We will also work with approximately 40 RiseBoro tenants to install sensors to collect real-world, in-unit data related to experience of cooling and air quality. We plan to measure a series of variables for two cooling seasons across units with no AC, with window ACs and with heat pumps. Data will likely include temperature, humidity, noise, air quality, ventilation, energy use and power demand.

Key partners: RiseBoro Community Partnership; NYC-MOCEJ

	Activity	*Result/Output*
4.1	Design in-unit data collection study, including hardware, tenant outreach and incentive program.	Effective in-unit study with strong tenant engagement.
4.2	Administer in-unit data collection study over two cooling seasons, and assess and validate results.	Generate novel insights and a more granular portrait of experience of cooling.
4.3	Draft online research brief with accessible summary of findings and data visualizations.	Increased community and policymaker understanding of NYC apartments in summer in vulnerable areas, including novel health and quality of life data and differences across cooling systems.

5. Analyzing energy and cost: Data and modeling for conventional ACs and heat pumps

NYC's cooling policy must be aligned with affordability and decarbonization priorities, ultimately driving cooling that is affordable, clean, efficient and resilient. We will leverage RiseBoro's extensive data – including from multifamily heat pump retrofits – and building energy modeling to assess installation, operation and maintenance costs; power demand and energy use; and carbon impact across different cooling technologies such as window ACs and heat pumps.

Key partners: RiseBoro Community Partnership; NYC-MOCEJ

	Activity	*Result/Output*
5.1	Collect and assess existing data from RiseBoro's buildings, including pre- and post-heat pump retrofit.	Robust dataset spanning older retrofitted buildings, with novel focus on cooling.
5.2	Run building energy models to supplement measured data from RiseBoro's portfolio.	Building energy model results to inform, validate and augment real-world data.

5.3	Develop representative case studies assessing cost, energy, power demand and carbon impact across different cooling solutions.	Clear depiction of the cost, efficiency, power demand and carbon impacts of various technology options to deploy cooling for heat vulnerable NYC residents.

6. Charting policy pathways: Collaborative convening on barriers and solutions
With a foundation from activities 1 through 5, we will convene a wide range of community stakeholders, advocates, policymakers and industry experts with the dual aim of sharing knowledge and gathering input on how to achieve a maximum indoor temperature policy that prioritizes health and affordability while balancing citywide electrification goals. We may convene on multiple tracks – such as a tenant/resident track and an owner/manager track – to develop comprehensive recommendations.

Key partners: NYC-MOCEJ; NYCC

	Activity	*Result/Output*
6.1	Identify and invite participants, including a wide range of tenant advocates, community groups, EJ groups, city and state agencies, building managers and design professionals.	Generate engagement and input from a diverse group of up to 50 stakeholders.
6.2	Prepare convening materials, including draft presentations to share findings from activities 1 to 5 and discussion questions.	Create an effective foundation for engagement through increased stakeholder understanding of heat vulnerability and issues related to cooling.
6.3	Facilitate convenings, likely on multiple tracks, and develop a list of recommendations to inform a max indoor temperature policy.	Collaborative dialogue to reach consensus on barriers and solutions to achieve a max indoor temperature policy for NYC aligned with climate, affordability and EJ goals.

7. Finding a way forward: An actionable roadmap to a max indoor temperature policy
We will synthesize the outputs from activities 1 through 6 into a clear and compelling research and policy report. The report will provide an overview of heat vulnerability and access to cooling in NYC; share key data and findings from the project; identify issues around regulations, metering and utility bills; and offer recommendations to inform development of a max indoor temperature policy to achieve clean, affordable, efficient and resilient cooling for all New Yorkers. The output will help inform NYC policy development and anchor our ongoing outreach and engagement through non-lobbying activities.

Key partner: NYC-MOCEJ

	Activity	*Result/Output*
7.1	Draft comprehensive research and policy report, with findings, data visualizations and recommendations.	Integrated, cross-disciplinary and compelling summary of findings.
7.2	Review and edit the report with input from contributing advisors from a range of stakeholders.	Engagement in the final output from a broad range of stakeholders and integration of diverse perspectives.
7.3	Finalize and release the report, and support policy development through ongoing outreach and engagement.	Development of a new heat mitigation and access to cooling roadmap that identifies policies and programs for NYC, in

		alignment with decarbonization, affordability and grid resilience priorities.

8. Sharing the outcomes: Community outreach on a max indoor temperature policy
To boost engagement, share knowledge and prompt further dialogue, we will work with partners to create a community outreach campaign including simple factsheets, public programs, discussion sessions with a range of community-based organizations, and other avenues for knowledge-sharing and dialogue.

Key partners: NYC-MOCEJ; NYCC; RiseBoro Community Partners

	Activity	*Result/Output*
8.1	Collaborate with partners to design an outreach and education campaign.	Effective outreach campaign to engage a wide range of relevant stakeholders and communities.
8.2	Develop simple factsheets and public program events.	Public programs and factsheets that include a range of options to mitigate heat vulnerability in the short term and long term, as well as best practices to maximize efficient cooling.
8.3	Coordinate briefings and discussion sessions with other community-based organizations.	Promote collaborative engagement to increase knowledge across range of relevant CBOs and build buy-in on cooling solutions.

9. Boosting workforce capacity: Industry education and training
Building operators and superintendents are a crucial part of any cooling solution. To help move the market, we will develop a brief technical training on heat vulnerability issues and short and long-term solutions for operation and maintenance workers, including best practices to maximize efficiency and indoor air quality. We'll then work with our partners to deliver both online and in-person training at RiseBoro and through NYCC partners, but also with other training partners like Green City Force.

Key partners: RiseBoro Community Partners; NYCC

	Activity	*Result/Output*
9.1	Develop training curriculum for both in-person and online delivery, and integrate into Urban Green's Learning Management System.	Adapt findings to increase understanding of heat mitigation strategies among building managers and operators, including with best practices and policy solutions in place or in consideration.
9.2	Deliver training in collaboration with partners.	Improve practices for building cooling system maintenance to reduce indoor temperatures while maintaining safe IAQ with current and future technology.

2.b. Milestone schedule

The following is a high-level milestone schedule with the timeline for each numbered project activity corresponding to section 2a above.

	MILESTONE	DUE	Activity	Schedule	Year 1					Year 2				Year 3			
					4Q23	1Q24	2Q24	3Q24	4Q24	1Q25	2Q25	3Q25	4Q25	1Q26	2Q26	3Q26	4Q26
YEAR 1	1. Publish heat vulnerability research brief	2Q24	1.1	4Q23													
			1.2	1Q24													
			1.3	2Q24													
	2. Convene stakeholders and develop matrix of owner and tenant responsibility for cooling	2Q24	2.1	1Q-2Q24													
			2.2	2Q24													
			2.3	2Q24													
	3. Develop resident cooling profiles informed by survey data	4Q24	3.1	2Q24													
			3.2	3Q24													
			3.3	4Q24													
	4. Collect in-unit data on experience with cooling	4Q24 3Q25	4.1	2Q24													
			4.2	3Q24													
			4.3	4Q24													
YEAR 2	5. Create representative case studies assessing cost, energy, power demand and carbon impact across different cooling solutions	3Q25	5.1	4Q24													
			5.2	1Q25													
			5.3	3Q25													
	6. Facilitate multi-stakeholder convening	4Q25	6.1	2Q25													
			6.2	3Q25													
			6.3	4Q25													
YEAR 3	7. Publish report with roadmap to a maximum indoor temperature policy	1Q26	7.1	3Q-4Q25													
			7.2	4Q25													
			7.3	1Q26													
	8. Engage residents and CBOs through factsheets, programs and briefings	2Q26	8.1	1Q26													
			8.2	1Q26													
			8.3	1Q-2Q26													
	9. Deliver industry education and training	4Q26	9.1	2Q-3Q26													
			9.2	3Q-4Q26													

Activity
Milestone

2.c. Detailed budget narrative

Urban Green is submitting a funding request for $497,174 and has provided a detailed budget by activity to support this. Beyond Urban Green Council staff time, our budget includes partner funding and Urban Green training to design and/or execute critical aspects of this project and that leverage each organization's strengths:

RiseBoro: Beyond staff time for data collection and analysis, $42,555 is budgeted for installation of 40 Quant-AQ Modulair PM sensors recommended by their buildings team and associated wireless monitoring to reduce tenant disruption to collect real-world, in-unit data related to experience of cooling. Stipends will be available for tenant participation.

New York Communities for Change: $50,000 for high-quality engagement and outreach activities, including canvassing, town halls and community education in their 8 NYC chapters

Urban Green Outreach and Education: Urban Green puts a high value on thoughtful, well-designed educational materials for a range of audiences. We will tap in-house expertise and design consultants to ensure all our materials and training are user-friendly and accessible.

In addition, the **Mayor's Office of Climate and Environmental Justice**, an in-kind partner, will be assigning a team member for the 3-year period to support the development of policy recommendations, interagency coordination, strategic guidance and creation of evaluation tools.

3.a Environmental Results/Logic Model

Black, low-income and elderly residents living in EJ areas face disproportionate health risks due to extreme heat. Climate change will exacerbate the problem, and diverse activities are needed to address this public health hazard. Together with RiseBoro, NYC MOCEJ and NYCC, we have designed a project that targets short, medium and long term outcomes to reduce heat-related illness and deaths, and build climate resilience in underserved communities. Specifically, we will build consensus on barriers and solutions to achieving a max indoor temperature policy that aligns with decarbonization, affordability and grid resilience priorities.

Fortunately we are not starting from scratch. Existing research and programs on extreme heat include the MOCEJ-run Be a Buddy! Program and RiseBoro's extensive building-level cooling and energy data. We will use this foundation to further conversations and collaboration among diverse stakeholders, especially residents disproportionately impacted by extreme heat. Our team embraces collaborative-problem solving methods to achieve the project activities described in section 2.a, leading to the following environmental results:

Outputs

1. Publish a heat vulnerability research brief that synthesizes the existing data, policies and community engagement around this issue across NYC
2. Convene 30 stakeholders to build a matrix of owner and tenant responsibilities for cooling
3. Survey up to 1,000 residents in underserved communities to develop in-depth resident cooling profiles and better understand the challenges these residents face
4. Install sensors and collect data from at least 40 residential units on temperature, humidity, IAQ and other characteristics during the summer months
5. Create up to 5 case-studies assessing cost, energy use, power demand and carbon emissions for different cooling solutions
6. Host approximately 5 multi-stakeholder convenings presenting results and facilitating collaboration among up to 50 buildings professionals, EJ leaders, policymakers and other stakeholders to chart a path for achieving a max indoor temperature policy
7. Publish a report with findings and a roadmap for a max indoor temperature policy
8. Collaborate with 5-10 organizations that work in underserved communities to change attitudes towards viewing access to cooling *as a right* rather than a luxury
9. Develop and deliver 1-2 new industry trainings for building operations and maintenance staff on heat mitigation and cooling to promote safe and healthy living environments.

