives to the proposed action that will be subject to analysis in the EIS (NEPA requires that EISs include an analysis of the proposed action, no action alternative, and a range of reasonable alternatives to the proposed action).

HIA scoping can be done independently, but typically it occurs as part of the NEPA process. NEPA scoping for large natural resource development projects in Alaska occurs during the early stages of the NEPA process, with public scoping meetings arranged by the lead federal agency. The HIA practitioner should work with the state's large project team (lead by the Office of Project Management and Permitting) to coordinate with the lead agency to ensure that NEPA scoping is inclusive of HIA issues. In a joint NEPA/HIA scoping process, the HIA practitioner should attend agency and public scoping meetings to listen for comments that are related to human health. Not all comments are presented orally, so the HIA practitioner should also review public and agency comments that are submitted in writing. If an HIA is being conducted independent of the NEPA process, HIA-specific scoping can be conducted through separate stakeholder meetings following similar protocols to the NEPA scoping process.

It is very useful to organize scoping comments according to the HECs presented in Section 4. While some interpretation and judgment is needed, this approach quickly clarifies what HECs receive the most attention from stakeholders and agencies. For example, general comments about subsistence resources can be placed in the Food, Nutrition, and Subsistence HEC. This approach allows comments to be grouped together, summarized, and discussed more effectively.

Once the HIA practitioner has understood the project features and reviewed scoping comments, a systematic review of the key outcomes and determinants in each HEC is very helpful. This systematic review also identifies interdependencies with social, economic, and environmental study teams, and promotes collaboration.

Establishing Reasonable Limits on HIA Scope

A limited scope means that the HIA practitioner will not address every conceivable health effect. Instead, scoping highlights health effects that produce potentially intense impacts—with persistent duration and broad geographical spread—that are highly likely to occur. There should be a clearly-defined causal chain between the project and the anticipated health effect. The HIA should also acknowledge that community perception of the project (not just physical project features) may cause behavioral changes where none would otherwise exist.

ED_016126_00000547-00028

Framing the Scope of the HIA

The HIA work plan should match the proportion of the anticipated health impacts and risks. A well-proportioned HIA allows health issues to be integrated into project planning in a timely and cost-effective manner. The HIA practitioner should consider the following questions as they create the work plan:

Will the HIA be a stand-alone document or integrated into an environmental impact statement?

Because HIAs follow a systematic methodology, an HIA should generally be developed as an independent stand-alone document. If an HIA is being developed in order to evaluate health impacts for an EIS, then the EIS will generally include sections on baseline health and potential health impacts of the proposed action and alternatives. The health sections in the EIS will draw upon the results of the HIA. The Federal Agency responsible for the EIS content may include the stand-alone HIA in the EIS as an appendix or it may be referred to in the list of references used to develop the EIS (as are other baseline and analytical reports used to support the EIS).

Does the HIA work plan adequately coordinate with the environmental and social assessment teams?

If an EIS is being conducted, there will be issues covered in the HIA that are interdependent with the social, economic, and environmental assessment teams. A chart of interdependencies between the various studies is a tool that can dramatically increase information sharing, reduce costs, reduce duplication of efforts, and reduce survey fatigue in communities.

For most resource development HIAs in Alaska, the HIA practitioner should collaborate with the state's large project team, which is led by the Office of Project Management, within the Department of Natural Resources. This team includes experts from all the relevant state agencies, including the departments of Natural Resources, Fish and Game, Environmental Conservation, and Health and Social Services.

Have the environmental, social, and health teams adequately mapped and selected the PACs and the geographical area of impact?

The HIA practitioner should understand and explain the different ways that the environmental, social, and health studies will describe the projected geographical scale of the project. The footprint and potentially affected communities (PACs) for the HIA may not always match the project footprint or the footprint of other studies.

During which stakeholder meetings will health discussions occur?

For projects that are engaged in the NEPA process, it is most efficient to hold joint stakeholder meetings for health discussions. This also reduces public burden and confusion that can arise from multiple meetings on a common project. The HIA practitioner should communicate with other project review teams and federal agencies if needed in order to join existing stakeholder meeting schedules where feasible. Joint meetings are highly encouraged, and should be the norm.

Has the HIA practitioner identified information gaps in documents

ED_016126_00000547-00029

produced by the project proponent?

In the early stages of project planning, proponents will commonly provide tentative design information that may not specify important project features such as the location of construction camps, the layout of transportation corridors, or the movement of materials. The HIA practitioner should carefully understand when these plans will be formalized and how potential changes may influence the anticipated health impacts. The HIA practitioner must understand as much as possible about the final project design and operations, including permit stipulations, preventative practices, and the amount, handling, and fate of potential contaminants of concern, such as metals (e.g., lead and mercury) or toxic chemicals used in the extraction process.

Defining Potentially Affected (Impacted) Communities (PACs)

During the scoping process, the HIA practitioner must define the PACs and be careful to identify vulnerable subgroups within these communities. This process is subjective and should be coordinated with the NEPA environmental and social teams if the project is under NEPA review. A set of clear criteria often allow PACs to be identified in a systematic way and facilitates the development of zones of impact for the project. Some sample criteria for PACs are communities with the following:

- Close geographic proximity to the project
- Potential changes to water sources and quantities
- Locations in potential unpermitted release areas for contaminants of concern due to spills and other accidental releases (e.g., plumes)
- High likelihood for influx, resettlement, or relocation
- Intense work force recruitment potential
- Historic map data of subsistence activities in the project area
- High likelihood for change in key subsistence resources
- High likelihood for change in transportation infrastructure
- Potential for economic change including regional staging centers
- Existing large burden of diseases or health problems
- Existing large burden of psychosocial distress (e.g., high rates of suicide)
- Existing high level of exposure to an environmental hazard
- Rural communities already experiencing high rates of health disparities

Key Performance Indicators (KPIs)

Ultimately, scoping may identify a handful of high-priority health impacts specifically related to the project. This group of impacts often becomes known as the Key Performance Indicators (KPIs). KPIs must be measurable and it is ideal if they are easy to monitor on a regular basis. An experienced HIA practitioner will use the scoping period to create KPIs for later use, as needed.

Potential Partners for HIA Practitioners Working in Alaska

The HIA practitioner will benefit from good relationships with a variety of partners involved with the process. Federal and state regulatory agencies will almost always be involved, as well as

local governments at the regional (borough), city, and village level (e.g. village councils). Each entity has unique information about the project, the local environment, and cultural and traditional practices important for completing the HIA and other assessments. In Alaska, there are a host of federally recognized Tribal governments and Alaska Native tribal organizations and affiliations that can be engaged prior to conducting an HIA for a given project. The HIA practitioner should be very careful to involve relevant tribal governments and organizations in the HIA process and keep them regularly apprised of decisions and progress. Tribal governments and organizations are an additional source of public health and epidemiologic expertise, and often maintain specialized databases, disease surveillance programs, and health records that are frequently the only sources of information needed to characterize the baseline health status of affected populations. The North Slope Borough and the Municipality of Anchorage are the only two "local" health departments in Alaska. The North Slope Borough has its own HIA program.

The Alaska Native Tribal Health Consortium manages statewide health services for all Alaska Native people, and provides umbrella healthcare and public health services to communities in Alaska. Southcentral Foundation provides healthcare services for a wide range of Alaska Native people within the Anchorage service unit (including 55 rural communities surrounding Anchorage) and together with ANTHC, manages the Alaska Native Medical Center.

In each region of the state, tribal health corporations exist to provide medical and public health services for communities within their region. A list of existing health corporations/consortiums are provided in Table 5.1.

Section 6: Stakeholder Engagement

Stakeholder engagement is an ongoing process that is useful for both obtaining input from and providing information back to key project stakeholders. Stakeholders are persons or groups who are affected by a project, as well as those who may have interest in a project or the ability to influence its outcome. In particular, stakeholders may include locally affected communities or individuals, their formal and informal representatives, national, tribal, or local government authorities, politicians, religious leaders, civil society organizations, special interest groups, the academic community, or third-party businesses.

For projects undergoing a NEPA process, the HIA should be integrated with stakeholder meetings held by the proponent and the lead federal agency, as well as the NEPA environmental and social review teams whenever feasible. Generally, the lead federal agency facilitates structured public meetings that can easily accommodate HIA activities. Including HIA in these meetings mitigates 'meeting fatigue' in communities. If possible, the HIA practitioner should avoid creating separate stakeholder engagement processes exclusively for health. For smaller projects, it may be reasonable to gather stakeholder input from public meetings or documentation of public comments.

The objectives of stakeholder engagement and public participation include:

- Providing project information and health information to stakeholders
- Obtaining public input on the nature of health risks and benefits posed by the project, and possible locally relevant solutions
- Ensuring that the analysis of potential impacts proceeds in a public, transparent and unbiased manner
- Obtaining information regarding local and traditional knowledge, scientific data, and other sources of information that may be available to contribute to a more complete HIA
- Building trust and collaboration between stakeholders
- Ensuring equal opportunities for participation by all stakeholders
- Refining stakeholder expectations about the scope of the HIA, its voluntary nature, and the discretion of agencies to implement (or not) HIA recommendations

The HIA should be conducted in a publicly transparent manner, with opportunity for public comment on:

- Scope of concerns to be addressed to be addressed through:
    - Scoping meetings
    - Written comments
    - Review of the draft scoping report
- The draft HIA including
    - Projected impacts on public health
    - Potential prevention and mitigation measures to address impacts
    - Monitoring and evaluation strategies
    - Recommendations

For projects under NEPA review, scoping and document reviews should be coordinated with the NEPA process, ideally with the state large projects team led by the Office of Project Management and Permitting. Every effort should be made to avoid duplicative community meetings as stakeholders can experience "consultation fatigue" just as easily as "survey

fatigue." One common approach to engaging stakeholders that can help avoid the problem of consultation fatigue is the use of an advisory committee comprised of representatives of key community organizations, industry, and other stakeholder organizations. Advisory committees can improve the quality and specificity of the analysis; help ensure that recommendations address community needs within the technical, financial, and legal limitations of the proposed action; and provide an efficient means of communicating results to key audiences. However, if used, such advisory committees must be carefully designed in collaboration with the other agencies.

Methodology

Due to the diverse projects and associated stakeholder groups, there is no single best method for conducting stakeholder engagement. Table 6.1 details the typical activities for stakeholder involvement when performing an HIA within the NEPA process.

Table 6.1. Common stakeholder engagement activities during an HIA

HIA Components	Stakeholder engagement activities
Screening	▪ Identify stakeholders ▪ Review documented stakeholder concern ▪ Meet with key stakeholder groups to identify health issues related to the proposed project
Scoping	▪ Attend scoping meetings with the EIS team (where stakeholders are provided information about the proposed project and are requested to provide comments) ▪ Document health issues identified by stakeholder during the scoping meetings ▪ Create a summary of health issues by health effect category ▪ Attend cooperating-agency meetings (where applicable federal, state, tribal, and local agencies provide input into the development of the EIS) ▪ Solicit stakeholder review and approval of health data summaries from fieldwork, if applicable ▪ Update stakeholder groups on HIA progress, especially regional and tribal health organizations
Impact Ranking	▪ Attend cooperating-agency meetings ▪ Update stakeholder groups on HIA progress ▪ Obtain data from relevant stakeholder groups (e.g. traditional knowledge, air quality, water quality)
Health Action Plan	▪ Attend cooperating-agency meetings ▪ Update stakeholder groups on HIA progress

ED_016126_00000547-00034

Implementation and Monitoring	▪ Present the findings of the HIA in the PACs ▪ Collaborate with relevant stakeholders to implement proposed monitoring activities, if applicable ▪ Collaborate with relevant stakeholders to collect data on selected KPIs ▪ Meet with stakeholder groups, as appropriate, to gather information on the results of the HIA

Upon the completion of the HIA, stakeholder engagement continues with public review of the document as it is included in the EIS. Stakeholders have the opportunity to comment on the draft HIA during the public review period for the draft EIS. The HIA practitioner will respond to the substantive comments and release a final version of the HIA when the final EIS is complete.

Cultural Considerations

Timing is essential to avoid conflicts between stakeholder meetings and subsistence activities and other community events. Careful coordination can enable attendance and participation in most cases. Participation improves when planners make attendance as convenient and enjoyable for the community as possible; as such, providing food, door prizes, and childcare can enhance attendance. It can be very useful to provide translators, particularly to enhance communication with elders that may not be fluent in English. This consideration should extend to advertisement of and written materials for stakeholder meetings. Since many local languages were not originally written languages, verbal communication in the native language is most effective.

Additional coordination with stakeholders in Alaska Native communities should be exercised in advance of significant stakeholder engagement activities. Many Alaska Native communities have a long history of being continually researched by various federal and state agencies and academic institutions. Some of this research has led to trauma within the communities and mistrust of research activities. The HIA practitioner should work with the community to build and maintain trust in the stakeholder process. If possible, the HIA practitioner should identify a contact, such as the director of the local health clinic, who can assist in identifying strategies to prevent additional trauma to participants during the stakeholder engagement process.

Participation

The geographic isolation of rural Alaskan communities, language barriers, seasonal subsistence activities, and the sheer number of small communities affected by large projects can frustrate efforts to coordinate meetings. Summer is a very challenging time for meeting with rural communities because many have departed for fishing or hunting opportunities. Winter can create transportation challenges in remote Alaska. Often, the shoulder seasons just prior to summer and just before winter are good times to coordinate visits with rural Alaskan communities. Every effort should be made to incorporate HIA-related community engagement with the existing public noticing and meeting processes used for environmental and social impact assessments of resource development projects.

ED_016126_00000547-00035

Section 7: Collecting and Reporting Baseline Data

Collecting and reporting baseline data is usually the first major analytic task for the HIA practitioner. The HIA practitioner should obtain as much data as possible regarding each high-priority issue identified (see Section 5). In many situations, careful literature searches, review of governmental (i.e., federal, state, tribal and local) and tribal information systems, and consultation with key stakeholders are sufficient. Occasionally, there are key data gaps that must be addressed through the collection of baseline field data (e.g., nutritional surveys). The data collection efforts should match the complexity and practical needs of the HIA and should avoid devolving into an academic exercise. It is always important to think about why the data need to be collected, how the data is relevant to the project, how the data relates to the overall final analysis of a project, and potential ramifications of the collection methodology on PACs. Data collection should also consider studies that will provide information in a manner that supports meaningful comparative analysis over time. Links to a large body of relevant health data organized by HEC may be found at www.epi.alaska.gov/hia/data.htm. Table 7.1 presents some examples of key information sources in Alaska.

Data collection for the HIA should begin as early as possible. For a typical resource development project in Alaska, baseline data collection may start many years before permit applications are actually submitted to the agencies, and before the NEPA process starts. The project proponent usually starts working with the state large project team with the Office of Project Management and Permitting during this pre-application phase. The HIA practicioner should be involved as early as possible so that they can coordinate the HIA baseline data collection with the efforts of the other agencies.

Table 7.1 Key Sources of Health Information in Alaska

- Published public health studies (literature review)
- State public health surveillance:
  - Reportable illnesses
  - Vital statistics
  - Alaska trauma registry
  - Health Facilities Data Reporting Program
- Tribal health databases:
  - Cancer registry
  - Diabetes registry
  - Trauma database
- Hospital health records:
  - Resource and Patient Management System
  - Cerner
- Other sources of health-related information:
  - Uniform crime reports
  - Family violence reporting
  - Community subsistence information system

Guidelines for Human Health Data Collection and Use

Unlike the collection and reporting of environmental data, the collection and use of human health data is governed by strict legal and ethical codes. This is especially true when accessing federal, state, local or tribal databases or collecting new health information in the field.

The HIA practitioner must be aware of local specifics related to health information and be prepared for the protracted timeframe required in obtaining institutional review board (IRB) approval for human subject research projects. In many cases, the difficulty, cost, and privacy concerns generated by human subject research means that only the most significant health issues will receive this level of investigation.

Most of the published public health surveillance reports in Alaska provide data at the statewide or regional level, but not at the village or community level. One reason for this is that health challenges can stigmatize rural Alaskan communities--this must be avoided at all costs. Another reason for limited data availability is that statistical validity is often not achieved at the village level since the numbers of cases for a given outcome are usually small. The State of Alaska does not release disaggregated results if the number of cases is less than six. In some cases, this situation can be remedied by creating zones of impact around a project and aggregating data from each zone. Zones increase the sample sizes involved, protect the privacy of individual communities, and provide useful information to the project proponent as well as regional health authorities.

In cases where low numbers or other concerns prevent public disclosure of baseline illness rates, it may be possible to obtain certain baseline data through collaboration with local or tribal health entities. Even if information cannot be reported publicly, the new baseline data collected can aid disease surveillance and service planning by municipal, tribal and state health agencies.

Many rural Alaskan communities contain a high percentage of Alaska Native peoples and these communities often track health information in a centralized computer database. In general, approval from tribal communities is required to access these records. *Under no circumstances may individually identifiable health information be included in any document related to a HIA.* HIA practitioners may need to review personal medical records in order to understand some disease conditions. Personal health information is protected under the federal Health Insurance Portability and Accountability Act (HIPAA), as well as applicable Institutional Review Board (IRB) guidelines (45 CFR Part 46), and institutional policies in the hospital, clinic, or other facility in which the records reside.

The U.S. Department of Health and Human Services (DHHS) has developed regulations that assure the protection of human subjects from research risks (45 CFR Part 46). The purpose of an IRB is to protect the rights and welfare of human subjects, to protect privacy, and to ensure that human data are used ethically and responsibly. It is often difficult to determine whether specific public health activities are subject to 45 CFR Part 46, because they cannot unambiguously be classified as either research or non-research. Guidelines and decision charts are provided by DHHS to assist public health practitioners in determining whether 45 CFR Part 46 regulations apply to specific activities occurring at the boundary between public health practice and research, such as data collection for HIAs. When in doubt, it is best to consult with the appropriate jurisdiction's IRB to request their assistance in classifying the

ED_016126_00000547-00037

project to ensure compliance with both the letter and spirit of 45 CFR Part 46. For projects involving tribal members as research subjects, the Alaska Area IRB is the appropriate entity to review research and data collection protocols.

In all cases, the HIA practitioner must work closely with ADHSS to identify the legal and ethical restrictions on collecting, evaluating, and reporting health statistics. As a general rule, collaboration with municipal, tribal, and state governments and health agencies is essential to ensure that health data are used in an appropriate manner.

Baseline Data Activities and Tasks

While each project is different, baseline data collection often occurs before proponents specify the design features for their project. Experienced HIA practitioners develop a standardized approach to baseline data collection. Again, the social and environmental review teams often produce baseline data that will be very useful to the HIA practitioner. In addition, these teams often perform survey work that can also be timed with HIA surveys during a comprehensive HIA.

Data Gaps Analysis

After the key baseline data have been reviewed, the HIA practitioner will need to assess if there are significant data gaps. This is a critical exercise so that a coherent and cost-effective plan for closing critical gaps can be created. Experience in Alaska indicates that several data gaps are likely to emerge, shown in Table 7.2. Further guidance for nutritional surveys and biomonitoring is contained in Appendix 4.

Table 7.2 Common Data Gaps for Alaskan HIAs

Data Gap	Potential baseline studies
Community morbidity patterns	• Discussion with local clinic staff • Review of a representative random sample of medical records • Body mass index measurements
Subsistence consumption	• Baseline nutritional surveys • Baseline food security (via representative survey)
Baseline contaminant levels	• Baseline study of contaminants in subsistence foods and in humans who consume the resource

ED_016126_00000547-00038

Subsistence Issues

Most of rural Alaska sustains a "mixed, subsistence-market" economy, wherein families invest money into small-scale, efficient technologies to harvest wild foods (ADF&G, 2000). In the non-urban areas of the state, many households depend on a mix of cash, subsistence (hunting, fishing and gathering), sharing, and non-cash trading. Potential impacts, either positive or negative, on subsistence resources can have large and persistent impacts on community health.

For Alaska Native peoples, subsistence is more than the harvesting, processing, sharing, and trading of marine and land mammals, fish, and plants. Subsistence embodies cultural, social, and spiritual values that are the essence of Alaska Native cultures (Braund, 2010). In addition, subsistence fishing, hunting, and gathering are important sources of nutrition and non-traditional employment in almost all rural communities. The Alaska Federation of Natives (AFN, 2010) describes subsistence as:

> "the hunting, fishing, and gathering activities which traditionally constituted the economic base of life for Alaska's Native peoples and which continue to flourish in many areas of the state today. ... Subsistence is a way of life in rural Alaska that is vital to the preservation of communities, tribal cultures, and economies. Subsistence resources have great nutritional, economical, cultural, and spiritual importance in the lives of rural Alaskans. …Subsistence, being integral to our worldview and among the strongest remaining ties to our ancient cultures, is as much spiritual and cultural, as it is physical."

According to Braund (2010), full-time, year-round wage employment has affected the pursuit of subsistence resources, both positively and negatively. It has positively affected the subsistence hunt by providing cash for snow machines, boats, motors, fuel, equipment, and ammunition required for the hunt. Negatively, however, full-time year-round employment limits the time a subsistence hunter can spend hunting to non-work hours (although often the subsistence hunter can share his or her equipment and resources with other family or community members). Remote employment may further limit the pursuit of subsistence resources, as hunters may be away working during the best times for harvesting in their home region. During midwinter, this time window is further limited by brief daylight hours. In summer, extensive hunting, fishing, and gathering activities can be pursued during non-work hours without any light limitation, but travel away from the road and trail system, without the advantages of snow travel, is limited to raised ground and waterways.

Employment policies should be reviewed to determine if work schedules and leave policies provide opportunities for subsistence activities; some remote natural resource developments work on a rotational basis that may allow for greater subsistence activity than more typical schedules.

EISs for natural resource development projects in Alaska include sections that evaluate baseline subsistence and impacts to subsistence from the project and alternatives. When a project is under NEPA review, the HIA practitioner should coordinate with the EIS team to incorporate the EIS team's subsistence data and analyses into the HIA. Impacts to subsistence may be positive, negative, or mixed. The HIA practitioner must consider how subsistence issues interact with the proposed project location, size, linear features, and number and variety of communities in reasonably close proximity to the project. Both direct and indirect impacts to subsistence must be considered during HIA baseline data collection planning.

Direct Impacts

- **Access** – If a project either limits or increases access to subsistence resources, this should be reviewed by the HIA practitioner. Economic growth and new access routes such as transportation corridors may increase the number of individuals (some from very distant communities) competing for a resource in a given area; it may also improve local access resulting in a net benefit to local subsistence users. Baseline data collection can confirm harvest patterns and stakeholder engagement can clarify subsistence practices before the project is implemented. NEPA environmental teams may also place great emphasis on access to subsistence resources. For projects under NEPA review, the HIA practitioner should utilize information collected by the NEPA environmental team to determine effects to human health and collaborate with the NEPA team to determine if additional data collection is warranted.

- **Quantity** – Project features that change the quantity (i.e., the number, size, and/or species) of a common subsistence resource are usually evaluated by the EIS team if the project is under NEPA review. For example, will the physical footprint (e.g., river diversion) of the project change the absolute number or size of certain critical fish species (e.g., salmon or pike) that support subsistence practices in local communities? Will the project include improvement projects such as habitat enhancement, fish hatcheries, or water treatment that minimize or improve subsistence resource numbers? The HIA practitioner should review these NEPA analyses to determine affects to human health.

- **Quality** – Project discharges may also change the quality of a resource or overall well-being of the resource. The HIA practitioner should understand the fate-transport pathways of potentially hazardous materials at the project location. Typically, a conceptual site model is created that describes how materials move in the environment and at what point subsistence resources may be affected. Prevention measures such as collection systems and containment should be incorporated into the evaluation.

  Quality can be affected by biomagnification, the process by which a substance builds up in the tissue of organisms in an ecosystem, such that the highest concentrations are found in the species at the top of the food chain. Large marine mammals in some areas of Alaska (e.g., whales, seals, otters) and certain freshwater fish (e.g., pike, Burbot) are examples of species that may accumulate toxins, such as mercury and polychlorinated biphenyls (PCBs). Tissue analyses of contaminants in marine mammal tissues are helpful for determining present vulnerability and provide a baseline for future comparative evaluations.

If the project will affect access and quantity or quality of a resource, the HIA practitioner may be directed to collect baseline nutritional data using dietary surveys. The point of a nutritional survey is to determine which foods are eaten and what relative quantities are eaten in a given region. The results of the survey should indicate the extent to which specific subsistence foods are relied upon for basic food security (quantity) as well as nutritional adequacy. Nutritional surveys focused on subsistence diets are one of the most common measures taken to address data gaps for Alaskan HIAs.

Indirect Impacts

The analyses of indirect impacts can be especially complex for subsistence issues. As a simple example, the presence of a development project may lead to rising incomes in a community, which may precipitate a variety of interrelated but independent choices for various members of the community. Some may use their improved economic standing to increase their engagement with subsistence living through the purchase of improved transportation and harvest equipment. Others may choose to use their new economic status to purchase prepared food from local sources and eat less subsistence foods, or to purchase healthy foods such as fresh produce to supplement their subsistence resources. The presence of individual choices renders this scenario an indirect impact.

Before drawing conclusions about subsistence impacts, the HIA practitioner must arrive at a contextual understanding of regional subsistence patterns without regard to a specific project. In order to understand this context, baseline nutritional surveys and the selection of control (comparison) regions can provide valuable information. In cases where a specific subsistence resource could be substantially affected by a project, a plausible causal chain, appropriate baseline information, comparison data, and documented shifts in consumption or harvest can be used to tie potential impacts to the project, making sure to weigh and qualify any conclusions according to the unique features and policies of the proposed project.

If a baseline nutritional survey is needed, it is a very important documentary tool for this portion of an HIA. Baseline nutritional surveys should be developed in collaboration with the community, if possible. A baseline nutritional survey can establish the proportion of the local diet that is drawn from a subsistence resource before the project is implemented. Nutritional surveys can also correlate subsistence consumption with baseline environmental hazards such as methyl mercury through noninvasive sampling. If future nutritional surveys are funded and coupled with a plausible causal chain of events, and if they demonstrate differences in subsistence consumption, a stakeholder or project proponent can address the issue based on concrete baseline information.

In addition to documenting overall change, baseline nutritional surveys provide a profile of the whole diet and reveal what foods replaced the subsistence food in question. Communities may purchase more store-bought food, or they may be choosing another subsistence resource that is more available. A baseline nutritional survey allows the project team to answer many of these critical questions about indirect impacts to subsistence resource use. Ultimately, baseline information reveals if the community is able to adapt to the change in a healthy way, or if additional measures are required to ensure that the dietary health of the community is protected.

Cumulative Impacts

Cumulative impacts on subsistence resources should be considered by the HIA practitioner. For example, if there have been many long-term industrial projects in the area, contaminants in subsistence resources could accumulate. Adequate baseline studies, especially nutritional work, will help document such effects as required. Though this scenario will be evaluated by the environmental team (cumulative impact analysis is required for EISs), the HIA should also consider it in a health and psychosocial-specific context.

Section 8: Impact Assessment – Rating and Ranking Health Impacts

What is a health impact?

A health impact is a positive or negative change in a health outcome or a health determinant (Section 4). The HIA practitioner should use precise language to formulate health impacts that promote clear thinking about causal factors, rating and ranking decisions, as well as potential health recommendations.

First, health impacts should reflect human health outcomes or determinants, rather than environmental conditions. For example, an impact stated as "increased road dust levels" is not a health impact, but rather an environmental impact. The health impact would be a health outcome related to dust exposure stated as "increased clinic visits for asthma exacerbation at clinic A." This means that HIA practitioners will use medical, social, and economic language to describe specific disease states or the health benefits that might arise from a project.

Second, health impacts should reflect specific outcomes or determinants. For example, an impact stated as "increase in respiratory disease" is typically too general to be useful in an HIA. As such, it would be better to state the impact as "increased incidence of lung cancer" or "increased incidence of chronic obstructive pulmonary disease."

Third, health impacts should reflect effects that are as readily quantifiable as possible. For example, an impact stated as "decreased incidence of depression-related visits at the Village A Clinic" is more readily quantifiable than "decreased depression in rural communities." Quantification or semi-quantification may occur through biomonitoring, public health surveillance systems, community interviews, or approved chart reviews.

The HIA will ultimately make recommendations on how the positive health impacts can be maximized, and how the negative health impacts can be minimized. However, the HIA assumes that a permitted project will operate as designed, in compliance with permit stipulations and standards.

Using Health Effect Categories to Create a List of Health Impacts

During the scoping phase, the HIA practitioner uses the eight health effect categories (HECs) from Section 4 to systematically consider a wide range of potential health impacts. This range of health impacts is further narrowed to a list of important health impacts to be considered in the impact assessment phase.

During rating and ranking, the HECs in Section 4 remain very useful for creating and listing health impacts. There are key outcomes and determinants in each HEC that can be reviewed during the rating exercise and the HIA practitioner can carefully state a handful of the most important health impacts to be considered. A list of specific and observable health impacts that are organized by HEC provides a very intuitive approach to impact rating.

What are the Dimensions of a Health Impact?

Health impacts may have several different dimensions and impacts may be positive or negative. The dimensions of an impact include:

- **Importance** – how important is the impact to the potentially affected communities and other stakeholders, including applicants?
- **Nature** – is the impact direct, indirect, or cumulative?
- **Duration** – when will the impacts occur and how long will they last under typical conditions?
- **Extent** – how widespread will the impacts be under likely conditions (e.g., statewide, regional, or local) and will there be groups with disproportionate impacts?
- **Magnitude** – what is the range of intensity of the impact in terms of change from existing baseline conditions?
- **Frequency** – how often would the impact reasonably occur during a specified time period?

The rating approach suggested in this section also incorporates health effects (i.e., beneficial or harmful health consequences that are expected to occur in impacted communities as a direct result of the project). In order to score a health effect, the rater must make an educated estimation of the likely magnitude and directionality (i.e., beneficial or harmful) of the health effect on the affected population. For example, in order to rate (i.e., quantify the relative magnitude of) the impact "increased visits for asthma exacerbation at clinic A", the HIA practitioner would need to forecast the extent of increased incidence in asthma exacerbation that may occur.

In the health effects column of Figure 8.1, health effects that can be imagined but would probably not be perceived by people or detected by monitoring are characterized with an impact level of *low*. Health effects with a score of 1 are generally effects that would be readily perceived by people or detected by surveillance and monitoring efforts, but would be primarily a nuisance and would not exceed current exposure limits or markedly change disease patterns for humans. Health effects with a score of 2 are those that would markedly increase or decrease illness and injury rates and may require interventions, if negative. Health effects with a score of 3 are those that would markedly increase or decrease mortality rates or cause large and notable changes in disease rates, and may necessitate interventions, if negative.

ED_016126_00000547-00043

Figure 8.1 Step 1 of a Four-Step Impact Assessment Matrix

Step 1				
	Impact Dimensions			
Impact Rating Score	A – Health Effect (+/-)	B- Duration	C-Magnitude	D- Extent
0	Effect is not perceptible	Less than 1 month	Minor	Individual cases
1	(+/-) minor benefits or risks to injury or illness patterns (no intervention needed)	Short-term: 1-12 months	Those impacted will 1.)be able to adapt to the impact with ease and maintain pre-impact level of health, 2.) see noticeable but limited and localized improvements to health conditions	Local: small limited impact to households
2	(+/-) moderate benefits or risks to illness or injury patterns (intervention needed, if negative)	Medium-term: 1 to 6 years	Those impacted will: 1.) be able to adapt to the health impact with some difficulty and will maintain pre-impact level of health with support, or 2.) experience beneficial impacts to health for specific population some maintenance may still be required	Entire Potentially Affected Communities (PACs); village level
3	(+/-) severe benefits or risks: marked change in mortality and morbidity patterns (intervention needed, if negative)	Long-term: more than 6 years/life of project and beyond	Those impacted will 1.) not be able to adapt to the health impact or to maintain pre-impact level of health 2.)see noticeable major improvements in health and overall quality of life	Extends beyond PACs; regional and state-wide levels

Impact Assessment: How Can Health Impacts Be Rated?

Potential positive and negative impacts can be rated using semi-quantitative approaches. The HIA practitioner benefits from impact ranking because it allows the practitioner to prioritize elements of the action plan. There are many rating approaches (an example is included below for illustration purposes only). HIA practitioners may use a variety of rating schemes, but they should be clearly explained for the purposes of transparency and collaboration. There are four steps to the sample impact rating process below (Figure 8.1 is used for Step 1, and Figure 8.2 is used for Steps 2-4).

For illustration purposes only, suppose a project footprint requires a gravel road near a small community and the project plan predicts a modest increase in road dust. While road dust is the environmental impact, the HIA practitioner states the health impact as "increased visits for asthma exacerbation at Clinic A" and begins the rating process (there are other impacts to be reviewed such as noise, traffic accidents, and the benefits of community access).

In Step 1 (Figure 8.1), the **health effect** of the impact "increased visits for asthma exacerbation at clinic A" would be **negative** and have moderate risks to health that could require an intervention (e.g., acute and ongoing therapy for asthma). In Figure 8.1, this corresponds with a score of 2 points. Next, the **duration** of the impact would be for the life of the project and so it would receive a score of 3. Next, the practitioner would consider the **magnitude** of the impact, which would be 1 point since a modest increase in road dust would not affect health status and individuals would probably be able to adapt using interventions. The **extent** of the impact would probably be limited to households near the road giving this impact 1 point for its localized extent. The overall score for Step 1 would be *negative* seven (health effect **2** + duration **3** + magnitude **1** + extent **1** = **7**).

For Step 2, the score from Step 1 is used to find the appropriate impact level range in the left column of Figure 8.2 below. For this example, the "increased visits for asthma exacerbation at Clinic A" impact had a Step 1 score of -7, and so the practitioner would select the 7-9 row in Figure 8.2.

Figure 8.2 Steps 2, 3, and 4 of Four-Step Impact Assessment Matrix

Step 2	Step 3						
Impact Level (Use Score from Step 1 to choose range)	Likelihood Rating						
	Extremely Unlikely (<1%)	Very Unlikely (1-10%)	Unlikely (10-33%)	About as likely as Not (33-66%)	Likely (66-90%)	Very Likely (90-99%)	Virtually Certain (>99%)
1-3	♦	♦	♦	♦	♦♦	♦♦	♦♦
4-6	♦	♦	♦	♦♦	♦♦	♦♦	♦♦♦
7-9	♦♦	♦♦	♦♦	♦♦♦	♦♦♦	♦♦♦	♦♦♦♦
10-12	♦♦♦	♦♦♦	♦♦♦	♦♦♦♦	♦♦♦♦	♦♦♦♦	♦♦♦♦
Step 4	Impact Rating						
	Category 1 = ♦		Category 2 = ♦♦		Category 3 = ♦♦♦		Category 4 = ♦♦♦♦

ED_016126_00000547-00045

Once the appropriate impact level row is selected during Step 2 (in the example: 7-9), the rater uses **only that row** of values to complete Step 3, which is the likelihood rating. Moving from left to right along the row of likelihood ratings, the rater will make an informed judgment about the likelihood of the impact. For the example, suppose the rater believes the likelihood of "increased visits for asthma exacerbation at clinic A" to be "unlikely" (10-33% chance of occurring). In the score 7-9 row above, "unlikely" corresponds with the result of two diamonds (♦♦). Step 4 provides a value for the result from Step 3, and the overall ranking for the impact "increased visits for asthma exacerbation at Clinic A". In our example two diamonds (♦♦) corresponds to a Category 2 impact rating. This means that the impact in question would be a *negative* impact with a Category 2 rating. After impacts have been rated, they can be placed in a rank order from highest to lowest category.

Assessing Toxicological Risks

Air and water emissions that are in compliance with permits are presumed to be protective of human health. It is not unusual, however, for community stakeholders to raise a variety of questions specifically about exposures to hazardous materials and the likelihood of associated adverse health impacts. The investigation and evaluation of community exposure to potentially hazardous materials has been the subject of numerous publications in the established scientific literature, and a standard conceptual framework has been developed and published in standard textbooks of occupational and environmental medicine and toxicology.

In order to determine that a substantial medical effect could be caused by a potential exposure, it is necessary to proceed in a logical fashion that establishes the presence of a complete (unbroken from source to exposure point) exposure pathway and appropriately assesses the likelihood of exposure. The best way to show this causal chain is through the use of a conceptual site model (CSM) that clearly diagrams the exposure pathway. Typically, the concentration of any chemical(s) under investigation at the logical exposure points (i.e., the geographical locations where an individual comes in contact with the source material) is determined. This fate and transport evaluation is generally done by the environmental assessment team and provided to the HIA practitioner who then calculates the potential dose received by the individual at the exposure points. Finally, the practitioner analyzes the health effects of the dose-response relationship of the chemical(s) under investigation so that an assessment of potential health risks can be made.

The HIA analysis of potential community health impacts from emissions related to a proposed project is best performed using this standard medical toxicological model:

Source → Exposure → Dose → Health Effect(s)

This form of the medical toxicological model is discussed in the 1991 National Research Council monograph, *Human Exposure Assessment for Airborne Pollutants: Advances and Opportunities*. Similar materials are available from the National Resource Council (NRC), Agency for Toxic Substances and Disease Registry (ATSDR), WHO and US Environmental Protection Agency (EPA), including the 2008 NRC publication *Science and Decision: Advancing Risk Assessment*. The key points emphasized in contemporary risk assessment

literature are the need to tie the risk-management questions to the risk assessment, and calculations should not be performed simply because computational capacity exists. The literature also discusses how to align the detail of uncertainty and variability analyses with what is actually needed to inform risk management decisions.

Section 9: Making Health Recommendations

General Considerations

Once health impacts have been identified, the HIA practitioner can make recommendations to maximize beneficial impacts and minimize potentially harmful impacts. Although recommendations are presented as the final phase of an HIA, they should be considered throughout the process, beginning as the project is being conceptualized and designed, and ending when impacts from the project and decommission have concluded.

In general, recommendations should be closely tied to the most important potential impacts. In the context of a NEPA analysis, the health assessment and recommendations should be carefully coordinated with the NEPA environmental and social assessments and the overall language of the EIS. In some circumstances, if the project is large or complex, a separate chapter on health recommendations may be appropriate. The federal agency may include health recommendations as mitigation measures in the EIS. As with other mitigation measures, the effectiveness of the recommendation and the potential that the recommendation would be implemented must be disclosed.

Even though well-developed generic health intervention strategies have been developed for many problems (e.g., infectious diseases), the HIA practitioner should develop recommendations that are scientifically defensible (evidence-based) and tailored to the local situation. The HIA practitioner should also consider recommendations rooted in local traditional knowledge, if applicable.

Some important considerations for health recommendations include determining the following:

- The feasibility of the potential health recommendations (e.g., engineering interventions that affect water quantity, quality, and sanitation)
- The appropriate timeline to implement the recommendations
- The availability of interim recommendations that would benefit communities
- The sustainability of, and responsibility for, implementing the recommendations. If the agencies do not have regulatory authority to implement the recommendations, then what?

It is important to be very clear about any prevention strategies or plans that are based on HIA recommendations. Significant community reactions can develop when the conditions for prevention efforts are not clarified and explained. It is, likewise, important to be very clear regarding the likelihood that the recommendations will be adopted by the agencies, project applicant, or communities.

How are recommendations used?

As discussed above, recommendations in an HIA that is developed to evaluate health for a NEPA process, would generally be included in the EIS. The recommendations would be grouped with the mitigation measures, and may be called mitigation measures depending upon the wording of the recommendation. EISs must identify “means to mitigate adverse impacts”, even if the mitigation measures cannot be required by the lead or cooperating agencies.

ED_016126_00000547-00048

Recommendations may be used by applicants to revise project design and implement prevention strategies. The applicant may use the outcomes of the impact rating step (Section 8) to establish actions that will limit the severity of identified impacts. Applicants may also make voluntary contributions to maximize potential benefits in affected communities. Similarly, project proponents may use HIA recommendations to voluntarily negotiate a series of specific commitments to affected communities (e.g., participatory monitoring of certain impacts, subsistence resource access, quantity and quality).

Recommendations may also be used by decision makers to set certain conditions (i.e., permit stipulations) for project approval.

Even if HIA recommendations are not engaged by federal agencies or proponents, other stakeholders may use the recommendations to pursue their own human health objectives.

The publication of the HIA recommendations is likely to result in public and political pressure to adopt many of the recommendations, even though they are discretionary. It is therefore important that the HIA practitioner take care that all recommendations are appropriately designed for the site and the health concern at issue.

Fundamental Concepts

Health recommendations in an HIA are aimed at preventing disease and promoting health in communities. Some recommendations require action by the applicant. Other recommendations may suggest community action; successful implementation of these health recommendations usually requires stakeholder involvement.

Disease Prevention

Disease prevention includes any intervention that seeks to reduce or eliminate diagnosable disease. It may be applied at the individual level (e.g., immunization) or at the community level (e.g., an improved community sanitation system, or chlorination of the water supply).

The concept of disease prevention is often divided into three levels: primary, secondary, and tertiary:

- **Primary Prevention** – Prevents the condition *before it occurs* (e.g., preventing diabetes before it develops). For an HIA, these actions include elimination (eliminate certain features of the project), timing of the project (such as to avoid interfering with subsistence activities), substitution (for example, providing diesel fuel as a fuel source instead of wood), design or engineering preventions, and administrative controls.

- **Secondary Prevention** – Once a health condition exists, secondary prevention seeks to screen individuals at high risk for *early detection and prompt intervention* to control disease and minimize disability (e.g., early diagnosis of diabetes and accurate management to prevent vascular symptoms).

- **Tertiary Prevention** – Measures aimed at softening the impact of long-term disease and disability by eliminating or reducing impairment and maximizing potential years of quality life. This usually involves treatment or rehabilitation of existing, serious problems, such as preventing infection of diabetic foot ulcers. Tertiary prevention is

appropriate when the project has had some effect and this effect has caused health impacts. Tertiary prevention seeks to keep the human health impacts from continually affecting communities or from affecting a wider circle of people.

Health Promotion

In addition to disease prevention, the HIA may recommend activities that involve health promotion and education. This includes any combination of health education and related interventions designed to facilitate improved health through behavioral and environmental adaptations. In combination with primary prevention, health promotion and education is the most efficient and cost-effective method of managing potential impacts.

A workforce health promotion and education effort spearheaded by the project can also substantially influence behaviors and practices in local communities by using the project workforce as peer educators and ambassadors to local communities.

Important Characteristics for Recommendations

Evaluation of the recommendations requires identification of resource flows and responsibilities, local absorptive capacity, and social and environmental determinants.

Resource Flow and Responsibilities

The effectiveness of any plan to implement recommendations depends on adequate resources and careful delegation of responsibility between stakeholders. Among the most challenging tasks is assessing local resources for implementation and identifying reliable partners that can sustain any prevention plans. Local participation in prevention plans requires preparation, experience, and sufficient human and financial resources.

In one example from international HIA work, proponents will often build and/or refurbish hospitals, clinics, or health dispensaries in response to recommendations from an HIA. Although these activities are highly visible and initially well received, they are difficult to sustain long-term due to shortage of technical support staff such as physicians, nurses and laboratory technicians. To be sustainable, structural improvements should be coupled with a realistic and long-term assessment of the locally available human resources.

Experience also shows that prevention plans have a greater sustainability when they are focused on specific project effects, such as adequate drinking-water supply, solid and human waste disposal, and appropriate systems to deal with the influx of workers in a community.

Social Determinants of Health Issues

A variety of important potential positive and negative indirect effects tied to SDH and psychosocial issues (e.g., alcohol, drug use, gender violence, suicide) may be identified. Prevention plans that are directed towards social determinants must:

- Coordinate with mitigation strategies from the social impact assessment
- Be carefully reviewed, and the roles and responsibilities realistically appraised
- Account for the existence of personal choice
- Be clearly defined to include factors that are within the span of control of the project

(e.g., workforce scheduling, imposition of a “dry status” at all project facilities, pre-employment and random drug, and alcohol testing)

- Be developed in collaboration with the community, if possible

Strategies directed towards social determinants require a multidisciplinary effort, involving social and medical specialists, and community stakeholders.

Section 10: Monitoring and Evaluation

Once recommendations and prevention strategies are selected, the HIA practitioner can formulate a monitoring and evaluation (M&E) plan to help stakeholders determine if intervention strategies are achieving their intended effect. The M&E plan is often anchored to a set of key performance indicators (KPIs). In general, KPIs can measure the following:

- Change in a health outcome (e.g., increased clinic visits for prenatal care)
- Change in an intermediate health risk indicator (e.g., body mass index is a risk factor for problems such as cardiovascular disease and diabetes mellitus)
- Change in a health hazard or health determinant (e.g., fine particulates in air constitute a health hazard that influences asthma rates)

Monitoring and evaluation are presented here as a widely accepted step in the HIA process. *The funding and support for monitoring efforts is voluntary and not required under Alaska law.* Therefore, careful consideration should be given to making recommendations that would require follow-up that has no identified sources of funding.

Key Performance Indicators

Numerous KPIs have been established for monitoring health performance (Mosse and Sontheimer, 1996). In general, KPIs fall into the following three categories:

- **Structural indicators** – Buildings, equipment, drugs, medical supplies, vehicles, personnel, money, and organizational arrangements
- **Process indicators** – Effectiveness of the preventive actions
- **Outcome indicators** – Death, disease, disability, discomfort, and dissatisfaction are typically considered outcome measures (typically calculated as rates)

Some specific examples of the more common KPIs include the following:

Structural

- Household characteristics (household size, number of rooms)
- Pharmacy supplies of specific categories of drugs
- Sanitation systems such as septic tanks, latrines, etc.
- Water supply systems – indoor supply percent
- Solid waste – permitted landfill vs. open dump
- Tribal health facilities

Process

- Access to maternal medical services (such as trained birth attendants) and number of pre-delivery visits
- In-migration patterns (place of origin of household members, professional status of household members)
- Training with follow-up knowledge, attitudes, practices, beliefs concerning prevailing diseases

Outcome

- Disease-specific prevalence rates
- Anemia prevalence
- Anthropometric measurements
- Alcohol use, smoking rates, domestic violence, and accidents
- Toxicology-biomonitoring (lead, arsenic, etc.), if relevant
- Increase or decrease in prevalent disease
- Appearance of new disease

The baseline health assessment must be as complete as possible in order to observe changes in the KPIs. As discussed in Section 6, Alaska reports health information at the state or regional level, but not typically for individual communities. Given these limitations, the HIA practitioner should choose KPIs that can be tracked using readily available statewide or regional data. The selection of appropriate and relevant KPIs requires careful technical review by epidemiologists and biostatisticians.

There are several features common to a well-selected KPI. First, KPIs should be measurable. This presents a particular challenge in small rural Alaskan communities because the size of the population limits the statistical reliability of many disease rates. Even so, the HIA practitioner can select KPIs that report health risk factors or intermediate health indicators that serve as a proxy for the health issues of interest.

Second, KPIs should measure impacts to both the project workforce and the community. For instance, a KPI that measures a health impact in the project workforce may also give excellent information about the wider rural or urban environment surrounding the project. This is especially true when the project employs a large local workforce. Therefore, many of the monitoring strategies originate inside the fence line and extend outside to specific project-affected areas.

Third, KPIs should detect both acute and chronic changes within PACs. Acute changes appear within weeks to months, such as acute disease-rate changes for respiratory infection. Chronic non-communicable disease-rate changes for diabetes or cardiovascular disorders evolve over a much longer period of time. A well-selected set of KPIs will detect both acute and chronic changes in health status.

Fourth, the HIA practitioner should select KPIs that are clearly linked to the project. Monitoring and evaluating community health changes unrelated to a project is important, but beyond the scope of the HIA.

Fifth, the KPIs should capture both positive and negative health impacts. For example, the alleviation of income poverty will produce both positive and/or negative changes across many health outcomes.

ED_016126_00000547-00053

Finally, KPIs should be drawn as much as possible from existing health information systems. For example, Alaska administers a state version of the Behavioral Risk Factor Surveillance System (BRFSS) each year, so KPIs drawn from BRFSS will be available for review on an annual basis.

KPIs based on traditional knowledge can be selected in collaboration with stakeholders. However, these KPIs should meet as many of the above criteria as possible, in order to have an appropriate indicator that is relevant, robust, and measurable.

Internationally, the development of district and local-level demographic surveillance systems (DSS) has been shown to be an effective method of long-term longitudinal surveillance.

Verification

The HIA practitioner may also recommend a verification system so that the progress of the disease prevention and health promotion efforts can be reviewed at a community level. For most projects, it is unrealistic to begin the verification process before the project has collected at least 6–12 months of information. For most health indicators, yearly verification reviews are likely to be sufficient. Formal external verification for health performance should be performed at selected time intervals, but it is possible to create a platform for more frequent community stakeholder involvement and input. Verification systems should be integrated with, and not duplicative of, other environmental verification systems, such as periodic environmental audits already required by the State for mining projects. Verification systems should also be transparent and include a mechanism for community input into the process.

Section 11: Resourcing

ADHSS serves as the State of Alaska's technical lead on HIA, but other entities conduct HIA work in the State. If project proponents wish to work through the State of Alaska HIA program, they can make funding arrangements through the large mine permitting team (LMPT) within, ADNR/OPMP, or another state agency involved with coordinating development projects. In general, funding is not provided by the State of Alaska for preparation of HIAs.

If other entities wish to perform HIA, there are a number of grant-based opportunities available through the U.S. Centers for Disease Control and Prevention, the Robert Wood Johnson Foundation, and the Pew Charitable Trust. Links to these and other resources are listed on the State of Alaska HIA Program website (available at: http://epi.alaska.gov/hia).

The financial and human resources allocated to an HIA ought to be commensurate with the potential anticipated risks. Costs are largely a function of the scope of the type of HIA to be performed (i.e., desktop, rapid appraisal, and comprehensive), and the need for new data collection. New data collection is often a difficult, time-consuming, and expensive process. Coordination with the environmental and social impact assessment process will minimize duplication and delays in schedules.

Attachment A: Itemized Budget Sheet

Item	Description	Total
Personnel	• Project Manager @ $65,000 annual salary x 90% of time on project = $175,500 for three years • Rogue Organizer @ $45,000 annual salary x 30% of time on project = $40,500 • Indigenous Organizer @ $45,000 annual salary x 30% = $40,500	$ 256,500
Fringe Benefits	• Project Manager 12.6% of salary (includes medical, dental, life insurance) = $22,158 for three years • Rogue Organizer 30.2% of salary (includes medical, dental, life insurance) = $12,258 • Indigenous Organizer 30.2% of salary (includes medical, dental, life insurance) = $12,258	$ 46,674
Travel	• Travel to 2 regional semiars (3 days) • Travel for partner coordination and community outreach	$ 8,976
Equipment	N/A	$ -
Supplies	• Printing $500 • 3 Laptop computer for Outreach worker to work off-site on community $2,250 • Miscellaneous supplies for staff on this project (snacks and events) - $150 for 10 events & $1,000 for incidentals	$ 5,250
Contractual	• Strategic Planning & Coordination - $7,500	$ 7,500
Construction	N/A	$ -
Indirect Costs	• 10% of allowable expenses	$ 39,318
Other	• Participant Support Costs (community stipends, child care, travel reimbursement for approximately 500 communtiy members) - $45,782.20 • Translation & interpretation - $5,000 • Sub-award to Warms Springs Community Action Team for outreach activities and project recruitment = $45,000 • Sub-award to Coalition of Communities of Color for data justice coaching = $30,000 • Sub-award to Southern Oregon Climate Action Now for climate education = $10,000	$ 135,782
Construction	N/A	$ -
Total Project Cost		**$ 500,000**

Attachment B: Unite Oregon Climate Justice- Logic Model

Inputs	Activities	Outputs	Audience	Short-term Outcomes	Intermediate Outcomes	Long-term Outcomes
Unite staff time CCC research justice coaching Warm Springs and Southern Oregon Climate Action Now staff time Participant supports (translation, stipends, childcare, etc.) Partner in-kind contributions	Strengthen capacity for climate justice	Central Oregon chapter formed with 50-60 community leaders Two-part training on data analysis for 20-30 partner & community leaders Rogue chapter grown with 300-330 community contacts	immigrants, refugees, and Black, Indigenous, people of color residents of Jefferson, Deschutes, and Crook counties Rural and Indigenous CBOs in Central Oregon and the Rogue Valley	Ongoing organizing capacity improved for Central Oregon More centralized information on community needs in community voices Increased community capacity to collect, analyze, and communicate their data	Clear articulation of needs and solutions Increased, and more flexible, funding going to meet needs articulated by disadvantaged communities Policy is more responsive to community needs	Better public health and cleaner environments for Central Oregon communities More than 40% of federal environment and infrastructure funding in Oregon is going to IR-BIPOC communities
	Increase utilization of energy efficiency incentives	Culturally-specific outreach and materials		200 community households reached 90% of reached households say access needs were met	100 community households applying for incentives Culturally specific outreach normalized in utilities	More than 40% of federal energy incentives in Central Oregon and Rogue Valley going to IR-BIPOC communities
	Create equal access to climate disaster resources for response, recovery, and resilience	Community Resilience Hub components adapted Partnership agreements finalized for two Hubs		2 Climate Resilience Hubs are active (e.g., Rogue Valley and Central Oregon) and ready to respond to disasters Integration with Medicaid and Emerg. Management systems	Improved access during disasters to shelter, technology, resource packets, food, childcare, etc. regardless of national origin, limited English proficiency, race, ethnicity, or gender.	Better public health and faster climate recovery for Oregon communities

19.				
20. TOTAL (sum of lines 16 - 19)	$ 188,120.72	$ 171,381.08	$ 111,004.35	$

SECTION F - OTHER BUDGET INFORMATION

21. Direct Charges:

22. Indirect Charges:

23. Remarks: Our budget is entered based on the three year performance period of the grant. Starting on Dec 1st, 2023 until Dec 1st, 2026.

LOGIC MODEL

Resources/Inputs	Activities	Outputs	Audience	Short term outcomes	Intermediate outcomes	Long-term outcomes
• Staff and contracted expert leadership, strategic partnership building and public outreach to broaden awareness of community-oriented solutions to climate change and air pollution • Volunteer time from public health leaders to help implement and prioritize actions from Methow Climate Action Plan to ensure a community safe in the face of adversity • Additional outreach activities and communication campaigns to improve air pollution and communicate about prescribed burning and smoke. • Volunteer time of community members for chipping and vegetation drives as an alternative to outdoor burning	• Air and climate programmatic work to reduce emissions, monitor air pollution and support the community on topics like air quality and climate resiliency. • Conduct quarterly forums. • Coordinate and promote free alternatives to burning events in Okanogan County or in pre-identified client clusters. • Coordinate and connect alternative to burning resources with the Okanogan Conservation District and Fire Adapted Methow Valley • Create outreach materials (slides rack cards, handouts, coasters, direct mailers) • Build relationships in underserved communities, especially Hispanic communities in Methow and Pateros • Give public demonstration and outreach highlighting alternatives to outdoor burning.	• 40 reliable low-cost sensors to accurately monitor PM2.5 pollution in under-resourced and overburden areas of Okanogan County • 13 quarterly forums focused on implementing actions in the Methow Climate Action Plan • 18 chipping and vegetation drive events over the three-year performance period • 1 regional air-climate conference	• Local partners • Community residents • Underserved populations in Okanogan County • City, state, and local government\ • Members of the community at risk as "sensitive" populations to wildfire smoke and air pollution (elders, children, pregnant women, those with heart or lung disease, those in substandard or insecure housing and outdoor workers with potential for high exposures) • County Public health leadership and decision makers • Organizations and individuals promoting forest health and wildfire preparedness: USFS, WA DNR, Fire Adapted Methow Valley, • Community residents interested in monitoring air pollution where	• Increase in # of residents of climate resiliency and air quality issues and work in community (n =1000 residents) • Decreased air pollution from outdoor burning. • Convening of other orgs, partners and potential new partners at the conference • New air pollution monitors in previously un-monitored areas • Air-Climate conference: host the vehicle for deeper conversations about air pollution and climate solutions	• Increased accessibility to burning alternatives. • Increase in # of households who choose to chip/compost rather than burn. • Trusted sources of air quality data in places previously without data. • An increase in households seeking alternatives to burning from landowners cleaning up their property to reduce fire risk; an increase in chipping, composting, and hauling of these materials as alternatives	• Data-driven decisions on air quality based on data from new and updated sensors • Decreased spring and fall PM2.5 concentration due to less outdoor burning. • Established air and climate coordinator positions in Okanogan County working with vulnerable populations and working toward climate and air quality solutions. • A healthier community inspired to take steps to reduce their smoke exposure. • A community motivated to change their behaviors that

	• Attend "EPA Region 10 Smoke Management in the Northwest" conferences to share the work of MVCC and learn how to further engage disadvantaged populations on air quality and health issues. • Meet with organizations responsible for forest health and wildfire preparedness to support their public communication efforts. • Host alternative to burning events such as chipping and composting to directly reduce air pollution • Replace aging Purple Air sensors. • Recruit new air sensor hosts in populated areas currently without monitoring in Okanogan County • 2025 Air-Climate Conference to facilitate deeper conversations about climate resiliency and air pollution in North Central Washington, while also procuring commitments from Local Government		there currently is no data. • Organizations, businesses, local universities, local government officials, land management agencies, general-public attending the air-climate conference			generate air pollution, such as participating in composting and chipping programs instead of outdoor burning, switching to alternatives to home heating with wood, or following clean home heating practices such as thoroughly seasoning wood and cleaning chimneys annually.

APPENDIX G

EJCPS Detailed Budget
***Rounded to closest whole #, totaled for three years. See budget on Grants.gov**

	Description	Total
Personnel	• **Project Manager.** Jasmine Minbashian will be the project manager for this grant. Jasmine oversees…. 4/h week @ $40/hr *Pay based on similar personnel job description responsibilities and pay =$24,960 for three years • **Air program coordinator.** 20hr/week @ $24/hr = $72,000 for three years • **Resilient Methow Program Coordinator** 20hr/week @ $24/hr = $72,000 for three years • **Community engagement coordinator** @ 5 hours/week @ $24/hr = $18,720 for three years • **Grant administration manager** @ $50,000 annual salary X 5% time on project = $2,500 • Two undergraduate intern @ $2500 annually X 100%=$15,000 for three summers	$210k
Fringe Benefits	• 0.1 of $24,960 for Project Manager. Covers health benefits, paid leave. • 0.1 of $72,000 for Air Program Coordinator: covers health benefits, paid leave. • 0.1 of $72,000 for Resilient Methow Coordinator: covers	$18,750

	health benefits and paid leave. • 0.1 of $18,720 for Community Engagement Coordinator: covers health benefits and paid leave	
Travel	• Local mileage for Air Program Coordinator: 70 miles @ $0.625/mi. x 50 meetings/trips =$ $2,187.5 • Local mileage for Resilient Methow Coordinator: 70 miles @ $0.625/mi. x 50 meetings/trips =$ $2,187.5 • Travel for Air-Climate Conference (2 days, 2 nights). Per diem = $61 per day x four staff = $244 x 2 days = $488, $200 mileage RT from Winthrop to Wenatchee (mileage = 199mi) for project manager, Air Program Coordinator, Resilient Methow Coordinator and Community Engagement Coordinator = $1,288	$5,663
Equipment	**No purchases greater than $5,000**	
Supplies	• 40 Purple Air sensors @ $229.00 + 20% for tax and shipping = $10,200 • Miscellaneous supplies for staff on this project = $1,500 • Outreach printing materials = $5,000 • Direct mailer printing @ $200 per effort x 6 efforts = $1200	$17,900
Contractual	• Contract for chipper and arborist @ $5,000 per day x 18 days = $90,000	$215,700

	• Smoke-ready consultant. Expertise in strategic relationship building, outreach and alternatives to burning. 5h/week @ $80/hr = $62,400 for three years • Air-Climate Conference = quoted by Wenatchee Convention Center $60,000 • Cashmere Mailing for 6 direct mailing efforts @ $300 per effort = $1,800 • Designer for outreach materials 20 hrs @ $75/hr = $1500	
Other	• Printing of communication materials: rack cards, handouts, coasters, etc. 5000 pieces @ $0.50/piece = $2500 •	$2500
		Total: 460k

APPENDIX H

Office of Environmental Justice and External Civil Rights
Quality Assurance Project Plan Requirement (QAPP)

Check Yes or No for each of the items provided below as it applies to your specific project. If you answered **YES** to any of the items listed above, you are **REQUIRED TO SUBMIT** a Quality Assurance Project Plan in accordance with EPA Requirements and an approved QAPP must be in place ***prior*** to the initiation of activities.

You will be contacted with information on how to prepare your QAPP. In the meantime, please visit the website https://www.epa.gov/sites/default/files/2015-06/documents/g5-final.pdf which provides guidance on what must be submitted for grants/cooperative agreements.

1. Your project will involve the collection of groundwater, soil, sediment, surface water, air, biota or fauna samples for chemical or biological analysis.
   Yes ☐ No ☒

2. Your project will use existing computer databases containing analytical data or personal information previously collected.
   Yes ☐ No ☒

3. Your project will use existing historical research pertaining to this project or application. Yes ☐ No ☒

4. Your project will implement deed searches for current property or site.
   Yes ☐ No ☒

5. Your project will conduct medical records search for the population covered in the grant.
   Yes ☐ No ☒

6. Your project will compile meteorological data to determine weather trends or air mixing trends.
   Yes ☐ No ☒

7. Your project will use existing statistical studies or will conduct these studies as part of the project.
   Yes ☐ No ☒

8. Your project will create a new database based on the information gathered.
   Yes ☐ No ☒

9. Your project will use this information for litigation purposes.
   Yes ☐ No ☒

10. Your project will use this information to make recommendations on environmental decisions.
    Yes ☐ No ☒

Logic Model

Resources & Inputs	Activities	Outputs	Audience	Short-Term Outcomes	Intermediate Outcomes	Long-Term Outcomes
Objective 1						
OCVA Staff Time Portland, Salem, and Eugene CBOs Knot Consultant Time Forth Mobility Consultant Time NorthWest Transportation Options ODOT PSU	A1.1 Identify vulnerable communities of color in Portland Metro, Eugene, and Salem AND collaborate with CBOs. A1.2 Plan engagement sessions AND design survey A1.3 Conduct focus groups and complete surveys A1.4 Perform Social Travel Analysis of vulnerable communities of color in Portland Metro, Eugene, and Salem	R1.1 Develop partnerships with 4 CBOs in Portland, 3 in Salem, and 2 in Eugene. R1.2 A) Create and test a digital survey in the target community. B) Develop 9 engagement plans for each focus group. R1.3 Conduct 4 focus groups in Portland, 3 in Salem, 2 in Eugene, and 100 surveys. R1.4 Produce a report chapter on safe and equitable travel to the Oregon coast for vulnerable travelers of color, including visions, goals, and key barriers. R1.5 Produce a report chapter on clean energy transportation routes, schedules, and important locations for transportation	Vulnerable communities of color living in the Portland, Salem, and Eugene Areas. Local partners such as other CBO's operating in the Portland, Salem, and Eugene Areas. City, state, and local government agencies including ODOT, and ODOE Utility providers Transportation	Vulnerable communities of color living in the Portland Metro, Eugene, and Salem areas will: 1. Learn about and engage with our program and our proposed model. 2. Will be supported in identifying and communicating gaps, and deep seeded cultural barriers experienced around equitable travel to the Oregon coast 3. Will vision and set community priorities for accessible low emission transportation to the coast	Through engagement and discussion, CBO's, Government organizations, and other NGOs will learn about opportunities to increase equitable travel to the Oregon Coast. This will be measured by the development of an advisory board and number of advisors serving from audience organizations.	A detailed Oregon Coast equitable and inclusive movement plan with social and infrastructure analysis will be publicly available. This plan will provide detailed action steps for community implementation. Long-term outcomes from the implementation of this plan are: 1.increased access to nature for identified vulnerable communities 2. Increased

	A1.5 Perform Route Analysis from identified vulnerable communities of color in Portland Metro, Eugene, and Salem to the Oregon Coast. A1.6 Perform Technical & Financial Transportation Analysis to support the travel of vulnerable communities of color in Portland Metro, Eugene, and Salem to the Oregon Coast. A1.7 Perform Key Collaborator Analysis to support implementation of solutions in vulnerable communities of color in Portland Metro, Eugene, and Salem to the Oregon Coast.	hubs. R1.6 Produce a report chapter describing key transportation infrastructure, financial support, vehicle procurement strategies, policy development strategies, and incentives. R1.7 Produce a report chapter outlining the roles of project managers, implementing partners, government support, technical expertise, and cooperation from industry and business partners.	providers	These short term outcomes will be measured by survey responses and focus group participation against targets. Another short-term outcome will be partnership development between the Coastal CBO (OCVA) and CBOs serving above-mentioned vulnerable communities. This will be measured in the number of partnerships between OCVA and other CBOs.		access to low emission transportation options for identified vulnerable communities. 3.increased rates of travelers of color visiting the Oregon coast 4.Job generation from emerging industries for identified vulnerable communities 5. Installation of critical infrastructure needed to meet Oregon's transportation electrification needs

Objective 2						
OCVA Staff Time Knot Consultant Time Forth Mobility Consultant Time NorthWest Transportation Options ODOT PSU Sunset Empire Tillamook County Transportation District Visit Tillamook Bay	A2.1 Identify commuter communities in the tourism industry on the Oregon North and Central Coast, and collaborate with community advocates and other community CBOs. A2.2 Plan engagement sessions and design surveys. A2.3 Conduct focus groups and complete surveys. A2.4 Perform a social travel analysis of Oregon coast tourism workforce	R2.1 Activate current coastal partnerships with community advocates, other CBOs, and businesses on the Oregon Coast that work with tourism commuters, and identify five locations for focus groups. R2.2 A) Create and test a digital survey in the target community. B) Develop five engagement plans for each focus group. R2.3 Conduct five workforce focus groups in identified commuter communities on the Oregon North and Central Coast. R2.4 Produce a report chapter on safe and equitable transportation for Oregon coast tourism workforce commuters, including visions, goals, and key barriers. R2.5 Produce a report chapter on clean energy transportation routes,	Oregon Coast Tourism Workforce who Commute to work Local partners such as community advocates, businesses, chambers of commerce, utility providers, other NGOs and CBO's operating along the Oregon Coast. City, state, and local government agencies including ODOT, and ODOE Transportation providers such as Sunset	Oregon coast tourism workforce commuters will: 1. Learn about and engage with our program and our proposed model. 2. Be supported in identifying and communicating gaps and needs surrounding equitable travel to and along the Oregon coast. 3. Will vision and set priorities for accessible low emission transportation to work. These short term outcomes will be measured by survey responses and focus group participation.	Through engagement and discussion, CBO's, Government organizations, and other NGOs will learn about opportunities to increase equitable travel to and along the Oregon Coast. This will be measured by the development of an advisory board and number of advisors serving from audience organizations.	A detailed Oregon Coast equitable and inclusive movement plan with social and infrastructure analysis and detailed actions steps for community implementation. 1a. Project Summary Page

Project Title: Creating Equitable and Low-Impact Transportation to and Along Oregon Coast

Project Location: This is a multi-region project that has a specific focus on the following communities on the Oregon North and Central Coast: Astoria OR (97103), Seaside OR (97138), Cannon Beach (97110), Manzanita (97130), Nehalem OR(97131), Garibaldi OR(97118), Tillamook OR (97141), Pacific City OR (97135), Lincoln City OR (97367), Newport OR(97365 & 97366), Waldport OR(97394), Yachats OR(97498), and Florence OR(97439), and vulnerable communities in all Portland, Salem, and Eugene OR areas.

Applicant Information: Arica Sears, P.O. Box 940 Tillamook, OR 97141

Brief Description of Applicant Organization: The Oregon Coast Visitors Association (OCVA) strives to inspire travel and strengthen collaboration to create and maintain a sustainable coastal economy. To achieve this goal, OCVA has signed the Glasgow Declaration on Climate Action in Tourism and developed a Mitigation, Adaptation & Resiliency Climate Action Plan. OCVA is guided by these commitments.

OCVA partners with coastal communities to develop destination strategies aligned with their vision of "a coastal utopia for all." This includes engaging with stakeholders, preserving natural resources, managing tourism impacts, promoting sustainable travel, and reducing transportation emissions. These projects enhance the visitor experience and improve livability for residents.

Are you applying for the Small CBO Set Aside Track for $150,000 projects? No

Project Abstract: This planning grant aims to expand equitable and inclusive movement to and along the Oregon Coast. OCVA will do this by developing social, environmental, financial, and technical strategies to assess the critical points of technical and social infrastructure needed for equitable and low impact transportation. The grant will support three communities burdened by environmental justice issues relating to transportation to and along the Oregon coast: people of color who reside in the Portland metro, Salem, and Eugene areas who wish to visit the Oregon coast as tourists, the tourism workforce who commute to their employment on the Oregon coast, and residents residing in congested traffic ways along the north and central Oregon coast. The grant aims to reduce the nature gap observed in the Portland Metro, Salem, and Eugene areas, reduce barriers and increase feelings of safety for people of color visiting the Oregon coast, decrease workforce traffic and burden, and decrease traffic congestion and air pollution at highly visited coastal destinations.

Project Type(s): Planning, nature access, low-emission transportation technology, facilitating engagement of disadvantaged communities, workforce development to reduce GHG emissions

Special Considerations: Climate Change and Rural Areas

Environmental Issue: Air pollution, access to low-impact transportation, access to nature

List of Project Partners: Forth Mobility (transportation non-profit), Knot Design (business), Florence Chamber of Commerce (local government), Lincoln City Chamber (local government), Tillamook Coast Visitors Association (DMO), Oregon Department of Energy (state agency)

ED_016126_00000603-00001

Need of QAPP: Yes

1b. Environmental and Public Health Information of Underserved Community

This is a **planning** grant that aims to expand equitable and inclusive movement to and along the Oregon Coast. This grant develops social, environmental, financial, and technical strategy to assess the critical points of technical and social infrastructure needed for equitable and low impact transportation. The following three communities burdened by environmental justice issues relating to transportation to and along the Oregon coast will be supported:

1. People of color who reside in the Portland metro, Salem, and Eugene areas who wish to visit the Oregon coast as tourists. This includes Black (5.6%), Indigenous (1%), Asian (8.5%), Pacific Islander (0.5%), and Latinx (10.3%) peoples (REF). According to the EJ screening tool, these communities score between 80-95%ile for particulate matter, 80-100%ile for diesel particulate matter, 80-95%ile for cancer risk due to air toxics, 80-95%ile for air toxics respiratory HI, and 80-100%ile for traffic proximity burden. Due to historic discrimination in housing and zoning policies in Oregon metro areas (REF), people of color are more likely to live in areas with higher levels of particulate matter pollution (REF), live near major transportation corridors, such as highways and ports, that are major sources of pollution and emissions (REF), and experience health impacts, with people of color 30% more likely to have asthma (REF). A study by Oregon Health & Science University recently showed Oregon Black and Latinx children with increased asthma related emergency department use compared to white peers (REF). According to the EJ screening tool, people living in these communities score between 80-100%ile for Asthma.

There are two significant environmental justice impacts we hope to address regarding these communities: **First, we aim to reduce the nature gap observed in the Portland Metro, Salem, and Eugene areas.** The nature gap refers to the unequal access to clean air, public parks and beaches, biodiversity, and open spaces that people of color experience while living in these spaces. A 2020 report shows that there are racial and economic disparities in nature access. This report finds that there are fewer forests, streams, wetlands, and other natural places near where Black, Latinx, and Asian American people live. Notably, families of color with children have the least access to nature (REF). These disparities are particularly concerning as nature is a necessity for health and well-being (REF), particularly among communities with high exposure to air pollution (REF). This grant aims to identify strategic locations, routes, transportation times, and other needed information to establish and increase zero emission transportation options from the Portland Metro, Salem, and Eugene areas to the North and Central Coasts. It also aims to identify funding opportunities, build community capacity for the establishment of this program and develop multi-stakeholder partnerships with varying transportation organizations throughout Oregon, so that successful implementation of this plan may be achieved.

Second, we aim to reduce barriers and increase feelings of safety for people of color visiting the Oregon coast. Communities along the Oregon coast are historically known to be sundown towns, places that exclude people of color through fear, violence, and intimidation (REF). Through the Environmental Justice Collaborative Problem Solving Model (EJCPSM) and skilled facilitation, this grant aims to generate discussion amongst people of color in the Portland Metro, Salem, and Eugene areas surrounding barriers of safety and access when visiting the Oregon coast. From these discussions, we aim to identify social solutions and coastal partnerships to increase access for people of color to visit the Oregon coast.

ED_016126_00000603-00002

2. This grant will support the tourism workforce who commute to their employment on the Oregon coast. We will do this by identifying barriers to accessible and equitable transportation for workforce commuters and reducing the transportation burden they experience.

According to the State of Oregon Employment Department, in 2021, the accommodation and food services industry was the most racially diverse in the state with, 18% of the workforce identifying as Latinx, 6% Asian, 4% Black, and 2% Indigenous peoples (REF). A 2022 study shows that workers of color drive 22.4 minutes longer to get to work every week compared to white counterparts (REF) while a 2017 study shows that every extra commute minute is associated with reduced job satisfaction, leisure time satisfaction, increased strain, and reduced mental health (REF). There is a disproportionate burden placed on these commuters, who many times cannot afford to live in the same place they work. According to the most recent US census LEHD Origin-Destination Employment Statistics (REF), the majority of the workforce supporting Oregon North and Central coastal industries commutes from out of the area. 67% of Astoria workforce commutes, Seaside (66%), Nehalem (97%), Garibaldi (91%), Tillamook (79%), Pacific City (90%), Lincoln City (61%), Newport (71%), Waldport (85%), Yahats (89%), and Florence (67%). As tourism is the number one economic industry on the Oregon Coast (REF), a significant portion of the Oregon Coast tourism workforce is commuting to support the industry.

Additionally, fuel-based transportation increases air pollution, is the primary source of Oregon's statewide emissions (REF), contributes to climate change, and reduces equitable access to jobs due to the requirement of needing a vehicle to serve where public transportation does not (REF). Through the use of publicly available data and network analysis, this grant aims to identify the communities in which people are commuting from. Once these communities have been identified, using the EJCPSM, we can identify barriers to accessible and equitable transportation for this workforce, route analysis to support a workforce commuter program, financial analysis including the identification of incentives, an environmental analysis to better mitigate against emissions, a technical analysis to identify locations specifically for workforce EV charging, and vehicle procurement planning. This zero emission workforce commute plan will help alleviate the transportation burden placed on the Oregon coast tourism workforce.

3. This grant will support residents residing in congested traffic ways along the north and central Oregon coast. 91% of these residents are white, 6% Latinx, and 3% Indigenous peoples (REF). According to the EJ screening tool, residents residing in Astoria, Seaside, Tillamook, Lincoln City, Newport, Waldport, and Florence areas rank in the 80-100%ile for low income with pockets of limited English speaking populations ranking in the 70-95%ile compared to national numbers (REF). These coastal communities also range from 70-90%ile in traffic proximity burden, with Florence and Tillamook ranking in the 70-80%ile for air toxics repository HI. Connected to air pollution, these same coastal towns rank in the 80-90%ile for asthma, 80-100%ile for heart disease, and 80-90%ile for low life expectancy.

This grant aims to decrease traffic burden and air pollution of these highly trafficked coastal destinations. By knowing the point of origin, intended destination and trip route of these coastal visitors, we aim to develop transportation options that easily support visitation to the Oregon coast while significantly reducing both traffic and transportation emissions that are significantly burdening coastal residents. Through this grant we aim to develop coastal micro-mobility to support visitor movement once people have arrived on the coast. Using the EJCPSM, we hope to identify critical locations for EV charging infrastructure, micro-mobility infrastructure, financial access, vehicle and micro-mobility procurement, and identify collaborators on the coast to implement this plan. This will

benefit local residents by supporting the economy, decreasing transportation pollution, and minimizing traffic congestion, all three of which are critical burdens to coastal residents.

1c. Organization's Historical Connection to Underserved Community

OCVA was formed in 1997 by coastal cities, counties, destination management organizations (DMOs) and other stakeholders organized to promote vacation travel, recreation, attractions and overnight stays on the Oregon Coast. These efforts brought (and continue to bring) economic development opportunities to the rural communities of the region. In 2003, the state of Oregon passed House Bill 2267. Within the scope of the legislation, the Oregon Tourism Commission could appropriate as much as 15 percent of the revenue from the statewide lodging tax to Oregon's tourism regions for cooperative regional and multi-regional marketing efforts. OCVA became the official regional destination management organization for the Oregon Coast, receiving the coastal portion of the 15%. In 2016, OCVA shifted from focusing on marketing tourism to managing tourism. This allowed our organization to better address the needs of our communities including infrastructure, training, and partnering with non-tourism partners.

OCVA distributes an in-depth stakeholder survey provided by the Oregon Tourism Commission to our coastal communities including residents, businesses, local government and nonprofits every two years. This survey yields anywhere from 375 - 615 respondents. Our team reviews the results and then holds focus groups in person and online to gather more feedback from community partners. That community feedback directly informs our two-year strategic plan.

Priorities from those stakeholder surveys and feedback sessions have led to community-partnered and agency-partnered projects addressing local environmental and public health issues. A few examples are:

Creation of a Strategic Advisory Group in 2014 to mitigate negative impacts to local environments. We hear strong feedback every two years in our stakeholder surveys that communities are concerned about tourism's impact on their natural resources. We continue to convene this group of state and federal land management agencies quarterly with the intention of improving interagency communications, identifying current negative impacts to local environments and livability of coastal communities. Results include cooperative communications in Spanish and English via social media and print campaigns.

Creation and Support of Local Food Trails in 2018 and 2019 continues to be a high priority for our community members, which includes providing local food producers (like fishermen and farmers) and businesses sourcing local food with technical support and marketing tools. We actively lead two food trails on the Oregon Coast which have resulted in 77 active partners including farms, ranches, restaurants, local markets, artisan products, craft beverages and local experiences who gather for technical training, networking, and cooperative marketing to visitors.

Creation of North Coast Tourism Management Network (NCTMN) in 2018 to focus on mitigating negative impacts of tourism in high visitation areas in Clatsop and Tillamook Counties, including habitat destruction, increased traffic and congestion, and increased trash and human waste in outdoor areas. More than 100 residents developed a community vision for successful regional tourism, including formation of the NCTMN. The network has resulted in a collaborative networking and problem solving model for two coastal counties, the creation of a public restrooms map, a series of educational webinars on sustainable tourism practices, cooperative education campaigns on trail

safety and etiquette and stewardship behaviors, resources for volunteer tourism, and guides for car-free travel to and along the North Coast in both English and Spanish.

Creation of the Ocean Cluster Initiative in 2021, which focuses on making local seafood easier to find and buy, and captures more value for communities from our local catch. Partners include Oregon RAIN, coastal ports, economic development districts, small business development centers, community colleges, local food producers, and local nonprofit organizations. This recent work has resulted in 15 videos highlighting the local seafood and aquaculture industry; $85K of funding to and collaboration with Oregon Kelp Alliance; $60K of funding committed to the Port of Bandon, supporting their innovative mariculture and Urchin Ranch in efforts to restore Oregon's wild kelp forests; subsidies and support for 3 new delivery routes for local food, which is expanding access and creating additional farm business opportunities; subsidies and support for coordinating a PSU Portland cooperative farmers market booth with 5 local coastal producers providing products (the booth generated just under $30k in new sales for these producers over the summer months); and the development of an "Oregon Coastal Food Prospector" mapping tool to help identify gaps in food system infrastructure.

Participation in the Tourism Declares a Climate Emergency Coalition and Creation of a Mitigation, Adaptation and Resilience Plan in 2021 to take purposeful action to reduce carbon emissions as per the advice from The Intergovernmental Panel on Climate Change (IPCC) to cut global carbon emissions to 55% below 2017 levels by 2030. We heard concern from our communities regarding the future of seafood industries, the dairy industry and tourism industry about the impacts of ocean acidification, increased droughts, flooding and wildfires. Additionally, some of our counties, like Lane County, conducted community engagement workshops and focus groups to support their own county-wide climate action plan.

Our participation in these community conversations resulted in the creation of one of the first tourism Mitigation, Adaptation and Resilience Plans in the United States and integration of climate action in the Oregon Tourism Commission's new strategic plan. We interviewed and listened to numerous state agencies, coastal businesses and state tourism partners. We have connected with 110 coastal businesses on EV topics through in-person events and one-on-one meetings. We have partnered with local and national partners to install $1million worth of Level 3 DC Fast Chargers and are currently securing an additional $1 million worth for infrastructure this summer.

Creation of an Oregon Coast Travelability Group which focuses on the intersection of travel and accessibility for disabled travelers. Our organization convenes this group quarterly, shares communications and funding opportunities and has sponsored Oregon Coast partners to attend the national Travelability Conference. This has resulted in $200,000 of grant funding to the Oregon Coast region to support accessibility assessments, training and marketing.

Organizational Focus on Diversity, Equity, Inclusion and Accessibility continues to be prioritized by our stakeholders, visitors and organization. Our 2022 annual grant program ($90,000) was focused on DEIA programs and initiatives on the Oregon Coast. We funded and continue to work with: Vive NW, Adventures without Limits, Latinos Outdoors Portland Chapter, Oregon Coast Aquarium Latinx visitors, Oregon Black Pioneers and View the Future.

1d. EJCPS Model

Step 1: Issue Identification, Community Vision, & Strategic Goal Setting

For Oregon Coast Visitors of Color residing in Portland Metro, Salem, and Eugene Areas:

Using Knot Designs network analysis, we will collaborate and build relationships with CBOs who work in identified communities, with the goal of building on existing expertise and leadership. Prior to conducting focus groups sessions, we will conduct local outreach and fact-finding to better understand community history and practices. These focus group sessions will also allow us to identify relevant issues, and connect with community advocates and stakeholders.

To reduce underrepresentation in natural spaces by better understanding barriers and increasing feelings of safety for people of color visiting the Oregon coast, we will conduct focus groups in identified marginalized communities. These will be non-prescriptive, open-ended focus groups. The goal will be a deeper understanding of cultural barriers, qualitative experiences, and vision of these Oregon communities. The attendees of these focus groups sessions will also complete a survey to better understand transportation and infrastructure needs of the respondents and to collect data needed for additional analysis.

For Oregon Coast Tourism Workforce and Residents:

As a CBO on the Oregon Coast, OCVA works extensively with businesses, workforce and residents. OCVA also commonly collaborates with other CBOs in the regions also working in these communities. Using the proposed workforce movement and visitor movement analysis, we will identify the coastal communities with the largest commuting workforces and those that experience significantly high visitation (with a focus towards identifying communities that have *both* a high number of commuters and high visitation). Once identified, these communities will be brought to the table with the goal of syncing and aligning existing community expertise and leadership. In connecting with these relationships, we will perform fact-finding to better understand community history and practices, identify relevant issues, and connect with community advocates and stakeholders important for the focus groups sessions.

We will conduct similar focus groups in these identified coastal communities: these will be non-prescriptive, open-ended focus groups to better understand the deeper cultural barriers, qualitative experiences, and vision of these communities not available through current databases. The attendees of these focus groups sessions will also complete a survey to better understand transportation and infrastructure needs of the respondents and to collect data needed for additional analysis.

Step 2: Community Capacity Building & Leadership Development

Based on the information collected from the focus groups session, we will further build relationships with community advocates and CBOs who express interest in implementing solutions identified in focus group sessions and surveys. In collaboration with these relationships, we will develop a plan highlighting ways to build capacity, leadership, and financial support tailored specifically to the communities engaged. This plan will include training, mentoring, and technical assistance activities. It will also highlight next steps to develop processes that ensure capacity-building and leadership development for community residents engaging in these solutions. Through this process, we will also identify and recruit members for a project advisory board for future implementation (REF).

Step 3: Consensus Building & Dispute Resolution

Based on the expertise of both OCVA and collaborator Knot Design, we will design all focus groups sessions in a way that ensures fair treatment and meaningful participation of all stakeholders. Our plan will align and highlight common vision and goals of all partners, emphasizing win/win scenarios, mutual gains, and ways for collaboration. We will use dispute resolution techniques when necessary and will work with community advocates to identify third parties who can build trust amongst all dispute members.

ED_016126_00000603-00006

Step 4: Multi-Stakeholder Partnerships & Leveraging of Resources
This plan requires OCVA's collaboration with multiple key stakeholders who have vast expertise in communities, locations, and subjects. These include partnerships we have or are actively building that include Oregon coast, portland, Salem, and Eugene communities, transportation agencies and NGOs like Forth Mobility, other CBO's like the Oregon Just Transition Alliance, all levels of government from chambers of commerce to state led agencies like ODOT, business and industry like Knot Design, and academia such as researchers at PSU. These partnerships will be sharing resources including human, institutional, technical, legal, and financial. We will also be looking for new partnerships throughout the process to help address new issues and needs as they are identified.

Step 5: Constructive Engagement by Relative Stakeholders
The plan developed from this project will identify the project manager and partner roles necessary for the implementation of the planning recommendations. It will specifically identify how governments can support the next step implementation process through information, resources, and technical assistance. It will identify cooperation needed from industry and business partners. It also will identify any additional analysis needed and partners capable of performing future analysis.

Step 6: Sound Management & Implementation
Our approach will be developed with full transparency of the commitments required from each partner, in terms of staff time, finances, timeline, creation, visioning, and facilitation support. We will also make our plan publicly available including our measurements of success. We are focused on servant based horizontal leadership, with the goal of empowering communities and using all abilities and talents. The plan we develop will identify clear goals and results that will improve community conditions. It will also clarify the commitments needed from partnerships during implementation stages.

Step 7: Evaluation, lessons learned, replication of best practices
In our approach we have used a logic model to develop our plan including identifying our clear measures of success. After the completion of each activity in our plan, we will evaluate progress, lessons learned, and update our process to be most effective. Our free, publicly-available published plan will document and share all information and successes from our focus groups, analysis, and workshop alignment.

1e. Project Linkages

This project supports the EPA's strategic plan goal 2 in several ways. Firstly, it helps reduce environmental inequities by addressing the disproportionate impacts of traffic pollution from fossil fuel emissions on low-income communities and communities of color. Transportation is a major contributor to air pollution on the Oregon Coast, and an equitable transportation plan would prioritize the reduction of emissions in areas with high levels of pollution and vulnerable populations.

Secondly, this project takes significant steps in knowledge gathering and open-ended listening to plan safe, inclusive, and accessible transportation options for visitors of color, who have historically been excluded from access to the Oregon coast.

Thirdly, this project helps reduce greenhouse gas emissions from tourism workforce transportation and mitigate the impacts of climate change, which are seen predominantly in low-income and vulnerable communities of color both in the Portland, Salem, and Eugene areas, and destinations on

ED_016126_00000603-00007

the Oregon Coast. By promoting these transportation options, an equitable and accessible transportation plan can support the EPA's efforts to reduce carbon emissions and protect public health and the environment.

1f. Partner and Collaborate

At OCVA, we are committed to using a servant leadership approach. This means that we listen, build capacity, conduct research to understand the landscape, bring people together, promote cross-dialogue, and provide technical expertise to find solutions.

Our projects rely heavily on partnerships because we are a network of many stakeholders. We use partnership communication channels, outreach strategies, feedback loops, and local expertise. With this project, we aim to foster collaborations and build partnerships among community stakeholders. We will also develop a project advisory board to enable distributed leadership among stakeholders.

Our partners include:

Forth Mobility: brings deep connections with utilities, diverse and inclusive transportation options, policy, and government (city, state, and federal) and additional transportation providers. Their roles include technical and financial assessments and workforce focus groups. They offer expertise, time, network, partnerships, and methodology. Their interests align with our mission statement, which aims to "electrify transportation by bringing people together to create solutions that reduce pollution and barriers to access."

Knot Design: offers a novel methodology based on publicly available census data of identifying vulnerable communities and connecting them to CBO's working in those communities. Their roles could include engagement strategy, focus group planning, and route and social analysis. They offer expertise, time, network, partnerships, and methodology. Their interests align with our objectives and identified partner collaboration, which support Knot's approach to creating projects that respect and promote ecological health and social equity while fostering an appreciation for the environment.

Florence Chamber of Commerce (Chamber/Businesses): provides workforce and burdened destination focus groups, connections with Florence employers and the Florence City Council. They offer communication channels, community and business networks, and access to commuter workforce networks. Their interests align with our efforts to improve the economy of Florence.

Lincoln City Chamber of Commerce: provides workforce and burdened destination focus groups engagment, connections with Lincoln City employers and the Lincoln City Council.

Tillamook Coast Visitors Association (DMO): brings deep roots in Tillamook County with businesses, residents, and nonprofits, and visitors out of county (like Portland visitors). Their roles include workforce and burdened destination focus groups. They offer marketing programs, distributing surveys to industry for both workforce and residents, and expertise in alternative transportation options for visitors. Their interests align with our partner collaborations, feasibility reports, and opportunity to implement transportation programs, which align directly with the organization's focus on destination management and alternative transportation solutions.

ODOT- Northwest Area Department: has a role in plan development and provides capacity for additional funding opportunities, in-house support for community micro-mobility plans. They offer

connections to government entities and policy. Their interests align with our goals to provide a safe and reliable multimodal transportation system that connects people and helps Oregon's communities and economy thrive.

Oregon Just Transition Alliance (under development): aligns with visitors of color and workforce focus groups. They offer a statewide network consisting of a movement of communities facing environmental racism, climate change, and economic exploitation. Their interests align with our project outline, which focuses on the 2023 resilience agenda including the three key pillars: invest in resilient communities and a just recovery, ensure housing justice, and advance clean energy opportunity.

North Coast Tourism Management Network (under development): provides burdened destination focus groups and local resident sentiment feedback. They offer connections with local residents, businesses, local government, and environmental nonprofits, and a transportation action team focused on reducing cars, congestion, and parking tensions on the North Coast since 2018. Their interests align with our deliverables, which support the Network's initiatives to enhance healthy, collaborative, sustainable relationships between coastal visitors, residents, and the environment.

Northwest Oregon Works (under development): provides workforce focus group and plan development. They offer direct contacts with large employers in three of the seven coastal counties and insight into workforce resources and how to best support employers/employee relationships. Their interests align with our aim to champion impactful workforce solutions, provide leadership, create connections, foster partnerships, and make investments to address the employment needs of individuals and the business community.

OSU Cascades (under development): supports community engagement at a destination level and helps determine the carrying capacity of visitors for a given city or county. They offer academic expertise, destination and workforce case studies, and research support. Their interests align with our project, which seeks resident and workforce feedback and engagement to provide data that the tourism lab seeks to help tourism organizations around the country balance visitor needs and community impact.

2.0 Project Activities, Results, and Milestones

Objective 1: Reduce the nature gap and promote equitable and accessible travel to the Oregon Coast for vulnerable communities in Portland, Salem, and Eugene.		
Activity	**Results**	**Milestone Schedule**
A1.1 Identify vulnerable communities of color in Portland Metro, Eugene, and Salem using US census data and KNOT Design methodology. Connect with CBOs to establish key approaches for stakeholder engagement. Co-develop	R1.1 Develop relationships and engage in partnerships with nine community-based organizations (CBOs), based on the density of vulnerable populations: • Four CBOs in the Portland area • Three CBOs in Salem	S1.1 Month 1 - Month 6 Interact with 2-3 new CBOs monthly to establish partnerships. Aim to partner with 2 CBOs in each region by Month 4. If behind at this milestone, adjust strategy and timeline.

ED_016126_00000603-00009

strategies for momentum building within these communities.	• Two CBOs in Eugene	
A1.2 Collaborating with KNOT Design and partnered Community-Based Organizations (CBOs), plan engagement sessions and survey design to ensure all required information is collected for subsequent analysis	R1.2 A. Create a digital survey and test it with targeted community. Get feedback on usability and burden from five people. B. Develop an engagement plan for each focus group that includes partnering with a community-based facilitator (nine in total).	S1.2 Month 2- Month 8 A) By Month 3, we will have developed and tested our survey, adapting it based on feedback. B) Develop the first engagement plan by Month 4 and complete it all by the end of Month 8.
A1.3 Co-conduct focus groups in collaboration with partnered CBOs and facilitators. Surveys will be completed at focus groups, by participants.	R1.3 Conduct the following focus groups and collect qualitative and quantitative data: 4 FG in Portland Area 3 FG in Salem 2 FG in Eugene	S1.3 Month 9- Month 13 We will have our first focus group by the end of month 9, followed by two sessions per month for the next 4 months.
A1.4 **Social Analysis:** Perform analysis based on publicly available data and data received from focus groups.	R1.4 Produce a report chapter that describes the visions, goals, and key barriers for safe and equitable travel to the Oregon coast by vulnerable travelers of color.	S1.4 Month 14- Month 30 Analysis of draft 1 complete by Month 24. Conduct internal workshop A4.2 with first draft data. Additional analysis and report completion between Month 24-30, with final draft due in Month 30.
A1.5 **Route Analysis:** Perform analysis based on publicly available data and data received from focus groups.	R1.5 Produce a report chapter outlining the necessary clean energy transportation routes for vulnerable travelers of color visiting the Oregon Coast from Portland, Salem, and Eugene. The chapter should cover important locations for transportation hubs within these communities, as well as the quantity and type of EV charging infrastructure needed. Additionally, include community-relevant routes and schedules for busing, vanpools, and carshares.	S1.5 Month 14- Month 30 Analysis of draft 1 complete by Month 24. We will use this draft to conduct an internal workshop (A4.2). Additional analysis and report completion between Month 24-30, with final draft due in Month 30.
A1.6 **Technical & Financial**	R1.6 Produce a report chapter describing the key transportation	S1.6 Month 14- Month 30

ED_016126_00000603-00010

Transportation Analysis: Perform analysis based on publicly available data and data received from focus groups.	infrastructure and financial support necessary to increase equitable transportation access for vulnerable travelers of color to the Oregon coast. The chapter will include the required model and density of key infrastructure, vehicle procurement strategies, policy development strategies, and strategies for financial support and incentives.	Analysis of draft 1 complete by Month 24. We will use this draft to conduct an internal workshop (A4.2). Additional analysis and report completion between Month 24-30, with final draft due in Month 30.
A1.7 **Key Collaborator Analysis:** Perform analysis based on publicly available data and data received from focus groups.	R1.7 Produce a report chapter outlining the roles of project managers and partners for implementing planning recommendations from the analysis. Discuss government support, technical expertise, and cooperation from industry and business partners. Identify required technical expertise and potential partners for future analysis.	S1.7 Month 14- Month 30 Analysis of draft 1 complete by Month 24. We will use this draft to conduct an internal workshop (A4.2). Additional analysis and report completion between Month 24-30, with final draft due in Month 30.
Objective 2: Reduce transportation emissions and improve access to zero-emission transportation infrastructure for the tourism workforce on the Oregon Coast.		
Activity	**Results**	**Milestone Schedule**
A2.1 Identify target commuter communities on the Oregon North and Central Coast using US Census data and KNOT Design methodology. Develop key strategies for engaging commuters, and collaborate with other coastal organizations to build momentum within these communities.	R2.1 Identify five communities with a high level of tourism workforce commuters and engage in relationships and networking with other community-based organizations (CBOs), coastal community advocates, and businesses on the Oregon Coast that work with commuters.	S2.1 Month 3 - Month 7 Interact with 2-3 new CBOs/businesses/community advocates monthly to establish focus group locations. Aim to establish 1 focus group location in the coastal region by Month 5 with all 5 focus destinations by Month 7. If behind the Month 6 milestone, adjust strategy and timeline.
A2.2 Collaborating with KNOT Design and partnered Community-Based Organizations (CBOs),	R2.2 A. Create a digital survey and test it with a targeted community. Get feedback on usability and burden	S2.2 Month 6- Month 10 A) By Month 6, we will have developed and tested our survey,

ED_016126_00000603-00011

plan engagement sessions and survey design to ensure all required information is collected for subsequent analysis	from five people. B. Develop an engagement plan for each focus group that includes partnering with a community-based facilitator (nine in total).	adapting it based on feedback. B) Develop the first engagement plan by Month 6 and complete it all by the end of Month 10.
A2.3 Co-conduct focus groups in collaboration with community advocates, and facilitators. Surveys will be completed at FG, by participants.	R2.3 Conduct 5 focus groups in the North and Central coast and collect qualitative and quantitative data.	S2.3 Month 11- Month 14 We will have our first focus group by the end of month 11, followed by two sessions per month for the next 2 months.
A2.4 **Social Analysis:** Perform analysis based on publicly available data and data received from focus groups.	R2.4 Produce a report chapter that describes the vision, goals, and key barriers for safe and equitable tourism workforce commute travel to and along Oregon.	S2.4 Month 15- Month 30 Analysis of draft 1 complete by Month 24.We will use this draft to conduct an internal workshop (A4.2).Additional analysis and report completion between Month 24-30, with final draft due in Month 30.
A2.5 **Route Analysis:** Perform analysis based on publicly available data and data received from focus groups.	R2.5 Produce a report chapter on clean energy transportation for Oregon Coast tourism workforce commuters. Cover transportation hubs, EV charging infrastructure needs, and relevant busing, vanpooling, and carsharing routes and schedules.	S2.5 Month 15- Month 30 Analysis of draft 1 complete by Month 24.We will use this draft to conduct an internal workshop (A4.2).Additional analysis and report completion between Month 24-30, with final draft due in Month 30..
A2.6 **Technical & Financial Transportation Analysis:** Perform analysis based on publicly available data and data received from focus groups.	R2.6 Produce a report chapter describing the necessary strategic transportation infrastructure, with an emphasis on micro-mobility. It will cover the required models and densities of key infrastructure, including micro-mobility hubs, vehicle procurement strategies, policy development strategies, required coordination with coastal government and utility providers, and strategies for financial support and incentives.	S2.6 Month 15- Month 30 Analysis of draft 1 complete by Month 24.We will use this draft to conduct an internal workshop (A4.2).Additional analysis and report completion between Month 24-30, with final draft due in Month 30.

ED_016126_00000603-00012

A2.7 **Key Collaborator Analysis:** Perform analysis based on publicly available data and data received from focus groups	R2. Produce a report chapter outlining the roles of project managers and partners for implementing planning recommendations from the analysis. Discuss government support, technical expertise, and cooperation from industry and business partners. Identify required technical expertise and potential partners for future analysis.	S2.7 Month 15- Month 30 Analysis of draft 1 complete by Month 24. Conduct internal workshop A4.2 with first draft data. Additional analysis and report completion between Month 24-30, with final draft due in Month 30.
Objective 3: Planning an Equitable Way Forward for Oregon Coast Destinations Experiencing High Visitation Traffic		
Activity	**Results**	**Milestone Schedule**
A3.1 Identify Oregon Coast destinations affected by high visitation traffic using US Census data and KNOT Design methodology. Develop strategies for engaging community residents and collaborate with other coastal organizations to build momentum.	R3.1 Identify five destinations and engage in relationships and networking with other community-based organizations (CBOs) and coastal community advocates on the Oregon Coast that work with residents at these destinations.	S3.1 Month 3 - Month 7 Interact with 2-3 new CBOs/businesses/community advocates monthly to establish focus group locations. Aim to establish 1 focus group location in the coastal region by Month 5 with all 5 focus destinations by Month 7. If behind the Month 6 milestone, adjust strategy and timeline.
A3.2 Plan engagement sessions and survey design to ensure all required information is collected for subsequent analysis	R3.2 A. Create a digital survey and test it with a targeted community. Get feedback on usability and burden from five people. B. Develop an engagement plan for each focus group that includes partnering with a community-based facilitator (nine in total).	S3.2 Month 8- Month 12 A) By Month 8, we will have developed and tested our survey, adapting it based on feedback. B) Develop the first engagement plan by Month 9 and complete it all by the end of Month 12.
A3.3 Co-conduct focus groups in collaboration with community advocates, and facilitators. Surveys will be completed at FG, by participants.	R3.3 Conduct 5 focus groups in burdened destinations on the North and Central coast and collect qualitative and quantitative data.	S2.3 Month 13- Month 16 We will have our first focus group by the end of month 13, followed by two sessions per month for the next 2 months.

ED_016126_00000603-00013

A3.4 **Social Analysis:** Perform analysis based on publicly available data and data received from focus groups.	R3.4 Produce a report chapter that describes the vision, goals, and key barriers of residents living in burdened coastal destinations.	S3.4 Month 17- Month 330 Analysis of draft 1 complete by Month 24.We will use this draft to conduct an internal workshop (A4.2).Additional analysis and report completion between Month 24-30, with final draft due in Month 30.
A3.5 **Route Analysis:** Perform analysis based on publicly available data and data received from focus groups.	R3.5 Produce a report chapter on clean energy transportation for Oregon Coast destinations. Cover transportation hubs, EV charging infrastructure needs,micro-mobility, and relevant busing, vanpooling, and carsharing routes and schedules.	S3.5 Month 17- Month 30 Analysis of draft 1 complete by Month 24.We will use this draft to conduct an internal workshop (A4.2).Additional analysis and report completion between Month 24-30, with final draft due in Month 30.
A3.6 **Technical & Financial Transportation Analysis:** Perform analysis based on publicly available data and data received from focus groups.	R3.6 Produce a report chapter describing the necessary strategic transportation infrastructure. It will cover the required models and densities of key infrastructure, including micro-mobility hubs, vehicle procurement strategies, policy development strategies, required coordination with coastal government and utility providers, and strategies for financial support and incentives.	S3.6 Month 17- Month 30 Analysis of draft 1 complete by Month 24.We will use this draft to conduct an internal workshop (A4.2).Additional analysis and report completion between Month 24-30, with final draft due in Month 30..
A3.7 **Key Collaborator Analysis:** Perform analysis based on publicly available data and data received from focus groups	R3.7 Produce a report chapter outlining the roles of project managers and partners for implementing planning recommendations from the analysis. Discuss government support, technical expertise, and cooperation from industry and business partners. Identify required technical expertise and potential partners for future analysis.	S3.7 Month 17- Month 30 Analysis of draft 1 complete by Month 24.We will use this draft to conduct an internal workshop (A4.2).Additional analysis and report completion between Month 24-30, with final draft due in Month 30.
Objective 4: Write and finalize an Oregon Coast equitable and inclusive movement plan		
Activity	**Results**	**Milestone Schedule**
A4.1 **Climate Change Preparedness Strategy:** Perform environmental analysis assessing critical ways to reduce transportation emissions sourced from visitation	R4.1 Produce a report chapter describing metrics and indicators needed for implementation, set emission desired targets and pathway forward for achievement, suggest impact management strategies for implementation, and analyze the	S4.1 Month 27- Month 30 Based on internal workshop A4.2, the first draft of the plan will be available by Month 29. Final report draft due by Month 30.

ED_016126_00000603-00014

to the Oregon coast	spillover of climate factors in these identified communities into other industries.	
A4.2 Conduct collaborator workshop	R4.2 Conduct 3 workshops: 1) Align transportation issue identification, vision, goals and barriers while maintaining the specifics of location. 2) Determine key capacity and leadership development needed for the implementation of the plan and establish an advisory board. 3)Develop implementation strategy	S4.2 Month 25- Month 27 Workshop 1 to be performed Month 25, Workshop 2 in Month 26, and Workshop 3 in Month 27
A4.3 Write and finalize the plan: Creating Equitable and Low-Impact Transportation to and Along Oregon Coast based on the above analysis	R4.3 The plan includes the following chapters: Background, Process & Methodology, Key Opportunities, Social Analysis, Route Analysis, Technical & Financial Transportation Analysis, Key Collaborator Analysis, Climate Change Transportation Preparedness Strategy, Gaps, Conclusions	S4.3 Month 25- Month 36 All final plan chapters will be collected by Month 30. Draft 1 of the final plan will be complete by month 32. Plan will be distributed to all collaborators for feedback and edits Month by month 33. Final plan will be published on month 36..

2c. Itemized Budget Sheet

*Submitted as attachment

3.0 Environmental Results- Outputs, Outcomes, and Performance

3a. Environmental Results, Logic Model

*Submitted as attachment

3b. Performance Measurement Plan

Project Manager will use Asana management software to perform a monthly progress review that will track actual activity results/outputs to timeline, milestones and budget. There will be quarterly meetings with all partners to review and evaluate activities and results. If necessary, at these team reviews, the PM will adapt performance and make decisions to expand the timeline and or shift budget accordingly to the adjustment.

3c. Sustainability Plan and Community Vision

The Oregon Coast Visitors Association's (OCVA) mission "is to inspire travel and strengthen collaboration to create and steward a sustainable coastal economy." OCVA has also signed on to the

ED_016126_00000603-00015

Glascow Declaration on Climate Action in Tourism and created a Mitigation, Adaptation & Resiliency Climate Action Plan. Our projects are informed by this mission and these commitments.

OCVA has the honor of working with coastal communities to align partnerships, destination development projects, destination marketing, and destination management with the vision of creating "a coastal utopia for all." This includes coastal stakeholders, new and returning visitors, and the natural resources that make these coveted experiences so magical.

On the North Coast, OCVA worked with partners to develop and sustain the North Coast Tourism Management Network. This network has been the project management home for strategies that minimize the impacts of tourism on residents and the environment, inform visitors of best stewardship and sustainable travel practices, and decrease transportation emissions to and along the north coast. These projects both improve livability for local residents and enhance the visitor experience.

In collaboration with existing partners, OCVA will create a grant implementation plan. This plan will outline the specific role and responsibilities of the advisory board with two main programmatic focuses:

1) Advise and support OCVA's grant managers and grant partners in capacity building, community connections and funding identification.
2) Advise and support marketing and community outreach of the planning findings in order to build support and momentum for implementation.

This board's mandate will be to serve as a space where public collaborators can brainstorm, serve as a mechanism for community feedback and community accountability, extend invites to those who would not traditionally be at the tourism management table, and finally, empower local communities–through participation–to define equitable benefit sharing and successful project management.

The ultimate aim of the advisory board will be to hold OCVA and grant partners accountable to the above-stated mission and commitments as well as the needs of coastal residents and travelers.

4.0 Programmic Capability

4a. Organizational Experience

OCVA - Project Management Team
For nearly a decade, OCVA and our strategic partners have been uniting around a statewide vision to align Oregon's tourism industry for "*a better quality of life for all Oregonians*". This framework allowed our agency to embark on new pathways to support our rural coastal communities. What started years ago in the form of community engagement sessions to explore the impacts, benefits, and opportunities of increased visitation has expanded into a rich dialogue with community leaders, business owners, and residents working toward "sustainable tourism" on the Oregon Coast.

Oregon's 363 miles of rugged, rural coastline consists of 7 counties, 29 incorporated cities, and 68 unincorporated villages, with the largest populated city having only 16,700 residents. Our staff live and work in these rural communities, experiencing firsthand the hurdles that rural communities and

businesses experience. The following staff members will directly support the grant project while the rest will play supporting roles on our team:

4b. Staff Experience and Qualifications of PM

Arica Sears (Deputy Director) will be the Project Manager for the OCVA team and the overall grant. As a fifth generation resident of the Oregon Coast and active community member of Pacific City, OR she has a deep understanding of rural communities on the Oregon Coast. Her previous experience as a frontline hospitality worker locally and globally give her firsthand experience of the tourism industry. Her volunteer board positions with the Pacific City Doryman's Association, Kiawanda Community Center and Nestucca School Budget committee round out her understanding of other industries and cultural heritage on the coast.

Marcus Hinz (Executive Director) is a seasoned training and education administrator with decades of successful multi-departmental, organizational, and cross-jurisdictional collaboration on workforce training, technical assistance and inter-agency service coordination. He is currently the grant administrator for a USDA Local Food Promotion Program, which convenes numerous community members, seafood stakeholder and businesses together to keep more local seafood local via better processing, marketing and distribution systems. Marcus will ensure financial transparency, grant reporting systems oversight, and alignment between this work and existing work related to coastal workforce and climate.

Finn Johnson will support coastal workforce and business engagement as well as transportation feasibility reports in this project as OCVA's Coastal Tourism Resiliency Coordinator. He currently lives on the Oregon Coast in Astoria and is actively engaged in resiliency projects on the coast including EV mapping, EV infrastructure investments and placements, transit plan proposals for private companies on the North Coast, and creating climate resiliency donation systems for visitors. Finn works directly with coastal businesses and environmental nonprofits.

Karen Olson will support communication, community engagement and outreach needs for OCVA and grant partners during this three-year process. Her former role as the Manager of the North Coast Tourism Management Network provided her with direct community contacts and experience solving complex destination management issues like transportation, public safety, waste management and business support. Karen has lived on the North Coast for years and previously worked for one of the largest employers, Tillamook Cheese, while also supporting small community groups like the Emergency Volunteer Corps of Nehalem Bay.

Patty Martin is a Climate Consultant working directly with OCVA on the Mitigation, Adaptation and Resilience plan, partnership opportunities with coastal ports, and consultation for our Ocean Cluster Initiative. She will ensure climate and resilience options put forward are scientifically backed and provide expertise on emission measurements and reductions.

4c. Award Compliance

OCVA has standard compliance measurements in place for management of funding.

5.0 Past Performance

ED_016126_00000603-00017

1. USDA Local Food Promotion Program Grant | 2021 - Present | Federal - USDA | $735,200

This project is in progress and focused on implementing route optimization, backhaul opportunities, aggregation and cold storage development, strategic region-to-region coordination and application of technical assistance to help producers scale.

We have provided our first Interim Performance Report and will report 90 days after the end of each subsequent year until the expiration date of the grant period. Interim Performance Reports must illustrate the progress made toward the completion of each project within the grant agreement. Our team's progress and successes so far will be highlighted in an upcoming Local Agriculture Market Program Grant Spotlight.

2. Regional Food System Partnership Program - 2020 - 2023 | Federal - USDA | $450,000

This three-year grant provided support for the third phase of Oregon North Coast Regional Food System work implements and expanded on the planning and development of a multi-partner network of economic development, small agriculture and seafood producer development organizations, tourism food trail and farmers market organizations, small business development centers, local ports, and food value chain technical advisors.

OCVA provided a $62,500 cash match, was listed as "key staff" and helped develop the project management plan. Our organization was not the official applicant. Our role was to help alleviate producers' time knocking on doors and developing business sales by assisting them in making connections to markets. We supported events to connect producers to consumers and wholesale buyers, provided free marketing service through our broad-reaching networks, and provided sales of their products through our physical and digital marketplaces.

3. Oregon Wine Country License Plate Program - 2020 -2022 | Non-Federal | $40,000

With funding provided through sales of the Oregon Wine Country license plate, Travel Oregon administers a program to make grant awards available to tourism promotion agencies for projects that promote wine and culinary tourism and provide for the improvement or expansion of the tourism economy in Oregon.

Oregon Coast Visitors Association received $40,000 to host and facilitate Live Culture Coast, a two-weekend food festival that showcases the culinary richness and cultural heritage of the Southern Oregon Coast, in collaboration with local businesses, nonprofits and destination management organizations.

All required reports were submitted through Travel Oregon's online grant management system. The entire program and reporting was delayed an entire year due to the COVID-19 pandemic. With an extension we were still able to turn in a Mid- Project Report, and we completed our grant accomplishment report and final budget with detailed project expenses two months early.

6.0 QAPP Information: This project will require a QAPP. Specifically, this project will use existing computer databases containing analytical data and personal information, will use existing statistical studies, and will use this information to make recommendations on environmental decisions.

B. Budget Narrative

Personnel: Total personnel costs are $91,180.00 and includes salary for the project manager, Alysha Cypher, to dedicate 100% time for 5 months annually towards project management and participation in Activities 1-11. The PM will build the structure (1-2 days), dry seaweed (3 weeks), assay tissue samples (2 weeks), analyze data and prepare presentation to stakeholders (2 weeks), optimizing drying efficiency (1 week), organizing stakeholder meetings (2 days), organize community events (1.5 week), analyze survey data for presentation to stakeholders (3 day), prepare and hold training workshop (1.5 weeks), disseminate results and annual/final reporting (7-8 weeks).

Fringe: Total fringe costs are $45,590 and includes a 50% benefit rate for the PM, Alysha Cypher, to dedicate 100% time for 5 months. Fringe distribution includes 18% medical, 11% PTO, 6% pension, 9% payroll taxes, and 6% workman's compensation.

Travel: Total travel costs are $15,705 and includes airfare, lodging, and per diem for three farmers, Skye Steritz and Sean Den Adel of NOF and Thea Thomas of ROKC to attend the Mariculture Conference of Alaska each year in Juneau, Alaska. The PM will utilize other funds. We will make presentations in 2025 and 2026 on this project.

Equipment: Total equipment costs of $27,525 include the portable building and an Aqualab meter. We received a quote from TundraTech (Palmer, AK) for a 30'x16'x11' structure for $13,750 with a shipping rate of $1900 and will obtain competitive quotes from other companies, if funded. Aqualab provided a quote for a water activity meter for $11,700 with a shipping rate of $175 and can provide sole source documentation.

Supplies: Total supplies costs are $ 19,550 and includes the following supplies and need for project completion.

Item	**Purpose/Need**
Supplies to reinforce foundation	We anticipate needing to flatten the area under the structure (use palettes, wood, etc)
Standing racks with trays	For distributing kelp onto trays for drying
Hanging racks	For distributing kelp that is hanging vertically for drying. We include a second option in case one requires less labor.
Misc. supplies (hooks, rope, trays)	Additional supplies to hang kelp and utilize the entire structure space.
Cleaning supplies (ethanol, etc)	We will clean the structure frequently to prevent contamination with a solution of isopropyl alcohol.
Hobart electric salad spinner	To reduce drying time of kelp by allowing us to spin excess water out.
Fans/dehumidifier	To provide air movement and reduce humidity as needed for drying.
Balances	To weigh wet and dry kelp for water loss.
Portable battery	To provide electricity for fans.
Ducting pipe (25', 12" diameter)	For piping excess heat from diesel plant to structure approximately 30' away.

Double bubble reflectix (4x125')	For insulating the interior of the structure.
Wi-Fi thermo-hygrometer	To provide real-time measurements of internal and external temperature and humidity and notify project team if conditions deviate from expected norms.
Misc. lab supplies (disposable cups, salt solutions, kim wipes)	Supplies to operate water activity meter for measuring 'dryness' of kelp.
Shipping	Anticipated costs of shipping supplies

Contractual: Total contractual costs are $99,867 and includes
-$37,110 for Noble Ocean Farms (NOF) for Skye Steritz and Sean Den Adel to each allocate time (300 hours annually) towards building the structure (1-2 days), drying seaweed (~3 weeks), hosting community events (2 days per year), and training (1 day per year). These funds will not be used for purchasing kelp and hours will be tracked throughout the project.
-$19,792 for Royal Ocean Kelp Company (ROKC) for Thea Thomas to allocate time (160 hours annually) towards building the structure (1-2 days), drying seaweed (~3 weeks), preparing community events (2 days), community events (2 days per year). These funds will not be used for purchasing kelp and hours will be tracked throughout the project.
-$12,370 for Prince William Sound Economic Development District (PWSEDD) to allocate time (100 hours annually) towards this project. This will allow PWSEDD to arrange stakeholder meetings and identify long-term options for processing in PWS. PWSEDD has agreed to cover additional time allocated towards this project, if needed. We will track hours allocated towards this project.
-$2,625 for network/phone/printing for PWSSC salaried positions (PM Cypher) at a rate of $175/month for 5 months each year.
-$3500 for a TBD local business to assist with clearing brush from the proposed project site. This value is based on similar projects that have occurred in Cordova.
-$800 for renting space at the Cordova Center for 4 community events (1 in 2024, 1 in 2025, and 2 in 2026)
-$22,500 to contract with the Alaska Manufacturing Extension Partnership (MEP), a consulting firm for Alaska manufacturers, to hire a TBD business student for 9 months to complete a business viability assessment of the structure that incorporates project data. Alaska MEP has provided consulting for the seaweed mariculture industry in Alaska and can provide sole source documentation for this service.
-$1170 in the second year of this project to return meter to Aqualab for calibration.

Total Direct Costs: $299,417.00
Modified Total Direct Costs: $271,892.00 (excludes equipment)
Total Indirect Costs: $83,389.00 (calculated from an indirect cost rate of 30.67% - see negotiated IDC attachment)
Total Funding Request: $382,806.00

Inputs	Activities	Outputs	Audience	Short-term Outcomes	Intermediate Outcomes	Long-Term Outcomes
• Funding • Supplies and Equipment • Project Site • Heat Source • Time • Project team	1. Establish a structure for drying seaweed and using waste heat from a power plant. 2. Dry locally grown seaweed from 2024-2026. 3. Quantify drying times, rates, heating needs, and labor hours necessary for adequate drying. 4. Analyze data. 5. Hold regular stakeholder meetings. 6. Reassess and optimize drying efficiency 7. Assess social license for kelp farming. 8. Evaluate scalability and long-term solutions 9. Assess business viability 10. Train community members on kelp processing. 11. Disseminate Results	• Established structure • Drying data (drying rates/times, temperature/humidity data (inside/ outside structure), water activity of dried kelp, lbs dried.) • Effort data (hours, manpower) • Community events • Survey data (200 community members) • 40 PWS-residents trained on processing • 2 conference presentations • 1 Publication in scientific journal • 4 publications in newsletters • 1 City Council presentaion	• Kelp Farmers • Mariculture stakeholders • Consumers • Cordova Community Members • Food Processing Trainees • Coastal Alaska Communities	• Dedicated capacity to dry large quantities of kelp. • Optimized drying procedure based on data. • Reduced shipping costs to export products. • Options for scalability and long-term solutions • Business plan • Social license for kelp farming. • Developed workforce for kelp processing	• Farmers grow more kelp • Dried seaweed product development • Increased access to seaweed products and exports of dried products. • Long-term solution for drying capacity.	• Economic diversity (More community members join mariculture industry and generate income) • Food security (PWS has access to seaweed products)

Community Cook Demo Survey

Please rate your agreement with the following, from 1 to 10, with 10 being the best.

Seaweeds taste good.

1	2	3	4	5	6	7	8	9	10

I am likely to use seaweed in my home cooking.

1	2	3	4	5	6	7	8	9	10

Seaweeds could be popular in Alaskan cooking.

1	2	3	4	5	6	7	8	9	10

I am typically open to new foods.

1	2	3	4	5	6	7	8	9	10

I am an experienced cook.

1	2	3	4	5	6	7	8	9	10

What is your profession?

How long have you lived in Alaska (years)?

Other comments:

Social License to Operate Survey Form

The purpose of this survey is to measure community perception of mariculture. Your answer is valuable even if you do not know a lot about the mariculture industry. Please rate your agreement with the following, from 1 to 10, with 10 being the best.
DK = “don’t know”

1. The mariculture industry will benefit community members.

1	2	3	4	5	6	7	8	9	10	DK

2. The mariculture industry will benefit the PWS ecosystem.

1	2	3	4	5	6	7	8	9	10	DK

3. Mariculture industry stakeholders do what they say they will do.

1	2	3	4	5	6	7	8	9	10	DK

4. Mariculture stakeholders are listening to community members.

1	2	3	4	5	6	7	8	9	10	DK

5. The mariculture industry respects the people/citizen’s way of life.

1	2	3	4	5	6	7	8	9	10	DK

6. Community members are involved in decision-making for the mariculture industry.

1	2	3	4	5	6	7	8	9	10	DK

7. The mariculture industry treats community members and stakeholders equally/fairly.

1	2	3	4	5	6	7	8	9	10	DK

8. I approve of the mariculture industry operating in PWS.

1	2	3	4	5	6	7	8	9	10	DK

9 I approve of adding capacity for drying seaweed in Cordova.

1	2	3	4	5	6	7	8	9	10	DK

Where do you live?

What is your profession?

How long have you lived in Alaska (years)?

Other comments:

Workshop Survey Form

Please rate your agreement with the following, from 1 to 10, with 10 being the best.

1. The content was clear and improved my understanding of kelp farming.

1	2	3	4	5	6	7	8	9	10

2. The speakers had adequate expertise.

1	2	3	4	5	6	7	8	9	10

3. I am better prepared to join the seaweed industry.

1	2	3	4	5	6	7	8	9	10

4. How would you rate this workshop overall?

1	2	3	4	5	6	7	8	9	10

Where do you live?

Why did you join the workshop?

Were any topics not covered enough?

Did you have enough opportunity to express your concerns/interests in kelp farming?

ROYAL OCEAN KELP CO.

April 6, 2023

U.S. Environmental Protection Agency
Office of Environmental Justice and External Civil Rights
1200 Pennsylvania Avenue NW
Washington, DC 20004

To whom it may concern,

As the owner's of the Royal Ocean Kelp Co. we are writing to support the project "Drying seaweed using waste heat: a proof of concept to build community resilience for food security and economic diversity in PWS, AK" under the Environmental Justice Collaborative Problem Solving Cooperative Agreement Program.

Cordova, Alaska is a rural, coastal community located on the eastern edge of Prince William Sound (PWS). Cordova has a rich commercial fishing history with hardy people that rely on the sea for a living. The warming of the North Pacific and our inland rivers and lakes appears to be having a negative impact on salmon stocks. The salmon fishery has been the main economic driver in this region for over a century. Kelp farming is one way we are building climate resilience and food security. PWS has proven to be nearly perfect environment for growing kelp and shellfish.

The challenge has been developing the infrastructure and transportation methods to process the kelp and deliver it to markets outside of Alaska. Shipping fresh or frozen kelp that is 90% water is not economically viable. The stakeholders in PWS have determined the need for an energy-efficient way to dry the kelp for long-term preservation. We fully support this project idea to use excess heat from our local diesel power plant to dry kelp. We plan to participate fully in all aspects of this project from initial set-up to supplying raw kelp, hanging and drying, and stakeholder/community meetings to assess the progress.

Thank you for your consideration of this important project to help our community build resilience and provide economic viability to this emerging industry.

Sincerely,

Thea Thomas and Cale Herschleb
Royal Ocean Kelp Co.

April 2nd, 2023

U.S. Environmental Protection Agency
Office of Environmental Justice and External Civil Rights
1200 Pennsylvania Avenue NW
Washington, DC 20004

To whom it may concern,

Noble Ocean Farms is writing to support the project, "Drying seaweed using waste heat: a proof of concept to build community resilience for food security and economic diversity in PWS, AK" for the Environmental Justice Collaborative Problem Solving Cooperative Agreement Program. Our community of Cordova, Alaska is an isolated, rural, coastal town consisting of Alaska Native People and a mixture of settlers. Since the late 1800's, our community has been majorly reliant on commercial fishing for income and food security.

Now the fisheries are dwindling (largely due to climate change) and Cordova is in a precarious environmental and economic situation. There are currently no commercially-grown vegetables (on land) in Cordova, which leads to all produce being shipped in by barge or plane. Vegetables and fruits are often already damaged and have lost nutrients by the time they arrive. Transportation delays during COVID opened our eyes to the critical need to bolster our local food system.

Kelp farming is one way we are building climate resilience and food security. In the last two years, Noble Ocean Farms became one of the three commercial kelp farms growing highly-nutritious sea vegetables in local bays and distributing them to the community in April and May. The community support has been outstanding, and people are excited to have access to a new healthy food source – grown right in their home waters. Kelp also alleviates local ocean acidification, helping buffer the impacts of climate change for marine organisms like fish and shellfish.

The challenge is that we need an energy-efficient way to dry the kelp for long-term preservation. This idea, to use excess heat from the Cordova Electric Cooperative Orca Power Plant, is genius. We will participate by:

- Assisting with the set-up and installment of the temporary drying structure at Orca Power Plant,
- Using 1,000 lb. of our wet weight kelp crop each year from 2024-2026 to determine drying times and heating needs to reach below 0.85 water activity level,
- Co-hosting regular stakeholder meetings to assess processing needs in Cordova,
- Co-planning and co-hosting community events to assess and build community interest in processing and consuming seaweed, including teaching people how to cook with our dried kelp,
- Assisting in evaluating local prospects for moving the temporary structure off site of the Orca Power Plant, and
- Training current and prospective kelp farmers about kelp processing.

Thank you for your consideration of this important project to help our community build resilience climate resilience and combat food insecurity.

Sincerely,

Skye Steritz & Sean Den Adel

Appendix A

EPA Administrative Capability Questionnaire

The Environmental Protection Agency (EPA) uses the standards set forth in the Code of Federal Regulations, Title 2, Parts 200 and 1500, "Uniform Administrative Requirements, Cost Principles and Audit Requirements for Federal Awards" to assess the adequacy of administrative management systems. These regulations can be found by searching the Electronic Code of Federal Regulations by Title and Part at: http://www.ecfr.gov/.

If your organization is being recommended for an EPA grant, and your organizational policies and procedures do not fully cover the areas outlined in the questionnaire, revised or new policies may be necessary to comply with Federal financial management standards.

PART I - GENERAL

1.	**Legal Name of the Organization**	Southern Oregon Forest Restoration Collaborative
2.	**Other Organizational Names or Acronyms Used**	SOFRC
2a	**Please Identify any affiliated organizations**	
3.	**Unique Entity Identifier (aka Dun and Bradstreet (D&B) Data Universal Numbering System (DUNS)) Number**	013435751
4.	**Is your accounting system accrual based or cash based?**	accrual
5.	**Is your accounting system manual, automated or combination?**	combination
6.	**Has an audit been performed on the organization's financial statement?**	no
7.	**What was the audit opinion?**	n/a
8.	**If the organization has expended more than $750,000 in federal grant funds within a year, has an Single audit been performed?**	n/a
9.	**If yes, were there any major findings?**	n/a
10.	**Does the organization have an approved indirect cost rate with the Federal government?**	in process
11.	**Has the organization filed any certification/questionnaire regarding its financial managements systems to other Federal agencies? If yes, please list and provide a copy.**	no

PART II - ADMINISTRATIVE CAPABILITY

	Instructions: Check the appropriate box to the right for each item. If your organization has written policies/procedures that meet the requirement, check the box under the AYes@column. If your organization does not have written policies/procedures that meet the requirement described under this column, check (/) the box under the ANo@column and explain in the box or in an attachment. Please provide EPA a copy (electronic is preferable) of the following items: 1) Most recent audit of financial statements and management letter, 2) procurement and property policies, 3) personnel policies and 4) travel policy. EPA will evaluate your responses against these items.	**Yes**	**No (explain)**
STANDARDS FOR FINANCIAL MANAGEMENT SYSTEMS		X	
1.	Does your accounting and financial management system(s) follow Generally Accepted Accounting Principles? (2 CFR 200.403)	X	
2.	Is your financial management system(s) able to relate financial data to performance data and develop unit cost information? (2 CFR 200.301)	X	
3.	Can your financial management system(s) provide accurate, current and complete disclosure of the financial results of each federally-sponsored project or program in accordance with the financial reporting requirements (2 CFR 200.327? These are the Financial Status Report and Report of Federal Cash Transactions. (2 CFR 200.302(b)(2))	X	
4.	Can your financial management system(s) provide records that adequately identify the source and application of funds for federally-sponsored activities? Information to be included is: authorizations, obligations, unliquidated obligations, assets, outlays, income and interest. (2 CFR 200.302(b)(3))	X	
5.	Does your financial management system(s) provide for effective control over and accountability for all funds, property and other assets, including ensuring that all such assets are used solely for authorized purposes? (2 CFR 200.302(b)(4))	X	
6.	Can your financial management system(s) provide for a comparison of outlays with budget amounts for each award, including, where appropriate, information related to performance and unit cost? (2 CFR 200.302(b)(5))	X	
7.	Does your financial management system(s) provide written procedures to minimize the time elapsing between the transfer of funds to the recipient from the U.S. Treasury and the issuance or redemption of checks, warrants or payments by other means for the purposes of the program? (2 CFR 200.302(b)(6))	n/a	
8.	Does your financial management system(s) provide written procedures for determining the reasonableness, allocability and allowability of costs in accordance with 2 CFR 200.302(b)(7)?	X	
9.	Does your financial management system(s) provide accounting records which include cost accounting records supported by source documentation? (2 CFR 200.302(b)(3))	X	
10.	If applicable, does your financial management system(s) provide procedures for conducting an audit in accordance with 2 CFR 200 Subpart F? Currently, single audits are required for recipients expending $750,000 or more in federal funds during the fiscal year. (2 CFR 200.501)	N/A	
11.	Does your financial management system(s) provide or describe existing or planned indirect cost rates? C(2 CFR 200 Subpart E)	X	
PROPERTY AND PROCUREMENT STANDARDS			

ED_016126_00000638-00002

	Instructions: Check the appropriate box to the right for each item. If your organization has written policies/procedures that meet the requirement, check the box under the AYes@column. If your organization does not have written policies/procedures that meet the requirement described under this column, check (/) the box under the ANo@column and explain in the box or in an attachment. Please provide EPA a copy (electronic is preferable) of the following items: 1) Most recent audit of financial statements and management letter, 2) procurement and property policies, 3) personnel policies and 4) travel policy. EPA will evaluate your responses against these items.	**Yes**	**No (explain)**
1.	Does your property management system(s) provide for maintaining: (1) a description of the equipment; (2) an identification number; (3) source of the property, including the award number; (4) where title vests; (5) acquisition date; (6) federal share of property cost; (7) location and condition of the property; (8) acquisition cost; (9) ultimate disposition information? (2 CFR 200.313(d)(1))		/no property
2.	Does your property management system(s) provide for a physical inventory and reconciliation of property at least every two years? (2 CFR 200.313(d)(2))		/no property
3.	Does your property management system(s) provide controls to insure safeguards against loss, damage or theft of the property? (2 CFR 200.313(d)(3))		/no property
4.	Does your property management system(s) provide for adequate maintenance of the property? (2 CFR 200.313(d)(4))		/no property
5.	Does your organization maintain written procurement procedures which (1) avoid unnecessary purchases; (2) provide an analysis of lease and purchase alternatives; and (3) provide a process for soliciting goods and services? (2 CFR 200.318)	X	
6.	Does your procurement system provide for the conduct and documentation of cost or price analysis for each procurement action? (2 CFR 200.318))	X	
7.	Does your organization maintain written standards of conduct governing the performance of your employees engaged in the award and administration of contract (i.e., conflict of interest) and does it provide for disciplinary actions? (2 CFR 200.318(c)(1) and (c)(2)) **PERSONNEL AND TRAVEL**	X	
1.	Does your organization maintain a personnel system(s) which provides monthly reports on the activities of each employee whose compensation is charged to the assistance agreement? (2 CFR 200.430)	X	
2.	Does your organization maintain a standard travel policy? (2 CFR 200.474)	X	

PART III - CERTIFICATION AND SUBMISSION

CERTIFICATION OF APPLICANT'S AUTHORIZED REPRESENTATIVE (REQUIRED):

I certify that the statements I have made on this form and all attachments thereto are true, accurate and complete. I acknowledge that any knowingly false or misleading statement may be punishable by fine or imprisonment or both under applicable law.

Name Terry Fairbanks
Title Executive Director
Signature 
Date April 11, 2023

SUBMISSION INSTRUCTIONS:

Submit questionnaire with documentation at least 60 days prior to your proposed project start date to [EPA EMAIL ADDRESS]. If you do not have internet access, mail the questionnaire and supporting documentation to the following address:

US Environmental Protection Agency (EPA)
[MAILING ADDRESS]
Attn: [NAME OF CONTACT]

If the signed document is submitted by email, it must be submitted in a computer file format, such as Portable Document Format (PDF) developed by Adobe Systems, Inc., that allows authors to exchange documents among different computer systems, while preserving the documents' typography and page layout.

The public reporting and recordkeeping burden for this collection of information is estimated to average 4 hours per response. Send comments on the Agency's need for this information, the accuracy of the provided burden estimates, and any suggested methods for minimizing respondent burden, including through the use of automated collection techniques to the Director, Collection Strategies Division, U.S. Environmental Protection Agency (2822T), 1200 Pennsylvania Ave., NW, Washington, D.C. 20460. Include the OMB control number in any correspondence. Do not send the completed form to this address.

Wildfire Resilience Education for All

Fire and Cultural Edcuation

- Wildfire and smoke vulnerability assessment
- Identify education gaps and serve most vulnerable first while planning for *all*

- Community led education for cultural use of fire
- Students and teachers have access to learning materials and training
- Fire essential questions are standardized across SW Oregon
- Access is supported with yearly funding

Workforce Development

- Labor needs assessment for natural resources employers
- Subsidized positions – RWP programs

Career ladder middle school

- Paid internships - Internship placement with agencies and contractors.
- Youth Training Programs 16 to 24
- Pathways to Lomakatsi youth programs & Project Youth+
- Student leadership roles – community
- Student led organizations through CTE school programs

Community College – Concurrent Enrollment

High School Wildfire Curriculum for Career Pathways and Community Resiliency

- CTE components
- Field heavy curriculum
- Integration of field professional mentors
- Firewise related community resiliency components
- Leadership opportunities
- Pilot completed: 5 high schools in Southern Oregon
- 5 Teacher Trainings completed – 3 hands-on and 2 virtual – 1 regional and 4 statewide
- Over 175 student service hours logged for fuels reduction work in the Rogue Basin and community resiliency outreach.

Curriculum & Programs

- Place-based for classroom and outdoor school
- STEAM and Education Standards
- Open Source USFS FireWorks! Curriculum
- Serves vulnerable populations fire & smoke
- Community education for smoke & wildfire resilience
- Fire safety & prevention (State Fire Marshall)
- ScienceWorks, Children's Museum, library programs, etc.

SOFEE

SOUTHERN OREGON FIRE ECOLOGY EDUCATION

Shared Values

- Wildfire Ecology Education for *All*
- Social issues related to wildfire
- Indigenous Traditional Ecological Knowledge (ITEK)
- Trauma Informed Approach (TIA)
- Aligned to Oregon Department of Education standards
- Reach under-served populations
- Community and student led learning

FIREBRIGHT LEARN·WORK·LEAD

Collaborators/Partners

- AFR – lead
- BLM
- USFS
- SOESD
- Lomakatsi
- SOFRC
- OSU Ext.
- TNC
- ScienceWorks
- RV Fire Prevention
- SOLC
- Etc.

Funded by BLM and USFS

Goals – Works-in-Progress

- Full pilot of curriculum
- Regular teacher trainings
- Curriculum revisions
- Accessibility – 508 Compliance
- Post electronically and share
- Deliver trunks and plan checkout process
- Share with partners and train practitioners

Shared Goals and Vision

- DEI
- Expand ITEK components
- Link to RVIFP
- Formalize MOU for higher level of collaboration
- Plan for yearly teacher trainings
- Develop and fund sustainable fire education and training programs for students
- Fire essential questions and concepts in a learning continuum
- Community education and service projects

Goals

- Integrate FireBright into multiple high school CTE programs
  - Develop fire school component
- Develop paid internship positions/pathways
- Develop sustainable student-led community service projects and leadership roles

Partners

- ODF
- OSU Ext
- SOFRC
- OFRI
- KOG

In-kind contributing partners

- BLM
- USFS
- Private contractors
- Lomakatsi

Current funder - USDA

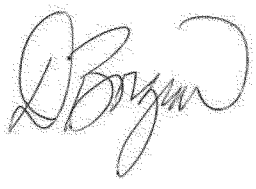
The Nature Conservancy
Protecting nature. Preserving life.™

14 April, 2023



Dear EPA Decision-Makers,

I offer The Nature Conservancy's support of the Southern Oregon Forest Restoration Collaborative (SOFRC) grant proposal to the Environmental Protection Agency Region 10 to advance collaborative planning for wildfire resilience education for K-12 students, including those from underserved and vulnerable populations.

SOFRC's goal for the grant is that students in Southern Oregon understand fire ecology and community wildfire resilience so that they can choose to become stewards of a healthy forest and make informed decisions during a wildfire or smoke emergency. SOFRC is coordinating with regional education partners and land management organizations to collaborate on implementing two curricula: FireBright for youths oriented toward career paths, and the Southern Oregon Forest & Fire Ecology curriculum for general K-12 students. The combination of youth workforce training and generally more knowledgeable students in the Rogue Valley will facilitate informed community engagement and collaboration with to achieve the Fire-Adapted Communities pillar of the National Cohesive Wildfire Strategy*: Human populations and infrastructure can withstand a wildfire without loss of life and property.*

The Nature Conservancy, through its Fire Learning Network with federal funding under a cooperative agreement, *Promoting Ecosystem Resilience and Fire Adapted Communities Together* (PERFACT), has previously extended support to local partners in the earlier development of an indigenous lesson for fire ecology curriculum. In support of this grant, The Nature Conservancy commits to reviewing key parts of the refined curricula and potentially visiting classrooms or field trips to help students and their teachers gain exposure to real world collaborative restoration of resilient forests and restoration of beneficial fire that works for people and nature. Please feel free to contact me if you have any questions at dborgias@tnc.org.

Sincerely,

Darren Borgias

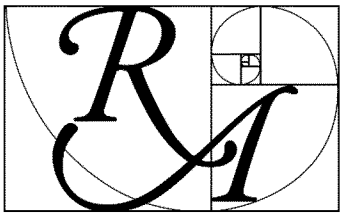
SW Oregon Forest Conservation Director

April 6, 2023

Dear EPA Decision-Makers –

I am writing in support of a grant by Southern Oregon Forest Restoration Collaborative (SOFRC) with Environmental Protection Agency Region 10(EPA) to advance collaborative planning for wildfire resilience education for all student populations and learners including underserved and vulnerable populations.

Over the course of this 22-23 school year my students have participated in the SOFRC, ODF and OSU Ext. led FireBright Career and Technical Education (CTE) program for wildfire education. Most of my students reside in underserved, fire-prone areas, such as Gold Hill and the wildland urban interface of Central Point, Oregon. Not only has the FireBright program provided my students with career mentoring and field work experience, it has also prepared them to be more adapted and prepared for wildfire and smoke. The Crater Renaissance Academy (CRA) Natural Resources CTE program is aligned with the FireBright program and components of the SOFEE curriculum. My students will benefit from an expansion of the FireBright career pathways and community resliency components. The coordination and support that SOFRC and partners provide are critical to providing wildfire education for my students.



As a CTE natural resources educator, I share the FireBright and SOFEE goals to have students in Southern Oregon supported by fire ecology, wildfire resilience and forestry education and develop their knowledge, skills, and confidence so they can be stewards of a healthy forest and make good decisions during a wildfire or smoke emergency. My students are the potential leaders who will actively participate in future decisions that will shape the economic, social, and ecological outcomes from science-based management of Southern Oregon's forest ecosystems.

I currently have students who recently went through both home loss and evacuation during the Oregon 2020 Fire Storm where locally, the Almeda and South Obenchain Fires burned 2900 homes, as well as the Campfire in Paradise, CA. The FireBright trauma informed approach to wildfire education has helped those students to recover and build resiliency around those traumatic losses. It has empowered them to see themselves as agents of positive change for wildfire adapted communities.

Thank you for your consideration of the SOFRC environmental justice proposal. I am committed to continuing to work with SOFRC and partners to extend the education and career opportunities available through FireBright for my students.

Sincerely,

Caroline Burdick Rihan
Science Teacher
Crater Renaissance Academy
Caroline.burdick@district6.org

EJCPS Logic Model – Southern Oregon Wildfire Resilience Education for *All*

Resource Inputs	**Activities**	**Outputs**	**Audience**	**Short-term Outcomes** (6-12 months)	**Intermediate Outcomes** (12-24 months)	**Long-term Outcomes** (2 years)
• BLM and USFS staff time and resources • SOFRC coordination for education community • Oregon State University Extension Services fire program and outdoor education teacher training and resources • Oregon Natural Resources Education Program expertise in education models, planning and resources for teacher training • Lomakatsi participation in youth training and employment, student education, Indigenous Traditional Ecological Knowledge planning • City of Ashland staff time for smoke education and outreach • Oregon Department of Forestry assistance with FireBright youth training, consultation for Firewise projects and funding for implementation of education and outreach activities • Southwest Oregon Nature Conservancy reviews curriculum and fund education project that support outcomes Fire Adapted Communities Network	• FireWorks Train-the-Trainers Workshop held at the Medford Interagency Offices of the USFS and BLM • Wildfire education coordinator and Education Director are hired for student pilots, teacher trainings and programmatic work • ScienceWorks presents fire basic, fire prevention and fire safety education for rural students and underserved schools • Five science trunks with k-12th grade wildfire curriculum and support materials are shared in classrooms for Southern Oregon through a checkout process for use by classroom teachers, outdoor schools and non-formal educators • Lomakatsi Restoration Project leads Indigenous Traditional Ecological Knowledge (ITEK) student learning activities • Diversity, equity, and inclusion planning is organized through monthly meetings for shared values, outcomes, and goals with organizing partners	• School districts use the curriculum and check out trunk materials • K-12 Students demonstrate knowledge of fire prevention, fire safety, fire basics, fire ecology and fire use for landscape restoration. • High school students and youth are supported with coordination of non-formal and formal educator workshops • Trauma Informed curriculum that integrates the cultural use of fire, diversity equity and inclusion is published and shared broadly	• Formal educators in local schools • Local agencies and non-profits • K-12th grade students • Youth 18-24 • Local community members • Students who were evacuated and have experienced home loss from wildfire • Rural Student populations • Second-language learners • High school students in underserved communities	• Partners will lead class and field presentations for SOFEE and Fire Bright • Wildfire education website is updated for curriculum access and booking presentations and field activities • City of Ashland coordinates work for smoke adaptations and student curriculum • Education community provides input and advocacy for local wildfire and smoke planning and trauma-informed support of student learning	• Fire Bright students lead and develop fire-adapted communities' actions including Service-learning projects in local forests, Community outreach and education for events, Facilitate Firewise planning for schools • Career and Technical Education (CTE) teaching options for educators. • Non-formal educators at the BLM, USFS and ODF add SOFEE and Fire Bright curriculum into their yearly outreach and education programs • Rural youth receive career & technical education which supports their job readiness, fulfilling Oregon wildfire and forestry capacity needs	• Communities include wildfire resilience education for Community Wildfire Protection Plans • Sustainable funding is available for wildfire resilience education • Indigenous communities relate their stories, cultural use of fire and Traditional Ecological Knowledge(TEK), including indigenous burning practitioners. • Formal and non-formal educators attend yearly workshops for wildfire resilience education program for k-12th grade and 18-24 youth • Youth lead community education each spring for wildfire • Diversity, equity and inclusion planning and advocacy for including actionable outcomes are included for vulnerable populations in CWPP plans • Wildfire Resilience Education Programs (WREP) is regionally adapted and modified for students and youth across Oregon

ScienceWorks
HANDS-ON MUSEUM

April 10, 2023

Dear EPA Decision-Makers –

ScienceWorks Hands-on Museum is an interactive science museum located in Ashland, Oregon, serving visitors of all ages throughout Southern Oregon and Northern California. Founded in 2002 as a private response to a crisis in public science education, ScienceWorks is committed to inspiring wonder and stimulating creative exploration through fun interactive science. Since opening in 2002, ScienceWorks has served nearly one million visitors and 100,000 K-12 students throughout Southern Oregon and Northern California, with 2,000 member households across the region. We are a thriving non-profit organization committed to serving on a collaborative wildfire education planning committee so that we can help in developing a diversity, equity and inclusion plan that will help serve all students in the Rogue Valley.

ScienceWorks has been participating in curriculum development, teacher training and development of a comprehensive wildfire education program for the past three years with partners as part of Southern Oregon Fire Ecology Education. Recently, the Rogue Valley Fire Prevention Cooperative has teamed up with ScienceWorks to provide fire prevention and safety lessons for 350 students this year. We are laying the groundwork for yearly spring wildfire education opportunities and hands-on fire science.

As part of the EPA Grant ScienceWorks will:

- Provide support for diversity, equity and inclusion planning
- Teacher trainings and student pilot of lessons
- Hands on science activities for rural and underserved communities around Southern Oregon

We need collaborative wildfire education planning so that ScienceWorks can identify and reach students and youth in communities who need additional fire education resources and training. Our mission is to inspire curiosity and wonder through scientific exploration and interactive experiences and our vision is to be a launchpad for the next generation of creative thinkers and problem solvers. One of the greatest challenges our community faces is wildfire and, we want to help students be more adapted by facilitating the learning of fire basics, fire safety and prevention in a sustainably funded education program that is here for students in a changing climate with higher fire risk now, and for many decades.'

Sincerely,

Melissa Donner

Melissa Donner, Education Manager, ScienceWorks Hands-On Museum

Areas affected by Project:

Counties: Jackson, Josephine, Curry

Cities: Medford, Ashland, Grants, Pass, Cave Junction, Central Point, Talent, Phoenix, Trail, Shady Cove, Butte Falls, O'Brien, Ruch, Takelma, Merlin, Gold Beach, Brookings, Jacksonville, Murphy, New Hope,

State: Oregon

EPA The Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program – Region 10

Budget Narrative SOFRC

	Description	Total
Personnel	Education Coordinator: This position will provide the oversite and coordination needed for the Southern Oregon Fire Ecology Education and Fire Bright activities and planning with local and regional partners. In addition, the specialist will coordinate the distribution of resources to underserved students and communities. Hiring an education coordinator will increase the capacity of SOFRC to complete outreach and education services for the community as part of the Rogue Forest Partners. • $55,000 yearly salary for 24 months = $110,000 Education Director: Currently, an education director coordinates and co-develops the Fire Bright Program. The education director will continue coordinating Fire Bright Teacher Education, expand FireBright career pathways, and assist with the SOFEE teacher training and field trips. • $25,000 yearly salary for 24 months = $50,000	$160,000
Fringe Benefits	• Education Coordinator: Benefits for PPO, Workers compensation, healthcare and retirement = 25% *Salary = $27,500 • Education Director: Benefits for healthcare and retirement = 25% *Salary = $12,500	$ 40,000
Travel	Travel Costs for School and Youth Field Trips All travel will be for student transportation from rural and underserved urban locations in the project area. The Education Specialist will provide small grants to local school districts for field trips to ScienceWorks, local wildfire sites, places where controlled burning was completed and for youth and training activities. • $300 per field activity of 30 students FireBright and SOFEE plan to have 30 field trips each year for a transportation cost of $9,000/year. • $.58/mile for Education Specialist and Education and Coordinator to participate in 30 field trips per year for a total of 172 miles per trip per person for a total cost of $11,971	$29,971

Supplies	Supply items will support educational field work, service-learning activities, and teacher training. Supplies Needs Fire Ecology/Tree Measurement Equipment = $1,000 Personal Safety Equipment for Service Learning = $5,000 Teachers Training = $1,000 Printed Materials = $3,000	$10,000
Contractual	ScienceWorks student education $200 for each student fieldtrip to the museum for live fire science demonstration and museum visit. Up to 60 students can attend for each 4-hour block. $200 *150 classes = $30,000 City of Ashland Coordination of SOFEE education and smoke preparedness curriculum. $50/hour for 500 hours = $25,000 Lomakatsi Restoration Project for coordination of Indigenous Traditional Ecological Knowledge student education and youth training $50/hour for 500 hours = $25,000	$80,000
Indirect Costs	De Minimis rate of 10% on all billings	$31,997
Total		$351,968

Formatted: Indent: Left: 0"

1.0 PROGRAM OBJECTIVES

a. Project Summary

Southern Oregon Wildfire Resilience Education Program for *All*

Location: Southern Oregon Region including rural and urban communities in Jackson, Josephine, Klamath, Coos and Curry Counties

Contact Information: Terry Fairbanks@sofrc.org, Jennifer Payne, jpayne@sofrc.org, PO Box 1946, 525 Bigham Knoll Dr, Jacksonville, OR 97530

Applicant: Southern Oregon Forest Restoration Collaborative (SOFRC) engages with diverse constituencies on forest health and wildfire risk projects to support resilient landscapes, thriving communities and workforce development. As part of the mission for thriving communities, SOFRC is leading coordination of collaboratively developed k-12th grade wildfire education career and technical education (CTE) focused on underserved communities, Southern Oregon Wildfire Resilience Education (SOWREP). SOFRC supports local communities by developing opportunities for interns in natural resource technical careers. SOFRC provides a direct connection between the partner-supported wildfire CTE program and local workforce needs at land management agencies and private businesses.

Project Abstract: Collaboratively planned fire education for k-12th grade students and youth workforce training and development in Southern Oregon will facilitate greater coordination among organizing partners and achieve the mission set forth in the National Cohesive Wildfire Strategy for – *Fire-adapted communities: Human populations and infrastructure can withstand a wildfire without loss of life and property.* An extended network of formal and non-formal educators support students and youth to be fire-adapted citizens who: understand forest health, can prepare in advance of wildfire, make informed decisions through awareness and knowledge of forest and fire ecology, understand Indigenous Traditional Ecological Knowledge (ITEK), are familiar with fire science, fire behavior, and fire prevention. Coordination and implementation of wildfire education will provide a conduit for reaching student populations who are vulnerable to smoke and wildfire and facilitate a greater depth of diversity, equity and, inclusion for local wildfire planning and preparedness. Projects partners and the education community will facilitate actionable education outcomes and goals for student populations and youth for the Rogue Valley Integrated Fire Plan (RVIFP), as part of the Jackson County Community Response Plan for Smoke, Ashland Community Response Plan for Smoke (CRP), local community wildfire protection plans (CWPP)s and community forest planning. The target population for services are k-12th grade students in urban and rural communities and youth 18-24 who will have comprehensive wildfire resilience education that creates a pathway for careers in wildland fire and forestry. The geographic area ranks in the 86 percentiles for PM 2.5 particulate exposure when low-income, limited English speaking, less than high school education, unemployment, and low life expectancy populations are included for risk factors. The project area is in the extreme or high-risk categories for wildfire which requires more climate disaster planning and community wildfire resilience education for student and youth populations.

Two education programs will be integrated and supported with new funding for fire education in Southern Oregon.

1. Fire Bright - Wildfire Curriculum for Community Resiliency and Career Pathways was developed in 2020 to provide career & technical education (CTE) for 9th-12th grade students. The purpose of the project is to bolster existing Natural Resource Career Pathways and natural science programs in Oregon, and to develop and expand the curriculum to high schools in high fire-risk rural

communities. The Fire Bright program can provide capacity for implementation of landscape-scale forest restoration projects and wildfire response.

2. Southern Oregon Fire Ecology Education (SOFEE) is a network of regional formal and informal educators who are developing teacher training, student materials and k-12th grade curriculum for a comprehensive science-based fire education program. SOFEE is adapted from the USFS FireWorks curriculum to represent Southern Oregon ecology. SOFEE provides the foundation for students to understand wildfire preparedness, and safety in a wildfire or smoke emergency. It fosters lifelong participation in climate resilience by fostering their role in forest health and stewardship.

Coordination for Community Wildfire Resilience Education

EPA funding is needed to hire a *Wildfire Education Coordinator* who will organize fire education for k-12th grade students in Southern Oregon using existing networks and curriculum programs. Fire professionals and partner organizations will have a coordinator who can carry forward integrated fire education goals and liaison directly with the community and educators.

The SOFRC *Education Director* will expand the FireBright community leadership and career pathways components and support the education coordinator in teacher training and organizing grant deliverables and outcomes.

Partners participating in both FireBright and SOFEE have specific roles outlined for facilitating the near-term and long-term outcomes as part of a cohesive collaborative partnership, SOWREP.

Actionable Results for Student and Youth Education

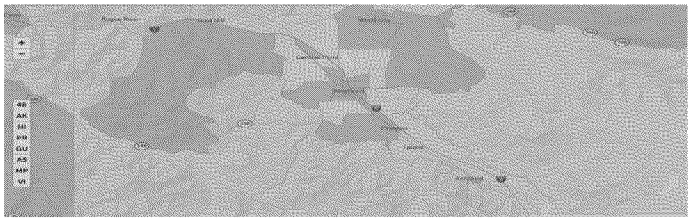
With new EPA funding, the RVIFP and other regional community plans for smoke and wildfire will include FireBright and SOFEE education. Students, the community and organizing partners will use the FEMA RAPT planning, resilience mapping, the climate portal, the EPA Environmental Justice Screen (EJ Screen) and the Environmental Justice Collaborative Problem-Solving (EJCPS) model for planning and implementing the long-term and short-term outcomes and goals for reaching students and youth with wildfire resilience education and integration of vulnerable populations and mitigation actions for local Community Wildfire Protection Plans(CWPP). Local communities have received Community Wildfire Defense Grants (CWDG) for updating local CWPPs in communities. Organizing partners will work with local decision-makers, including the City of Ashland, to include wildfire resilience education for students and youth with actionable goals and outcomes. Data will be collected on vulnerable populations served.

Project Type: Education and Training

Special Considerations: Rural areas

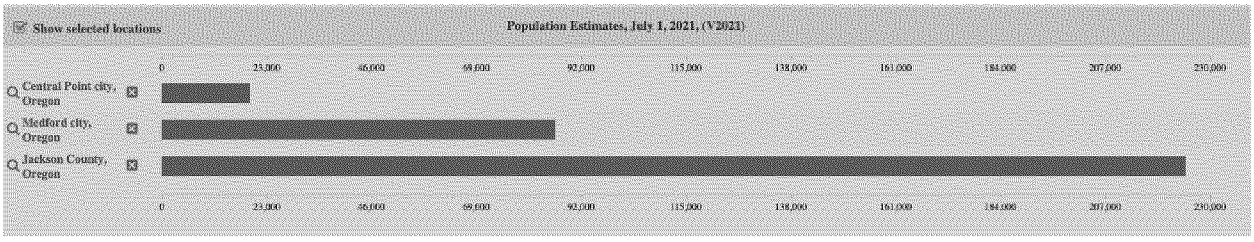
Environmental Issue: Wildfire and Smoke

Project Partners for SOWREP: Federal agencies - U.S. Forest Service and Bureau of Land Management, local state agencies with Oregon State University Extension, Southwest District of the Oregon Department of Forestry, non-profit organizations Lomakatsi Restoration Project, The Nature Conservancy, Rogue Valley Workforce Partnership and state education organizations Oregon Natural Resources Education Program, Keep Oregon Green, Oregon Forest Resources Institute, local education organizations, Southern Oregon Educational Services District, Crater Renaissance High School, Medford School District, ScienceWorks and local government City of Ashland.



b. Environmental and Public Health of the Underserved Community

Demographics and Local Background:



During the Almeda and South Obenchain Wildfires, 2900 structures were destroyed. Local students and youth were evacuated and experienced home loss. These environmental stressors have impacted community mental health. One Jackson County organization that represents seasonal workers estimated that the Almeda fire displaced at least 3,000 residents. The Phoenix-Talent School District had a staggering 40% of its students -- about 1,000 kids -- lose their homes in the Almeda Fire and many are now scattered across the region. Among the hardest hit by the Almeda Fire was the Latino community, at 14% of Jackson County. Some of the most affordable low-income housing was destroyed, displacing families who had lived in the close-knit housing communities for decades.

Geography of Southern Oregon and Key Sites:

The geography of Southern Oregon consists of a large central city, Medford, and smaller surrounding cities held within a basin of mountains. Southern Oregon has a dry desert like climate and severe wildfire risk. Many communities are considered disadvantaged in Southern Oregon based on a wide range of criteria from low income to high fire risk. For the scope of this proposal, we have focused on the communities surrounding the schools FireBright and SOFEE serve: Rogue River, Medford, Applegate, Central Point, Phoenix, and Gold Hill. The figure below shows disadvantaged areas highlighted in blue, and encompassing Gold Hill, Central Point, Medford, and Phoenix. Exceptions to the disadvantaged areas surrounding our schools on this map are Rogue River, and Applegate; however, we assert that these areas are underserved rural communities at risk of being impacted by wildfire. (Map produced using Climate and Economic Justice screening tool, version 1/22/22.)

The following data, from census.gov, shows the Census Population from July, 2021. Smaller areas with a limited population, like Gold Hill, Rogue River, Applegate, and Phoenix, did not show up on the census data. Medford showed up on the 2022 census data, thus the use of 2021's analysis. Of the data accessible on the census website, only Medford is not considered rural based on a population size of 86,000. Other areas served, such as Central Point have a population of 19,000 and are rural.

Additionally, Medford has the core services that many people require including big box stores, the best medical care, and businesses that are not locally available. According to rural.gov, an area is considered rural if there is limited access to economic development, professional services, financial resources and or historic lack of investment. Most of the communities surrounding SOWREP served schools are

located in rural Southern Oregon and have limitations that can be exacerbated by wildfire. For example, not having transportation is riskier when there is a necessary evacuation and homes are near surrounding forests. Even the closest areas, Central Point and Phoenix, which are 10-minute drive to Medford, require at least a half an hour bus ride to access Medford.

Wildfire Risk for the Population Served

The land mass across the five counties served is 14,375 square miles and each community ranges from the 80th to over 90th percentile for risk of significant loss from wildfire. Of the approximated population of 460,548, around 138,164 people are between the ages of 5 and 24 who will be the target audience of the Fire Bright and SOFEE wildfire resilience education.

Increased Risk from Wildfire Smoke

The national standard for annual $PM_{2.5}$ levels is **12.0µg/m^3**. When $PM_{2.5}$ levels are above 12, this means that air quality is more likely to affect your health. Each of the counties in the project area have PM 2.5 levels above the national ambient air quality standards due to the ongoing wildfire smoke emergency. Adult Oregonians suffer asthma rates of 10.6% whereas the rest of the nation is at 7%. Smoke education in the SOFEE curriculum can help provide health research translation and best practices for students, youth and educators. The City of Ashland through the Smokewise Ashland collaborative can provide smoke education resources for the wildfire resilience education.

Our Approach to Supporting our Community:

Two educator training courses have used the Trauma Informed toolkit for 40 teachers. Many more trainings are needed for serving students and youth. A measure of success will be the number of educators who have had trauma-informed training who can meet the social-emotional needs of students and youth directly impacted by wildfire. Students in the FireBright program learn the science of how the brain processes traumatic experiences which gives them the tools to understand their own reactions during an emergency, as well as prepares them for leadership roles around wildfire resiliency within their communities. The wildfire resilience education model will be one that will help communities recover after wildfire and be more prepared during wildfire. Students impacted by the Almeda Fire in Phoenix and Talent as well as students in Butte Falls who were impacted by the South Obenchain Fire are prioritized for student pilots of curriculum.