Outcomes

1. *Short term outcomes*

- Increase awareness of the disproportionate current and future public health risks facing underserved communities due to extreme heat
- Educate stakeholders on the connection between heat vulnerability, access to cooling, building maintenance and electric grid resiliency.
- Establish clarity on the complex regulations that govern owner and tenant responsibility for cooling, particularly in affordable housing
- Increase understanding of how NYC residents currently access cooling, including how this is impacted by health, financial and other constraints
- Increase understanding of NYC apartments in summer in vulnerable areas, including novel health and quality of life data and differences across cooling systems
- Clear depiction of the cost, efficiency, power demand and carbon impacts of various technology options to deploy cooling for heat vulnerable NYC residents

2. *Intermediate outcomes*

- Establish consensus on the barriers and solutions to achieving a max indoor temperature policy that is most impactful for underserved communities
- Develop a policy roadmap that details the steps to a max indoor temperature policy that aligns with EJ, decarbonization and grid resilience priorities.
- Change perspectives on access to cooling so it is viewed as a right instead of a luxury
- Improve practices and workforce capacity for building system maintenance that can reduce indoor temperatures during extreme heat events while maintaining safe IAQ

3. Long term Outcomes

- Reduction in heat-related illness among residents disproportionately impacted
- New policy mechanism that establishes a max indoor temperature for NYC's residential buildings while promoting affordability and decarbonization
- Deployment of efficient, resilient and affordable cooling in underserved communities, synchronized with overarching climate resiliency, building decarbonization, and EJ goals
- Increased energy efficiency in buildings while maintaining healthy IAQ
- Improved quality of life for underserved communities during the summer months
- Establish policy precedents to drive change in underserved communities across the country

3.b. Performance measurement plan

To track progress toward expected results, we will use a system of continuous monitoring and reporting on performance measures based on the project's outputs and outcomes, including:

- A designated team member to lead coordination of performance measurement activities;
- A regularly updated performance tracking document with key quantitative metrics for each project activity from the outputs and outcomes above and in the logic model (e.g. number of stakeholders engaged, residents surveyed, publications released, etc.), as well as additional metrics where helpful, such as number of page views and downloads for online resources;
- Recurring partner meetings for progress updates and to address issues in a timely manner;
- Annual review of project performance with all partners;
- Solicitation of direct feedback incorporated into resident, community and stakeholder engagement, including short surveys following convenings or outreach activities; and
- Qualitative assessment of impact on policy development over time, including revisions to programs, policies and regulations related to heat mitigation and access to cooling.

3.c. Sustainability plan and community vision

Climate change is projected to cause more frequent, longer-lasting and intense heat waves in NYC over the coming decades. Disadvantaged communities already experience a disproportionate amount of heat-related illness and death as a result of today's extreme heat, primarily in apartments without air conditioning. Without action to increase access to cooling, those impacts will lead to increased morbidity and mortality of our most vulnerable residents.

New York City government has a long-term sustainability plan to mitigate climate change through decarbonization and to adapt to protect residents from extreme heat – and residents have a vested interest in this project because their lives and livelihoods are at stake in the face of climate impacts. NYC government is also elevating heat mitigation in its current sustainability plan and calling for increased CBO engagement in policymaking on this issue, including exploring regulations requiring landlords to provide tenants with cooling. CBOs are also increasingly focusing on heat mitigation as a priority issue, including organizations like WE ACT and the NYC Environmental Justice Alliance. This project is designed to meet these community

needs, to collaboratively build on the great work of partner organizations to date, and to leverage increasing NYC government focus on solutions that align health, equity and climate.

This project's vision is to dislodge the idea that cooling is a luxury, and instead shift perspective to view access to cooling as a necessary right for vulnerable New Yorkers – as much as heating in the winter. This shift, and a roadmap for the complexities of a maximum indoor temperature requirement for residences, will be a major step toward broader community goals around heat mitigation. Prioritizing pathways that deliver *affordable* access to cooling for low-income New Yorkers and where possible merge solutions that simultaneously help meet citywide decarbonization goals, will help catalyze community action and create replicable solutions for other jurisdictions toward affordable, efficient, and resilient cooling as a right.

4.a. Organizational experience

The mission of Urban Green Council is to decarbonize buildings for healthy and resilient communities. As a thought leader, convener, technical expert, policy advocate, educator and communicator, Urban Green's imprint can be seen on virtually all of New York City's major building sustainability efforts in the last 20 years.

- We **convene** to drive consensus-based recommendations, tapping our extensive network of stakeholders to advise and guide us on research priorities, policy development or meeting market and community needs through education.
- We **research** solutions that drive conversations and inform policy on critical building science issues such as electrification, energy efficiency, building envelopes, and large-building retrofits. We work extensively with the country's biggest benchmarking dataset—giving us an unparalleled understanding of the city's building systems and their energy and water use.
- We successfully **advocate** for effective policy solutions, resulting in over 90 policy and legislative changes that have already contributed to substantial energy reductions in NYC and set a new standard for sustainability policy nationally and globally.
- We **educate** building professionals in every sector – real estate, design, construction, and operations. Our educational programs have reached over 47,000 people through industry-leading courses, presentations, conferences, and workshops.

Most recently, our work was vital to shaping cutting-edge policies such as NYC's groundbreaking emissions legislation and the all-electric new buildings law. Urban Green collaborated with a number of environmental justice groups to bring these laws to fruition including WE ACT for Environmental Justice; New York Communities for Change; ALIGN: The Alliance for a Greater NY; NY League of Conservation Voters, and New York Working Families.

In terms of infrastructure, our key program teams are Research/Policy and Education, with Communications substantially supporting these functions. We're fortunate in that our resources go well beyond our staff of 14; our supporters and allies regularly provide pro bono advice and analysis, serve on advisory committees, and participate in our educational events. We will regularly tap this network for collaboration and guidance as part of this proposal.

We also have robust internal management systems and controls for a relatively small organization, including constituent management and goal tracking in Salesforce, detailed financial and operating procedures, and outside CPA and Auditing services to ensure we're adhering to industry best practices.

4.b. Staff experience/qualifications of project manager

The project manager will be Senior Director of Research and Policy, Chris Halfnight, who currently directs all of Urban Green's research and policy convenings and work product. Chris led Urban Green's 80x50 Buildings Partnership, a 40-expert collaboration to shape an energy

performance policy for NYC's large buildings. He was lead author of the Partnership's report, *Blueprint for Efficiency*, which shaped NYC's Local Law 97. Chris has led many convenings, including 2018's *Going Electric*. He has also led many publications and webinars to educate the market on building decarbonization laws, policies and practices. Chris is currently leading a convening for the Department of City Planning (DCP) to help integrate recommendations from our *Zone Greener* report into Mayor Adams' City of Yes: Carbon Neutrality, an initiative to modernize zoning to support climate goals. Chris has collaborated extensively with many environmental and EJ groups on policy development, including WE ACT, NYCC and ALIGN. He also has deep expertise in New York City and State climate policy for buildings and was appointed to the NYC Energy Code Committee, a Local Law 97 Advisory Board Working Group, and Mayor Adams' 26-member NYC Sustainability Advisory Board.

Supporting Chris will be Research Manager Adam Schiabor, who brings deep knowledge of NYC's benchmarked buildings dataset, and an understanding of the relationship between environmental justice communities and the city's electrical grid. Adam led Urban Green's analysis for the recently released *Equitable Electrification*, an exploration of grid readiness through an environmental justice lens, and will lead our data analysis and visualization.

Policy Manager Danielle Manley will lead convening and stakeholder engagement. Danielle manages advocacy, collaboration and outreach on building decarbonization, electrification and equity to meet NYC and NY state climate targets. She is currently co-leading our convening on NYC's zoning changes for carbon neutrality with the Dept. of City Planning. Her deep background in NYC climate science and extreme heat impacts comes from past work as project manager for the 2019 New York City Panel on Climate Change Report and co-author of its Extreme Temperatures, Heavy Downpours, and Drought chapter.

Our education efforts will be led by Senior Education Director Ellen Honigstock, who created Urban Green's signature training including GPRO, a national green building certificate program, 2020's Energy Code training in NY State and Coop/Condo Energy 101 Workshops for residents and board members of multifamily buildings. CEO John Mandyck will provide executive oversight and HVAC expertise from 25 years at United Technologies Company.

4.c. Expenditure of awarded grant funds and plan for compliance with EPA pre-award compliance review for non-profit organizations

Urban Green is confident we have adequate financial controls, systems and procedures in place to comply with EPA's Pre-award Compliance Review for Nonprofit Organizations, and are prepared to submit EPA Form 6600-09 if we receive an award.

5.0 Past performance

Urban Green has not received federal funding, but received the following grants in the past three years:

2022: Energy Foundation, $125,000
2022: Schmidt Family Foundation, $75,000
2021: Energy Foundation: $150,000
2021: New York Community Trust: $100,000
2020: Energy Foundation, $150,000

6.0 Quality Assurance Project Plan (QAPP): Yes we will need to develop a QAPP.

ENVIRONMENTAL JUSTICE COLLABORATIVE PROBLEM-SOLVING (EJCPS) COOPERATIVE AGREEMENT PROGRAM | FUNDING NO. EPA-R-OEJECR-OCS-23-01

URBAN JUSTICE CENTER: STREET VENDOR PROJECT: ENVIRONMENTAL JUSTICE FOR VENDORS BY VENDORS

Project Summary Page

Project Title: Environmental Justice for Vendors, by Vendors

Project Location: New York, NY

Applicant Information: Urban Justice Center (Street Vendor Project), 40 Rector Street, 9th Floor, New York, NY 10006

Brief Description of Applicant Organization:
The Street Vendor Project (SVP) is a membership-based project of vendor members who are working together to create a movement for permanent change. SVP advocates on behalf of vendors, provides a forum to share knowledge, and plans collective action to ensure vendors' voices are heard. SVP publishes reports and files lawsuits to raise awareness about vendors and the enormous contribution they make to the City of New York. SVP is part of the Urban Justice Center, a non-profit organization that provides legal representation and advocacy to various marginalized groups of New Yorkers.

Are you applying for the Small CBO Set Aside Track for $150,000 projects? NO

Project Abstract:
SVP seeks EPA funding to continue to advance the **"Environmental Justice for Vendors, by Vendors" (EJVV)** project, which intends to improve the lives of street vendors in New York City and other residents by helping vendors shift from gas-powered generators to clean energy alternatives in order to protect their health, reduce environmental pollutants, and fortify their financial health. EJVV will accomplish this by executing three parallel tasks that are bold in scope but build on existing momentum and benefit from the support of expert local partners:

1. *Collaborative prototype design process.* SVP will steward a collaborative process to prototype a flexible, adaptable, battery-powered street food cart.
2. *Health impact assessment.* EJVV will oversee a health impact assessment (HIA) that screens potential City and State policies designed to change vendor behavior and increase the adoption of clean power alternatives (for example, battery subsidies). The HIA will include an air quality monitoring effort.
3. *Environmental justice collaborative problem-solving forums.* SVP and its partners Center for Zero Waste Design and Tri-State Transportation Campaign will design and convene inclusive groups to tackle parallel challenges facing vendors as they transition to battery-powered carts: a need for coordinated sustainable waste management policy and infrastructure, a need for commissary electrification, and a need for on-street grid connection for operating vendors.

ED_016126_00001165-00001

Project Type(s):
Air quality monitoring, waste management improvement, clean energy and electrification technology prototyping, Health Impact Assessment, public awareness campaigns, coalition-building and expansion.

Special Considerations:

- *Health Impact Assessment* – SVP plans to execute an HIA to evaluate the potential beneficial health impacts of City and State policies designed to support the adoption of rechargeable batteries or alternative clean power technology by vendors.
- *Climate Change* – As New York City works to reduce its greenhouse gas emissions from buildings and vehicles, street vending carts should be included in this transition. Vendors will need to shift from gas- and diesel-powered generators to rechargeable batteries and potentially grid connection.