Long-term Resilience:

Southern Oregon Fire Ecology Education (SOFEE) has adapted and created a new fire ecology education curriculum and materials to guide vulnerable populations in the Wildland Urban Interface (WUI). The hope for SOFEE is to educate on how disturbance ecology through fire can be and has been a valuable tool for forest health and fire resiliency. In addition, the SOFEE project aims to use resources through partner narratives and education to empower the next generations on Firewise practices and how to identify defensible space in a variety of landscapes and home dwellings. There is a statewide need for fire ecology education integration on the district level. An effective way to educate landowners on disturbance ecology and fire mitigation is through the next generation of learners who are in active learning environments. SOFEE aligns with the National Cohesive Wildfire Strategy for – Fire-adapted communities: Human populations and infrastructure can withstand a wildfire without loss of life and property. The funding from the EPA region 10 grant would bolster the ongoing work of a collaborative effort of organizations, many of which have volunteered countless hours into seeing this

project through to completion through trainings, site education, and coordination. Education continues to prove to be an effective coping mechanism for families and people managing social, economic, and emotional trauma after fire, specifically the highly impacted and still trauma resonating Almeda fire in 2020 in Southern Oregon towns. The goal is to have a resource for students to learn about fire as a disturbance mechanism for landscape health to initiate pathways into fire careers and be prepared for wildfire emergencies and smoke effects during active burns and wildfire season. SOFEE's and FireBright's learning objectives will meet the education goals outlined in the Rogue Valley Integrated Fire Plan and the funding will broaden the partnerships reach to enable educational opportunities for every student in the Rogue Valley.

c. Organization's Historical Connection to Underserved Community

Under the USDA Landscape Scale Resiliency grant, SOFRC has collaborated with FireBright project partners over the past four years to build relationships with teachers and schools that serve rural, underserved, vulnerable communities. Working with students at Rogue River High School, Crater Renaissance Academy, Central Medford High School, and Phoenix High School, SOFRC has provided wildfire resiliency education and natural resources career training opportunities. SOFRC has co-coordinated student service work in students' communities for defensible space, and student-led community engagement for wildfire resiliency. With SOFRC support, FireBright students have performed thinning work at Elderberry Flats and Butte Falls Community Forest; defensible space work in Firewise communities of South Medford and Gold Hill; and wildfire resiliency community engagement/outreach in Medford, and for Central Point 8th grade and Ruch School 4th grade families.

FireBright students choose their target audience and outreach media for a final project, Protecting Your Community from Wildfire, and create outreach products with support from FireBright partners.

SOFRC connects FireBright students to natural resource paid training opportunities with Lomakatsi.

Demographics for schools served by FireBright project. Data provided by school districts served.

Schools served by FireBright project	% Minority Enrollment	% Free/Reduced Lunch Recipients	Statewide school ranking	Risk level for wildfire
Phoenix High School, Phoenix, Oregon	56%	56%	Ranks in top 20	80th to 90th % for risk for significant loss from wildfire. 40% of students lost homes in Almeda Fire, 2020
Crater Renaissance Academy – Serves students from rural Gold Hill and Central Point	30%	68.9%	156th	80th to 90th percentile for risk for significant loss from wildfire.
Central Medford High School – Alternative high school for Medford School District	36%	76.7%	233rd	80th to 90th % for risk for significant loss from wildfire. Student population impacted by Almeda Fire, 2020.
Rogue River High School – Serves rural Rogue River	18.7%	66%	172nd	80th to 90th % for risk for significant loss from wildfire.

The SOFEE curriculum has been piloted in Ruch Outdoor Community School:

Schools served by SOFEE project	% Minority Enrollment	% Free/Reduced Lunch Recipients	Statewide school ranking	Risk level for wildfire
Ruch Outdoor Community School, Applegate Valley, Medford School District	20.9%	63%	387th	80th to 90th % for risk for significant loss from wildfire.

d. EJCPS Model

Under this grant, SOWREP will work on CPS Elements 4 and 5. The partners have collaboratively worked through Elements 1 and 2 already, although the MOU described in Element 1 will be formalized and a Wildfire Resiliency Education for ALL committee will be formed under the SOFRC umbrella. The partners are now at the Collective Action stage of problem solving. Partners have also strategized for the future by planning and laying the groundwork for Elements 6 and 7.

CPS Element 1: Issue Identification, Community Vision, and Strategic Goal Setting

- SOWREP partners have identified the current risk of wildfire and smoke with community wildfire risk assessments, forest plans, social surveys and data and information collected from the Oregon DEQ for smoke planning
- A shared vision and memorandum of understanding is in process with partners. EJ funding will be utilized for an improved vision that includes DEI planning for populations at risk
- Strategic goals setting can be developed with more collaborative problem-solving and planning.

CPS Element 2: Community Capacity-Building and Leadership Development

- Community capacity-building for implementing forest stewardship projects and controlled burning have outpaced the investments made for coordination of education and resources for vulnerable populations
- All partners are providing leadership for wildfire resilience including student education
- Youth leadership will be integrated for implementation of the EJCPS grant

CPS Element 3: Consensus Building and Dispute Resolution – Partners are in Collective Action Phase

- Using more controlled burning/prescribed fire for addressing the threat of wildfire requires continual education and coordinated communication for community resolve and consensus
- A shared vision for safer communities using prescribed fire for improved forest health is supported by diverse groups and education will increase public support.
- Challenges remain for disputes around the equitable distribution of limited resources for vulnerable populations and communities at risk

CPS Element 4: Multi-Stakeholder Partnerships and Leveraging of Resources

- Increased funding resources for education will provide coordination for populations at risk

- Multi-stakeholder partnerships working on the forest landscape and in the communities are investing resources for student and youth education. Rogue Valley Fire Prevention Co-operative, Ashland Forest Resiliency, Southern Oregon Forest Restoration Collaborative, Rogue Forest Partners and Rogue Workforce Partnership, and many others.

CPS Element 5: Constructive Engagement by Relevant Stakeholders

- Increased engagement of underserved students and communities, educators and agencies is needed for improving Community Wildfire Protection Plans
- Building bridges from schools and student-led work into the community and the local natural resources work force is needed.

CPS Element 6: Sound Management and Implementation

- Each organization and partnership perform quality work for community wildfire and smoke risk reduction, however, greater coordination and resources are needed for vulnerable populations

CPS Element 7: Evaluation, Lessons Learned, and Replication of Best Practices

- An evaluation tool has been developed for the SOFEE curriculum but challenges remain in greater implementation due to a lack of funding
- Best practices and lessons learned will be included with project deliverables and wildfire resilience education models can be shared
- Some organizing partners meet with regional wildfire educators for best practices sharing
- Capacity challenges and funding are barriers
- The FireBright team in partnership with ONREP and OFRI has implemented multiple statewide teacher trainings to lay the groundwork for replication of the program statewide. SOFRC is building an interactive web page for FireBright and SOFEE where teachers can showcase student work, and share resources and lessons learned.

e. <u>Project Linkages</u>

Goals 1, 2, 4, 5 and 6 are supported with the SOWREP project for EPA's Strategic Plan.

Goal 1) Climate resilience and planning for populations at risk is part of the SOWREP project

Goal 2) SOWREP will advocate for education funding and resources for underserved community members and ensure education is included for youth in Community Wildfire Protection Plans

Goal 4) SOWREP will share smoke preparedness education and cleaner air best practices as part of student education

Goal 5) Education for fire ecology and forest stewardship supports management activities that improve watershed health, ensuring clean and safe water is available for all communities

Goal 6) SOWREP safeguards youth through preparation for before, during and after wildfire and helps reach EPA strategic goal Objective 6.3 for preparing and responding to environmental emergencies for vulnerable populations

f. **Partner and Collaborators**

The Southern Oregon Wildfire Resilience Education Program (SOWREP) has evolved from two collaborative wildfire resiliency education efforts working in tandem with some overlapping

partnerships. SOWREP diverse partner groups are coming together in a collective action to support their shared vision of collaboratively planned wildfire resiliency education and workforce training in support of the 1) National Cohesive Wildfire Strategy for – *Fire-adapted communities: Human populations and infrastructure can withstand a wildfire without loss of life and property;* 2) Rogue Valley Integrated Fire Plan (RVIFP); 3) Jackson County Community Response Plan for Smoke; 4) Ashland Community Response Plan for Smoke (CRP); 5) local community wildfire protection plans (CWPP)s; and 6) community forest planning.

Under this grant, SOFRC will lead SOWREP diverse partners to formalize their draft MOU, form a Wildfire Resiliency Education for ALL committee with student representation, and expand FireBright and SOFEE education and training program opportunities to vulnerable and rural southern Oregon student populations. This diverse group of collaborative partners represent formal and informal education, workforce development, forestry and wildland firefighting employment, federal and state government agencies, local government, and non-profit organizations.

Partners include:

Organizations with Subawards:

City of Ashland: Participating through the Ashland Forest Resiliency (AFR), City of Ashland assists in community outreach and education for citizens in and around Ashland on the controlled burn program and forest restoration activities in a 58,000-acre project across public and private lands. Through Fire-Adapted Ashland, Smokewise Ashland, AFR helps lead the area in education for fire-adaptation including smoke and health education, Firewise, fire safety, evacuation and *Ready, Set, Go!* Convening meetings for planning and initial funding. The Community Engagement Coordinator for Ashland Forest Resiliency has successfully managed several projects including on the ground education and outreach. Since the formation in 2010, 25 million dollars has been put to work for fire risk reduction through state, federal and local funding. Two programs for reaching vulnerable populations at risk of smoke and wildfire have been developed. Southern Oregon Fire Ecology Education (SOFEE) has been coordinated with local partners to reach students k-12th grade. A second program, Smokewise Ashland, has developed an Ashland Community Smoke Response Plan (CRP) that outlines who is most vulnerable to smoke and organizes resources to reach lower-income communities. COA is currently managing eight sites for air quality monitoring and smoke planning and will facilitate smoke preparedness education planning for the SOFEE project.

Lomakatsi Restoration Project (LRP): Lomakatsi Restoration Project is a non-profit grassroots organization that develops and implements forest and watershed restoration projects in Oregon and northern California. Since 1995, LRP has a proven record of success implementing restoration projects across thousands of acres of forests and miles of streams. In cooperation with a broad range of partners including federal and state land management agencies, The Nature Conservancy, land trusts, private landowners, watershed councils, city and county governments, and Native American tribes, LRP's work has set precedence on nationally recognized projects. LRP provides expertise and capacity in project development, planning, management, fine-scale ecological treatment design, monitoring, and implementation for ecosystem restoration projects and integrates restoration practice with science delivery, education and workforce training. LRP can advise for curriculum and deliver outdoor education. Lomakatsi has over 25 years of field education experience with students and has directly educated 2500 students. Youth and training programs are reaching underserved students who are

ED_016126_00000660-00008

indigenous and fire generation immigrants. Lomakatsi serves the community with the Tribal Partnerships Program which reaches indigenous youth with training and employment.

ScienceWorks: ScienceWorks Hands-on Museum is an interactive science museum located in Ashland, Oregon, serving visitors of all ages throughout Southern Oregon and Northern California. Founded in 2002, ScienceWorks is committed to inspiring wonder and stimulating creative exploration through fun interactive science. Since opening in 2002, ScienceWorks has served nearly one million visitors and 100,000 K-12 students throughout Southern Oregon and Northern California, with 2,000 member households across the region. Under SOWREP, they will deliver curriculum, provide field trips and teacher training. This spring, in partnership with Rogue Valley Fire Prevention Cooperative (RVFPC) and the City of Ashland, 12 student groups will receive fire prevention, fire safety and fire basic laboratory experience.

Additional Participating Partners:

Oregon Department of Forestry (ODF): State agency, ODF, serves the people of Oregon by protecting, managing, and promoting stewardship of Oregon's forests to enhance environmental, economic, and community sustainability. ODF is dedicated to diversity, equity and inclusion, and demonstrates commitment to collaborative relationships, and the engagement and cooperation of Oregonians. ODF has demonstrated a commitment to wildfire resiliency education in the schools through FireBright and the Smoky Bear Program. The FireBright lead for ODF, Herb Johnson, has coordinated field lab sites, co-taught lessons, provided tools, and supported community engagement events. ODF is committed to continuing to support the FireBright program and expand training through certification opportunities within participating schools.

Crater Renaissance Academy (CRA): The Central Point public high school, CRA, accredited High School Natural Resources Career and Technical Education (CTE) Oregon Department of Education Program of Study has adopted the FireBright curriculum and has served as one of the pilot schools for the project. The CRA CTE program has already established a student-led Future Natural Resources Leaders of America organization that is committed to leading student wildfire resiliency community focused efforts.

Oregon Natural Resources Education Program (ONREP): The OSU, Oregon Natural Resources Education Program (ONREP) has over 40 years of experience supporting formal and nonformal educators. ONREP professional development events as well as environmental education curriculum resources encourage educators to engage their students in nature-based learning both indoors and outside. ONREP is committed to supporting teacher professional development events using Fire Bright and SOFEE curricula to build student environmental literacy focused on wildfire awareness and knowledge, cultural use of fire, wildfire basics, prevention, ecology, effects, and behavior is integrated into all classrooms at every level throughout Oregon. ONREP can help facilitate delivering the WREP model to communities across Oregon.

Rogue Forest Partners: The Rogue Forest Partners are a group of four nonprofits and six public agencies working as one for the communities and forests of the Rogue Basin. The partnership plans, funds, and collaborates to implement forest restoration projects across both public and private lands in the Basin. RFP is restoring forests in collaboration with diverse communities to reduce wildfire risks, enhance wildlife habitat and create equitable, sustainable jobs. RFP is committed to supporting education for k-12th grade guided by sustaining a human connection to place for present and future

generations including the indigenous peoples who have been a part of the landscape since time immemorial and who remain a part of our community.

Southern Oregon Educational Service District (SOESD): SOESD supports SOFEE and Fire Bright programs by helping to organize teacher training, curriculum development and introduction of the programs for school districts. SOESD will manage the SOFEE website and help facilitate the trunk materials checkout for rural schools. Southern Oregon Education Service District (SOESD) provides schools with essential services across the largest ESD region in Oregon. They serve 3,500 teachers and 52,000 students in 13 school districts. SOESD provides a connection to the SOFEE program through the website and links educators through the PD Network for training opportunities.

Oregon State University Extension Service Outdoor School: Provide educator training, funding for outdoor school/fieldtrips and advise curriculum. Local education project and museum with a reach of 52,000 students in the service area. OSU Ext. hosted a wildfire curriculum training for teachers in spring of 2021 and plan to host more teacher trainings.

The Nature Conservancy (TNC): TNC partners with SOWREP to review curriculum and provide community education. Fire Adapted Communities Network (FACNet), a part of TNC, has funded development of an indigenous lesson to support Lomakatsi and other partners developing the wildfire curriculum. The Nature Conservancy, an international non-profit organization, whose mission is to preserve plants, animals and natural communities that represent the diversity of life on Earth by protecting the lands and waters they need to survive.

U.S. Department of Agriculture – U.S. Forest Service (FS): The Forest Service has coordinated past education projects using the FireWorks curriculum since 2000. USFS has worked with AFR for 10 years to implement landscape scale projects for forest restoration. In 2020, USFS hosted a train-the-trainer workshop at the Interagency offices in Medford, OR for 30 educators. The teacher training, presentations with students and technical assistance of USFS employees are available for planning and implementation of wildfire education. The mission of the FS is to sustain the health, diversity, and productivity of the Nation's forests and grasslands (*those lands under FS management jurisdiction*) to meet the needs of present and future generations. USFS will advise curriculum and present education in local schools.

U.S. Department of Interior – Bureau of Land Management (BLM): Several interns have dedicated hundreds of hours for developing the SOFEE curriculum and the species encyclopedia in the SOFEE curriculum. The BLM's mission is to sustain the health, diversity, and productivity of publicly owned lands (*those lands under BLM management jurisdiction*) for the use and enjoyment of present and future generations. BLM administers more public land – over 245 million surface acres – than any other Federal agency in the United States and most of this land is located in the 12 Western states, including Alaska.

SOWREP partners will fulfill the following roles:

Partner/Sector	Role/Activities	Resources	Invested Resources	Sustained Partnership
SOFRC – non-profit	Lead SOWREP Formalize MOU and form SOWREP committee. Chair quarterly meetings. Hire and supervise SOWREP coord. Expand FireBright career and training pathways. SOFEE teacher training and pilot. Link to RVIFP and CWPPs.	EPA funding Match funding: Rogue Basin Partnership workforce development project. Staff for project capacity. Build partnership with Rogue Workforce Partnership through Project Youth+ for paid student internship positions and incentives.	FireBright and SOFEE curricula and collaborative partnerships. Established relationships with schools, agencies, and non-profit groups	Link to RVIFP and CWPPs for sustainable funding to maintain leadership role.
City of Ashland – Sub awardee – Municipal govt.	SOFEE teacher training & pilot. Smoke education & outreach.	EPA subaward Staff time for smoke education & outreach.	SOFEE curriculum and Smokewise Ashland programming.	Link to RVIFP and CWPPs for sustainable funding to maintain leadership role
Lomakatsi – Sub awardee – non-profit	Youth training & employment. ITEK planning and lesson development.	EPA subaward Youth training program staff time for career pathway link for FireBright students.	Participation with FireBright career panels 2019 to 2023. ITEK SOFEE lessons development. Youth Ecological Training & Employment Program.	Link to RVIFP and CWPPs for sustainable funding to maintain role. Build partnership with Rogue Workforce Partnership for paid student internship positions and incentives.
ScienceWorks – Sub awardee – Informal education – non-profit	Informal education SOWREP – basic fire, fire prevention, fire safety education	EPA subaward Facility	Staff time	
ODF – State forestry agency	Wildfire firefighting certificated training in FireBright schools. Links to Firewise program for FireBright community service projects.	ODF funding for staff time.	Staff time for development and implementation of FireBright program.	Dedicated ODF funding source.

OSU Ext. - State higher education organization	Housing FireBright materials for teacher check-out. Guest instructors as needed. Replication of FireBright statewide via OSU Ext. network	OSU Ext. Staff time	Published FireBright curriculum. FireBright field lab sites. Staff time for curriculum development, pilot, video production.	OSU Ext. Network support
BLM – Federal agency	Informal education – SOFEE and ITEK lessons. Teacher training	Staff time	Funding for SOFEE materials and teacher trainings. Staff time for FireBright guest instruction and field lab sites.	Dedicated programming.
ONREP – OSU Ext. - State higher education org.	FireBright & SOFEE annual teacher training.	Staff time	Teacher training & Trauma Informed Approach toolkit. Fire essential questions/standards	Dedicated staff time
OFRI – State agency	FireBright & SOFEE annual teacher training	Staff time	Contributions to FireBright curriculum and teacher trainings.	Dedicated staff time
USFS – Federal agency	Facility for trainings. Curriculum review.	Facility & staff time for SOFEE train-the-trainer workshops.	Facility & staff time for FireWorks train-the-trainer workshops. Staff time for FireBright guest instruction and field lab sites.	Dedicated resources
Crater Renaissance Academy – Public high school	CTE program for FireBright expansion and student-led natural resources leadership organization.	Facility Existing program and teaching staff	Pilot of FireBright	Adoption of FireBright and SOFEE components. Established ODF certificate program. Paid internship positions established with Project Youth+
TNC – non-profit	Community education. ITEK lesson development. SOFEE & FireBright curricula review.	Outreach networks Staff time	SOFEE curriculum review. Contributions to ITEK lesson.	Dedicated staff time
SOESD – Regional education services district	Organize teacher training, curriculum development and introduction of school program for school districts.	Staff time Host and manage SOFEE website linked to SOFRC web page	FireWorks training 2020 for initiation of SOFEE. Staff time for curriculum development and online outreach.	Dedicated web hosting and staff time.
Medford School District – Ruch School, Central Medford High School	Curriculum adoption	Facility Existing program and teaching staff	Pilot of FireBright and SOFEE	Model FireBright and SOFEE schools linked to RVIFP

ED_016126_00000660-00012

2.0 Project Activities / Milestone Schedule

Southern Oregon Wildfire Resilience Education for *All*

Resource Inputs	Activities	Outputs	Audience	Short-term Outcomes (6-12 months)	Intermediate Outcomes (12-24 months)	Long-term Outcomes (2 years+)
• BLM and USFS staff time and resources • SOFRC coordination for education community • Oregon State University Extension Services fire program and outdoor education teacher training and resources • Oregon Natural Resources Education Program, OFRI, and SOESD expertise in education models, planning	• SOFEE Train-the-Trainers Workshop held at the Medford Interagency Offices of the USFS and BLM • Wildfire education coordinator and educator are hired for student pilots, teacher trainings and programmatic work • ScienceWorks presents fire basic, fire prevention and fire safety education for rural students and underserved schools • Five science trunks with k-12th grade wildfire curriculum and support materials are shared in classrooms for Southern Oregon	• School districts use the curriculum and check out trunk materials • K-12 Students are more familiar with fire prevention, fire safety, fire basics, fire ecology and fire use for landscape restoration. • High school students and youth are supported with	• Formal educa-tors in local schools • Local agencies and non-profits • K-12th grade students • Youth 18-24 • Local community members • Students who were evacuated and have experienced home loss from wildfire • Rural Student • Second-language learners	• Partners will lead class and field presentations for SOFEE and Fire Bright • Wildfire education website is updated for curriculum access and booking presentations and field activities • City of Ashland coordinates work for smoke adaptations and student curriculum • Education community provides input and advocacy for local wildfire and smoke planning and trauma-	• Fire Bright students lead and develop fire-adapted communities' actions including Service-learning projects in local forests, Community outreach and education for events, Facilitate Firewise planning for schools • Career and Technical Education (CTE) teaching options for educators. • Non-formal educators at the BLM, USFS and ODF add SOFEE and Fire Bright curriculum into their yearly outreach and education programs • Rural youth receive career & technical	• Communities include wildfire resilience education for Community Wildfire Protection Plans • Sustainable funding is available for wildfire resilience education • Indigenous communities relate their stories, cultural use of fire and Traditional Ecological Knowledge (TEK) • Formal and non-formal educators attend yearly workshops for wildfire resilience education program for k-12th grade and 18-24 youth • Youth lead community education each spring for wildfire • Diversity, equity and inclusion planning and advocacy for including actionable outcomes are included for vulnerable populations in CWPP plans

and resources for teacher training • Lomakatsi participation in youth training and employment, student education, Indigenous Traditional Ecological Knowledge planning • City of Ashland staff time for smoke education and outreach •	through a checkout process for use by classroom teachers, outdoor schools and non-formal educators • Lomakatsi Restoration Project leads Indigenous Traditional Ecological Knowledge (ITEK) student learning activities • Diversity, equity, and inclusion planning is organized through monthly meetings for shared values, outcomes, and goals with organizing partners	coordination of non-formal and formal educator workshops • Trauma Informed curriculum that integrates the cultural use of fire, diversity equity and inclusion is published and shared broadly	• High school students in lower-income communities	informed support or student learning	education which making them job ready and fulfilling Oregon wildfire and forestry capacity needs	• Wildfire Resilience Education Programs (WREP) is regionally adapted and modified for students and youth across Oregon

b. **Milestones and Measurements of Success**

Year One:

- Smoke health education and the best practices for reducing exposure will be shared and broadly communicated to populations at risk including youth who have developing lungs, educators and administration in local organizations serving youth
- Wildfire resilience education is provided to youth in student pilots at ScienceWorks and through partners in the classroom, for outdoor school and in the field
- Teachers and administrators across the five counties receive fire education presentations and training for SOFEE and Fire Bright with a trauma-informed approach
- Educators can access the materials
- Students participating in Fire Bright have education pathways and training opportunities that provide for certifications for career development, and paid internship opportunities funded through Rogue Workforce Partnership and Lomakatsi.

Year Two:

- Public education recommendations are integrated for a revision of RVIFP outlining a strategy to meet the needs of underrepresented communities
- Coordinated messages are developed for Be Ready, Be Set, Go! and wildfire preparedness and shared broadly through liaison with local schools
- A repository for fire education materials is developed and maintained for residents, teachers, students, and their families
- Carry forward fire prevention and education messages in local events at local celebrations with high school students participating in Fire Bright
- Fire Bright students will lead in development of Firewise planning and projects in their communities
- Organize and coordinate one yearly outreach event in May for community wildfire education that is open to all residents including lower-income and under-served community members
- SOWREP is shared broadly with regional partners

Diversity Equity and Inclusion Planning

A mission of collaboratively developing the Southern Oregon Wildfire Resilience Education Program (SOWREP) will be to include identified populations at risk. Detailed plans for education goals and sustained funding will be dedicated for education of underserved school age students (k-12th grade) and their families, and youth training and career and technical education for youth 18 to 24. Each year, Southern Oregon Educational Services District holds an equity conference for professional development and, local school districts are leading efforts for diversity, equity and inclusion. Partners will continue participating and coordinate quarterly meetings during the project implementation for planning projects for reaching underserved students and youth. In addition, FireBright has been adopted by Crater Renaissance High School, Natural Resources Career and Technical Education (CTE) Program which serves underserved and vulnerable student populations in wildland urban interface areas.As a critical part of the DEI planning, tribal history and traditional and ecological values of tribes are a priority in these curricula. “Good fire” and “cultural fire” will be taught with traditional tribal values intact.

Outputs	Outcomes	
Short-term	**Short-term**	**Long-term**
• SOWREP MOU is formalized, and committee formed by partners under SOFRC umbrella. • SOFEE Train-the-Trainers Workshop • ScienceWorks presents fire basic, fire prevention and fire safety education for rural students and underserved schools • Lomakatsi Restoration Project leads Indigenous Traditional Ecological Knowledge (ITEK) student learning • Partners coordinate work for smoke adaptations and student curriculum • Fire Bright students lead and develop fire-adapted communities' actions including: • Service-learning projects in local forests • Community outreach and education for events • Facilitate Firewise planning for schools • Provide input and advocacy for local wildfire and smoke planning • Formal and non-formal educators attend scheduled workshops for input on development of a regional wildfire resilience education program for k-12thgrade and 18-24 youth • Five science trunks with k-12th grade wildfire curriculum and support materials are shared in classrooms for Southern Oregon through a checkout process for use by classroom teachers, outdoor schools and non-formal educators. FireBright materials are available for check-out through OSU Ext. • Partners lead class and field presentations for SOFEE and Fire Bright	• Wildfire education coordinator is hired for student pilots, teacher trainings and programmatic work • Formal and non-formal educators are familiar with SOFEE, checkout trunks and present the materials in k-12th grade classrooms. • School districts use curriculum, and some develop site-specific lessons. • Diversity, equity, and inclusion planning is organized through monthly meetings for shared values, outcomes, and goals with partners • K-12 Students are more familiar withfire prevention, fire safety, fire basics, fireecology and fire use for landscape restoration, demonstrated through showcased student work. • Indigenous communities relate theirstories, cultural use of fire and Indigenous Traditional Ecological Knowledge (ITEK) • Wildfire education website is updated for curriculum access and presentations and field activities • High school students and youth are supported to plan community service projects.	· Graduate Assistantship created for SOU materials maintenance. • Career and Technical Education (CTE) teaching training for educators. • Youth receive career & technical education, making them job-ready and fulfilling Oregon wildfire and forestry capacity needs • Strategy developed for diversity, equity and inclusion planning and advocacy for including actionable outcomes for vulnerable populations in CWPP plans for Southern Oregon. • Non-formal educators at the BLM, USFS and ODF add SOFEE and Fire Bright curriculum into their yearly outreach and education programs • Data is collected on number of students served who have been impacted by fire. • Over 150 student service hours are logged in student-led community wildfire resiliency projects. • · Materials are replicated and regionally adapted and modified for both indoor and outdoor education in Wildfire Resilience Education Programs (WREP) across Oregon.

c. **Itemized Budget Sheet / Budget Narrative** – Submitted

3.0 **Environmental Results – Outputs, Outcomes, and Performance Measures**

Sustainability Plan and Community Vision

Wildfire education is a component of the current iteration of the Rogue Valley Integrated Fire Plan(RVIFP). SOWREP can meet RVIFP education and community engagement goals, and serve as a model to other communities statewide to link equitable wildfire resiliency education to community resiliency goals. Linking SOWREP to the RVIFP will lead to sustainable county level funding for Southern Oregon Wildfire Resiliency for ALL and will be replicated across the region.

Goal 1 Deliverable 9 (page 16, RVIFP)
9. educating residents on the importance of forest resiliency

Goal 2 Deliverables 1, 3, 4, 5 and 7

1. identifying community-scale actions to improve wildfire preparedness;
3. targeting broad interest groups and tailoring outreach based on risk;
4. ensuring a process for two-way communication between agencies and the community;
5. collaboration on Be Ready, Be Set, Go! evacuation education;
7. improving preparedness and resilience to survive and recover from wildfire.

Goal 2, Recommendations to Promote Fire-Adapted Communities (page 179, RVIFP)

- Create a central repository for education and outreach materials for the Rogue Valley.
- Create and maintain an updated calendar of public events in Rogue Valley.
- Identify opportunities for providing fire prevention education.
- Encourage and provide fire prevention messages at local community celebrations and events, including the ecological benefits of fire and the impacts.

4.0 Programmatic Capability

a. Organizational Experience and Infrastructure

SOFRC is engaged in large-scale restoration projects and coordinates the Rogue Forest Partners, a partnership of four nonprofits, four federal agencies and two state organizations including Oregon State University. Recent restoration projects include providing defensible space along 45 miles of rural highway that included the work of conservation corps from tribal nations and locally underserved communities. SOFRC has coordinated annually between two and five federally and state funded projects over the last five years. Terry Fairbanks, Executive Director, has 25 years of program management experience including managing up to $8 million dollars in programmatic budgets in federal land management organizations. SOFRC has participated in the proposed project activities for the past four years. Working with partners, SOFRC helped create, implement, monitor, and evaluate the FireBright curriculum. SOFRC has an executive director, program manager and education director totaling 2.5 FTE who will guide and shape this project.

b. Staff Experience / Qualifications of Project Manager (PM)

Over the past decade, Jennifer Payne has coordinated federal grant programs (EPA clean water grant for the City of Chico and USDA LSR grant, FireBright for SOFRC) and met project deliverables in partnership with diverse organizations. As a credentialed teacher, Jennifer has served as liaison between public schools, government agencies, non-profit, private contractors. Jennifer has organized student-led community engagement events. She is currently working on a workforce development project with the Rogue Basin Partnership to develop paid internship opportunities for youth to expand FireBright.

Under the FireBright project, Jennifer has established strong working relationships with teachers, schools, workforce development professionals, and project partners across the region, and helped to lay the groundwork for the next phase of wildfire resiliency education and training that will leverage the resources that have been invested by project partners and link collective education efforts to the Rogue Valley Integrated Fire Plan.

Jennifer Payne has worked on the following FireBright and SOFEE activities:

- Served as a main point of contact for public school teachers for coordination and implementation of the FireBright project and chaired LSR team meetings.
- Served as liaison between schools and non-profit groups offering paid natural resources training opportunities for students and supervised student-led events.
- Co-developed FireBright curriculum and co-taught lessons for high school students
- Collaboratively organized and delivered statewide FireBright teacher trainings for natural resource educators in partnership with OSU Ext., OFRI and ONREP.
- Produced progress reports and evaluation tools for FireBright project.
- Interfaced with Rogue Workforce Partnership to link FireBright high school CTE education to workforce development efforts.
- Served as SOFRC representative for SOFEE association, including assist with teacher training, outdoor education instruction, materials organization, and curriculum edits.

c. Expenditure of Awarded Grant Funds

SOFRC has adequate financial controls in place to successfully complete this grant. SOFRC has successfully completed or is in good standing with all the grants listed in the current or past performance section. SOFRC has completed EPA Form 6600-09.

5.0 Past Performance

SOFRC list of grants and agreements successfully implemented over the last three years:

1: 2019-2023: Landscape Scale Restoration Natural Resource Career Pathways from State and Private Forestry: Total Grant $$300,000; SOFRC share $87,000. Wrapping up a successful FireBright curriculum piloted in five high schools and ready to be shared throughout Oregon.

2. 2019-2025: Oregon Watershed Enhancement Board (OWEB) Focused Investment Partnership: Rogue Forest Restoration Initiative: $6 million dollars over six years in six project locations. SOFRC share $336,400. SOFRC serves as coordinator of a 10-partner group. SOFRC and partners have exceeded all project deliverables and recently won high praise from the OWEB board.

3. 2022-2023: Oregon Department of Forestry Prescription for Safety $277,482 implementing defensible space along 45 miles of high-risk evacuation routes employing nonprofit, conservation corps and intertribal crews. This project is 90% complete with two months in advance of due date.

4. 2019-2021: OWEB Collaborative Capacity Grant: $34,760; Successfully concluded, meeting all deliverables.

5. 2021-2023: OWEB Collaborative Capacity Grant: $66,033: On track to conclude in June 2003.

6: 2022-2024: USDI Bureau of Land Management Cooperative Agreement: $96,260. Collaborative development and implementation of fire risk reduction partner activities. Successful fulfillment.

7. 2022-2025: Rogue Basin Collaborative Forest Landscape Restoration Challenge Cost Share Agreement: $472,072. Master Challenge Cost Share with Rogue Siskiyou National Forest for range of activities from education and workforce development to monitoring, engagement, project management and feasibility studies.

BUDGET INFORMATION - Non-Construction Programs

OMB Number: 4040-0006
Expiration Date: 02/28/2025

SECTION A - BUDGET SUMMARY

Grant Program Function or Activity (a)	Catalog of Federal Domestic Assistance Number (b)	Estimated Unobligated Funds		New or Revised Budget		
		Federal (c)	Non-Federal (d)	Federal (e)	Non-Federal (f)	Total (g)
1. N/A	66.306	$	$	$ 351,968.00	$ 73,000.00	$ 424,968.00
2.						
3.						
4.						
5. Totals		$	$	$ 351,968.00	$ 73,000.00	$ 424,968.00

NIMS4MIM LOGIC MODEL

RESOURCES / INPUTS

Staff time | In-kind Contributions | Partnering Organizations | Volunteers | Equipment | Community Feedback | Cooperative Agreement Funding

ACTIVITIES

8 workshops:

1. Kickoff meeting
2. Baseline data coordination
3. Baseline data coordination
4. Share baseline findings
5. NIMS development
6. NIMS development
7. Extended Tabletop Feedback
8. Feedback on applying NIMS4MIM

4 Training Events:

1. NEPA
2. EIS
3. NIMS
4. GIS

6 Community Forums:

1. Introduce NIMS4MIM project
2. Share baseline results
3. Share NIMS4MIM plan
4. Activity 2 feedback
5. Activity 3 feedback

3 Hands-on Activities:

1. Baseline data collection
2. Extended tabletop activity
3. Applying NIMS4MIM to active NEPA proposal

OUTPUTS

- Develop materials and agendas for workshops
- Deliver 8 workshops for 10 Tribal agency employees and 6 partners
- Develop materials for 4 training events
- Train 10 Tribal agency staff during 4 training events
- Engage 10 students in baseline data collection activities
- Engage 20 community members in community forums

AUDIENCE

DVIR Tribal Government Staff; DVIR Community; other Upper Snake River Tribal members

SHORT-TERM (knowledge) OUTCOMES (6-12 MONTHS): Develop a holistic understanding of baseline conditions and increase capacity to assess potential impacts to those conditions.

- Develop baseline TEK database, including traditional medicines, wildlife and habitat management practices, etc..
- Develop baseline database documenting existing environmental, ecological, cultural status on DVIR.
- Increase understanding of baseline environmental/ecological/cultural status.
- Increase DVIR GIS knowledge and application to existing management practices.
- Increase OCS students' knowledge in collection of baseline environmental, ecological, and TEK data.
- Increase in knowledge about local and regional environmental challenges.
- Increase competency with NEPA process, EIS review, EA, HIA, and NIMS framework.

INTERMEDIATE (behavior) OUTCOMES (12-24 MONTHS): Improve engagement in NEPA, including collaborative decision making.

- Increase community involvement collecting holistic environmental, ecological, and cultural data.
- Increase in application of baseline data collection and management skills, GIS skills, and EIS, EA, HIA, and EA during government-to-government consultation.

LONG-TERM (condition) OUTCOMES (>2 YEARS): Protect Tribal environmental, wildlife, and cultural resources for generations to come.

- Develop an efficient process for DVIR, an underserved community, to mobilize limited resources to provide meaningful response to government-to-government consultations related to proposed mines.
- Increase Tribe's capacity to provide meaningful response to government-to-government consultations on proposed mines.
- Deploy holistic, collaborative, efficient approach to responding to mining proposals on/near DVIR.
- Engage other USRT members Tribes to develop their own version of NIMS4MIM.
- Increase community participation in developing collaborative process for responding to proposed mining operations in region.
- Increase communication and collaboration between project partners and community.

Final Progress Report Template – EJ Grants

Grantee Name TerraGraphics International Foundation
EPA Grant # _EQ - 02J03501 - 0_

Project Title __One Habitat___ Project Officer _Emily Bitalac____

Project Period Length: **One Year X** **Two Years** □

Total Funds expended: **$**__$75,000_____ **Date Report submitted: ___1/17/2023__**

Instructions: This form is for EJ Grant recipients to report their final outputs, outcomes, and results of their EJ grant project. Recipients should send this report to their assigned EPA Project Officer. Final Reports are due 90 days after the listed end date on your EPA award documentation. ***However, recipients are encouraged to submit final reports as early as possible to expedite the closeout process.*** *Please answer all questions below as thoroughly as possible.*

1) Project Summary
What are the objectives of your project? What is your project trying to accomplish? (i.e. what are the health/environmental issues, what are the demographic issues, how will your project address those issues and impact the affected community).

The Shoshone-Paiute Tribe of the Duck Valley Indian Reservation (DVIR) faces disproportionate environmental burdens related to mining and fisheries collapse, and challenges in building capacity to tackle these issues due to underrepresentation of Native American students in Science, Technology, Engineering, and Math (STEM) fields, including environmental sciences.

The DVIR has been directly impacted by historic mining. Exploration companies are actively exploring areas near the reservation. Adverse effects due to the Rio Tinto copper mine are observed on the East Fork of the Owyhee River (EFOR), reservoirs, and irrigated agricultural lands. The DVIR ranks in the 85th percentile for proximity to Superfund sites in ID/NV, in the 60th percentile for proximity to hazardous waste sites nationally, and in the 69th percentile for cancer rates nationally. Adverse effects are observed in the EFOR, reservoirs, and irrigated agricultural lands.

Additionally, Native Americans are overwhelmingly underrepresented in scientific fields. There is a high rate of academic failure among Native American students. Native American professors are underrepresented in STEM, and Native students make up less than one percent of those earning advanced degrees in science and engineering, due in part to the fact that less than 50% have access to STEM-related math and science classes in high school. This disparity results in few Tribal members with education and training to tackle the environmental challenges faced by communities like the DVIR.

Our One Habitat project aims to:

- *Increase DVIR students' environmental science competency.*
- *Increase the number of students pursuing environmental science/STEM higher education and jobs.*
- *Improve the riparian ecosystem on the DVIR.*

This is a collaboration between TerraGraphics International Foundation (TIFO), Owyhee Combined School (OCS), the Sho-Pai Tribal Environmental Protection Program (TEPP), and the North American Native Research and Education Fund (NANREF).

2) Project Progress

Final Progress Report Template – EJ Grants

Grantee Name TerraGraphics International Foundation
EPA Grant # _EQ - 02J03501 - 0_

Project Title __One Habitat___ Project Officer _Emily Bitalac____

Project Period Length: **One Year X** **Two Years** □

Total Funds expended: **$**__$75,000_____ **Date Report submitted: ___1/17/2023__**

Instructions: This form is for EJ Grant recipients to report their final outputs, outcomes, and results of their EJ grant project. Recipients should send this report to their assigned EPA Project Officer. Final Reports are due 90 days after the listed end date on your EPA award documentation. ***However, recipients are encouraged to submit final reports as early as possible to expedite the closeout process.*** *Please answer all questions below as thoroughly as possible.*

Did you complete all proposed EPA-funded activities of your project? Were all desired results achieved? If not, what project activities and desired results still remain?

We have completed all proposed grant-funded activities and achieved our desired results.

3) Project Accomplishments by Task/Evaluation Measures/Results (Table format is encouraged. Feel free to attach your reporting table/logic model as a separate page if the sample table below does not provide enough space)

Provide updates for each task/activity under your project workplan. **What accomplishments have been achieved since the start of the project?** (e.g. Milestones reached, Activities completed Outputs/Outcomes). Include numbers (e.g. trained 20 residents on healthy homes; distributed 50 radon education booklets at health fair, etc.). See sample reporting logic model below to get started:

Workplan Task / Project Activity	**Inputs** (what is invested)	**Outputs** (what is produced)	**Outcomes** (the results or effects)	**Completed?** Yes / No / in-process
Owyhee School and Elko County Science Fairs	Staff and student time; poster printing	15 students participated	1 first place winner 2 second place winners Strong engagement by students	Yes
Mining and Climate Change Workshop	3 project staff to develop lesson plan and implement workshop	1 educational workshop 16 participants (13 students and 3 teachers)	Enhanced attendees' knowledge of mineral intensity of low carbon tech. and how it relates to local issues on DVIR and surrounding areas.	Yes
Trip to Fort McDermitt and Thacker Pass	9 project staff 1 bus driver 6 volunteers/ external staff; 2 days including Preparation & travel time; student discussions/jour-naling by students	3 educational meetings (California Trail Interpretive Center, Lithium Nevada Inc., Fort McDermitt Tribe at Thacker Pass (proposed mine site) 19 student participants	Developed students' understanding of the proposed Thacker Pass lithium mine within the historical context of Native Lands; students hear different viewpoints on mining development and journaled about their opinions and experiences	Yes
Student presentations to Tribal Council	2 project staff at the event, plus 4 additional staff to help students prepare presentation	6 students and two project staff, plus 4 Tribal Council members	Tribal Council gave students support and feedback on the One Habitat program; members were educated about importance of holistic approach to riparian ecosystem management	Yes

Final Progress Report Template – EJ Grants

Grantee Name TerraGraphics International Foundation
EPA Grant # _EQ - 02J03501 - 0_

Project Title __One Habitat___ Project Officer _Emily Bitalac____

Project Period Length: **One Year X** **Two Years** □

Total Funds expended: **$**__$75,000_____ **Date Report submitted: ___1/17/2023__**

Instructions: This form is for EJ Grant recipients to report their final outputs, outcomes, and results of their EJ grant project. Recipients should send this report to their assigned EPA Project Officer. Final Reports are due 90 days after the listed end date on your EPA award documentation. ***However, recipients are encouraged to submit final reports as early as possible to expedite the closeout process.*** *Please answer all questions below as thoroughly as possible.*

Fire and Riparian Restoration Workshop	2 project staff at the event, plus 1 additional staff to help with lesson plan	1 educational workshop 20 plants planted 8 student attendees 1 OCS teacher and 1 greenhouse manager	Enhanced students' knowledge of fire's relationship with landscape.	Yes
Beaver Workshop and Trapping	6 project staff	4 days of experiential field activities, including beaver trapping and medicinal plant collection/harvesting; 18 student participants	Enhanced students' knowledge of riparian systems on the reservation; explored traditional plant collection techniques, respectful of the ecosystem and others who need to use the plants; discussed collection of plants in areas not impacted by mining	Yes
Return of the Boise Valley People conference				Canceled
Water and soil sampling		4 days of real-time water quality and soil testing, and water and soil sample collection; 18 student participants	Built skills in collecting samples and interpreting data; looked at differences between upstream riparian areas and irrigation canals; visited Rio Tinto Superfund site and used XRF to analyze soils	Yes
American Indian Science and Engineering Society (AISES) National Conference	7 project staff	6 students attended 4 days of scientific events at the national conference; students presented 3 posters and attended career fair	Second place prize for middle-school presenters; built students' confidence in participating in STEM research and presentation of results; exposed students to other indigenous scientists and their research; encouraged students to consider higher ed and careers in STEM	Yes

EPA Grant # _EQ - 02J03501 - 0_

Project Title __One Habitat___ Project Officer _Emily Bitalac____

Project Period Length: **One Year X** **Two Years** □

Total Funds expended: **$**__$75,000_____ **Date Report submitted: ___1/17/2023__**

Instructions: This form is for EJ Grant recipients to report their final outputs, outcomes, and results of their EJ grant project. Recipients should send this report to their assigned EPA Project Officer. Final Reports are due 90 days after the listed end date on your EPA award documentation. ***However, recipients are encouraged to submit final reports as early as possible to expedite the closeout process.*** *Please answer all questions below as thoroughly as possible.*

Lower Granite Dam / UI / Hatchery field trip and Salmon Workshop	5 project staff	4-day field trip to learn about regional riparian ecosystem challenges and successes in the Greater Snake River Basin; also learned about proposed mine in the basin, as suggested by the Tribal Council during spring kick-off meeting; spent one day at UI and toured campus with Native American Student Center staff; 13 students	Students observed workings of major hydropower dam and efforts to support fish migration at the dam; students learned about efforts by the Nez Perce Tribe to restore salmon and lamprey populations, in collaboration with the Lower Snake River Dams Students learned about opportunities to earn higher education and support systems available to indigenous students; Students learned about the Stibnite mine from those opposed to the mine as well as from the mining company	Yes
Tribal Council student presentations	5 project staff	40 community members (students, their families, and Tribal Council members) attended our closing celebration to hear about accomplishments and to hear from students	Community learned about activities students had participated in and asked students questions about their learning; students presented on their activities; Tribal Council was present to see how their feedback had been incorporated into the programming	Yes

4) New Partnerships (partnerships **not** disclosed in your original grant application)

Have you developed any new partnerships related to your project during the reporting period? If so, please describe these partnerships (organization name, project activities/resources the partner is responsible for, vision for partnership going forward).

- *The group met with representatives from the Fort McDermitt Tribe at Thacker Pass/Rotten Moon (Myron, Josephine); some students used this for the topic of their research projects presented at AISES.*
- *Tribal Council suggested students learn about the Midas/Perpetua Stibnite mine; students and teachers met with Idaho Conservation League, Save the South Fork, and Perpetua Resources.*
- *Two students connected with a Program Manager at Northern Arizona University at the AISES conference and are now doing an internship in Air Quality in Tribal Communities on their reservation.*

Project Title __One Habitat___ Project Officer _Emily Bitalac____

Project Period Length: **One Year X** **Two Years** □

Total Funds expended: **$**__$75,000_____ **Date Report submitted: ___1/17/2023__**

Instructions: This form is for EJ Grant recipients to report their final outputs, outcomes, and results of their EJ grant project. Recipients should send this report to their assigned EPA Project Officer. Final Reports are due 90 days after the listed end date on your EPA award documentation. ***However, recipients are encouraged to submit final reports as early as possible to expedite the closeout process.*** *Please answer all questions below as thoroughly as possible.*

- *We met (virtually) with Kessler Keener Foundation to get our One Habitat lesson plans included in their efforts to connect Idaho educators to Native-centered lesson planning (*[HYPERLINK "https://www.kesslerkeenerfoundation.org/native-voices-educators"]*).*
- *We were connected with representatives at the US Army Corps of Engineers about getting One Habitat students involved in the Owyhee River Ecology Restoration project.*
- *TIFO is actively discussing future collaboration opportunities with the Sho-Pai Tribe.*

5) Personnel Changes / Staff Turnover

No.

6) Workplan Changes

Do you need to make a change to the workplan and why? (EPA Project Officer approval is required)

Our workplan changes did not result in a ≥20% change to our budget. We've made small scheduling changes and shifted some funds due to change of dates in Return of Boise Valley People.

7) Fiscal Information

Have all funds been drawn down and spent? Please fill out table below.

Initial grant amount	$75000.00
Funds drawn down	$75000.00
Funds remaining	$0.00

8) Challenges / Difficulties

Any problems or difficulties encountered during the reporting period? How have they been addressed and/or resolved?

The greatest challenges were adjusting to scheduling changes due to COVID19 early in our project. We altered our schedules, and canceled some in-person trips and moved to more virtual meetings. We've also had to manage the busy schedules of students and teachers! We hadn't fully realized how full the school year can be with activities and a few of the students were unable to participate because of sporting events or other commitments. The COVID19 pandemic also impacted the number of students participating in planned activities.

The remote nature of the DVIR also challenged project implementation. This was not a surprise, but it was a continual challenge to logistics and travel..

9) Project Sustainability

Final Progress Report Template – EJ Grants

Grantee Name TerraGraphics International Foundation
EPA Grant # _EQ - 02J03501 - 0_

Project Title __One Habitat___ Project Officer _Emily Bitalac____

Project Period Length: **One Year X** **Two Years** ☐

Total Funds expended: **$**__$75,000_____ **Date Report submitted: ___1/17/2023__**

Instructions: This form is for EJ Grant recipients to report their final outputs, outcomes, and results of their EJ grant project. Recipients should send this report to their assigned EPA Project Officer. Final Reports are due 90 days after the listed end date on your EPA award documentation. ***However, recipients are encouraged to submit final reports as early as possible to expedite the closeout process.*** *Please answer all questions below as thoroughly as possible.*

What steps have you and the community taken to ensure that the progress from your project continues and the results of your project are utilized to achieve the community's vision for an environmentally healthy community?

What are the next steps for your project and/or organization to continue addressing the needs of the community now that the project period is over?

We've shared the classroom workshops lesson plans with OCS. We've also engaged a wide audience on the DVIR. The summer soil and water sampling and beaver trapping included families of students from the community, making it a multi-generational learning event. The Tribal Council is engaged in the project, and the One Habitat group participated in the Tribe's Arbor Day event, as well as the School and District Science Fairs.

TIFO is communicating with members of the Tribal Council and other Tribal Agencies about pursuing other grants, including EPA opportunities.

10) Project Photos

Please submit pictures capturing images of key project activities and highlights with your progress report. Feel free to attach the photos on separate pages or in separate emails to your EPA Project Officer. **Please submit the hi-resolution version of the photos**, as the hi-res photos can be uploaded easily by EPA staff into our online EJ Grantee Spotlights and Story-maps.

Photo essay of activities attached.

DESCRIPTION	PROJECT COST
Personnel: Project Manager, Oregon Rural Schoolyards Program 33%	**$31,600**
Fringe Benefits: 48% of salaries above	**$15,168**
Travel: N/A	**-**
Equipment: N/A	**-**
Supplies: N/A	**-**
Contractual: $20,000 for Community Coordinator (15 hours per month for 12 months) $18,003 for Landscape Architect to complete community engagement, finalize design, oversee competitive construction bidding process, and manage construction.	**$38,003**
Other: $368,000 for construction of the community schoolyard. Specifically, EPA funds will go toward: Bus lane removal and relocation, earthwork, including grading for better drainage and stormwater management, landscaping, including site preparation, planting trees, and plants, and installing shade structures, including design, materials, and installation of trees.	**$368,000**
Indirect Cost: Federal indirect 32.71%	**$27,729**
Total	**$480,500**

EPA EJCPS Narrative: Madras Schoolyard Environmental Justice

1. Program Objectives

A. Project Summary Page

Project Title: Madras Schoolyard Environmental Justice

Project Location: Madras Elementary School, 215 SE 10th St. Madras, OR 97741

Applicant Information: Trust for Public Land, 15 SW Colorado Ave., Suite 100, Bend, OR 97702

Brief Description of Applicant Organization: Trust for Public Land (TPL), a 501(c)3 nonprofit, partners with communities across the country to create parks and protect public land where they are needed most. We select projects that serve racially marginalized groups in areas experiencing high rates of poverty, negative health outcomes, effects of climate change, and barriers to creating new parks. In Oregon's rural communities, we are specifically committed to working with immigrant, Latinx, and Indigenous communities who have been previously underserved by environmental organizations.

Are you applying for the Small CBO Set Aside Track for $150,000 projects? No

Project Abstract: Through extensive community engagement, TPL is partnering with rural communities in Oregon to transform outdated schoolyards into vibrant green spaces that reflect local cultures, create opportunities for physical activity, advance community goals, strengthen climate resiliency, and build local capacity for future community projects. In Madras, Oregon, TPL is partnering with the school district, students, teachers, community organizations, and the Confederated Tribes of Warm Springs to design and create a green schoolyard at Madras Elementary School. The project will directly address the environmental and public health issues of lack of access to physical activity amenities, exposure to air pollution, and vulnerability to excessive heat as air temperatures rise due to climate change.

The new schoolyard will reduce asphalt, add more drought tolerant, native plants and shade to help keep the schoolyard cool and accessible during hot weather, and provide educational multi-lingual signage and art installations throughout the site that reflect the community's diverse and vibrant cultures. The final built project will provide an opportunity to deepen student and community knowledge of the local ecosystem, the impacts of climate change on that system, and elevate Traditional Ecological Knowledge and history through specific design elements and plants.

Project Types: Demonstration, Small-scale construction, and Public education.

Special Considerations: Rural areas, Climate resiliency.

Environmental Issue: Equity in access to nature, Public health and air quality, Climate resiliency

List of Project Partners: Willamette Partnership (nonprofit), Bean Foundation (nonprofit philanthropic foundation), Jefferson County School District 509J (local government), Latino Community Association (nonprofit), Madras Elementary Parents Club (community group)

Will you need to develop a QAPP for your project? No.

B. Environmental and Public Health Information of the Underserved Community

Madras, OR

Located in Jefferson County in Central Oregon, Madras is a small, rural city set amongst panoramic views of the Cascade Mountains and the beautiful high desert. The area is the ancestral homeland of the Confederated Tribes of the Warm Springs, which comprises the Wasco, Warm Spring, and Paiute bands. Madras has a rich history in agriculture, aviation, and manufacturing, which continues to this day.

The Oregon Office of Rural Health classifies Jefferson County as rural because it is greater than 10 miles from a population center of 40,000 or more people.[1] Approximately 7,683 people live in Madras (2021). Many community members have proudly shared that Madras is the most diverse rural community in Oregon. According to the U.S. Census Bureau, 32% of residents are people of color, including 20% of whom are two or more races, and 11% of whom are Native American. Over 36% of residents are Hispanic.

With fewer economic opportunities than urban areas, the per capita income in Madras is $21,967. The median household income is $43,722, which is 60% below the Oregon state median of $70,084 (2021). According to the U.S. Census Bureau, Madras also has a 21.3% poverty rate, which is well above the County rate of 15.7% and the State rate of 12.2%.

Rural communities like Madras often do not have sufficient resources for building or maintaining public parks. As such, people who live in the area do not have safe and accessible places to gather. Schools often serve as the town's social center; therefore, community schoolyards can become places for social cohesion and group recreation.

Rural communities are also particularly vulnerable to climate change and have reduced access to funding for resilience compared to more populous areas. Already, Oregon's rural communities are feeling the effects of climate change: extended wildfire seasons, unsafe air quality from wildfire smoke, extreme heat waves, prolonged droughts, and reduced crop and forestry yields.

Madras Elementary School

Madras has an impressive network of walking and biking trails. But today, the schoolyard at the centrally located Madras Elementary School does not reflect the community's vibrant cultures and shared love of the outdoors. Approximately 70% of Madras residents live within a 10-minute walk of the school. Currently, the schoolyard is not programed or designed for community use, so it is not used by the public outside of school hours. The schoolyard is failing to serve its residents as a community hub.

The school serves 405 children in kindergarten through fifth grade, and 58% of students are people of color and/or multi-racial, including Native Americans and Alaskan Natives. Over 95% of students receive free or reduced-price lunches, demonstrating that a significant portion of families in the community are low-income. The school is also currently at capacity, if not slightly over capacity, with existing space for indoor classrooms.

---

[1] Oregon Office of Rural Health. (2021). Area Unmet Health Care Need Report. Retrieved March 2023, from 2021 Areas of Unmet Health Care Needs Report 2.pdf (ohsu.edu)

The elementary school was built in 1938. The outdated play equipment and patchy grass areas sharply contrast the stunning mountainous background. Accessibility is limited in the schoolyard due to the remnant foundations of past play structures scattered throughout, inaccessible surfaces including woodchips and raised foundations, and a lack of diversity of types of play. Students and community members with mobility aids, such as wheelchairs, and/or sensory issues currently have few options to utilize the schoolyard. Children's needs for outdoor activity and exercise are going unmet. This is significant because 32% of Madras residents are children under the age of 18, which is above the state average of 25%.

The schoolyard is 2.55 acres and is a largely paved area with an excessive amount of asphalt (23,000 sq ft). With few trees or shade structures, these conditions create a local heat island, especially in the dry, hot, desert summers, and as the temperatures increase due to climate change. Additionally, in this high desert landscape, during winter months increased snow and freezing temperatures, and a lack of protection from the elements, limit the use of the schoolyard, preventing students from accessing the multiple benefits of time spent outdoors.

Environmental Health

According to Robert Wood Johnson Foundation's County Health Rankings and Roadmap, Jefferson County ranks 34 out of 35 counties in Oregon for health, meaning it is the second least healthy county in the state. Over half of county residents reported a lack of access to exercise opportunities, and 29% of adult residents reported no leisure-time physical activity. Twenty-two percent of adult residents reported that they consider themselves in fair or poor health.[2] According to the U.S. Department of Agriculture, Madras meets the definition of a rural food desert for low-income census tracts because a significant number of residents live more than 10 miles from the nearest supermarket.[3]

Decades of research have demonstrated myriad ways that a lack of access to nature has cost people their health, happiness, and prosperity for generations. Communities with less green space are hotter in the summer, have worse air quality, and are more susceptible to catastrophic flooding. People without parks close to home get less exercise. Lack of access to parks is associated with higher rates of heart disease, stroke, and obesity. In the study, *The importance of outdoor play for young children's healthy development,* researchers found that play promotes cognitive, physical, social, and emotional well-being, offering the necessary conditions for children to thrive and learn. Through play, children can experiment, solve problems, think creatively, and cooperate with others, thereby gaining a deeper knowledge about themselves and the world.[4]

Despite its rural location and idyllic high desert surroundings, according to the Environmental Protection Agency's EJScreen tool, Madras is in the 93rd percentile in the state for ozone levels,

---

[4] Bento G, Dias G. (2017). The importance of outdoor play for young children's healthy development. Porto Biomed J. 2017;2(5):157-160. doi:10.1016/j.pbj.2017.03.003.

45th percentile in the state for diesel particulate matter, and 32nd percentile in the state for particulate matter. For traffic proximity, Madras is in the 83rd percentile in the state. These rankings reflect the disproportionate environmental and public health harms faced by the community. The community is affected by these increased exposures as indicated by the county's higher rates of premature death.[5]

Air pollution and traffic proximity are problems at the school, as the bus lane currently bisects the schoolyard. Diesel school buses idle during drop off and pick up, meaning that twice a day, the air becomes polluted as children arrive and leave school. On days with little wind, these fumes likely linger over the schoolyard during recesses throughout the day. Vehicle fumes contain particulate matter, nitrogen dioxide, sulfur dioxide, polycyclic aromatic hydrocarbons, mercury, and volatile organic compounds, all of which harm public health, especially children.[6] Studies have documented the connection between exposure to particulate air pollution and increased risk of heart disease, respiratory disease, stroke, and cancer, which are four of the five leading causes of death in Oregon.

Green Schoolyard Development

This project will partner with the Madras community to design and renovate the 2.55-acre schoolyard at Madras Elementary School to create a safe and accessible multigenerational space for students and the greater community outside of school hours. The project will directly address the environmental and public health issues of lack of access to physical activity amenities, lack of accessibility, exposure to air pollution, and vulnerability to excessive heat. The resulting schoolyard will add a resource to the local built environment to address social determinants of health and reduce air pollution exposure. By offering places for the community to come together, the schoolyard will provide a shared public place to strengthen social cohesion. As a close-to-home opportunity for active recreation, this project will address a social determinant of health to help increase physical activity. The schoolyard will also impact mental health, providing respite and relief from high stress levels, anxiety, and depression with a place to relax in nature. By being universally and ADA-accessible, it will also bring together and serve all residents regardless of age or ability.

The new, green schoolyard will also enhance the educational setting by providing students with the opportunity for hands-on instruction outdoors, exciting physical education opportunities, and structures to socialize on or within during recess. Regular use of the greenhouse and new garden beds can equip students with hands-on gardening experience and empower them to grow their own food at home. With the school already at capacity with the number of students per classroom, teachers have told us that a covered outdoor classroom space is a high priority. Once complete, students will have daily access to the beautiful outdoor space that they designed. Plus, since most Madras residents live within a 10-minute walk of the school, thousands of people will enjoy this renovated schoolyard as a local park outside of school hours.

---

This community's unique cultural diversity, regularly described by members of the community as one-third Native American, one-third Latinx and one-third other/Caucasian, is deeply rooted in Madras' history, present day, and future. The community-identified values of sense of pride and belonging, and building a greater connection to nature, stem from these diverse cultural and historical relationships with the environment and is something we will highlight and celebrate throughout this project.

C. Organization's Historical Connection to Underserved Community

History of the Oregon Rural Schoolyards Program

The Madras schoolyard project is part of Trust for Public Land's (TPL) Oregon Rural Schoolyards program, which is a nature-based effort dedicated to community building, health, climate resilience, and education. Our vision is for community schoolyards in rural places to become the standard for creating more resilient, equitable communities.

This program builds off TPL's national Community Schoolyards initiative. TPL is leading the movement to transform our nation's asphalt playgrounds into vibrant green spaces that are improving community health and climate resiliency. Since the mid-1990's, TPL has worked with communities nationwide, collaborating with thousands of students, parents, schools, and neighborhoods to create hundreds of nature-rich schoolyards designed to address climate, health, and educational inequities. The resulting schoolyards also address shortages in green spaces in historically marginalized communities.

In Oregon, we are deliberately focusing on rural areas, since the communities within the state with the greatest need are often rural. Madras is no exception. Prior to engaging the community for the Madras schoolyard project, TPL completed a thorough, evidence-based selection and prioritization process using data that indicated the education, equity, health, and climate conditions of each town. Through this prioritization process, Madras ranked second out of 10 towns for where community schoolyards would be most beneficial to address these conditions. Our research was informed by Oregon Office of Rural Health Areas of Unmet Health Care Need Report (2021), Robert Wood Johnson Foundation County Health Rankings and Roadmaps (2021), Oregon Department of Forestry Communities at High Risk of Wildfire Report (2020), and Oregon Climate Change and Public Health Report (2018). This data-driven prioritization process led us to approach the Madras Elementary School Principal and the Director of Operations and Safety at the Jefferson County School District 509J with the idea of engaging the community in redesigning and renovating the schoolyard at Madras Elementary School. With their strong support, we began working with students and the school community in June of 2022.

Community Engagement in Madras

To address local environmental and public health issues of lack of physical activity opportunities, exposure to air pollutants, and vulnerability to excessive heat in an era of climate change, we are working with students, teachers, and the community to raise awareness of these issues and to design a new, vibrant schoolyard. Thus far, TPL has conducted an in-class design workshop with every student in grades K-5 as well as the life skills students who have disabilities. Additionally, TPL conducted a design workshop for staff and teachers over three days in November. To reach the broader Madras community, TPL participated in community events like the Fall Carnival, Winter Concert, Family University Spanish-Speaking Night at Jefferson County

Middle School and hosted monthly engagement dinner gatherings for our community stakeholders and partners. Our participatory design engagement efforts have used presentations, pictures, poster boards, collective art creation, and even balloon animals. Altogether, we have spoken with all 405 elementary school students, 250 residents/families, and 30 school and district staff.

In addition to community members, we have engaged the following 17 partners and stakeholders representing nine different industries:

- City of Madras (local government)
- Confederated Tribes of the Warm Springs (Tribal government)
- Bean Foundation (nonprofit philanthropic foundation)
- Family University (nonprofit)
- Jefferson County Public Health (local government)
- Jefferson County Public Library (local government)
- Jefferson County School District 509J (local government)
- Latino Community Association (nonprofit)
- Madras Aquatic Center & Recreation District (local government)
- Madras Elementary Parents Club (community group)
- Madras Elementary School (academia)
- Madras Faith Based Network (faith-based nonprofit)
- Madras High School Early Childhood Education Program (academia)
- Oregon State University Extension Nutrition Education/Supplemental Nutrition Assistance Program Education (SNAP-Ed) (academia)
- Saint Charles Hospital (medical)
- Vamonos Outside (nonprofit)
- Willamette Partnership (nonprofit)

During this community-driven participatory design process, students and community members have provided input that we have distilled into recurring themes of water, wildlife, and food. The concept plan for the schoolyard redesign is the results of this engagement. The community is involved in the project by directly shaping the schoolyard design. The community identified the values of universal access for all abilities, sense of pride and belonging, variety of play, being in, and learning about, nature, and safety as priorities for the schoolyard design. For example, parents and community members are concerned not just about the fumes from the school buses, but also about the children's safety. With current conditions, as the bus lane goes through the existing playground, though highly monitored, there is a risk of pedestrian-vehicle conflicts or accidents, especially with children. Additionally, there is currently a limited ability to monitor people coming on and off the property during school hours.

Prior Community Engagement in Jefferson County

Prior to this project, TPL built strong community ties throughout Jefferson County while protecting part of the Crooked River Canyon Wild and Scenic River just south of Madras. This 101-acre property was a popular destination for fishing, hiking, and kayaking, especially since it was one of only a few places where visitors could access the water. For the last eight years, we

worked closely with community members, the Friends and Neighbors of the Deschutes Canyon Area, and the U.S. Forest Service on this project. In partnership with the community, we stepped in to help the U.S. Forest Service add this land to the national forest, thus keeping it publicly available for residents and visitors alike for generations to come. We also worked with local volunteers and the Bureau of Land Management to construct a trail loop with interpretive signage that provides safe, non-motorized access from the canyon rim to the Crooked River.

D. EJCPS Model

Together with the community, the team is working through the Environmental Justice Collaborative Problem-Solving model to improve physical activity, reduce exposure to air pollutants, and provide climate resiliency by renovating the Madras schoolyard.

We have already completed **CPS Element 1, Issue Identification, Community Vision, and Strategic Goal Setting.** After garnering interest and establishing a partnership with the school district, TPL involved community residents early in identifying concerns with not just the current schoolyard, but also overall community access to green spaces and other factors in the built environment that affect public health. Community knowledge deepened the Oregon Rural Schoolyards Program prioritization data analysis and studies mentioned above. The community has been directly involved in providing input, creating the vision, and setting the goals for their future community schoolyard.

The goals for this EPA-funded project are to continue to build local capacity and knowledge of environmental health and justice issues, improve access to greenspace, improve the local environment, and facilitate community building through the redevelopment and activation of the Madras Community Schoolyard. These goals are based on the community-identified values of universal access for all abilities, sense of pride and belonging, variety of play, being in and learning about nature, and safety.

The team has begun efforts toward the **second CPS element of Community Capacity-Building and Leadership Development** and will continue these efforts during the grant period**.** TPL has centered student and community learning during the design of the space. As mentioned above, starting in June 2022, we worked with all students in K-5 grades and the life skills classes for students with disabilities, as well as with teachers and community members to identify and learn about the environmental health problems in their community. We also involved them in creating a vision for solutions to these issues, using images and art creation to imagine what the space could and should look like at planning charrettes and community events. TPL has ensured that the students and residents we engaged reflect the diverse community demographics in terms of racial, social, and economic status diversity. During the grant period, the community engagement process before construction, and environmental and climate education after construction, will build partnerships, community capacity, and potentially future environmental leaders among the students.

With three key partners actively engaged in the project, the team has completed many aspects of **CPS Element 3, Multi-Stakeholder Partnerships and Leveraging Resources.** Our current partners represent the nonprofit, local government, faith-based nonprofit, philanthropic, and community group sectors. We are continually looking for new partners and will continue this

element during the project period. Our existing key partners will continue to help further our efforts in community outreach and engagement, site programming and activation, and capital funding resources. This will be ongoing during the grant period as our current partners take the lead to self-determine their specific engagement and activation activities.

As we work to finalize the site plan design, the team is currently engaged in the **fourth CPS Element of Consensus Building**. We anticipate continuing working on this element during the grant period by fostering common ground amongst diverse opinions and finding middle ground between seemingly divergent needs. TPL's role is to act as a facilitator or mediator between students, residents, and school district officials to elevate community requests. For example, the site design is considering future maintenance requirements to meet the needs of the school district, which will be responsible for maintenance. This means considering the future maintenance requirements of all proposed amenities. In all design decisions, we aim to be transparent and fair as we continually engage stakeholders to ensure meaningful participation. The project team will meet with school and district representatives monthly and attend school board meetings bimonthly.

As with CPS element 3, we are and will continue to actively engage other stakeholders for **CPS Element 5, Constructive Engagement by Relevant Stakeholders.** Not counting our key partners above, we have engaged 14 stakeholders representing seven sectors. Throughout the grant period, we would regularly engage these community stakeholders in the design, construction, and activation of the schoolyard. If awarded EJCPS funding, the team would seek to engage the EPA in providing technical assistance, in addition to the much-needed financial resources this grant will provide.

With all this groundwork laid to date, the heart of this stage of the project will be **CPS Element 6, Sound Management, and Implementation**; namely, the result-oriented activities of finalizing the design, developing construction documents, demolishing the current site, constructing and renovating the entire schoolyard site, and coordinating activation activities to drive community use and stewardship. If awarded, the construction grant funds will be used for elements that improve air quality, mitigate climate and health risks from extreme heat, and improve climate resiliency and adaptation. The project team will meet on a weekly basis to conduct project implementation, track progress, and ensure milestone are met on-schedule. The school team will meet on a monthly basis to ensure construction and school-based activities are successful.

Also included in the project will be the **seventh CPS element of Evaluation, Lessons Learned, and Replication of Best Practices**. TPL will survey stakeholders and partners before and after the program. After completion, we will check in with the school and district to assess the effects on student mental health, attendance, behavior incidents, and any other noticeable effects on the students. Ultimately, Madras Elementary is one part of TPL's demonstration program that aims to reshape and adapt our national schoolyards initiative to support rural areas. One result of the demonstration program will be a replicable process template and case study that other communities can use to undertake rural green schoolyard projects in Oregon and beyond. Outside the scope of this project, our Oregon Rural Schoolyards program is working in two other Oregon communities, and we hope to bring lessons learned from Madras to these and others as we extend beyond the program's three-year pilot. We will also work to inspire future actions by

demonstrating a successful pilot program through best practices in community engagement, design, funding, development, and site activation.

E. Project Linkages

If awarded, this project would assist the EPA in fulfilling **Objective 2.1, Promote Environmental Justice and Civil Rights at the Federal, Tribal, State, and Local Levels**, in its 2022-2026 Strategic Plan. We are building community capacity and climate resilience while maximizing benefits to the Madras community, which has been historically underserved and is currently overburdened as the temperatures rise due to climate change. Madras has a historic lack of investment in infrastructure, especially compared to other urban and rural areas in Oregon. According to members of the community this is, in part, due to Madras having a smaller tax base and therefore fewer resources to make investments than larger, urban communities. If awarded, this grant would contribute to Executive Order 14008's Justice40 mandate, where at least 40% of the overall benefits from federal investments serve underserved communities.

This project builds capacity by placing the community at the center of this collaborative problem-solving process as they decide what they want their schoolyard and community hub to look like. When designed by the community, the process of creating and activating a schoolyard shifts power to the people. TPL's in-class design workshops taught students how to be junior landscape architects, where they were able to design their own schoolyard considering aspects of play, mental and physical health, education, protection from the weather, and community cultural representation through art and signage. TPL's community engagement process has built, and will continue to build, community capacity by empowering future leaders with the experience, knowledge, and skills to be able to meaningfully engage with government programs to advocate for their community's needs. As students learn and practice meaningfully engaging in public processes with this project, we hope they will feel confident to do so with future community-identified needs. The resulting schoolyard can be a symbol that change is possible.

In addition, the nature-rich schoolyard will provide a close-to-home connection to nature that children currently lack, which can make them more likely to be environmentally minded and conscious. The design so far includes an outdoor classroom and a gardening area where teachers can create curricula to learn outside in nature. The final built project will provide an opportunity to deepen student and community knowledge of the local ecosystem, the impacts of climate change on that system, and elevate Indigenous knowledge through specific design elements and native plants.

When schoolyards within underserved communities are transformed, resources are channeled into the places that need it most. The resulting schoolyard and community space will be climate resilient. Climate change is increasing temperatures in the rural high desert, especially in the summer when temperatures are over 100 degrees Fahrenheit. Yet there is little to no shade within the playground, and the schoolyard has an excess of asphalt surfaces that absorb heat, creating a local heat island that continues to heat the surroundings long after sunset. This project will add greater climate resiliency by planting drought resistant trees and native plants that will, over time, provide lasting shade as well as filter local air pollutants, improving air quality. Parks can be as much as 17 degrees cooler than surrounding neighborhoods, and cooling can extend half a mile away. By relocating the bus lane away from the play areas, it will

also improve local air quality with reduced exhaust and diesel fumes. In addition, specially landscaped gardens, bioswales, and porous surfaces filter rainwater, thereby cleaning stormwater runoff.

F. Partner and Collaborate

Collaboration with partners from multiple stakeholder groups is essential to redesign and activate the Madras schoolyard to develop solutions to environmental and public health issues. TPL is working in partnership with local and regional nonprofits, the local school district, and others for community engagement, collaboration on schoolyard design, management of the construction, and activation of the new space. Local and regional partnerships are a priority to foster trust and understanding of the process and encourage community engagement and participation. Local partnership roles and responsibilities shall respond to local needs and capacity, and a commitment to advance shared outcomes. Partners have diverse knowledge and expertise in health, education, climate, and equity.

Project Teams

The core Project Team comprises TPL, a contracted community coordinator, a contracted landscape architect, and the Communications Partner and Health Partner at the Willamette Partnership. The team meets weekly. The School Team is the Project Team plus the Madras Elementary Principal, the Jefferson County School District Director of Operations and Safety, and a Madras Elementary teacher. The School Team meets monthly and attends all school board meetings.

Key Partners

We have brought together diverse partners who do not typically interact with each other. Our key partners are the Willamette Partnership, a nonprofit; Jefferson County School District 509J, a local government; the Madras Elementary Parents Club, a community group; the Latino Community Association, a nonprofit; and the Jefferson County Faith Based Network, a faith-based nonprofit. Our partners are deeply committed to the project as evidenced by their support to date. We are deliberately letting each partner take the lead in determining their role, resources, and activities. This flexibility allows our partners to engage in Community Capacity-Building and Leadership Development (CPS Element 2) as they determine their role for each specific activity. As mentioned above, our work of Multi-Stakeholder Partnerships and Leveraging of Resources (CPS Element 4) is ongoing and will continue during the grant period.

The Willamette Partnership is a conservation nonprofit with a deep commitment to helping build stronger, healthier, and more equitable communities that are sustained by nature. As Project Team members, they are contributing time of two staff members for community engagement and technical assistance.

The Jefferson County School District 509J is the local school district serving the region. Their mission is to unite to empower culturally enhanced learners to shape the world. Their role is to be the liaison for the schoolyard development and supporter of efforts to engage with students, staff, and parents. As property owners, they will have final approval of the design and will be

responsible for future maintenance and upkeep. They are engaged in the design process to ensure future maintenance needs are accounted for in the final design.

Similar to a parent-teacher association but not formalized as such, the **Madras Elementary Parents Club** is an all-volunteer group of parents and guardians of children attending Madras Elementary. They have and will continue to shape the design through direct feedback and connecting with other community members. They may also choose to participate in organizing environmental education and activation activities as their capacity allows.

The Latino Community Association, a 501(c)3 nonprofit, empowers Latino families to thrive by creating opportunities for advancement and building bridges that unite and strengthen. They are an essential connecting point for the largely Latino immigrant community in Madras. They have and will continue to play a vital role in community engagement to ensure all historically marginalized groups have a chance to have their voice heard. They will provide critical input into onsite community art and signage representing the language, history, and the culture of the Latinx community in Madras. They will also assist with fundraising for construction costs and activation of the site through community events, as their capacity allows and as they determine how they will use the future space for their current programs.

The Bean Foundation's mission is to improve the lives of children, families, and young adults living in Jefferson County and the Confederated Tribes of Warm Springs, primarily through grants for recreation, education, and the arts. They are a local foundation in memory of Al Bean, a former insurance salesperson and real estate professional. As a local community foundation, according to former Madras Mayor Rick Allen, "their visionary leadership has been quietly building our community for decades, improving the quality of life of those they touch."[7] The Bean Foundation has provided a $25,000 grant for this project and has invited Trust for Public Land to reapply for future funding.

Stakeholders

In addition, our 11 stakeholders committed to the project represent a broad spectrum of sectors and interests. Stakeholders include:

City of Madras (local government), Confederated Tribes of the Warm Springs (Tribal government), Bean Foundation (nonprofit foundation), Family University (nonprofit), Jefferson County Public Health (local government), Jefferson County Public Library (local government), Madras Aquatic Center & Recreation District (local government), Madras Elementary Parents Club (nonprofit), Madras Elementary School (local government), Madras Faith Based Network (faith-based nonprofit), Madras High School Early Childhood Education Program (academia), Oregon State University Extension Nutrition Education/Supplemental Nutrition Assistance Program Education (SNAP-Ed) (academia), Saint Charles Hospital (medical), Vamonos Outside (nonprofit).

In particular, the Confederated Tribes of the Warm Springs are an important stakeholder in the Madras schoolyard project. TPL presented the project to the Warm Springs Culture and Heritage

[7] See https://www.thebeanfoundation.com/general-1

Committee and is consulting with them on design themes, signage, and art to represent the Tribe's history, language, present life, and future in Madras and the greater Jefferson County. Specifically, members of the tribal Committee will work with the project design team to review and approve information about the Tribes' history, language, and relationship to plant material.

2. Project Activities

A. Project Activities

With the requested U.S. EPA support the Trust for Public Land (TPL) and its partners will continue the engagement process for programming, implement construction of the schoolyard, and conduct site activation and environmental education at the Madras Community Schoolyard.

Activity A: Community Engagement to Increase Awareness of Schoolyard Solutions

TPL and key partners and stakeholders will continue the participatory design process. The engagement process will be focused on continuing to build and deepen community partnerships and community capacity to engage in problem solving and decision-making processes related to the schoolyard; ensuring safe and inclusive access and opportunities for communal use; and informing the culturally diverse representation of Madras' rich cultural heritage and histories through signage and art installations.

- In-classroom engagement with all 405 elementary school students to teach students about environmental justice issues, mental and physical health, and community representation through art and signage
- 4 quarterly community events to maintain momentum, solicit feedback, and ensure community awareness of how this schoolyard will address environmental justice issues, mental and physical health, and community representation through art and signage
- Meet with the school district to finalize and approve the community-informed design
- Through input from community engagement, development of community, student, and tribal-informed educational and artistic signage that is reflective of the diverse and vibrant community cultures and Traditional Ecological Knowledge to ensure continuous learning of all students and community members

Goal: Encourage inclusivity, and community ownership and adoption of the site for outdoor and environmental learning, and regular use outside school hours, as a community hub.