Environmental Issues:
Street vending presents environmental issues related to air quality, as gas generators are used to power the electrical needs of the cart – spewing noxious pollutants into the air. The associated food and utensil services present a problem for waste collection, and moving towards compostable or reusable utensils and packaging can help divert waste from landfills.

List of Project Partners:

1) Center for Zero Waste Design (Non-Profit). Scope: Convening collaborative problem-solving stakeholder groups and advising on sustainable waste management.
2) Tri-State Transportation Campaign (Non-Profit). Scope: Convening collaborative problem-solving stakeholder groups focused on electrification infrastructure in vending commissaries and on-street for vendors.
3) Nixon Peabody LLP (Legal Industry). Scope: Protecting street vendor/manufacturer ownership of intellectual property.

**SVP has relationships with local universities and non-profit organizations with the capacity to structure and perform air quality monitoring experiments. SVP will formalize a partnership and subaward with an air quality monitoring partner during the pre-award period.*

Will you need to develop a QAPP for your project?
YES

Environmental and Public Health of Underserved Community

Nearly 20,000 New Yorkers make a living selling from tables, carts, and trucks on the streets and sidewalks of New York City. Most of these vendors are immigrants and people of color, and many are U.S. military veterans. A survey conducted by the SVP found 43% of vendors are of Middle Eastern or North African descent and 32.5% identify as Hispanic/Latino(a/x). These vendors often sell fresh and prepared food and snacks and other goods. Street vending provides a low barrier to entry for people with limited educational attainment, lack of English fluency, or who require more flexibility to support their families.

These vendors work long shifts while exposed to the elements, directly exposed to the high levels of air pollution. Operating a mobile food cart requires the use of a gasoline-powered

generator, which releases harmful pollutants like particulate matter (PM2.5), carbon monoxide (CO), and nitrous oxide (NOx). Street vendors face prolonged exposure to these contaminants on top of cooking, propane, and outdoor vehicular emissions. In other contexts, the immediate surroundings of street vending carts have the highest levels of PM2.5 compared to other types of urban environments, which could subject vendors to enhanced health complications.[1]

Poor regional outdoor air quality compounds vendors' exposure to local generators and cooking emissions. According to the EPA's EJScreen tool, residents of New York City are above the 59th percentile for exposure to Particulate Matter 2.5 (Figure 1) and within the 95th-100th percentile for Diesel Particulate Matter exposure (Figure 2), New Yorkers are in the 95th-100th percentile for health risks from exposure to air toxics (Figure 3).

When they are not working, street vendors are more likely to live in neighborhoods the EPA classifies as "environmental justice" areas of concern such as the Bronx and East Brooklyn. These neighborhoods have a higher share of residents who are people of color, low-income, non-English speaking, and who have worse access to healthcare. Furthermore, New Yorkers who are of color, low-income, or non-English speaking—characteristics that are highly prevalent for street vendors—tend to experience greater environmental burdens than members of the general population. For example, New York City scores in the 78th percentile for the Particulate Matter 2.5 Environmental Justice Index, but the index reaches significantly higher percentiles in neighborhoods where vendors are more likely to live (Figure 4). This same pattern of spatial inequity plays out in the Diesel Particulate Matter Environmental Justice Index (Figure 5) and for the Air Toxics Respiratory HI Environmental Justice Index (Figure 6).

Problem summary: environmental/public health issue(s) that the project seeks to address:
"Environmental Justice for Vendors, by Vendors" seeks to help address the harmful levels of air and noise pollution that street vendors are exposed to on a daily basis due to (i) their close proximity gas-powered generators to power their carts and cooking compounded by (ii) their exposure to severe ambient pollution in New York City and (iii) their lower likelihood to have adequate access to healthcare to manage the effects of chronic exposure to these environmental hazards.

Goal summary: environmental/public health results the project seeks to achieve, and benefits for the underserved community.
"Environmental Justice for Vendors, by Vendors" seeks to reduce or eliminate the levels of greenhouse gasses emitted from gas-powered generators used in mobile street cart vending, an action which could lead to improved long-term respiratory health outcomes for vendors and potentially help advance public health and environmental goals citywide. Additional benefits for the underserved population of vendors could include reduced operating costs over time (e.g., long-term cost savings associated with batteries compared to generator/fuel costs over time).

Section V Factors: The "Environmental Justice for Vendors, by Vendors" project relates to "climate" and "health impact assessment" factors noted as priorities or under special consideration by the EPA.

Organization's Historical Connection to Underserved Community

History of SVP: The history of SVP's involvement with the underserved community, including the duration of involvement and circumstances that led to SVP's involvement.

The Street Vendor Project was created in 2001 as an initiative of the Urban Justice Center to protect and promote the rights of vendors who sell food and other goods in the public realm. It began as a means to collectively organize and advocate for the needs of New York City's street vendors – especially in legitimizing their role in the City's economic landscape. The Street Vendor Project's initial work started to combat harassment from law enforcement and to advocate for an increase in the number of permits available from the City. The lack of available permits often forced vendors to rely on the underground market and left them vulnerable to harassment, fines, and sometimes arrest. This created economic harm to populations that are among the most vulnerable in New York City.

Through direct legal representation, small business development training, grassroots organizing, leadership development, and strategic legislative advocacy, SVP builds power and community among vendors. Members hold collaboratively planned activities to educate fellow street vendors on their legal rights and connect them with resources to sustain and grow their

ED_016126_00001165-00004

enterprises. The organization also advocates to governmental bodies for policies that will improve vendors' circumstances and increase their economic opportunity.

Due to SVP's advocacy and collective action, New York City recently increased the number of vendor permits for the first time in over forty years, allowing up to 4,000 additional vendors in the next 10 years to legitimize their businesses and avoid the high costs and uncertainty inherent in the underground market for permits.

History of SVP's work with the underserved community's residents to address local environmental and public health issues and the results of that work.
The organization began the "Environmental Justice: For Vendors, by Vendors" program in January 2021 to reduce energy consumption and emissions of greenhouse gases and pollutants from vending carts, help vendors adopt waste management practices to reduce solid waste and maximize use of recyclable and compostable items, and integrate street vendors in municipal planning efforts on urban resilience. SVP undertook this environmental justice project in three steps: a survey on a sample of vendors' green practices, a landscape analysis of alternative energy solutions for vendors, and a multi-disciplinary design lab that integrated findings and articulated goals for next-generation green vending technology and practice. These findings culminated in a pilot program for vendors to determine the suitability of battery technologies on their carts. The initial pilot feedback received has been positive, with vendors expressing interest at a scale that SVP currently does not have capacity for. This application is a momentous opportunity to build off of the tangible impacts we have had so far.

Community Driven Participation: How the underserved community's residents were involved in developing the current project plan and are part of the decision-making process.
Members of SVP were included throughout the planning and engagement components of the Street Vendor Project's programs and initiatives, including the Environmental Justice: For Vendors, by Vendors program. Two-hundred street vendors were surveyed to understand their current energy and waste needs and their environmental sustainability and health concerns. Street vendors were represented on EJVV's stakeholder coalition that informed the design and research behind the pilot program, and participated in the pilot to understand the suitability of using batteries to power their cart operations.

Environmental Justice Collaborative Problem-Solving Model

SVP believes that the EJVV planned scope of work will benefit from all seven (7) elements of the EPA's collaborative problem-solving (CPS) model.

1. Issue identification, community vision, strategic goal-setting	As described above, SVP completed issue identification and goal-setting with members and stakeholders In 2020 and 2021. EPA funding will allow further issue identification, visioning, and goal-setting around longer-term challenges: sustainable waste management, commissary electrification, grid connection.

ED_016126_00001165-00005

2. Community capacity-building and leadership development	The HIA will enable "citizen science" that puts air quality monitoring data and health information in the hands of vendors. And educational materials for vendors will empower them with the technical knowledge to navigate clean energy options.
3. Consensus-building and dispute resolution	SVP has played the role of consensus-builder among vendor members since its founding in 2001. In addition, SVP believes that members of the EJVV Coalition can convene on an ad hoc basis to serve as a neutral facilitator, mediator, or fact-finder.
4. Multi-stakeholder partnerships and leveraging of resources	EJVV has consistently leveraged multi-stakeholder partnerships. With EPA funding, SVP intends to expand the EJVV Coalition and convene more stakeholder groups: to prototype a battery-powered cart and suggest solutions to long-term challenges.
5. Constructive engagement by relevant stakeholders	The EJVV convenings noted above and below will specifically involve government, industry/business, academic, and civic/advocacy organization stakeholders.
6. Sound management and implementation	SVP's EJVV Project Director and full time Project Manager will manage all collaborative problem-solving processes funded.
7. Evaluation, Lessons Learned, and Replication of Best Practices	SVP will embrace a commitment to self-evaluation and stakeholder evaluation. One example of this is iteratively sharing in-draft materials with convened stakeholder groups to keep the development of recommendations transparent and inclusive.

Project Linkages

Environmental Justice For Vendors, by Vendors will promote environmental justice and civil rights for a marginalized population that is in some ways invisible in plain sight in the nation's largest city. Street vendors provide critical services while enduring prolonged exposure to harsh air and noise pollution. The project scope includes vendor and public education campaigns that will equip street vendors with information to highlight their increased exposure to harmful emissions from diesel generators, how their exposure might be mitigated through actions like battery-power replacement, and what potential benefits might exist by taking these actions. Meaningful engagement is built in throughout the battery prototype evaluation process, ensuring that a successful prototype serves the needs of vendors effectively.

Partner and Collaborate

Partnership and collaboration across sectors is at the core of Environmental Justice for Vendors, by Vendors. As described in the project activities and milestone schedule section below, EJVV activities funded by the EPA will convene stakeholders from the street food vending industry, academia, transportation and public realm advocacy communities, city and state government, and other sectors to guide prototype design and articulate solutions to long-term problems with air quality and access to electrification for vendors. In addition to cross-sector forums, EJVV will rely on the following core partners to advance specific parts of our approach.

ED_016126_00001165-00006

Center for Zero Waste Design (Non-Profit 501c3)
Role: Convene collaborative problem-solving focused on sustainable waste management; develop vendor-facing educational materials; research best practices on policy and programs to drive sustainable waste management behavior; advise on prototype development.

Rationale: The Center for Zero Waste Design (the Center) has been involved in EJVV since late 2021 as a member of the EJVV Coalition. Previously, the Center worked with graduate students in NYC to sketch theoretical waste management concepts for street carts and commissaries. Moreover, the funds will be an avenue to advance their advocacy and research work generally. The Center's other related projects on food waste reduction in NYC includes composting, recycling, reusable/compostable equipment advising projects for major residential and commercial buildings as well as parks and open spaces.

Resources: Clare Miflin, project manager, as well as a support staff will bring to bear years of experience designing reduced and zero waste processes in New York City.

Proposed Subaward: $11,420

Tri-State Transportation Campaign (Non-Profit Civic Organization)
Role: Convene collaborative problem-solving focused on electrification infrastructure in vending commissaries and on-street for vendors.

Rationale: The Tri-State Transportation Campaign (TSTC) and Street Vendor Project have a long collaborative relationship. They most recently collaborated on a 2021 RFP response to the Design Trust for Public Space in NYC; the proposal sought to develop model design guidelines to electrify street carts via street charging. TSTC is motivated to pursue this work because it is linked to the intersection of transportation infrastructure and an inclusive public realm for all.

Resources: TSTC will bring their facilitation expertise as well as relationships with relevant transportation policy decision-makers, including stakeholders at NYC Dept of Transportation.