Activity B: Schoolyard Development

TPL and the Jefferson County School District will oversee development of construction documents, a competitive bid process, contractor selection, and construction.

- Monthly meetings with the school district and bimonthly meetings with the school board to track progress, share updates, and ensure continued support
- Run competitive bidding process for subcontractors, in accordance with local, state, and federal procurement requirements
- Complete required permitting for the project at the state and local level
- Construction process to be completed by the end of 2024
- Use EPA grant funds for site preparation, equipment, materials, construction, and construction administration of several components of the Madras Community Schoolyard in relation to improving air quality, mitigating climate and health risks from extreme heat, climate resiliency and adaptation

Goal: Construction of new community schoolyard featuring community-identified amenities.

Activity C: Community Capacity and Partnership Building for Ongoing Schoolyard Stewardship
Before and after construction of the schoolyard, TPL and key partners will host community events and activate the schoolyard site through programming to be developed in coordination with key partners and stakeholders as their expertise and capacity allows.

- 5 community partner dinners to solicit input, maintain momentum and excitement, and discuss and develop ongoing site programming and maintenance of the new schoolyard
- Deepen relationships among partner organizations to ensure collaborative, ongoing programming and maintenance of the schoolyard once construction is complete
- Identify partner(s) to manage the greenhouse and planting beds and work with them to develop a long-term stewardship plan

Goal: Deepen stakeholder partnerships to ensure continued collaborative programming, stewardship, and maintenance of the schoolyard, to sustain its status as a community hub and ensure the environmental and public health benefits are fulfilled to their fullest potential.

B. Milestone Schedule

Q1: Fall, November 1, 2023- December 31, 2023

- Grant agreement finalized that details timelines for financial and progress reporting.
- TPL will convene the Project Team to discuss budget, timeline, a regular meeting schedule, and activities between November 2023-December 2024.
- TPL will work with contracted Landscape Architect and the school district to complete 100% construction documents, permitting and bidding process for construction.
- Project Team and partners, will host 1 community partner dinner in relation to site programming and maintenance of the new schoolyard.
- Project Team and partners will host 1 community engagement event in relation to site programming and activation of the site and its new elements.

MILESTONES: Grant agreement executed. First Project Team meeting. Completion of 100% construction documents, permitting and bidding processes. Completion and documentation of community engagement events about programming and maintenance as well as activation of the site post-construction.

Q2: Winter, January-March 2024

- Weekly Project Team meetings; Monthly School Team meetings; Bimonthly school board meetings
- TPL will work with contracted Landscape Architect on construction management.
- Project Team and partners will host 1 community partner dinner in relation to site programming and maintenance.
- Project Team and partners will host 1 community engagement event in relation to cultural inclusivity of art, signage.
- Construction: site preparation to begin *(weather dependent – could be pushed to Q3).* This includes removal of asphalt, earthwork, removal of the bus lane and all outdated play equipment.

MILESTONES: 13 weekly Project Team meetings. Site prep for construction to begin *(weather dependent)*, removal of asphalt, bus lane, and outdated equipment. Completion and

documentation of 2 community engagement events, in relation to programming and maintenance as well as signage, art, and cultural inclusivity.

Q3: Spring, April-June, 2024

- Weekly Project Team meetings; Monthly School Team meetings; Bimonthly school board meetings
- TPL will work with contracted Landscape Architect to provide construction management for the project.
- Project Team and partners host 1 community partner dinner in relation to site programming and maintenance of the new schoolyard.
- Project Team and partners host 1 community engagement event to maintain momentum prior to the ribbon cutting ceremony and celebration tentatively scheduled for late Fall 2024, in relation to programming and activation.
- Construction: continued site preparation, earthwork, and material purchasing.

MILESTONES: 13 Project Team meetings. Site prep completion, materials purchased. Completion and documentation of 2 community engagement events, programming, maintenance and the groundbreaking ceremony and celebration to initiate construction.

Q4: Summer, July-September, 2024

- Weekly Project Team meetings; Monthly School Team meetings; Bimonthly school board meetings
- TPL will work with contracted Landscape Architect to provide construction management for the project.
- Project Team and partners host 1 community partner dinner in relation to site programming and maintenance of the new schoolyard.
- Project team and partners host 1 engagement event to maintain momentum prior to the ribbon cutting, tentatively scheduled for late Fall 2024, in relation to programming and activation.
- Construction: grant-funded elements/structures; shade pavilion, outdoor classrooms, and the bus lane relocation.

MILESTONES: 13 Project Team meetings. Completion and documentation of 2 community engagement events, programming, and maintenance.

Q5: Fall, October-December, 2024

- Weekly Project Team meetings; Monthly School Team meetings; Bimonthly school board meetings
- TPL will work with contracted Landscape Architect to provide construction management for the project.
- Project Team and partners to host 1 engagement event prior to ribbon cutting, in relation to programming and activation.
- Construction: completion of grant-funded elements/structures; shade pavilion, outdoor classrooms, and the bus lane relocation.
- November 2024: Ribbon Cutting Ceremony and Celebration!

MILESTONES: Weekly Project Team meetings through completion. One Post-project Evaluation meeting. Completion of all EPA-funded elements/structures of the new community schoolyard. 1 Community engagement event prior to ribbon cutting. Activation &

Programming: have 1 community partner and champion for greenhouse and planting beds, have 1-2 educational and or environmental community or youth activities scheduled on site.

C. Itemized Budget Sheet

Please see the attached budget sheet for a breakdown of costs. The budget consists of personnel, fringe benefits, travel, contractual, and other categories. For personnel, the budget is 33% of the Project Manager's time, totaling $31,600. Fringe benefits are 48% of the personnel salary, totaling $15,168. Additional funds outside this grant are covering the staff time for TPL's Oregon State Program Director.

Contractual costs include a Community Coordinator and Landscape Architect. The Community Coordinator is estimated at 15 hours per month for 12 months, for a flat salary of $20,000 a year. This Coordinator will act as a liaison for project design, engagement, and schoolyard activation. The Landscape Architect is budgeted for $18,003. The landscape architect will work with TPL and partners to complete final community engagement, finalize the design, oversee the competitive bidding process, and manage construction.

Capital construction of the schoolyard falls under the Other budget category, totaling $368,000. This grant will focus on bus lane removal and relocation outside of the new playground footprint, earthwork, including grading for better drainage and stormwater management, landscaping, including site preparation, planting trees and plants, and installing shade structures, including design, materials, and installation of trees.

The budgeted direct costs total $452,771. TPL has a negotiated indirect rate of 32.71%, which totals $27,729 in indirect costs when applied to all modified total direct costs. The total request to the EPA Environmental Justice Collaborative Problem Solving program is $480,500.

3. Environment Results – Outputs, Outcomes, and Performance Measures (Logic Model)

A. Environmental Results – Outputs/Outcomes

Short-term, the project will increase community awareness of the local environmental justice and public health issues of lack of access to physical activity amenities, lack of accessibility, exposure to air pollution, and vulnerability to excessive heat, and the benefits that nature-based solutions provide. As partners continue to work together through the Environmental Justice Collaborative Problem-Solving model and to refine the design through community outreach, we will increase our coordination and capacity for community building more broadly.

With construction scheduled to be complete in the fall of 2024, the project's most significant intermediate outcome is the transformation of the 2.55-acre schoolyard into a safe and accessible multigenerational space for students and the greater community outside of school hours. This will result in increased access to physical activity amenities for the 70% of Madras residents who live within a 10-minute walk of the school and increased use of the site. Renovation includes the bus lane relocation, an increase in shade with the shade pavilion and new tree plantings, and an outdoor classroom. Relocating the bus lane will result in reduced air pollution exposure, as idling buses will be further away, and more trees will provide oxygen and absorb pollutants. While these effects will occur immediately, the impact on community health will only be measurable further out, as a long-term outcome. This will also result in increased

local climate resiliency through infrastructure to mitigate heat waves and urban heat islands in the summer, and harsh, cold weather in the winter.

Long-term, the renovated schoolyard will serve as a new outdoor community hub, providing for greater social cohesion and physical and mental health. By adding a resource to the local built environment, an outcome will be addressing a social determinant of health to increase levels of physical activity and decrease stress levels through close-to-home access to nature. Being universally accessible, it will also bring together and serve all residents regardless of age or ability. Use of the outdoor classroom has the potential to raise future environmental leaders.

Please see the attached Logic Model for more details.

B. Performance Measurement Plan

We will track progress by tracking student, community member, and partner attendance at community events and activities; seeking feedback from partner organizations and community stakeholders throughout the process, what has been successful and what can be improved, through questionnaires or group meetings; pre- and post-activity surveys to collect data about student, community member, and partner understanding of the environment and perception of green spaces; informal interviews with stakeholders about whether this project strengthens partner relationships; and document through before and after photos the transformation of the community schoolyard. TPL will further refine these evaluation and performance measures with our Director of Evaluation and Learning who will be on-staff in June of 2023; they will help the Program Team develop a robust performance management and evaluation process.

C. Sustainability Plan and Community Vision

The result of this project will be a completely renovated community schoolyard that is resilient to climate impacts and open to the public outside of school hours. We will have designed the schoolyard to minimize future maintenance requirements. The school district will maintain the schoolyard within their annual maintenance and facilities budgets. For additional support and upkeep of some of the schoolyard components, for example the planting beds and greenhouse, we are partnering with local community groups to help maintain those gardens when school is not in session. With the numerous, wide-reaching, and diverse key partners and stakeholders we have already developed and will continue to develop, we are confident that these groups will be able sustain the momentum built by the project to continue to use the schoolyard for future community events.

This project will also directly inform TPL's Oregon Rural Schoolyards Program. Once complete, we will work to inspire future actions by using Madras as a model demonstrating a successful pilot project. We will create and share a replicable process template and case study on best practices in community engagement, design, and funding, which other communities can use to undertake rural green schoolyard projects in Oregon and beyond. Outside the scope of this project, our program is working in two other communities, and we hope to bring lessons learned from Madras to these and others as we extend beyond the program's three-year pilot.

4. Programmatic Capability

A. Organizational Experience

Nationally, with help from our partners and supporters, TPL has created nearly 300 Community Schoolyards projects, and continues to lead the movement to transform our nation's asphalt playgrounds into vibrant green spaces that are improving student education outcomes and community health and climate resiliency. Since 1972, we have worked with communities nationwide, collaborating with thousands of students, parents, schools, and neighborhoods to create nature-rich schoolyards designed to address climate, health, and educational inequities. This has put more than four million people within a 10-minute walk of a quality schoolyard park.

TPL staff learn from each other through webinars, intranet, and peer mentoring, ensuring that lessons learned in one community are available to all project managers. The national schoolyards team has developed trainings and templates for the Oregon project team.

B. Staff Experience/Qualifications of Project Manager

Amanda Craig, Oregon Rural Community Schoolyards Project Manager, is the project manager for this project. She has worked at TPL for one year and is a recent graduate of the University of Oregon with a Master of Landscape Architecture and a B.S. in Environmental Studies. Prior to graduate school, Amanda worked for her Tribal Community, the Confederated Tribes of the Coos, Lower Umpqua, and Siuslaw Indians, as the Air and Water Protection Specialist. Her work focused on conserving and restoring ecological and cultural health within the Tribes' extensive ancestral lands. Amanda's education, work experience, and interests are deeply rooted in Indigenous, cultural and environmental stewardship and management, with a focus on ecological health, education, equity, and inclusion here in Oregon. For this project, Amanda will oversee all project activities, manage partner and stakeholder engagement, track progress, and track the budget. She will be responsible for all performance and financial reporting to the EPA.

Kristin Kovalik, Oregon State Program Director, is overseeing this project. She has worked at TPL for over 25 years. During this time, she has worked with communities in Oregon, Washington, Montana, and Idaho completing forest and farmland conservation projects and working on conservation finance measures. Kristin holds a B.S. from Pennsylvania State University, a Bachelor of Landscape Architecture from University of Oregon and a Certificate in Sustainable Management from Duke University.

Kristin was the project manager for the Crooked River Canyon Wild and Scenic River project south of Madras in Jefferson County where she worked with community members, the Friends and Neighbors of the Deschutes Canyon Area, and the US Forest Service. Additionally, she recently completed TPL's inaugural rural schoolyard project in Chiloquin, a rural community where over half of residents identify as Native American and all 180 elementary school students qualify for free or reduced-price lunch. She worked closely with partners and the community to develop and implement their vision for a vibrant, green, and welcoming schoolyard.

C. Expenditure of Awarded Grant Funds and Plan for Compliance with EPA Pre-Award Compliance Review for Nonprofits

TPL has a rigorous oversight process for Federal Awards and has a strong record in managing federal grants and contracts. All awards are reviewed by legal, finance, and accounting staff, who are trained in monitoring and overseeing federal awards. We also employ a federal grant manager to administer and track the organization's federal awards and ensure all compliance

requirements, such as the submission of timely programmatic reports and Federal Financial Reports, are successfully met. Additionally, as a best practice TPL aims to request withdrawal of cash to reimburse grant expenditures on a quarterly basis and will do so for this grant. A dedicated project director of finance and federal grants manager also work jointly to ensure all anticipated costs are allowable under award program guidelines. Monthly reports are provided to all budget managers and reviewed jointly with finance staff and budget managers.

The organization has an outstanding financial system that allows for tracking of all funding sources, any requirements for restrictions, and matching of allowable expenses for each fund. The organization also has strong accounting controls that include separation of duties, cost tracking, expense approvals, checks and balances, and cash receipts and disbursement. Specific officials are designated to approve payrolls and other major transactions. The time and accounting system tracks effort by cost objective and time distribution records. Cash receipts are promptly logged in, restrictively endorsed, and deposited in an insured bank account. Bank statements are promptly reconciled to the accounting records. All disbursements are made with supporting documents. The organization conducts a single audit annually and our annual audits have not identified issues. The organization maintains healthy reserves that exceed the minimum amount set by the Board of Directors.

5. Past Performance

Within the last five years, TPL has been awarded numerous federal assistance agreements and grants. TPL is successfully managing each agreement, implementing grant activities, and meeting all reporting requirements. A selection of recent agreements, including all recent EPA grants, are described below.

- **U.S. Environmental Protection Agency Environmental Education FY2021 Grant**. $100,000 grant for the "Environmental Education through Stewardship of Philadelphia Green Schoolyards" project. Grant period is July 2022-June 2024.
- **U.S. Forest Service (USFS) FY2021 Community Forest and Open Space Program Grant.** $200,000 grant for the "Community Forests, Public Health, and Tribal Access" project. Grant period is Aug 2021-Sep 2023.
- **National Endowment for the Arts (NEA) FY2021 Our Town Grant for Arts Engagement, Cultural Planning, and Design Projects.** This is a $75,000 grant for the "to support inclusive engagement and creation of a space representative of the people, language, place and culture of Chiloquin, OR" project. The grant period began in July 2021 and will be complete in June 2023.
- **U.S. Environmental Protection Agency FY2019 Brownfields Clean Up Grant**. $500,000 cooperative agreement for the "9th Street Park Cleanup Project in East Wenatchee, Washington" project. Grant period is Oct 2019-Sep 2022.
- **U.S. Environmental Protection Agency (EPA) FY2018 Environmental Education Grant**. This is a $100,000 EPA EE grant for the "Alton Park Riverwalk Connector Environmental Education and Experiences" project. Grant period is Oct 2018 - Mar 2022.

Letter of Commitment
EPA Environmental Justice Collaborative Problem Solving

I am writing to indicate our commitment to partnering with the Upper Snake River Tribes (USRT) Foundation on the **Tribal Youth Environmental Justice and Climate Leadership Program**. We are excited by the goals of this project to 1) improve the environmental justice literacy of tribal youth; 2) authentically connect tribal youth to local and regional environmental justice and climate issues that impact their community through collaborative engagement; and 3) empower tribal youth to take action through career and workforce development in climate and environmental justice.

Friends of the Owyhee (FOTO) is a nonprofit organization conducting conservation advocacy, stewardship, and responsible recreation in the Owyhee region.

Since FOTOs establishment in 2019, USRTF and FOTO have not officially done any projects together though we have been in several, large coalition style collaborations, such as the GEM3 project and work on legislation such as the 2020 SB 2828. During that time we have often discussed the potential for collaborations, particularly on place-based youth programming. We are excited to put that potential into action.

Should USRT be awarded the EPA EJCPS grant, Friends of the Owyhee will assist through our expertise in geography and geology of the Owyhee region, engaging community youth in place-based education and commitment to uplifting disadvantaged communities. FOTO will participate in all partnership meetings and necessary calls to organize and plan for appropriate engagement throughout the course of the program. FOTO also commits to the following:

Year 1:

- Participating in partnership collaboration meetings
- Building curriculum and trip outlines

Friends of the Owyhee

Year 2:

- Providing activities and support for one (1) field trip based in Boise, ID
- Run one (1) pilot trip in the Owyhee

Year 3:

- Providing activities and support for four (4) career focused field trips that allow students to learn about fieldwork, career opportunities, and reconnect with their ancestral homeland in the Owyhees.

The above services will be contributed as a subgrantee of this grant for $6,000 annually.

We are excited to be a partner on this project and increase the engagement of tribal youth in Environmental Justice and climate change.

Sincerely,

Sammy Castonguay
Programs Director,
Friends of the Owyhee

IDAHO
CONSERVATION
LEAGUE

Scott Hauser

Upper Snake River Tribes Foundation
Boise, ID 83706

RE: EPA Environmental Justice Collaborative Problem Solving - Letter of Commitment

I am writing to indicate the Idaho Conservation League's (ICL) commitment to partnering with the Upper Snake River Tribes (USRT) Foundation on the Tribal Youth Environmental Justice and Climate Leadership Program. We are excited that the goals of this project strive to 1) improve the environmental justice literacy of tribal youth; 2) authentically connect tribal youth to local and regional environmental justice and climate issues that impact their community through collaborative engagement; and 3) empower tribal youth to take action through career and workforce development in climate and environmental justice.

Founded in 1973, ICL is Idaho's oldest and largest state-based, non-profit conservation organization. We are a membership organization with members and supporters across Idaho, a Board of Directors with statewide geographic representation; offices in Boise, Ketchum, McCall and Sandpoint; employing approximately 30 staff. Our vision is an Idaho where public lands remain public and are well managed, air is clean, lakes and rivers are healthy, fish and wildlife thrive, and a prosperous, sustainable future exists for all Idahoans. Clean water, clean air, public lands, and abundant fish and wildlife should be accessible to everyone, and ICL is committed to a long-term goal of broadening our work to better serve the diversity of people our work connects to, particularly those populations with traditionally underrepresented voices or marginalized communities.

ICL has enjoyed a long and productive working relationship with USRT. Over the years we have worked together on numerous water quality and human health issues related to mercury and fish consumption rates. We have also worked on resident and anadromous fisheries issues, land management, and climate change related work.

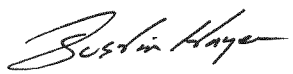
Should USRT be awarded the EPA EJCPS grant, ICL will assist by using our expertise in Idaho's most pressing environmental issues and help to support and empower youth activism, while committing to uplift Idaho's underrepresented and marginalized communities. ICL will participate in partnership meetings and necessary calls to organize and plan for appropriate engagement throughout the program. ICL also commits to the following:

Year 1:

- Participating in 2 virtual EJ/climate classes with a call to action
- Participate in 1 on-reservation workshop

Year 2:

- Participating in 2 virtual EJ/climate classes with a call to action
- Participate and provide support for 1 youth-led service learning opportunity, within the reservation
- One hosted field trip to Boise focusing on direct action activity with ICL's Youth Engagement staff



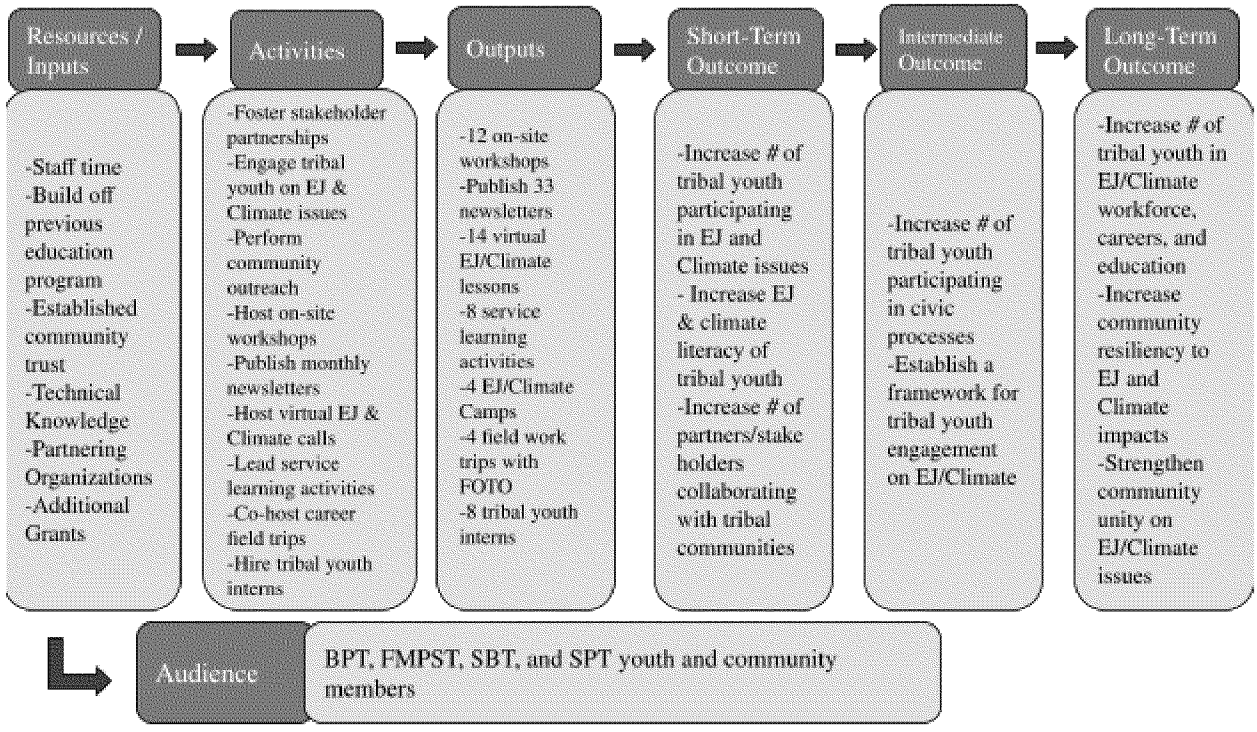
Year 3:

- Participating in 2 virtual EJ/climate classes with a call to action
- Host one tribal youth intern at ICL

Additionally, the Idaho Conservation League will explore other opportunities whether that be on reservation workshops alongside USRT or near one of our offices. The above services will be contributed in-kind.

We are excited to be a partner on this project and increase the engagement of tribal youth in Environmental Justice, climate change, and ICL's opportunities.

Sincerely,



Justin Hayes
Executive Director

3.0 ENVIRONMENTAL RESULTS

Outputs, Outcomes, and Performance Measures

Environmental Results (Logic Model)

Budget Narrative and Itemized Sheet

Line Item	Description	Total
Personnel	• Outreach and Education Coordinator @ $50,000 annual salary X 100% of time on project = $150,000 for three years. • Administrative Costs: $7500 X 3 years = $22,500 • Internship wages: $20 per hour X 20 hrs a week X 12 weeks X 8 tribal interns = $38,400	$210,900
Fringe Benefits	• Coordinator 15% of salary (medical, dentail, life, retirement) = $22,500 for three years.	$22,500

Travel	• Mileage for 12 workshops over three years (based on current GSA rates):
	  ○ Boise, ID >McDermitt, NV: $244.97 X 3 workshops = $734.91
	  ○ Boise, ID >Burns, OR: $247.59 X 3 workshops = $742.77
	  ○ Boise, ID>Owyhee, NV: $191.26 X 3 workshops = $573.78
	  ○ Boise, ID >Fort Hall, ID: $315.71 X 3 workshops = $947.13
	• Lodging for one night per workshop (based on current GSA rates):
	  ○ McDermitt, NV: $98 X 3 workshops = $294
	  ○ Burns, OR: $98 X 3 workshops = $294
	  ○ Owyhee, NV: $98 X 3 workshops = $294
	  ○ Fort Hall, ID: $98 X 3 workshops = $294
	• Per Diem for workshops:
	  ○ Idaho/Oregon/Nevada Rates: $44.25 per day X 8 workshops = $708
	• Mileage for eight field trips (two per tribe) over three years (based on current GSA rates):
	  ○ Fort McDermitt, NV > Boise, ID: $244.97 X 2 field trips = $489.94
	  ○ Burns, OR > Boise, ID: $247.59 X 2 field trips = $495.18
	  ○ Owyhee, NV > Boise, ID: $191.26 X 2 field trips = $382.52
	  ○ Fort Hall, ID>Boise, ID: $315.71 X 2 field trips = $631.42
	  ○ Boise, ID>TNC Silver Creek Preserve X 2 field days: $356.32
		$7,237.97

Supplies	• Workshop materials: $800 per workshop = $6,400 • Food for field trips: $32 per student per day (4 day field trip, estimating 30 students) X 2 trips = $7,680 • Educational materials (pens, paper, handouts, etc): $1,500 • Service Learning Activity Materials (water quality testing kit, air quality kits, educational materials, etc): $300 X 8 activities: $2,400 • Gear for field trips: $500	$18,480
Indirect Costs	• IDC rate agreement of 20% of salary: ($150,000 x 20%) = $30,000	$30,000

Other	• Subaward for FOTO over three years: $18,000 • Subaward for TNC over three years: $2500 (intern stipend), $3000 (intern travel), $8,000 (intern housing): $13,500 • Participant support costs (stipends for tribal chaperones): $150 per day per chaperone ($150 X 4 chaperones X 4 days X two trips per tribe) = $4,800 • Field trip activity costs: $5,000 per trip: $10,000	$46,300
		$335,417.97

1. **a. Project Summary Page**

•**Project Title:** Health + Wealth Domain

•**Project Location:** Bedford-Stuyvesant (11205, 11206, 11216, 11221, 11233, 11238), Brownsville (11212), East New York (11207, 11208), and Canarsie (11236), in Brooklyn NY

•**Applicant Information:** Shari Suchoff, Executive Director, Brooklyn Communities Collaborative Inc, 4802 Tenth Ave Brooklyn NY 11219

•**Brief Description of Applicant Organization** Brooklyn Communities Collaborative (BCC) empowers and engages community members through Participatory Action Research that identifies social determinants of health and community solutions.

• Are you applying for the **Small CBO Set Aside Track** for $150,000 projects? No

•**Project Abstract:** Health + Wealth Domain is an initiative to improve health and housing conditions for vulnerable Brooklyn residents while preventing against displacement, creating a model for how low-income renters can benefit from investments in air quality and energy efficiency. In the predominantly Black and low-income neighborhoods of Central and East Brooklyn, residents face disparately poor indoor air quality, leading to high rates of asthma. These are also heat-vulnerable neighborhoods where residents face higher indoor and outdoor air temperatures as a result of the urban heat island effect. Because of high energy costs and overburdened energy infrastructure, many residents lack access to cooling and are increasingly at risk of brown-outs. Traditional approaches to energy efficiency are not designed to benefit renters, and landlord upgrades may actually increase rent and displacement. As building owners and low-income communities look to the forthcoming investments from the Inflation Reduction Act, it is imperative to design solutions that center the needs of tenants and foster community resilience. BCC will conduct energy and health assessments to inform building investments – and design agreements, models, and best practices to ensure that those improvements benefit renters. The project will use hospital data to target buildings with a density of residents experiencing asthma. The planning process will uplift the health and environmental needs of residents to make the case for building investments and identify sources of funding for executing the improvements. BCC will also develop investment models and accountability tools that will ensure community health impacts, resilience, and environmental justice.

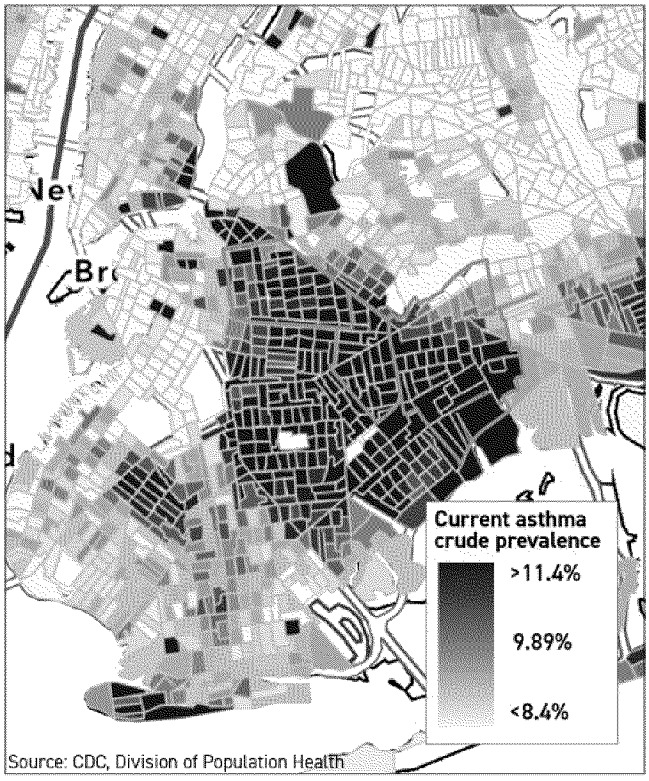
• **Project Type(s):** public education, engagement; community planning and consensus-building

• **Special Considerations:** Climate Change/Disaster Resiliency

• **Environmental Issues:** Air quality and asthma, healthy homes, mitigating climate and health risks from urban heat islands, greenhouse gas emissions reductions

• **List of Project Partners:** East New York Restoration Corporation, East Brooklyn Call to Action (CBOs); Hunter College (academic); Monadnock Construction Management and Real Estate, APEX Building Group (business/industry); One Brooklyn Health, Maimonides Medical Center (healthcare); NYC Dept. Housing Preservation and Development, NYSERDA (government)

• Will you need to develop a **QAPP for your project**? Yes



ED_016126_00000719-00001

1.0 Program Objectives

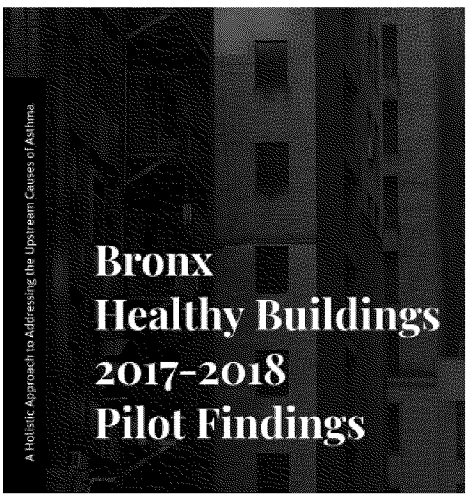
b. Environmental and Public Health information of the Underserved Community

Brooklyn is the most populous borough in New York City, with 2.6 million residents.[1] While celebrated for its overall diversity, many Brooklyn neighborhoods are characterized by low income, poor infrastructure, and racial segregation, all of which contribute to substantial health disparities. Residents in BCC's priority neighborhoods – **Bedford-Stuyvesant, Brownsville, East New York, and Canarsie** – experience higher levels of economic and social stress where poverty, unemployment, and rent burden are higher than the citywide average. Rates of violence, assault-related hospitalization, and incarceration are also higher. The physical environment, too, presents an array of risks and challenges to residents, with the highest rates of maintenance defects, insect and rodent infestation, and lack of access to fresh food.

Asthma prevalence in Central and East Brooklyn, 2020-2021

In particular, target communities experience **higher rates of asthma** and **heat vulnerability.**

Data reporting required by the Asthma Free Housing Act in 2019 reveals that Brownsville has the highest rate of adult asthma in New York City, nearly twice the rate of largely white and affluent neighborhoods. Surrounding neighborhoods came in just behind.



More than 70% of the housing in these neighborhoods are rental, and more than 30% of residents are rent burdened, with rates more acute among Black households and low-wage workers. Poor indoor air quality is tied to home design, construction, and maintenance, and a significant number of households surveyed in BCC's Participatory Action Research live in buildings suffering from decades of neglect and intentional efforts by management to keep housing conditions poor in order to push out long-standing tenants. Even newly constructed buildings can quickly fall into disrepair without proper management. Allergens produced by mold and pests are more prominent in older or poorly maintained homes due to inadequate moisture control and ventilation designs. Mold, pests, and lead contribute to poor health outcomes.

[1] US Census, 2021

ED_016126_00000719-00002

In New York City, increasing temperatures are intensified by the urban heat island effect, which leads to increased heat absorption by materials such as concrete and roads. Bedford-Stuyvesant, Brownsville, and East New York are among the most heat vulnerable neighborhoods in the city.[2] Over 70% of residents in Brownsville and 50% of residents in East New York are Black, and Black New Yorkers are twice as likely to die from heat-related stress.[3]

The confluence of rent burden, poor housing stock, and an underinvested built environment compound public health disparities in these neighborhoods, and efforts to date have been insufficient to the scale of the problem. While legislation like the Asthma Free Housing Act have increased awareness of this issue and the role of poor housing on health, the buildings in the most impacted communities have not taken action. Owners of multi-family apartment buildings often lack the upfront capital or incentive to invest in public health remediation. Building retrofits improve energy efficiency, but the costs are incurred upfront and savings take time to accrue. Financial benefits for landlords rarely translate to tenants. Moreover, landlord investments to improve the building stock often lead to increased rents and risk of displacement for current residents.

The Health + Wealth Domain draws inspiration from the Bronx Healthy Buildings pilot, which was launched in similarly impacted communities in the Bronx and in partnership with healthcare institutions. The Bronx pilot supported capital improvements to address health and energy concerns in nine buildings, reflecting over 530 units. Using electronic medical record data, the pilot was able to demonstrate reductions of patient visits for indoor air related illness of 68% at one facility – a 37% reduction among Medicaid patients – and a 100% decrease in patient visits for indoor air related illness at another facility.[4] These findings reflect savings to our publicly-funded healthcare system, as well as increased measures of comfort and safety among residents.

BCC Health and Wealth Domain aims to build upon the results in the Bronx and harness this historic moment of investment in the built environment to address climate change. Based on results from the Bronx pilot, we can expect similar results, including reductions in patient visits

[3] 2022 NYC Heat-Related Mortality Report: https://nyccas.cityofnewyork.us/nyccas2022/report/1
[4] Bronx Healthy Buildings Pilot Findings, available at: https://static1.squarespace.com/static/5a2021c5e5dd5b3a4dda00d4/t/64221f1a3f279e03e429e4a7/1679957787872/BPHC+Healthy+Buildings+Pilot+Year+Findings+and+Evaluation.pdf

ED_016126_00000719-00003

for indoor air related illness. The Inflation Reduction Act has made a large-scale investment in energy retrofits and building technologies that reduce greenhouse gas emissions. However renters are largely excluded. Indeed, where their landlords decide to invest in energy efficiency, low-income renters could face increased rent or displacement. With the efforts to build a Collaborative Problem-Solving Model, BCC aims to leverage this critical investment for the communities who stand to benefit the most.

c. Organization's Historical Connection to Underserved Community

BCC is rooted in community needs and community leadership. The impetus for BCC came from community leaders who organized in opposition to the proposed closure of Interfaith Hospital, a safety net hospital in Central Brooklyn, which threatened to reduce access to healthcare and jobs in some of the poorest and medically-underserved areas of New York City and New York State. Community leaders emerged with the goal to not only keep Interfaith Hospital open, but to transform it as both a hospital and as an economic asset in the community. The community-driven, asset-based approach to saving and sustaining Interfaith Hospital and developing BCC for associated initiatives was developed over a three-year, highly-participatory effort among an organized group of African-American community leaders, labor leaders, elected officials, businesses, and academic institutions.

BCC's approach and strategy is also directly informed and guided by seven years of Participatory Action Research (PAR), its key practice for harnessing community insight to identify problems and find solutions. BCC implements targeted efforts to address housing conditions (physical, economic, and social), access to healthcare, and economic opportunities. BCC was awarded, in collaboration with CUNY Hunter College, a grant from the E.M. Kauffman Foundation for community-engaged research with anchor institutions and Black-owned businesses in East and Central Brooklyn. BCC worked with partners in State government, housing developers, and One Brooklyn Health to inform the design of thousands of units of new affordable and supportive housing. PAR projects have galvanized and united a range of stakeholders, including community members, healthcare workers, clergy, activists, healthcare institutions, labor unions, elected officials, and real estate developers.

Toward ensuring the improved and sustainable maintenance of affordable housing, in Fall 2021, BCC collaborated with local CBO partners and real estate developers to launch a Property Management and Stewardship of the Healthy Built Environment Fellowship. The program was designed to train and place community members as skilled property management professionals in forthcoming housing developments and other buildings in Central Brooklyn. BCC and its partners developed a curriculum encompassing traditional property management certifications,

ED_016126_00000719-00004

with enhanced content on housing-as-healthcare, leadership development, community building and stewardship of the overall neighborhood environment. The Program's pilot phase ran from November 2022 – January 2023 with 15 participants and 100% completion rate. Early feedback has been enthusiastic, with developers expressing need for candidates and confidence in the curriculum and training process.

The Health + Wealth Domain will build on the Property Management Fellowship as well as the Health + Housing PAR in Bedford-Stuyvesant, Brownsville, and East New York that highlighted the acute health impacts that resulted from poor housing conditions and galvanized community action. The project offers innovative, structural approaches to remedy poor housing, health impacts, and ensure residents can stay in their homes.

d. Environmental Justice Collaborative Problem-Solving (EJCPS) Model

The EJCPS Model offers an invaluable framework for this project, given the currently misaligned interests and incentives among key stakeholders. The Health + Wealth Domain project will undertake elements 2 - 5 for this project period and resources, as described below.

EJCPS Model Element	**Project Elements**
1. Issue Identification, Visioning, and Strategic Goal-Setting	This was completed over extensive Participatory Action Research (PAR) in 2019 - 2020
2. Community Capacity-Building and Leadership Development	Building on PAR training methodologies, BCC will support awareness of and leadership around building health and greening.
3. Development of Multi-Stakeholder Partnerships and Leveraging of Resources	BCC is uniquely positioned to convene healthcare institutions, building owners, and residents/tenants for this project. This platform affords leveraging of financial and non-financial resources towards shared goals.
4. Consensus Building and Dispute Resolution	Health + Wealth Domain affords tenants and landlords new ways to address building maintenance issues.
5. Constructive Engagement with Other Stakeholders	This process, as well as the best practices and terms among landlords and tenants, have broader application and relevance to policymakers.
6. Sound Management and Implementation	The implementation and completion of building improvements is beyond the timeline of this project, but will be informed by accountability mechanisms developed during the project.
7. Evaluation	Evaluation will take place a year following implementation, comparing health impacts to the baseline collected by the project in Element 2.

ED_016126_00000719-00005

e. Project Linkages

BCC Health + Wealth Domain supports EPA Strategic Plan Goal 2, Objective 2.1, Promote Environmental Justice and Civil Rights at the Federal, Tribal, State, and Local Levels. BCC Health + Wealth Domain targets communities that have been overburdened by public health disparities and environmental harm and seeks to position impacted communities as advocates for change in their neighborhoods and beyond.

f. Partner and Collaborate

BCC will leverage and build upon diverse partnerships to achieve the vision outlined in Health + Wealth Domain. Partnerships include:

	Vested Interest	**Contribution to Project**
Community / Tenants Organizations *Provide support for tenant outreach and public education*		
East Brooklyn Call to Action	Represents dozens of community-based public health campaigns in the project area.	Leverage ongoing and aligned organizing among community residents
East New York Restoration Corporation (Subarwardee)	Entity charged with increasing economic opportunity in the area. Trains building managers to improve health outcomes.	Leverage current program to train building management staff
SEIU 1199	Significant number of 1199 members live in poor quality buildings in project area	Support for outreach, organizing, and neducation
Building Owners / Managers (Business / Industry) *Offer leadership among building owners / managers, advising on key project elements*		
Monadnock	Developers and owners of nearby affordable housing developments	Advise on the value proposition for building owners, terms for tenants
APEX	Developers and owners of nearby affordable housing developments	Advise on the value proposition for building owners, terms for tenants
Healthcare *Data management and tracking health impacts*		
One Brooklyn Health	Incentivized to reduce public health costs, particularly among the most vulnerable residents, who tend to drive Medicaid high-costs.	Support with data to identify target buildings, overall public health impacts of the program

	Vested Interest	**Contribution to Project**
Maimonides Medical Center	Incentivized to reduce public health costs, particularly among the most vulnerable residents, who tend to drive Medicaid high-costs.	Support with data to identify target buildings, overall public health impacts of the program
Academia *Support for research and data collection*		
Hunter College, Urban Policy and Planning (Subarwardee)	The Department is regularly seeking opportunities for applied student learning, faculty research publications	Students will support data collection and faculty will advise on program design and research methodologies.
Government *Financial support for capital improvements, potential policy changes to codify project learnings*		
Elected Officials	Their constituents experience health concerns; they are seeking low-cost, scalable interventions. Elected Officials engaged by BCC to date include: U.S. Senate Majority Leader Schumer, House Minority Leader Jeffries, Congresswoman Clarke, State Senator Myrie, and City Council Member Barron, and others.	Support for identifying potential funding, accountability for building owners and managers, amplification of project goals and outcomes.
NYC Dept. of Housing Preservation and Development	HPD works to preserve affordable housing. Although it seeks to engage smaller buildings, it has had difficulty attracting smaller buildings to use its products.	HPD offers no- or low-cost loans through the Green Housing Preservation Program. The project will direct building owners to this existing source of funding.
NY State Energy Research & Development Authority	NYSERDA is charged with reducing greenhouse gas emissions and climate risks	NYSERDA offers numerous funding programs for building retrofits and energy efficiency. The project will consider these funding sources.

Through Health + Wealth Domain, BCC will build a convening table that is poised to sustain these relationships beyond the project. Indeed, a critical outcome to the project will be formulating the ongoing governing entity, working agreements, and shared understanding that will engage on this work for years to come. Given how critical this work is to its long-term goals, BCC intends to hold regular convenings to ensure project monitoring and continued movement.

2.0 Project Activities / Milestone Schedule

a. Project Activities

BCC's Health + Wealth Domain will establish a collaborative problem-solving agenda that will convene tenants and building owners and advance building models that will advance critical public health and environmental justice efforts. The project will focus on key neighborhoods in Central and East Brooklyn to realize impact for this vulnerable population and ensure a model that addresses the greatest inequities, and it will ultimately build a toolkit for advancing in other parts of the borough and city.

(1) Planning and Data Sharing Agreements

BCC will work with administrators at One Brooklyn Health and Maimonides Healthcare System and faculty at Hunter College, Department of Urban Policy and Planning, to develop a data collection framework. This will serve as the foundation for the required Quality Assurance Project Plan (QAPP) and ongoing data collection and monitoring for the project. BCC will also brief and gather input from existing BCC Community Action and Advocacy Workgroup (CAAW), to offer input on the design and execution of the program.

(2) Community and Tenant Engagement

Leveraging data, the Participatory Action Research (PAR), and tenant-identified maintenance issues, BCC will engage tenant organizations and identify multifamily buildings in Central and East Brooklyn that are "hotspots" reflecting patients with high rates of asthma-related emergency room and hospitalization visits. BCC will also gather other public data such as rent

stabilization, energy and water data, and boiler retirement. BCC will work with tenant organizations to ensure that awareness of this data and need for action is shared and understood among community organizations.

(3) Landlord Outreach and Engagement

Leveraging insights from developer partners, BCC will outreach to landlords around the incentives and benefits of working with the Health + Wealth Domain. For this pilot, BCC aims to outreach to at least 25 building owners, with a goal for at least 4 participating in the pilot.

(4) Building Analysis and Value Proposition

A full audit will be completed for each building that elects to participate in the pilot program, identifying health, energy, and structural needs that – with investment – could realize health, environmental, and financial benefits. This could be anything from integrated pest management and mold remediation, to window replacement, to more wide scale electrification. The audit will also identify available incentives or rebates that may be available to building owners, as well as any additional financing that may be needed to complete the building improvement. This will form the basis of the value proposition for the building owner, as well as a guide for organizing additional funding that may be needed.

(5) Organizing Funding, Setting Mutually Agreeable and Beneficial Terms

With a strong value proposition at hand, BCC – along with key advisors and tenant leaders – will work to explore and propose mutually agreeable and beneficial terms that may be considered alongside capital investments. For example, if there is significant outside funding needed to undertake improvements, perhaps those improvements could be tied to longer-term and fixed rent increase amounts. Models could also be developed to ensure that the tenant-managed equipment (e.g. air conditioners, heat pumps) are managed to ensure the full benefit to the building owner. This work would yield key models, terms of understanding, and best practices that could be included with any additional funding BCC could bring to the table. BCC would work closely to ensure that these could be aligned, or even adopted, in public funding streams if appropriate. BCC will release a report outlining the value propositions uncovered, the opportunities to organize funding, and the terms that would ensure communities benefit.

(6) Building Improvements, Ongoing Accountability

Once agreements are in place, BCC will connect building owners to sources of investment and support tenant education and engagement around building improvements and associated

terms. The completion of improvements will extend beyond the three-year planning grant timeline (and program milestones and budget reflect this timeline).

b. Milestone Schedule

The project milestones below will advance project activities and objectives:

Month	Project Milestone
Phase 1: Community Engagement, Building Identification	
Months 1 - 3	**(1) Planning and Data Sharing Agreements** ● Complete and garner approval for Quality Assurance Project Plan (QAPP) ● Execute program subawards and outline performance management expectations to all stakeholders ● Design core program materials ● Briefing for key stakeholders, including elected officials
Months 4 - 7	**(2) Building Identification, Community and Tenant Engagement** ● Compile key health and building data, identify target buildings ● Engage community residents, engage tenants ● Begin identifying potential building audit contractors
Months 8 - 13	**(3) Landlord Outreach and Engagement** ● Refine landlord value proposition ● Outreach to at least 25 building owners, garner sign-on of 4 in pilot program ● Execute contracts with building audit contractors
Phase 2: Making the Case for Investment	
Months 14 - 18	**(4) Building Analysis and Value Proposition** ● Complete building audit, ensuring proper communication with landlord and sources of reimbursement
Months 19 - 29	**(5) Organizing Funding, Setting Mutually Agreeable and Beneficial Terms** ● Project update briefing to key stakeholders, including elected officials ● Work to identify potential funding sources for capital improvements for each of the 4 buildings, in cluding existing public funds and other sources ● Develop draft term sheets and accountability tools and develop into report ● Solidify project details (financing, term sheet) for pilot projects that advance
Phase 3: Building Models for Equity	
Months 30 - 36	**(6) Building Improvements, Ongoing Accountability** ● Support implementation of building improvements in pilot buildings, including formalizing tenant engagement and other forms of engagement / accountability

ED_016126_00000719-00010

	• Disseminate key reports and findings to impacted communities and beyond • Identify lessons learned for future pilots and other partners

c. Itemized Budget Sheet / Budget Narrative

BCC has designed a budget proposal (Attachment 1) that reflects key areas of investment and follows federal budget guidance:

- East New York Restoration Corporation and Hunter College, Department of Urban Policy and Planning, have been identified for subawards. Both are long-standing partners whose work organizing and educating residents and supporting research are critical to the project. Subaward amounts are based on existing and previous grant amounts.
- Contracted services, namely building assessments, will be completed by consultants selected through competitive procurement. The project's first priority will be aligning with vendors that enable cost reimbursement through existing state building audit programs. In alignment with federal Justice40 and Section 3 requirements and BCC's goals to increase economic impact of this investment, BCC will also seek to recruit bid proposals from minority- and women-owned businesses. BCC will leverage support from the NYC Department of Small Businesses, supplier diversity team, to ensure effective outreach to eligible businesses.

3.0 Environmental Results – Outputs, Outcomes, and Performance Measures (Logic Model)

a. Environmental Results (Logic Model)

Please see Attachment 2 for the associated Logic Model.

b. Performance Measurement Plan

BCC will work closely with partners and subawardees to track and monitor project performance and progress throughout the project period, to ensure execution towards project goals and effective stewardship of resources. BCC will:

- Establish and communicate clear accountability across the collaborative with a **DARCI Framework** that outlines the organizations and individuals who are Decision-makers, Accountable, Responsible, Consulted, and Informed in each of the key project activities. This will ensure overall cohesion among project stakeholders and collaboration, while ensuring clear accountability and oversight for all project activities.
- Develop and maintain an overall **Project Progress Tracker,** building from the Project Activities and Milestone described above and the Logic Model (Attachment 2). This will be shared amongst all project stakeholders to highlight progress and potential

ED_016126_00000719-00011

roadblocks, and ensure the identification of key activities and dependencies across workstreams and partner organizations. The Project Progress Tracker will include Key Performance Indictors (KPIs):

- Development of building / health data framework (percent completion)
- Number of community residents engaged (towards 300 resident goal)
- Outreach to building owners (towards 25 outreach, 4 signed-on to pilot)
- Number of tenants engaged (towards 100 resident goal)
- Completion of building assessments (4 in pilot)
- Completion of key policy meetings and products

- Conduct **Project Meetings** on a monthly basis across all key project partners to check-in on a regular interval and foster collective accountability for this project. Meetings will include review of Project Progress Tracker and support collective problem-solving as needed. In the project kick-off and around key milestones, additional meetings and subgroubs will be identified to focus on developing key program elements (education materials, program identity, landlord-facing materials).
- Collect **Outreach Trackers** from subawardees and key project partners once outreach begins. During the focused outreach periods (beginning Month 3 in Year 1), these will be collected on a weekly basis. Trackers will include numbers of residents engaged, percent towards goal, information about the form of engagement (one-on-one, group meeting), participant name and contact, and building of residence. Subawardees will be trained and expected to input this data into BCC's Customer Relationship Management (CRM) system, building on best practices developed during PAR processes.
- Conduct **Partner Meetings** with each of the subawardees quarterly, to track each individual organization's progress towards its project goals. This will ensure proper time for relationship building, shared learning, and any course-correction as needed. In these meetings, BCC will also review the grant award distribution with subawardees, to ensure effective and timely spending and accounting.
- **Provide bi-monthly updates** to the BCC Community Action and Advocacy Workgroup (CAAW) and EPA staff involved in the cooperative agreement, to ensure key progress.
- Complete other grant reporting as required by EPA under this Cooperative Agreement.

c. Sustainability Plan and Community Vision

BCC is eager to use the efforts and impact of the Health + Wealth Domain to further the community's vision for strong and healthy communities. Communities in Central and East Brooklyn made their vision clear in the Health + Housing Participatory Action Research (PAR)

undertaken 2020 - 2021. BCC will continue to work closely with community-based groups to ensure the results of Health + Wealth Domain build momentum and achieve the community's vision for healthier indoor air, affordable housing, and climate resilience.

BCC is proud to be connected to key organizations for the health and economic prosperity of Central and East Brooklyn communities. BCC's work with the Health + Housing PAR included direct community "balloting" about key priorities (see picture) and resulted in the formation of new community coalitions, including the East Brooklyn Call to Action, comprised of community-based organizations advancing health and social services. The community has expressed an eagerness to see real action towards their Health + Housing goals and to lift-up the kinds of policy actions and scalable interventions. BCC believes the Health + Wealth Domain will offer the critical proof-points to advance community leadership.

The outcomes of the Health + Wealth Domain have been designed to benefit the target neighborhood, as well as others in New York City and urban areas beyond that are grappling with how building improvements – to improve indoor air quality and reduce greenhouse gas emissions – do not negatively impact renters. Indeed, there is significant opportunity to identify examples and models that demonstrate the benefits building improvements to renters, building owners, and community stakeholders such as hospitals. Through this project, BCC intends to have demonstrated proof-points in a critically impacted neighborhood that can be replicated to other communities seeking to realize community wealth building and environmental justice.

4.0 Programmatic Capability

a. Organizational Experience

BCC convenes and supports multidisciplinary partners to work together to improve the health of Brooklynites. It builds on collaborations that have provided 80,000 complex patients with care management; reduced recidivism among the justice-involved by 10%; decreased preventable hospitalizations by 30%; and established career ladders for 240 medical assistants promoted to health coach, among others.

ED_016126_00000719-00013

Through Participatory Action Research (PAR), BCC has gathered data on lived experience in neighborhoods where health disparities were most evident, learning directly from community members, based on the premise that those most affected by issues and problems have the most insight into how best to solve them. To date, PAR initiatives have trained 190 community members, elicited 90+ community-endorsed recommendations, and identified 400 community assets. BCC has worked to sustain and further leverage the momentum created by these investments, refining and scaling existing work, and advocating for funding and supportive public policy. This demonstrated success uniquely positions BCC to improve the health and wealth of those living and working in Brooklyn, due to its established role as a trusted convener of impactful organizations and its track record of engaging the community in priority-setting.

BCC reflects community voice in its governance. The Community Action and Advocacy Workgroup (CAAW) was established to coordinate PAR programs and is now part of BCC's formal governance structure to coordinate in-depth involvement of the local community in advancing health. CAAW serves as a model for cross-sector collaboration, including over 125 community stakeholders with a majority of its membership residing in the neighborhoods served, and meets regularly to coordinate PAR and implement research-identified interventions.

BCC programs use a community-empowered and community-driven approach. BCC partnered with NYC DOHMH to inform Brooklynites about COVID-19 testing and vaccination. Through the partnership, 14 CBOs received funding to conduct outreach to increase vaccination and testing, armed with PAR findings about the best way to reach different communities and real-time weekly clinical surveillance data, translated by BCC's data analytics team. Overall, this partnership resulted in 300,000+ targeted outreach texts, expanded testing by 20%, and 2,000+ vaccinations administered. BCC will leverage its inclusive governance structure for this initiative, ensuring that decision-making power and resources are shared amongst partners.

BCC has successfully managed a diverse portfolio of grant awards totaling more than $9M from public and private funders. In addition, BCC's management team in the Department of Population Health at Maimonides Medical Center has extensive experience executing large-scale innovative programs, including DSRIP, through which the team distributed over $300M via 1500+ subcontracts with 600+ health and community partners across Brooklyn. BCC's fiscal management processes are audited regularly through a robust compliance program.

BCC's management team provides support to a number of entities directly, including the largest DSRIP network of providers in Brooklyn and the Brooklyn Health Home, a network of community-based care management providers. Through these efforts, staff has worked with a network of over 1,000 organizations who together provide service to more than 600,000

residents in an effort to improve health and build wealth in Brooklyn. The team also managed an award of $15M from 2012-2015 to address medical, behavioral and social needs for adults with serious mental illness, which demonstrated improved outcomes, decreased inpatient/ED utilization, and Medicaid savings of $48M.

b. **Staff Experience / Qualifications of Project Manager (PM)**

Two BCC staff members, Samori Touré, JD, and Emmaneulla Chevalier, MPH, will serve as Project Managers, leading and coordinating around distinct areas of the Health + Wealth Domain project. BCC's Deputy Director, Gretchen Susi, Ph.D. will provide close oversight to the Core Project Team, which will include key staff, partners, and consultants. This team will also be supported by BCC Advisor, Christine Curella, who has extensive experience in the relevant aspects of the project. Additional communications support will be provided by the BCC Communications Manager.

Samori Touré is BCC's manager for enterprise development and holds a JD from the CUNY School of Law. He has a background in NYC housing law, and is a native Brooklynite with a strong commitment to building health, health and civic infrastructure in Brooklyn. Emmanuella Chevalier, MPH, serves as BCC's manager of community engagement across all projects. Ms. Chevalier is also a native Brooklynite and lives in East New York, one of the neighborhoods where the proposed project is focused. Ms. Chevalier is skilled at relationship building and the maintenance of the communication channels that are crucial to BCC's work.

Dr. Susi has more than 25 years of experience in catalytic community engagement and participatory action research and a long track-record of successfully bringing together a wide range of leaders and decision-makers to address complicated issues. Her work with community, education, foundation, government, housing and media leaders from across the country has led to significant improvements in policy, institutional practices, media representations, and even in the design of youth-serving facilities. Before her appointment at Brooklyn Communities Collaborative, she was the director of Wellness Empowerment for Brooklyn, a project dedicated to addressing the social determinants of health and guided by participatory action research efforts in Brooklyn neighborhoods. During her tenure at MIT CoLab, which led directly to her work at BCC, I co-authored *Building a Culture of Health In Central Brooklyn: From Protest to Health Systems Transformation* (Cunningham, Susi, et. al., 2020), an in-depth case study of the creation of the One Brooklyn Health System and the alliance of community, health care and union leadership that led to it. With the insights gained during the writing of the case study and conducting PAR in Brooklyn, Dr. Susi worked with the team in the Department of Population Health at Maimonides Health to launch BCC in 2019.

ED_016126_00000719-00015

Dr. Susi's work at BCC is informed by the experience she earned while serving at the Aspen Institute Roundtable on Community Change where she led the Roundtable's efforts to implement place-based racial equity-promoting strategies with partners from across the country. Her work has focused on community development policy and practice, the effects of stress on human development and wellbeing, social movements, resident activism in public housing, cross-sector alliances, and methods for identifying and dismantling structural racism. She developed and raised funds to launch and sustain the Racial Equity Leadership Development Program at the Aspen Institute for leaders from across sectors to build the knowledge, political will and allies necessary to increase social and economic opportunity. The program served more than 1,000 people, effected changes in organizational policies and practices, and inspired the development of new curricula in schools and universities as well as the launch of a yearlong public radio series. She co-authored *Structural Racism & Community Building* (2004), an influential account of racial dynamics in the 21st century that led to significant change within organizations, foundations and institutions throughout the country.

Christine Curella is an advisor to policymakers and grassroots leaders on community wealth building initiatives, building on more than fifteen years of experience operationalizing innovative and inclusive economic development programs. Ms. Curella has supported diverse coalitions in designing impactful programs, including for the federal Build Back Better Regional Challenge grants and the Innovation Engines program of the National Science Foundation. Previously, Christine held senior positions in New York City government, where she designed and operationalized programs and policies to advance inclusive economic development, including Employee Ownership NYC, a suite of initiatives to build worker ownership. Christine worked at the U.S. Environmental Protection Agency during the Obama Administration, where she supported the development of the Agency Strategic Plan and cross-cutting efforts towards environmental justice. She is a graduate of Hunter College, of the City University of New York (CUNY), and received her Masters in City Planning from the Massachusetts Institute of Technology. She serves on the Board of the Democracy at Work Institute and is an advisor to the Community and Worker Ownership Project at the CUNY School of Labor and Urban Studies.

c. **Expenditure of Awarded Grant Funds, and plan for compliance with EPA's Pre-award Compliance Review for Nonprofit Organizations**

BCC will serve as an effective steward of project resources, building on its fiscal management process and experience managing a diverse portfolio of grant awards totaling more than $9M from public and private funders. Key measures include:

- Completing a **subaward agreement** with subawardees that includes fixed payment schedule. This will be reviewed by BCC Legal and Finance teams prior to execution for compliance with relevant legal and finance terms and funder and grant expectations.
- **Payment schedule** will be designed to ensure subawardee and consultant success and include performance-based payments and deliverables-based payments.
- Using its grants management system, BCC Finance Department provides **regular updates on grant expenditures** to ensure efficient and timely spending.
- This grant will benefit from the **procedures and controls in place** from BCC's FInance Department, which regularly oversees significant public and philanthropic funding.
- **Invoices** will be sent to Project Manager for project performance-level approval and forwarded to Finance Team for review and approval. The Finance team will also coordinate with activities outlined in Performance Management (Section 3.b) to ensure reporting on financial expenditures and subawardee and consultant performance.

BCC understands and will fully comply with the EPA's Pre-award Compliance Review for Nonprofit Organizations.

5.0 Past Performance

Outlined below are key grants that BCC has received to advance its work and key projects. All agreements have been successfully managed and reporting requirements met.

Award	Amount	Description
Federal Earmark via Health Resources and Service Administration	$875,000	To expand telehealth for high-demand specialties in Brownsville, Brooklyn and adjacent neighborhoods
Mother Cabrini Health Foundation	$300,000	To expand the Brooklyn Health Enterprise Hub through the economic democracy fellowship; workforce development and training
NYC Community Trust & Altman Foundation	$400,000	To support BCC core operations and programs
Senator Kevin Parker via the Office of Children and Family Services	$100,000	For feasibility study for Brooklyn Health Enterprise Hub

Affinity Legacy	$200,000	For workforce development for formerly incarcerated individuals

6.0 Quality Assurance Project Plan (QAPP) Information (If applicable)

The Health + Wealth Domain will involve the use of existing environmental data and the collection of new data. BCC will develop and seek approval for a QAPP prior to the initiation of project activities.

APPENDIX H

Office of Environmental Justice and External Civil Rights
Quality Assurance Project Plan Requirement (QAPP)

Check Yes or No for each of the items provided below as it applies to your specific project. If you answered **YES** to any of the items listed above, you are **REQUIRED TO SUBMIT** a Quality Assurance Project Plan in accordance with EPA Requirements and an approved QAPP must be in place ***prior*** to the initiation of activities.

You will be contacted with information on how to prepare your QAPP. In the meantime, please visit the website https://www.epa.gov/sites/default/files/2015-06/documents/g5-final.pdf which provides guidance on what must be submitted for grants/cooperative agreements.

1. Your project will involve the collection of groundwater, soil, sediment, surface water, air, biota or fauna samples for chemical or biological analysis.
   Yes ☐ No ☐
2. Your project will use existing computer databases containing analytical data or personal information previously collected.
   Yes ☐ No ☐
3. Your project will use existing historical research pertaining to this project or application. Yes ☐ No ☐
4. Your project will implement deed searches for current property or site.
   Yes ☐ No ☐
5. Your project will conduct medical records search for the population covered in the grant.
   Yes ☐ No ☐
6. Your project will compile meteorological data to determine weather trends or air mixing trends.
   Yes ☐ No ☐
7. Your project will use existing statistical studies or will conduct these studies as part of the project.
   Yes ☐ No ☐
8. Your project will create a new database based on the information gathered.
   Yes ☐ No ☐
9. Your project will use this information for litigation purposes.
   Yes ☐ No ☐
10. Your project will use this information to make recommendations on environmental decisions.

For a sum of **$9,000** for three years One (1) Wellbeing and mental health consultant (WC) will be hired for 3 seminars/workshops per 12-week program and 1 closing activity @ 4 activities x 5 hrs. x $50 = $1,000 per session. In addition, the consultant will provide support after activities through follow-up calls and text messages with iNature program participants. YR 1= *$3,000.00* : 2 sessions of 12-week program @$1,000 x 2= $2,000 and 20 hours of motivational engagement ($50 x 20hrs= $1,000.00) ; YR 2 *$4,500.00*: 3 sessions of 12-week program@ $1,000 x 3= $3,000, 00 and 30 hours of motivational engagement ($50 x 30 Hours= $1,500.00) and	$71,500.00

	YR 3 *$5,000.00*: 3 sessions of 12-week program@ $1,000 x 3=$3,000, 40 hours of motivational engagement ($50 x 40 Hours= $2,000.00). For a sum of **$12,500** for three years. National Association Interpretation and CPR Trainer to certify two educational nature guides and 3 community members. A sum of $3,000.00 is requested annually @ $350 paid for course materials and certification x 5 persons ($350 x 5 = $1,750.00) and a NAI Trainer will be hired at $25 x 50 hours = $1,250.00. A total sum of **$9,000.00** is requested for three years. One Media and publicity company for the development and publication of recruit publicity and audio-visual products documenting activities of the annual 12-week iNature program. A sum of $3,000.00 is requested annually for a total of **$9,000.00** over three years. An accountant@$20/hour@2 hours a week 25 weeks per year =$1,000.00 x 3 = **$3,000.00** for three years. They will manage all transactions for the EPA EJ proposal and prepare financial documents for COSPRO & COMITE Boards and external COSSEC audits. An External Evaluator will be hired to ensure compliance and progress of project objectives, milestones and timeline. She will complete and present the formative and summative evaluation to the Boards of COSPRO, COMITE, ADVISORY BOARD and EPA @$7,000 per year x 3 = **$21,000.00** for three years	
Construction	0	
Other Subaward	The COMITE will receive a total of **$298,927.50** for the three years through a subaward contract with COSPRO. YR 1 = **$93,257.50** Salary = $ 61,325.00, Travel = $500.00; Consultant $5,500.00, Participant Support = $19,200.00 for 40 participants; Indirect Costs excluding participant support costs= $6732.50 YR 2 = **$102,857.50** Salary = $ 61,325.00, Travel = $500.00; Consultant $5,500.00, Participant Support = $ 28,800.00 for 60 participants ; Indirect Costs excluding participant support costs = $6,732.50	$298,972.50

	YR 3 = **$102,857.50** Salary = $ 61,325.00, Travel = $500.00 ; Consultant $5,500.00, Participant Support = $ 28,800.00 for 60 participants ; Indirect Costs excluding participant support costs = $6,732.50	
Total Direct Costs	YR1 $149, 155.50 YR2 $153,255.50 YR3 $151,625.50	$ 454, 036.50
Indirect Costs	Since COSPRO does not have a negotiated rate, 10 % was calculated on direct costs @ $ 454, 036.50 for a sum of **$ 45,403.65** for three years. YR 1 =Total Direct Costs $149, 155.50 x .10 = $14,915.55); YR 2 = Total Direct Costs $153,255.50 x .10 = $15,325.55; YR 3 = Total Direct Costs $151,625.50 x.10 = $15,162.55.	$ 45,403.65
Total		$499,440.15

Budget Narrative

Personnel: $45,600.00

The COSPRO board is responsible for the effective execution and compliance of the iNature project. Ms. Dayamiris Candelario Maysonet will be hired as Project Manager (PM) by COSPRO for 20% of TE for project implementation. She will be responsible for 1) Completing the legally binding documents between COSPRO and COMITE and oversee the subaward compliance criteria and 2) Development and posting the Title IX policies for INature project and ensure all project staff are trained on compliance and grievance procedures, 3) Contract negotiations with Board of COSPRO for professional services and 4) ensure all materials and supplies are allowable and are used exclusively aligned to the objectives of the iNature program. She will work with COSPRO Board for timely withdraws through the EPA project management system and ensure timely payments to staff and contractors. She will be responsible for working with all stakeholders, partners, and collaborators to ensure proposed goals and objectives are completed according to the timetable. She will oversee project programmatic and financial operations together with the Project Coordinator hired by COMITE. She will coordinate the formative and summative evaluations with contractors and ensure dissemination of recruitment and project activities in project social media pages. She will report monthly project progress to the boards of COSPRO and COMITE and submit reports to COSPRO Board according to EPA reporting requirements. She will be responsible for working with the accountant for external financial audits and fiscal closeout. A sum of $15,200.00 is requested per year for the salary of Ms. Caledron Maysonet (8hrs a week x 50 weeks x $38.00/hr = **$15,200.00 x 3 years = $45,600.00**).

Fringe Benefits: **$6594.00.**

A sum of $1,728.00 per year (calculated at 11.5 % of salary) for a total of $5,244.00 is requested to cover state tax for the hired project manager. COSSEC also requires liability insurance for all

personnel participating in implementation of cooperative agreements@$450.00 per year = $1350.00. A total sum of $2,198 x 3 yrs = **$6594.00.**

Travel: $1,500.00

Local mileage for Project Manager to attend partner meetings: 250 miles x .60 c = $150, Per diem @ $35 for 10 days = $350.00. Total $500 x 3=$1,500.00 is requested for three years

Material and supplies $29,870.00.

To achieve the objective of increasing physical activities to improve chronic illness we will supply participants with materials and supplies that will assist in the documentation of their PA for the grant period and provide 160 participants protective gear such as hats to walk within the Reserve. We request funds to update the chairs and tables in the Visitors center to be comfortable for participants with disabilities to participate in 3–4-hour activities. A new audio-visual center is requested to replace the olde system that does not allow wireless or HDMI connection, which many of our consultants require for their planned activities. The COMITE will provide office space for the project staff, therefore office workstation and laptop is requested for planning, coordinating and documenting project activities. Material and supplies are requested to develop engaging activities within the 12-week iNature program such as yoga mats, binoculars, field guides for plants and birds, waterproof waders, labels for trees, cards, chess and picture boards.

A sum of **$16,000 is requested for YR 1 for** 40 Fitbits for participant to monitor physical activity @$60=$2,400.00, 40 Omni shade hats@$20 ea.= $800.00, 40 Individual Bird Guides $7= $280, 25 plant field guides@$22=$550.00, 25 binoculars@$50ea = $1,250.00, One workstation including chair for Project Coordinator $1,500.00, One laptop for Project Coordinator =$1,200.00, Remodel Conference Room for meetings, educational workshops and public health seminars Chairs@$60 x 40 chairs=$2,400.00; Tables @$100x10 tables=$1,000.00, Audio visual projector with Wi-Fi and HDMI connection for laptop and speakers $2,400,Miscellaneous supplies include office materials for staff, supplies for workshops, materials for publicity and education @ $2,220.00 for YR 1.

A sum of **$8000.00 is requested for YR2 for** 60 Fitbits for participant to monitor physical activity @$60=$3,600.00, 60 Omni shade hats@$20 ea.= $1,200, 60 Individual Bird Guides $7= $420.00, 25 binoculars@$50ea = $1,250.00, Miscellaneous supplies include materials for staff, for workshops, materials for publicity and educational materials @ $1530.00 for YR 2.

A sum of $6,500.00 is requested for YR 3 for 60 Fitbits for participant to monitor physical activity @$60=$3,600.00, 60 Omni shade hats@$20 ea.= $1,200, 60 Individual Bird Guides $7= $420.00-Miscellaneous supplies include materials for staff, for workshops, materials for publicity and educational materials @ $1280.00 for YR 3.

Equipment: No equipment will be purchased

Consultants $71,000.00

It is well documented that physical activity (PA) improves chronic illness symptoms, and that getting participants to increase their PA requires a multidisciplinary approach (CDC, 2022). The

iNature planning team consisting of COSPRO and COMITE members, health care providers and wellbeing experts identified several activities for the following components:1) Education and Support for People with Chronic Illness - Workshops, seminars, strengthening community participation and resilience; support for developing PA habits with peer support, create a PA community within the Punta Tuna Reserve; 2) Planning and developing Community-Based Activities- Nature walks, bird watching and tree planting; and 3) Tools and Resources-Nutrition plans, educational materials for walking in Nature, educational materials for managing and improving chronic illness during and after natural disasters such as Hurricanes. To develop the above components and activities iNature project will hire several consultants. The COMITE and COSPRO have identified several consultants already working in the southeast region of Puerto Rico who are available to provide services to participants within the iNature program.

A. A sum of **$29,500.00** is requested for the services of a health care provider, well-being and mental health consultant, and a nutritionist. Table 1 below is a summary of the services they will provide to the 12-week iNature program over a three-year period.

One (1) Health Care Provider: During and after Hurricanes Irma and Maria and COVID 19 chronic illness patients had no or limited access to their health care provider. Therefore, we will hire a health care consultant to provide chronic illness participants with the tools they and their families require to better manage their illness and to increase their survival during and after natural disasters. We request a sum of $8,000 for a health care consultant to provide workshops over three years (3 per year) to help participants understand their illness and the importance of physical activities in improving their well-being. The health care provider selected will be required to have experience working in the underserved low-income communities. A total sum of $8,000 is requested for three years (see table below for details on activity schedule)

One (1) Wellbeing and mental health consultant Dr. Hernandez has committed to working on the iNature project (*see letter*). She has been providing clinical services for the past 10 years in the neighboring municipality Guayama. She works with clients who are from underserved communities and low income who have been impacted by Hurricanes Maria and Irma. She will provide motivational seminars and workshops to increase participation engagement in the iNature Project. She will provide a further 6 months follow-up calls and send text messages to participants to provide mental health support required for continued improvement of physical activities and engagement in the iNature program activities. A sum of $12,500.00 is.

One (1) Nutritionist/Dietitian will be hired to develop workshops and seminars on healthy nutrition habits and help create a meal plan for participants with low incomes. We know that generalized commercial nutrition plans do not react the same for different populations. Therefore, the Nutritionist/Dietitian will be hired to develop menu plans based on the needs of our participants. A sum of $9000,00 is requested for three years to cover the costs of training, development of nutrition plans and development of snacks plans for nature walks.

B. One (1) Nature Guide Trainer- A National Association for Interpretation, certified Trainer, will be hired as Nature Guide Trainer 1) to create educational content and materials for the nature walks in the Reserve that integrate well-being and health activities (yoga, meditation) into the nature walks. The nature walks will include to see (visual elements to attract people), to touch (flowers, trees, medicinal plants), to exercise (to walk, lower blood pressure, fresh air), to sit (benches, large rocks, gazebos), to meet (connect with family or friends in a local common space), to talk (share stories, pictures, photos, express difficulties or challenges), to smell (soils, flowers, trees), to listens (birds, insects, frogs), to play (cards, chess, dominoes), to eat (snacks, healthy lunches) and other activities; 2) Train and certify two (2) nature guides and three (3) community members to offer nature walks to 160 participants within the Reserve according to the physical and health abilities. The trainer hired will have experience training community members, university and high school students in obtaining and maintaining their nature guide certificates. A sum of $3,000.00 is requested annually (@ $350 paid for course materials and certification x 5 persons = $1,750.00 and a NAI Trainer will be hired at $25 x 50 hours = $1,250.00 =$3,000.00). A total sum of **$9,000.00** is requested for three years.

One (1) Publicity Consultant will be hired to develop and implement a publicity campaign for recruitment of participants from the community and dissemination of project activities and achievements in the COMITE social media accounts, local radio and newspapers and cross street banners each in community and vehicle megaphone. The consultant will be responsible for working with the project team and advisory committee in developing a project logo that resonates with community vision. They will develop content for digital and paper flyers for recruitment and dissemination of project activities and meetings. Our experience showed that these media mechanisms are effective in community outreach. The media company hired will have experience working with community-based campaigns and will develop a wide range of media products that will ensure the iNature project is inclusive and diverse. A sum of **$9,000.00** is requested for three years @ $3,000.00 per year.

A qualified accountancy firm will be hired to audit the use of EJCPS funds by the project Team to ensure compliance with State and Federal regulations. They will manage all transactions for the EPA EJ proposal and prepare financial documents for COSPRO & COMITE Boards and external COSSEC audits. A sum of **$3,000.00** is requested for this service @ $1,000.00 annually.

Ms. Gabriel Haynes will be hired as the external evaluator. She will be hired to ensure compliance and progress of project objectives, milestones and timeline. She will complete and present the formative and summative evaluation to the Boards of COSPRO, COMITE, Advisory Board and EPA Program Officer @$7,000 per year x 3 = **$21,000.00** for three years.

OTHER

Collaborative problem-solving involves the establishment and/or maintenance of partnerships between and among other stakeholders and the underserved community to address the community's local environmental and/or public health issues. Partnerships may be financial, such as a partnership of community-based nonprofit organizations that apply for a CPS cooperative agreement, or non-financial such as cooperative relationships among stakeholders that do not involve subawards of EPA funding.

The partnership between members of COSPRO and COMITE for the past twenty years has been non-financial and collaborative. For this iNature program COSPRO and COMITE will enter a financial partnership to address the community's' environmental and public health issues by addressing environmental injustices in low income underserved communities in the municipality of Maunabo. COMITE will be the subrecipient of **$298,927.50** for the operationalization of the iNature project in the Punta Tuna Nature Reserve. Attached is the detailed budget and justification of this subaward. A sum of $93,257.50 for YR 1, $102,857.50 for YR2 and $102,857.50 for YR 3 is requested by the COMITE for three years.

TOTAL DIRECT COSTS:

YR1: $149,155.50 + YR2:153,255.50 + YR3: $151,625.50 = **$454,036.50**

INDIRECT COSTS: 10 % of Total Direct Costs:

YR1: $14,915.55 + YR2:15,325.55 + YR3: $15,162.55 = **$45,403.65**

TOTAL PROJECT

YR 1: $164,071.05 + YR 2: $168,581.05 + YR 3 $166,788.05 = **$499,440.15**

SUBWARD BUDGET DETAILS FOR COMITE

Item	Description	Total for Three Years
Personnel	Project Coordinator@ $25,000.00 annually $25/hr x 20 hrs/week/50weeks of time on project = **$75,000.00** for three years Two Nature guides@$15,000.00 each $15 x 20 hrs/week/50weeks of time on project = $45,000.00 for three years x 2 guides = **$90,000.00**	$165,000.00
Fringe Benefits	All persons working with professional contracts are required by State law to pay 11.5 % in tax. A sum of $6,325.00 per year for a total of $18,975.00 is requested to cover these costs for personnel hired.	$18,975.00
Travel	Local mileage for Project Coordinator for partner meetings: 250 miles x .60 c = $150 Per diem @ $35 for 10 days = $350.00 Total $500 x 3=$1,500.00 for three years	$1,500.00
Equipment	0	
Supplies	0	
Contractual	One (1) Consultant for design, installations and maintenance of signage for persons with disabilities and chronic illness. A sum of $1,000 x 3 years =$3,000 for three years. One (1) consultant will be hired to rehabilitate the current trails for off-road wheelchair access and reforest areas destroyed by the Hurricanes. A sum of $4,500.00 is requested annually for three years for total of $13,500.00.	$16,500.00
Construction	0	
Direct Costs	Total Director costs before Participant Support Costs. YR 1: $67, 325.00 YR 2: $67, 325.00 YR 3: $67, 325.00	$201,975.00
Indirect Costs	COMITE does not have a current negotiated indirect cost rate, a *de minimis* rate of 10% is applied to direct costs not including funds requested for participant costs. YR1 $6,732.50 YR 2 $6,732.50 YR3 $6,732.50	$20, 197.50
Other Reserve Entrance Fees	**Participant Support** YR 1 $19,200.00 YR 2 $28,800.00 YR 3 $28,800.00 160 participants = **$76,800.00** YR1= $20 x 20 participants x 12-weeks x 2 sessions =$9,600.00 (40 participants)	$76,800.00

	YR 2 = $20 x 20 participants x 12-weeks x 3 sessions= $14,400.00 (60 participants) YR 3 =$20 x 20 participants x 12-weeks x 3 sessions= $14,400.00 (60 participants)	
Travel	To increase accessibility to physical activities and increase visitors in the nature reserve participants will be provided a stipend for transportation. A sum of **$19,200.00** is requested for three years. YR1: 40 participants will receive $10 ea for transport per 12 activities they will participate in@ 40 x 10x 12 =$4,800.00. YR2: 60 participants will receive $10 ea for transport per 12 activities they will participate in@ 60 x 10x 12 =$7,200.00. YR3: 60 participants will receive $10 ea for transport per 12 activities they will participate in@ 60 x 10x 12 =$7,200.00.	
Snacks	To ensure participants learn about healthy eating choices snacks and water will be provided to them during their nature immersion activities. The snacks menu will be developed by the nutritionist/dietitian. A sum of **$19,200.00** is requested for three years. YR1: 40 participants will receive snacks valued at $10 ea per 12 activities they will participate in@ 40 x 10x 12 =$4,800.00. YR2: 60 participants will receive snack valued $10 ea per 12 activities they will participate in@ 60 x 10x 12 =$7,200.00. YR3: 60 participants will receive snack valued $10 ea per 12 activities they will participate in@ 60 x 10x 12 =$7,200.00.	
Total Costs	Total Direct Costs + Participant Costs + Indirect Costs YR1: $67, 325.00 + $19,200.00 +$6,732.50 = $93,257.50 YR 2: $67, 325.00 + $28,800.00+$6,732.50 = $102,857.50 YR 2: $67, 325.00 + $28,800.00+$6,732.50 = $102,857.50	$298,972.50

BUDGET JUSTIFICATION

Personnel: $165,000.00

The COMITE will recruit Dr. Edwin Crepso to coordinate the iNature Project. He will be responsible for the implementation of the financial and programmatic activities for improving physical activities (PA) for participants with chronic illness. Dr. Crepso was specifically selected by COMITE as he is a community leader who has been collaborating with the reserve as a volunteer nature guide for the past 5 years. He has vast managerial experience with federal projects through the Department of Education in professional development and outreach. As an science educator he has worked with teachers and schools throughout the south-east region of Puerto Rico,

including Muanabo. He will be responsible for 1) Organize and coordinate all meetings for the project, 2) assist PM in hiring of Nature Guides & Consultants 3) Supervise Nature Guides and consultants during the 12-week program 4) Participate in the development and implementation of the publicity campaign for recruitment and dissemination of achievements; 5) Administer participate satisfaction surveys 6) Display and orientate personnel and participants of Title IX process and guidelines 7) Provide PM information for invoicing and monthly reports to Boards of COSPRO and COMITE 8) Maintain communication with PM and advisory committee about project progress, achievements and challenges in timely manner, 9) Participate in meetings with partners and collaborators, 10) Maintain office hours at the Visitors Center in the Reserve. A sum of $25,000.00 is requested annually to pay Dr. Crespo: $25/hr. x 20 hrs./week/50weeks of time = $25,000.00 x 3 on project = **$75,000.00** for three years.

Two (2) Nature guides will be hired to provide guided nature walks with the Reserve during the 12-week program. Each guide will offer 6 activities within the Reserve. Once hired they will certify as NAI environmental educators and work with consultants (NAI Trainer, Health Care Provider, Well-being Provider and Nutritionist/Dietitian to develop a culturally relevant Physical Activities Program. The nature guides will be recruited from the pool of community members who volunteer in the reserve. A sum of $**90,000.00** is requested for three years ($15,000.00 each is $15 x 20 hrs./week/50weeks of time on project x 3 year = $45,000.00 x 2 guides =$90,000.00).

Fringe Benefits: $18,975.00

State requires the employer to retain 11.5 % tax for personnel. Total salary $55,000.00 x 11.5% =$6,325.00 per year. A sum of **$18,975.00** is requested for three years.

Travel: $1,500.00

Local mileage for Project Manager to attend partner meetings: 250 miles x .60 c = $150, Per diem @ $35 for 10 days = $350.00. Total $500 x 3= **$1,500.00** is requested for three years

Consultants $16,500.00

Literature shows that a well-maintained, peaceful and attractive environment with established trees, gardens and birdlife; seating[1]; pleasant paths; toilets; cafés; water features; shade/shelter; facilities for grandchildren; and the presence of other people are features most valued for physical activity. Features most valued for social interaction included picnic/barbecue facilities, organized events, a café and aesthetics[2] The current trail system is adapted for blind persons but does not include features for persons who have challenges with PA. A consultant will be hired to improve the trail design and signage within the Reserve to accommodate people with chronic illness. The consultant will identify areas for additional natural features and provide recommendations for resting places and meeting areas along trails for sharing and talking. These well-placed and

[2] Jenny Veitch, Elliott Flowers, Kylie Ball, Benedicte Deforche, Anna Timperio (2020) Designing parks for older adults: A qualitative study using walk-along interviews. Urban Forestry & Urban Greening, Volume 54, 2020, https://doi.org/10.1016/j.ufug.2020.126768.

relevant features and signage will allow participants to complete the 12-week program and increase their PA activities in the Reserve. Also, signage will allow participants to continue with their PA goals without the guidance of a nature guide thus reducing their cost of entrance to the Reserve. A sum of $5,500.00 x 3 years = **$16,500.00** requested for three years.

SUBTOTAL : YR 1 $67,325.00 + YR 2 = $67,325.00 + YR 3 = $67,325.00 = **$201,975.00**

Participant Support Costs ($76,800.00)

During the annual meeting with Board of COMITE and community members on 11 March 2023, the following concerns/barriers were discussed for the effective engagement of participants in the iNature project 1) Lack of Transportation, 2) Motivation, and 3) Additional miscellaneous cost for attendance. Therefore, to address these concerns/barriers in the iNature project, we are requesting a sum of **$76,800.00** for participants costs.

Entrance Fee: The COMITE as part of it co-management agreement currently charges a $20 entrance fee to participants in the reserve, a sum of **$38,400.00** is requested for three years for 160 participants to access the reserve for project activities (YR 1= 40 participants x $20 x 12 activities = $9,600.00; YR 2. 60 participants x $20 x 12 activities = $14,400.00; YR 3. 60 participants x $20 x 12 activities = $14,400.00 = $38,400.00).

Snacks: To ensure all participants can safely participate in PA in the Reserve, funds are required to provide them with healthy snacks and water during the nature walks. A sum of **$19,200.00** is requested for three years for 160 participants x $10 ea. (YR 1= 40 participants x $10 x 12 activities = $4,800.00; YR 2. 60 participants x $10 x 12 activities = $7,200.00; YR 3. 60 participants x $10 x 12 activities = $7,200.00 = $19,200.00).

Transportation: To ensure high retention of participants, stipends for transportation will be provided to 160 participants for the 12-week program. A sum of **$19,200.00** is requested for three years for 160 participants x $10 ea. (YR 1= 40 participants x $10 x 12 activities = $4,800.00; YR 2. 60 participants x $10 x 12 activities = $7,200.00; YR 3. 60 participants x $10 x 12 activities = $7,200.00 = $19,200.00).

SUBTOTAL : YR 1 $67,325.00 + YR 2 = $67,325.00 + YR 3 = $67,325.00 = **$201,975.00**

PARTICIPANT : YR1 = $19,200.00 + YR2 = $28,800.00 +YR3 =$28,800.00 = **$76,800.00**

INDIRECT COST: YR1 6,732.50 + YR2 6,732.50 + YR3 6,732.50 = **$20,197.50** (10 % OF SUBTOTAL)

TOTAL SUB-AWARD: SUBTOTAL + PARTICIPANT+INDIRECT= $298,972.50

Office of Environmental Justice and External Civil Rights
Quality Assurance Project Plan Requirement (QAPP)

Check Yes or No for each of the items provided below as it applies to your specific project. If you answered **YES** to any of the items listed above, you are **REQUIRED TO SUBMIT** a Quality Assurance Project Plan in accordance with EPA Requirements and an approved QAPP must be in place ***prior*** to the initiation of activities.

You will be contacted with information on how to prepare your QAPP. In the meantime, please visit the website https://www.epa.gov/sites/default/files/2015-06/documents/g5-final.pdf which provides guidance on what must be submitted for grants/cooperative agreements.

1. Your project will involve the collection of groundwater, soil, sediment, surface water, air, biota or fauna samples for chemical or biological analysis.
   Yes ☐ No X

2. Your project will use existing computer databases containing analytical data or personal information previously collected.
   Yes ☐ No X

3. Your project will use existing historical research pertaining to this project or application.
   Yes ☐ No X

4. Your project will implement deed searches for current property or site.
   Yes ☐ No X

5. Your project will conduct medical records search for the population covered in the grant.
   Yes ☐ No X

6. Your project will compile meteorological data to determine weather trends or air mixing trends.
   Yes ☐ No X

7. Your project will use existing statistical studies or will conduct these studies as part of the project.
   Yes ☐ No X

8. Your project will create a new database based on the information gathered.
   Yes ☐ No X

9. Your project will use this information for litigation purposes.
   Yes ☐ No X

Your project will use this information to make recommendations on environmental decisions.

Yes ☐ No X

CERTIFICATE OF EXISTENCE

I, **Omar J. Marrero Díaz, Secretary of State** of the Government of Puerto Rico,

CERTIFY: That according to our records **COOPERATIVA DE SERVICIOS PROFESIONALES (COSPRO)**, with registration number **576**, is a **domestic non-profit consumer cooperative** organized on **October 4, 2007**.

AVILLAGE

US Environmental Protection Agency
Environmental Justice Collaborative Problem-solving Cooperative Agreement Program
Funding No: EPA-R-OEJECR-OCS-23-01

April 13, 2023

To whom it may concern:

AVillage Inc., a non-profit organization, is pleased to provide this letter of commitment as a partner in Clean and Healthy New York's (C+H) Clean Air and a Healthy Future for Albany, NY project under the US Environmental Protection Agency's Environmental Justice Collaborative Problem-solving Cooperative Agreement Program. We have worked closely with C+H to develop this proposal.

AVillage Inc., looks forward to engaging and empowering community members in the City of Albany's most disproportionately impacted neighborhoods to determine their priorities for environmental health and justice actions and to speak for themselves with elected officials, government agencies, businesses and other NGOs to address the most pressing environmental justice concerns, including air pollution, vehicle traffic, especially in and around the Port of Albany, bulk storage of diesel and other toxic chemicals in the Port and at surrounding businesses, the impact of rail and road traffic on people living in Ezra Prentice housing, and the potential removal of I-787 as an elevated highway.

We bring our experience doing community outreach and engagement, and are prepared to do community outreach and engagement in service of the Clean Air and Healthy Future for Albany, NY project. Specifically, we will:

- Coordinate and Expand Innovation Blocks Program
- Community Engagement
- Use platforms like South End Night Market and other events that create access to important information and resources.

C+H has committed to entering into a partnership agreement for a subaward of $236,750 over the three-year grant period. We understand all work must be performed within those three years, without extension. This project is an outgrowth of many years of work and the collaborative conversations facilitated under US EPA's award to C+H for their EVAAC Project (US EPA EJ Small Grants project).

We are confident that the proposed project will ensure greater cohesion among community members in Albany, greater visibility for the self-identified needs of those disproportionately harmed, and improvements being driven by these priorities being discussed and advanced by community members with elected officials, government agencies, businesses, and industry in Albany, resulting in cleaner air and a healthier future for all.

Sincerely,

Eva Bass
Executive Director

PO BOX 10152, Albany, NY 12201 executive@avillage,org

US Environmental Protection Agency
Environmental Justice Collaborative Problem-solving Cooperative Agreement Program
Funding No: EPA-R-OEJECR-OCS-23-01

April 13th, 2023

To whom it may concern:

The City of Albany's Office of Sustainability is pleased to provide this letter of commitment as a partner in "Clean and Healthy New York's (C+H) Clean Air and a Healthy Future for Albany, NY" project under the US Environmental Protection Agency's Environmental Justice Collaborative Problem-solving Cooperative Agreement Program.

Our office looks forward to supporting efforts to engage and empower community members in the City of Albany's most disproportionately impacted neighborhoods to determine their priorities for environmental health and justice actions and to speak for themselves with elected officials, government agencies, businesses and other NGOs to address the most pressing environmental justice concerns, including air pollution, vehicle traffic (especially in and around the Port of Albany), bulk storage of diesel and other toxic chemicals in the Port and at surrounding businesses, the impact of rail and road traffic on people living in Ezra Prentice housing, and the potential removal of I-787 as an elevated highway.

Our Office currently has two full-time staff, and we are currently looking to hire a full-time Climate Justice Fellow. Our staff will participate in regular "Clean Air and a Healthy Future for Albany" project meetings, taking information developed under this program back to the City of Albany for consideration in our planning. We will also participate in public activities, including town halls and public meetings as well as folding this project into our pre-existing outreach efforts.

Furthermore, our Office is preparing to update Albany's decade-old Climate Action Plan. The knowledge, insights, and information gained through the "Clean Air and a Healthy Future for Albany" collaborations will be invaluable as we engage city residents, business owners and other stakeholders in the coming years.

The outcomes of this project will help our office better understand community needs and priorities, so we can better tailor our work to be aligned with these priorities, resulting in cleaner air and a healthier future for all.

Sincerely,

Jason West
Director of Sustainability
City of Albany

One Ward United for Environmental Justice, Air Monitoring and Green Infrastructure Collaborative Problem-Solving Initiative

Resources/Inputs	Activities	Outputs	Audience	Short-term outcomes (6-12 months)	Intermediate Outcomes (12-24 months)	Long-term Outcomes (2+ years)
Air Monitoring Partners: • City of Newark Green Team • New Jersey DEP • Center for Community Engagement, Environmental Justice, and Health (CEEJH), • University of Maryland • EOSHI Rutgers University	• Train community residents to conduct Hyper Local air monitoring. • Engage in a network of technical and public health experts. • Establish neighborhood Air Monitoring Advisory Boards in three neighborhoods	• Monthly meetings with the 3 neighborhood Air monitoring Advisory Board. • Monitor data from 10 sites with Purple Air Monitors • Select sites and Conduct truck Count with Air Beams and Black Carbon Monitors	• Residents in the Weequahic, Dayton Street and Clinton Hill neighborhood. • South Ward partners, CBO's, Faith Based institutions, government, and municipal officials.	• Increased attendance of residents attending SWEA monthly meetings. • Quarterly training sessions for community partners • Conduct two Truck count events. • Increase residents' participation at yearly Environmental Summit	• Select 1 EJ Youth Community Ambassador for each neighborhood. • Select 2 community groups/leader from each neighborhood as the Lead Train the Trainer Partner	• Develop Neighborhood Climate Action Plans for the three neighborhoods. • Develop Translating Health-related Environmental Community Data for Actionable Practice and Prevention (THE DAPP), health literacy and translation tool.
Reducing Flooding through Green Infrastructure Partners: • NewarkDIG • Rutgers Cooperative Extension Water Resources Program • City of Newark Department of Water & Sewer Utilities	Expand reach of GI Reformer team to outreach to South Ward residents and business stakeholders in the three neighborhoods where GI projects will take place.	Identify community groups to assist with recruitment of South Ward GI Reformers, Street canvassing and Door Knocker delivery to attend public events.	Residents in the Weequahic, Dayton Street and Clinton Hill neighborhood. South Ward partners, CBO's, Faith Based institutions, government, and municipal officials.	• Post 3,000 door knockers across the South Ward (1000 in each • Neighborhood) • Paint 12 catch basins (4 in each neighborhood) • Host/Attend 6 events (2 in each neighborhood) • Post at least 1 on-site signage per neighborhood	• Formalize GI Apprenticeship Program partnerships. • Establish new partnerships with projects in the South Ward. • Employ 3 GI trainees with positions.	• Establish calendar of projects and GI trainee assignments. • Establish process for post-assignment evaluation including surveys by trainees. • Evaluating apprenticeship experience and supervisor • Evaluation of demonstrated skills.
Workforce development • CHCA • NewarkDIG • City of Newark Green Works Program • Rutgers Cooperative Extension (RCE) Water Resources Program	Planning, a project team, including additional partners, to review the program plan, develop the necessary supporting materials and data tracking tools, and formalize partnerships.	• Establish Green Jobs Task Force, Develop brochure for Green Hub Recruitment of 60 residents (20 from each neighborhood). • Monthly meeting with community-based partners.	• Residents in the Weequahic, Dayton Street and Clinton Hill neighborhood. • South Ward partners, CBO's, Faith Based institutions and High Schools.	• Increase in South Ward residents' knowledge of Green Infrastructure and urban tree forestry. • Target 45 residents (15 from each neighborhood) for Green Alliance Leadership Academy (GALA). • Establish MOU Partnership with Rutgers Cooperative Extension Water Resources Green Infrastructure Champion program. • Quarterly meetings with SWEA Green Jobs Task Force. Identify sites to plant 100 trees.	• Workforce Readiness Training & Career Exploration. • Plant and maintain trees to expand the tree canopy and improve air quality. • Bring more awareness to new and imminent GI projects while soliciting valuable community feedback and highlighting the green job opportunities which are one of many co-benefits of green stormwater management solutions.	• Match participants with a Green Jobs coach to explore a credential-bearing green job training of their choice. • Post-Training Support, Evaluation & Planning to assess the program's efficacy while pursuing additional funding to scale and sustain the effort.

newark Green TEAM

Jacob Burney
U.S. Environmental Protection Agency
Office Of Environmental Justice &
External Civil Rights

RE: SWEA One Ward United for Environmental Justice, Air Monitoring and Green Infrastructure (EJCPS) Cooperative Agreement Program

Dear Mr. Burney,

Please accept this letter of support from the Newark Green Team for the Collaborative Problem-Solving Initiative proposal of the South Ward Environmental Alliance (SWEA). SWEA plans to implement a One Ward United for Environmental Justice, Air Monitoring and Green Infrastructure project to improve air quality and amplify engagement to improve the quality of life for residents of the South Ward of Newark.

The Newark Green Team is a multi-sector coalition of local stakeholders working to advance policies and programs related to urban sustainability, environmental health, community greening, quality of life, and green economic opportunities for Newark residents. The success of this project is vital to the South Ward community, which is surrounded by the second largest port in the United States, one of the busiest international airports in the country, three major interstate highways and high-volume county roads including the New Jersey Turnpike, Route 22, 1&9, 78, exposing nearby communities to toxic emissions from diesel transportation and freight.

South Ward residents' quality of life can be improved when we have local data matched with local action. SWEA will collect air quality data at a hyper-local level then implement green infrastructure practices and advocate for policies and actions to address the adverse impacts of poor air quality and local flooding on the health of low-income residents in the three South Ward neighborhoods, Dayton, Weequahic and Clinton Hill.

The Newark Green Team fully supports this project and will participate as a stakeholder throughout the project period. We believe that the goals and outcomes of this project will directly empower residents to collect and use air quality data to advocate for the changes they want to see, provide evidence for policymakers, and reduce air pollution, local flooding and greenhouse gas emissions while improving health outcomes for our residents.

If you have any questions, please feel free to contact me.

Sincerely,

M. Nicole Miller
Chair, Newark Green Team

Particulate Matter 2.5 EJ index	93	88
Ozone EJ index	64	83
Diesel Particulate Matter EJ index*	95	97
Air Toxics Cancer Risk EJ index*	95	96
Air Toxics Respiratory HI EJ index*	96	96
Traffic Proximity EJ index	96	96
Lead Paint EJ index	94	96
Superfund Proximity EJ index	93	98
RMP Facility Proximity EJ index	84	81
Hazardous Waste Proximity EJ index	95	97
Underground Storage Tanks EJ index	93	98
Wastewater Discharge EJ index	48	57

EJ Indexes - The EJ indexes help users screen for potential EJ concerns. To do this, the EJ index combines data on low income and people of color populations with a single environmental indicator.

*Diesel particular matter, air toxics cancer risk, and air toxics respiratory hazard index are from the EPA's Air Toxics Data Update, which is the Agency's ongoing, comprehensive evaluation of air toxics in the United States. This effort aims to prioritize air toxics, emission sources, and locations of interest for further study. It is important to remember that the air toxics data presented here provide broad estimates of health risks over geographic areas of the country, not definitive risks to specific individuals or locations. Cancer risks and hazard indices from the Air Toxics Data Update are reported to one significant figure and any additional significant figures here are due to rounding. More information on the Air Toxics Data Update can be found at: https://www.epa.gov/haps/air-toxics-data-update.

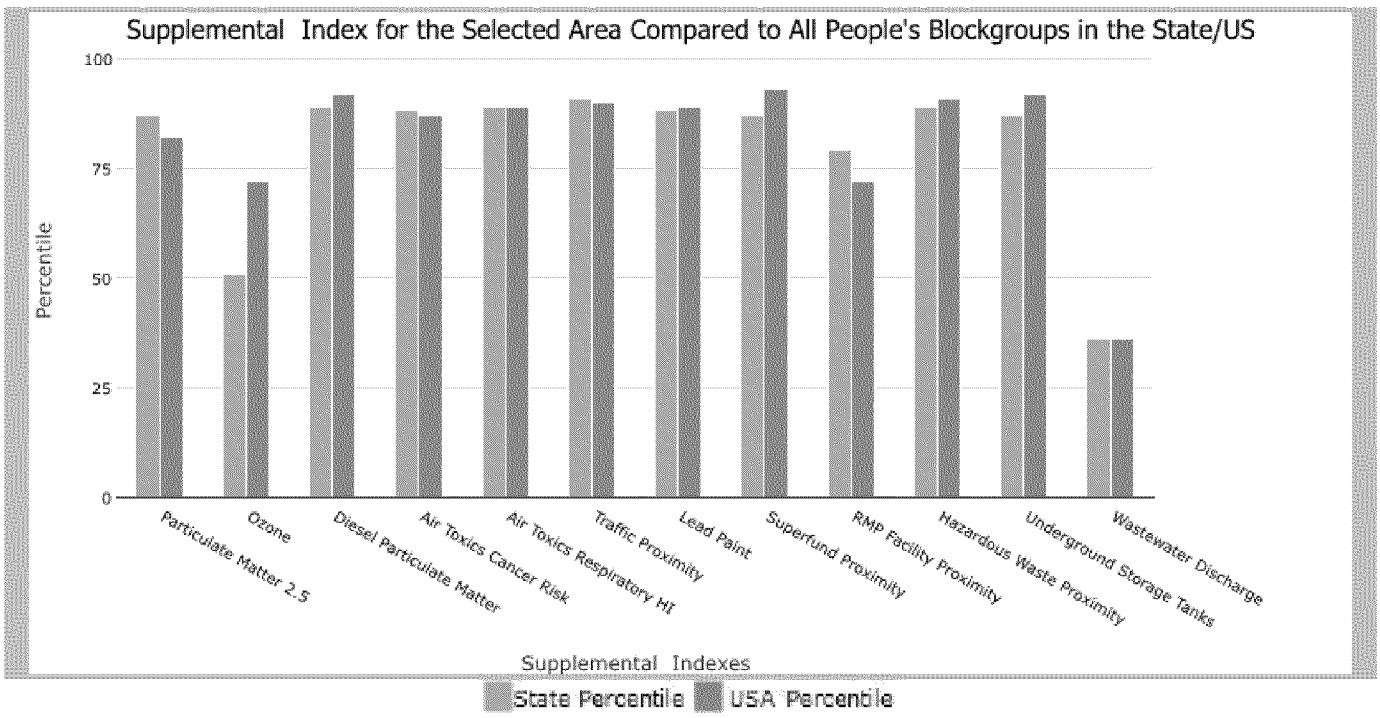
EJScreen is a screening tool for pre-decisional use only. It can help identify areas that may warrant additional consideration, analysis, or outreach. It does not provide a basis for decision-making, but it may help identify potential areas of EJ concern. Users should keep in mind that screening tools are subject to substantial uncertainty in their demographic and environmental data, particularly when looking at small geographic areas. Important caveats and uncertainties apply to this screening-level information, so it is essential to understand the limitations on appropriate interpretations and applications of these indicators. Please see EJScreen documentation for discussion of these issues before using reports. This screening tool does not provide data on every environmental impact and demographic factor that may be relevant to a particular location. EJScreen outputs should be supplemented with additional information and local knowledge before taking any action to address potential EJ concerns.

EJScreen Report (Version 2.11)

the User Specified Area, NEW JERSEY, EPA Region 2



Approximate Population: 23,954

Input Area (sq. miles): 1.46

Superfund Proximity Supplemental Index	87	93
RMP Facility Proximity Supplemental Index	79	72
Hazardous Waste Proximity Supplemental Index	89	91
Underground Storage Tanks Supplemental Index	87	92
Wastewater Discharge Supplemental Index	36	36

Supplemental Indexes - The supplemental indexes offer a different perspective on community-level vulnerability. They combine data on low-income, limited English speaking, less than high school education, unemployed, and low life expectancy populations with a single environmental indicator.

This report shows the values for environmental and demographic indicators, EJScreen indexes, and supplemental indexes. It shows environmental and demographic raw data (e.g., the estimated concentration of ozone in the air), and also shows what percentile each raw data value represents. These percentiles provide perspective on how the selected block group or buffer area compares to the entire state, EPA region, or nation. For example, if a given location is at the 95th percentile nationwide, this means that only 5 percent of the US population has a higher block group value than the average person in the location being analyzed. The years for which the data are available, and the methods used, vary across these indicators. Important caveats and uncertainties apply to this screening-level information, so it is essential to understand the limitations on appropriate interpretations and applications of these indicators. Please see EJScreen documentation for discussion of these issues before using reports. For additional information, see: www.epa.gov/environmentaljustice.

One Ward United for Environmental Justice, Air Monitoring and Green Infrastructure Collaborative Problem-Solving Initiative

Resources/Inputs	Activities	Outputs	
Air Monitoring Partners: • Newark Green Team • New Jersey DEP • Center for Community Engagement, Environmental Justice, and Health (CEEJH), • University of Maryland • EOSHI Rutgers University	• Train community residents to conduct Hyper Local air monitoring. • Engage in a network of technical and public health experts. • Establish neighborhood Air Monitoring Advisory Boards in three neighborhoods	• Monthly meetings with the 3 neighborhood Air monitoring Advisory Board. • Monitor data from 10 sites with Purple Air Monitors • Select sites and Conduct truck Count with Air Beams and Black Carbon Monitors	• R W D C n • S p F i g n c
Reducing Flooding through Green Infrastructure Partners: • NewarkDIG • Rutgers Cooperative Extension Water Resources Program	Expand reach of GI Reformer team to outreach to South Ward residents and business stakeholders in the three neighborhoods where GI projects will take place.	Identify community groups to assist with recruitment of South Ward GI Reformers, Street canvassing and Door Knocker delivery to attend public events.	Reside Weequ Street neighb South CBO's institut goverr munici

• City of Newark Department of Water & Sewer Utilities			
Workforce development • CHCA • NewarkDIG • City of Newark Green Works Program • Rutgers Cooperative Extension (RCE) Water Resources Program	Planning, a project team, including additional partners, to review the program plan, develop the necessary supporting materials and data tracking tools, and formalize partnerships.	• Establish Green Jobs Task Force, Develop brochure for Green Hub Recruitment of 60 residents (20 from each neighborhood). • Monthly meeting with community-based partners.	• R W D C m • S p F in H

South Ward Environmental Alliance
Budget - One Ward United for Environmental Justice (October 1, 2023 - October 2026)

	Budget									Narrative
Line	Expenses	2023 (Oct-Sept)		2024 (Oct-Sept)		2025 (Oct-Sept)

Project Performance Period: 11/1/2023-10/31/2026

1.0 PROGRAM OBJECTIVES

a. Project Summary Page

Project Title: Delivering Resilient Power and Communications to Vulnerable Populations in Vieques, Puerto Rico

Project Location: Vieques, Puerto Rico, 00765

Applicant Information:
Organization: Community Through Colors (CTC)
Main Contact: Edgar Oscar Ruiz, Executive Director

Brief Description of Applicant Organization: Community Through Colors (CTC) is a 501(c)(3) nonprofit organization active in Vieques, Puerto Rico following the devastating 2017 hurricane season. CTC's mission is to assist disadvantaged individuals who are disproportionately affected by natural disasters recover and achieve resiliency in anticipation of future humanitarian crises. Previous projects include: deploying renewable power and communications systems; implementing sustainable agricultural systems to enhance local food security; supporting community organizations to distribute food to residents without other support systems; renovating Vieques homes to a higher standard of safety and sanitation; and, improving the waste management system to divert organic and recyclable material from the landfill.

• **Small CBO Set Aside:** No

• **Project Abstract:** This project aims to address the adverse environmental and public health effects experienced by the underserved frontline community of Vieques, Puerto Rico. Vieques is medically underserved, and the island's remote location and lack of infrastructure make it vulnerable to complete resource and information isolation during power outages, forcing them to rely on immediate solutions which often have long-term health and environmental consequences. The community of Vieques was devastated by the extended power outages and subsequent complications following Hurricane Maria in 2017. Many residents lack the resources to have cellular or internet technology in their homes, and when power is out radio is the only communication method that works. The project will reduce the risk of adverse health outcomes among residents who require energy-consuming medical services. The CTC Team will deliver

ED_016126_00000826-00001

renewable off-grid energy systems and mobile communications technologies to the residences of elderly, disabled, and severely low-income individuals—enhancing their ability to withstand extreme weather events. The remote solar and battery systems will provide residents with a reliable source of power, particularly during power outages caused by hurricanes. Off-grid energy systems will be able to provide energy needed to sustain critical medical devices, refrigeration, and communication systems. Additionally, energy systems will be provided to two schools which serve as emergency shelters in a natural disaster, and two systems for a high school innovation technology. CTC will provide solar-powered portable radios to vulnerable populations in Vieques so they can receive information broadcast by the emergency radio station during a power outage.

Project Type(s): Disaster Preparedness/Response Planning and Implementation; Support of low and zero emission and resilient technologies that reduce greenhouse gas emissions; Environmental Justice partnership building that engages disadvantaged communities in Local, State and Federal public processes

Special Considerations:

- Climate Change/Disaster Resiliency
- Rural Area with population of 8,043 (US Census, 2022)

• **Environmental Issue**: Environmental Justice; Public Health; Natural Disaster Response

• **List of Project Partners:**
VieuesLove (nonprofit organization)
COREFI (nonprofit organization)
Vieques High School (academia)
Sustainable Designs (business/industry)
Center For International Media Action (nonprofit organization)

QAPP Needed: No

b. Environmental and Public Health information of the Underserved Community
This project aims to address the adverse environmental and public health effects experienced by the underserved community of Vieques, Puerto Rico. A small island with a population of approximately 8,000 and over 50% of residents living below the poverty line, Vieques is a rural and persistent poverty community (US Census, 2022). Vieques is predominantly Hispanic, with a disproportionately high elderly population and 90% of the residents identified as low-income (Figure 1). Vieques is medically underserved (Figure 2), and the island's remote location, lack of infrastructure, and unreliable communications make it vulnerable to power outages and resulting disproportionately severe social and environmental consequences. In 2017, the community of Vieques was ill prepared for the impact of Hurricane Maria due to poor accessibility to information and resources, resulting in worsened health conditions, food and water shortages, and unsanitary or unsafe living conditions which would persist for years. Many residents lack the financial or technical resources to have cellular or internet technology in their

homes, leaving them reliant on radio for communication during power outages. Currently, radio is broadcast around Vieques by a speaker mounted on the back of a truck which incurs high rates of travel related fuel emissions. This project, led by Vieques nonprofit Community Through Colors, will provide the underserved and frontline community of Vieques with access to critical energy services and communication capabilities during a natural disaster.

Figure 1. Snapshot of Environmental Justice Indicators for Vieques (EPA EJ Mapping Tool) depicting the historically disadvantaged community of Vieques, PR, specifically the demographic features which limit their access to resources and capacity to respond and adapt to climate change and severe environmental events.

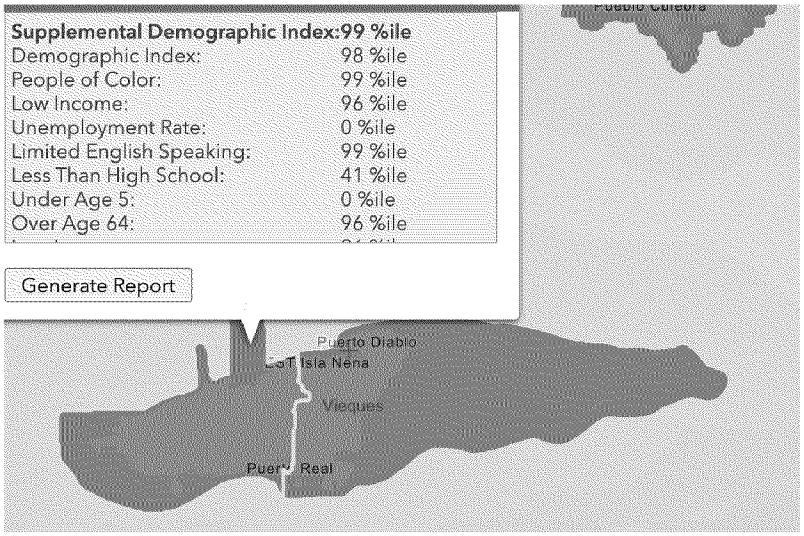

Figure 2. Vieques depicted as a Medically Underserved Community (EPA EJ Mapping Tool). The island of Vieques currently lacks a hospital, despite the large population of medically dependent individuals, leaving the community isolated and without capacity to serve environmental related health issues.

It is widely recognized that the community of Vieques disproportionately experiences environmental and public health issues. For over 50 years, the US Navy used Vieques as a bombing range, ultimately leading to groundwater contamination and increased rates of airborne toxins. As a result of the uncontrolled environmental pollution from the bombing, Vieques residents experience higher rates of health problems including certain cancers, kidney

ED_016126_00000826-00003

ailments, and asthma compared to the US national average[1]. However, Vieques does not have a hospital, thereby forcing individuals with compromised health to either regularly travel to the main island for care, substantially increasing fuel emissions, or rely on life-saving medical equipment and emergency communication to make critical health decisions. Power outages are particularly devastating for residents who require medical devices, refrigeration for medicines such as insulin, communications systems or medical alerts, and other life-sustaining equipment. Without access to power, these residents are at disproportionally high risk of adverse health outcomes, including death. The instability of the current energy production and distribution network presents a situation that requires additional support to not only communicate critical information to the most vulnerable members of the community but also provide backup power during regular or extended power failures. Therefore, the targeted members of the community for this project will be residents of Vieques who are bedridden, elderly, diabetic, and/or dialysis patients.

This project seeks to address the environmental and public health issues faced in Vieques through the following activities:

1) installing remote solar and battery systems in homes with life-saving medical devices to improve individual health, provide life sustaining resources, and reduce generator related emissions
2) providing portable radios to emergency responders, community organizers, and vulnerable populations so they can tune into the CTC emergency radio network for updates and guidance in the event of natural disasters such as earthquakes or hurricanes to reduce travel related emissions

The project will reduce the risk of adverse health outcomes among residents that require energy-consuming medical services. The CTC Team will deliver renewable off-grid energy systems and mobile communications technologies to the residences of elderly, disabled, and severely low-income individuals, consequently enhancing their ability to withstand extreme weather events. The remote solar and battery systems will provide residents with a clean and reliable source of power, particularly during power outages caused by hurricanes. Off-grid energy systems will be able to provide energy needed to sustain critical medical devices, refrigeration, and communication systems. Project activities will provide a climate-friendly solution to disaster resiliency for vulnerable populations in Vieques.

Providing community and village emergency response units with portable radios will help improve resiliency through communication capability and reduce the social and environmental detrimental impacts of a natural disaster. CTC operates the only emergency radio communications system in Vieques. Using this radio system, critical information can be disseminated to people across the island in the case of an emergency. The radio broadcast system is powered by solar panels and a battery bank, capable of operating when the electrical

[1] *"An Evaluation of Environmental, Biological, and Health Data from the Island of Vieques, Puerto Rico".* U.S. Department of Health and Human Services Agency:Toxic Substances and Disease Registry Division of Community Health Investigations. March 2013.

ED_016126_00000826-00004

grid is down without incurring additional fuel or fuel importation burden. Through this project, portable radios will be provided to vulnerable households and disaster response coordinators in each subregion of Vieques who can tune into the CTC radio station during an emergency. The emergency radio network will prepare residents prior to severe weather events and following environmental crises to enable coordination of disaster response efforts to ensure those in need receive immediate attention.

c. Organization's Historical Connection to Underserved Community

Community Through Colors has extensive experience working with residents and businesses in the underserved community of Vieques. The organization has been involved with the Vieques community since Hurricane Maria hit the island in Fall 2017. CTC has worked closely with residents and organizations in the community to address local environmental and public health issues, including the inequitable access to environmentally friendly alternatives, lack of access to power during hurricanes, and the limited access to healthcare on the island. CTC has now established the only emergency radio communications system in Vieques which helps disseminate available information to the public during outages. The emergency broadcast station operated by CTC is powered by solar panels and a battery bank, capable of operating when the electrical grid is down without causing increased fuel burden. CTC project team members have been working with the community for several decades, beginning with efforts that brought attention to the Navy's use of Vieques as a bombing range. This work involved closely working with community organizations to organize protests and raise awareness of the social and environmental injustices that were perpetrated on the island. The CTC Team has continued to work with the underserved community in Vieques, Puerto Rico, to address local environmental and public health issues.

The CTC Team has been thoroughly engaged with the targeted vulnerable populations in Vieques. CTC has been on the ground for each disaster response effort since Hurricane Maria, helping to deploy off-grid renewable energy systems to power mobile clinics and emergency shelters. After Hurricane Fiona in the Fall of 2022, CTC provided the underserved community of Vieques with the only emergency radio available on the island. Project Partner COREFI provides the elderly, disabled, and those with high-risk medical situations meals multiple times a week; logistics with medical appointments; and additional in-home support such as cleaning, bathing, and general housekeeping. The households that will receive energy systems to power their medical devices and refrigeration through this project will be verified by COREFI's network of residents in need.

During the aftermath of Hurricane Maria, project partner ViequesLove provided solar radios to families on Vieques as well as crank radios to schools, churches, community centers, agencies, and organizations. Five days after Hurricane Maria, ViequesLove landed a plane with twelve satellite phones and critical needs. The satellite phones were used to connect the government agencies, first responders, and organizations with help both on and off the island as well as to provide community events for people to call loved ones and let them know that they were safe. For almost three months the only means of communicating with Vieques was by satellite

phones or HAM radio (amateur licensed radio frequency), as all other means of communicating were severed by the blackout.

The project aims to provide the most vulnerable populations in Vieques, Puerto Rico with resilient energy and communication capabilities. The community's input and participation were crucial in developing the project plan that meets their specific needs. Community residents and organizations were involved in developing the current project plan, and they are actively part of the decision-making process. The project approach developed is to install remote solar and battery systems and to increase access to the Vieques emergency radio network. The CTC Team held public meetings to receive input from residents about the challenges they face and approaches for resolution. Strategic goals arose from these discussions, which is to provide the most vulnerable populations with reliable and resilient energy and communication systems during disasters and emergencies. All individuals and organizations involved with the project will be consulted prior to installation regarding their energy use and provided with basic troubleshooting protocols. Further, systems provided to the Vieques high school will challenge students to submit proposals for teaching and training programs for other residents using new and existing systems. This will provide students a platform to engage with other members of the community and increase local knowledge, confidence, and excitement for resilient energy systems in Vieques.

d. EJCPS Model

The project will utilize each element of the Environmental Justice Collaborative Problem-Solving (EJCPS) Model, with some of the EJCPS Model elements currently in action. Planned and existing implementation of EJCPS Model elements are described in detail below.

EJCPS Model Element 1—Issue Identification, Community Vision, and Strategic Goal Setting: CTC has identified the disproportionate environmental and public health harms and risks that the Vieques community faces, including: limited access to reliable electricity and emergency communication systems for vulnerable populations. The project team worked with the community to establish a shared vision for the project and set strategic goals to address identified challenges for Vieques residents. The project will go further to identify specific needs of individuals who are most at risk during natural disasters through detailed surveys and site assessments. Emergency communications infrastructure has been secured and will be vital for ensuring project success. CTC was granted licensing permission from the FCC to use a radio frequency for broadcast emergency communications. CTC took over the one radio station in Vieques, previously Radio Vieques, to serve as the broadcast station for disseminating information during emergencies.

EJCPS Model Element 2—Community Capacity Building and Leadership Development Element: The project will focus on building the capacity of the local community to manage and sustain the renewable off-grid energy and mobile communication systems that will be installed. CTC will deliver technical training through a workshop series on renewable energy systems and portable radios to the following: project personnel, disaster response leads, residents who are recipients of energy systems, and interested community members. Through these workshops project

ED_016126_00000826-00006

participants will learn how to operate and troubleshoot problems that may arise with renewable energy systems and portable radios. As a result of this training, community members and community organizations will develop the necessary leadership capabilities to successfully enact disaster preparedness and response plans. Further, the high school innovation challenge provides students an opportunity to learn about renewable energy systems and lead initiatives which utilize renewable energy as a means to improve resilience in their community.

EJCPS Model Element 3—Consensus Building and Dispute Resolution Element: The project team will work closely with targeted populations to ensure concerns and needs are heard and addressed throughout the project. The CTC Team is composed of leaders in the Vieques who have developed trusting relationships with members of the community, businesses, and government. Community leaders and individuals in Vieques have worked directly with CTC Team members as part of ongoing activities that support vulnerable populations in Vieques. Any disputes that arise will be resolved through a collaborative process involving all project stakeholders with the overarching goal of enhancing resilience for vulnerable populations.

EJCPS Model Element 4—Multi-Stakeholder Partnership and Leveraging of Resources Element: The project will bring together multiple stakeholders to achieve the project's goals, including community members, local organizations, government agencies, and private sector partners, to pool their resources and expertise. Throughout the duration of the project the CTC Team will work to leverage external funding, technical assistance, and other resources to increase the project's success and impact. Project partner ViequesLove will help to identify resources and create structures for communication and information sharing from those entities that are certified by the federal, state, or local government to be used as a key element in the community situation, threats, challenges, and resources available to the residents. ViequesLove also has several tools that could be used to provide information through the CTC radio station. This includes an Asset Mapping Project which has surveyed and mapped island resources necessary in emergencies and connects resources to needs. Multiple CTC Team members are official volunteers in the Municipal Emergency Management Office and collaborate on response and recovery with FEMA, the Emergency Management Offices on Vieques and Puerto Rico, the municipality, other NGOs, and are Community Emergency Response Team (CERT) validated by FEMA. Further, the CTC Team is actively participating in the Puerto Rico Voluntary Organizations Active in Disaster (PRVOAD) and are in the process of creating a long-term recovery group.

EJCPS Model Element 5—Constructive Engagement by Relevant Stakeholders Element: The project team will engage with relevant stakeholders throughout the project to ensure their input is heard and incorporated into project decisions. This will include regular communication and collaboration with community members, government officials, and other key stakeholders. The project team will seek feedback from the underserved community and stakeholders and evaluate the project's effectiveness in addressing the environmental and public health issues faced by the community. CTC will expand existing collaboration with local authorities to ensure project activities align with, and are integrated into, overall disaster preparedness and response plans.

ED_016126_00000826-00007

EJCPS Model Element 6—Sound Management and Implementation Element: The project team has developed a detailed project plan, with clear timelines and milestones, to ensure the project is completed on time and within budget. The plan involves effective management of project resources, including personnel, equipment, and materials. Team members have clearly articulated roles and responsibilities that will streamline project operations. The CTC Team has developed a sound implementation plan to address the identified environmental and public health issues. In this project, the plan of action includes the installation of remote solar and battery systems and an emergency radio network to provide reliable and resilient energy and communication systems during disasters and emergencies.

EJCPS Model Element 7—Evaluation, Lessons Learned, and Replication of Best Practices: The project will be evaluated at key milestones to assess its effectiveness in achieving its goals. Lessons learned will be identified and incorporated into ongoing project activities, and best practices will be shared with other communities to encourage replication of successful models. The project team will monitor and evaluate the effectiveness of the remote solar and battery systems and emergency radio network in addressing the environmental and public health issues faced by the underserved community in Vieques, Puerto Rico. CTC will be responsive to technical challenges that arise and will be responsible for the maintenance and repairs of energy or communications systems.

e. Project Linkages

This project directly supports *EPA Strategic Plan Goal 2, Objective 2.1* to promote environmental justice and civil rights. The project aligns with EPA's goal of promoting environmental justice by addressing the disproportionate impact of environmental and public health harms on vulnerable populations. The proposed project seeks to address these disparities by providing critical infrastructure and resources that will improve the community's resilience and ability to respond to disasters and emergencies. Vieques is a community that has historically been subject to environmental injustices, including contamination from a former U.S. Navy bombing range and a lack of access to basic resources such as reliable electricity and communication infrastructure. These injustices have disproportionately affected the most vulnerable populations in the community, including those who require critical medical devices such as dialysis machines and CPAP machines. The proposed project will resolve existing disparities by installing remote solar and battery systems that will provide reliable power to the most underserved and at-risk community members. This will not only bolster medical response times, but also reduce the risk of worsened respiratory conditions from fuel emissions from importing medical supplies and transporting ill individuals to the mainland. Providing portable radios that can access the emergency radio network will provide a critical means of communication prior to and during disasters and emergencies, allowing the community to prepare, coordinate response efforts, and access critical resources.

The project supports *EPA Strategic Plan Goal 2, Objective 2.1* by providing access to critical infrastructure and resources to underserved populations in Vieques. The project is community-driven, ensuring that the underserved community's needs and concerns are addressed, and promoting environmental justice and civil rights at the local level. The

ED_016126_00000826-00008

community's involvement in the decision-making process ensures that the project is tailored to their specific needs and concerns, promoting equitable access to resources and infrastructure.

f. Partners and Collaborators

CTC's previous work with disaster response units and community leaders in Vieques has helped identify recipients for renewable energy systems and solar-powered portable radios. Individuals in Vieques who work with COREFI–including the elderly, disabled, and those in need of medical devices–are all identified as vulnerable and at high risk during power outages.

ViequesLove is a 501c3 nonprofit that started after Hurricane Maria in 2017, and has since worked in the response and recovery effort while focusing on preparing the community for all weather events and adverse situations. ViequesLove will continue its close collaboration with CTC personnel that operate the emergency radio station, understanding that the residents of Vieques utilize radio as an only source of information when no other method is available. ViequesLove has worked to help the community in the past both in preparation and in understanding what resources are available to an underserved island with a limited amount of access to response and recovery support as well as healthcare. ViequesLove will continue to look for ways to outfit additional community centers and hubs with solar or emergency radios for residents to be connected to the vital information that the emergency radio station would provide.

COREFI is a community non-profit organization based in Vieques, established in response to the overwhelming number of residents in need. COREFI assists hundreds of residents on a regular basis to receive support with critical services and basic human necessities such as food and water, medication, safe and sanitary living conditions, and accessible infrastructure. Over the past fifteen years, COREFI has identified the most at risk communities and isolated individuals who are impacted the worst during environmental crises. These communities and individuals are the target populations of this proposed project and COREFI already has established a record of communication and trust within this population. COREFI will interface with individuals and households that receive renewable energy systems and portable radios, while helping to ensure their voices are heard and the project is fulfilled to the specific needs and desires of the recipients.

Vieques High School will be a recipient and partner for this project. 2 portable solar energy systems will be deployed at the high school to be used in a technology challenge developed to engage students in the future of a resilient Vieques, increase awareness to the environmental challenges facing remote islands, and provide opportunities for students to learn and think critically about renewable energy and human health.

Sustainable Designs has been working with CTC on disaster recovery and assistance efforts in Vieques since Hurricane Maria in 2017. Sustainable Designs has collaborated closely with Community Through Colors since 2017 to develop and implement multiple activities in Vieques which support the underserved community and vulnerable populations. This includes projects that have used renewable energy to increase resiliency and energy independence and,

ED_016126_00000826-00009

increased access to medical care and food provisions for vulnerable and low-income populations. will assist CTC with project design and implementation, planning, reporting, and budgeting to ensure project deliverables are met on-time and within budget. This partnering agreement complies with 2 CFR Part 200 as a subrecipient because Sustainable Design's work: cannot be replicated; is vital to programmatic design and implementation activities; is entirely focused on supporting the underserved population of Vieques; and the total fee is below the micro-purchase threshold for competitive contracts.

Center For International Media Action is a non-profit radio engineering organization that helps to build community radio stations and transition to green energy. In Vieques, CIMA procured hundreds of used solar panels from redistribution and installation on residential homes. CIMA fundraised for solar materials and performed installations for people with precarious electricity and fixed-incomes around the island.

2.0 PROJECT ACTIVITIES / MILESTONE SCHEDULE / DETAILED

a. *Project Activities*

The CTC Team will deploy New Use SunKit 2000 portable energy systems at 19 residences, 2 schools which serve as emergency shelters in a natural disaster, and 2 systems for high school students as a technology challenge. The New Use systems are plug-and-play, composed of a 2 kilowatt-hour solar photovoltaic array, 2 kilowatt inverter, and a 5 kilowatt lithium battery. This system will be able to provide the energy needed to sustain critical medical devices, including energy-consuming devices such as refrigerators, CPAP machines, and dialysis machines. Vieques experiences a higher incidence rate of medical problems as a result of the exposure to toxins from decades of US Naval bomb testing on the island (source). The CTC Team will provide a New Use system to 19 low-income households with energy-consuming medical devices, including those with needs for refrigeration, the elderly, and disabled individuals.

Local community organizations and concerned residents have created a community HAM (amateur radio licensed frequency) radio network that connects government and local agencies, organizations, fishers, and community responders with HAM radios for more efficient response and recovery. However, individual households remain without a method of receiving critical information before, during and after a storm or adverse event putting them at risk. The CTC Team will use grant funds to support the delivery of 400 portable radios that can tune into the CTC radio station frequency during an emergency. Every portable radio will have an LED flashlight, cellular phone charging capabilities, and will be powered by embedded solar photovoltaic cells and a battery unit. Radios will be provided to households in remote regions of Vieques, areas which have been identified by project partner COREFI as highly vulnerable in the event of an emergency.

The CTC Team will use two New Use energy systems for a High School innovation challenge. The challenge will involve teams of Vieques high school students to submit ideas for teaching and training other Vieques residents on using the off-grid renewable energy system. The intention of this challenge is to provide students a platform for engaging with other members of the community to help increase local knowledge about resilient energy systems in Vieques. It is a goal for this information to spread and enhance the desire for a sustainable energy future that is able to provide security in emergency situations.

The project activities for providing resilient energy and communication capabilities to the vulnerable population in Vieques, Puerto Rico, are as follows:

1. Needs assessment and project planning: The project team will conduct a needs assessment to identify specific site characteristics of the most vulnerable households that require renewable off-grid energy systems and mobile communications technologies. The team will finalize a detailed project plan, including a detailed timeline, budget, and resource allocation plan.
2. Procurement of equipment and materials: The project team will procure the necessary equipment and materials required for renewable energy systems and mobile communication technologies.
3. Deployment of mobile communication technologies: The project team will provide mobile communication technologies, including satellite phones and radios, in the households of vulnerable populations and disaster response units. These communication technologies will allow individuals to stay connected and informed during extreme weather events.
4. Deployment of renewable energy systems: The project team will deploy renewable energy systems in the households of elderly, disabled, and individuals with severe medical needs. Systems will be provided at the Vieques emergency shelters, and two systems will be used for the high school innovations challenge. The systems will include solar panels, batteries, and inverters to provide a reliable and resilient source of energy.
5. Deployment of mobile communication technologies: The project team will provide mobile communication technologies, including satellite phones and radios, in the households of vulnerable populations and disaster response units. These communication technologies will allow individuals to stay connected and informed during extreme weather events.
6. Training and education: The project team will provide training and education to vulnerable populations on the proper use and maintenance of renewable energy systems and mobile communication technologies. The team will also provide information on disaster preparedness and response.
7. Monitoring and evaluation: The project team will monitor and evaluate the performance of the renewable energy systems and mobile communication technologies installed in households. The team will also collect feedback from vulnerable populations on the effectiveness of the project and make any necessary adjustments.

b. Milestone Schedule

The following table outlines the major milestones and timeframes for completing significant project activities within the three-year period of performance:

Milestone	**Timeframe**
Project kick-off meeting with CTC Team	Month 1
Meet with project stakeholders to produce detailed needs assessment plan and schedule site visits to vulnerable households and emergency shelters	Month 2
Meet with Disaster Preparedness and response units to identify pathways for integration with existing disaster response plans	Month 3
Produce detailed project plan for deployment of renewable energy and mobile communication systems	Month 4
Renewable Energy and Mobile Communications Equipment and Material procurement, including shipping logistics	Month 5
Solidify plan for on-site delivery/installation, notify stakeholders and recipients of systems	Month 6
Mobile communication system deployment, rollout of radios to identified recipients	Months 7-8
Training on mobile radio communication technology for recipients. Includes CTC Team technical support contact information.	Months 7-8
Workshop series on renewable energy system components is developed and schedule for workshops is produced	Month 8-9
Systems monitoring, troubleshooting, maintenance, and repairs	Months 8-36
High School innovation challenge plan is developed, partnering communities are engaged in planning	Month 10
Renewable energy system deployment and installation	Months 10-11
Basic training and education on renewable energy systems technology for recipients. Includes CTC Team technical support contact information.	Months 10-12
Detailed workshop series on renewable energy systems for community at-large, including students interested in participating in the high school innovation challenge	Months 10-18
High School innovation challenge begins after participants have gone through renewable energy workshop series	Month 19

CTC Team awards high school innovation winners for best proposal for best utilization of renewable energy systems in their given community	Month 24
Project monitoring and internal evaluation done on a quarterly basis and annual report due to EPA	Quarterly, EPA report annually
Final Project Evaluation and Closing meeting	Months 35-36
Final Project Report to EPA	Month 36

c. Itemized Budget Sheet / Budget Narrative

The Budget Sheet and Narrative is attached as a separate document and will provide a detailed explanation of how funds will be used for each activity and component of the project.

3.0 ENVIRONMENTAL RESULTS – OUTPUTS, OUTCOMES, AND PERFORMANCE MEASURES (LOGIC MODEL)

a. Environmental Results (Logic Model):

The logic model is attached as a separate document.

b. Performance Measurement Plan:

The project team will use a combination of qualitative and quantitative measures to track and monitor project performance and progress. The team will collect data on the number of households served, energy generated, communication technologies installed, and feedback from vulnerable populations. The team will also monitor the reliability and resilience of the renewable energy systems and mobile communication technologies during extreme weather events. In addition to the outputs and outcomes identified in the logic model, the performance measurement plan will use the following indicators to track and monitor the progress and success of the project:

- Number of individuals/households identified and served
- Percentage increase of individuals/households with reliable access to energy and communication during natural disasters
- Percentage of individuals/households that report an improvement in quality of life as a result of resilient energy and communications
- Number of individuals/households that have received training and education on clean energy
- Number of individuals/households that have reported satisfaction with the training and education provided
- Number of systems and technologies that are functioning effectively
- Amount of power provided to critical services during emergencies or blackouts, consequently reducing generator usage and fuel emissions
- Percentage of households that report feeling prepared for future natural disasters as a result of resilient energy and communications

ED_016126_00000826-00013

The progress of these measurement indicators will be documented internally on a quarterly basis, and will also be provided to EPA in project reports.

c. Sustainability Plan and Community Vision:
The project aims to empower the most vulnerable populations in Vieques to be better prepared for future natural disasters by providing them with resilient energy and communication capabilities. The project will work closely with the community to ensure that the solutions provided are tailored to their needs and the project's momentum is sustained into the future. The inclusion of a solar challenge for high school students will engage a critical population of the community essential for long term continuation and community growth. Further, the team will engage with local organizations and stakeholders to develop a sustainability plan that will ensure the long-term operation and maintenance of renewable energy systems and mobile communication technologies. The community has previously expressed desire and interest for these systems, but lack the opportunities and resources to access them to date. Accordingly, the team does not anticipate any issues assisting the key stakeholders in forming a sustainability plan. Finally, the team will also leverage the project's results and momentum to support other communities facing similar challenges, as appropriate. The project team will work with local organizations and stakeholders to develop a replicable model that can be used in other communities.

4.0 PROGRAMMATIC CAPABILITY

a. Organizational Experience
Community Through Colors has six years experience operating projects within the community of Vieques and is readily capable of effectively implementing this project. The commitment, sincerity, and integrity displayed by the organization in the completion of previous work has developed a strong relationship with Vieques businesses, organizations, and individuals. CTC's work includes sustainable agriculture and food security, renewable energy, resilience and disaster relief, education, waste management, and community coalition building projects, positioning them to effectively unite all stakeholders throughout this project.

CTC is the lead organization on two active projects supported through the following US Department of Agriculture grant programs: the Beginning Farmers and Ranchers Development Program (BFRDP), and the Community Food Project (CFP) program. In response to lack of local food production and over-reliance on food imports, CTC developed the BFRDP project to enhance local knowledge and capacity of beginning and early-stage farmers to provide residents in Vieques with organic local produce. CTC partnered with COREFI on a Community Food Program project to address severe food insecurity for low-income populations in Vieques by providing reliable nutritious meals to them multiple times per week.

CTC's current pilot Vieques Microgrid project is recognized by the Department of Energy as a finalist for equitable community solar practices in the DOE Sunny Award. The pilot microgrid serves low-income households, small businesses, first responders, communications buildings, and emergency response centers with solar and battery storage. The system has operated

ED_016126_00000826-00014

through island wide blackouts, allowing essential operations to continue without heavy reliance on generators as was the case after Hurricane Maria, effectively bolstering environmental resilience and reducing emissions during both daily operations and in times of crisis. As a result of maintaining these renewable energy and communications systems, CTC has accumulated extensive experience working with local Vieques schools, emergency responders, individuals, resiliency centers, community centers, individuals, and more.

In the wake of Hurricane Fiona in 2022, CTC was granted permission by the FCC to provide vital disaster recovery communications for the island of Vieques. The storm effectively wiped out all electricity on the island, and the backup generator was unable to power up. Prior to the operation of the CTC radio station, dissemination of vital and potentially life saving information was incredibly difficult. Little or no content pertinent to the residents was being broadcast, and cellular service remained spotty and erratic throughout the island. For communications to the public, officials reverted to using a "speaker truck," driving around the island. Not only was this inefficient, as residents would only catch pieces of information at a time, if they were on the truck route, but it was also environmentally harmful. Fuel emissions from the one truck were unreasonably high for the small island, as residents regularly walk, ride horses, or take short vehicle trips. However, the CTC radio station is 100% dedicated to broadcasting recovery information and does not require any fuel to operate. The station is not used for music, entertainment programming, advertising, or underwriting content. The radio frequency and studio facility that was used as an STA broadcast site for the emergency radio station is still in place, and the radio station will relay vital information from the emergency services offices several miles away, for rebroadcast. Since the station has its own backup power source in the form of solar photovoltaic panels and batteries, it is not only a significantly more environmentally friendly option but also incredibly resilient and can operate through hurricanes, earthquakes, and other environmental disasters.

Since 2018, CTC has also operated a sustainable, organic, educational farm in Vieques, serving over ten restaurants, community markets, caterers, and individuals with fresh, healthy produce every week. As 99% of food and consumer goods are imported to the island of Vieques, local farming and support of aspiring local farmers not only increases the quality of food delivered to the island but also reduces the environmental impact of importation and distribution of food from other countries through air, water, and land travel. The farm not only supports the community through outputs, but also collects food waste from restaurants and markets, effectively diverting over 3.5 metric tonnes of CO2 from the landfill so far in 2023. CTC has worked to improve access to local produce for public schools for the free breakfast and lunch program. Previous partnerships with local schools and youth groups have fostered farm visits, during which the children learn about agriculture, local crops, and food origins.

b. Staff Experience / Qualifications of Project Manager (PM) -
CTC will leverage its diverse network staff, volunteers, and project collaborators to effectively deliver project goals. The project team has decades of experience working with vulnerable populations in the small and close-knit community of Vieques. The CTC team is composed of

well-known and established leaders in the Vieques community with extensive outreach capacity. A summary of Key Personnel is described below:

Oscar Ruiz, ***Project Manager, Community Through Colors***: Edgar Oscar Ruiz has served as the Executive Director of Community Through Colors since 2016. Mr. Ruiz will have oversight of the project to ensure that programmatic and financial objectives are achieved on-time and within budget. Mr. Ruiz lives and works in Vieques, and has experience in resilient community development, disaster response, renewable energy and agricultural projects. Mr. Ruiz has developed a strong relationship with multiple community organizations in Vieques that will help achieve project goals. Mr. Ruiz has led multiple efforts to deploy containerized solar microgrid systems to power clinics and schools in Puerto Rico after Hurricane Maria. Mr. Ruiz is a military veteran with experience in resilient community development and has a strong relationship with the directors of other non-profit organizations in Vieques.

Dayanara Cruz Maldonado, ***ViequesLove***: Dayanara Cruz Maldonado was born and raised in Vieques, Puerto Rico, and is bilingual in both written and spoken English and Spanish. She is one of the few young Viequense women to own her own business: managing residential properties. In 2018 she started working with ViequesLove as an office administrator and became a community liaison. In 2020 when the pandemic began, she began working with Jorge Fernadez Porto on the Contact Tracing Team, and became the project manager. She oversees the meetings with the VOAD team and the Long-Term Recovery Group. Dayanara Cruz Maldonado is married with three teenage children and enjoys all types of music, movies, and crochet; sometimes all at the same time.

Yaritza Pérez, *COREFI*: Yaritza is the executive director for COREFI, and provides a strong connection between the community and support organizations. COREFI provides direct services to disadvantaged and underserved communities in Vieques, Puerto Rico. Established in 2008 as a response to the overwhelming number of neglected residents, they have worked to identify and serve the most isolated citizens who lack other support systems. Many are ill, bedridden, or physically unable to leave their homes. Currently, they assist hundreds of residents on a regular basis with critical services and basic human necessities such as rood and water, medication, and accessibility. As an organization, they have identified the most critical population in Vieques and identified the most essential needs.

Edgar Reyes Maneiro: Edgar Reyes brings over fifteen years of experience managing, producing, creating, and broadcasting information on several radio stations. He graduated from the Connecticut School of Broadcasting and has since served as head of operations, show producer, controller, and on air personality. He currently lives and works in Vieques and is well connected with the community and their needs and desires for radio information. Edgar Reyes oversaw and operated the emergency radio license after Hurricane Fiona. He also communicates and shares messages with the community by driving a truck with loudspeakers to convey important or timely information to residents.

Beth Straight, *Community Through Colors*: Beth Straight joined Community Through Colors in 2021, acting as the operations and data manager for several projects operating under USDA programs. Ms. Straight currently resides in Vieques, and has worked to develop and strengthen relations with local businesses and organizations over the past year on a foundation of trust and reliability. Further, her experience capacity building renewable energy, agriculture, and waste diversion projects will ensure all components of the project are completed for the benefit of the community.

Joseph Siegel, *Sustainable Designs*: Mr. Siegel will apply his skill set to help CTC with project management, financial management, quality assurance and quality control, data management, and project reporting. Mr. Siegel has experience working for clients that include, but are not limited to: US Department of Agriculture, Environmental Protection Agency, US Army, Department of Energy, and the World Bank. Mr. Siegel is the Co-Project Manager of CTC's two projects under the USDA's BFRDP and CFP programs. He will help CTC ensure data is shared between collaborators and prepare inputs to meet EPA requirements for this project.

***c.* Expenditure of Awarded Grant Funds Plan**

CTC is committed to equitably and transparently distributing the grant funds as described in the budget, maintaining appropriate records of personnel and expenditures, and reporting all associated costs. CTC will work closely with project partners to ensure that funds are appropriately allocated to each organization to complete their responsibilities associated with realizing the objectives of this project. CTC's Expenditure of Awarded Grant Funds Plan is in accordance with EPA's Pre-Award Compliance Review for Nonprofit Organizations.

To ensure the timely and efficient expenditure of the awarded grant funds, CTC will implement the following procedures:

- *Budget Management:* Maintaining a detailed budget that will outline all the planned expenditures, monitoring the budget regularly to ensure that expenditures are within the budgetary limits. Any variations from the budget will be documented and reported.

- *Financial Management:* Keeping accurate records of all expenditures to ensure all funding is used for relevant and appropriate purposes within the grant limitations and project scope.

- *Reporting:* Providing reports on the project as per reporting requirements, to include progress, budget, community feedback, performance measures, and team development.

- *Controls:* To ensure all funds are equitably and appropriately allocated, collecting written justifications or receipts for all non-personnel expenditures. Any issues or concerns with funding distribution will be identified and promptly addressed.

ED_016126_00000826-00017

5.0 PAST PERFORMANCE

Community Through Colors is the lead organization on two active projects supported by the following US Department of Agriculture grant programs:

- the Beginning Farmers and Ranchers Development Program (BFRDP), and
- the Community Food Project (CFP) program.

CTC has been on-time in project reporting and within budget on both of these projects. CTC's coordination with team members and project stakeholders have ensured that project outputs and outcomes have been successfully realized. The CTC management plan and process has allowed information to be relayed clearly and in a timely manner so project team members understand their role and requirements in the context of larger project goals.

6.0 QUALITY ASSURANCE PROJECT PLAN

After reviewing the Quality Assurance Project Plan Requirement guidelines, Community Through Colors has determined that this project does not require a Quality Assurance Project Plan. To each of the questions listed in the associated Appendix the response was No, and the project will not involve the use of existing environmental data or the collection of new data.

In conclusion, the Community Through Colors team is ready to hit the ground running and improve the resiliency and safety of the most vulnerable populations in the underserved community of Vieques, Puerto Rico!

Resources	Activities	Outputs
Time (especially time away from COPI's other community projects	cleanup brush/solid waste from mangrove channels and lagoons	clear mangrove channels and consequent improvemenof water flow and the prevention of floding during storms
COPI: staff, facilities	plant mangrove trees	forest growth (and consequently cleaner air)
Partners: Vanderbilt University, LimPiaR, DRNA	harvest seeds for nursery	resident involvement in conservation strategies
private vehicles, COPI's boat (and other navigating equipment), and COPI's tool	disperse seeds in deforeted areas	business involvent in strategies for conservation and the growth of ecotourism
COPI's mangrove nursery	monitor rate of plant growth/death in reforestation areas	less trash in the streets, beaches, and forest of Piñones
	monitor floding in the community during storms	documentation of best practices and mistakes to guide future conservation efforts by COPI, residents, and business owners
	monitor visible pollution within the forest	
	community outreach to learn about past conservation practices and threads to mangrove ecosystem	
	community outreach to business owners without proper means to dispose of waste	

Audience	Short-Term Outcomes	Intermediate Outcomes	Long-Term Outcomes
business owners	a visible/proven effort of viable conservation for residens, business owners, and governmental	institutionalization of conservation mechanism for the community and business owners	environmental policies by the local and state government to institutionalize the conservation of the
residents		an analysis of the best practices and mistakes to guide future conservation efforts by COPI, residents, and business owners	long-lasting conservation of the forest
decision makers in DRNA		strategies for public policy advocacy	

	Description
Personnel (total = 130,000)	Administrator @ $15,000 per year to COPI for offsetting the cost and time that the executive director and other support staff have to divert from other tasks and to directly compensate for this work this project. Project Manager: @ $15,000 per year to compensate field and project managers. Field staff @ $25,000 per year for daily work in the field (planting, cleanup, monitoring) - part-time staff varies from week to week and season to season, so this is an estimate of 10-25 staff @4-6 hours per day Education and Community Outreach @ $10, 000 per year for programing activities meant to reach residents, business owners, schools, and government stakeholders
Travel (total = 2,500_	Field projects: @ $1,000 per year gasoline/oil for vehicles and boats Education and Community outreach @$250 per year to pay for gas for education outreach activities outside of COPU
Equipment (total = 7,000)	field projects @ $3,500 per year to purchase planting equipment, work uniforms (especially boots), and brush clean-up equipment. This sum also accounts for the possible need to purchase equipment for water quality and pollution monitoring (e.g., multiparameter photometer, dissolved oxygen meter, pH tester, salinity tester, turbidity meter,nitrogen/nitrate tester, phosphate test kit, solvent-free membrane recoverable oil and grease by infrared determination, nutrient agar kit
Supplies (total = 5,500)	Field project @ $2,000 per year for water, food, sunscreen, repellent, first aid, and miscellaneous field need (.e.g., wood and paint for posts and signs) Educational outreach @ $750 per year for publication costs and other materials for community events
Construction (total = 2,000)	field projects @$1,000 per year for the nursery maintenance and expansion, and for building structures to prevent newly planted mangroves from washing away
Other (total = 3,000)	Field projects @ $1,500 per year to pay for repairs of broken field equipment (particularly, motor on boat and electric tools for bruch cleanup)

20. TOTAL (sum of lines 16 - 19)	$ 147,020.00	$ 165,220.00	$ 179,073.00	$

SECTION F - OTHER BUDGET INFORMATION

21. Direct Charges:

22. Indirect Charges:

23. Remarks: Contracts: NJIT -$81,200; Rutgers - $30,000; TPL -$20,000. Supplies: rain garden, catch basin materials- $90,000; T-shirts/food- $4000 Other: Student stipends - $5184; meeting space -$15000; GSWA overhead for project management - $44,426

Great Swamp Watershed Association EJCPS Budget Detail		
Salary and Fringe:	**Requested**	**Notes**
GSWA Program Liaison	$122,803	Program Liaison -$26K Year One, $40,560 Year Two, $56,243 Year Three
GSWA Program Manager	$36,000	$12000/year for 3 years
Fringe	$39,700	(25% fringe benefits)
Subcontract:		
NJIT	$81,200	Boufadel,PhD students, Part-time students, Postdoc, supplies and overhead
Rutgers	$30,000	Technical support, Dr. Obropta. $10K per year, for 3 years
TPL	$20,000	Technical support from Scott Dvorak,$6,666 per year for 3 years
Supplies/Materials:		
Rain Garden Materials, Catch Basin materials	$90,000	($15k/rain garden) 15k/year for other projects
T-shirts for program participants	$4,000	T-shirts and food for up to 300 students
Mileage/Travel:	$3,000	Local travel for GSWA Program Manager and Program Liaison to and from program meetings and sites @ $1K/yr for 3 years
Stipends for Summer Student Assistants:	$5,184	Summer Garden Assistants - $12/hr for 3 hrs/week for 12 weeks for 4 students for 3 years
Rent for Program Space	$15,000	Rental of meeting space at BGCPP - $100/hr/1 hr/week for 50 weeks for 3 years
Overhead (10%):	$44,426	(GSWA's cost to manage the grant, insurance, etc)
Total Cost:	**$491,313**

Superfund Proximity EJ index	86	97
RMP Facility Proximity EJ index	94	93
Hazardous Waste Proximity EJ index	95	97
Underground Storage Tanks EJ index	93	97
Wastewater Discharge EJ index	91	94

EJ Indexes - The EJ indexes help users screen for potential EJ concerns. To do this, the EJ index combines data on low income and people of color populations with a single environmental indicator.

*Diesel particular matter, air toxics cancer risk, and air toxics respiratory hazard index are from the EPA's Air Toxics Data Update, which is the Agency's ongoing, comprehensive evaluation of air toxics in the United States. This effort aims to prioritize air toxics, emission sources, and locations of interest for further study. It is important to remember that the air toxics data presented here provide broad estimates of health risks over geographic areas of the country, not definitive risks to specific individuals or locations. Cancer risks and hazard indices from the Air Toxics Data Update are reported to one significant figure and any additional significant figures here are due to rounding. More information on the Air Toxics Data Update can be found at: https://www.epa.gov/haps/air-toxics-data-update.

EJScreen is a screening tool for pre-decisional use only. It can help identify areas that may warrant additional consideration, analysis, or outreach. It does not provide a basis for decision-making, but it may help identify potential areas of EJ concern. Users should keep in mind that screening tools are subject to substantial uncertainty in their demographic and environmental data, particularly when looking at small geographic areas. Important caveats and uncertainties apply to this screening-level information, so it is essential to understand the limitations on appropriate interpretations and applications of these indicators. Please see EJScreen documentation for discussion of these issues before using reports. This screening tool does not provide data on every environmental impact and demographic factor that may be relevant to a particular location. EJScreen outputs should be supplemented with additional information and local knowledge before taking any action to address potential EJ concerns.

Superfund Proximity Supplemental Index	88	96
RMP Facility Proximity Supplemental Index	93	92
Hazardous Waste Proximity Supplemental Index	94	96
Underground Storage Tanks Supplemental Index	93	96
Wastewater Discharge Supplemental Index	91	92

Supplemental Indexes - The supplemental indexes offer a different perspective on community-level vulnerability. They combine data on low-income, limited English speaking, less than high school education, unemployed, and low life expectancy populations with a single environmental indicator.

This report shows the values for environmental and demographic indicators, EJScreen indexes, and supplemental indexes. It shows environmental and demographic raw data (e.g., the estimated concentration of ozone in the air), and also shows what percentile each raw data value represents. These percentiles provide perspective on how the selected block group or buffer area compares to the entire state, EPA region, or nation. For example, if a given location is at the 95th percentile nationwide, this means that only 5 percent of the US population has a higher block group value than the average person in the location being analyzed. The years for which the data are available, and the methods used, vary across these indicators. Important caveats and uncertainties apply to this screening-level information, so it is essential to understand the limitations on appropriate interpretations and applications of these indicators. Please see EJScreen documentation for discussion of these issues before using reports. For additional information, see: www.epa.gov/environmentaljustice.

APPENDIX C
Green City Force EJCPS Logic Model

Resources/Inputs	Activities	Outputs	Audience	Short-term Outcomes (6-12 months)	Intermediate Outcomes (12-24 months)	Long-term Outcomes (2+ years)
<u>Green City Force Staff:</u> - Chief Program Officer - Director of Sectoral Business Development - Director of Social Enterprise Operations - Director of Alumni Engagement and Analytics - Sectoral Training Manager - Alumni Retention Manager **Trainee Stipend:** GCF Trainee Stipend during 2 week post-service Green Infrastructure Training **Partners:** Trees NY 2 Week Training - partner costs to implement training	Ongoing oversight of partnership and milestones Training - Foundational Green Infrastructure Training during 6 month service term. Training - Intensive 2 week, Post- Service Green Infrastructure training Job Readiness Support Services (Resume Building, Interview Coaching, Wraparound Services) Employer Coordination and Matching Placement Follow-up (Retention Services to Alumni)	550 Corp Members receive foundational training to prepare them for green career pathways, including broad exposure to green infrastructure. 150 Corp Members specialized in Green Infrastructure through the establishment of a green infrastructure track for Green City Force. 150 Alumni participate in 2 week Green Infrastructure bootcamp, upskilling them for green infrastructure jobs in NYC. 96 Alumni secure jobs in Green Infrastructure in NYC, through our close collaboration with key partners like DEP, NYCHA and USDA Forest Service	New York City residents	Through the partnership supported by the EPA, GCF, NYCHA and DEP will bridge the training gap, allowing New Yorkers to find full time work contributing to the city's urban resiliency efforts in the face of climate change.	Following the training period, GCF's Social Enterprise will hire Green Infrastructure specialized alumni, allowing us to secure contracts building and maintaining Green Infrastructure projects in New York City. Following Green Infrastructure Bootcamp training and initial work exposure through our Social Enterprise, 96 Green City Force alumni will be matched to full-time green infrastructure employers in New York City, such as our partners NYCHA, USDA Forest Service, DEP	The long term outcomes of this initiative will be a skilled workforce ready to provide New York City urgently needed green infrastructure that will improve the city's climate resiliency, ensuring frontline communities gain access to green jobs and are able to earn family sustaining wages while in the construction of urban environment provides green infrastructure training access through our Service Corp. The result will be the creation of a to create a skilled workforce capable of filling the forthcoming jobs building NYC's green infrastructure.

Green City Force: EPA EJ Collaborative Problem Solving Program Narrative

Project Summary Page

- Project Title: GCF Eco-Hubs Building Climate Resiliency and Career Pathways in Urban Forestry and Green Infrastructure for Frontline New Yorkers
- Project Location (including community/neighborhood(s), city, state, and zip code)

The prime locations are at our six Eco-Hub sites, located in public housing developments across the city:

ASTORIA HOUSES Eco-Hub Powered by GCF
Location: Astoria Houses, Astoria, Queens
The closest street address is 3-20 27th Ave

BAY VIEW HOUSES Eco-Hub Powered by GCF
Location: Bay View Houses, Canarsie, Brooklyn.
At the center of the development.
The closest street address is 2085 Rockaway Parkway, Brooklyn, NY 11236

HOWARD HOUSES Eco-Hub Powered by GCF
Location: Howard Houses, Brownsville, Brooklyn.
Behind the Brownsville Brooklyn Public Library branch at the end of Glenmore Ave.
The closest street address is 60 Glenmore Ave, Brooklyn, NY 11212

FOREST HOUSES Eco-Hub Powered by GCF
Location: Forest Houses, Morrisania, Bronx.
At 730 East 165th Street, Bronx, NY 10456

MARINERS HARBOR HOUSES Eco-Hub Powered by GCF
Location: Mariners Harbor Houses, North Shore, Staten Island.
At 132 Brabant Street, Staten Island, NY 10303

WAGNER HOUSES Eco-Hub Powered by GCF
Location: Wagner Houses, East Harlem, Manhattan.
At 122nd Street between 1st and 2nd Avenues.
The closest street address is
2395 1st Avenue, New York, NY 10035

- Applicant Information:

Green City Force, 630 Flushing Avenue, Mailbox #1, Brooklyn, NY 11206

Main Contact: Erika Lim, erikal@greencityforce.org

- Brief Description of Applicant Organization:

ED_016126_00000900-00001

Green City Force (GCF) trains young leaders from low-income housing communities to power a green and inclusive economy, through service. We equip them with the tools to change the trajectory of their lives and access career paths tied to the green economy. Our 18-24 year old Corps Members develop a passion for sustainability and AmeriCorps service by driving large-scale environmental and health initiatives. We design service as a path to greater wellbeing and means to enlist young people to become leaders in the movement to build a greener, fairer, and more just world. Graduates go on to jobs or college, directly or through alumni initiatives that build towards sectoral jobs and apprenticeships.

- Are you applying for the Small CBO Set Aside Track for $150,000 projects? No
- Project Abstract

With the extreme weather conditions and natural disasters occurring across the nation and the world, there is no doubt that we are beginning to feel the effects of climate change. Frontline communities like the New York City Housing Authority (NYCHA) are bearing the brunt of climate change and deserve to have a healthy, resilient, and secure living environment. In partnership with NYCHA, the Department of Environmental Protection (DEP), the USDA Forest Service, The Nature Conservancy (TNC), and Trees NY, Green City Force (GCF) is working towards empowering these disproportionately impacted communities and solving the issue of high unemployment rates of young adults through the implementation of green infrastructure (GI) workforce development projects in NYCHA to preserve and protect public housing and other low-income communities for the years to come.

Through this collaboration, GCF will train and prepare young adult residents of NYC public and low-income housing with basic green infrastructure skills during their 6-10 month AmeriCorps service term. Following their service term, graduates will have the opportunity to further their GI skills and training in a bootcamp. The upskilled graduates will then be prepared for entry-level GI jobs, including jobs with our partners like NYCHA and DEP focused on tree stewardship and maintaining bioswales that will all be essential as our climate continues to change.

The trainings will be located at GCF Eco-Hubs in NYCHA developments across NYC: Astoria Houses, Astoria; Howard Houses, Brownsville; Wagner Houses, East Harlem; Forest Houses, Morissania; Bay View Houses, Canarsie; Mariners Harbor Houses, Mariners Harbor.