Proposed Subaward: $38,005

Nixon Peabody LLP (Private Law Firm)
Role: Protect street vendor/manufacturer ownership of intellectual property.

Rationale: Nixon Peabody has previously provided pro bono legal services to the Street Vendor Project. Their legal expertise has supported SVP and UJC's strategic use of litigation as a means of securing workers rights for underserved street vendors. Nixon Peabody understands the aims of EJVV and is enthusiastic about continuing to support progress.

Resources: Nixon Peabody will provide legal patent expertise to prototype design participants.

Proposed Subaward: N/A

Note regarding partnership for Air Quality Monitoring
SVP is developing relationships with universities experienced in air quality monitoring. In 2023, SVP met with air quality expert professors and practitioners at the Massachusetts Institute of Technology Senseable Cities Lab, New York University, and the Columbia University School of Climate. Although SVP has not incorporated a specific subaward in its grant application, SVP

intends to continue to develop these relationships in 2023 to solicit advising and guidance on air quality monitoring experiment design, supplies selection, effective calibration, and data analysis. SVP has reserved $40,000 to support guidance and implementation support on air quality monitoring in its application budget; if this assistance must come from a for-profit business, SVP will procure that business in accordance with 2 CFR 200.

Note regarding Collaborative Prototype Design

SVP has allocated $10,000 in participant support costs to incentivize up to two (2) cart manufacturers to meaningfully participate in the prototype design process by attending several meetings in a year with the participants and sharing their expertise on current cart specifications. Smaller stipends will go to up to two (2) vendors who provide insight on vendor needs and commentary on evolving prototype designs.

Project Activities and Milestone Schedule

The Street Vendor Project has detailed the scope of project activities proposed over the three-year grant term. Although specific tasks and subtasks include timing, SVP has enclosed a summary schedule at the end of this section.

Pre-award Activities

Upon notice of award and execution of a grant agreement with EPA, SVP and the Urban Justice Center will conduct the following pre-award activities to ensure successful and complaint project initiation in Nov 2023:

- Complete Quality Assurance Project Plan (QAPP).
- Complete all additional required EPA administrative forms.
- Recruit and onboard the full-time EJVV Project Manager, who will be supervised by Mohamed Attia as Project Director.
- Expand, reconvene, and update the existing EJVV Coalition, a diverse group of stakeholders including vendors, commissary owners, advocates, technical experts, academics, representatives of financial institutions, non-profit workers, and others who since 2021 to volunteer their time and knowledge to helping advance the EJVV project toward a vision of clean, safe, healthy, and economically empowering street vending.

Task 1. Street Cart Battery-Powered Collaborative Prototyping Process

Goal: Convene vendors, commissary owners, cart manufacturers, technical experts, sustainable waste management experts, and other stakeholders to collaborate on a detailed prototype design for an affordable, battery-powered cart that could be owned and operated by vendors. The process will produce a single flexible prototype adaptable to a variety of cooking uses.

Approach:

Grounding Analysis. Nov 2023-Jan 2024 (3 months).

- *Confirm assumptions.* Update a landscape analysis completed in summer 2021 and update a 2022 analysis of the electrical power needs of various typical street carts in New York City. The 2021 landscape analysis documented the current leading approaches

to street food cart alternative energy and clean energy approaches, including battery power, solar power, grid connection, and renewable propane. This landscape analysis, completed with the support of a NYC-based consulting firm, determined that rechargeable batteries presented the most practicable, affordable, and impactful near-term solution for street cart electrification. The 2022 analysis estimated the power needs (in kW and kWh) for three actual street carts operating in New York City, a sample determined to be broadly representative of mid-sized street carts operating citywide. The grounding analysis will confirm the conclusion of the landscape analysis and elaborate the 2022 typology analysis into a set of specifications for the desired prototype. The specifications will include minimum power needs, duration of vendor shift(s), maximum time available to recharge batteries, desired battery weight, cart maneuverability, and other variables.

- *Confirm landscape of electrification and clean power efforts.* Review precedent and current street food cart electrification efforts, including desktop research, patent review, and outreach to cart designers based in the U.S. A consulting firm completed a high-level scan for precedents in 2021, but the EJVV Project Manager will undertake a more thorough analysis. SVP's partner Nixon Peabody will support patent review pro bono.
- *Chart a legal pathway to shared ownership.* SVP's partner Nixon Peabody will lead the determination of the possible legal pathways for a group of collaborators to equitably share the intellectual property rights generated through the EJVV process, in form of a patent and other arrangements.

Partnership Building and Expert Procurement. Jan-Mar 2024 (3 months).

- *Build team.* Build a flexible team of core prototype design and implementation partners. Although SVP expects to refine this list based on feedback from the EJVV community coalition and EPA, SVP anticipates the following team elements: (i) 1-3 vendors, (ii) 1-2 cart garage (commissary) owners, (iii) 1-2 cart manufacturers, and 3-5 pro bono technical experts with backgrounds in electrical engineering and sustainable waste management. As discussed in **Budget** under **Other Attachments**, SVP will provide modest stipends to 1-3 participating vendors and 1-2 cart manufacturers allocated under "Participant Support Costs" to honor their extensive contributions to prototyping.
- *Procure technical expert.* Competitively procure, in compliance with 2 CFR 200, one (1) dedicated technical expert with a background in electrical engineering to provide expert guidance, electrical engineering analysis, and design and mockup services to the collaborative team during the prototype development process. SVP will make special efforts to reach disadvantaged business enterprises (DBEs).

Prototype Design Process. April 2024-Mar 2025. (12 months).

- *Convene stakeholders and kick off the prototype design process.* During kickoff, confirm the goal of the prototype design process (individually communicated to team members during prior step); emphasize that the prototype must be able to accommodate a variety of setups of cooking equipment, ideally using a formula to ensure combinations of cooking equipment receive adequate power throughout a shift. Ensure all participants have an opportunity to share their background, perspectives, and ideas. Ask

ED_016126_00001165-00009

questions about participants' specific needs and concerns and ensure that everyone's input is heard. Assign roles and responsibilities for each participant. For example, the technical expert may be responsible for designing the battery-powered system, while the cart manufacturer may be responsible for the cart's physical design. Define stages of the project and establish timelines for each stage, including a needs assessment phase and the prototype development phase. Ensure that each stakeholder understands the timeline and their responsibilities within each phase. Schedule periodic check-in meetings between the development team and the EJVV project manager.

- *Waste management.* SVP's partner the Center for Zero Waste Design will participate in the prototype development process during kickoff and during key meetings to provide guidance to the technical expert and collaborators on incorporating sustainable waste management interventions (e.g., separate bins for trash and recycling, customer-facing signage providing guidance on recycling).
- *Quarterly updates.* Schedule quarterly updates to the EJVV Coalition to share progress and solicit feedback on design, usability, affordability, and other goals.

Prototype evaluation, learning, and adaptation. Apr-June 2025 (3 months).

- *Share the prototype.* Facilitate a hybrid in person/virtual showcase that debuts the prototype to members of the public, including street vendors that are members of SVP, the EJVV coalition, expert stakeholders, and invited City and State officials. During the showcase, set up feedback channels (including a physical station, a survey, or other means) where attendees can share their feedback on the prototype design.
- *Learn and adapt.* Analyze feedback collected to identify the strengths and weaknesses of the prototype design. Categorize the feedback into themes such as design, functionality, sustainability, and user-friendliness. Use the feedback to inform revisions to the prototype design. Identify which areas need to be improved and prioritize feedback based on its impact on the design. Collaborate with the design team, technical experts, and other stakeholders to develop a revised prototype design.

Next steps and implementation plan. July 2025-Dec 2025 (6 months).

- The capital required to construct, test, and operate a tangible battery-powered prototype is beyond the scope of the EJCPS program. However, the EJVV project manager will devote time to crafting an implementation plan for the prototype. The plan will at least include the following elements:
    - Standards for production and operation: Develop a set of standards for producing and operating the prototype based on feedback gathered.
    - Shared ownership: Describe the legal and contractual arrangements that will allow collaborating partners to equitably share in the intellectual property generated. A key outcome of the process is allowing vendors to not only participate in design but own the outcomes as a means of economic empowerment for this underserved population.
    - Pathway to implementation: Describe ways the collaborators can fund/finance the creation of the prototype. Outline a testing and piloting protocol that tests the ability of the prototype to meet the production and operation standards

ED_016126_00001165-00010

defined in the implementation plan. Outline an iterative redesign and optimization process based on observations made during the pilot.

Educational materials and navigation guide. July-Aug 2025, July 2026

- Develop an interactive set of educational resources hosted on SVP's website or dedicated project website that will equip vendors with the expertise to navigate a growing market of rechargeable batteries and potential financing opportunities as informed consumers. The guide will emphasize the measured and anticipated health and economic benefits associated with swapping generators with batteries. SVP will update the guide in 2026 to reflect evolving market conditions and lessons learned at the close of the HIA, including findings from the air quality monitoring assessment process and associated academic literature on chronic health impacts.

Task 2. Health Impact Assessment

Goal: Conduct a health impact assessment (HIA) studying how vendor health, and associated conditions like economic stability, would be affected by one or more potential environmental policies and programs that would affect the legality of generators and standards for rechargeable batteries or alternative clean power sources.

Approach:

Screening. Prior to Nov 2023.

- Prior to commencing work under the EPA grant, SVP will complete a *screening* process to define the plan(s), policy or policies, program(s) under consideration, defining one policy or a range of policies that the HIA will evaluate to understand the potential for health and economic costs or benefits to vendors. New York City and State decision-makers have raised a variety of unofficial policies on street vending operations designed to improve air quality in New York City but that fail to serve the health and economic needs of the underserved population of vendors. These have included outright bans on outdoor generators citywide and bans on outdoor generators in city parks. No productive policies have yet emerged to require, subsidize, or otherwise support the adoption of clean energy alternatives by vendors. Without careful phasing and support for affordable, safe, and reliable clean energy alternatives to generators, certain bans could be economically devastating to vendors without improving their health.
- Announce undertaking of an HIA to relevant NYC and NYS agencies (e.g., NYC Department of Health, Department of Transportation, Department of Environmental Protection, Department of Sanitation).

Scoping. Nov 2023-Mar 2024 (5 months).

- Determine the health effects to consider and data sources to use, including air quality monitoring data, contextual government data such as EJScreen and NYC Department of Health and Mental Hygiene (DOHMH) Environment and Health Data Portal, aggregated qualitative data from vendors on their health concerns, and academic literature on the health impacts of chronic exposure to hazardous pollution.
- Gather data and complete a literature review. Theorize how vendor health could change in a variety of scenarios, which could include:

ED_016126_00001165-00011

- "Local or state government restricts generators swiftly"—vendor health may improve in concrete, measurable ways, but without accessible clean energy alternatives, vendors may have to find new livelihoods or endure financial difficulty.
- "Local or state government restricts generators but meaningfully supports the adoption of alternatives"—vendor health improves in concrete, measurable ways and vendor economic stability is preserved due to access to clean energy alternatives.

Assess potential changes to exposure to hazardous pollution using air quality monitoring. Apr-Sept 2024 or Apr 2024 -Mar 2025 (6-12 months pending test design, partner availability)

SVP envisions an air quality monitoring process along the following lines, but SVP anticipates refining the quality and credibility of the process with the EJVV coalition and EPA.