- Project Type(s): Training, workforce development, monitoring, small-scale construction, public education, demonstration, public health
- Special Considerations Applicants/Grantees, and/or other factors identified in Section V): Climate Change/Disaster Resiliency, Environmental Justice
- Environmental Issue: Air, water, global warming, flooding
- List of Project Partners
    - Green City Force
    - NYCHA Climate and Resiliency Department - Siobhan Watson (local government)
    - USDA Forestry Service, Northern Research Station - Erika Svendsen, Lindsay Campbell, Michelle Johnson, Rich Hallett (researchers)
    - Trees NY - Nelson Villarrubia, Executive Director

- The Nature Conservancy - Emily Noble Maxwell, New York Cities Program Director
- The Department of Environmental Protection - Melissa Enoch, Managing Director Green Infrastructure Planning & Partnerships

- Will you need to develop a QAPP for your project? Yes

b. Environmental and Public Health information of the Underserved Community:

New York City Housing Authority (NYCHA) is the largest public housing authority in North America with over 500,000 residents. When the authority started in 1934, it was the first in the United States to provide publicly funded housing and it was considered a high-quality standard of living. Fast forward 88 years later, 1 in 15 NYC residents live in NYCHA housing, yet NYCHA has experienced a significant decline in federal funding which is resulting in dilapidated buildings and an overall disinvestment in its public housing residents. The lack of investment in NYCHA communities has also resulted in environmental and health injustices that have only been exacerbated by COVID-19 and climate change.

Although NYCHA originally started with a majority of white residents, currently 90% of NYCHA residents are Black or Hispanic and they have been overrepresented in contracting COVID-19 due to many chronic issues of hypertension, asthma and diabetes. The density of living conditions combined with the high volume of essential workers required to be at risk daily due to income inequality, only increased the spread and exacerbated the risk of COVID-19. During COVID-19, Black American and Hispanic/Latinx New Yorkers have experienced the highest rates of hospitalization and deaths. Pre-pandemic, these residents already had higher hospitalization rates for underlying health conditions that put them at an increased risk of COVID-19. One of the most common health conditions NYCHA residents have is asthma which can be triggered by dust, poor ventilation, and pest infestations. According to a recent article, asthma is the number one reason children in New York City's lowest-income neighborhoods visit the emergency room, and New Yorkers in asthma hotspots are five times more likely to live in public housing (City Limit, 2021). For this reason, air quality, and its connection to the health of NYCHA's urban forest which contributes to improving air quality and health among NYCHA residents as well as its role in green infrastructure, is one of the environmental justice issues we are highlighting in this proposal.

Flooding is another major environmental justice issue that this proposal will highlight. One of the most devastating hurricanes in NYC's history was Hurricane Sandy. In 2012, Hurricane Sandy flooded 35 NYCHA developments and left tens of thousands of residents without power for days and some even weeks. Other types of low-income housing were also affected by the storm, with 24,000 government-subsidized apartments and 40,000 rent-stabilized apartments in the path of the storm surge. As a city built on impermeable concrete in a deep water harbor, NYC's handscape is prone to flooding from storm surges and researchers have predicted that it will only increase in the upcoming years. According to a data analysis of the National Hurricane Center's research, WNYC-NPR predicts that a Sandy-like storm could flood more than 50 NYCHA developments by 2080 (NPR, 2022). A national study also predicts that low-income housing is three times more likely to be at risk of frequent floodings by 2080. With these predictions, NYCHA has created a Climate Adaptation Plan to prepare for the climate

ED_016126_00000900-00003

emergencies and our proposal will go hand-in-hand with these plans to ensure that our frontline communities have both the knowledge and resources to prepare for the next storm.

As witnessed during Hurricane Sandy, NYCHA residents are among the most exposed to the effects of climate change. NYCHA's open spaces are an important factor in mitigating the effects of climate change and building resiliency, both for NYCHA residents and for New York City as a whole. In partnership with DEP and NYCHA, the city has invested over $13 million in new green infrastructure on NYCHA's property to create vibrant, green, and climate resilient open spaces. Since 2021, through this partnership, 23 green infrastructure (GI) projects have been implemented on NYCHA property and 21 one projects are still in the works. The main purpose of GI is to provide stormwater management through filtering and reducing combined sewer overflows (CSO) which improves the health of the local community and waterways. However, there are additional benefits to GI that include reduced localized stormwater flooding, increased urban greening with native plants, heat reduction, and more habitat for birds and pollinators around the city. Types of GI include rain gardens, bioswales, and green roofs that collect stormwater from streets, sidewalks, and other hard surfaces that filter the water to keep our waterways healthy before it can enter the sewer system or cause local flooding. In addition to GI projects on NYCHA property, DEP has over 3,000 bioswales that they maintain across NYC and by 2030, they plan on installing a total of 8,000 bioswales across all five boroughs (DEP, 2021). Like street trees, the bioswales need care and maintenance by trained personnel. Originally DEP implemented its bioswales agenda in collaboration with a broad range of contractors, with whom they had challenges with contract completion and community relations. At some sites where bioswales were successfully built, the bioswales were poorly received by residents due to lack of community engagement and education. This led to the development of Bioswale Maintenance Workers that DEP hired on a seasonal basis. However, due to a lack of a pipeline of skilled candidates, there has been a significant gap in the maintenance of the bioswales. Moving forward, DEP plans to work with trusted community-based organizations and nonprofits, like GCF to fulfill these positions and keep up with the planned bioswales through the city.

NYCHA's approximately 2,600 acres of open spaces also support about 1,000 acres of tree canopy, with many mature canopy trees providing crucial ecosystem services, contributing to air quality - a critical need for NYCHA residents, as mentioned above - through air pollutant removal. They have many other contributions including mitigating urban heat island effect through providing shade, comfort, and beauty in addition to carbon sequestration, air pollutant removal, and stormwater mitigation benefits. In an urban setting, the urban forest can absorb water to provide stormwater management. Urban forestry is especially useful in stormwater management along roadways, retention basins, the banks of water bodies and in sloping areas to catch excess stormwater and prevent soil erosion. In neighborhoods with clusters of NYCHA developments, NYCHA is often the primary source of tree canopy cover neighborhood-wide, making NYCHA trees particularly important in neighborhoods with less access to large parks and other open spaces. Trees at NYCHA, however, bring challenges as well: as a housing authority focused on upgrading housing quality in the context of decades of deferred maintenance and a $40 billion capital need, the resources NYCHA is able to devote to caring for trees is limited. Outside of NYCHA, in the rest of NYC, NYC Parks relies on volunteering by Citizen Pruners to steward and care for street trees. Since NYCHA trees are on land that belongs to the housing authority, they are not

ED_016126_00000900-00004

considered street trees and therefore not subject to the established stewardship approach that applies to the rest of the city. Given the many ways in which trees contribute to the health of residents at NYCHA, there is a need to provide protection and care for the existing canopy to ensure it survives and thrives.

We believe that young NYCHA residents are a key part of addressing health and climate-related problems facing public housing. NYCHA is vast and under-resourced and residents face many competing pressures. GCF's Service Corps program develops a skilled workforce capable of filling the forthcoming jobs building NYC's GI. Corps Members, the young adults in our program, will be exposed to the basics of green infrastructure in their 6-10 month service term. Post-program graduates will have the option of joining a two week bootcamp with Trees NY to learn to steward, care, and maintain trees. With the GI skills gained through their service term and bootcamp, the trained graduates will have the opportunity to gain employment through GCF's Social Enterprise (SE) or a job through our partners like NYCHA and DEP. Young residents trained in green infrastucture careers can help bring about change to their communities and build climate resiliency and act as credible messengers to build consciousness among residents towards agency and actions for climate and health equity across NYC.

We use residency with NYCHA or supported low-income housing as a prerequisite for program enrollment. As part of our multi-year strategic plan, we are in the process of expanding our eligibility to include more low-income New Yorkers because we recognize the need for employment and climate solutions in all forms of frontline, low-income communities. Currently, the majority of our program participants are NYCHA residents with a vast majority of community service projects led by GCF Corps Members completed on NYCHA property. In order to qualify for NYCHA housing a family's household income must be below 80% of the area median income, with most NYCHA residents earning below that mark. As of January 2022, the average household income at NYCHA is $24,454 which is significantly below the 2022 Federal Poverty Level for a family of four. As of 2017, NYCHA was home to 52,000+ 18-24 year olds. Young adult public housing residents pre-pandemic were already unemployed in massive numbers, with 72% of 18-24 year old residents reporting no income from employment (NYCHA, 2017), compared to the citywide 22% unemployment rate for 18-24 year olds in March 2017 (JobsFirstNYC, 2018).

- What are the local environmental/public health issue(s) that the project seeks to address?
  Air quality, pollution, flooding, heat, water quality, and climate resiliency

What are the local environmental/public health results the project seeks to achieve and how will the underserved community benefit from those results?

GI is a cost-effective, resilient, and sustainable way to combat climate change. The maintenance, education, and stewardship of NYC's GI such as trees and bioswales will provide a greener and more resilient landscape, cooler temperatures, better air quality, flood mitigation, and cleaner water for all New Yorkers, especially frontline communities. GCF has first-hand experience in engaging public housing young adults and residents on introducing the importance of GI in the community.

In 2020, Green City Force worked in partnership with NYCHA to catalog the inventory of NYCHA trees, and to analyze the ecological and social impacts of the trees. The tree assessments also provided COVID-19 safe (outdoors and socially distanced) job opportunities for GCF alumni that would strengthen and develop their skills in a green career path. Six alumni were trained to serve as the project's field crew, with our Director of Social Enterprise as the crew lead. This project was also in collaboration with the USDA Forest Service and The Nature Conservancy who advised on the study design and research methods, assisting in training the field staff in urban forestry, social science skills, technical assistance and analytical support. This partnership provided short-term staffing and provided an opportunity to explore the development of longer-term urban forestry programming and career paths. The pilot program laid the foundation for data-driven landscape management at NYCHA, identified the potential paths for elevating landscape maintenance, and maximized the social benefits of the urban forest for NYCHA residents.

During COVID-19, like many jobs, energy work was paused and the SE team's work pivoted to performing census outreach followed by the first every NYCHA urban forestry project. A group of GCF alumni worked with NYCHA's Recovery and Resilience Department to conduct tree inventory and open space assessments across NYCHA. In the fall of 2020, NYCHA and Green City Force conducted a tree inventory of 2,636 trees and open space assessment at 18 NYCHA developments. The goal of the first year of tree assessments was to gain a better understanding of the type of trees on NYCHA property while also understanding the ecological and social impacts of the trees. It was also a way to identify trends amongst how residents use and perceive the trees in their communities to form a holistic understanding of the landscape that surrounds nearly 500,000 residents of New York. Analysis of the data from the tree inventory team shows that the trees at these 18 developments provide a variety of ecological benefits, including:

- sequestering 44 tons of carbon per year
- storing 1.801 thousand tons of carbon
- preventing 100,500 cubic feet of stormwater from running off into the sewer system each year
- removing 2,157 pounds of pollution per year
- producing 117.3 tons of oxygen each year

** All data can be found in NYCHA's Urban Forest Report 2021*

The tree inventory team also noted their interactions with residents at the campuses where they were working. The most common resident interaction documented by field staff revolved around residents' interest in why field crews were there, what the goals of the project were, and in some cases exactly how crews were going about their work. Residents frequently expressed appreciation for GCF field crews being there and enthusiasm for the attention being paid to trees as part of the project. One resident visited the field crew at two different campuses out of continuing interest in how the project was going; another mentioned that this seemed like a job she'd like to see her child get interested in. Because of the success in the first year, the GCF continued the partnership with NYCHA for another two years. In 2021, the team inventoried 13,776 trees across 638 acres on NYCHA property. In 2022, continued to lead the

ED_016126_00000900-00006

efforts in assessments, inventorying over 8,803 trees across over 470 acres of land in 38 NYCHA developments, and the trees they inventoried provided these ecological benefits:

- sequestering 192 tons of carbon per year
- storing 7.4 thousand tons of carbon
- preventing 398,000 tons of cubic feet of stormwater from running off into the sewer system each year
- removing 4.8 tons of pollution per year
- producing 510 tons of oxygen each year

In four years, the team inventoried 25,933 trees across 1,257 acres which is 54% of NYCHA's total tree portfolio. In the tree inventory team's findings presentation, they focused on their biological and social results, as well as recommendations for NYCHA on next steps. Some of their recommendations included coming up with ways to protect existing trees, the types of trees to plant and where to plant them based on GI and climate resiliency, educational resources for the residents on the importance of trees, and a NYCHA planting and pruning schedule. This project has highlighted the value of partnerships with organizations to not only build a pathway to employment for young adults in public housing related to GI in NYCHA, but also provide actionable solutions to climate resiliency in our most vulnerable communities.

Our partnership with the DEP will strive to build a similar model to the tree inventory program with NYCHA but with a GI focus. Corps Members will be exposed to basic GI training during their 6-10 month service program a subset of those graduates with gain further upskilling in GI education through a two-week bootcamp building their knowledge and technical skills in GI. The city's GI program has already greened more than 2,000 acres and implemented more than 17,000 linear feet of porous pavement with an additional 300,000 liner feet in design. These GI jobs will continue to play a vital role in combating threats from climate change that will come in all sorts of forms from flooding to heavy rainstorms.

* If your project relates to one or more of the other factors in Section V(e.g. COVID-19 impacts and/or Climate/Disaster Resiliency) include additional details about how the project addresses those factors in this section.

This is data pulled from EPA's EJSCREEN tool regarding the community where our six Eco-Hub sites are located. All of our Eco-Hub sites are located on NYCHA property.

- Astoria Houses: 95-100 Percentile in People of Color
- Bay View Houses: 95-100 Percentile in People of Color
- Forest Houses: 95-100 Percentile in People of Color
- Howard Houses: 95-100 Percentile in People of Color
- Mariners Harbor Houses: 90-95 Percentile in People of Color
- Wagner Houses: 95-100 Percentile in People of Color
    - EJ - Particulate Matter 2.5: all sites
    - EJ - Ozone: all sites

- EJ - Diesel Particulate Matter: all sites
- EJ - Air Toxics Cancer Risk: all sites
- EJ - Air Toxics Respiratory HI: all sites
- EJ - Traffic Proximity: all sites (Astoria Houses 50-70 percentile)
- EJ - Lead Paint: all sites
- EJ - Superfund Proximity: all sites
- EJ - RMP Facility Proximity: all sites
- EJ - Hazardous Waste: all sites
- EJ - Underground Storage Tanks: all sites
- EJ - Wastewater Discharge: Astoria, Wagner, Mariners Harbor

**All sites were either in the 80-90, 90-95 or 95-100 percentile for the EJ indexes (compared to the US). We used the Environmental Justice Index - An EJ Index combines demographic factors with a single environmental factor.

This data represents the environmental quality issues that affect the communities we predominantly serve. In almost every category, the communities we serve are listed as high risk areas. All of the data points to strengthen the argument that these Black, Indigenous, People of Color (BIPOC) communities are frontline communities experiencing the most immediate and worst impacts of climate change.

c. Organization's Historical Connection to Underserved Community

GCF brings nearly 15 years of innovative experience uniquely employing an urban conservation corps model focused on public housing communities, lifting up young Black and Brown people who are critical leaders in engaging fellow community members to practice sustainable behavior for more connected, vibrant, and healthier communities. Our multiple benefits model also makes us best suited to supporting these young adults as they gain training, experience, education, and pathways to quality jobs in the green economy, while surrounding communities benefit from meaningful, place-based service.

GCF was founded with the goal of creating economic opportunity for young adults in the green economy through a period of service creating impact in the community while building skills and experience on a path to careers. We chose to direct our entire program towards NYCHA following a collaboration with NYCHA's Office of Resident Economic Empowerment and Sustainability (REES) in 2010 during Earth Week, through which we jointly recruited participants for GCF's NYC Cool Roofs-focused AmeriCorps service and training, our focus at the time. Through this experience, we discovered the potential of recruiting NYCHA young adults to lead service initiatives in NYCHA as frontline leaders and credible messengers. NYCHA residents, and young adult NYCHA residents in particular, face many barriers to entering the workforce, including a lack of training and skills, poverty, institutionalized racism, and histories of trauma and abuse. The Eco-Hub model, powered by GCF, places NYCHA young adult residents at the center of food and community climate education to benefit thousands of NYCHA residents at the developments where sites are located, while also preparing young adult NYCHA residents for green economy careers and advancement opportunities.

- How the organization has worked with the underserved community's residents and/or organizations to address local environmental and public health issues currently or in the past and

what are some of the results of that work. Include information about recent efforts in the community, if any, that have sought to address the disproportionate issues you described in 1.b.

Since our start in 2009, GCF has graduated over 600 Corps Members, who have reached over 50,000 NYCHA residents through closed-loop community outreach and education focused on energy efficiency, solar, water, compost, nutrition, and recycling; built seven large-scale urban farms in public housing; grown and distributed over 150,000 pounds of organic produce to residents; diverted over 146,500 lbs of compostable waste; and engaged tens of thousands of residents across NYCHA through community events including weekly farm stands, cooking demonstrations, and harvest festivals. GCF also helped to design and lead Farms at NYCHA, building 6 additional large-scale farms across all five boroughs in NYC with multi-faceted impacts documented in a 3-year study by CUNY.

GCF has a growing network of over 600 alumni. Despite the ongoing challenges of COVID-19 related to recruitment and retention, and although we've had smaller groups of graduates for the most recent cohorts, 82% and 95% (Cohort 23 and 22 respectively) have been able to obtain job placement or enroll in higher education within six months of graduating, exceeding our typical rate of 80%. In 2022, 38 alumni enrolled in advanced energy training, 38 new graduates enrolled in college or obtained employment, and 53 alumni obtained new jobs or promotions in fields including green construction, energy efficiency, urban agriculture, horticulture, community health, zero-waste and youth development. In FY22, alumni earned on average $18.5/hr after graduation, $19.33/hr at one-year post-graduation, $21/hr following promotions or new jobs, and $20- $25/hr across alumni hired in our Social Enterprise.

Since 2009, GCF has hired over 200 alumni through our innovative SE program. In 2022, in addition to the tree inventory project, 12 alumni completed energy projects across nearly 70 developments; 4 alumni engaged in outreach via our Clean Up Corps funding from the former NYC Mayor DeBlasio's administration; and 21 alumni were hired to Compost Power, an organization founded by a GCF alumni to make composting accessible to all, in both full-time six-month stepping-stone positions and longer-term contract roles, helping to train CMs, process nearly 80,000 lbs of organic waste into compost across NYCHA, upgrade our initial five Eco-Hub compost systems, and install a sixth three-bin compost system at our newest Eco-Hub in Queens.

- Community Driven Participation

GCF has always valued the community we serve and has always put the needs of the NYCHA residents first. Even when creating green career pathways for our graduates, the job opportunities through our SE are also tied to improving the lives of public housing residents. When the SE program started, GCF became part of NYCHA's historic $300M investment in Energy Performance Contracts (EPCs) to upgrade and retrofit up to 120,000 apartments, benefiting nearly 262,000 NYCHA residents. Today, GCF continues to work with NYCHA on contracted energy retrofit projects that provide maintenance and improvements on the over 300 developments. During the start of each project, the SE team has the opportunity to connect with tenants during start-up meetings and Tenant Association meetings to speak to residents on what is happening in their developments. During the auditing process, the SE team will talk to residents

one-on-one to hear their concerns and take any feedback they may have. At the same time, while in the communities our graduates, who are also NYCHA residents, are able to speak to and recruit the next generation of members for our Service Corps program.

One of the reasons the tree inventory project was so successful was because we received so much feedback from the community. As the team was out in the community, they had multiple encounters with NYCHA residents to be able to ask their opinion about the trees in their environment. They were also able to interview NYCHA grounds crew about their role in taking care of the trees at their development, challenges, and any feedback in regards to trees at NYCHA developments. Each time a resident approached the team, the team recorded the information in their field notes, provided an overview of the project to the resident, and asked for their opinions on the trees. In 2022, there were 72 resident interactions and they determined that generally residents in NYCHA are happy and curious with the work GCF has done in the field. They also found that residents like to inform the team about their personal negative experience with trees in hopes that the team could make a difference. The tree inventory team also developed flyers about the importance of trees in the community and used it to steward community members about the work they were doing. To engage residents of all ages, they also designed a coloring sheet about trees for children. Following their data collection, the team presented the data and recommendations from the NYCHA staff and residents regarding next steps in a presentation to representatives from NYCHA, local leaders, and local environmental organizations.

Our efforts to engage residents instills an awareness in each individual of their impact and role in not just their development but in the entire environmental system. With a resident-led SE team, this community-wide collaboration promotes self determination and helps residents to shape what the communities can and should be.

d. EJCPS Model

This application uses all of the elements of the EJCPS Model, to some degree. The proposed project builds on existing relationships and the problem we propose to address through collaborative problem-solving was identified through dialogue with several of the stakeholders. In terms of element 1, “Issue Identification, Community Vision & Strategic Goal Setting”, we have identified the issue of needing additional green infrastructure in NYCHA and NYC and the need for jobs for young adults living in public housing. We have collaborated with our partners and stakeholders to envision the way to address this issue prior to applying. Element 2, “Community Capacity-Building & Leadership Development”, runs throughout the project: with support from the EPA, we will invest in the education, training, certification and leadership of young adults during their 6-10 month service time with GCF and post graduation, as central to the approach and the outcomes we seek. This time and investment will be vital in ensuring they are ready for entry-level GI jobs with our partners. Element 3, “Consensus Building & Dispute Resolution” - we anticipate to be a part of the planning phase at the outset of the project. Because we have already worked with these partners on past projects, we have trust in their expertise and feedback. However, we do understand that every partner plays a different role and has different priorities for joining the project, whether that is being a training or employer partner. Therefore, we do need to

discuss with all our partners a plan for fair participation of all and a dispute resolution. Element 4, "Multi-Stakeholder Partnerships & Leveraging of Resources" is something we have already discussed with all our stakeholders and partners at this stage in the process. We are clear of our goals and identified the roles of our partners. Element 5, "Constructive Engagement by Relevant Stakeholders", we anticipate to take place along the process, including incorporating other stakeholder groups such as businesses and local civic organizations that may be able to share their expertise on GI in NYC, both of which who may also serve as potential employers for our young adults post GCF. Element 6, "Sound Management & Implementation", is part of our GCF practice and our commitment as anchor partner and lead applicant on this proposal. We will ensure that prior to the start of the project, we will have all met to review our goals and each partner's commitment to the project. We will also facilitate regular meetings and create a structure for communication to keep all partners informed. Finally, Element 7, "Evaluation, Lessons Learned, & Replication of Best Practices" will be a process we take on as we proceed with the project. We can follow the process through our logic model to keep up with the plan and the measures of success. Additionally, because we've implemented a similar project with our tree inventory team, we are able to take our best practices from there and implement them in this project. If the project is a success, we can replicate this model for other green career tracks.

e. Project Linkages

As we continue to face the challenge and opportunity to seize the national movement focused on economic, environmental, and racial injustice, GCF is taking action in public housing communities and instilling consciousness in each person and impact large-scale systems, empowering residents to affect sustainable changes within their own communities, starting with our Corps Members in our Service Corps program.

We cannot wait for another major disaster to strike to take action. Instead, GCF is partnering with the city and local partners to prepare and mitigate for the extreme weather conditions climate change is expected to bring. This project focuses on positioning and providing young adults in public housing with the knowledge, training, and hands-on skills for pathways in the GI career path. Through GCF's Green City Academy (GCA), our Corps Members will learn the fundamentals of eco-literacy, give CMs the technical skills they need to succeed in service and the workforce, instill professionalism, and prepare CMs to secure employment post-term. We currently use the Roots of Success environmental literacy curriculum that strives to prepare youth and adults with barriers to employment for careers in the green economy, and empower them to improve conditions in their communities. Corps Members are given the opportunity to examine society's most pressing environmental problems, identify innovative solutions, and put their ideas into practice as they respond to community needs and pursue environmental careers.

Lessons also include topics such as environmental justice and public health, and combating climate change with green buildings. Post-service term, they will gain additional skills through a GI focused boot camp led by Trees NY and gain the hands-on experience and training certifications needed for full-time employment. Through our partnership with NYCHA and DEP, our graduates will be eligible for employment positions that include protecting our tree canopy and maintaining bioswales that are

essential in flood resilience and the GI of NYCHA and NYC. Throughout GCA and a young adult's entire journey with GCF, we are promoting the urgency of environmental justice, while also providing opportunities to take physical action and solutions that are embedded in their own communities.

Our project also supports goal 1, 4, 5, 6 to tackle the climate crisis, safeguard and revitalize communities, and ensure clean and healthy air and water for all communities.

f. Partner and Collaborate

This project brings together stakeholders who are in a position to make progress on the problem we are seeking to solve by working together. It builds off of GCF and NYCHA's existing partnership and track record of problem-solving to create solutions that unlock environmental and health benefits for public housing residents. With NYCHA as a partner, we can not only have their expertise and knowledge in serving the public housing community, but we can involve relevant NYCHA staff across departments and property management for GI trainings and projects. The USDA Forestry Service team will serve as a resource and be key partners in connecting this effort to the ongoing research on NYCHA trees. They have previously worked with NYCHA and GCF on various projects, including a tree inventorying project this past year. The team has seen the power of young adults and is committed to the health and well-being of public housing residents. TNC will also provide any technical assistance related to tree canopy data on NYCHA campuses and contribute their expertise as needed. As a partner and a supporter of GCF's tree inventory work, TNC is ready to build upon our prior collaborations to address environmental and health issues in frontline communities. Trees NY is the go-to organization for training and certification for Citizen Pruning (the volunteer stewardship certification that is the basis for stewardship of street trees around NYC, except for NYCHA). We have not worked directly together before and this is an exciting opportunity to build on mutual assets and expertise to address barriers to extending the citizen pruner approach into NYCHA for the health and benefit of trees and residents alike. They will be providing the post-graduation bootcamp for graduates interested in gaining additional GI training. DEP will be providing their expertise and knowledge on GI in NYC as the lead agency for the NYC Green Infrastructure Program (GI Program). They understand the need for a trained GI workforce to fill the gap in maintaining over 11,000 GI assets in NYC and are seeking our graduates for these positions.

Beyond this grant, this project has already taken the steps in building a relationship with all of these partners. Some of these partners are already involved with GCF in prior years and in other capacities. All of these partnerships will enable us to amplify their expertise as we continue to create access to opportunities for frontline young adults to enter the green economy.

2.0 Project Activities / Milestone Schedule / Detailed Budget Narrative -

The seven steps in the project Milestone Schedule include: Stakeholder Planning and Coordination Meetings, Corps Member Service Term and Foundational Training, Corps Member Specialized Training, Corps Member Service Term Graduation, Alumni Boot Camp and Upskilling, Job Readiness Support Services, and Green Infrastructure Job Placement. GCF and partners/stakeholders (including NYCHA, USDA Forest Service, Trees NY and DEP will hold ongoing planning and coordination meetings to ensure

smooth program delivery, issue identification, and progress tracking throughout the three year grant term. Meetings will include resident and community representatives, program participants and graduates to provide holistic input and program design adjustments as necessary to ensure successful implementation. We will bring new program participants into the project in cohorts at six stages throughout the grant term, creating an ongoing pool of qualified candidates for the various levels of training, implementation and job placement. GCF program staff and training partners will execute specific training stages and service delivery milestones throughout the project with technical assistance from our research, development, government and policy partners to align with GI and EJ priorities over the course of the three year term.

This phased approach provides opportunities for an iterative process and gradual capacity building to ensure sustainability of the project. It also allows GCF to coordinate with NYCHA as it works to put in place higher standards of tree care across the authority: NYCHA is working to elevate the level of tree care provided across its more than 2,600 acres of open space with 2% of New York City's tree canopy providing relief to some of New York City's most heat vulnerable EJ communities.

Funding for this project will cover costs associated with Program staff capacity to provide career exposure, technical training, wages for boot camp upskilling, technical assistance and program oversight with partners for ongoing engagement and collaboration between project partners. In addition, support from EPA will provide resources to build out employer partnerships, business development, job placement capacity and support, alumni outreach and monitoring of project success.

b. Milestone Schedule - **Uploaded in other attachments**

3.0 Environmental Results

GCF has experience tracking community engagement and workforce training outcomes. We will build on our years of experience tracking our member-related outcomes as well as residents engaged through our activities at the farm / Eco-Hub sites to track resident-related outcomes for this project, outlined in our Milestones and including:

- Partnership planning meetings achieved
- Onboarding and graduation rates of program participants
- Tree stewardship tracking: documentation of type of tree, location, condition of tree, and stewardship activity conducted
- Member training: documented by our Career and Alumni Services Staff, on Corps Member timesheets, through assessments administered through on-line surveys, and through completion of trainings and certification exams
- Success rates of boot camp participants
- Alumni Job placements post service term
- SE placements and upskilling technical training outcomes
- Resident engagement (both residents engaged and activities performed/events hosted): tracked through digital resident engagement form and Eco-Hub site activity log

- GI initiatives and outcomes aligned with NYCHA and DEP target outcomes

Finally, we will employ GCF's approach to project development and implementation which includes regularly monitoring outcomes and adjusting based on engagement with stakeholders, trouble-shooting and course-correction, towards the goals of the project.

c. Sustainability Plan and Community Vision

As mentioned above, and in the partner letters, all of the partners have a vested interest in sustaining the outcomes of the project into the future. For the community and NYCHA, at stake is addressing the issue of climate resilience across their 335 developments. In 2021, NYCHA released NYCHA's Climate Adaptation Plan to a call to action and goals to reach in partnership with residents, community partners, and environmental advocates. Some goals that are directly related to this project include building resilience into NYCHA's capital work, fostering the health of NYCHA's urban forest, and preparing developments to manage heavier, more frequent rainstorms. This project in building the GI workforce is vital in keeping the 500,000 residents habitable and safe in the years ahead. For the young adult public housing residents in our program, the project will provide training, skills, and employment in a green economy career, specifically in the GI track. They will be able to take action in their own communities against tackling the climate crisis while also earning wages to sustain their families.

For GCF, the plan to build out new career tracks, such as GI, for our young adults, goes hand-in-hand with our growth plan. One of our goals included in our multi-year strategic plan is to expand our three direct service programs (Service Corps, Career Services and Social Enterprise) to prepare over 800 young people with job ready skills and motivation to pursue green careers by 2025. This project will allow GCF to implement a framework model that is replicable in providing a pathway to employment in emerging sectors of the green economy.

Outside of New York City, we are making headlines in our model. Most recently, President Biden announced the forming of a national CCC. We have been invited to be part of the conversation as leaders of this model to share our successes and provide suggestions on mobilizing young leaders in combating climate change. We also recently received a $750,000 investment from Congressman Hakeem Jeffries to expand our Bay View Eco-Hub site in Canarsie, Brooklyn. In 2020, GCF also worked with a consulting firm to lead a 6-month Puerto Rico growth and expansion feasibility study supported and funded by a Puerto Rico-based foundation. The findings from the feasibility study will be used to understand the viability of a GCF model expansion or adaptation on the Island. A recommendation and proposal for a Puerto Rico Climate Corps program was made and GCF's former Chief Service Officer, Jennifer Tirado is currently running a pilot program on the Island. The process includes establishing replication indicators for the organization, learning, and highlighting comparable service to-career models and relevant scaling approaches as benchmarks. This proves that our program model not only has the ability to be scaled and replicated in cities across the nation, but that we are leaders in this field and can also provide technical assistance and partnership opportunities at the local, state, and national level.

4.0 Programmatic Capability In order to be evaluated under this criterion in Section V, applicants must provide information on their:

a. Organizational Experience related to the proposed project and their infrastructure as it relates to their ability to successfully execute the proposed project.

As described above, GCF has over 14 years of experience working with NYCHA residents and within NYCHA developments with success achieving results at the community level for environmental, community and workforce development outcomes. GCF has the relationships, expertise and capacity to successfully execute the proposed project. As planned, we opened our sixth Eco-Hub and have continued upgrades across each site to maximize exposure to green careers and educate frontline community members about climate mitigation, adaptation and resilience. As part of our continued expansion outlined in our strategic plan, we are aiming to open four additional new Eco-Hubs by the end of 2025, beginning with another site in the Bronx this year.

We also plan to secure new Social Enterprise contracts to offer upskilling and paths toward pre-apprenticeship placements, including placement in GI careers, to 20% of new graduates in 2023. In order to support this expansion, our Career and Alumni Services team has recently also expanded to better support the needs of our growing alumni community. The newest positions include our Director of Sectoral Business Development who is working to establish employer partners to build employment opportunities for graduates, and our Sectorial Training Manager who connects alumni to sectoral training opportunities and prepares them for placement and advancements in sustainable careers. As NYCHA's Civilian Climate Corps, we work together in lockstep to open climate-related career opportunities for young adults in public housing. We also work very closely with industry advisors, employers, other workforce trainers, workforce development funders and advocacy organizations to ensure that our training programs meet a direct market demand, and are aligned with current best-practices.

In addition, GCF's approach is deeply holistic, considering the barriers young people of color encounter navigating systems. We support their growth, leadership and well-being by first identifying their needs and addressing any socio-emotional challenges through a frame of liberation. Our Support Services team has both a field and classroom-based presence, providing both individual and group youth development sessions. CMs participate in workshops exploring unconscious bias and structural racism, and engage in regular "Power Sessions," "Liberated Leader," and "Wellness Warrior" curricula providing tools for trauma-informed healing and empowerment valuing their lived experiences. We teach and uplift the voices of young people in NYCHA to help rectify historical wrongs and show the interconnectedness between racial, social and environmental justice movements, as they hold the power to incite structural and community-level changes for a more equitable world.

b. Staff Experience / Qualifications of Project Manager (PM)

The Project Manager will be our Chief Program Officer, Annel Cabrera-Marus. Annel joined Green City Force in 2021. Prior to joining GCF she was the Senior Director of Engagement and Programming for the New York Restoration Project. She has over fifteen years of professional experience in economic and

community development, poverty alleviation, economic self-sufficiency, environmental justice and sustainability and workforce development; Annel has worked across sectors – government, private, and nonprofit. While much of her professional career has focused on New York City, she has worked on environmental justice issues in Buenos Aires, Argentina and workforce development in Memphis, Tennessee. Her passion and admiration for GCF began while she worked at NYCHA's Office of Resident Economic Development and Sustainability as an inaugural Zone Coordinator focused on the Lower East Side and later the Manager of the NYCHA Resident Training Academy. She has a Masters of Science in Environmental Policy & Sustainability Management from The New School, Milano School for Public Engagement. Annel was born and raised in Western Queens and identifies as a Queer, first generation multiracial Latina (Caribbean and Central American) woman. Annel leads our Programs team made up of our Recruitment, Service, Operations, Support Services, Business Development, Career Services, and Social Enterprise divisions.

a. Expenditure of Awarded Grant Funds, and plan for compliance with EPA's Pre-award Compliance Review for Nonprofit Organizations - **document included in other attachments**

5.0 Past Performance

We are not familiar with the term "assistance agreements" and have not previously received any agreements through the EPA. As noted above, we have received multiple years of federal funding as a subcontractor for AmeriCorps funding via The Corps Network. This year, we were awarded federal funding from Congress Member Hakeem Jeffries via Community Project Funding. At the state level, we have multiple years of funding via The New York State Energy Authority (NYSERDA) for multi-year workforce training and environment initiatives and we have a variety of local city funding via The New York City Council, and various city agencies.

For the past eight years, we've committed to outcomes including recruitment, training, partnership and stewardship under a grant through the Mayor's Office of Criminal Justice (MOCJ). MOCJ is the lead agency on a multi-stakeholder approach previously called the Mayor's Action Plan for Neighborhood Safety (MAP) via the Office of Neighborhood Safety.. GCF is one of a small number of workforce development organizations within a group of 30+ diverse organizations ranging from city agencies to nonprofits and representatives of law enforcement. Our agreement with MAP/ONS includes supporting both workforce development outcomes and also resident-led stewardship projects within 15 NYCHA developments. Taking part in MAP involves regular stakeholder meetings, working with residents, coordinating with NYCHA at different levels, tracking and reporting. In the past year under the previous and current Mayoral administrations, we've also received funding from the NYC Clean Up Corps initiative.

ii. your history of meeting the reporting requirements under those agreements including whether you adequately and timely reported on your progress towards achieving the expected outputs and outcomes of those agreements (and if not, explain why not) and whether you submitted acceptable final technical reports under the agreements.

Our organization does not have prior experience with EPA grants. GCF does have experience with federal grants through having received AmeriCorps funding, as a direct recipient of AmeriCorps funds from CNCS and as a subgrantee via The Corps Network, through which we receive our AmeriCorps funding. As mentioned above, GCF's most relevant experience related to what we understand to be an "assistance grant" is with the Mayor's Office of Criminal Justice (MOCJ) Mayor's Action Plan (MAP), through which we have received $500,000 annually in funding since 2015. This grant is milestone-based and involves both regular reporting and participation in multi-stakeholder meetings and related collaborations. We have a strong track record of managing this grant, in meeting milestones and in submitting required documentation in a timely manner.

We have extensive experience with submitting reports as part of grant requirements, but are not familiar with what a "technical report" might be. For this question, therefore, given our lack of experience with that terminology, and per the instructions in the application, our answer is that we do not have experience submitting "technical reports".

OMB Control No. 2030-0020
Approval expires 06/30/2024

U.S. ENVIRONMENTAL PROTECTION AGENCY
Washington, DC 20460

Appendix A

EPA Administrative Capability Questionnaire

This collection of information is approved by OMB under the Paperwork Reduction Act, 44 U.S.C. 3501 et seq. (OMB Control No. 2030-0020). Responses to this collection of information are required to obtain an assistance agreement (40 CFR Part 30, 40 CFR Part 31, and 40 CFR Part 33 for awards made prior to December 26, 2014, and 2 CFR 200, 2 CFR 1500, and 40 CFR Part 33 for awards made after December 26, 2014). An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The public reporting and recordkeeping burden for this collection of information is estimated to be 4 hours per response. Send comments on the Agency's need for this information, the accuracy of the provided burden estimates and any suggested methods for minimizing respondent burden to the Regulatory Support Division Director, U.S. Environmental Protection Agency (2821T), 1200 Pennsylvania Ave., NW, Washington, D.C. 20460. Include the OMB control number in any correspondence. Do not send the completed form to this address.

The Environmental Protection Agency (EPA) uses the standards set forth in the Code of Federal Regulations, Title 2, Parts 200 and 1500, "Uniform Administrative Requirements, Cost Principles and Audit Requirements for Federal Awards" to assess the adequacy of administrative management systems. These regulations can be found by searching the Electronic Code of Federal Regulations by Title and Part at: http://www.ecfr.gov/.

If your organization is being recommended for an EPA grant, and your organizational policies and procedures do not fully cover the areas outlined in the questionnaire, revised or new policies may be necessary to comply with Federal financial management standards.

PART I - GENERAL

1.	**Legal Name of the Organization**	Green City Force Inc.
2.	**Other Organizational Names or Acronyms Used**	GCF
2a	**Please Identify any affiliated organizations**	N/a
3.	**Unique Entity Identifier Number**	80-0428040
4.	**Is your accounting system accrual based or cash based?**	Accural
5.	**Is your accounting system manual, automated or combination?**	Automated
6.	**Has an audit been performed on the organization's financial statement?**	Yes
7.	**What was the audit opinion?**	Clean opinion
8.	**If the organization has expended more than $750,000 in federal grant funds within a year, has an Single audit been performed?**	Yes
9.	**If yes, were there any major findings?**	NO
10.	**Does the organization have an approved indirect cost rate with the Federal government?**	No
11.	**Has the organization filed any certification/questionnaire regarding its financial managements systems to other Federal agencies? If yes, please list and provide a copy.**	No

PART II - ADMINISTRATIVE CAPABILITY

	Instructions: Check the appropriate box to the right for each item. If your organization has written policies/procedures that meet the requirement, check the box under the "Yes"column. If your organization does not have written policies/procedures that meet the requirement described under this column, check (/) the box under the "No" column and explain in the box or in an attachment. Please provide EPA a copy (electronic is preferable) of the following items: 1) Most recent audit of financial statements and management letter, 2) procurement and property policies, 3) personnel policies and 4) travel policy. EPA will evaluate your responses against these items.	**Yes**	**No (explain)**
STANDARDS FOR FINANCIAL MANAGEMENT SYSTEMS			
1.	Does your accounting and financial management system(s) follow Generally Accepted Accounting Principles? (2 CFR 200.403)	X	
2.	Is your financial management system(s) able to relate financial data to performance data and develop unit cost information? (2 CFR 200.301)	X	
3.	Can your financial management system(s) provide accurate, current and complete disclosure of the financial results of each federally-sponsored project or program in accordance with the financial reporting requirements (2 CFR 200.327? These are the Financial Status Report and Report of Federal Cash Transactions. (2 CFR 200.302(b)(2))	X	
4.	Can your financial management system(s) provide records that adequately identify the source and application of funds for federally-sponsored activities? Information to be included is: authorizations, obligations, unliquidated obligations, assets, outlays, income and interest. (2 CFR 200.302(b)(3))	X	
5.	Does your financial management system(s) provide for effective control over and accountability for all funds, property and other assets, including ensuring that all such assets are used solely for authorized purposes? (2 CFR 200.302(b)(4))	X	
6.	Can your financial management system(s) provide for a comparison of outlays with budget amounts for each award, including, where appropriate, information related to performance and unit cost? (2 CFR 200.302(b)(5))	X	
7.	Does your financial management system(s) provide written procedures to minimize the time elapsing between the transfer of funds to the recipient from the U.S. Treasury and the issuance or redemption of checks, warrants or payments by other means for the purposes of the program? (2 CFR 200.302(b)(6))	X	
8.	Does your financial management system(s) provide written procedures for determining the reasonableness, allocability and allowability of costs in accordance with 2 CFR 200.302(b)(7)?	X	
9.	Does your financial management system(s) provide accounting records which include cost accounting records supported by source documentation? (2 CFR 200.302(b)(3))	X	
10.	If applicable, does your financial management system(s) provide procedures for conducting an audit in accordance with 2 CFR 200 Subpart F? Currently, single audits are required for recipients expending $750,000 or more in federal funds during the fiscal year. (2 CFR 200.501)	X	
11.	Does your financial management system(s) provide or describe existing or planned indirect cost rates? C(2 CFR 200 Subpart E)	X	
PROPERTY AND PROCUREMENT STANDARDS			

ED_016126_00000901-00002

		Yes	No (explain)
Instructions: Check the appropriate box to the right for each item. If your organization has written policies/procedures that meet the requirement, check the box under the "Yes"column. If your organization does not have written policies/procedures that meet the requirement described under this column, check (/) the box under the "No" column and explain in the box or in an attachment. Please provide EPA a copy (electronic is preferable) of the following items: 1) Most recent audit of financial statements and management letter, 2) procurement and property policies, 3) personnel policies and 4) travel policy. EPA will evaluate your responses against these items.			
1.	Does your property management system(s) provide for maintaining: (1) a description of the equipment; (2) an identification number; (3) source of the property, including the award number; (4) where title vests; (5) acquisition date; (6) federal share of property cost; (7) location and condition of the property; (8) acquisition cost; (9) ultimate disposition information? (2 CFR 200.313(d)(1))	X	
2.	Does your property management system(s) provide for a physical inventory and reconciliation of property at least every two years? (2 CFR 200.313(d)(2))	X	
3.	Does your property management system(s) provide controls to insure safeguards against loss, damage or theft of the property? (2 CFR 200.313(d)(3))	X	
4.	Does your property management system(s) provide for adequate maintenance of the property? (2 CFR 200.313(d)(4))	X	
5.	Does your organization maintain written procurement procedures which (1) avoid unnecessary purchases; (2) provide an analysis of lease and purchase alternatives; and (3) provide a process for soliciting goods and services? (2 CFR 200.318)	X	
6.	Does your procurement system provide for the conduct and documentation of cost or price analysis for each procurement action? (2 CFR 200.318))	X	
7.	Does your organization maintain written standards of conduct governing the performance of your employees engaged in the award and administration of contract (i.e., conflict of interest) and does it provide for disciplinary actions? (2 CFR 200.318(c)(1) and (c)(2)) **PERSONNEL AND TRAVEL**	X	
1.	Does your organization maintain a personnel system(s) which provides monthly reports on the activities of each employee whose compensation is charged to the assistance agreement? (2 CFR 200.430)	X	
2.	Does your organization maintain a standard travel policy? (2 CFR 200.474)	X	

PART III - CERTIFICATION AND SUBMISSION

CERTIFICATION OF APPLICANT'S AUTHORIZED REPRESENTATIVE (REQUIRED):

I certify that the statements I have made on this form and all attachments thereto are true, accurate and complete. I acknowledge that any knowingly false or misleading statement may be punishable by fine or imprisonment or both under applicable law.

GROUNDWORK Elizabeth

METRICS and DATA ANALYSIS--We utilize the following practices to measure our performance during the grant period and use these practices to readjust our direction when needed.

- **We regularly measure #community meetings, #community members reached, #community members regularly attending, #partnerships active, # partnerships added, #monitors active, #monitors out of service, #youth in program, #youth peers in program, #social media posts, #other types of outreach to community #other unexpected outcomes.**

OUR STRATEGIES--

1. **Program Evaluation: Groundwork conducts internal and external surveys internally and with our community members via Googleforms quarterly. We compile data and our management team reviews successes and plans for adjustments when necessary.**

Program evaluations can assess the performance of a program at all stages of a program's development. The type of program evaluation conducted aligns with the program's maturity (e.g., developmental, implementation, or completion) and is driven by the purpose for conducting the evaluation and the questions that it seeks to answer. The purpose of the program evaluation determines which type of evaluation is needed.

2. **Outcome Evaluations: We look at our grant program goals and see where we are successful and why we may need to change our practices. Our management team meets weekly.**

Outcome evaluations examine the results of a program to determine the reasons why there are differences between the outcomes and the program's stated goals and objectives. Outcome evaluations sometimes examine program processes and activities to better understand how outcomes are achieved and how quality and productivity could be improved.

3. **Formative Evaluation: In talks with our partners and community members we make sure that our progress is what we expected it to be.**

A Formative Evaluation assesses the feasibility of a program or policy before its full implementation. This type of evaluation can include process and outcome measures, but its overall goal is to assist with proactive learning and improvement.

1.0 PROGRAM OBJECTIVES

1a. Project Summary

Project Title: The Elizabeth N.J. Clean Air Project Expands: A Community-led Collaborative in an Overburdened Port City to Create a Replicable Air Quality Dashboard and Engagement Plan

Project Location(s): Elizabeth New Jersey

Applicant Information: Groundwork Elizabeth has the goal of creating more sustainable, healthy and equitable communities. We seek input from our low income and environmental overburdened residents on what is needed to make a better Elizabeth. Groundwork is already invested in a Climate Safe Elizabeth program which has addressed EJ issues and issues of air quality and is positioned to take the efforts to the next steps for community improvement.

Description of Applying Organization: 501c3 nonprofit organization

CBO Set aside? No

Project Abstract: Groundwork Elizabeth has formed an environmental justice collaborative of residents, government, academia, public housing and community based organizations to address air quality issues in Elizabeth NJ. The organization is currently completing a network of air monitors in Elizabethport and is beginning to install an air monitoring system at 15 Housing Authority locations. Groundwork Elizabeth seeks, in collaboration, to engage the community to develop an Environmental Dashboard that will receive and analyze data from different monitors and provide near real-time actionable data to residents and stakeholders based upon the location they are in. The Environmental Hub is supported by local government, and academia, who both pledge to use the data to inform future decision making and community investments.

Project Type(s): Air Quality, Environmentally Overburdened Community

Special Considerations: Our project relates to Climate and Disaster Resiliency

Environmental Issue: Air Quality, Overburdened Community

List of Partners: Groundwork USA; Rutgers University, The Edward J. Bloustein School of Public Planning and Policy, Rutgers University of Environmental and Occupational Health Science Institute, Housing Authority of the City of Elizabeth, the NAACP ELizabeth, the City of Elizabeth, Union County Department of Health, Board of County Commissioners, Moving Forward NJ and technology partner, Temboo

Will you need to develop a QAPP? Yes

1b. Environmental and Public Health Information of the Underserved Community?

The focus of this project is in New Jersey's fourth largest City, Elizabeth. The port City is located just 16 miles south of New York City adjacent to Newark Airport. With a population above 125,000, Elizabeth is a highly urbanized environment (10,000+ per mile) reflecting its location in the industrialized metropolis of northern New Jersey. The city, containing five Opportunity Zones (3403903110 - Census Tract 311, 3403903120 - Census Tract 312, 3403903160 - Census Tract 316.02, 3403903980 - Census Tract 398, 3403903990 - Census Tract 399), continues to evolve from its industrial past which once included the Singer Sewing factory, many refineries and multiple shipyards.

Data from the 2020 Census and other demographic information:

As of 2020, the United States Census Bureau has estimated the population of Elizabeth, N.J. at 137,298. Elizabeth serves as the county seat and is also the fourth largest city in New Jersey hosting a variety of ethnic diversity. 64% of residents are Hispanic/Latino of any race; 19% Black or African American; and 13% White alone (not Hispanic or Latino). When compared with median state statistics, Elizabeth is significantly lower in high school graduation rates, residents with a bachelor degree, household income, and home ownership rates. Elizabeth is significantly higher than the state median in persons below poverty level, violent crime, and crimes per square mile.

Many segments of the population are disproportionately affected by poverty, the lack of access to open space, health consequences of physical inactivity and poor nutrition, and a tarnished physical environment. Many areas in Elizabeth do not offer healthy food options, and are classified as Food Deserts.

The long term issues of environmental injustice affect those most at risk and those that are in the weakest position to change their circumstances. Air quality, water quality, litter, and ground pollution are ongoing issues. All community members are affected. 30,000 school aged children walk and play daily in areas that are deemed unsafe. Within the City, impervious surfaces, heat, and population density threaten the quality of life. Many of our local neighborhoods are contaminated by soil-borne, water-borne, or airborne pollutants, and lie within a web of highways, local roadways, truck routes, dirty waterways and a large regional airport. As a coastal community, and with a continuing lack of land ownership and community awareness regarding the unnatural state of the watershed, there exists a deficit of sustainable solutions that could improve the local lives that surround it.

In a Letter of Support for this proposal Mayor J. Christian Bollwage aptly states *"as a waterfront and port community, the City of Elizabeth's proximity and access to resources, have resulted in the creation of employment opportunities and continued success of businesses throughout the area. The benefits of these commercial efforts are many; however, the exposure to diesel particulates expelled by the many trucks, planes, ships and other large machinery utilized in association with operations throughout the Port Newark-Elizabeth area, also produce significant environmental impacts."*

Particulate matter (PM) is a major health problem with greater severity in low-income, racially and ethnically diverse communities, especially in and around the City of Elizabeth, New Jersey. The City of Elizabeth is home to two of the United States busiest ports (Newark Airport Terminal A and Port Elizabeth-Newark International Container Seaport), two train stations, two exits of the New Jersey Turnpike, as well as access to major highways including Route 1 and 9. The EPA Greenbook currently

cites New Jersey, Union County, New York - N, New Jersey Long Island , NY-NJ-CT for Ozone 8-Hour Ozone (2015), 8-Hour Ozone (2008) and Carbon Monoxide (1971). Cities Solutions on Harvard.edu states"9000 housing authority properties exist within 1 mile of a superfund site (Adler, Laura. "Monitoring Air Quality and the Impacts of Pollution." Data-Smart City Solutions (https://datasmart.ash.harvard.edu/news/article/monitoring-air-quality-Andthe-impacts-of-pollution-679.Accessed 22 March 2022.)

According to the American Lung Association's recent digital publication, Particle Pollution, anyone who lives where particle pollution levels are high is at risk. People at the greatest risk from particle pollution exposure include infants, children and teens; people with lung disease, especially asthma, but also people with chronic obstructive pulmonary disease (COPD); people with cardiovascular disease; people of color; current or former smokers; people with low incomes; and people who are obese. https://www.baruch.cuny.edu/nycdata/infrastructure/airport_newark.html

Groundwork Elizabeth and collaborators seek to address air quality in Elizabeth, N.J. and its accompanying burdens on health and economy.

EJSCREEN Data:

The Climate Safe Task Force and community participants conducted the following research using two mapping tools.

EJScreen Tool: Query Findings for Elizabeth, NJ 07206 and Surrounding Neighborhoods.
1. Particulate Matter (PM 2.5 in µg/m3). Higher: National 63%, State 85% -99%
2. EJ Index - NATA Respiratory Hazard Index. Higher: National 77% - 99%, State 77% - 99%
3. NATA Diesel PM (µg/m3). Higher: National 93% - 96%, State Percentiles 86% - 96%

Climate Safe Neighborhood Mapping Tool: Elizabeth, NJ compared to Union County, NJ.
1. Rate of Impervious Coverage greater than 65%
2. Coverage of Tree Canopy is less than 10%
3. Asthma Rates of Prevalence ranges from less than 8% to over 10%
https://gwmke.maps.arcgis.com/apps/webappviewer/index.html?id=580719d523c14e9cb51bee9c04f8c24e

1c. Organizations Historical Connection to the Underserved Community

Groundwork Elizabeth (GWE) was established in 2003 through an initiative of the United States Department of the Interior and the National Park System to engage urban communities to make improvements in the physical environment and conserve open spaces. GWE has built healthy, sustainable, and equitable communities through the development and management of programs and projects that improve and enhance its local urban challenged environment and educate and employ its community members.

Groundwork Elizabeth has developed collaboration, programs and initiatives in environmentally overburdened Elizabeth, NJ. Our community relationships include:

1. Climate Safe Neighborhoods Partnership and Climate Safe Task Force (Begun in 2019, continues)In 2019 GWE joined the Climate Safe Neighborhoods partnership to explore the relationship between

historical race-based housing segregation and the current and predicted impacts of climate change. As a result, GWE launched the Climate Safe Elizabeth Task Force to engage, educate and empower select Elizabeth communities.

2. GWE Youth Development: The Green Team (Begun in 2006, youth ages 14-24) program coordinates the capacity and desire to engage local youth in hands-on, ideologically driven work to improve the environment, raise awareness about the critical environmental, economic, and social issues,nurture civic engagement, and improve quality of life in Elizabeth's most challenged neighborhoods. It also addresses skills needed for a newer, greener economy. Currently the Green Team is leading efforts to address poor air quality in Elizabeth's most needy neighborhoods working in concert with the City, Rutgers University, Groundwork USA, in a program called, "What Else is In the Air."

3. The Mayor's Youth Council, closely tied to the Green Team, is staffed by young people from ages 14-24 and led by peers. By including youth in conversations with community leaders, these youth seek to deliver their voice as an instrument for policies that will address environmental injustice, issues surrounding diversity and equity. The team meets with Mayor J. Christian Bollwage, members of City Council and policy makers.

1d. EJCPS Model Demonstration

The ***Elizabeth Clean Air Project Expands*** will use the environmental justice, collaborative, problem-solving model as follows, further descriptions of actions are located in **Project Activities.**

Issue Identification, Community Vision, and Strategic Goal Setting
- Engage the Community
- Development of the Environmental Dashboard
- Expand Relationships
- Advocate for Systems Change

Community Capacity-Building and Leadership Development
- Grant Administration
- Engage the Community
- Development of the Environmental Dashboard
- Expand Relationships
- Advocate for Systems Change

Multi-Stakeholder Partnerships and Leveraging of Resources
- Engage the Community
- Development of the Environmental Dashboard
- Expand Relationships
- Advocate for Systems Change

Constructive Engagement by Relevant Stakeholders
- Development of the Environmental Dashboard
- Expand Relationships
- Advocate for Systems Change

Sound Management and Implementation
- Grant Administration
- Engage the Community
- Development of the Environmental Dashboard

- Expand Relationships
- Advocate for Systems Change

Evaluation, Lessons Learned, and Replication of Best Practices

- Grant Administration
- Expand Relationships
- Advocate for Systems Change

1e. Project Linkages

These actions support EPA Strategic Plan Goal 2, Objective 2.2 to listen and collaborate with impacted stakeholders and provide effective platforms for public participation and meaningful engagement. All activities in this project fall within the parameters of the Clean Air Act, Section 103(b)(3) and include research, public education, monitoring, and development related to the causes, effects (including health and welfare effects), extent, prevention, and control of air pollution.

The Elizabeth Clean Air Project Continues builds upon two EPA funded projects: ***The Elizabeth Clean Air Project*** and ***Addressing Ambient Air Pollution at the Housing Authority City of Elizabeth. An Urban Housing Authority Demonstration Project.***

Project Abstract: ***The Elizabeth Clean Air Project*** will (1) bring together a diverse coalition of community stakeholders (residents, government, business, utilities and academia) that will (2) support increased monitoring of PM in the Elizabeth areas closest to the Port Newark-Elizabeth Marine Terminal; and (3) explore biodiesel as a clean energy tool to reduce diesel emission (4) while utilizing the Port Primer for Communities to complete the Community Action Roadmap.

Project Abstract: ***Addressing Ambient Air Pollution at the Housing Authority City of Elizabeth. An Urban Housing Authority Demonstration Project.*** The Housing Authority of the City of Elizabeth (HACE) in partnership with residents, local environmental non-profit Groundwork Elizabeth, and academic partner Rutgers University, will engage HACE residents to increase community knowledge of air pollution and provide actionable data. The project produces air quality readings from 13 locations utilizing a network of air quality sensors. The data will be uploaded, processed and released to the 1,604 residences at and around which sensors are placed via Community Knowledge Boards at each location. HACE will employ residents as Air Stewards to monitor sensors and engage the Mayor's Youth Council (ages 14-18) and the HACE HEAT (HACE Environmental Adventures Team, ages 14-18) will mobilize community residents. The HACE community will present analyzed data to the City of Elizabeth that will enable actions to be taken and resources to be accessed, resulting in an increase in environmental health and wellness in the City. At project's end, HACE will assume costs necessary to perpetuate the project in their operating budget, including the newly created position of Environmental Justice, Project Coordinator at HACE. The City of Elizabeth supports this application without hesitation. This partnership is also supported by the Elizabeth Development Company, the Elizabeth Urban League and the Elizabeth NAACP.

Project Partnerships: GWE will comply with all requirements in 2 CFR Part 200 and/or EPA Guidance on Participant Support Costs in making payments to partners receiving funding from this grant. GWE's financial staff are experienced with managing grant funding.

1f. Partners and Collaborators

The Environmental Justice Collaborative has come together to collaborate on ***The Elizabeth Clean Air Project Expands*** aimed at addressing environmental and public health issues in underserved communities in Elizabeth, New Jersey. Our collaboration will be guided by principles of environmental and economic justice, and we are committed to advancing environmental justice in Elizabeth and other EJ cities.

Through this collaboration, we will develop programs, policies, and activities to address the disproportionately high adverse health, environmental, climate-related, and other cumulative impacts on disadvantaged communities, as well as the accompanying economic challenges. We have reviewed Executive Order 14008 and Executive Order 1400 Justice40, and we are committed to reducing the high incidence of asthma by reducing diesel particulates in the port of Elizabeth.

Our primary objective is to achieve community health and sustainability, and we will work to build community capacity and climate resilience while maximizing benefits to overburdened and underserved communities. We will establish ongoing communication and collaboration between state agencies and local governments regarding ongoing environmental monitoring, prevention, and mediation projects at the local level to maximize the use of local resources and reduce duplication of efforts.

We will also work to advance racial equality and environmental and energy justice, address health outcome disparities, and support underserved communities. By providing resources to community-based organizations with environmental justice concerns, we will foster community-led action and build trust among stakeholders and the community.

In conclusion, our collaboration aims to transform Elizabeth, New Jersey, a historically marginalized, underserved, and overburdened community, into a healthy, thriving community capable of addressing environmental and public health challenges, including climate change.

Collaborator: Housing Authority of the City of Elizabeth, HACE HEAT (HACE Environmental Action and Adventure Team): In 2020 Groundwork Elizabeth and the Housing Authority partnered to create the HACE HEAT (HACE Environmental Adventure and Action Team) program to increase the number of youth who could participate in programs which would lead them into one of the two other youth groups. The 2020 summer-long initiative engaged HACE residents ages 15 to 21 in an exploration of the environment through education, community service and adventure. In 2022 many members of this group participated in the 2022 NJDEP Youth Inclusive Initiative. Skills and experiences gained led to a continuation of their involvement in a Climate Safe Task Force begun by Groundwork to help improve the physical environment in the City. **See letter of commitment attached.**

Collaborator: Temboo: Temboo is an environmental technology company based in New York City that provides an award-winning community-centric environmental monitoring and community engagement platform. Through a combination of innovative no-code technology and accessible, user-friendly design, Temboo removes the technological barrier to environmental monitoring and enables anyone to collect, contribute to, and access environmental data. Temboo helps people to take environmental issues into their own hands and empowers them to advocate for safer, more sustainable communities. **See letter of commitment attached.**

Partner: Mayor J. Christian Bollwage, City of Elizabeth and Mayor's Youth Council Role/Activities: Set PM reduction goals based upon project outcomes. As a founding partner of the Climate Safe Task Force, the city will encourage residents to participate in the Task Force and as Citizen Scientists for the project. The city serves on Shaping Elizabeth, (Elizabeth Health Coalition, 50+ partners) and works to set policy and create systems change to improve the health of all Elizabeth residents and stakeholders. The Mayor's Youth Council, formed during the Pandemic will address key community issues, including air quality and climate resiliency. Resources: Dept. of Health, Dept. of Parks and Recreation, Dept. of Public Works. Vested Interest: Assessing data to achieve goals. Relationship Sustainability: The City will give ongoing support via marketing and promotion, usage of facilities, and in-kind support from the Dept. of Public Works. **See letter of commitment attached.**

Partner: Union County Board of County Commissioners, Department of Health and Open Space, Recreation and Historic Preservation Trust Fund: 1n 2016 in an effort to increase sustainable food production and to encourage residents to make healthy food choices, the Union County Board of County Commissioners created a grant program called Union County Plant A Seed! This has contributed to the establishment and success of a network of 123 gardens. The Union County Means Green Community Gardening program for nonprofits, and more recently a "Kids Dig-In" program for building gardens and associated education at Union County public and private schools live within Union County. *R*This network of gardens and farms will be utilized to reach communities in Elizabeth regarding air quality. Educational materials will be distributed to school and community gardens. www.ucnj.org **See letter of commitment attached**.

Collaborator: Dr. Jennifer Sennick, PhD., Bloustein School, Rutgers University: (TAKE from NSF, HACE Ambient Demonstration) Dr. Senick is Executive Director of the Rutgers Center for Green Building and a Facilitator of the NJ Planning Healthy Communities Initiative, a coalition of academic and community resources dedicated to improving the built environment's impact on health. She has more than 15 years of advanced research experience on topics related to the intersection of behavior, energy and air quality, and evaluation research and over 25 years' experience in urban planning and public policy. Senick has managed large multi-disciplinary teams that have developed and deployed statistically significant behavioral interventions for IAQ in low-income households, including at HACE and is an active member of the building codes development community with emphasis on proposing building code revisions to existing buildings, including consideration of IEQ. She has led or contributed to dozens of studies and publications on applied healthy housing topics including those focused on air quality and community-based interventions and is active in the development and conduct of K-12 STEM/maker initiatives in disadvantaged communities. **See letter of commitment attached**.

Partner: Dr. Robert Laumbach The Environmental and Occupational Health Science Institute (EOSHI) and the Center for Environmental Exposure and Disease (CEED) within Rutgers University. Role/Activities: Will provide technical assistance for improved characterization of local air quality focused on particulate matter and diesel exhaust air pollution. They will assist with development of a quality assurance project plan (QAPP), training of GWE staff and Green Teams on fundamentals of air pollution and health, siting and deployment of Purple Air monitors, troubleshooting the monitors, and analysis and interpretation of data. Resources: RU CEED will provide real-time air monitoring equipment including three condensation particle counters (CPC 3007, TSI Inc.), five black carbon monitors (Ae51, Aethlabs), 3 personal monitors (SidePak, TSI), and 2 personal ozone monitors (POM, 2B Technologies) for demonstration and data collection as part of educational and citizen-science

learning experiences. Vested Interest/ Relationship Sustainability: The investigators (Laumbach, Butch, Haynes) have a long-standing partnership with GWE and community groups near the port to address diesel air pollution near the Port through community-driven education and air monitoring projects. **See letter of project commitment attached.**

Partner: New Jersey Clean Communities Coalition (NJCCC). Role/Activities: A partner in the Groundwork Elizabeth EPA EJ 2021 Small Grants program, NJCCC will help assist and facilitate discussions between the project team and local fleets at the Port Newark-Elizabeth Marine Terminal. NJCCC will participate in stakeholder meetings and will promote the project's outputs and outcomes on its website and through social media. Resources: NJCCC is an independent 501(c)3 nonprofit state organization that promotes public/private partnerships related to the development and use of alternative fuels, advanced technology vehicles, and the appropriate related infrastructure. NJCCC works with vehicle fleets, fuel providers, community leaders, and other stakeholders including fleets at the Port Newark-Elizabeth Marine Terminal. Vested Interest: The objectives of this project are in line with the mission of the coalition to reduce petroleum-based fuels with cleaner burner alternatives like biodiesel. Relationship Sustainability: Both GWE and NJCCC have an existing relationship that will continue well beyond this project.

Community Based Organization: Elizabeth Parent Special Support Group

Community Based Organization: NAACP, Elizabeth

Community Based Organization: Moving NJ Forward

2.0 Project Activities / Milestones Schedule

2a. Project Activities

Grant Administration: GWE is responsible for grant and project management, contracting with subrecipients, invoicing and reporting to EPA. GWE will attend / participate in EJ Grantee Training Workshops.

- **Progress-Final and Financial Status Reports**: GWE will submit reports and participate in calls and meetings as required in the RFA.
- **Post-Project Period Follow-up and Engagement:** GWE will provide semi-annual updates for no less than one year after the project. WE will submit information in a variety of formats which could include news releases, video, local media reports with updates on additional grant funding received, new initiatives and developing partnerships.

Engage Community Stakeholders

1. Groundwork Elizabeth is leading the Climate Safe Task Force to bring together a diverse coalition of community stakeholders to engage, educate, and empower the community to monitor and understand the effects of PM on their health. They plan to organize and host monthly bilingual Task Force meetings for three years to be held in-person/digitally at project partner or community center locations around Elizabeth city. The Task Force Coordinator will arrange

meetings, speakers, solicit attendees, coordinate data analysis and content, prepare for public presentation, and oversee AV needs. They will also be responsible for promoting meetings via word of mouth, advertising, newsletters, and social media, and authoring the final report to the EPA. The Climate Safe Task Force will be air stewards for existing and new air monitors and employ youth for the HACE HEAT, Climate Safe Task Force, and Green Team. They plan to partner with the Mayor's Youth Council and establish an online presence, host events, solicit feedback, collaborate, volunteer, show appreciation, and be responsive to the community.

2. The community is interested in knowing the best practices to mitigate air pollution in the port. Groundwork Elizabeth suggests constructive engagement with other stakeholders and bringing more stakeholder groups lacking in representation, such as business. They also suggest types of projects such as air quality, asthma, healthy homes, emergency preparedness, disaster resiliency, and job training related to environmental justice and youth employment. Groundwork Elizabeth aims to ensure an appropriately trained workforce by providing employee training in air quality monitoring and civil service tests for NJDE pay for all Groundwork use in high school and in college/post-college.

3. To communicate with stakeholders, Groundwork Elizabeth will employ a multi-medium strategy that includes real-time mapping of outdoor air quality, local indoor and outdoor air quality data, and their comparisons. They will use an extension of the HACE cell phone app for residents, the local-access cable TV channel, newly-installed video displays in each stairwell at HACE properties, seasonal bilingual exterior vinyl banners at HACE's Mravlag Manor, seasonal door hangers, 150 printed bilingual posters distributed seasonally, email and social media campaigns, and a digital fact sheet and infographic package. They will also provide access to HEH Data! that integrates physical, environmental, and behavioral data of local environments to empower local communities to make better choices about the multidimensional challenges posed by climate change and environmental justice problems.

Community-led development of a data hub, networking Elizabeth, NJ's air quality monitors, capable of providing multilingual actionable data to stakeholders in near real-time with technology partner, Temboo.

Temboo is an environmental technology company based in New York City that provides an award-winning community-centric environmental monitoring and community engagement platform. Through a combination of innovative no-code technology and accessible, user-friendly design, Temboo removes the technological barrier to environmental monitoring and enables anyone to collect, contribute to, and access environmental data. Temboo helps people to take environmental issues into their own hands and empowers them to advocate for safer, more sustainable communities.

Temboo's environmental monitoring and engagement platform includes ingesting publicly available air quality data for the area that is collected by the EPA and other research reports related to acute and chronic health impacts for both healthy citizens and citizens with respiratory illnesses. This public data is used for comparison with the data collected by Temboo's sensors. The EPA provides a range of air quality data, including measurements of particulate matter, ozone, carbon monoxide, sulfur dioxide, and nitrogen dioxide, among other pollutants. Temboo's platform can integrate with the EPA's data to provide a more comprehensive picture of air quality in a given area.

Temboo will be monitoring PM1.0, PM2.5, PM4.0, PM10.0, temperature, relative humidity, and typical particle size in the AQLite monitors and PM2.5 in the Purple Air network of monitors.

The project will identify air quality safety thresholds based on EPA. These thresholds will be utilized by Temboo to create data statistics for the air monitoring data that will be collected and used in the daily breather and monthly health reports on their data platform, which will also incorporate information on potential health impacts and ways for the community to reduce their exposure.

The Environmental Dashboard will provide:

1. **Environmental Monitoring**: Temboo provides an environmental monitoring and engagement platform that enables non-profit organizations to collect environmental data in their local communities. This data can be used to understand the impact of environmental issues on the community and to identify areas that need improvement. Automated alerts and graph annotations will identify air quality episodes that trigger the health thresholds established at the start of the program. Temboo will coordinate training and oversight of volunteer field technicians, and coordinate quality assurance tasks (including communication with Temboo on hardware, software, and data issues), and installation and routine equipment maintenance.

2. **Community Engagement**: Temboo's platform facilitates community engagement and volunteer involvement. It helps non-profit organizations to mobilize the community and create a sense of ownership towards environmental issues. The community-driven goal setting, team selection, and training, and community engagement around environmental findings can help to foster collaboration between residents, local businesses, and policymakers, to understand and improve the environment where they live.

3. **Performance Measurement**: Temboo's platform can also be used as a performance measurement tool. Non-profit organizations can use it to measure the impact of their environmental programs and interventions. The data collected from the platform can be used to report on the effectiveness of the organization's programs and interventions to funders, stakeholders, and the wider community.

4. **No-Code Technology:** Temboo's platform is designed to be accessible and user-friendly, even for people without a technical background. Non-profit organizations can use Temboo's no-code technology to collect environmental data and engage the community without the need for specialized technical skills or resources.

Expand Relationships with the Transportation, Utility, and Business Sectors

Relationship expansions to include:

- Port Authority of New York and New Jersey
- Shipping Terminals
- Newark International Airport
- Joint Meeting of Essex and Union Counties
- PSE&G
- Elizabethtown Gas
- American Water

- Present work to the Greater Elizabeth Chamber of Commerce

Advocate for Systems Change:

- Discuss and prioritize achievable near-term solutions
- Create a Community Action Plan
- Use to Dashboard to inform local, region, state and federal lawmakers
- Present at the NJ League of Municipalities in 2025
- Present to the NJ Urban Mayors Policy Center in 2025
- Present to the NJDEP, ongoing
- Present to Groundwork USA Trusts at National Assembly

2b. Milestones Schedule

Milestone Schedule: The Elizabeth N.J. Clean Air Project Expands: A Community-led Collaborative in an Overburdened Port City to Create a Replicable Air Quality Dashboard and Engagement Plan. EPA-R-OEJECR-OCS-23-01													
Activity	MO0	Y1Q1	Y1Q2	Y1Q3	Y1Q4	Y2Q1	Y2Q2	Y2Q3	Y2Q4	Y3Q1	Y3Q2	Y3Q3	Y3Q4
Milestone 1: Administration													
Notification of Award	x												
EPA/GWE Contract Signed		x											
Reporting and Updates		x	x	x	x	x	x	x	x	x	x	x	x
Contract with sub awards,		x	x										
Contract with contractors		x	x										
QAPP	x	x	x										
Milestone 2 Engage Community Stakeholders													
Monthly Meetings		x	x	x	x	x	x	x	x	x	x	x	x
Collaborative meetings		x	x	x	x	x	x	x	x	x	x	x	x
Smart Kids, Cool Seniors				x				x				x	
Elizabeth Truck County				x				x				x	
Community Environmental Survey						x	x	x	x				
Milestone 3: Develop Environmental Dashboard													

Engage community, determine goals		x	x	x	x								
Engage collaborative to shape dashboard			x	x	x	x							
work with Temboo to facilitate community-led design				x	x	x							
Temboo creates dashboard					x	x	x						
Dashboard soft launch								x	x				
Dashboard launch										x	x		
Dashboard maintenance												x	x
Explore Dashboard expansion to neighboring cities										x	x	x	x
Milestone 4: Expand Collaborative Relationships		x	x	x	x	x	x	x	x	x	x	x	x
Milestone 5 Advocate for System Change													
Present to NJDEP, local and county government, NJ Urban Mayors Policy Center									x	x	x	x	x
Share Community-determined goals to reduce air pollution on partner websites and in social media													

2c. <u>Itemized budget sheet budget narrative.</u>

See Attachments.

3. <u>Environmental Results- Outputs, Outcomes and Performances Measure (Logic Model)</u>

3a. <u>Environmental Results (Logic Model)</u>

See Attachments.

3b. <u>Performance Measurement Plan</u>

See Attachments.

3c. <u>Sustainability Plan and Community Vision</u>

GWE visions a community made aware of particulate matter and its effects on the health of Elizabeth residents. *The Elizabeth Clean Air Project Expands* complements the existing work of the GWE's Climate Safe Task Force while providing new resources and data points for residents and stakeholders to

consider as they work in coalition with Port Newark-Elizabeth Marine Terminal to reduce particulate matter.

The partnership expressed in this Environmental Justice Collaborative have been working together for over 20 years and expect to maintain these relationships.

Dedicated funding will be sought throughout the grant.

4.0 Programmatic Capability

4a. Organizational Experience

Climate Safe Neighborhoods Partnership and Climate Safe Task Force (Begun in 2019, continues.) In 2019 GWE joined the Climate Safe Neighborhoods partnership to explore the relationship between historical race-based housing segregation and the current and predicted impacts of climate change. As a result, GWE launched the Climate Safe Elizabeth Task Force to engage, educate and empower select Elizabeth communities. Monthly Community Meetings began in 2022 to address local air quality in Elizabethport, New Jersey

Climate Safe: The Elizabeth Clean Air Project, 2021-2023 EPA EJSG Program EPA-OP-OEJ-21-01 . Understanding that Particulate Matter (PM) is a major health problem with greater severity in low-income, racially and ethnically diverse communities, especially Elizabeth, New Jersey, the Elizabeth Clean Air Project, conducted by Groundwork Elizabeth (GWE) and led by the Climate Safe Task Force and supported by the Mayor's Youth Council, was created to 1) bring together a diverse coalition of community stakeholders (residents, government, business, utilities and academia) that will 2) increase PM monitoring and 3) define PM health costs in Elizabeth, near Port Newark-Elizabeth Marine Terminal; and 4) explore biodiesel as a tool to reduce diesel emissions, while 5) utilizing the Port Primer for Communities to complete the Community Action Roadmap. The Task Force is using a "Citizen Science" approach to engage communities to increase knowledge and awareness of air quality and how it affects health, while also providing data on local air quality (Irwin 2018). EJ stakeholders will be engaged during the entire grant period as they develop the Community Action Roadmap. This plan will be the foundation of near- and long-term approaches to mitigating bad air.

Climate Safe: Smart Kids, Cool Seniors. National Science Foundation:
The National Science Foundation on September 15, 2022 awarded a $50k planning grant under its Civic Innovation Challenge to Rutgers University, Groundwork Elizabeth, and the Housing Authority of the City of Elizabeth for this project. Team members used lessons learned in the planning grant to prepare an approximately $1 million proposal, submitted on March 1, 2023, to protect seniors living in urban public housing from the triple threat of summer heat stress, poor air quality, and inadequate indoor ventilation.

Climate Safe Elizabeth Bezos Earth Fund, 2022-2024:
Our Groundwork Climate Safe Elizabeth team, partners, and youth from the Mayor's Youth Council were awarded $347,000 from Groundwork USA and the Bezos Earth Fund to survey project sites and educate our local community on the value of MicroForests as a tool to combat climate change. MicroForests were the idea of Japanese botanist Akira Miyawaki, and serve as practical mini incubators that can be used in dense, urban areas to mitigate heat and flooding while providing a natural habitat for

plant and animal wildlife. Groundwork has built 2 forests to date and will be building three more in the coming two years. The process entails renting machinery, removing contaminated soils, purchasing soil and amendments, trees, shrubs, and fencing where needed. Youth, partners, government and the community at large all have a stake in the work and as residents reap the benefits of a drier, cooler, community with cleaner air.

GWE Youth Development: The Green Team (begun 2006, youth ages 14-24) program coordinates the capacity and desire to engage local youth in hands-on, ideologically driven work to improve the environment, raise awareness about the critical environmental, economic, and social issues,nurture civic engagement, and improve quality of life in Elizabeth's most challenged neighborhoods. They are currently leading efforts to address poor air quality in Elizabeth's most overburdened neighborhoods working in concert with the City, Rutgers University, Groundwork USA, in a program called, "What Else is In the Air."

GWE Youth Development: The Mayor's Youth Council, closely tied to the Green Team, is staffed by young people from ages 14-24 and led by peers. By including youth in conversations with community leaders, these youth seek to deliver their voice as an instrument for policies that will address environmental injustice, issues surrounding diversity and equity. The team meets with Mayor J. Christian Bollwage, members of the City Council and policy makers. Begun in 2019, it continues to provide opportunities to policymakers and youth.

GWE Youth Development: HACE HEAT
(Housing Authority City of Elizabeth Environmental Adventures and Action Team)
In 2020 Groundwork Elizabeth and the Housing Authority partnered to create the HACE HEAT (HACE Environmental Adventure and Action Team) program to increase the number of youth who could participate in programs which would lead them into one of the two other youth groups. The 2020 summer-long initiative engaged HACE residents ages 15 to 21 in an exploration of the environment through education, community service and adventure. In 2022 many members of this group participated in the 2022 NJDEP Youth Inclusive Initiative. Skills and experiences gained led to a continuation of their involvement in a Climate Safe Task Force begun by Groundwork to help improve the physical environment in the City

Urban Agriculture

- **MicroFarm and Environmental Center:**

As a result of our direction and visioning, Groundwork Elizabeth has designed and is continuing to improve a community oriented site which benefits thousands of Elizabeth and Union County Residents. Located behind the Elmora Library Branch on West Grand Street, the ¾ acre Groundwork Elizabeth *MicroFarm* is being constructed adjacent to the Groundwork Elizabeth AgLab (Agricultural Laboratory), which hosts a 50 bed community garden and an indoor classroom. We are including a state of the art energy system and four season greenhouses made available to the public in full capacity in 2019. We have made significant partnerships in helping to fund the site, and continue to seek crucial support for some of the features that will allow us to continue our work in all seasons and temperatures.

- **Housing Authority Gardening Partnership:**
  Groundwork Elizabeth supports community gardens at public housing locations overseen by the City and HACE throughout the City of Elizabeth by providing plants, materials, and instruction.

Each site contains a series of beds and seasonal programming classes.

- **Union County Plant a Seed Grant Program:**
  Groundwork Elizabeth has been managing the Plant a Seed Union County community gardening program since 2018. All 21 Union County municipalities are now engaged in the program. Both schools and nonprofit organizations are provided opportunities for creating a healthier, cleaner and greener Union County.

Ongoing partnerships:
Groundwork Elizabeth is proud to partner with the following government entities, foundations and organizations in pursuit of environmental justice in the communities we serve: Groundwork USA, New Jersey Department of Environmental Protection, the Union County Board of County Commissioners, the City of Elizabeth, Elizabeth Public Schools, the Housing Authority of the City of Elizabeth, Rutgers Cooperative Extension of Union County, Rutgers University, Kean University, US Fish and Wildlife Service, the National Park Service, the Natural Resources Conservation Service, The Nature Conservancy, The NJ Conservation Foundation, The Victoria Foundation, New Jersey Health Initiatives, Sustainable New Jersey and Robert Wood Johnson Foundation.

4b. <u>Staff Experience/ Qualifications of the Collaborative Project Managers</u>
Jonathan Phillips, Executive Director, Groundwork Elizabeth. Serving as Executive Director for Groundwork Elizabeth since 2003, Mr. Phillips has developed and managed the nonprofit in the following program areas: Healthy Living/Urban Agriculture, Youth Initiatives, Parks and Urban Waters, Green Infrastructure and Green Careers, and the Climate Safe Initiative. He has fostered relationships with the public, private, and community sectors in Elizabeth, Union County, and beyond.

Jackie Park Albaum, Director of Urban Agriculture and Environmental Justice, Groundwork Elizabeth. Since 2009, Jackie has served in progressive roles focused on expanding urban agriculture and more recently environmental justice. She led the More P.E.AS. grant funded project with the NJDEP to develop an urban demonstration - the MicroFarm in Elizabeth, and partnered with Union County to develop the Union County Plant a Seed Community and School Garden grant programs. Jackie currently serves as the Chair of the Land Committee on the New Jersey Department of Environmental Protection Environmental Justice Advisory Council (EJAC) and is a member of the Urban Ag NJ Committee of NRCS.

John Evangelista, Director of Operations. John joined the Groundwork Elizabeth Team as part of the More P.E.A.S. initiative funded in part by the NJDEP in 2016. In his role as Director of Operations, John oversees the Come Grow With Us! Urban Agriculture Initiatives, youth development projects and hydroponics as well as all the design/build projects with the Groundwork Elizabeth Green Team. As part of Groundwork Elizabeth, John built the first hydroponic greenhouse in the city of Elizabeth. In 2018, John became co-director of The Climate Safe Neighborhoods partnership which brings together nine Groundwork Trusts to explore the relationship between historical race-based housing segregation and the current and predicted impacts of climate change addressing air, water and land issues. John is currently past Vice President of the Union County Master Gardener program Rutgers Cooperative Extension and holds a seat on The Bloomfield Environmental Commission.

Beren Delgado serves as **Groundwork Elizabeth's Director of Youth Initiatives**, coordinating the three youth programs within the initiative. He came to the organization as a Green Team manager, and honed his planning and management skills beginning in May of 2022. His aptitude for coordinating intergenerational meetings with youth and seniors will help Groundwork engage all segments of the community.

Jennifer Senick, PhD. Dr. Senick is Executive Director of the Rutgers Center for Green Building and a Facilitator of the NJ Planning Healthy Communities Initiative, a coalition of academic and community resources dedicated to improving the built environment's impact on health. She has more than 15 years of advanced research experience on topics related to the intersection of behavior, energy and air quality, and evaluation research and over 25 years' experience in urban planning and public policy. Senick has managed large multi-disciplinary teams that have developed and deployed statistically significant behavioral interventions for IAQ in low-income households, including at HACE and is an active member of the building codes development community with emphasis on proposing building code revisions to existing buildings, including consideration of IEQ. She has led or contributed to dozens of studies and publications on applied healthy housing topics including those focused on air quality and community-based interventions and is active in the development and conduct of K-12 STEM/maker initiatives in disadvantaged communities.

Dr. Rob Laumbach: As an Assistant Professor for Rutgers Environmental and Occupational Health Sciences Institute (EOHSI), Dr. Laumbach specializes in clinical research and epidemiology focusing on the respiratory and cardiovascular health effects of air pollution. Aligned with this focus, Dr. Laumbach has interest in community-based research on environmental factors involved in urban health disparities including effects of psychosocial stress and air pollution on childhood asthma. He is often cited for expertise and clinical consultation on a variety of environmental and occupational health problems.
Through these efforts he led a data driven research program in Elizabeth that measured diesel PM 2.5 in the Elizabethport section of the City, which resulted in a ban on trucks driving through this formerly redlined district**.** *Please note Dr. Loaumbacks support was provided via email, however he did not submit the Letter of Collaboration as he is on strike with Rutger.*

Catherine Hart, Deputy Director: The Elizabeth Housing Authority's team has the managerial, technical, and administrative capability necessary to implement evidence-based strategies that are designed to improve the quality of life for the residents it serves. The housing authority is managed by an experienced managerial team including Executive Director, William D. Jones who oversees and manages an operating budget of $25 million annually and a full-time staff of 53. The Executive Director is assisted by a very passionate and focused Deputy Executive Director, Catherine Hart who manages the entire housing portfolio of just over 1600 units of public housing and affordable housing; and 1500 Section 8 Rental Assistance Vouchers. In addition, Jobs Plus programming and Community Supportive services for seniors and families have been implemented to provide continuing opportunities for residents. Cathy Hart is leading the project for a recent EPA award from Funding Opportunity Number: PA-OAR-OAQPS-22-01.

4c. Expenditure of Awarded Grant Funds and plan for compliance with Epa pre award compliance review for nonprofits.

Reviewed.

5.0 Past Performance

Groundwork Elizabeth has demonstrated the capacity to oversee and manage Federal, State, County, and private Foundation large scale grants. Our participation in the CDBG program taught us early to establish policies and guidelines that meet the requirements of the CDBG program and in a greater sense to conform to all Federal Policies and Procedures. We have filed all reports in a timely manner and were never cited for inaction or delay.

Examples of our work in large scale grants and programming include:

- United States Environmental Protection Agency, Environmental Justice Small Grant Port Specific EPA-OP-OEJ-21-01 for $75,000
- NRCS New Jersey Conservation Innovation Grant USDA-NRCS-NJ -CIG-19-GEN0010164 for $75,000
- Robert Wood Johnson Foundation Next Generation Community Leaders program, for $200,000.
- Union County New Jersey, Plant a Seed Community and School Garden Grant Program, 2016 - Current, $345,658
- Union County Elizabeth River Trail design and construction grant for trail from Broad Street Elizabeth to the Arthur Kill. $500,000.
- US Department of Transportation, 2006 Earmark for the Elizabeth River Trail of $500,000
- New Jersey Department of Environmental Protection, Supplemental Environmental Project, 2015, $250,000
- US Fish and Wildlife Foundation Impact Directed Environmental Action grant (current) for $225,000.

6.0 Quality Assurance Project Plan (QAPP) Information

Groundwork Elizabeth will need to do a QAPP. We have previously submitted a QAPP to the EPA.

Professional advisory team of 10 members are recruited and participate in the implementation of programming that will address illegal dumping and waste management Increased understanding of illegal dumping and waste management among youth advocates	Increase in # of community residents who are aware of illegal dumping and waste management. Increase in # of community residents who participate in community clean-ups. Increase in access to environmental improvements within deprived communities Continued implementation of environmental programming and projects	Decrease in illegal dumping areas on the peninsula. Development of long-term waste management policy solutions. Increase youths' and community's knowledge of environmental justice, illegal dumping, and waste management in Far Rockaway Increase community understanding of the importance of positive environmental changes Activation of former polluted public spaces for community use and/or economic development Increased governmental investment to maintain implemented environmental improvements Increased leadership and advocacy skills for youth participants Increased community advocacy for environmental community upkeep

		300 community residents complete post-workshop questionnaire about impact and effectiveness of workshops 1000 community residents receive one-pager via door-to-door outreach and street canvassing Two (one per cohort) policy brief surrounding illegal dumping and waste management Two (one per cohort) presentation on lessons learned and best practices Two (one per cohort) write-up of lessons learned and best practices 100 post-program community waste management surveys completed by community members				

1.0 Program Objectives

a. Project Summary Page

Project Title: Rock Solid Waste Management Coalition

Project Location: Far Rockaway, Queens, NY 11691

Applicant Information: *Justice Innovation Inc. d/b/a Center for Justice Innovation*. Located at 520 Eighth Ave., 18th floor, New York, NY 10018. Contact Information: Alexandrea Lee, Deputy Director of Grants Development & Administration, leea@innovatingjustice.org. *Queens Community Justice Center-The Rockaways* is an operating project of the Center for Justice Innovation and will implement the proposed project. Located at 1600 Central Avenue, 5th Floor, Far Rockaway, NY 11691. Contact Information: Kori Robinson, Project Director, korobinson@innovatingjustice.org.

Brief Description of Applicant Organization: The Center for Justice Innovation (Center) works with communities and justice systems to advance equity, increase safety, and help individuals and communities thrive. We do this in a number of ways, including investing resources in underserved communities, problem-solving side-by-side with populations affected by crime, and building programs that increase public safety without imposing lasting harms on individuals or communities. The Center's approach involves collaboration among our three main teams: research and evaluation; direct-service programming; and training and expert assistance. Research informs programming, programming informs research, and both research and practice inform our efforts to train and assist communities in adopting tailored reforms.

Are you applying for the Small CBO Set Aside Track for $150,000 projects?: No

Project Abstract: The Rock Solid Waste Management Coalition (Rock Solid WMC) will train and educate Far Rockaway community members to reduce hazardous and non-hazardous waste and to become researchers and advocates against illegal dumping. The Rock Solid WMC will activate high-school-aged youth in the Rockaways as change agents, organizers, and advocates for environmental justice over the course of a three-year youth development program. Their work will be supported by a Professional Advisory Team composed of stakeholders from the Rockaways and the wider New York City community. The goals of the Rock Solid WMC are to reduce the prevalence of illegal dumping on the peninsula through education of proper waste management strategies; address and clean up spaces which have fallen victim to illegal dumping; create a community movement towards zero waste that will allow for the sustainable reduction of waste produced; and advocate for systems-level change regarding the practices, land use, and policies that enable high rates of unaddressed illegal dumping. These efforts will reduce litter and pollution as well as support the current push for equitable re-investment in the Rockaway community.

Project Type(s): Training, workforce development, civic engagement, youth development, public education

Special Considerations: No

Environmental Issue: Waste Management

List of Project Partners: Friends of Beach 59th Street; Queens High School for Information, Research, and Technology/United Community Schools; NYC Department of Parks and Recreation; Dr. Melissa Checker; Rockaway East Merchants Association 4 United Synergy; Lily Baum Pollans; Jamaica Bay-Rockaway Parks Conservancy; Child Center of NY; Pratt Center for Community Development

Will you need to develop a QAPP for your project?: Yes

ED_016126_00000949-00001

b. Environmental and Public Health information of the Underserved Community

As a socially and geographically isolated region of New York City, Far Rockaway, Queens and the surrounding areas have experienced decades of institutional neglect and disinvestment that is often associated with landfill communities. This has led to limited transportation options, limited opportunity for economic mobility, higher incarceration rates, higher rates of assault-related hospitalizations, higher elementary school absenteeism, and lower on-time high school graduation rates than both Queens and New York City overall.[1] As a coastal community, the Rockaway peninsula is also particularly vulnerable to the impacts of climate change and natural disasters. The New York City Mayor's Office of Climate and Environmental Justice has identified several regions of the Rockaway peninsula as Environmental Justice Areas, regions where at least 23.59% of the population is below poverty and at least 51.1% of the total residency is from minority populations, including the Far Rockaway, Edgemere, Arverne, Hammels, Sommerville, and Rockaway Beach neighborhoods.[2]

The Rockaway's vulnerability to environmental disaster was put in the spotlight in 2012 when Hurricane Sandy ravaged the peninsula, with over 10 feet of storm surge flooding leaving more than 1,000 damaged structures.[3] The damage done to the Rockaways by Hurricane Sandy left residents without heat and electricity and living in moldy homes for months.[4] While natural disasters like Hurricane Sandy have no bias in the havoc that they wreak, the systemic marginalization and neglect of residents in Far Rockaway, Edgemere, and Arverne exacerbated the impact of the storm, leaving primarily Black, Hispanic, and immigrant communities to pick up the inequitably distributed pieces. On the Rockaway peninsula, 37% percent of residents are Black and 24% of residents are Hispanic.[5] Additionally, 28% of the Rockaway population identify as foreign-born, with 63% being born in Latin America.[6] Due to the patterns of disinvestment and neglect of these communities in the face of environmental justice infringements, they are often left under-resourced and without the knowledge necessary to advocate for equitable change.

The Edgemere Landfill, now known as Rockaway Community Park, was once the longest continuously operating dump in the United States and held more than 5% of the city's waste.[7] Opened in 1938 on the Rockaway peninsula in the easternmost part of New York City, the landfill accepted 1,200 tons of garbage each day, and by the time it closed down in 1991, the garbage mound occupied 178 acres and more than two miles of shoreline.[8] Over the years, the smell and sight of the landfill created the association that the surrounding communities were dumping grounds as well, thus reinforcing the institutional neglect of the Rockaway community. In 1983, thousands of improperly disposed of drums filled with toxic chemicals were discovered, leading to the designation of the landfill as a Superfund site,[9] a location where hazardous waste material is present and improperly managed.[10] Remediation efforts to remove the hazardous materials were conducted over two decades, and in 2003 the site was determined to be cleaned of all hazardous

material and capped to be incorporated as the Rockaway Community Park.[11]

Although the Edgemere Landfill has now been closed for more than 30 years, its legacy continues—with waste management continuing to be a concern on the Rockaway peninsula and illegal dumping leaving many public spaces littered with trash and pollution. For example, areas surrounding the Ocean Bay Apartments, a public housing development close to the former Edgemere Landfill, have been a hot spot for the illegal dumping of trash over the past 40 years.[12] Additionally, property between Beach 56th Place to Beach 59th Street is also a popular location for the illegal dumping of cars, trash, and other large waste.[13] Beyond anecdotal evidence, the EPA's Environmental Justice Screening and Mapping Tool (EJScreen) identifies Far Rockaway, Edgemere, Averne, and parts of Rockaway Beach as being above the 80th percentile of proximity to Superfund sites when compared to the rest of the United States, with several areas being in the 95th to 100th percentiles. EJScreen also identified many regions of Far Rockaway as being in the 80th to 90th percentile for hazardous waste proximity. Improper waste management within a coastal community threatens both the health and wellbeing of community members and the environment.

Over the years, the Rockaway community has worked to address the illegal dumping by hosting several small-scale community clean-ups and beautification projects conducted by the Queens Community Justice Center-The Rockaways, Rockaway Initiative for Sustainability & Equity, 100th Precinct, Friends of Beach 59th Street Playground Association, Jamaica Bay Rockaway Park Conservancy, Rockaway East Merchants Association 4 United Synergy, and Councilmember Joann Ariola, to name a few. However, community members have made it clear that more needs to be done to address the illegal dumping on the peninsula. Local electeds too have voiced their concerns about illegal dumping issues in the Rockaways. New York City Council Speaker Adrienne Adams called for a deeper government investment in sanitation services and cleanup initiatives, stating that "For decades, sanitation issues like illegal dumping and overflowing litter have negatively affected the quality of life for residents in Southeast Queens." Speaker Adams also noted that "in recent years, pandemic-related budget cuts worsened conditions, impacting the health, safety, and well-being of our communities."[14]

To address the issue of illegal dumping and improper waste management, the Queens Community Justice Center-The Rockaways (QCJC-TR) proposes to launch the Rock Solid Waste Management Coalition (Rock Solid WMC), a program that will train and educate community members to reduce hazardous and non-hazardous waste and to become researchers and advocates against illegal dumping. The Rock Solid WMC will activate high-school-aged youth in the Rockaways as change agents, organizers, and advocates for environmental justice over the course of a three-year youth development program. Their work will be supported by a multidisciplinary professional advisory team composed of stakeholders from the Rockaways and the wider New York City community. The goals of the Rock Solid WMC are to reduce the prevalence of illegal dumping on the peninsula through education of proper waste management strategies; address and clean up spaces which have fallen victim to illegal dumping; create a community movement towards zero waste that will allow for the sustainable reduction of waste produced; and advocate for systems-level change regarding the practices, land use, and policies that enable high rates of unaddressed illegal dumping. These efforts will reduce litter and pollution as well as support the current push for equitable re-

investment in the Rockaway community.

c. Organization's Historical Connection to Underserved Community

Founded in 1996, the Center for Justice Innovation (Center), formerly the Center for Court Innovation, is a unique non-profit that works with communities and justice systems to advance equity, increase safety, and help individuals and communities thrive. The Center does this in a number of ways, including investing in under-resourced communities, problem solving side-by-side with populations affected by crime, and building programs that increase public safety without imposing lasting harms on individuals or communities.

The Center has had a long presence in Queens, where it has operated the Queens Community Justice Center (QCJC) since 2007, offering a diverse portfolio of programs, including leadership, clinical, workforce development, family support, and gender-specific programs—the unifying goals of which are to provide youth with off-ramps from the justice system, reduce recidivism, and help people lead successful lives. In July 2021, the Center launched a sister site to QCJC, the Queens Community Justice Center-The Rockaways (QCJC-TR), located in Far Rockaway Queens, which is now a local hub for justice programming, youth development, and community safety initiatives. QCJC-TR invests in residents and provides services to address public safety, support the mental health and trauma facing residents, revitalize underutilized public spaces, promote economic mobility, and prevent justice system involvement. As an organization that works closely with systems and with communities, we are uniquely positioned to bridge the gap between them, fostering communication, understanding, and trust.

QCJC-TR's approach is rooted in engaging those most impacted by marginalization and structural oppression to design their own solutions to build the communities they envision. The design and variety of programming now offered to the community by QCJC-TR was driven by a participatory research study conducted in its planning phase, in which residents, particularly young people, were given meaningful opportunities to identify both the safety issues facing the neighborhood and the potential solutions that could be implemented with QCJC-TR. As QCJC-TR continues to grow and evolve, being responsive to the Rockaway community's needs remains a pillar of our work. QCJC-TR works to elevate resident voices, both through engagement with participants and surveys in the community, and incorporate that feedback into programming. Further, QCJC-TR has held more than 25 community events from January 2022 through March 2023, engaging more than 3,500 community residents throughout Far Rockaway.

A key area of programming for QCJC-TR is placemaking and other crime prevention through environmental design strategies. This evidence-backed model, implemented at project sites across the Center, seeks to transform hot spots into thriving, safe community spaces by cleanups, beautification efforts, and/or adding design elements. QCJC-TR conducts placekeeping activities across Far Rockaway, including activating public spaces through arts healing and music events, community celebrations, and public art installations, all led by Neighborhood Stewards. Through this work, QCJC-TR aims to address disinvestment in public spaces, increase public safety, and promote community ownership and cohesion. Since the commencement of this work, QCJC-TR's Neighborhood Stewards have engaged the Far Rockaway community with over 20 beautification events at local parks and beaches, and they have assisted more than 15 local merchants with exterior business clean-ups, which promotes public safety and economic development. Most recently, QCJC-TR became the NeighborhoodStat (NStat) provider for the Beach 41st Street New York City Housing Authority (NYCHA) Development in Far Rockaway, as part of the Mayor's

ED_016126_00000949-00004

Action Plan for Neighborhood Safety. The NStat initiative brings together residents, community stakeholders, and city agency representatives to identify and solve public safety and quality of life issues. Residents take the lead on safety realization efforts through partnerships with community organizations and various City agencies.

In line with this integral approach, community residents and organizations will be crucial to the development and decision-making processes of Rock Solid WMC. The project will activate high-school-aged youth in the Rockaways as change agents, organizers, and advocates to address illegal dumping and educate the local and broader community about this environmental justice issue. Rock Solid WMC will also utilize the Environmental Justice Collaborative Problem-Solving Model (ECJPS), described in Section 1.d, and convene a Professional Advisory Team, described in Section 1.f, to prioritize community-driven participation.

d. EJCPS Model

QCJC-TR's proposed Rock Solid Waste Management Coalition aligns well with the Environmental Justice Collaborative Problem-Solving Model and incorporates elements of the model throughout the entire program period in an iterative manner.

Element 1: Issue Identification, Community Vision & Strategic Goal Setting

While QCJC-TR has already identified the disproportionately prevalent issue of illegal dumping in the Rockaways through its current placemaking work and connections with the community, Rock Solid WMC youth participants will work to further research the specifics and implications of illegal dumping in the community through community mapping and surveying. Based on the survey results, stakeholder input, and input from members of the Professional Advisory Team, youth participants will develop a vision and set strategic goals on how to work towards the vision.

Element 2: Community Capacity-Building & Leadership Development

A key component of the Rock Solid WMC is the capacity building and leadership development of the youth participants. Youth participants will receive leadership development, advocacy, organizing, research, policy, and public speaking training and ample opportunities to put their training into practice over the course of the program. In addition, the Program Coordinator will train youth participants using Roots of Success, an environmental literacy and job training program, allowing them to gain an understanding of both the community- and systems-level issues that lead to illegal dumping. To complement their understanding of the current issues, youth will also learn about Zero Waste principles, such that they are able to both identify current issues and employ a framework that can be used to address root causes of the problems at hand.[15] Equipped with the knowledge and tools from provided trainings, youth participants will then go out into the community to disseminate the knowledge to their families, classmates, and other community members through facilitating their own workshops and community cleanups. By empowering community youth through leadership and job skills training, Rock Solid WMC will develop the leadership capacity of youth to sustain future progress in the Rockaways.

Element 3: Consensus Building and Dispute Resolution

Youth participants of the Rock Solid WMC will come to consensus among themselves before implementing the various parts of the program (their workshops, community cleanups, and advocacy work). Additionally, QCJC-TR staff will facilitate monthly joint Professional Advisory

[15] https://zwia.org/zero-waste-definition/: "The conservation of all resources by means of responsible production, consumption, reuse, and recovery of products, packaging, and materials without burning and with no discharges to land, water, or air that threaten the environment or human health."

ED_016126_00000949-00005

and Youth Advocate Teams meetings. Consensus building will be an ongoing process that will serve not only to further the goals of Rock Solid WMC, but also to strengthen the problem-solving and capacities of program youth and strengthen relationships among stakeholders. Staff will employ several strategies to achieve this end across both teams, including facilitating structured meetings with agendas and objectives, setting role expectations, and co-creating subcommittee to work through various elements and challenges of the project.

Element 4: Multi-Stakeholder Partnerships & Leveraging of Resources
QCJC-TR currently works with several community partners to deliver youth programs and conduct placekeeping work. Using the organization's experience collaborating with various stakeholders, QCJC-TR's Rock Solid WMC will convene a Professional Advisory Team to support the program and provide guidance to the Youth Advocate Team. Members of the Professional Advisory Team will come from a wide variety of backgrounds in order to bring diverse perspectives and resources to the project. Partners will include local government agencies, community-based organizations, non-profits, and academic stakeholders who are all dedicated to collaboratively increasing the capacity of youth participants as change agents in the Rockaways. In additional to serving on the advisory board, all partnerships will provide various levels of in-kind resource support to the initiative. Please see Section 1.f and the attached Letters of Commitment for more information on project partners.

Element 5: Constructive Engagement by Relevant Stakeholders
QCJC-TR has developed partnerships with various organizations and individuals throughout the Rockaways and the wider New York City community to support the broad goal of addressing waste management and illegal dumping on the peninsula. As youth participants complete their training and research, the Professional Advisory Team, as well as stakeholders beyond the formal group, will play an active, supportive role to support their vision and work in Rock Solid WMC. Throughout the project period, youth participants will also work to engage state, city, and local electeds through meetings, outreach, and the final policy brief in order to foster constructive engagement with government entities. Rock Solid WMC's partnership with REMA 4 US will also assist in connecting with relevant local business stakeholders and encouraging them to proactively engage with the community in addressing illegal dumping.

Element 6: Sound Management & Implementation
QCJC-TR has experience managing and implementing both youth development and placekeeping work. There are supervisory practices in place for all staff members involved in delivering programs to ensure the appropriate and effective implementation of all programs. A similar supervisory framework will be applied to the Rock Solid WMC to ensure the coalition is running efficiently and having positive impact. The Project Director and Program Manager will oversee the Rock Solid WMC. The Program Coordinator will be responsible for the administration of the Rock Solid WMC and will manage day-to-day operation of the program. The Program Coordinator will lead the recruitment of the Youth Advocate Team and will perform onboarding of the Youth Advocate Team and the Professional Advisory Team. The Program Coordinator will support and supervise the Youth Advocate Team and ensure that timelines, as described below, are met and that activities and deliverables are completed. Youth Advocate Team weekly working sessions will also be facilitated by the Program Coordinator as well. Additionally, the Program Coordinator will serve as the primary liaison between the QCJC-TR/Rock Solid WMC and the Professional Advisory Team. The Program Coordinator will schedule monthly meetings between the Youth Advocate Team and the Professional Advisory Team in order to foster collaboration and

ED_016126_00000949-00006

communication between the two groups.

Element 7: Evaluation
Evaluation of the Rock Solid WMC will be ongoing. QCJC-TR staff will consistently evaluate progress with youth participants and professional advisory team members internally to gain their insights into the program impact and effectiveness. Youth participants will also work to evaluate the impact and effectiveness of their workshops through questionnaires given to attendees as well as their community cleanups through ongoing community surveying. At the end of the program, youth participants, with the support of QCJC-TR staff, will develop a deliverable in the form of a presentation about the lessons learned and the best practices on the community level. Furthermore, QCJC-TR will develop a write up of lessons learned and best practices for facilitating an environmental justice youth development and change agent activation program. The Center has a Data Analytics and Applied Research (DAAR) team that works with operating projects to carry out, coordinate, and supervise data management, data analysis, and research. Rock Solid WMC will have a dedicated DAAR staff member to support the collection and analysis of program data to assess the results and impact of the program throughout the project period.

e. Project Linkages
QCJC-TR's proposed Rock Solid Waste Management Coalition supports EPA Strategic Plan Goal 2, Objective 2.1 through the program's community capacity-building focus. To engage youth participants across all income levels, the Rock Solid WMC participants will receive stipends, MetroCards, and participant awards to recognize their work and support their participation in the program. These components of the program are designed to help participants overcome any financial or logistical barriers that may hinder their engagement in the program and help advance educational or skill-based goals. Youth participants will engage in capacity-building training to hone their organizing and advocacy skills while increasing their knowledge of and skills in waste management, research, environmental justice principles, and Zero Waste frameworks. Youth will then conduct research on illegal dumping in the Rockaways through community mapping and surveying. Based on the training and research conducted, participants will develop and deliver their own workshops on waste management to the community; host community clean-ups; and advocate to local community boards, city council members, and state assembly people for the policy changes necessary to mitigate the waste management issues present. By specifically working with young people in the Rockaways and providing them with the capacity-building tools to in turn engage the rest of the community, QCJC-TR is working to empower the community to lead and address the disproportionate impacts of waste management and illegal dumping issues inter-generationally. Rock Solid WMC will also partner with and engage local government agencies to achieve results and advance environmental justice principles in the Rockaways.

f. Partner and Collaborate
In efforts to meet the objectives and goals of the Rock Solid Waste Management Coalition, QCJC-TR will bring together a diverse group of stakeholders to form the Professional Advisory Team, which will provide specialized information, skills, and resources to the program and youth participants. This Professional Advisory Team will consist of partners representing, at minimum, the following stakeholder groups: community-based organizations, secondary educational institutions, city government agencies, academia, merchants' associations, public-private partnerships, social services organizations, and community planning organizations. Partners will provide support and insight related to illegal dumping and waste management efforts the Rockaways. All partnerships will provide various levels of in-kind resource support to the

ED_016126_00000949-00007

initiative, and Rock Solid WMC staff will continue to seek additional partners. Please see the attached Letters of Commitment for further information on partner backgrounds and expertise.

Friends of Beach 59th Street Playground Association is a community-based organization that works to create a safe environment for the community by educating youth and inspiring them to treat their neighborhood with care. QCJC-TR has and will continue to partner with Friends of Beach 59th Street Playground Association to hold a community cleanup on the peninsula ranging from 54th to 62nd Streets. Friends of Beach 59th Street Playground Association is committed to supporting Rock Solid WMC by assisting with assessments of illegal dumping sites, program outreach efforts, and hosting community cleanups. Director Florence Ferguson will serve on the Professional Advisory Team.

Queens High School for Information, Research, and Technology (QIRT)/United Community Schools (UCS) serves students in grades 9 to 12 in Far Rockaway, Queens, New York. QIRT/UCS is committed to enhancing students' academic experience by encouraging and learning through personal discovery. QIRT/UCS is committed to supporting the Rock Solid WMC with program outreach, recruitment of youth advocates, and providing space for the community workshops. A member of the QIRT/UCS leadership team will be represented on the Professional Advisory Team, and they will also recommend an earth/environmental science teacher to lend knowledge in the area of waste management. QCJC-TR and QIRT/UCS partner together in several capacities, and QCJC-TR plans to sustain this relationship through program referrals and participation in events. QCJC-TR Project Director Kori Robinson also currently sits on the QIRT/USC Advisory Board.

The New York City Department of Parks and Recreation (*NYC Parks*) is a local government entity whose vision is to create and sustain thriving parks and public spaces for New Yorkers. NYC Parks hosts volunteers throughout the city all year long as part of its Stewardship Projects, including events such as the Rockaway Beach Coastal Cleanup. NYC Parks' Rockaway Beach Headquarters is committed to supporting Rock Solid WMC with education and resources related to illegal dumping and waste management sustainability, program outreach, and hosting community cleanup events. Partnering with QCJC-TR on this initiative will further enhance the NYC Parks mission and goals and support future project collaborations in Far Rockaway.

Dr. Melissa Checker serves on the faculties of the PhD Program in Anthropology and Environmental Psychology at the CUNY Graduate Center. She is also the Hagedorn Professor of Urban Studies at Queens College. Her research focuses on the politics of urban sustainability, environmental racism, grassroots activism, and managed retreat. Dr. Checker is committed to supporting Rock Solid WMC by serving on the Professional Advisory Team, assisting with training and workshops, connecting the program with the wider New York City environmental justice network, and potentially connecting interns with the program to support QCJC-TR's work. Dr. Checker's work on this project will bring invaluable knowledge and provide her student interns with academic and workforce experience.

Rockaway East Merchants Association 4 United Synergy, or REMA 4 US Inc. (REMA 4 US), is a nonprofit organization that seeks to engage in economic development and revitalization in the Rockaway Peninsula. To strengthen community revitalization programs and community development efforts in the Rockaway Peninsula, REMA 4 US works alongside businesses, civic groups, government agencies, and non-profit organizations. REMA 4 US works to inform the public about opportunities that exist to strengthen the community, and to create a welcoming and safe environment to help expand economic opportunity in the Rockaway Peninsula. REMA 4 US

ED_016126_00000949-00008

is committed to supporting Rock Solid WMC by promoting the initiative to local businesses and to the Far Rockaway community, helping to identify local community members that have been impacted by illegal dumping, and foster networking for space and audiences for the community training events and workshops. Executive Director Leonor Reina will also serve on the professional advisory team. The partnership with QCJC-TR will further REMA 4 US's goals of stimulating economic development for local businesses by revitalizing Far Rockaway through community education and direct cleanup efforts.

Lily Baum Pollans is Associate Professor of Urban Policy and Planning at Hunter College in New York City. As an urban planner and scholar, her interests lie in sustainability, infrastructure, and environmental justice. As a practicing planner, she has worked in both municipal and institutional settings on public transportation, public space design, and brownfield redevelopment. In her most recent contract, she collaborated with Boston-area sustainability professionals on a study of the jobs-development potential of companies that use recycled materials as inputs in manufacturing processes. Pollans is committed to supporting Rock Solid WMC and will serve on the Professional Advisory Team, deliver training and workshops to the Youth Advocate Team, and support the advocacy of the young people in helping to deliver a policy/research component of the program. The Rock Solid WMC will further Pollans' work in environmental justice and support her interests and expertise in public space and sustainability efforts through the program's focus illegal dumping and waste management.

Jamaica Bay-Rockaway Parks Conservancy (JBRPC) is as a public-private partnership dedicated to improving the 10,000 acres of public parkland throughout Jamaica Bay and the Rockaway peninsula for local residents and visitors alike. JBRPC is committed to supporting Rock Solid WMC by supporting with hosting community cleanups and aiding youth in community mapping of illegal dumping and litter hot spots. Additionally, Assistant Director Elizabeth Stoehr will serve on the Professional Advisory Team. The partnership with QCJC-TR will further JBRPC's work in increasing educational opportunities, fostering citizen stewardship and volunteerism, and ensuring long-term sustainability. QCJC-TR plans to continue strengthening this relationship through its placekeeping programming.

Child Center of NY was founded in 1953 as a children's counseling center in Queens and has grown to become a powerful community presence throughout the New York City. With 60 locations and 100 programs in NYC's most under-served communities, their 1,000+ results-oriented professionals make a difference for more than 43,000 children and their families each year. The Child Center of NY is committed to supporting the Rock Solid WMC by dedicating a staff member to serve on the Professional Advisory Team, referring high school students as potential program participants, providing access to community space to present educational workshops, and assisting with the promotion of community clean-up events. QCJC-TR values its current relationship Child Center of NY and plans to continue strengthening this relationship through program referrals, outreach assistance, and collaborative community events.

The Pratt Center for Community Development, founded in 1963, is the oldest university-based community planning organization in the U.S. As part of Pratt Institute, we leverage professional skills in urban planning, architecture, design and public policy to work on the ground with community-based organizations to challenge systemic inequities and advance sustainable development. Pratt Center works for a more just, equitable, and sustainable New York City in partnership with community-based groups, small businesses,

ED_016126_00000949-00009

and policymakers. If funding is secured, the Pratt Center is committed to supporting QCJC-TR and its Rock Solid WMC. The Pratt Center will provide mapping expertise and serve on the professional advisory team. Collaborating to develop the Rock Solid WMC model is strongly aligned with Pratt Center's goals.

2.0 Project Activities / Milestone Schedule / Detailed

a. Project Activities

The Queens Community Justice Center-The Rockaways proposes a three-year environmental justice program, Rock Solid Waste Management Coalition that focuses on illegal dumping of hazardous and nonhazardous waste on the Far Rockaway peninsula. This initiative will train, educate, and compensate 20 Far Rockaway, high-school-aged youth to become researchers, action-takers, and advocates against illegal dumping on the Far Rockaway peninsula. Over the course of the grant period, the Rock Solid WMC will run two 16-month cycles of 10 youth each, who will be taken through the stages of learning, planning, executing, and advocating. This initiative will culminate with the youth advocates creating and developing a policy brief that will summarize the illegal dumping and waste management issues on the peninsula, options to solve the problem, and recommendations on the best option for sustainability to share with community and stakeholders.

Rock Solid WMC will be guided by QCJC-TR's Project Director, QCJC-TR's Program Manager, a Program Coordinator dedicated to Rock Solid WMC, a Center researcher, the Professional Advisory Team, and two sequential cohorts of 10 paid youth advocates each. Early in Year 1, QCJC-TR will hire a Program Coordinator to manage the program objectives and to execute the program. The Program Coordinator will work closely with members of the Professional Advisory Team who will lend their skills, expertise, and resources to assist this initiative in reaching its goals. The Program Coordinator will also be responsible for forming the Youth Advocate Team cohorts by outreaching and promoting the initiative to local high schools and youth organizations.

Youth Advocate Team: The Youth Advocate Team will be made up of high-school age youth 13-18 years old who are residents of or attend school on the Far Rockaway peninsula. The Youth Advocate Team will meet twice per week for 1-1.5 hours during afterschool hours and on occasional Saturdays. Program activities will include environmental literacy and waste management training, community advocacy and organizing, research and community mapping related to illegal dumping, and developing a community education workshop and informational materials for youth advocates to facilitate workshops with community members covering the issue of illegal dumping.

Professional Advisory Team: The Professional Advisory Team will be comprised of local stakeholders that will work collaboratively with the Program Coordinator and the Youth Advocate Team. The Professional Advisory Team will support the Rock Solid WMC by providing their expertise and knowledge to the initiative, facilitating some of the group workshops, and assisting with community outreach efforts. Members of the Professional Advisory team will also provide basic professional mentoring and networking for the program youth. Rock Solid WMC staff will continue to recruit additional members of the Professional Advisory team once notified of award. See Section 1.F Partnerships and attached Letters of Commitment for further information on the makeup of the Professional Advisory Team.

Using the Environmental Justice Collaborative Problem-Solving Model (EJCPS) the Program Coordinator will convene the Professional Advisory Team in the first two months of the project period to provide an orientation and solidify expectations of program structure. Shortly after, the

ED_016126_00000949-00010

Program Coordinator will begin to facilitate monthly meetings between the Professional Advisory Team and the Youth Advocate Teams. Subcommittees will be set up based on the annual deliverables and program activities, let by a Professional Advisory Team member with appropriate expertise. Monthly meetings will also be structured so that the Professional Advisory Team will meet 20-30 minutes before each meeting to discuss program updates, needs, and concerns before the youth advocates join. The Rock Solid WMC 16-month program will be organized into four phases of four months each:

Phase 1: Training

Environmental Literacy and Waste Management Training: The Youth Advocate Team will be trained using the Roots of Success curriculum, which prepares youth and adults for environmental jobs and career pathways in the green economy. Roots of Success employs a train-the-instructor model, through which the Program Coordinator will be trained to facilitate the 10-module curriculum. Rock Solid WMC participants will complete and receive certificates in three modules: fundamentals of environmental literacy, waste, community organizing and leadership. The Roots of Success model builds basic academic enrichment and work readiness skills that provide entry-level experience into the workforce and important foundations for the Youth Advocate Team to be activated as environmental justice change actors. In addition to the Roots of Success curriculum, members of the Professional Advisory Team will be invited to deliver workshops. Dr. Lily Pollans, Associate Professor of Urban Planning and Policy at Hunter College, will lead workshop sessions on her research surrounding solid waste management and policy implications. Dr. Melissa Checker, faculty of the PhD Program in Anthropology and Environmental Psychology at the CUNY Graduate Center and Hagedorn Professor of Urban Studies at Queens College, will lead workshop sessions on her research pertaining to environmental justice, the politics of urban sustainability, and environmental racism. This will enhance the Youth Advocate Team's Roots of Success training by providing a New York City-specific lens to view waste management and environmental justice concerns.

Phase 2: Research & Planning

Community Mapping: Working with the Center's researcher and Rock Solid WMC Program Coordinator, the Youth Advocate Team will conduct community mapping; assess illegal dumping sites in Far Rockaway; and survey residents and community members about illegal dumping areas, safety, and health concerns. This research will help the Program Coordinator and youth advocates to identify illegal dumping hotspots that will be targeted for future community clean-up efforts, as well as to collect input from community members on how illegal dumping affects their lives. Data from the community mapping and surveys will also be used to help draft the policy brief on waste management on the peninsula in the final phase.

Community Waste Management Workshops and Infographic Development: In Phase 2, building on their training and community mapping process, the youth advocates will develop a community waste management workshop that they will facilitate, in-person and virtually, to local community members and groups, including schools, churches, libraries, and other agencies and organizations beginning in Phase 3. Participants will also create a one-page infographic on waste management that can be disbursed on an even wider scale.

Phase 3: Action

Community Waste Management Workshops and Infographic: In Phase 3, the Youth Advocate Team will begin facilitating the community waste management workshops. The goal of these

ED_016126_00000949-00011

workshops is to educate community members on the impact of illegal dumping and waste management on the peninsula and to start local conversations and activism around sustainability practices. Community members will receive completion certificates to acknowledge their participation, and have the chance to evaluate the community waste management workshops by completing post-workshop questionnaires. This feedback will be integrated into workshop facilitation on an ongoing basis. The Youth Advocate Team will also disseminate the one-page infographic through community workshops, social media, door-to-door outreach, and street canvassing. These activities will be supported by the Professional Advisory Team.

Community Clean-Ups: Beginning in Phase 3, the Youth Advocate Team will coordinate and begin to implement bi-monthly community clean-ups. Sites will be selected based on the community mapping work taking place in Phase 1, and post-cleanup surveys will be distributed to community participants to gauge the impact of the events and solicit feedback on ways to improve. All community members will be invited to participate in these cleanups, and youth participants will outreach with local organizations, connect with community waste management workshop participants, and publicly advertise the clean-ups to encourage participation. Also during Phase 3, the Program Coordinator will continue to host monthly planning meetings for members of the Professional Advisory Team and Youth Advocate Team. During these meetings, the team will evaluate and analyze the results of community surveys, schedule the bi-monthly community waste management workshops, continue strategizing on how to engage with local electeds about dumping and future solutions, and partner with other agencies to start talks on prevention and ways to minimize environmental and public health risks.

Phase 4: Advocacy

Engaging Electeds and the Community: Toward the end of Phase 3, the Program Coordinator and youth advocates will start attending local community meetings and scheduling time with state, city, and local electeds to speak about illegal dumping and waste management in their districts. These activities will promote leadership development and civic engagement for youth participants. The Youth Advocate Team members will not only practice advocating on behalf of issues important to them, but they will also learn in a more general sense how different levels of government and community organizing work. The Center's Government Partnerships team can lend support during this process.

Long-Term Sustainability Efforts and Final Deliverables: During Phase 4, the Professional Advisory Team and Youth Advocate Team will focus on community sustainability efforts related to illegal dumping and waste management on the peninsula. During this time, they will continue to focus on community education by providing bi-monthly workshops, hosting bi-monthly community clean-ups, and advocating for long-term dumping and pollution solutions through engaging with elected and local organizations. The Youth Advocate Team will prepare and present a policy brief to call on elected officials and other community stakeholders to create long-term change for illegal dumping in the Rockaways. Surveys to community members about illegal dumping areas, safety, and health concerns will be reissued to those who interacted with Rock Solid WMC to measure the impact of the community education workshops and clean-up efforts provided through this initiative. Information from these surveys will be compared to the data collected during the community mapping, and the information will be used to evaluate the objectives and goals of the initiative and used for context in the policy briefing and improving the program model. The Youth Advocate Team will also develop a presentation about lessons learned and best practices on the community level, as well as a write-up on lessons learned and best

ED_016126_00000949-00012

practices for facilitating an environmental justice youth development and change agent activation program. These final deliverables will contribute to the sustainability plan and community vision, described further in Section 3.c.

The second cohort of youth will build on the work of the first cohort. Community mapping will expand, either to new neighborhoods or targeting different subsets of the community; the workshop and infographic will be updated or created anew; and the policy work and materials will similarly be updated or created anew—all of which will be driven by the youth and their cohort's specific vision. The surveys collected in the first cohort will also inform the materials and work implemented by the second cohort.

Engagement of youth throughout their entire 16-month cohort is critical to ensure that they benefit from the full range of program activities and development opportunities. QCJC-TR will employ several strategies to encourage retention. Participants will sign a letter of commitment and attend a Rock Solid WMC orientation to review program expectations and commitments. QCJC-TR will also seek buy-in from participants' caretaker(s), and potentially support from their school. Off-site program trips, including the community mapping process itself, as well as guest speakers and appropriate breaks during the projects will assist with engagement and ensuring that youth advocates are able to balance other responsibilities in their day-to-day lives. Participants will also be able to engage with other youth programming at QCJC-TR, building strong social networks. At the end of their full participation in the program, participants will receive a stipend to acknowledge their efforts that they then could apply to a financial need like higher education costs.

Additionally, QCJC-TR staff build transformative relationships to maintain participant engagement and use Assertive Outreach to reengage participants whose participation wanes. Assertive Outreach is a persistent and purposeful approach used with individuals who may have difficulty engaging with programming due to trauma and poor experiences with providers. The onus is on QCJC-TR staff to engage participants and consistently try to re-engage youth as needed. Transformative relationships involve staff taking a non-judgmental, strengths-based stance that recognizes the young person and their family as the experts in their lives and an asset to their community. Building trust and respect and demonstrating reliability early on is often essential to engaging young people. If a participant does ultimately disengage, Rock Solid WMC will fill the program slot from a waiting list or accept further referrals.

b. Milestone Schedule

Planning	
November to December 2023	• Hire a Program Coordinator (PC) to manage and schedule program activities, the Professional Advisory Team (PAT), and the 20-person Youth Advocate Team (YAT) • QCJC-TR to identify additional PAT members
January to February 2024	• PC to convene the PAT for orientation/kick-off • PC to begin recruiting 10 youth • PC to be trained to facilitate Roots of Success curriculum
Cohort 1: Phase 1	

ED_016126_00000949-00013

March to June 2024	• YAT enrollment and orientation • PC to train YAT in environmental literacy, waste management, and community organizing and literacy using the Roots of Success model • Joint PAT/YAT monthly meetings to begin
Cohort 1: Phase 2	
July to October 2024	• Monthly joint PAT/YAT meetings continue • YAT to work with the Center researcher to do community mapping, assess illegal dumping sites in Far Rockaway, and survey residents • YAT to develop a community workshop on waste management to deliver to schools, local community groups, etc. • YAT to create a one-page infographic on waste management that will be disseminated to the community
Cohort 1: Phase 3	
November 2024 to February 2025	• YAT to implement bi-monthly community clean-up efforts with support from partnering agencies • YAT to facilitate bi-monthly community workshops and presentations on the effects of illegal dumping, waste management, health risks, etc. • YAT to collect surveys at the end of workshops and cleanups to gather feedback • YAT to distribute the one-page infographic to the community • Monthly joint PAT/YAT meetings continue • PC and YAT to attend local community meetings and meet with elected officials about dumping in their districts.
Cohort 1: Phase 4	
March to June 2025	• YAT to continue community clean-up efforts and workshops • Monthly joint PAT/YAT meetings continue • Issue surveys to residents and community members who participated community mapping to measure the impact of Rock Solid WMC • YAT to prepare a policy brief to call on elected officials and other community stakeholders to create long-term change • YAT to prepare a presentation with lessons learned and best practices • YAT to prepare a write-up with lessons learned and best practices • YAT and PAT to partner with local businesses, non-profits, and agencies to discuss sustainability and long-term solutions. • PC to recruit 10 youth for Cohort 2
Cohort 2*	
*Cohort 2 will follow the same timeline and activities as cohort one, building on and evolving the work accomplished by Cohort 1. Specifically for Cohort 2, Phase 1 will occur July to October 2025; Phase 2 will occur November 2025 to February 2026; Phase 3 will occur March to June 2026; and Phase 4 will occur July to October 2026.	

c. **Itemized Budget Sheet / Budget Narrative:** See the attached itemized budget sheet.

ED_016126_00000949-00014

3.0 Environmental Results – Outputs, Outcomes, and Performance Measures (Logic Model)

a. Environmental Results: Please see the attached Logic Model.

b. Performance Measurement Plan

For all programs operated by the Center, including QCJC-TR, research and tracking outcomes play essential roles. The Center is committed to an "action research" model in which researchers develop performance benchmarks in close coordination with project staff and then provide regular, data-driven feedback to identify successes and challenges that spark changes in practice and contribute to quality assurance and quality improvement efforts. QCJC-TR uses feedback surveys and other methods such as focus groups and individual interviews to capture levels of community satisfaction and to seek ideas for improving programming. The Center is deeply experienced in collecting data to understand, inform, and adjust practice; add to the field's overall research on what makes communities safer; and meet its funders' reporting requirements. Rock Solid WMC will have a dedicated researcher to support the collection and analysis of program data to assess the results and impact of the program. If awarded this grant, QCJC-TR will regularly review data to analyze outcomes and will respond by making program enhancements, adjusting practices or protocols, and/or offering staff further training. The Project Director, Program Manager, and Program Coordinator will perform regular audits of the program by observing program facilitation.

c. Sustainability Plan and Community Vision

Many residents in Far Rockaway see their neighborhoods as places where crime and incarceration are inevitable. As demonstrated, a key area of QCJC-TR programming that responds to this sentiment is investing in and revitalizing community spaces in order to enhance public safety and build community. The research, workshops, and advocacy completed under the Rock Solid WMC will significantly inform future placekeeping, community benefit, and beautification projects. The Rock Solid Waste Management Coalition initiative will shine a light on the community's environmental injustice and further the process of activism and policy reform in the Rockaways. To drive and sustain this initiative beyond the grant period, QCJC-TR is dedicated to keeping the issue at the forefront of its work and sharing new and relevant information as it is uncovered.

Further, because the model of the Rock Solid WMC hinges on community buy-in, QCJC-TR expects the program's momentum to be sustained towards achieving the community's goals. As residents and community members of the Far Rockaway peninsula, those who are closest to the issue often have the ideas, connection to community, and desire to make change addressing the issues they experience. The initiative will work to build the capacity of the younger generation of Rockaway residents and environmental justice change agents so that they in turn can educate their family, friends, classmates, and the community at large. The incorporation of youth-designed and -delivered surveying of the Rockaway community also ensures that the community is involved in the development and continued iteration of the vision for change in waste management and illegal dumping on the peninsula.

Finally, QCJC-TR aims to develop a replicable model for addressing environmental injustices and promoting youth-led advocacy for other Center sites and outside organizations to implement across New York City. Although the Rockaways disproportionately faces illegal dumping and waste management issues, QCJC-TR will be piloting youth advocacy model that others can implement to address a range of environmental concerns, such as lead, drinking water contamination, and air quality, and to advocate for policy changes in the disinvested communities they serve.

4.0 Programmatic Capability

ED_016126_00000949-00015

a. Organizational Experience

Since its inception, the Center for Justice Innovation has helped design, implement, and run more than three dozen operating projects, produced original research about hundreds of justice initiatives, and hosted tens of thousands of visitors interested in justice reform. The Center's projects, like QCJC-TR, have achieved tangible, independently verified results like safer streets, reduced levels of fear, and improved neighborhood quality of life.

Recognizing that youth can be transformative leaders, the Center operates Youth Impact, which provides restorative, peer-facilitated diversion programming, across multiple sites. As paid interns, Youth Impact members lead diversion programs, develop and pilot projects to promote community change, and take actions to address the underlying issues causing youth contact with the criminal legal system. Youth Impact's predecessor program, Youth Court, began in 1998. Additionally, the Youth Action Institute (YAI), formerly the Youth Justice Board, is a Center program that offers young New York City residents, ages 16-21, a paid fellowship opportunity to be trained in, and execute, intensive public policy research and policy advocacy, focusing particularly on the experiences of young people in public institutions. Fellows design research questions and protocols, execute their team-identified research projects and analyses, then translate their findings for multiple audiences and for pointed advocacy with policymakers, agencies, and other systems players. YAI uses this model because it values the intellect and expertise of young people, particularly when they are personally impacted by the topic of study, and because it sees these methods as a way to support them in claiming, using, and being accountable for their power. The Center has operated YAI's public policy research fellowship for more than 15 years.

Programming at QCJC-TR includes a mix of youth, adult, and community offerings for the Rockaways. QCJC-TR has experience operating placekeeping programming and is experienced with engaging the Rockaway community, as described in section 1.c. Youth programming includes the Rocksteady Youth Initiative (RSI), a program funded by the Queens District Attorney's Office, which works with youth ages 11 to 18 years old who are at risk of involvement in or are currently involved in the justice system. RSI youth are provided with educational, recreational, workforce and leadership development, and life skill training opportunities. The program focuses on reduction in youth crime and justice involvement by offering interest-based programming, like photography, graphic design, and podcasting, as well as placekeeping projects that encourage participants' community pride and civic engagement. Since its inception in October 2021, RSI has served 65 participants. The program has a 100% completion rate and has dispensed more than $23,000 in participant stipends.

The collaborative problem-solving model will be essential to Rock WMC's success, and QCJC-TR is experienced working with partners in the Rockaways and the wider community to meet identified needs. As described in section 1.c., QCJC-TR was and continues to be informed by community input. Additionally, QCJC-TR has collaborated with various deeply rooted Rockaway organizations and entities such as the Child Center of NY, United Methodist Center, the 100th and 101st precincts, and NYCHA developments like Hammels Houses, Redfern, and Carleton Manner.

b. Staff Experience / Qualifications

Kori Robinson, QCJC-TR's Project Director, is a Queens, New York native. In her previous role as a Field Director for the Police Athletic League Inc. (PAL), she supervised day-to-day operations, coordinated programming, and created community networks for the Goldie Maple Academy Beacon Community Center located on the peninsula. This center provided afterschool

ED_016126_00000949-00016

activities such as homework assistance, tutoring, STEAM, literacy development, performing arts, and physical education for youth in grades K-8. Since joining QCJC-TR, Ms. Robinson has continued to network and create collaboration opportunities and with local community stakeholders in Far Rockaway. She is currently the co-chair of the Far Rockaway/Arverne Nonprofit Coalition's (FRANC) Rockaway Peace Initiative Committee that seeks to decrease local violence by bringing awareness to issues on the peninsula and working collectively with other nonprofit agencies, local law enforcement, and electives to problem solve and create preventive solutions. She is also an active member of the Queens High School for Information Research & Technology (QIRT) Advisory Board, which connects the school community with local organizations and businesses to network and share resources.

Alexis Harbour is the Program Manager of Youth and Justice Initiatives at the Queens Community Justice Center-The Rockaways. Ms. Harbour oversees day-to-day operations of QCJC-TR programming and will provide supervision to staff on Rock Solid WMC. Ms. Harbour has fifteen years of extensive nonprofit experience in direct care service, community engagement, and philanthropy. Ms. Harbour has experience in child welfare, public policy, budget analysis, and intimate partner violence. Ms. Harbour's work has been rooted in New York City, particularly Queens and Brooklyn. Ms. Harbour is skilled in building relationships with local organizations and engaging community members to participate in civic engagement regarding legal, health, environmental, and educational disparities affecting the Rockaways.
The to-be-hired, full-time Program Coordinator will be responsible for the administration of the program. The Program Coordinator will have in-depth knowledge and familiarity of the Far Rockaway community and the Peninsula. The Program Coordinator's ties to the community will be essential to connecting with the youth participants and engaging local residents. Please see the attached job description for further responsibilities and qualifications of the to-be-hired Program Coordinator.

The Program Coordinator will have access to the Center's in-house Training Institute, which provides frequent ongoing education opportunities to its diverse and growing workforce to increase retention and promote the continual development of staff. The Training Institute develops on-site trainings in collaboration with internal staff experts, agencies, community-based organizations, and academic institutions. Targeted skills-based trainings in evidence-based practices, such as motivational interviewing and effective counseling, ensure high quality direct services while organizational development trainings, such as management and implicit bias trainings, promote healthy and supportive working environments.

c. Expenditure of Awarded Grant Funds and Plan for Compliance

With a current annual operating budget of more than $90 million and more than 25 years of experience in grants management, including dozens of federal grants, the Center is well positioned to successfully manage this award. The Center has fiscal and administrative departments responsible for fiscal planning, management and oversight, contract compliance, human resources, policy and procedures, and employee relations. QCJC-TR is assigned a senior fiscal manager to help manage grants, track expenses, and manage subawards and a senior development advisor to provide support writing grants and ensuring the timely and accurate submission of reports. QCJC-TR's Project Director also manages all project staff, program grants, contracts, and budgets. In keeping with General Accepted Accounting Principles (GAAP), the Center documents all of its accounting policies and procedures, including general ledger maintenance, payroll review and

ED_016126_00000949-00017

reporting, and invoice documentation. The Center has implemented a Netsuite Enterprise Resource Planning (ERP) system that handles all general ledger, including payroll functions. In addition, the Center follows the American Institute of Certified Public Accountants Industry Guide, "Audits of Not-for-Profit Organizations," for specific accounting policies and financial statement reporting guidelines. An independent certified public accounting firm conducts an annual audit to ensure fiscal accountability, internal controls, and contract compliance. If awarded funding, the Center's fiscal, administrative, and programmatic teams would ensure proper management of funds and work with the EPA to adhere to EPA's Pre-Award Compliance Review for Nonprofit Organizations, including providing records to assess and evaluate the Center's capabilities to manage funds and successfully perform the project scope of work.

5.0 Past Performance

Funder	Project	Successful management and completion?	Successful meeting of reporting requirements including final reports?
Urban Upbound/Mayor's Office of Neighborhood Safety	Queens Community Justice Center-The Rockaways: Love Where You Live Campaign	YES	YES; quarterly fiscal reporting
Department of Justice: Office of Juvenile Justice and Delinquency Prevention	Queens Community Justice Center: Queens HOPE, addressing Commercial Sexual Exploitation of Children	YES	YES; semi-annual and final reporting
Department of Justice: Office for Victims of Crime	Child Victims and Witnesses Going to Court	YES	YES; semi-annual and final reporting, as well as final published materials
Robin Hood Foundation	Red Hook and Brownsville JOIN, youth alternative-to-incarceration programming	YES	YES; interim and final reporting
W. Clement & Jessie V. Stone Foundation	Youth Action Institute	YES	YES; interim and final reporting

The above-listed grants and cooperative agreements were successfully managed and completed, including compliance with all reporting requirements. The Center's Grants Development & Administration team and fiscal department provide dedicated support to grants management and reporting. Attesting to the Center's successful management of these awards is the fact that three out of the five have been re-awarded under competitive processes—as is the case with many of the Center's awards.

6.0 Quality Assurance Project Plan (QAPP) Information

Rock Solid WMC will involve the use of existing or the collection of new environmental data.

ENVIRONMENTAL PROTECTION AGENCY
Washington, DC 20460

OMB Control No. 2030-0020
Approval expires 06/30/2024

This collection of information is approved by OMB under the Paperwork Reduction Act, 44 U.S.C. 3501 et seq. (OMB Control No. 2030-0020). Responses to this collection of information are required to obtain an assistance agreement (40 CFR Part 30, 40 CFR Part 31, and 40 CFR Part 33 for awards made prior to December 26, 2014, and 2 CFR 200, 2 CFR 1500, and 40 CFR Part 33 for awards made after December 26, 2014). An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The public reporting and recordkeeping burden for this collection of information is estimated to be 0.25 hours per response. Send comments on the Agency's need for this information, the accuracy of the provided burden estimates and any suggested methods for minimizing respondent burden to the Regulatory Support Division Director, U.S. Environmental Protection Agency (2821T), 1200 Pennsylvania Ave., NW, Washington, D.C. 20460. Include the OMB control number in any correspondence. Do not send the completed form to this address.

CERTIFICATION REGARDING LOBBYING

CERTIFICATION FOR CONTRACTS, GRANTS, **LOANS AND COOPERATIVE AGREEMENTS**

The undersigned certifies, to the best of his or her knowledge and belief, that:

(1) No Federal appropriated funds have been paid or will be paid, by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any Federal contract, the making of any Federal grant, the making of any Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement.

(2) If any funds other than Federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress in connection with this Federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form-LLL, "Disclosure Form to Report Lobbying," in accordance with its instructions.

(3) The undersigned shall require that the language of this certification be included in the award documents for all sub-awards at all tiers (including sub-contracts, sub-grants, and contracts under grants, loans, and cooperative agreements) and that all sub-recipients shall certify and disclose accordingly.

This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by section 1352, title 31 U.S. Code. Any person who fails to file the required certification shall be subject to a civil penalty of not less than $10,000 and not more than $100,000 for each such failure.

Itemized Budget Sheet

	Description	Total
Personnel	Project Manager @ $82,500 annual salary (X 100% of time in Year 1, X 50% in Year 2 and 3) of time on project = $165,000 for three years Operations worker @ $71,500 annual salary X 20% of time on project = $42,900 for three years Grant Administrator @ $71,500 annual salary X 10% of time on project = $21,450 for three years	$229,350
Fringe Benefits		
Travel		
Equipment	Battery Energy Storage System (2.05 MWh/0.5MW) = $918,400 Rooftop solar array = $79,000 Carport solar array = $66,000 Blink series EV charging stations = $24,000	While the total equipment cost is estimated at $1,087,400, the project is seeking funds from Phase 2 of the Department of Energy's Energy Storage for Social Equity program and looking to match funds. For that reason, the funding ask toward equipment for the project is $235,650
Supplies		
Contractual		
Construction		
Indirect Costs	Subaward to CBO for outreach activities and project recruitment = $35,000	$35,000
Other		

EJCPS Logic Model - Open Door Mission Solar Plus Battery Storage Project

Resources/Inputs	Activities	Outputs	Audience	Short-term (6-12 months)	Intermediate (12-24 months)	Long-term Outcomes (2+ years
- Partnering organizations - Staff time - Additional grants	- Deployment and installation of the Battery Energy Storage System with Solar and EV Charging - Coordination of workforce training - Outreach and education about the project and replicability	- 2.05 MWh (0.5125 MW, 4-hr duration) lithium-ion battery, 31 kW rooftop solar array, and 20 kW carport at the Open Door Mission 156 Plymouth Ave N site - Minimum of 3 training opportunities associated with system installation and deployment - 3 jobs created (project management, operations, administration)	- City, state, local government - Local partners - Community residents	- Resiliency of the Mission's operations (a commercial kitchen serving multiple locations and women's emergency shelter services)	- Cost-savings for the Mission - Reduction in emissions through use of the battery for back up and facilitating EV charging	- Improve local air quality - Replicate the project and model for resilience and workforce development

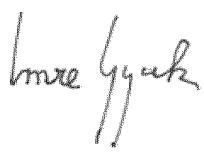
Environmental Justice Collaborative Problem-Solving (EJCPS) Cooperative Agreement Program
Funding number: EPA-R-OEJECR-OCS-23-01

April 10, 2023

Subject: Support letter for Open Door Mission application to EPA EJCPS Cooperative Agreement Program



The Open Door Mission in partnership with others is seeking to develop and deploy an energy storage project to provide backup power to its critical community facilities. Pacific Northwest National Laboratory (PNNL) has been providing Technical Assistance (TA) to the Mission since March 16, 2022 under the Department of Energy's Energy Storage for Social Equity (ES4SE) Initiative. The scope of TA has included conducting project site analysis, developing conceptual microgrid designs, and evaluating workforce and social equity considerations. The ES4SE Program will continue to provide assistance to program participants, with Sandia National Laboratories leading the development and deployment assistance phase starting in April of 2023.

Analysis during PNNL's technical assistance highlighted several energy and environmental equity considerations that informed the conceptual design of this project. Backup power for the Mission's critical facilities would provide community resilience in potential disaster events without exacerbating poor air quality and allowing a transition away from fossil fuels. Rochester experiences disproportionately high asthma rates, so reducing and avoiding fossil fuel emissions is especially important. Further compounding this is limited access to healthcare services: clean backup power lowers health impacts on vulnerable community members.

The project would also serve as an opportunity for job training and exposure to clean energy career pathways. The Mission operates a job training and skills development program and may use the project to provide apprenticeship opportunities. The Mission intends to explore installation contract provisions to hire locally and provide training for system maintenance as a step to build skills in the local workforce and rebuild trust in a community that has been excluded from jobs in the past.

We believe the Open Door Mission project aligns with multiple objectives of the EJCPS Cooperative Agreement Program as it encompasses several organizations working together to address local environmental and public health issues.

With best greetings,

Dr. Imre Gyuk
Director, Energy Storage Research
Office of Electricity
US Department of Energy

Table 2: Logic Model - Community-based Action Research and Education in Environmental Justice (CARE-EJ/CUIDA)

Resources	Activities	Outputs	Audience	Short-Term Outcomes (6-12 months)	Intermediate Outcomes (12-24 months)	Long- Term Outcomes (2+ years)
• Water testing equipment (testing strips) • Participating families • $500,000 investment • Framework for online platform for creating an incident registration system (CiviCRM and Drupal) • PR PASS (administration and coordination of organization and projects) • Municipality of Manatí • Municipality of Ciales	• Project Kick off • Community onboarding sessions • Community Research related meetings • Distribution of water testing kits • Water testing and monitoring activities • Data Informed Environmental Justice and Protection Activities • Citizens reporting environmental incidents • Steering Committee Progress Review Meetings • Annual Community Workshops	• Role Charter developed in Project Kick Off • Meeting invitations attendance and notes from Community Onboarding meetings (12) • Attendance and agenda for research meetings in each community (96 meetings) • Attendance in 3 yearly community progress meetings (estimated participation 50 annually) • Sample of atleast 5 videos and recordings of community proceedings • Training materials on water quality, conservation, and sustainability	• Communities in Manatí, Ciales, and other areas (northern and central region of Puerto Rico) • Government officials in Ciales and Manatí • Puerto Rico at large through social media and press • Families in rural and/or vulnerable areas • Other marginalized communities interested in water quality and in need of environmental justice.	• Greater awareness/trust of tap and surface water quality – target 150-200 residents • Survey assessment (60-80 residents) of commitment, awareness, and trust in water quality. • Increased engagement of stakeholders: 4 CBOs, 3 public schools • Reduction of water consumption and waste in homes and public areas • Cleaner public areas • 100 water quality and incident reports	• Greater awareness/trust of tap and surface water quality (250-400 residents) • Reduction of water pollution and improvement of water quality (250 – 400 tests) • Increased community trust through access to clean and sustainable water resources (attendance, and evaluation process) • More contact with municipal agents (1 – 2 key allies) • Knowledge sharing practices and connections are established between several communities	• Greater awareness/trust of tap and surface water quality (500 residents) • Improvement of the state of local water resources (tap, rivers, streams, aquifers, etc. 500+ tests) • Greater municipal government engagement in water quality issues through resolution of 50 incidents. • Improved generational commitment, awareness, and capacity for water quality, conservation, and local sustainability (100 surveys) • Improvements in municipal water management and quality

Resources	Activities	Outputs	Audience	Short-Term Outcomes (6-12 months)	Intermediate Out-comes (12-24 months)	Long- Term Outcomes (2+ years)
• Local community organizations (such as Acción Comunitaria Cialitos Inc. and other organizations and small businesses interested in protecting and sustaining a healthy environment) • Public schools in the area		• 12 Data-informed Environmental Justice Action Plans • Evidence from Environmental Justice events • Online water quality and environmental incident reporting system • Online portal with announcements blog of community activities and progress. • Guide summarizing Action Research process with 3 selected case studies • 2 Academic conference presentations with inclusive co-authoring • 1 peer-reviewed journal publication • 500 Tap water reports through online incident registration system			• Greater environmental justice through community reporting of water-related incidents (at least 250 water quality and incident reports)	• Sustained collaborations among several entities (CBOs, citizens, municipalities)

APPENDIX H

Office of Environmental Justice and External Civil Rights
Quality Assurance Project Plan Requirement (QAPP)

Check Yes or No for each of the items provided below as it applies to your specific project. If you answered **YES** to any of the items listed above, you are **REQUIRED TO SUBMIT** a Quality Assurance Project Plan in accordance with EPA Requirements and an approved QAPP must be in place ***prior*** to the initiation of activities.

You will be contacted with information on how to prepare your QAPP. In the meantime, please visit the website https://www.epa.gov/sites/default/files/2015-06/documents/g5-final.pdf which provides guidance on what must be submitted for grants/cooperative agreements.

1. Your project will involve the collection of groundwater, soil, sediment, surface water, air, biota or fauna samples for chemical orbiological analysis.
   Yes ☒ No ☐

2. Your project will use existing computer databases containing analytical data or personal information previously collected.
   Yes ☒ No ☐

3. Your project will use existing historical research pertaining to this project or application. Yes ☒ No ☐

4. Your project will implement deed searches for current property or site.
   Yes ☐ No ☒

5. Your project will conduct medical records search for the population covered in the grant.
   Yes ☐ No ☒

6. Your project will compile meteorological data to determine weather trends or air mixing trends.
   Yes ☐ No ☒

7. Your project will use existing statistical studies or will conduct these studies as part of the project.
   Yes ☐ No ☒

8. Your project will create a new database based on the information gathered.
   Yes ☒ No ☐

9. Your project will use this information for litigation purposes.
   Yes ☐ No ☒

10. Your project will use this information to make recommendations on environmental decisions.
    Yes ☒ No ☐

Areas Affected by Project

- Manatí, Puerto Rico
- Ciales, Puerto Rico
- Toa Baja, Puerto Rico

To Whom it May Concern,

This letter is to express the support of the New York City Mayor's Office of Climate and Environmental Justice (MOCEJ) for The HOPE Program on the proposed project under the U.S. EPA's EJCPS Cooperative Agreement Program to expand NYC CoolRoofs.

Extreme heat is a serious public health threat. More Americans die from heat than all other natural disasters combined, yet it receives relatively little public attention. In NYC alone, more than 350 residents die each year due to heat exposure. Because of climate change, NYC will continue to have hotter weather, potentially experiencing three times as many over 90°F by the 2050s. The city's most vulnerable populations also often live in housing conditions with poor ventilation and limited access to cooling. MOCEJ is leading initiatives to mitigate the heat risks in our communities.

Due to the dense concentration of concrete, asphalt pavements, and built infrastructure, and the way in which those surfaces absorb and re-radiate heat into the atmosphere, New York City's industrial areas, including Hunt's Point, represent a significant opportunity to mitigate the Urban Heat Island effect. Its physical attributes combined with social factors, make Hunt's Point one of the most heat-vulnerable communities in NYC.

For over eight years, Sustainable South Bronx, a division of The HOPE Program, has been a key partner in our NYC °CoolRoofs initiative in support of New York City's workforce development, carbon emission reduction, and climate adaptation goal. HOPE's job training curriculum and career services support hundreds of New Yorkers and contribute to the environmental sustainability of New York City. This project will build on the impressive track record of The HOPE Program and Sustainable South Bronx to improve the lives of New York's most heat-vulnerable community members.

I strongly support The HOPE Program in this project.

Sincerely,

Logic Model: Air Pollution Mitigation through Rooftop Coating and Transitional Employment

Inputs	Activities	Outputs	Audience	Short-Term Outcomes	Intermediate Outcomes	Impact
• Staff Time: CoolRoofs Operations Manager, Transitional Employment General Manager, Crew Co-Supervisors • Funding from SBS for participant wages • Funding from EPA for coating materials and supplies • Partnering Organizations: Authority to implement this project under the NYC CoolRoofs umbrella from the Mayor's Office of Climate and Environmental Justice; rooftop access from the Hunts Point Produce Market; and introductions to additional	• 210 participants will receive paid training and work experience in coating NYC rooftops with a reflective material • Participants will learn about the green economy and its role in the South Bronx community • Participants will complete lessons in digital literacy, financial literacy, work wellness, soft skills, interview preparation, and resume creation • Participants will meet with staff one-on-one to find and retain employment • We will host awareness-building convenings with local stakeholders	• 150,000 square feet of rooftops on industrial buildings in Hunts Point will be coated • 90% of participants will complete training • 25 new community members and stakeholders will become engaged in our program	• Unemployed South Bronxites and surrounding community • Local property owners • Local government • Communities working and/or residing within buildings	• Average rooftop temperature will decrease • Building's use of air conditioning and resulting emission of greenhouse gasses will decrease • 75% of program completers will achieve employment • More South Bronx community leaders will become aware and acknowledge the importance of NYC CoolRoofs opportunities	• 80% of graduates will retain employment for at least one year • Participation in the NYC CoolRoofs Program in the South Bronx will expand, benefiting a greater number of community partners	• Program graduates will build economically sustainable careers • South Bronx residents will be environmentally empowered and aware of opportunities to improve the community's environmental conditions • The South Bronx will be more resilient to heat and will experience fewer heat-related hospitalizations • Air pollution in the South Bronx will decrease, leading to lower occurrences of asthma, cancer, and other pollution- induced medical complications

industrial buildings from the office of New York City Councilmember Rafael Salamanca						

Budget Category	Total	Description
Personnel	$94,211	In line with HOPE's previous EJCPS agreement, this line covers program management specifically to conduct building outreach, ensure crew safety, monitor square footage, engage community members in CoolRoofs, liaise with EPA and monitor other program aspects; other personnel costs would be covered by the NYC CoolRoofs contract
Fringe Benefits	$14,378	Consistent with HOPE's existing fringe rate
Travel		
Supplies	$126,000	Includes rooftop coating supply as well as expenses related to building temporary parapets for industrial buildings which do not include this safety feature (required for CoolRoof coating)
Equipment	$0	
Contractual	$0	
Other	$72,275	Wages for workforce participants to coat the Hunts Point Produce Market specfically, which is a public/private institution requiring prevailing wages for roofing; calculation includes $25 per hour, which would be supplemented by the participant wages in the NYC CoolRoofs contract to achieve the prevailing wage
Indirect Expenses	$28,349	Consistent with previous EJCPS agreement
Total	$479,764

Application Work Plan Re: EPA-OEJECR-OCS-23-01
The New York Committee for Occupational Safety and Health, Inc.

1.0 Program Objectives

a. Project Summary Page

Project Title: Temperature Stress, Climate Change, and Resiliency Trainings for Construction Workers, Warehouse Workers, and Cleaners

Project Location (including community/neighborhood(s), city, state, and zip code): Jackson Heights, Queens (11372); Staten Island (10314, 10312, 10304, 10306, 10305, 10301, 10309, 10308).

Applicant Information (name, address, main contact information):
The New York Committee for Occupational Safety and Health, Inc.
14 Wall Street, Ste 5A
New York, NY 10005

Brief Description of Applicant Organization: The New York Committee for Occupational Safety and Health (NYCOSH) is a membership organization of workers, unions, community-based organizations, workers' rights activists, and health and safety professionals. NYCOSH uses training, education, and advocacy to improve health and safety conditions in our workplaces, our communities, and our environment. Our key ongoing projects include a Construction Safety School, the New York Nail Salon Worker School and adjacent New York Healthy Nail Salons Coalition, the Manhattan Justice for Workers' Collaborative, and the World Trade Center Health Program. NYCOSH also conducts industrial hygiene assessments at jobsites across industries.

Are you applying for the Small CBO Set Aside Track for $150,000 projects? No.

Project Abstract

Main Objective: Develop an education and training program for low-wage immigrant construction workers, cleaners, and warehouse workers about temperature stress, climate change, and disaster resiliency.

Activities: NYCOSH will conduct a total of 72 two-hour trainings on temperature stress, climate change, and resiliency throughout the duration of this grant period. NYCOSH aims to have 20 workers per training, for a total of 1,440 workers. NYCOSH's partner organizations will conduct outreach to their worker base to provide workers for the trainings.

Outputs/Outcomes: After the trainings, workers will be able to identify hazards as they relate to temperature extremes, and learn about proper personal protective equipment, disaster resiliency. Workers will be empowered to report workplace issues and develop temperature stress /climate change/resiliency plans on their job sites to protect themselves and coworkers.

Specific geographic areas of focus: Jackson Heights, Queens; and Staten Island will be where outreach and trainings take place.

Project Type: Training

Special Considerations: Climate Change/Disaster Resiliency

Environmental Issue: Climate change

List of Project Partners

1. Amazon Labor Union – a not-for-profit labor union for Amazon warehouse workers, particularly those on Staten Island.
2. La Colmena – a workers' center for day laborers and construction workers on Staten Island.
3. New Immigrant Community Empowerment (NICE) --a community-based organization for cleaners and new immigrant workers in Jackson Heights, Queens.

Will you need to develop a QAPP for your project? (See Appendix H) No.

b. Environmental and Public Health information of the Underserved Community. Please describe the following:
Describe and characterize the underserved community directly impacted by disproportionate environmental and/or public health harms and risks and describe how the community is impacted by those harms and risks
What are the environmental/public health issue(s) that the project seeks to address?

This proposal seeks to address New York workers in outdoor and indoor sites who are disproportionately impacted due to climate change, and are, as a result, increasingly exposed to extreme temperatures, including skyrocketing heat in the summer and freezing cold in the winter. Every year, New York City has high numbers of heat-related emergency department visits, hospital admissions, and deaths. According to the New York City Office of the Mayor, each year there are an estimated 450 heat-related ED visits, 150 heat-related hospital admissions, 10 heat stroke deaths, and 350 heat-exacerbated deaths, caused by heat-worsening existing chronic conditions.[1]

Cold stress injuries have also proven to be a concern for New York's workers. In 2018 there were 2,890 cases of ice, sleet, and snow injuries in the United States; 14% of those were in the state of New York (BLS). In 2018 in New York state, 50 injuries were related to exposure to

[1] "RE: Comments of the City of New York Relating to Advance Notice of Proposed Rulemaking on Occupational Safety and Health Administration Heat Injury and Illness Prevention in Outdoor and Indoor Work Settings, 86 Fed. Reg. 59309 (Oct. 27, 2021)." Received by OSHA, New York, 26 Jan. 2022, New York, NY.

environmental cold. All 50 of those injuries were cases involving 31 or more days of missed work (BLS).[2]

Low-income immigrant workers are more likely to work outside in extreme temperatures and inside without heat or air conditioning. They are also less likely to be able to mitigate extreme heat and extreme cold because they are unable to afford life-saving PPE that is currently not required by New York employers. Further, nonunion workers (or workers without a collective bargaining agreement) are less likely to speak up about hazards on the job, or to have an agreement with their employer that addresses extreme temperatures. Fear of speaking out due to retaliation is also a well-documented issue among undocumented workers.
This proposal seeks to address three target populations: warehouse workers at one Amazon facility in Staten Island, construction workers on Staten Island, and cleaning workers in Jackson Heights, Queens.

What are the environmental/public health results the project seeks to achieve and how will the underserved community benefit from those results?

The result NYCOSH seeks to achieve is to reduce the number of temperature-related injuries in New York by training workers who are most at risk. The underserved community to benefit will be low-income construction workers, warehouse workers, and cleaners. Studies have shown that training is effective in reducing the likelihood of injury on the job, which is a core tenet of NYCOSH's programming. A study by Ruth Ruttenberg shows workers who took OSHA-10 training were 7.6% less likely to be injured on the job.[3] In addition to training, injuries on the job are prevented by reporting and enforcement, but only as a result of workers taking action in unsafe working conditions. NYCOSH's program places special emphasis on workers' ability and comfort to make reports if inspections and enforcement are needed to correct hazardous conditions.