- *Identify test carts and control carts*. Identify a group of carts to test the outdoor and in-cart air quality impacts of generator replacement and a number of control carts.
- *Refine protocol*. Speak to test and control vendors to secure their comfortable and willing participation. Ask vendors questions about their needs and concerns and integrate their needs into the assessment protocol. It will be imperative that air quality monitoring not disrupt day-to-day cart operations or violate strict regulations on cart dimensions and placement defined by various City departments. Confirm the "test group" and "control group."
- *Pre-installation air quality monitoring*: Before the vendor replaces the generator with the rechargeable battery, measure the air quality within and immediately surrounding the cart. Use a reliable, carefully calibrated air quality monitor to take baseline measurements of the levels of key pollutants of concern (including but not limited to pollutants like PM2.5, PM10, CO2, NOx, etc.).
- *Installation of the rechargeable battery:* After baseline measurements, install a rechargeable battery in place of the generator on the carts in the "test" group.
- *Post-installation air quality monitoring:* Begin air quality monitoring immediately after the installation of the rechargeable battery. Take measurements of the same pollutants measured during the pre-installation monitoring inside and outside the cart. Compare the results with the baseline measurements.
- *Monitoring:* Monitor air quality continuously for proceeding months, taking measurements at regular intervals or live (if live data link is supported by the air quality monitoring technology). This will allow the SVP to evaluate changes in air quality over time, as well as any variations based on location, time of day, or other factors.
- *Control group:* The control group will not replace their generator with a rechargeable battery. Measure their in-cart and outdoor air quality at the same time intervals as the experimental group. This will allow SVP to isolate the changes in air quality that are attributable to the removal of the generator.
- *Theorize or measure impacts on health:* Based on the results of the air quality monitoring, theorize or measure (if feasible) the impact that improved air quality would have on the health of the street food vendors and of the general public. For example, SVP might estimate the reduction in respiratory problems or other health issues

ED_016126_00001165-00012

associated with exposure to air pollution using benchmarks provided by recent peer-reviewed academic literature.

Recommendations. (2 months)

- *Stakeholder engagement.* Convene the EJVV Coalition members, engaged City and State agencies, vendors, and other stakeholders in a pair of workshops facilitated to integrate HIA findings to date contextualized in academic literature. Encourage workshop participants to brainstorm and refine policy and program recommendations for the City or State to consider—such as standards, incentives and subsidies, educational public messaging campaigns—to help realize vendor health improvements evaluated by the HIA assessment step. The workshops should result in a set of recommendations the EJVV Project Manager and Project Director can prioritize, refine, and elaborate in the process of writing a report.

Report. (4 months)

- Write report describing the prioritized recommendations and establishing a proposed implementation plan. The report will include case study research on comparable or precedent policies and programs, and it will craft a feasible plan for implementing recommendations. The EJVV Project Manager will reach out to EJVV Coalition members, City and State agencies, and other stakeholders to add detail and realism to recommendations.
- Circulate draft report to stakeholders for feedback and buy-in behind the prioritization and content of recommendations. Then finalize the report and publish findings.

Define monitoring process. (3 months)

- Work closely with City and State agency stakeholders to outline a monitoring or evaluation plan to track the impact of the HIA on decision-making and on vendor health during the remainder of the grant period and after the grant period.

Task 3. Environmental Justice Long-term Problem-Solving and Education Forums

Goal: SVP will work with its partners the Tri-State Transportation Campaign and the Center for Zero Waste Design to design problem-solving processes, build an inclusive base of stakeholders, and facilitate a series of collaborative problem-solving (CPS) conversations. SVP will oversee durable forums for long-term CPS focused on three big infrastructure challenges facing vendors today: sustainable waste management at scale; commissary infrastructure investment to support large-scale electrification; and grid-connection at the street level. The CPS will lead to concrete policy proposals, guidance for City/State-led or private-sector-led pilots, and an interactive set of educational resources hosted on the project website.

Approach:

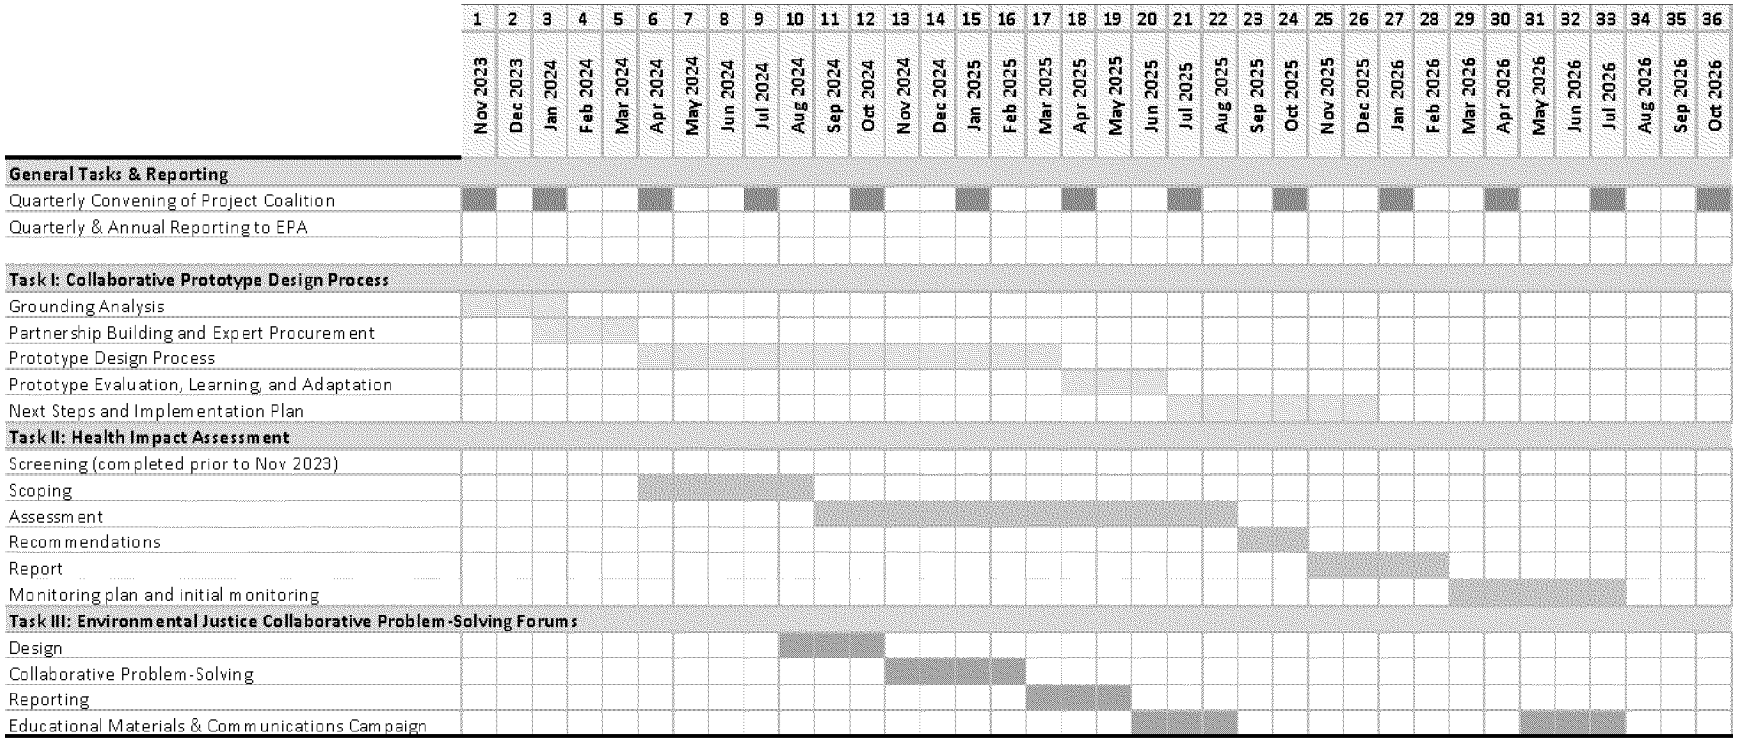
Design. July-Sept 2025 (3 months)

- *Define three big challenges.*
    - "Sustainable waste management"—Currently, there is no coordinated approach to mitigating, recycling, and composting vending-related paper, plastic, and food

waste at commissaries (the garages where vendors store their materials and prepare certain food items) or on the street. Vendors could benefit from education on best-practices and infrastructure/interventions that support sustainable and waste-conscious behavior among vendors and consumers.
    - "Grid connection pathway"—A 2021 survey of vendors by SVP revealed that about 90% are interested in connecting to the grid while operating on-street, but the pathway to grid connection is uncertain and requires significant infrastructure upgrades and City/State leadership. Given an ongoing push to update transportation infrastructure to support electric vehicles (EVs), the time is now to incorporate vendors into a citywide process of street electrification.
    - "Commissary charging infrastructure pathway"—SVP has learned that large-scale adoption of rechargeable batteries by vendors could result in combined demand for electricity at commissaries that is not supportable by current electrical connections in commissaries. A pathway to understand, supply, and finance the adequate electrification of commissaries is required in parallel with vendor-by-vendor cart electrification.
- *Design CPS process and inclusively identify participants.* SVP's partner the Center for Zero Waste Design will design the collaborative approach, help identify an inclusive set of participants, and facilitate the CPS group dedicated to defining a sustainable waste management pathway. SVP's partner Tri-State Transportation Campaign will lead the process for the grid connection pathway and commissary infrastructure pathway.

CPS process. Oct 2024 – Feb 2025 (5 months)

- In general, CPS groups will convene multiple times to define pathways in the following stages: (i) inventory needs and barriers, (ii) review precedent approaches and solutions, (iii) determine minimum standards and requirements of a successful pathway, (iv) articulate infrastructure "big ideas" or "moonshots" that will require major private-sector investment or public-sector leadership, and (v) propose a pilot effort for the City, State, or private-sector to implement near-term as a test case. SVP will actively participate and support but defer to the leadership of its partners on the exact cadence and agendas for CPS meetings.



Report. Mar – May 2024 (3 months)

- SVP will lead authorship of a report, or three separate reports, that synthesize the analysis and proposals of each CPS group.

Educational materials and communications campaign. June -Sept 2025, July 2026 (4 months)

- SVP will lead development of an interactive web toolkit that expresses the CPS group's ideas in straightforward terms and serves as an educational resource for vendors and the public on (i) steps they can take today to sustainably manage waste and electrify their operations and (ii) ways they can advocate to their public representatives for bold action on sustainable and renewable vendor-serving infrastructure.
- SVP will update the materials once in 2026 to reflect any leadership achieved by the City and State, as tracked by HIA "monitoring plan."

MILESTONE SCHEDULE

*Does not include post-award tasks completed prior to Nov 2023.

**The milestone schedule incorporates 3 months of buffer at the end of the three-year performance period to mitigate the impact of unforeseen delays or barriers in tasks.

***Task 2 milestone schedule assumes a 12-month "assessment" timeframe for environmental air quality monitoring; however, depending on experimental design, this timeframe may be as short as 6-months, in which case subsequent Task 1 actions would start and end earlier.

NOTE: An itemized Budget Sheet and Budget Narrative is submitted as an attachment under "Other Attachments."

Programmatic Capability

The Street Vendor Project (SVP) is a membership-based project of vendor members who are working together to create a movement for permanent change. Founded in 2001, SVP has advocated on behalf of vendors, provided a forum to share knowledge, and planned collective actions to ensure vendors' voices are heard for over 20 years. There is no other organization in New York City with greater capability to inclusive bring together its members, as well as other diverse actors, to solve environmental justice challenges facing vendors today.

As described in SVP's **history of commitment to the underserved community** above, SVP's environmental justice work with vendors goes back to January 2021. SVP undertook this environmental justice project in three steps: a survey on a sample of vendors' green practices, a landscape analysis of alternative energy solutions for vendors, and a multi-disciplinary design lab that integrated findings and articulated goals for next-generation green vending technology and practice. These findings culminated in a pilot program for vendors to determine the suitability of battery technologies on their carts. The initial pilot feedback received has been positive, with vendors expressing interest at a scale that SVP currently does not have the capacity to serve without additional operating funding.

Project Controls and Capability to Administer Federal Grants

The Street Vendor Project (SVP) is a project of the Urban Justice Center (UJC), which is the non-profit organization that will administer the grant on behalf of SVP.

UJC's fiscal policy and internal project controls allow UJC to provide accurate, current, and complete disclosure of the financial results of each federally, state, and local sponsor. UJC's accounting software creates general ledger reports for grants and tracks budgets versus actual expenditures, allowing for accuracy in accounting records.

The Urban Justice Center (UJC) uses NetSuite ERP to record all financial transactions. Balance sheet and income statements are recorded using accrual basis accounting and in compliance with GAAP. UJC's finance department performs monthly reconciliation on all bank accounts, records month-end journal adjustment and allocates transactions such as fringe, overhead, and direct expenses across all departments and grants. The UJC finance team also has monthly budget meeting with departments to ensure the grant spending follows budgets.

UJC's finance department has controls in place for approving invoices, bills, and journal entries. All transactions approved are attached with backup. All bill pay (checks) and ACH transactions are approved by the CEO before issuance to vendors. Credit transactions and expenses reimbursements are approved by department heads before approval and payment by the finance department.

UJC is audited annually, and a single audit is performed due to the fact that UJC receives over 750k annually in federal funds. The audits have been clear with no material weaknesses in internal controls.

Past Performance

Robin Hood Foundation

SVP received a grant of $2,495,000 from the Robin Hood Foundation in 2020 to provide cash assistance cards to NYC street vendors affected by the Covid-19 pandemic from December 1, 2020 to September 30, 2021.

SVP met the grant requirements by hiring 16 part-time language-specific contractors (Spanish, Mandarin, Arabic, Bangla, English, Tibetan, French and Wolof) and conducting intakes to distribute cash assistance to 2,355 street vendors across the five boroughs of NYC, providing immediate and critical economic support to enable these street vendors to feed and house their families.

SVP fulfilled the reporting requirements for the grant by providing monthly narrative and financial reporting detailing the numbers of intakes completed, demographic data about the vendors reached, and financial expenditures. At the end of the grant period, SVP provided a final report detailing the total number of intakes completed, demographic data about the vendors reached, and overall financial expenditures.

New York Community Trust – Environmental Justice Program

In 2020, SVP received a grant of $85,000 from the New York Community Trust to help street vendors work with policymakers to reduce pollution through an innovative and critical program, *Environmental Justice, for Vendors, by Vendors* for a 15-month grant period of June 9, 2020 – September 9, 2021.

SVP fulfilled the grant by completing the following deliverables: 1) Surveying existing stakeholders in the vending industry to assess current technologies and map supply chains, motivations and present health risks facing vendors; 2) Identifying technical improvements to existing pushcarts and char-broilers, and propose new incentives, regulations, or business models for rolling them out at scale; 3) Launching a multi-stakeholder collaboration on green vending, in partnership with cart owners and workers, cart manufacturers, the NYC Departments of Health, Environmental Protection, and Sanitation; 4) Building a shared understanding among SVP leaders and members around the risks of climate change and the roles that vendors can play in building urban resilience.

SVP fulfilled the reporting requirement for this grant by submitted a final report by September 30, 2021. This report contained a fiscal accounting of grant expenditures, a narrative describing progress made toward meeting the grant results, and a detailed discussion of activities carried out to secure funding to continue the project beyond the grant period.

New York City Department of Small Business Services

In 2021, SVP received a grant of $121,862 from the New York City Department of Small Business Services through the Chamber on the Go and Small Business Support initiative to support community outreach to street vendors on small business services and financial literacy from 7/1/2021 - 6/30/2022.

SVP fulfilled the grant requirements by completing the following deliverables: 1. Conducting 23 virtual and in-person community education sessions across the five boroughs to speak with vendors and share materials regarding regulatory compliance, financial literacy, and referrals to other governmental resources and support; 2 providing individual technical and financial assistance consultations with 243 vendor small business owners; 3. conducting 4 trainings with a total of 154 member attendees regarding opportunities for business growth and referrals to supportive governmental resources.

SVP fulfilled the reporting requirements by providing a final report, broken down by quarter, detailing numbers of vendors reached, type of engagement, date of engagement, and demographic data about vendors including language, gender, and borough.

New York State Department of Labor
In 2021, SVP received a grant for $184, 164 from the New York State Department of Labor to provide direct application assistance and outreach to inform street vendors about the Excluded Workers Fund which provided cash assistance to workers excluded from pandemic relief. The grant period ran from 6/25/2021 and 6/24/2022.

SVP fulfilled the grant requirements by completing the following deliverables: 1. assisting eligible street vendors in completing 1000 applications; 2. hosting 9 educational sessions held at vendor membership meetings in citywide meetings, reaching 30 members at each meeting to promote awareness of the EWF and educate vendors about their eligibility; 3. engaging 250 vendors from hard-to-reach neighborhoods not currently in our membership through conducting street outreach.

SVP fulfilled the reporting requirements for the grant by submitting monthly reports detailing types of outreach, numbers of vendors reached each month, and challenges and obstacles, as well as a budget breakdown with expenditures for each month.

Quality Assurance Project Plan

YES. SVP anticipates that a Quality Assurance Project Plan will be required for this project, due to the fact that the Health Impact Assessment and possibly other tasks will involve the collection of existing environmental data and the collection of new environmental data. SVP will prepare a QAPP for review by EPA upon notice of award.

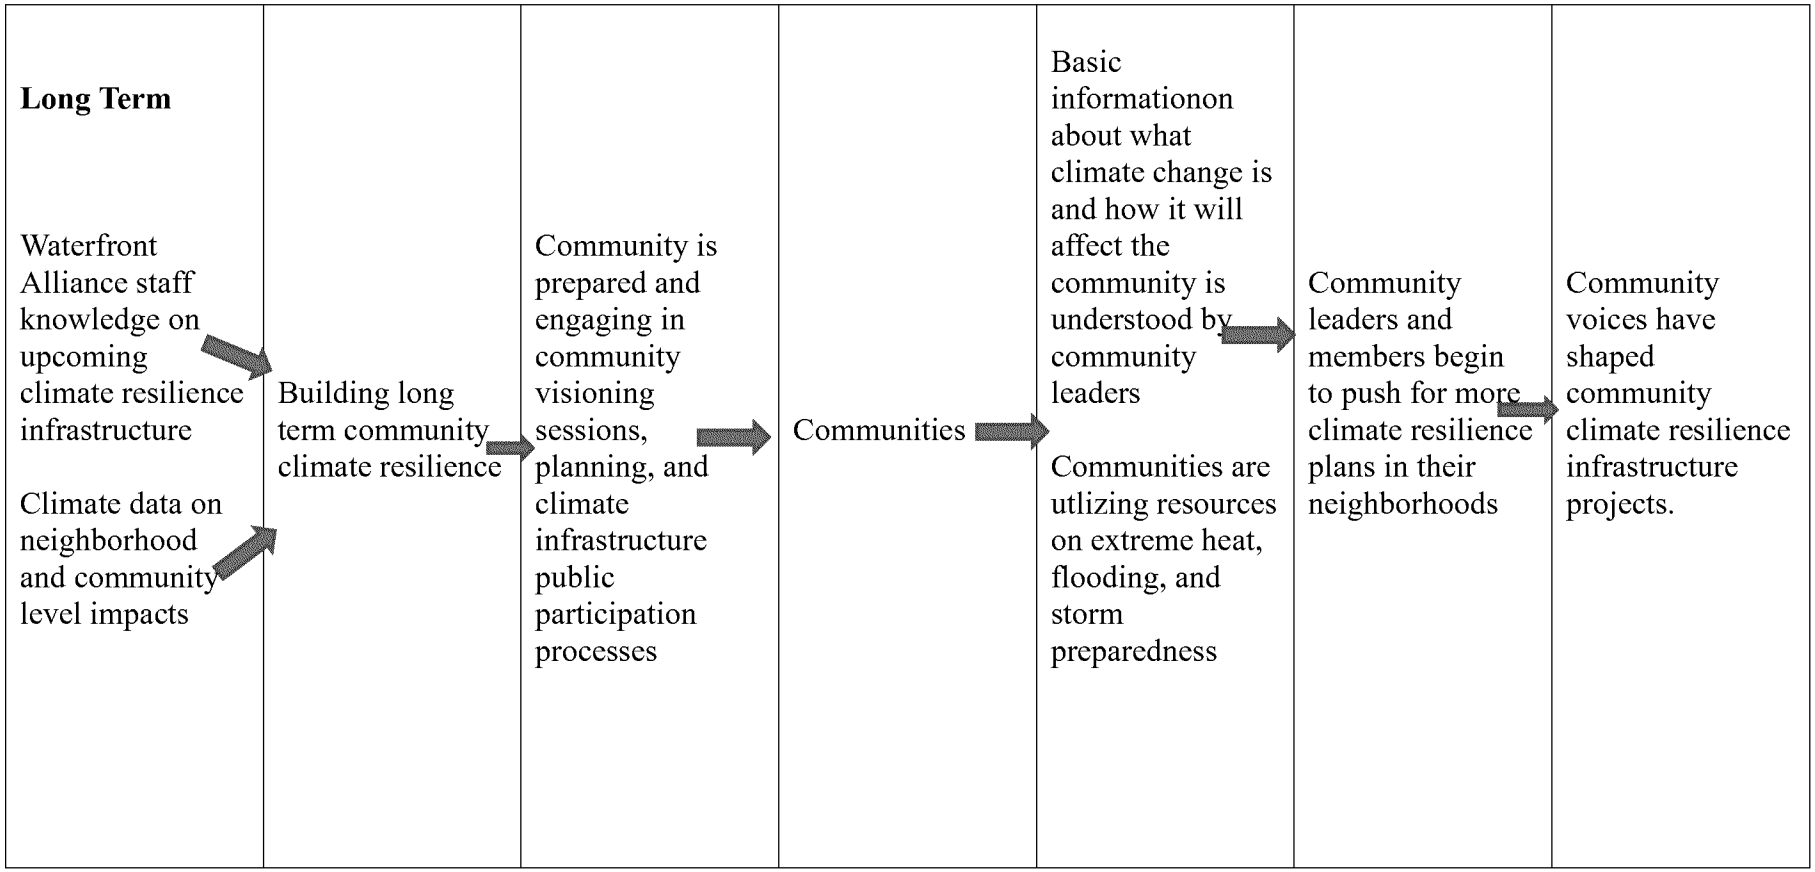
Waterfront Alliance
EPA EJCPS Budget - 24 Months
Climate Informed Communities:
Collaborative Climate Resilience Solutions for New York City (CIC)