***If your project relates to one or more of the other factors in Section V include additional details about how the project addresses those factors in this section.**

One of the major impacts of climate change on US workers has been the increase of heat stress, which has more than doubled over the last 40 years, and that trend is only expected to continue, with extreme temperature projected to rise even faster than average temperatures in the

[2] Bureau of Labor Statistics, U.S. Department of Labor, *The Economics Daily*, Workplace deaths from weather and atmospheric conditions at https://www.bls.gov/opub/ted/2022/workplace-deaths-from-weather-and-atmospheric-conditions.htm (visited *April 11, 2023*).

contiguous US.[4,5] Meanwhile, the 3-year average of worker heat-related deaths has doubled since the early 1990s.[6]

Construction workers are particularly susceptible to injury and illness from extreme temperatures; a 2019 study from the Center for Construction Research and Training calculated that while construction workers comprise only 6% of the total US workforce, they accounted for 36% of all occupational heat-related deaths between 1992 and 2016; the risk of heat-related death was found to be significantly higher for Hispanic workers, particularly for those born in Mexico (with a 91% higher risk than the average for all construction workers), suggesting that immigrant workers, and particularly immigrant workers of color, are at greater risk for heat-related occupational death.[7] The same research study also observed that there was a positive correlation between an increase in temperature and the number of annual heat-related deaths, suggesting, as does the NASA Climate data, that climate change may be a contributing factor to these deaths.[8]

Heat illness also heavily impacts warehouse workers, especially as the warehousing sector grows in response to the decline in brick-and-mortar retail jobs in favor of online stores. Warehouses are often unventilated, or under ventilated spaces where workers perform physically strenuous work to meet demanding quotas with notoriously few rest breaks.[9] Moreover, many warehouses and fulfillment centers also employ their own drivers to deliver their orders. Drivers are subject to the same demanding quotas as warehouse workers, but are also additionally vulnerable to temperature stress, as they are often in un-airconditioned vehicles, while making frequent stops during which they exit their vehicle to drop off packages, at which point they are further exposed to the outside conditions.

Similar conditions are present for cleaning workers, who often perform their work after standard business hours, thus even if their place of employment has a well-functioning HVAC, that HVAC is usually off well before the cleaners arrive for their shift.

In response to these factors, NYCOSH is proposing to conduct training for workers in these industries. Training and education empowers workers not only with the specific knowledge of the hazards they are dealing with, but also of their protected rights, and their collective power, and it helps them develop the tools they will need to take ownership of their workplace and push their employer(s) to fulfill the obligation to provide a workplace free from recognizable hazards.

The application must include relevant information such as demographics, geographic location, and community history.

- Demographic data for all locations was sourced from the New York City Department of City Planning population tabulations.[10] Sociodemographic indicators and health disparity data for all locations was sourced from the EPA's EJSCREEN tool.[11]
    - Jackson Heights, Queens, New York (11372) is a neighborhood in the NW part of Queens with a population of 108,152 according to the 2010 Census. A 2020 *New York Times* article called Jackson Heights, "the most culturally diverse neighborhood in New York, if not on the planet," as approximately half of the population of the neighborhood has been foreign-born since the 2000s.[12] The neighborhood demographic makeup is 57% Hispanic, 22% Asian, 17% White, 2.0 Black, 2.3 Multiracial/Other.
        - SES indicators: **POC:** 84%ile; **Low income:** 63%ile; **Limited English speaking:** 96%ile; **Less than high school education:** 81%ile
        - Health disparities: **Low life expectancy:** 8%ile
    - Mariner's Harbor-Arlington-Port Ivory-Graniteville, Staten Island, New York (10314)
        - The 10314 ZIP code is comprised of four Staten Island neighborhoods with a combined population of 31,474 according to the 2010 Census. The neighborhood demographic makeup is 35% Hispanic, 30% Black, 24% White, 9% Asian, 3% Multiracial/Other.
            - SES indicators: **POC:** 41%ile; **Low income:** 31%ile; **Limited English speaking:** 70%ile; **Less than high school education:** 44%ile
            - Health disparities: **Low life expectancy:** 9%ile

c. Organization's Historical Connection to Underserved Community. How the organization has worked with the underserved community's residents and/or organizations to address local environmental and public health issues currently or in the past and what are some of the results of that work.

The history of your organization's involvement with the underserved community, including the duration of involvement and circumstances that led to your organization's involvement.

NYCOSH has been conducting life-saving trainings for immigrant construction workers since the organization was founded in 1978. Our Construction Safety School trains hundreds of Spanish-speaking, low-wage immigrant workers each year. Safety training is essential for immigrant workers, who are more likely than non-immigrants to be injured on the job, and who often do not have the funds necessary to pay for fee-for-service training programs. NYCOSH's program provides a vital resource by focusing primarily on low-wage construction workers in the immigrant community.

NYCOSH has conducted trainings for cleaners throughout the New York metropolitan area, including trainings tailored to workers who have been exposed to high heat due to employers turning off air conditioning services after office hours, when cleaning typically takes place. NYCOSH has also trained cleaners about hazardous chemicals, the right to know what chemicals they are working with, and how to protect themselves from health hazards on the job.

NYCOSH has had longstanding partnerships with La Colmena and New Immigrant Community Empowerment. Both organizations participated in NYCOSH's Manhattan Justice for Workers' Collaborative to increase crime reporting of wage theft and safety and health violations among immigrant construction and cleaning workers (founded in 2016). As a result, we regularly conduct trainings and conduct programming with these two organizations and are also working together to advocate for a New York State temperature standard to protect workers.

NYCOSH has also been working with Amazon warehouse workers on Staten Island for many years, having completed a research report with the workers in 2019, "Time Off Task: Pressure, Pain, and Productivity at Amazon." NYCOSH interviewed 142 warehouse workers to complete the study. We then continued to work with the organization to provide technical support for legislation signed into law in 2022 called the Warehouse Workers Act, which sought to provide production quotas in the warehouse industry to prevent ergonomic injuries. Finally, the Amazon Labor Union is a supporter of the New York State temperature standard legislation and attends regular coalition meetings.

Community Driven Participation - How the underserved community's residents and/or organizations were involved in developing the current project plan and are part of the decision-making process

NYCOSH training programs are developed in collaboration with the target groups that we intend to train, as this is the most effective way to develop training materials that workers will understand and learn from. NYCOSH has been working with all of the target populations for many years through training, case management, focus groups and advocacy.

NYCOSH will develop this program in coordination with the target population and will continue to work with the partners throughout the implementation of the program to make decisions about how outreach and training takes place, and how to regularly implement feedback. In addition, NYCOSH will incorporate individual participant feedback into the project design throughout the program and through its evaluations and will conduct focus groups.

In preparation for this grant, NYCOSH heard directly from its partner organizations and workers about the hazards that they are facing on the job. For example, on a February 10, 2023 press conference on the need for a temperature standard in New York State, NICE Executive Director Nilbia Coyote stated one fact for immigrant workers, stating, "Even in extreme weather, immigrant New Yorkers still go to work."[13]

Members went on to testify about the dangerous conditions of working in hot and cold warehouses, cleaning buildings that shut off air conditioning at night to save money, and outside construction sites without any protections from the cold. Partners are ready to develop a curriculum and train their impacted workers for this project and will be contributing direct experiences to the curriculum development process.

d. EJCPS Model - Demonstrate how this application utilizes the Environmental Justice Collaborative Problem-Solving Model (Section I.B).

The program proposed in this application utilizes four of the seven Environmental Justice Collaborative Problem-Solving Model elements. Two of these elements were accomplished prior to this application:

1. Issue Identification, Visioning, and Strategic Goal-Setting

In New York and beyond, low-wage immigrant workers are most likely to face occupational exposure to extreme temperatures. The need to protect workers from extreme temperatures and develop climate resiliency is well established among worker-focused organizations in NYS; every year, New York City has high numbers of heat-related emergency department visits, hospital admissions, and deaths as found and declared by the NY state legislature. NYCOSH is spearheading a New York State temperature standard in collaboration with unions, CBOs, and workers. The legislation was proposed after a year of meeting with stakeholders to set goals for change. Through our advocacy work, we identified the need for training low-wage workers on the hazards of temperature stress, climate change, and resiliency and set the goals outlined in this application.

2. Development of Multi-Stakeholder Partnerships and Leveraging of Resources

[13] "'State Labor Chairs Introduce Temperature Extremes Mitigation Program.'" *The New York State Senate*, New York State, 10 Feb. 2023, https://www.nysenate.gov/newsroom/press-releases/jessica-ramos/state-labor-chairs-introduce-temperature-extremes-mitigation.

While visioning and setting strategic goals, key populations were identified as high risk for suffering from hot and cold stress: construction workers, warehouse workers, and cleaners. To reach these populations, we formalized our partnerships with organizations and unions reaching these workers, including worker center La Colmena, CBO New Immigrant Community Empowerment, and the Amazon Labor Union. NYCOSH already had strong relationships with the partners and frequently collaborates via Zoom and in-person meetings on other occupational safety and health related issues to work towards a common vision or goal. As outlined in the letters of commitment, each partner brings their own assets and resources to this project; the necessary resources have been determined through planning meetings with NYCOSH.

The following elements will be undertaken during this project:

3. Community Capacity-Building and Leadership Development;
Though NYCOSH staff are already experts on disaster resiliency and the impact of climate change on workers, we will spend the first few months of the grant gathering information, continuing to educate ourselves, and creating curricula and training materials. Once the materials are almost complete, NYCOSH will conduct two pilot trainings (in English and Spanish) and a focus group to assess what changes should be made, what potential solutions to the problem are missing, and to ensure that community members and workers participate in developing the final training materials.
To immediately increase capacity, NYCOSH will host a train the trainer, where each of the three partner organizations will select 2-3 staff to learn how to deliver the training materials so that they build their own expertise on the issue.
The remainder of the project will be focused on education and capacity building through the delivery of 2-hour trainings.

4. Evaluation
NYCOSH is committed to utilizing the evaluation process in its training programs to improve existing trainings and evaluate the need for future training. We conduct evaluations on the quality of the training and instructor (level 1) to assess immediate reactions, pre- and post- tests (level 2) to assess knowledge change and "intent to take action". These evaluations allow NYCOSH to determine if the participants are implementing lessons learned from their training into their workplaces to improve health and safety on their job sites, therefore reducing the incidence/severity of occupational illnesses and injuries. NYCOSH also offers oral exams in some training programs for workers for whom written exams would be an impossibility. NYCOSH regularly incorporates these evaluations into its program planning.

e. Project Linkages Please describe the following:
Briefly describe how the project supports EPA Strategic Plan Goal 2, Objective 2.1

NYCOSH is based out of New York, a state with a civil rights bureau that works to promote "equal justice under law and seeks to enforce the civil rights of all New Yorkers." NYCOSH is committed to that mission and works to extend and defend every person's right to a safe and healthy workplace, regardless of race, color, national origin, sex, religion, age, marital status, sexual orientation, gender identity, military status, source of income, or disability. Furthermore, our programs center immigrant workers of color from various countries across union and non-

union jobs; these workers are disproportionately impacted by exploitation, including working in extreme temperatures.

f. Partner and Collaborate - Provide a clear and concise description of how the proposed project promotes collaborations with partners from multiple stakeholder groups to develop solutions that will address environmental and/or public health issues.

Describe how the project will accomplish its goals through the use of appropriate and diverse partnerships from multiple stakeholder groups, such as industry, business, academia, government, etc.

NYCOSH's partners include day laborer organization *La Colmena*, CBO New Immigrant Community Empowerment, and non-profit labor union Amazon Labor Union. Each partner has a base of workers that are the target audience for the trainings proposed in this application and is a member of a diverse stakeholder group. For example, La Colmena will be mobilizing construction workers and is a workers' center, Amazon Labor Union is a union and will be mobilizing warehouse workers, and New Immigrant Community Empowerment is a CBO that will mobilize cleaners. Partnering with organizations that can mobilize workers via phone calls, door knocking, tabling, and other outreach activities, is essential to the work of this project.

As outreach takes place, NYCOSH will conduct trainings via its Safety and Health Specialists, who are experts on temperature stress, climate change, and resiliency. Outreach will be ongoing to attract various pools of workers for each training. Further, as new immigrants continue to come into New York City, partners La Colmena and NICE will regularly inform new arrivals about this training, helping keep them safe on New York City's job sites.

Identify and describe all partners involved, including those partnerships that may be under development. Include the following details about each of your partners.

-Planned roles of each partner listed in your Project Summary. Include which stakeholder group the partner represents and the project activities each partner will be responsible for
La Colmena will partner with NYCOSH to reach low-wage day laborers and construction workers. Through outreach they will inform workers about this project, the reasons for participating, and register them for trainings.

NICE is prepared to support NYCOSH by conducting extensive outreach to immigrant workers, including domestic/cleaning/construction workers, to inform them of this project, the benefits of participating, and register them for trainings.

ALU will partner with NYCOSH to reach warehouse workers who work outdoors, as well as indoors without air conditioning and/or heat. Through outreach they will inform workers about this project, the reasons for participating, and register them for trainings.

How each partner will contribute to the project

La Colmena will:

- Contribute to the project by conducting outreach and telling workers about the project.
- Conduct outreach to at least 800 immigrant workers in person, virtually, and by phone to participate in trainings.
- Ensure that members are responsive to NYCOSH evaluations so that accurate data is collected on membership.
- Assign approximately 20% of outreach staff time to this project.
- Provide access to training space on Staten Island when needed.

NICE will:

- Conduct outreach to at least 500 immigrant workers (flyers, calls, texts, and other channels).
- Distribute flyers and other materials with key information.
- Support NYCOSH with the collection of information on exposure to temperature hazards.
- Conduct in-person outreach at Worker Centers, places of congregation for immigrant workers; OSHA training and others.
- Refer workers to NYCOSH virtual and in person 2-hour long training.

ALU will:

- Contribute to the project by conducting outreach to worker-members and recruiting workers to trainings.
- Provide access to 830 workers during the contract years.
- Provide NYCOSH with a venue to conduct trainings, technical assistance in creating and disseminating trainings, promotion of trainings through direct worker outreach and social media, as well as access to printing fliers and materials for trainings.
- Assign approximately 25% of five staff organizers time to this project to conduct outreach.

What resources each partner brings to the partnership

Each organization will be responsible for providing outreach to their membership, bringing the organization's vast membership resource to the grant project. They will also bring their knowledge of the industries and critical feedback throughout the programming.

How the partner has a vested interest in working with this partnership

Members of the organizations that we partner with are directly impacted by temperature stress and climate change on the job. By training their membership on temperature stress, climate change, and resiliency the organization is helping to provide workers with the tools to protect themself in various working conditions. Our partners' purposes are to provide good, safe jobs for their members and they each have a self-interest in the project at hand.

How the applicant organization plans to maintain and sustain these relationships on into the future

NYCOSH was founded in 1979 and has developed long-lasting partnerships that span far longer than any one project, campaign, or collaboration. We believe in developing sustainable relationships because we are all a part of the labor movement; or the movement for good, safe

jobs in New York State. Each partner on this project has been a partner of NYCOSH for years, and we plan to continue these partnerships.

NYCOSH has staff liaisons that work directly with partner organizations, regularly checking in with them about their campaigns and projects and ensuring that we are able to provide support where needed. NYCOSH also regularly provides education and training on other subjects with these organizations and will continue to do so.

If you intend to fund the partner's participation in the project describe how the proposed financial transaction complies with applicable requirements in 2 CFR Part 200 on competitive procurement or for subrecipients EPA's Subaward Policy or EPA Guidance on Participant Support Costs.

All three partners are eligible subrecipients under EPA's policies and will receive subaward funding to participate in grant activities. As per the EPA Subaward Policy, all partners are non-profit organizations; and none are classified as 501(c)4 under the Internal Revenue Service code.

2.0 Project Activities / Milestone Schedule / Detailed Please describe the following:
a. Project Activities - Provide a clear description of the steps the applicant will take to meet the program objectives and execute the project. Provide clear descriptions and details for each project activity or component and the anticipated products/results associated with each activity.

Under this grant we propose the following activities:

Curriculum Development: NYCOSH will develop a worker-centered curriculum for the program. NYCOSH training sessions are conducted using a variety of educational methods and materials, and custom designed for each group of trainees. Sessions are conducted using "mini-lectures" (brief verbal instruction, including opportunities for questions and answers, designed to reinforce material presented by other means), small-group activities, videos used to trigger discussion on a certain topic, role-playing situations, hands-on sessions, simulations, group discussions, case studies and problem-solving exercises. Varied adult education methodologies are utilized for each type of group, with small-group activities developed with education and skill level of the group in mind. A certain portion of each training is based on the specific conditions and concerns expressed by the trainees, so time is allotted for open discussion to allow participants to have their identified concerns addressed.

Translation: The training will be written in English and translated into Spanish.
Pilot training and feedback session: NYCOSH will host a pilot (2) two-hour trainings (in English and Spanish) to test the curriculum, and then will get feedback from the workers via (2) two-hour focus groups immediately following each training.

Edits to curriculum: NYCOSH will utilize the focus group/feedback sessions to incorporate trainings into the curriculum. All staff working on this project will take part in these edits.
Materials Development: NYCOSH will develop flyers for outreach and evaluation materials that will be utilized in the trainings.

Train the Trainer: Each organization will select 2-3 staff to take part in a train-the-trainer where they will learn to deliver the training materials so that they become the point people on staff for questions about the program. This will also build sustainability for the program, so that trainings can continue after the grant ends.

Outreach: Ongoing outreach will take place, where partners will mobilize workers via phone calls, door knocking, tabling, and other outreach activities. Outreach will take place between 1-4 weeks prior to each training and we estimate at least four hours of outreach will be necessary to recruit for each training. For the 72 trainings that NYCOSH plans to deliver, we estimate 288 outreach hours will be dedicated to this project.

Trainings for Workers: NYCOSH will conduct a total of 72 two-hour trainings on temperature stress, climate change, and resiliency throughout the duration of this grant period. NYCOSH aims to have 20 workers per training, for a total of 1,440 workers.

Evaluation: NYCOSH will conduct level 1 (on satisfaction) and level 2 (on learning) evaluations for the duration of this project, collecting and compiling data for 1,440 evaluations.

b. Milestone Schedule - Include a clearly articulated/organized milestone schedule, detailing timeframes and major milestones to complete significant project activities within the three-year period of performance (Nov 1, 2023- Oct 31, 2026).

Time Period	Milestone	Point Person
November 2023 – January 2024	1. Curriculum and material development 2. Hire new Safety and Health Specialist 3. Kickoff meeting with subgrantees	1. 2 Safety and Health Specialists (Luzdary Giraldo and Liam Lynch) and 1 Industrial Hygienist (Marina Jabsky) 2. Project Manager (Charlene Obernauer) and Associate Director (Lara Maldjian) 3. Project Manager (Charlene Obernauer) and Associate Director (Lara Maldjian)
February – March 2024	1. Translation 2. Two pilot trainings conducted – one in English and one in Spanish 3. Two focus groups held following training; feedback collected	1. Translation consultants (WBE vendor, Translingua) 2. 3 Safety and Health Specialists (Luzdary Giraldo, Liam Lynch, Safety and Health Specialist TBH) 3. 3 Safety and Health Specialists (Luzdary Giraldo, Liam Lynch, Safety and Health Specialist TBH)
April 2024	1. Curriculum and materials refined 2. Train-the-trainer for staff at 3 partner organizations	1. 3 Safety and Health Specialists (Luzdary Giraldo, Liam Lynch, Safety and Health Specialist TBH) and 1 Industrial Hygienist (Marina Jabsky) 2. 3 Safety and Health Specialists (Luzdary Giraldo, Liam Lynch, Safety and Health Specialist TBH)

May-October 2024	1. Outreach ongoing 2. Conduct 18, 2-hr temperature stress, climate change, and resiliency trainings and collect level 1 and 2 evaluations	1. Subgrantees: La Colmena, Amazon Labor Union, New Immigrant Community Empowerment 2. 3 Safety and Health Specialists (Luzdary Giraldo, Liam Lynch, Safety and Health Specialist TBH)
November – October 2025	1. Ongoing outreach 2. Conduct 36, 2-hr temperature stress, climate change, and resiliency trainings and collect level 1 and 2 evaluations	1. Subgrantees: La Colmena, Amazon Labor Union, New Immigrant Community Empowerment 2. 3 Safety and Health Specialists (Luzdary Giraldo, Liam Lynch, Safety and Health Specialist TBH)
November – October 2026	1. Ongoing outreach 2. Conduct 36, 2-hr temperature stress, climate change, and resiliency trainings and collect level 1 and 2 evaluations	1. Subgrantees: La Colmena, Amazon Labor Union, New Immigrant Community Empowerment 2. 3 Safety and Health Specialists (Luzdary Giraldo, Liam Lynch, Safety and Health Specialist TBH)

c. Itemized Budget Sheet / Budget Narrative - Submit as Attachment

3.0 Environmental Results – Outputs, Outcomes, and Performance Measures (Logic Model)
a. Environmental Results (Logic Model) – Submit as Attachment
b. Performance Measurement Plan – Applicants should describe how they plan to track and monitor their project performance and progress throughout the project period.

To track and monitor our project performance, NYCOSH will host regular meetings with internal staff and subgrantees to discuss this grant. At the start of the grant period, we will host a kick-off meeting to go through the attached logic model and set any additional goals that may have arisen during the waiting period. In this meeting we will also develop an outreach plan with methods for reaching the target population and number of trainees. Following the kick-off meeting, NYCOSH will host a monthly group meeting with the three subrecipients to touch base on activities, outputs, and outcomes; we will review the logic model on a quarterly basis to make sure we are on track for meeting our targets. Additionally, NYCOSH management will meet with Safety and Health Specialists on this grant on a weekly basis to discuss training progress, lessons learned, and any changes needed to curriculum; training evaluation data will be reviewed and discussed monthly.

c. Sustainability Plan and Community Vision – Description of how the applicant plans to utilize the results and momentum of the proposed project to come closer to achieve the community's goals and objectives.

Among the low-wage immigrant worker community, goals and objectives include improving working conditions within their industries. For workers' rights organizations such as our partners, it is within their interest to provide the necessary training to protect workers from injury, illness, or even death because of heat and cold exposure. As more workers are educated around an issue, the workers organizations are empowered to conduct advocacy.

Successful programs, such as ours at NYCOSH, look to increase participants' knowledge around the hazards they face, and how these risks can be eliminated, reduced or controlled. Workers will learn that time in the shade can prevent overheating, for example, and the recommended amount of water that should be ingested per hour. In addition, addressing worker's attitudes about their ability to bring concerns to their supervisor is an important element at all trainings, as an understanding of rights and regulations emphasizes the employers' responsibility to provide a safe workplace. Therefore, workers will act to help create safer workplaces, thus impacting more and more workers on their job sites.

Finally, NYCOSH will make its curriculum publicly available on its website so that communities elsewhere can implement this training and help workers stay safe from extreme temperatures in an increasingly warming world.

4.0 Programmatic Capability
a. Organizational Experience related to the proposed project and their infrastructure as it relates to their ability to successfully implement the proposed project.

NYCOSH's programming has been highly effective in developing high-impact occupational safety and health training and education projects for workers and employers for the past 40 years. NYCOSH has been a recipient of NYS Hazard Abatement Board funding since 1980 for training, and received the second-largest award among recipients in 2023. NYCOSH also administers effective training, outreach, and education programs for many government agencies including NIEHS, OSHA, NIOSH's World Trade Center Health Program, NYC's Department of Youth and Child Services, and recently for the Manhattan District Attorney. NYCOSH has had high overall training numbers, and in the 2021-2022 fiscal year, NYCOSH trained 8,772 workers across industries in 538 training sessions. NYCOSH has a fiscal year 2023-2024 budget of nearly $3,000,000 and regularly manages programs of equal size to the EPA grant program being proposed.

b. Staff Experience / Qualifications of Project Manager (PM)
-Why the PM and associated staff are qualified to undertake the project

NYCOSH is the leading occupational safety and health non-profit organization in the State of New York, and is one of the leading organizations in the country. Our training program is led by experienced, dedicated staff, many of whom have been conducting OSH training for decades.

Project Manager: Executive Director, Charlene Obernauer, M.A., oversees NYCOSH's campaign and policy work. Obernauer authors NYCOSH's annual construction fatalities report and founded the New York Healthy Nail Salons Coalition. She is also an adjunct professor of

occupational safety and health. Obernauer has her M.A. in Liberal Studies from the CUNY Graduate Center and her B.A. from SUNY Stony Brook.

Associate Director, Lara Maldjian, M.P.H., directs the Safety and Health Department. She leads the organization through a series of effective programs, including trainings for nail salon workers, youth, and construction workers. She has her B.A. from U.C. Berkeley and her M.P.H. from Columbia University.

Finance Director, Terry Ferreira, B.A., directs the finance department at NYCOSH. She ensures that all finance policies and procedures are being followed and that NYCOSH is in compliance with the finance requirements of our government contracts. She has her B.A. in Economics from Hunter College.

Safety and Health Specialist, Luzdary Giraldo, B.A. has trained tens of thousands of immigrant workers to advocate for their rights in the workplace and is a disaster resiliency expert. She has been a member of NYCOSH staff since 2006 and has led NYCOSH training and outreach programs to a number of community-based organizations and workers' centers. Giraldo has a number of certifications, including OSHA 500 & 510 and Bystander certification.

Industrial Hygienist, Marina Jabsky, M.P.H. is an expert in industrial hygiene and has conducted various site assessments, training, and other services throughout her career as an industrial hygienist and researcher. Jabsky has her M.P.H. from CUNY School of Public Health and is an instructor of Occupational Safety and Health at CUNY School of Labor and Urban Studies.

Safety and Health Specialist, Liam Lynch, M.A., leads various safety and health training programs. Lynch also organizes NYCOSH's outreach and education efforts on the World Trade Center Health program. He has an M.A. in Labor Studies from the CUNY School of Professional Studies and is an instructor of Occupational Safety and Health at CUNY School of Labor and Urban Studies.

For this program, NYCOSH will hire an additional Spanish-speaking Safety and Health Specialist with proven expertise in training around climate change.

Illustrating the PM's ties/historical connection to the community and the applicant organization. Please include detailed descriptions of any activities that the PM has worked on with the community and/or applicant organization.

Project Manager, Charlene Obernauer, M.A., has been leading NYCOSH since 2014 and has been organizing and advocating in the community for nearly two decades. She is an expert in the industries impacted, authoring a nationally-recognized annual report on construction safety, and also authoring a 2019 report on Amazon's Staten Island warehouse. She is also an expert in temperature stress, and wrote the first-of-its kind legislation addressing extreme temperature in both hot and cold climates, which has been introduced in the 2023 session of the NYS Legislature (S1604, A3321). Obernauer is an Adjunct Professor on Occupational Safety and Health and the Environment at SUNY Empire State College's Harry Van Arsdale Center, where she lectures about the intersection between climate change and worker justice.

Further, Obernauer serves as the Project Manager for the Manhattan Justice for Workers' Collaborative, where *La Colmena* and NICE are partnering organizations. This project has existed since 2016 and has led to joint tracking of wage theft cases and employers in New York State. The program has recovered more than $125,000 in lost wages among low-wage immigrant construction workers.

c. Expenditure of Awarded Grant Funds, and plan for compliance with EPA's Pre-award Compliance Review for Nonprofit Organizations

NYCOSH's managerial expertise and fiscal expertise can be demonstrated by the complexity of programs that it coordinates and the kinds of government contracts that it successfully manages. First, to note, NYCOSH has always passed its New York State Department of Labor audits without any findings. As recently as 2017, when NYCOSH was audited, the agency had no findings against the organization. NYCOSH has had similar audits from agencies like the Center for Disease Control, and as of 2021, received satisfactory ratings from the agency.

NYCOSH runs the New York State Department of State-approved New York Nail Salon Worker School, which has resulted in the graduation of nearly 1,000 students since the inception of its program. The School has a 95% pass rate for students who then go on to take the New York State manicurist exam, a requirement to become a licensed manicurist.

NYCOSH also launched its Construction Safety School in 2019, funded by the City of New York and New York City Small Business Services. The grant, $1.66 million over a period of five years, supports the mandatory 40-hour training required for all construction workers in New York City. The grant has been extended an additional year for 2023 due to our success. The target population is day laborers.

NYCOSH has a well-managed finance team, which includes its Executive Director, Finance Director, Finance and Operations Associate, Treasurer, and accountants. This team helps ensure that NYCOSH follows all applicable, Federal, State, City, and County finance guidelines, as well as non-profit tax law.

5.0 Past Performance
Submit a list of federally and/or non-federally funded assistance agreements that your organization performed within the last three years.

1. New York City Small Business Services: Construction Worker School
2. New York State Hazard Abatement Board: occupational safety and health trainings
3. Manhattan District Attorney Criminal Justice Investment Initiative: Wage theft and safety and health cases
4. New York City Human Resources Administration: Outreach for the New York Healthy Nail Salons School
5. New York City Department of Youth and Community Development: Training and operation of the New York Healthy Nail Salons School

i. Whether, and how, you were able to successfully complete and manage those agreements

For each grant program, NYCOSH has been able to successfully complete and manage the agreements. NYCOSH also often exceeds proposed deliverables.

- New York City Small Business Services: NYCOSH's Construction Worker School successfully provided virtual and in-person site safety training for nearly 500 immigrant construction workers every year (since 2019) and managed the complex distribution of Site Safety Training cards with its base of workers.
- New York State Hazard Abatement Board: For various occupational safety and health trainings, NYCOSH has received funding for more than thirty years. For the past five years, NYCOSH managed complex training programs and completed the following deliverables:
    - NYCOSH received $229,955 in 2020-2021 program year and its measurable outcomes include training to 1,818 workers and 208 hours of training.
    - NYCOSH received $244,869 in 2021-2022 program year and its measurable outcomes include training to 1,398 workers and 539 hours of training.
    - NYCOSH received $250,000 in 2022-2023 program year and its measurable outcomes include 601 hours of training.
- Manhattan District Attorney Criminal Justice Investment Initiative: For this wage theft and safety and health case management grant, NYCOSH trained more than 92,000 workers since June of 2018, resulting in more than 1,000 workers reporting employer crime. To date, this program has helped recover more than $125,000 wages at an average of almost $1,900 per worker.
- New York City Human Resources Administration: Outreach for the New York Healthy Nail Salons School has been successful in registering workers for our program. We have conducted outreach thus far to about 5,000 workers.
- New York City Department of Youth and Community Development: Conducting trainings for the New York Healthy Nail Salons School. We have had, since 2016, nearly 1,000 workers graduate from our school and 95% of these workers have gone on to successfully pass the New York State Manicurist exam.

ii. Your history of meeting the reporting requirements under those agreements

NYCOSH has always met the reporting requirements under our agreements. We submit reports as needed per contract, whether it's monthly or quarterly—and always submit an end of year report in a timely manner. NYCOSH has never had any findings against the organization in regular audits that take place under each program, and regularly meets full billing for all its programs.

6.0 Quality Assurance Project Plan (QAPP) Information (If applicable)

Indicate whether you believe that your project will involve the use of existing environmental data or the collection of new data (use the checklist in Appendix F to assist you in making this determination). No.

SECTION F - OTHER BUDGET INFORMATION

21. Direct Charges:

22. Indirect Charges: 10%

23. Remarks:

Greening Burlington City Detailed Budget

	Description	Total
Personnel	• Program Director @ $60,000 annual salary x 15% of time on project = $27,000 total for three years • Program Coordinator @ $50,000 annual salary x 75% of time on project = $112,500 total for three years • Program Apprentice @ $40,000 annual salary x 50% time on project = $60,000	$199,500
Fringe Benefits	• 14% of Salary Costs - average cost for health insurance, workers comp, and leave	$27,930
Travel	• N/A	$0
Equipment	• Hand Tools, $2,000 cost contributed by PPA/RCF • Green House for Market Gardens @ 1 x $20,000 • Materials for raised beds @ $200 each for 40 4' x 40' beds = $8,000 • Irrigation Equipment for Market Gardens = $2,400	$30,400
Supplies	• Flyers, printing and mailing @$1 each for 2*3900 households=$7,800 • Plants for Rain Gardens @ $4,000 per 800 sq ft garden for 8 gardens = $32,000 • Trees for Street Trees @ $300 per tree for 100 trees = $30,000 • Plants for Market Gardens @ $1,100 for each of two 1/4 acre Market Gardens for each of two growing seasons = $4,400 • Growing supplies for Market Gardens = $3,470 • Equipment for site prep to be supplied by the City at no cost, approxmately $40,000 value	$77,670
Contractual	• N/A	$0
Construction	• N/A	$0
Indirect Costs	• 10% of Direct costs = $33,500, contributed by TOL	$0
Other	• PPA/RCF Subaward = $72,000 • Rutgers Water Resource Program Subaward = $58,500 • Hopeworks Subaward = $28,000 • Insurance-Liability = $6,000	$164,500
		$500,000

Greening Burlington City Logic Model

Resources	Activities	Outputs	Audience	Short-Term Outcomes	Intermediate Outcomes	Long-Term Outcomes
Trained Staff	Organizing local engagement	8+ rain gardens and street trees in underserved neighborhoods	City residents	Forum with at least 40 engaged residents for discussion and planning meets regularly	Less to no flooding during storms in neighborhoods with rain gardens and street trees	Community members create new initiatives to improve their lives
Resident volunteers	Information collection through walking, taklking and mapping	2 market gardens that are economically sustainable for growers	Residents interested in gardening and tending	Broad knowledge among residents about the project and its value to them	Improved appearance of public spaces in City, creating better quality of life	TOL has greater ongoing capacity among staff and volunteers to sustain this project and do things not yet imaged
Resident growers	Planning through inclusive conversation based on local knowledge	Maintenance plans for rain gardens and street trees	Residents interested in become market farmers/growers	Cadre of at least 25 trained and committed volunteers	Greater shade and lesser heat along streets and neibhoring houses	Flooding risks are permanently reduced in the City
City government	Creating detailed designs and procedures for installations	Management plans for each market gardens	City government officials	Trained and committed growers to develop and operate the market gardens	Income flow begun for market gardeners/growers	Water quality in Delaware River and tributaries is improved with cleaner stormwater
Funding	Recruitng volunteers and growers	Sales of produce for local consumption, quantities and prices to be determined	Current and future partner organizations among nonprofits and agencies	8 rain gardens planted and 100 street trees	Broad sense of empowerment and inclusion among residents involved in or affected by the project	Health of City residents improves through better nutrition and consumption of nurtrient-rich produce
Partner organizations with special capacities	Teaching programs for volunteers and growers	Community knowledge of natural systems and growing skills via 8 training events involving at least 80 residents	Foundations and otherpotential funding sources	2 market gardens developed and planted starting in year 2 growing season	Health of City residents improves through better nutrition and consumption of nurtrient-rich produce	City residents find quality, satifsying employment in environmental and food system jobs
Land for green stormwater infrastructure	Planting rain gardens and street trees	Monthy meetings of the community of volunteers, growers and partners	Neighboring town residents and officials	Report and other communications materials available to TOL and partners to spread the word		More urban market gardens are created in the region with sustainable economic models
Land for market gardening	Developing and planting market gardens	Final report, with images and videos about the project, its challenges and successes	Residents and officials of South Jersey and Philadelphia Metro area			More towns create similar or better initiatives around greening their neighborhoods and stormwater management
Growing tools and equipment	Running market gardens for grower income	2 flyers delivered to all City residences about the project and opportunities to get involved				
	Ongoing organizing, support and training for maintenance of installations	At least monthly social media posts via Facebook, Instagram and email				

Key Partner Bios

Jaclyn Rhoads, Ph.D., is the assistant executive director of Pinelands Preservation Alliance (PPA). Dr. Rhoads oversees all policy and science staff at PPA while also writing and executing many funding requests. She started the Landscape Makeover Program (Program) approximately 7 years ago as way to unite nearly 10 non-governmental organization partners working on changing the culture of landscape and stormwater management in south Jersey. The Program provides financial and technical assistance for green stormwater infrastructure to homeowners, public land managers, and farmers/farm businesses in select locations. Dr. Rhoads has partnered with nearly 25 towns to transform their landscapes, funded around 100 installations, and received 5 grants over the years for the program totaling nearly $1.95 million. She continues to be the program manager, coordinates with all partnering organizations, oversees the work of additional PPA staff on the program, and completes all grant reporting requirements.

Dr. Christopher Obropta founded the Rutgers Cooperative Extension (RCE) Water Resources Program in 2002 and has developed into an award-winning state-wide program dedicated to solving New Jersey's water resources issues. The program supports eight full-time staff and 10 part-time undergraduate students. The diversity of backgrounds of this staff reflects the variety of needs to be addressed and the holistic approach needed to solve New Jersey's water resources issues. With engineers, scientists, educators, landscape architects, and other design professionals, the team routinely approaches each project and program from a multidisciplinary point of view. The mission of the Water Resources Program is to identify and address community water resource issues using sustainable and practical science-based solutions. This is accomplished through research, project development, assessment, and extension and through the collaborative efforts of their many regional, national, and international partners. The Water Resources Program has been working to develop green infrastructure feasibility studies for municipalities throughout New Jersey. These feasibility studies identify sites where green infrastructure practices can be installed to capture, treat, and infiltrate stormwater runoff from impervious surfaces, thereby helping communities become more sustainable, reduce flooding, and improve water quality.

Since the inception of the Landscape Makeover Program, RCE Water Resources Program conducts educational sessions and technical sessions for the rain garden rebate program. RCE also generates all the engineered design plans for all the green infrastructure projects at municipal/public owned property and institutions. Additionally, Water Resources Program staff is on-site during project layout and construction to verify that the green infrastructure BMPs are properly installed according to the design plans.

City of Burlington Garden Club

April 5, 2023

Seigha Omuso
Executive Director
The Opportunity League
11 West Broad Street
Burlington, NJ 08016

Re: Letter of Commitment for the Greening Burlington City Initiative

Dear Mr. Omuso:

I am writing on behalf of The City of Burlington Garden Club to express The Garden Club's commitment to the Greening Burlington City initiative and specifically to the tasks described in this letter. The Garden Club sees that this project will improve the environment for our residents.

The Burlington Garden Club is a 501 (c)(3) non-profit organization whose goal is to beautify Burlington City through various gardening activities and services for current and potential businesses, as well as residents and visitors. Our goal is to make downtown Burlington an even more beautiful place to live. The Opportunity League (TOL) is a valued member of The City of Burlington Garden Club and our City.

The Burlington Garden Club will contribute to the success of the Greening Burlington City initiative by using our various means of support through our social media, community events, and members to inform City residents about the program and how they can become involved. The Garden Club will highlight the project by posting information provided by TOL on our Facebook page and asking our members to inform residents around the city about the program. In addition, The Garden Club will encourage our members to participate in activities, including the planning and installation projects at the heart of this project. We anticipate that The Garden Club and its members will find additional ways to support this project as it unfolds.

We look forward to working with The Opportunity League and your partners on this project.

Sincerely,

Jeff Gorleski
President

Seigha Omuso
Executive Director
The Opportunity League of Burlington
11 W Broad Street
Burlington, NJ 08016

Re: Letter of Commitment for the Greening of Burlington City

Dear Mr. Omuso,

I am writing on behalf of Main Street Burlington, a 501 (c)(3) non-profit corporation whose goal is to generate economic activity and encourage investment in the city of Burlington, through a variety of events and services for current and potential businesses, as well as residents and visitors. Our goal is to make downtown Burlington an even better place to live and do business.

The goals of this initiative align very well with the time-tested strategy of the Main Street America movement, which is built on a 4-point model for transformation focused on economic vitality, downtown aesthetics, downtown promotion, and a vibrant organization of volunteers networked into the community and its organizations. Specifically, this initiative promotes community leadership through neighborhood meetings, environmental preservation and beautification, and economic development.

Main Street Burlington, with its relationship to the Burlington Garden Club and its Farmer's Market initiative now in its 3rd year of operation, is prepared to lend its support to The Opportunity League and the Pinelands Preservation Alliance in promoting the initiative to residents and businesses through its active social media channels and events, as well as seeking ways to integrate the program into its Farmer's Market, and participating in community planning meetings that TOL will organize. We are open to discussion about other ways in which we can show our support.

We are excited about this initiative and the myriad benefits it will bring to the city, its residents, and businesses.

Please let me know if you have any questions.

Sincerely,

Donnamarie Mazzola
President

Equitable Cooling and Extreme Heat: Collaborative Pathways to a Max Indoor Temperature in NYC

Resources / Inputs	**Activities**	**Outputs**	**Audience**	**Short-term outcomes (6-12 months)**	**Intermediate outcomes (12-24 months)**	**Long-term outcomes (2+ years)**
Urban Green staff time Riseboro staff time NYCC staff time In-kind MOCEJ staff time Resident survey time In-unit sensors Advisory participation from community leaders and subject matter experts	Assess and synthesize existing research on extreme heat, cooling access, and impacts to NYC environmental justice communities Collaborate with experts and environmental justice leaders to establish baseline regulatory landscape Conduct a resident-survey to understand behavioral, financial, health, and comfort factors around cooling during extreme heat Collect in-unit data with residents on key factors around	Publish heat vulnerability research brief Convene 30 stakeholders to understand tenant-landlord responsibility for cooling and utilities Install temperature and air quality sensors in 40 apartments Create 5 representative case-studies Facilitate 5 multi-stakeholder convenings with 50 experts to create a policy roadmap Publish 1 detailed research and policy report with research findings and policy	Underserved and heat vulnerable residents Building operations and maintenance staff NYC community-based and environmental justice organizations and leaders NYC policymakers Utility regulators Building Design Professionals HVAC manufacturers	Increased community knowledge of heat vulnerability in EJ communities and how building types, systems, and grid resilience inter-relate Establish consensus on regulatory complexities of owner-tenant responsibilities for cooling and utilities Increase understanding of the factors affecting how NYC residents experience cooling in hot summer months Improved data on the state of NYC apartments during hot	Increase in the number of heat-vulnerable residences that have in-unit cooling Reach consensus among key experts and leaders on barriers and solutions to an indoor max temperature policy in NYC Publish a policy roadmap to achieving an indoor maximum temperature Change in public and decision-maker perspectives on cooling as a right instead of an amenity Decision-makers begin using policy roadmap	The passage of a data-driven policy mechanism to establish a maximum indoor temperature for NYC's multifamily buildings Affordable, efficient, and resilient cooling for all heat vulnerable NYC residents Improved climate resilience and quality of life for vulnerable residents during more frequent extreme heat events Reduced heat-related hospital admissions and deaths for heat vulnerable New Yorkers

	extreme heat and cooling in summer months Analyze energy and cost data from Riseboro buildings on conventional air conditioners and heat pumps Convene NYC stakeholders to chart policy pathways to reach a maximum indoor temperature Publish research and policy report charting an actionable roadmap to an indoor temperature policy Develop community outreach campaign to improve cooling access in NYC Boost workforce capacity with industry education and training	roadmap Collaborate with 5-10 NYC environmental justice and CBOs to change perspectives on cooling as a right Create and deliver 1-2 new industry training modules to reach ~100 buildings operations and maintenance staff		summer months in heat vulnerable neighborhoods Clarity on the costs, efficiency, power demand, and carbon impacts of various cooling technology options	to increase access to cooling for NYC's heat vulnerable residents Improved workforce practices and capacity to install and maintain efficient, resilient cooling systems	Increased efficient cooling technologies in buildings in EJ neighborhoods that also helps to meet City climate decarbonization goals Establish policy precedents that will drive policy change in other local governments

Office of the Mayor

April 12, 2023

Kizzy Charles-Guzman
Executive Director
Mayor's Office of Climate
and Environmental Justice

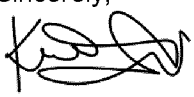
253 Broadway, 14th Floor
New York, NY 10007

kguzman@cityhall.nyc.gov

Mr. Jacob Burney
Office of Environmental Justice and External Civil Rights
Environmental Protection Agency
1200 Pennsylvania Avenue, N.W.
Washington, DC 20460

Re: Letter of Commitment for Equitable Cooling and Extreme Heat: Collaborative Pathways to a Max Indoor Temperature in NYC Project

Dear Mr. Burney,



I am writing on behalf of the Mayor's Office of Climate & Environmental Justice (MOCEJ) to express our commitment to support the Equitable Cooling and Extreme Heat Project. We are excited by the opportunity to establish this agreement with the Urban Green Council (UGC). Through science-based analysis, policy and program development, and capacity building, MOCEJ leads the City's efforts to ensure that New York City (NYC) is minimizing its contributions to climate change and preparing to adapt and protect New Yorkers from extreme weather and multiple climate hazards. MOCEJ work is centered on environmental justice, prioritizing the health and well-being front line communities, and seeking to redress inequities.

Every summer approximately 370 New Yorkers die from heat-related exposure, consistent with our knowledge that extreme heat is the deadliest climate hazard in NYC and nationwide. Most New Yorkers who die from heat exposure do so in apartments without a functioning air conditioner. Cooling has traditionally been considered an amenity, but it is a life-saving feature and thermal safety needs to be integrated into building regulations. The development of a framework for establishing and enacting a maximum indoor temperature will help to advance the City's goals, ensuring that our residential spaces support year-round thermal safety and that our most vulnerable New Yorkers are safe in their homes in the summer months.

To support the Equitable Cooling and Extreme Heat Project and its partners for the three-year duration of the grant, MOCEJ enthusiastically commits to the following: a) Our team will provide strategic guidance, assist with interagency coordination, and other advisory support as needed to UGC and their project partners, b) I will assign a team member to support the development of policy recommendations and assist with interagency coordination, and c) We will work with UGC on the development and implementation of evaluation tools.

As we face a future with hotter, longer, and more intense heat waves, the development of heat resiliency policies will help close the gap on environmental health disparities in New York City.

Sincerely,

Kizzy Charles-Guzman

Remarks: All personnel costs were determined based on estimated staff time for each activity. Contractual services were broken down based on total contractor costs per activity.		

CHRISTINA ANJESKY I Managing Director I Urban Green Council

EXPERIENCE

Urban Green Council, USGBC New York, New York, NY
Senior Director, Strategy, 2023

- Lead new fundraising projects for leading NYC environmental nonprofit
- Provide administrative support for select funding and contracts

Managing Director, 2010-2022 Oversaw content development and outreach for Urban Green's educational efforts including GPRO training for trades, energy code training and public programs.

- Direct edall fundraising efforts including management of sponsorship and membership programs, foundation and government funding, and special events.
- Directed all communications functions including organizational branding, website development and management, internal and external communications, and PR activities.

The Partnership for the Homeless, New York, NY
Vice President of Development and Communications, 2008 – 2009
Directed all fundraising and communications activities for leading nonprofit provider of services to homeless and at-risk individuals and families in New York City.

Make the Road New York, Brooklyn, NY
Development Director, 2005 – 2007
Managed all fundraising and communications activities for progressive nonprofit that advocates for and provides services to low-income immigrant families and youth throughout New York City.

Backlot Marketing Solutions, Scarsdale, NY
Marketing Consultant, 2004
Developed marketing strategies, market research, and associated marketing materials (print and multimedia) in collaboration with clients and advertising agencies. Clients included America Online Inc, as well as smaller New York-based firms.

American Red Cross of Greater New York, New York, NY
Senior Director, Health and Safety Services, 1996 – 2000
Managed all aspects of $3 million training unit (primarily First Aid, CPR and Aquatics education) with staff of 70 full- and part-time employees. Responsibilities included marketing, sales, budgeting, customer service, strategic planning, and program delivery.

Director, Direct Marketing, 1992 – 1996
Developed and implemented new individual donor fundraising program resulting in a 100% increase in income (over $1 million) in a two-year period.

Citibank, U.S. Card Products Group, Long Island City, NY
Assistant Vice President, 1987 – 1992
Managed large-scale ($3-5 million) marketing programs targeted to Citibank credit card customers. Responsibilities included marketing planning, creative development and production management.

EDUCATION

Bachelor of Arts, The Ohio State University, Columbus, Ohio.

CASEY EISENREICH | Manager, Operations | Urban Green Council

EXPERIENCE

Urban Green Council, New York, NY
Manager, Operations, 2022 – Present

- Manage all aspects of Urban Green Council finances including budgeting, cash flow, bookkeeping and reporting
- Oversee all HR operations including payroll, benefits, hiring and recruitment, staff training and intern management
- Lead and manage internal Diversity, Equity and Inclusion efforts, workplace culture and professional development efforts.

Bike & Build, Philadelphia, PA
Director of Operations & Development, 2018 - 2022

- Work effectively in a flat leadership structure with two co-directors
- Created and implemented annual budget ranging from $500-700k
- Created, tracked, and executed annual fundraising plans including corporate sponsorship, individual giving, grant and foundation funding
- Chaired Governance and Fundraising committees within Board of Directors, creating strategy and leading projects
- Managed day to day office operations, monthly bookkeeping, benefits and payroll processing, insurance policies, CRM management, and ensured compliance as a nonprofit.

Habitat for Humanity of Washington D.C., Washington D.C.
Assistant Site Supervisor, 2017 - 2018

- Managed 8 AmeriCorps members, daily volunteer groups and partner families on multiple construction sites each week, ensuring safety and completion of projects
- Assisted in coordination and communication with contractors, vendors, staff, and volunteers.

Habitat for Humanity of Fort Wayne, IN Fort Wayne, IN
Volunteer Coordinator, 2015 - 2017

- Managed and coordinated daily volunteer groups on various worksites throughout Northeast Indiana
- Ensured safety and completion of projects,

EDUCATION

Indiana University, Bloomington, School of Public and Environmental Affairs, Bloomington, IN
Masters of Public Affairs, Nonprofit Management, 2017

Emerson College, Boston, MA
Bachelor of Arts, Film & Television Production 2012

Extreme Heat and Equitable Cooling: Exploring a Max. Indoor Temperature

Project location: New York City, NY, with a focus on North and Central Brooklyn
Urban Green Council | 55 Broad St, New York, NY 10004 | Contact: Christina Anjesky

Brief Description of Applicant Organization

The mission of Urban Green Council is to decarbonize buildings for healthy and resilient communities. We do this through consensus-building with a broad range of stakeholders combined with technical analyses to find actionable solutions. Then we educate for results. Current projects include designing an Equitable Buildings Fund in New York City (NYC) to fund energy-saving retrofits in low-income housing, exploring equitable electrification and grid-readiness, and providing green job mentorship to at-risk youth and on the job sustainability training to building operators and tradespeople.

Are you applying for the Small CBO Set Aside Track for $150,000 projects? No.

Project Abstract

Over three million New Yorkers live in the most heat-vulnerable community districts. Extreme heat is the deadliest climate hazard in NYC, causing on average 370 deaths each year, and climate change is making NYC summers hotter. Heat stress disproportionately affects Black, low-income and elderly New Yorkers, often due to a lack of cooling. Decarbonizing buildings through efficiency and electric heat pumps could bring efficient cooling to underserved communities.

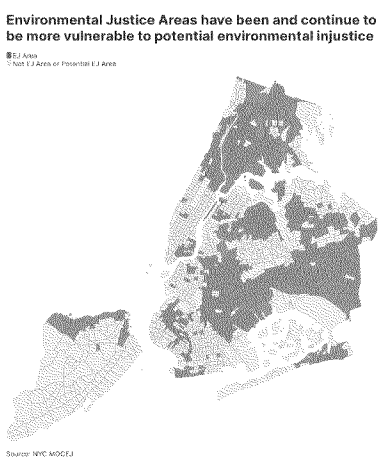
Our project addresses these urgent public health and climate challenges by exploring the implications of a policy setting a maximum indoor summer temperature for residences – and the potential role for heat pumps in its implementation. We'll assess issues and opportunities through community engagement on research, data analysis and resident experience to illuminate health, technology, cost and regulatory impacts. The results will inform development of a max indoor temperature policy to mitigate heat-related deaths while speeding the transition to efficient, resilient and healthy homes for disadvantaged residents. As summer temperatures rise, all New Yorkers have a right to cooling – and we believe it can be clean, affordable and climate-aligned.

Activities include:

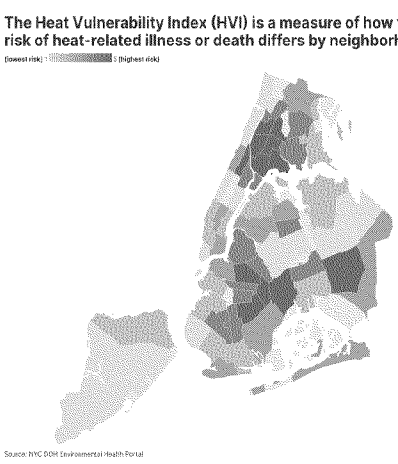
- **Research and data analysis** on extreme heat and prevalence of cooling;
- **Stakeholder convening** on the implications of a max indoor temperature policy;
- **Community research and engagement** on lived experience in EJ communities in North and Central Brooklyn;
- **Real-world data collection and modeling** to assess cost, energy, carbon and grid impacts across technologies;
- **Policy roadmap** on pathways to an effective max indoor temperature policy; and
- **Outreach and education** to disseminate findings across CBOs and others.

Project Types: Community and stakeholder engagement, monitoring, analysis, research, public education, job training
Special Considerations: Climate Change
Environmental Issue: Indoor Air Quality
List of Project Partners:

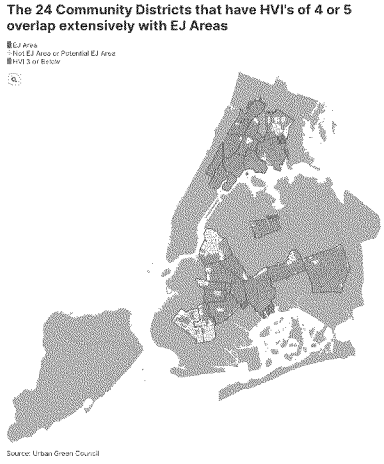
1. New York City Mayor's Office of Climate and Environmental Justice (Local Government)
2. RiseBoro Community Partnership (Low-income Community Development Organization)
3. New York Communities for Change (Community-Based Organization)



Will you need to develop a QAPP for your project? Yes.



ED_016126_00001163-00001



1.b. Environmental and public health information of the underserved community

1) Extreme heat is responsible for more deaths in the United States than any other weather-related event. In New York City, Black, low-income and elderly residents make-up a disproportionate number of heat-related deaths. Between 2000 and 2012, Black New Yorkers accounted for 49 percent of heat-related deaths, while only making up 22 percent of the citywide population. These communities suffer disproportionately primarily due to a lack of access to safe indoor environments during heat waves, structural racism and legacy of environmental racism.

The vast majority of heat-related deaths in NYC happen inside residential units without cooling. This is due to a lack of an air conditioner or the inability to pay for electricity. Multiple New York City neighborhoods, mostly clustered in north and central Brooklyn and the southern Bronx, have the deadly combination of urban heat island effect, lack of cooling, severe energy-cost burden and leaky buildings. We compared NYC's Environmental Justice Areas and Heat Vulnerability Index maps to identify the 24 community districts in NYC that are impacted disproportionately by extreme heat and environmental injustice.

These 24 Community Districts have a higher percentage of Black residents compared to NYC as a whole–35 percent versus 22 percent. And, the median age of the 234,000 residential buildings in these districts is 98 years old. Within these buildings there are more than 1.3 million residential units, most of which are rental units. Many of these same Community Districts also have some of the highest number of households without air conditioning, including Brownsville (central Brooklyn) with 18.3 percent of households lacking ACs compared to the citywide average of 9 percent.

Additionally, 33 percent of residents in these areas are *extremely housing burdened*, which means that renters spend 50 percent or more of their income on housing-related costs compared to 27 percent citywide. A recent study co-authored by NYC community-based organization WE ACT for Environmental Justice found that the primary reason residents don't use ACs is cost. Professor Diana Hernández refers to this dynamic as energy insecurity, to better capture how the inability to meet energy needs is tied to housing conditions, adverse health impacts and socioeconomic consequences.

These districts are also some of the most grid constrained areas when NYC peak power demand occurs in the summer months. Much of central Brooklyn, including Brownsville, were part of Con Edison's Brooklyn Queens Demand Management Program, to help relieve summer grid stress in these areas.

2) Extreme heat is already a major public health hazard in NYC. In 2022, there were 25 days at or above 90 degrees and 725 heat-related emergency room visits. And, climate change is set to bring hotter and longer heat waves that will stress the electric grid and continue to be disproportionately fatal to vulnerable residents. By 2050, NYC will have 2-3 times more days over 90 degrees and 2-4 times more heat waves. Additionally, extreme heat in many NYC neighborhoods is exacerbated by urban heat island effect, which can increase nighttime temperatures by 2-5 degrees.

Access to cool indoor environments is key to protecting residents from heat-related illness, but the energy needed to provide sufficient cooling to NYC residents will increase due to rising temperatures. Con Edison, the electric utility for most NYC residents, estimates that increases in cooling degree-days (CCDs) could increase summertime energy delivery by between 1.4-5.4 percent by 2050. At the same time, the New York State Climate Leadership and Community Protection Act requires significant reductions in energy demand by 2050 in order to reach the State's greenhouse gas reduction targets.

Old, leaky and unmaintained buildings make it more difficult to create safe indoor environments particularly during heat waves, and underserved communities in NYC disproportionately live in buildings with serious maintenance deficiencies like cracks and holes in the walls, ceilings and floors. These deficiencies need to be fixed through weatherization measures in order to provide energy efficient cooling to vulnerable residents, but this must be achieved without sacrificing building ventilation, which is needed to maintain safe indoor air quality.

3) This project aims to establish consensus and fill technical information gaps on an achievable pathway to increase access to cooling for underserved communities in NYC. We will build on previous community engagement and local policies, like NYCs Get Cool Program, to establish how a maximum indoor temperature policy can best reduce heat-related illness and increase resilience to the impacts of climate change in vulnerable communities.

Achieving these results will require diverse activities that target short, medium and long term outcomes. This includes direct collaboration with underserved communities to prioritize the most pressing public health hazards. For example, an evaluation of a recent AC deployment program by the City found that, "30% of seniors surveyed were not aware of any heat warnings issued by the City and did not perceive themselves to be at risk and many did not identify air conditioning as an important health protection strategy." In this example, communication initiatives designed with community members about extreme heat could deliver relief to vulnerable residents.

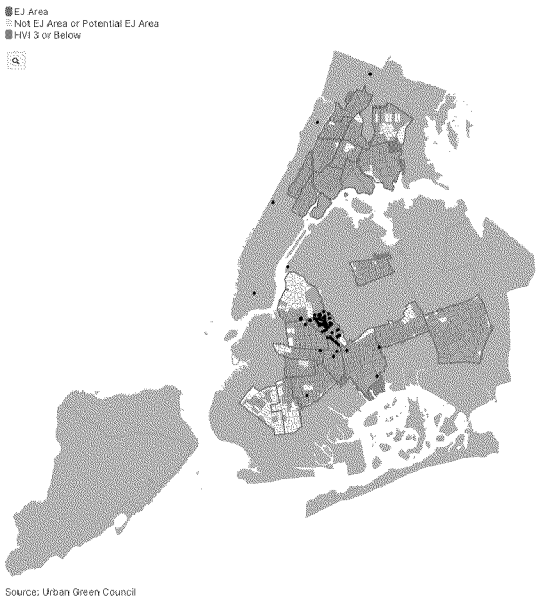
Other results will be tied to medium and long term outcomes such as policy recommendations to overcome complex regulatory barriers to equitable cooling access; and strategic deployment of efficient heat pump building retrofits. These interventions will benefit underserved communities by paving the way for permanent efficient cooling solutions that are consistent with climate change mitigation and resilience initiatives.

1.c. Organization's historical connection to the underserved community

(1) Urban Green's Involvement with Underserved Communities

The mission of Urban Green Council is to decarbonize buildings for healthy and resilient communities. We do this in four ways: We seek broad stakeholder consensus; we make the technical relatable; we create ambitious and actionable solutions; we educate for results.

Since our inception, Urban Green has brought together a broad range of stakeholders who are committed to advocating for efficient and healthy buildings as an important climate and health



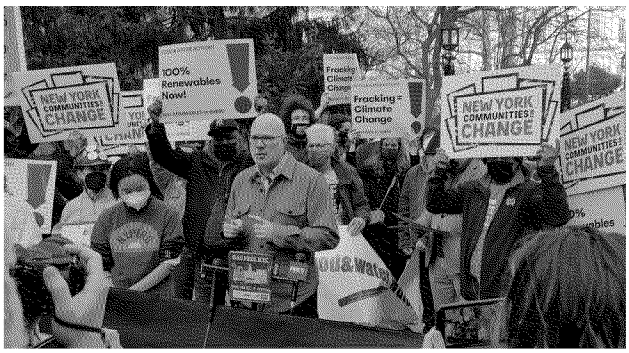
priority. Environmental justice and affordable housing groups are key partners and constituents in reaching this goal. **We have worked with a range of CBOs over the past five years on several NYC initiatives** including:

- Setting 2030 carbon reduction goals for buildings;
- Banning fossil fuels in new construction;
- Educating various stakeholders on environmental justice issues related to buildings;
- Establishing a mentorship program to bring disadvantaged youth into the building industry

For this RFA, we're defining the underserved community as heat-vulnerable residents in *Environmental Justice Areas* throughout New York City, and are collaborating with three past partners to establish consensus on the barriers and solutions to achieving a maximum indoor temperature policy that addresses extreme heat:

- The NYC Mayor's Office of Climate and Environmental Justice (MOCEJ), the key city agency directing the city's sustainability and EJ efforts;
- RiseBoro Community Partnership, a leader in efficient affordable housing in low-income communities. They manage over 1,800 units of affordable housing and have over 5,000 units in pre-development;
- New York Communities for Change (NYCC), a member-driven CBO focused on safe, healthy and sustainable neighborhoods.

Residential Buildings Managed or Owned by RiseBoro are Primarily in Heat Vulnerable and EJ Areas



Source: Urban Green Council

(2) Our Work with CBOs in Addressing Local Environmental and Health issues

Urban Green has worked with a range of CBOs over the years to address critical decarbonization and environmental justice priorities in New York City. An impactful example is the 80x50 Buildings Partnership convened by Urban Green in 2017, which resulted in the passage of NYC's Local Law 97, the most ambitious building emissions legislation enacted by any city in the world. The Partnership set out to develop recommendations for the City of New York on the optimal policy design to reduce building energy use and meet the city's ambitious 2050 carbon reduction goals. Urban Green brought together more than 40 organizations to tackle the complex questions bearing on this challenge, and collaborated with community-based organizations representing underserved communities including WE ACT for Environmental Justice; New York Communities for Change; ALIGN: The Alliance for a Greater NY; NY League of Conservation Voters, and New York Working Families.

But passage of the law was only the first step. Urban Green played a crucial role in finalizing LL97 through official rulemaking and collaboration with allies including NRDC, NYCC, and WE ACT. The final rules for LL97 were released in December 2022, but a critical piece remains unfinished—how do we affordably retrofit housing in low-income communities and ensure that Local Law 97 drives investment in buildings? The **Equitable Buildings Fund** is the recommended path forward. Up to $200 million in annual fines for owners who fail to comply with LL97 could soon be flowing into the city's general fund – and much more in the next compliance period starting in 2030. Urban Green and allies including NRDC, the Regional Plan

Association, WE ACT, and the Association for Energy Affordability are building a policy campaign to spend that money on decarbonizing the buildings that house NYC's most vulnerable, such as public housing and affordable housing. **If we're successful, the fund will keep investment, jobs, and climate and health benefits in the NYC buildings that need it most and serve as a replicable model for other cities.**

< Urban Green Council CEO John Mandyck at December 2021 Gas Ban Rally at City Hall with EJ Partners.

Urban Green also played a pivotal role in passing Local Law 154 in December 2021, which phases fossil fuels out of new construction starting in 2024–and makes New York City the largest city in the world to mandate all-electric new buildings which improves local air quality, emits less carbon, and makes occupants more comfortable. Urban Green was instrumental in shaping and passing this law, which buttressed critical EJ initiatives including WE ACT's Gas Free NYC and NYCC's gas ban campaign. With our success on Local Law 154, we are working with a range of EJ allies to ensure that similar legislation is passed by New York State.

This proposal builds on our work advancing equitable electrification. In 2021, Urban Green did a deep dive into how electrification will impact NYC's electrical grid and found that winter power demand could grow by 42 percent before exceeding the current summer peak demand. With that in mind, we expanded our *Grid Ready* analysis to explore how increasing power demand from building electrification impacts the grid in environmental justice communities. We found that Environmental Justice Areas are dominated by smaller buildings that are easier to electrify but are served by lower-capacity power infrastructure. Building electrification policies and programs must ensure that resources and policy approaches consider vulnerable communities.

In keeping with Urban Green's prioritization of equity within all our programs, our June 2021 Conference, ***Climate, Equity and Health: No More False Choices***, took a critical look at the status quo that has often pitted these outcomes against each other rather than embrace all three. As part of our education work, we're developing the Rising Stars Program to provide training and mentorship to underserved communities. Entry points into green careers are difficult to find particularly for students from underserved communities. Urban Green—in partnership with Tremoco CPG Inc. and Riseboro —is developing a new mentorship program to support students along their professional journey. The cohort of Rising Stars students will consist of young people aged 16 to 24 from disadvantaged communities in Brooklyn.

(3) Community Driven Participation
Our partners have substantially contributed to the project plan as noted below, and will continue to collaborate on key deliverables throughout the project:

Urban Green was already in discussions with the **Mayor's Office of Climate and Environmental Justice** about issues relating to extreme heat in underserved communities. They acknowledged that this will be an area of increasing importance for NYC, and have helped shape the project plan to address the complex issues on how to implement a policy to protect people from high indoor temperatures. In addition, comparing heat vulnerability is a key part of the city's sustainability roadmap, PlaNYC.

RiseBoro Community Partnership's buildings team suggested "on the ground" techniques including heat sensors in tenant apartments to help get a real-world snapshot. They will also provide and analyze decades of energy and cost data for their portfolio. We are also working with Riseboro's tenant liaison to implement this program and conduct a tenant survey. RiseBoro will also be part of our education efforts, including training building operations staff on cooling solutions and community outreach on issues related to a maximum indoor air temperature.

Longtime collaborator **NY Communities for Change** (NYCC) brought a number of exciting aspects to the project including engaging their chapters in NYC on canvassing and/or other community information we want to gather; and working with the Mutual Housing Association of NY (MHANY) on tenant heat issues in addition to NYCC members. They will also help lead convenings on barriers and solutions to adopting a maximum indoor air temperature that brings benefits to underserved communities, and will be providing community outreach and education on short- and long-term solutions to extreme indoor heat in NYC.

1.d. EJCPS Model

The project partners will work together and with community members to employ the Environmental Justice Collaborative Problem-Solving (EJCPS) Model to achieve affordable, efficient, and resilient access to cooling to heat-vulnerable New Yorkers.

Our partners are motivated to carry out this work because elements of the EJCPS model are already underway. In particular, this project will build on completed work on **CPS Element 1 - Issue Identification, Community Vision, and Strategic Goal Setting.**

- As described in Section 1.c, research identifying particular climate vulnerabilities in New York City's EJ communities is the impetus for this project - including local climate-specific risks to New York City and disproportionate impacts.
- Studies by NYC Department of Health and Mental Hygiene, WE ACT for Environmental Justice, and researchers at Columbia University have demonstrated the disproportionate heat-related hospital admissions and mortality experienced by Black, low-income, and elderly residents. These same communities also face increased energy-cost burden when making a choice between turning on air conditioning and putting food on the table.
- A recent study evaluated NYC's recent window air conditioner distribution program which was focused on lowering heat risk in disadvantaged residents
- Policy recommendations from key community experts and stakeholders have called for policy solutions – including a maximum indoor heat temperature requirement. In particular, we will integrate the following Community Problem Solving (CPS) elements:

To build on this work, Urban Green Council, Riseboro, NYCC, and MOCEJ will utilize three core elements of the EJCPS model to carry out our project activities:

CPS Element 1 - Issue Identification, Community Vision, and Strategic Goal Setting

- Build on previous issue identification to connect the risks of extreme heat and lack of access to cooling to building typology, decarbonization, electrification and grid resiliency

CPS Element 4 - Multi-Stakeholder Partnerships and Leveraging of Resources

- Early on in the project, Urban Green, RiseBoro, NYCC, and MOCEJ will leverage our networks of EJ leaders, representatives of underserved communities, and industry experts to build a common understanding of the existing complexities for disadvantaged residents to access cooling - including energy cost burden, building work needed to accommodate

cooling technology, and the regulatory context governing the owner-tenant responsibilities for providing and paying for cooling.

- The consensus will inform a shared vision towards shifting perspectives of cooling as a right, not an amenity, and to use the decisions resulting from this consensus building exercise to inform the community/resident research and engagement activities of this project.
- To conduct the research, we will leverage the expertise and resources of our partners:
    - Riseboro has extensive building-level cooling energy efficiency data across their portfolio of affordable housing
    - NYCC has developed trust and established networks with communities and tenants in underserved communities, which will allow them to capture the lived experience of heat vulnerable residents through surveys and community meetings
    - NYC MOCEJ administered an AC deployment program during the COVID public-health emergency, and currently runs the Be a Buddy! - a community-led social resiliency program directed at heat vulnerable New Yorkers

CPS Element 5 - Constructive Engagement by Relevant Stakeholders.

- As a key partner in this project, MOCEJ will provide strategic guidance, participate and engage in multi-stakeholder convenings to directly hear input from the community on the needs of heat-vulnerable New Yorkers, and can help with interagency coordination relevant City agencies as appropriate for input and guidance (e.g., Dept. of Health and Mental Hygiene, NYCHA). MOCEJ will also play a key role once a policy roadmap is developed to take the recommendations from this work to help reach a maximum indoor temperature requirement in NYC.
- We will also engage other stakeholders in our network to provide expert knowledge and insights where appropriate such as; academic institutions on topics like energy affordability and heat-related health impacts; industry experts like heat-pump manufacturers and building design professionals; and building owners to understand the tenant-landlord complexities on installing, maintaining and paying for in-unit cooling.
- NYCC will be integral to communication and outreach to change perspectives around the idea of cooling as a right, not an amenity, among vulnerable residents.

1.e. Project linkages

Our project directly supports a number of objectives in EPA's Strategic Plan Goal 2, Take Decisive Action to Advance Environmental Justice and Civil Rights:

Objective: Demonstrate how the action is responsive to environmental justice concerns and reduces or otherwise addresses disproportionate impacts. Heat vulnerability, and associated deaths and hospitalizations disproportionately affect Black, Hispanic and low-income communities and is a top concern of ours and our partners, RiseBoro Community Partnership and New York Communities for Change, as well as NYC-based WE ACT and other CBOs. Our program directly addresses these disproportionate impacts and seeks a path to implementing a safe maximum summer indoor air temperature in NYC homes.

Promote environmental justice and civil rights at the local and regional level: Per the Region 2 2022 Climate Adaptation Implementation Plan under Vulnerable Populations, "low-income individuals are more likely to live in areas with the highest increases in mortality rates due to climate-driven changes in extreme temperatures." Our project directly addresses this concern and gives us an opportunity to work with the EPA at the regional level as well.

Objective: Provide for collaborative and meaningful involvement and fair treatment of communities with environmental justice concerns. As detailed in our Project Activities, our

initiative includes our partners in virtually every aspect of the program, from convenings, small group meetings, survey design, monitoring and evaluation, and outreach and education. We will be collaborating with other CBOs and stakeholders including government, local communities, academia and real estate to support equitable and healthy housing on the recommendations for an indoor max summer temperature for homes. In addition, our partner, Riseboro, is a leading low-income housing provider with expertise in resilient community development and designated tenant liaisons.

1.f. Description of partnerships and collaborations with partners

Convening and consensus-building is both a core competency and top priority of Urban Green Council. The success of our project is rooted in collaboration, as evidenced by 3 of our 5 key strategies noted in the abstract:

1. **Stakeholder convening to identify regulatory implications of a max indoor temperature policy:** Convenings will include our partners as well as representatives from tenant and EJ groups, city and state agencies, academia and more to identify issues around regulations, metering and utility bills; and offer recommendations to inform development of a max indoor temperature policy to achieve clean, affordable, efficient and resilient cooling for all New Yorkers. These convenings will occur at the beginning and end of the research period to share findings and refine our recommendations.
2. **Community/resident research and engagement on lived experience in EJ communities in North and Central Brooklyn:** Engagement through our partners will add lived experience to our understanding of how NYC residents access and experience cooling, to inform our analysis and engagement on how setting a max indoor temperature could affect New Yorkers. This input will shed light on behavioral, financial and health and comfort considerations relevant to cooling policy.
3. **Outreach and education to disseminate findings across NYC CBOs and others:** We'll share our findings on a max indoor temperature policy across NYC CBOs and other local agencies. To boost engagement, share knowledge and prompt dialogue, we will work with partners to create a community outreach campaign including simple factsheets, public programs and discussion sessions for a range of community-based organizations.

Our three partners (Letters of Commitment attached) were key collaborators in creating this proposal and will play a key role in its execution:

The Mayor's Office of Climate and Environmental Justice, City of New York

Through science-based analysis, policy and program development, and capacity building, MOCEJ leads the city's efforts to ensure that NYC is minimizing its contributions to climate change and preparing to adapt and protect New Yorkers from extreme weather and multiple climate hazards. MOCEJ work is centered on environmental justice, prioritizing the health and well-being of front line communities, and seeking to redress inequities.

Project role and Resources:

- Strategic guidance, assistance with interagency coordination, and other advisory support as needed to Urban Green and their project partners;
- Dedicated team member to support the development of policy recommendations and assist with interagency coordination;
- Work with Urban Green on the development and implementation of evaluation tools.

Compensation and vested interest: In-kind partner. Addressing heat vulnerability is a long-term priority of MOCEJ and will be part of NYC's next building sustainability plan (PlaNYC). This project will support MOCEJ goals with technical expertise and stakeholder engagement in addition to Be a Buddy, MOCEJ's community-based climate resiliency model.

RiseBoro Community Partnership
RiseBoro collaborates with community leaders, government agencies, and private investors in an effort to serve as a comprehensive housing, health, and services agency for poor communities. With a housing department staff of over 150 employees and 18,000 units of housing, and an agency staff of nearly 2,000, they have grown from a small community-based organization to one of the largest nonprofits in Brooklyn, and place a major focus on issues related to climate change and housing.
Project Role and Resources:

- Technical analysis of building data, including indoor summer temperatures and installation of sensors to assess the current quality of cooling;
- Lead tenant engagement, including community outreach;
- Engage in technical training (to be provided by Urban Green) on short-and long-term operations issues and solutions related to extreme summer heat.
- RiseBoro has unique and extensive data sets on multifamily energy use, including comparative data on buildings that have undergone heat pump retrofits.

Compensation and vested interest: RiseBoro will receive funding for these activities under this RFA, including costs for equipment (sensors), stipends, and other payments (staff time) in keeping with EPA Guidance on Participant Support Costs. As a community partnership that manages buildings, this project furthers RiseBoro's goals to provide safe, healthy housing to their residents and heat vulnerability is a top concern.

NY Communities for Change (NYCC)
NYCC brings neighbors together to build power and improve lives and communities. Through direct action, legislative advocacy, and community organizing and engagement, NYCC fights for a safe and healthy New York–including healthy homes– through its members base and 8 chapters in NYC.
Project Role and Resources:

- Community and stakeholder engagement on the regulatory landscape around summer indoor air temperatures;
- Engaging NYCC members and partner organizations through a community survey on summer heat in their homes;
- Collaborative convening on barriers and solutions to setting a maximum indoor air temperature in EJ communities to drive future city policies;
- Community outreach and education on short- and long-term solutions to extreme indoor heat in NYC.
- Engaging leadership and members to design and execute these program components in collaboration with Urban Green and other participants.

Compensation and vested interest: NYCC will receive funding for these activities under this RFA, in the form of other payments (staff time) in keeping with EPA Guidance on Participant Support Costs. This project furthers NYCC's work to promote safe and healthy communities and heat-related deaths are a major priority for the organization.

Sustaining Partner Relationships
Urban Green has already been working with these partners on a range of critical building sustainability issues over the last five years. RiseBoro and NYCC will continue to be a key part of the process as we move the City of New York through MOCEJ toward a safe and healthy indoor maximum temperature during increasingly hot summers. We will continue to engage these partners as we navigate other issues around equitable electrification.

2.a. Project activities

This project will explore the feasibility and implications of a policy establishing a maximum indoor summer temperature for residential spaces in New York City. In collaboration with our partners, Urban Green will assess this complex issue through many lenses, with real-world data, and with input from a range of community members, stakeholders and policymakers.

1. Assessing the threat: Research on extreme heat and the prevalence of cooling

We will conduct a literature review and synthesis of existing datasets on extreme heat, climate projections, energy affordability and the prevalence of cooling in NYC residences across different indicators. In particular, we'll focus on integrating insights on building typologies and systems, data not previously well considered and where Urban Green has significant expertise.

Key partner: NYC-MOCEJ

	Activity	*Result/Output*
1.1	Analyze existing data and studies on climate projections, heat mortality, vulnerability and energy affordability in NYC.	Comprehensive knowledge base to inform project activities.
1.2	Analyze existing data on prevalence of ACs and access to cooling, and pair with analysis of data on building types and systems.	New insights on the prevalence of ACs in NYC buildings and variance across building types, geography and demographics.
1.3	Create an online research brief with an accessible summary of key findings.	Online research brief with data visualizations to increase community and policymaker knowledge.

2. Shedding light on the rules: Collaborative engagement on the regulatory landscape

Requirements governing responsibility for cooling are complex. We will collaborate on small-group meetings or a multi-stakeholder convening to clarify owner and tenant responsibilities and issues relevant to cooling under different regulations and metering. Participants will include representatives from tenants, EJ groups, government and more.

Key partners: NYCC; NYC-MOCEJ

	Activity	*Result/Output*
2.1	Identify and invite stakeholders. Host and facilitate small-group meetings and/or multi-stakeholder convenings.	Generate engagement and input from a diverse group of up to 30 experts and stakeholders.
2.2	Draft a comprehensive outline of regulatory restrictions, metering configurations and utility bill responsibilities relevant to cooling.	Clarity on how policy and technology related to cooling affects tenants.
2.3	Review and finalize regulatory outline with stakeholders and experts.	Consensus matrix of owner and tenant responsibility for cooling under a range of regulations, metering and technology.

3. Engaging residents: Community survey on lived experience

Input from residents will add lived experience to our understanding of how NYC residents access and experience cooling. We will complement existing survey data with new input on experience with cooling – including experience with conventional ACs versus heat pumps among RiseBoro's tenants,

NYCC's members and/or NYCC's partner network. That lived experience will help shed light on behavioral, financial and health considerations relevant to cooling policy.

Key partners: RiseBoro Community Partnership; NYC-MOCEJ; NYCC

	Activity	*Result/Output*
3.1	Design resident survey in collaboration with partners.	Effective resident survey with novel questions on experience with cooling.
3.2	Administer survey to RiseBoro tenants, NYCC members, and tenants of NYCC partners like Mutual Housing Association of New York.	Engage approximately 1,000 residents through survey.
3.3	Assess and validate survey results, and integrate with findings from activities 1 and 2 to build representative cooling profiles of NYC residents.	Research brief with representative cooling profiles of NYC residents including access to cooling, vulnerability, building type, regulatory status and utility responsibility.

4. Engaging residents: In-unit data collection on experience with cooling