	Description	Total
Personnel	Funding in the amount of $245,631 will be used to cover staff salaries over the 24 months as follows: -President and CEO @$202,800 annual salary x 10% of time on project x 2 years (24 months) = $40,560 -Director of Programs and Climate Initiatives @ $107,000 annual salary x 20% of time on project x 2 years (24 months) = $42,800 -Senior Manager for Climate Policy @ $69,300 annual salary x 20% of time on project x 2 years (24 months) = $27,720 -Community Organizer @ $68,000 annual salary x 50% of time on project x 2 years (24 months) = $68,000 -Chief Operating Officer @ $137,430 annual salary x 10% of time on project x 2 years (24 months) = $27,486 -Senior Waterfront Education Coordinator @ $57,500 annual salary x 10% of time on project x 2 years (24 months) = $11,500 -Director of Communciations @ $77,327 annual salary x 10% of time on project x 2 years (24 months) = $15,465 -Operations Manager and Exec Asst @ $60,500 annual salary x 10% of time on project x 2 years (24 months) = $12,100	$245,631
Fringe Benefits	Fringe benefits for the salaries of the personnel detailed above are calculated at a rate of 20% ($245,631 x 20% = $49,126) and include employer paid medical, dental, and vision insurances; life and AD&D insurance; short-term disability; and 401K employer match.	$49,126



Travel	Funding in the amount of $5,048 is requested to cover travel expenses. We anticipate occasional car trips will be required to carry out the project activities. We have estimated that over the course of 24 months, the project will require staff to take 20 car rides (via taxi or app-based car service) at an average cost of $100 per round trip. This totals $2,000. We are additionally budgetting to purchase a monthly unlimited subway card for our community organizer who will be frequently visiting the target communities. A monthly unlimited subway card costs $127 x 24 months = $3,048.	$5,048
Equipment	N/A	$0
Supplies	Funding in the amount of $6,990 is requested to cover supplies. This includes: -Printer paper @ $205 ($98.33/case x 3 = $295) -Printer toner/ink @ $3,360 ($140/month for 24 months and part of monthly printer lease) -Flip charts and markers for community meetings @ $235 -Postage/mailing/telephone @ $2,100 - Light refreshments for selected community meetings that we host @ $100 / meeting x 10 meetings = $1,000	$6,990
Contractual	Funding in the amount of $29,750 is requested to cover contractual services. This include: -Public affairs firm @ $1,000/month x 24 months = $24,000 (this represents 20% of currently contracted time) -Professional translation services @ $75/hour x estimated 50 hours = $3,750 -Graphic designer @ $100/hour x estimated 20 hours = $2,0000	$29,750
Construction	N/A	$0

Other	Funding in the amount of $118,000 is requested to cover the following Other costs: Partner Stipends in the amount of $100,000 will be distributed as follows: -Guardians of Flushing Bay @ $15,000 -Red Hook Initiative @ $15,000 -South Bronx Unite @ $15,000 -Science and Resilience Institute at Jamaica Bay @ $10,000 -FRANC @ $15,000 -Coney Island Beautification Project @ $15,000 -Staten Island Urban Center @ $15,000 Social Media Amplification (paid ads) is budgetted @ $10,000. Social media amplification will include consulting for graphic design and social media services to launch a broad public campaign to get out messages and resources pertinent to the project. Funding in the amount of $8,000 will be use to print 500 copies of the Climate Literacy Handbook and 500 copies of the Extreme Weather Fact Sheet.	$118,000
Total Direct Costs		**$454,545**
Indirect Costs	10% de minimis rate	**$45,455**
Grand Total		**$500,000**

EJCPS Completed Logic Model

Climate Informed Communities: Collaborative Climate Resilience Solutions for New York City (CIC)

Resources/ Inputs	Activities	Outputs	Audience	Short-term Outcomes (6-12 months)	Intermediate Outcomes (12-24 months)	Long-term Outcomes (2+ years)
Short Term Waterfront Alliance staff, government, and partner expertise and community knowledge Community preparedness resources on flood, storm, and extreme heat	Identification of most impacted communities Understanding the community needs and gaps in services Identification of tools and services available to build climate resilience Building an awareness of tools and services within most impacted communities	Targeted, customized, strategy for outreach and direct work with communities including meetings, workshops and events. Community uptake of resources and materials on climate preparation	Staff, partners, and communities Communities	Surveying community members about their baseline understanding. Begin materials dissemination	Information on protecting lives and properties start to become embedded in most vulnerable communities	Partners and communities report that climate change preparation and resources are embedded and utilized to maximum extent possible measured through surveying compared to baseline surveys conducted at the start of the project.

Long Term
Waterfront Alliance staff knowledge on upcoming climate resilience infrastructure
Climate data on neighborhood and community level impacts
Building long term community climate resilience
Community is prepared and engaging in community visioning sessions, planning, and climate infrastructure public participation processes
Communities
Basic informationon about what climate change is and how it will affect the community is understood by community leaders
Communities are utlizing resources on extreme heat, flooding, and storm preparedness
Community leaders and members begin to push for more climate resilience plans in their neighborhoods
Community voices have shaped community climate resilience infrastructure projects.

RE: Waterfront Alliance Application for EPA EJCPS Grant Application (EPA-R-OEJECR-OCS-23-01)

Dear Mr. Burney,

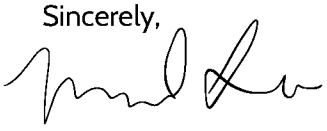
I am writing on behalf of FRANC (Far Rockaway Arverne Nonprofit Coalition) to express our formal commitment to partnering with the Waterfront Alliance on the EPA EJCPS Grant Application for the project titled, Climate Informed Communities: Collaborative Climate Resilience Solutions for New York City. Please consider this letter as our official endorsement of the project and its objectives, as well as a commitment for FRANC to complete the project activities and responsibilities outlined below.

FRANC is already working closely with partner non-profits and agencies across sectors in emergency preparedness including partnerships with New York City Emergency Management through their Strengthening Communities Initiative and Department of Health and Mental Hygiene's Community Emergency Network initiative. We manage and maintain a sub-coalition of organizations and community leaders that is centered around resiliency, emergency preparedness, and recovery.

The goal of this project is to ensure local communities and neighborhoods grow to (1) better learn and understand the risks they will face from climate impacts before major infrastructure and retrofitting for green infrastructure come online, and (2) are able to influence and advocate for local climate resilient projects for their communities.

As a partner in this project, FRANC is committed to carrying out the following activities:

Work in partnership with Waterfront Alliance to disseminate information about climate readiness;
Information sharing about existing preparedness and readiness programs;
Waterfront Alliance and partner to provide materials, presenting at meetings, holding one-on-one discussions in coordination with our partners about climate readiness;



Identification of community members and non-formal organizations within communities that the partner and/or Waterfront Alliance will prioritize to work with first.

The Waterfront Alliance will provide a subaward to FRANC for this work in the amount of $15,000. The Waterfront Alliance has agreed to pay out the subaward to FRANC upon receipt of the grant award.

We are proud to contribute to this important project and believe that it aligns well with FRANC's mission to improve the community for and with youth and families by strengthening Rockaway's nonprofit network.

Thank you for considering our commitment to this project. Please let us know if you require any further information or support.

Sincerely,

Manny Silva
Executive Director
FRANC (Far Rockaway Arverne Nonprofit Coalition)

RE: Waterfront Alliance Application for EPA EJCPS Grant Application (EPA-R-OEJECR-OCS-23-01)

Dear Mr. Burney,

I am writing on behalf of Guardians of Flushing Bay (GoFB) to express our formal commitment to partnering with the Waterfront Alliance on the EPA EJCPS Grant Application for the project titled, Climate Informed Communities: Collaborative Climate Resilience Solutions for New York City. Please consider this letter as our official endorsement of the project and its objectives, as well as a commitment for GoFB to complete the project activities and responsibilities outlined below.

The goal of this project is to ensure local communities and neighborhoods grow to (1) better learn and understand the risks they will face from climate impacts before major infrastructure and retrofitting for green infrastructure come online, and (2) are able to influence and advocate for local climate resilient projects for their communities.

As a partner in this project, GoFB is committed to carrying out the following activities:

- Partner with Waterfront Alliance to disseminate information about climate readiness;
- Coordinate with Waterfront Alliance to present at local meetings and hold one-on-one discussions with community leaders about climate readiness;
- Identify community members and non-formal organizations to prioritize in our outreach.

The Waterfront Alliance will provide a subaward to Guardians of Flushing Bay for this work in the amount of $15,000. The Waterfront Alliance has agreed to pay out the subaward to Guardians of Flushing Bay upon receipt of the grant award.

We are proud to contribute to this important project and believe that it aligns well with the Guardians of Flushing Bay's mission to advocate for healthy and equitably accessible Flushing Waterways.

Thank you for considering our commitment to this project. Please let us know if you require any further information or support.

Sincerely,

Rebecca Pryor
Executive Director
Guardians of Flushing Bay

RE: Waterfront Alliance Application for EPA EJCPS Grant Application (EPA-R-OEJECR-OCS-23-01)

Hello Mr. Burney,

Please allow this letter to serve as a formal commitment in a partnership with Waterfront Alliance. As a new Harbor Middle school located in Red Hook, Brooklyn right by the waterfront. We have committed to providing our students with a hands on, place based experience in the harbor. With support from our partners with BOP, Reti center and Beam we have been able to infuse Harbor within our units of study, and provide expert support for our staff.

Through building a curriculum that centers the water and allows our students to design their projects and provide students with experiences in the field our students have learned much about the Harbor that surrounds them and it's value.

With that said, I represent the Harbor Middle School as we support the partnership and collaboration with the Waterfront Alliance group. We are seeking additional opportunities to enrich those instructional experiences, as we scale up beyond the 6th grade. The partnership will provide opportunities for students to learn more about coastal resistance, design opportunities to advocate for water equity and build on career interests and knowledge in the field of water.

As a partner on this grant, Harbor Middle School will complete the following activities:

- Work with Waterfront Alliance to host teacher trainings focused on extreme weather preparedness through lessons such as how to find shelter during a hurricane or flood and how to prepare a go bag.
- Offer Continuing Teaching and Leader Education (CTLE) credits to teachers participating in trainings.
- Distribute education materials such as Waterfront Alliance's Climate Resilience Literacy Handbook and Extreme Weather Fact Sheet.

This partnership opportunity would support the school's goal in alignment with its vision and mission, and the city's efforts to create a more sustainable environment for all as well as opportunities for our youth in the field. Our community is in support and ready to dive right into the work.

Please reach out with any additional questions or concerns.

Thank you,
Priscilla Figueroa
Principal. 15k676
Harbor Middle School

RE: Waterfront Alliance Application for EPA EJCPS Grant Application (EPA-R-OEJECR-OCS-23-01)

Dear Mr. Burney,

I am writing on behalf of the New York City Mayor's Office of Climate and Environmental Justice (MOCEJ) to express our formal commitment to partnering with the Waterfront Alliance on the EPA EJCPS Grant Application for the project titled, Climate Informed Communities: Collaborative Climate Resilience Solutions for New York City. Please consider this letter as our official endorsement of the project and its objectives, as well as a commitment for MOCEJ to complete the project activities and responsibilities outlined below.

The Waterfront Alliance Climate Informed Communities: Collaborative Climate Resilience Solutions program will greatly support New York City's efforts to engage vulnerable coastal communities through the City's Climate-Strong Communities (CSC) initiative. CSC will launch New York City's next generation of multi-hazard, pro-active, and equitable resiliency projects by leveraging existing resiliency and sustainability planning and capital commitments and maximize federal and state funding opportunities with a community-centered planning process by proactively engaging with stakeholders. Substantive and informed engagement is critical to the City's resiliency work in local communities, which is why this office supports this funding application.

The goal of this project is to ensure local communities and neighborhoods grow to (1) better learn and understand the risks they will face from climate impacts before major infrastructure and retrofitting for green infrastructure come online, and (2) are able to influence and advocate for local climate resilient projects for their communities.

To support the Climate Informed Communities Program and its partners, MOCEJ enthusiastically commits to providing strategic guidance, interagency coordination, and other advisory support as needed to Waterfront Alliance and their project partners.

We are proud to contribute to this important project and believe that it aligns well with the Mayor's Office of Climate and Environmental Justice's "Climate Strong Communities" initiative.

Thank you for considering our commitment to this project. Please let us know if you require any further information or support.

Sincerely,

Kizzy Charles-Guzman, Executive Director
New York City Mayor's Office of Climate and Environmental Justice
253 Broadway, 14th Floor, New York, NY, 10007

RE: Waterfront Alliance Application for EPA EJCPS Grant Application (EPA-R-OEJECR-OCS-23-01)

Dear Mr. Burney,

I am writing on behalf of Red Hook Initiative to express our formal commitment to partnering with the Waterfront Alliance on the EPA EJCPS Grant Application for the project titled, Climate Informed Communities: Collaborative Climate Resilience Solutions for New York City. Please consider this letter as our official endorsement of the project and its objectives, as well as a commitment for the Red Hook Initiative to complete the project activities and responsibilities outlined below.

The goal of this project is to ensure local communities and neighborhoods grow to (1) better learn and understand the risks they will face from climate impacts before major infrastructure and retrofitting for green infrastructure come online, and (2) are able to influence and advocate for local climate resilient projects for their communities.

As a partner in this project, Red Hook Initiative is committed to carrying out the following activities:

- Work in partnership with Waterfront Alliance to disseminate information about climate readiness;
- Waterfront Alliance and partner to provide materials, presenting at meetings, holding one-on-one discussions in coordination with our partners about climate readiness;
- Identification of community members and non-formal organizations within communities that the partner and/or Waterfront Alliance will prioritize to work with first.

The Waterfront Alliance will provide a subaward to Red Hook Initiative for this work in the amount of $15,000. The Waterfront Alliance has agreed to pay out the subaward to Red Hook Initiative upon receipt of the grant award.

We are proud to contribute to this important project and believe that it aligns well with the Red Hook Initiative's mission to nurture young people in Red Hook to be inspired, resilient and healthy, and to envision themselves as co-creators of their lives, community and society.

Thank you for considering our commitment to this project. Please let us know if you require any further information or support.

Sincerely,

Yvonne M. Brathwaite

RE: Waterfront Alliance Application for EPA EJCPS Grant Application (EPA-R-OEJECR-OCS-23-01)

Dear Mr. Burney,

I am writing on behalf of South Bronx Unite to express our formal commitment to partnering with the Waterfront Alliance on the EPA EJCPS Grant Application for the project titled, Climate Informed Communities: Collaborative Climate Resilience Solutions for New York City. Please consider this letter as our official endorsement of the project and its objectives, as well as a commitment for South Bronx Unite Center to complete the project activities and responsibilities outlined below.

The goal of this project is to ensure local communities and neighborhoods grow to (1) better learn and understand the risks they will face from climate impacts before major infrastructure and retrofitting for green infrastructure come online, and (2) are able to influence and advocate for local climate resilient projects for their communities.

As a partner in this project, South Bronx Unite is committed to carrying out the following activities:

- Work in partnership with Waterfront Alliance to disseminate information about climate readiness;
- Information sharing about existing preparedness and readiness programs;
- Waterfront Alliance and partner to provide materials, presenting at meetings, holding one-on-one discussions in coordination with our partners about climate readiness and South Bronx Unite's Mott Haven-Port Morris Waterfront Plan;
- Identification of community members and nonformal organizations within communities that the partner and/or Waterfront Alliance will prioritize to work with first.

The Waterfront Alliance will provide a subaward to South Bronx Unite for this work in the amount of $15,000. The Waterfront Alliance has agreed to pay out the subaward to South Bronx Unite upon receipt of the grant award.

We are proud to contribute to this important project and believe that it aligns well with South Bronx Unite's mission to bring together neighborhood residents, community organizations, academic institutions, and allies to improve and protect the social, environmental, and economic future of Mott Haven and Port Morris.

Thank you for considering our commitment to this project. Please let us know if you require any further information or support.

Sincerely,

Arif Ullah
Executive Director
South Bronx Unite

EPA EJCPS - Logic Model

Inputs/Resources (What you invest)	**Project Activities/ Workplan Tasks** (What you do)	**Outputs** (What you produce or deliver and to whom)	**Outcomes and Status** (The desired results or effects)		
			Short-Term (6-12 months)	Medium-Term (12-24 months)	Long-Term (2+ years)
• 4 project staff (1 WE ACT, 1 DOHMH, 1 AEA, 1 SBU)	**Educational Workshops/Recruitment** Host 3-5 one-day Healthy Homes workshops on sources of indoor air pollution (including gas stoves), demonstration of indoor air quality monitoring equipment, and culturally relevant cooking demonstrations with induction stoves. Identify the building in which to conduct the study and recruit program participants from building residents. [CPS Element 2 - Community Capacity-Building and Leadership Development]	• 3-5 one-day workshops, each attended by 15-20 community members living in S. Bronx (WE ACT/ DOHMH/AEA/SBU) • 1 building identified for retrofitting and air monitoring • Distribution of pots/pans for induction stoves to 30-100 households	• 30-100 community members are knowledgeable about sources of indoor air quality and how to reduce their exposure.	• 30-100 households are familiar with indoor air quality monitoring methods and express interest in community based participatory research related to indoor air quality.	• 30-100 households are confident in their ability to use induction stoves to perform their usual cooking tasks, and are sharing knowledge with their families and neighbors about the benefits of electrifying household appliances.

• Y project staff (X AEA, 1 WE ACT)	**Stove Swap Out** Facilitate swap out of gas stoves for induction stoves in 30-100 households from AEA-selected building(s) in S. Bronx, prioritizing households where one or more individuals has asthma (Full building, throughout NYC) [CPS Element 5 - Constructive Engagement by Relevant Stakeholders]	• 3-100 households receive induction stove as replacement for gas stove in their homes (AEA)	• Induction stoves begin to be installed in recruited households in place of existing gas stoves	• Induction stoves continue to be installed in up to 60 households total	• 30-100 households are using an induction stove to perform their usual cooking tasks, and are sharing knowledge with their families and neighbors about the benefits of electrifying household appliances.
• 3 project staff (2 WE ACT, 1 Queens College) • Queens College laboratory space and equipment	**NO_2 Monitoring** Calibration and distribution of air sensors. Monitor reductions in indoor levels of NO_2 among 30-100 households who participated in the gas stove transition led by AEA. [CPS Element 5 - Constructive Engagement	• 4 Sensors calibrated and distributed to participating households using the stepped-wedge approach • 30-100 households receive testing for indoor levels of NO_2 to measure reductions associated with an induction stove swap out.	• 30-100 households recruited to participate in seasonal monitoring for indoor levels of NO_2 before receiving an induction stove swap out	• 30-100 households participate in follow-up seasonal monitoring for indoor levels of NO_2 after receiving an induction stove swap out	• 30-100 households experience measured reductions in indoor levels of NO_2

	by Relevant Stakeholders]				
• 2 project staff (1 Columbia, 1 WE ACT)	**Health Impacts Assessment** Develop IRB-approved survey to use for health impacts assessment in partnership with Columbia University. Conduct health pre-assessment before stove replacement. Conduct assessment of changes in acute respiratory and mental health symptoms among 30-1-00 households who participated in the gas stove transition led by AEA [CPS Element 5 - Constructive Engagement by Relevant Stakeholders]	• 30-100 households participate in an assessment of acute respiratory and mental health symptoms before and after an induction stove swap out (Columbia/WE ACT)	• 30-100 households participate in an assessment of acute respiratory and mental health symptoms BEFORE induction stove swap out	• 30-100 households participate in an assessment of acute respiratory and mental health symptoms AFTER induction stove swap out	• 30-100 households are expected to experience reductions in negative outcomes associated with asthma and/or relevant mental health outcomes
• 2 project staff (1 WE ACT, 1 DOHMH) • 2 students/interns	**Report Findings to Participants** Share study findings regarding the contribution of gas stoves	• 30-100 summary reports for indoor air quality data from each household (WE ACT)	• Distribution of summary reports for indoor air quality data to 30-100 households	• 30-100 households are knowledgeable about the contribution of gas stoves to indoor air	• 30-100 households are taking steps to reduce their exposure to

	on indoor air quality among study participants' homes [CPS Element 2 - Community Capacity-Building and Leadership Development]	• Host 3-5 half-day workshops, each attended by 15-20 study participants to explain summary reports (WE ACT/ DOHMH)		pollution in their homes	indoor air pollution, sharing knowledge with their families and neighbors, and leading change in their community
• 4 project staff	**Evaluation, Disseminate Findings, Reports and Manuscripts** Conduct and share formal evaluation of study, including development of recommendations for policy and research. [CPS Element 7 - Evaluation, Lessons Learned, and Replication of Best Practices]	• Develop and publish report featuring analysis of household indoor air quality data, including recommendations for policy/research	• Formal evaluation process has begun utilizing the indoor air quality data and surveys on negative outcomes associated with asthma and relevant mental health outcomes from 60 households	• Publication of study report on organization website and relevant newsletters • Press conference held to announce the study release and share findings	• New York and other states are providing resources to support buildings in the transition to induction stoves

EJ EJCPS Itemized Budget Sheet Template

Note—EPA provides detailed guidance on how to characterize costs for budgeting purposes as well as a budget detail example in the agency's Interim General Budget Development Guidance for Applicants and Recipients of EPA Financial Assistance. For a sample Itemized Budget Sheet refer to: https://www.epa.gov/grants/rain-2019-g02

Year 1 of 3	Description	Total
Personnel	Micaela Martinez, Director of Environmental Health will provide support on the development and implementation of the program study. Funding in the amount of $5,750 is requested at 5% FTE. Jaron Burke, the Environmental Health Manager, will support in outreach, educational events, and implementation of the program study. Funding in the amount of $37,500 is requested at 50% FTE. Marileidy Pimentel Paniagua, the Bilingual Community Organizer, will provide support on program outreach and recruitment. Funding in the amount of $11,700 is requested at 20% FTE.	$54,950
Fringe Benefits	Fringe benefits for the salaries of the personnel listed above equal $16,210.25 and were calculated at a rate of 29.5% of personnel costs. Fringe benefits for full time year-round workers include FICA, health, dental and disability insurance, and life insurance.	$16,210.25
Travel		
Equipment	Funding in the amount of $21,500 is requested to cover the cost of purchasing air monitoring sensors and supplies, including replacement filters for monitoring.	$21,500
Supplies	Funding in the amount of $334 is requested for general office supplies. Funding in the amount of $16,250 is requested to cover the cost of providing cookware to program participants, at $325 per household (50 households).	$16,584
Contractual	Funding in the amount of $33,334 is requested to cover the cost of the Association for Energy Affordability's participation per the subaward agreement. Funding in the amount of $10,000 is requested to cover the cost of South Bronx Unite's participation per the subaward agreement.	$43,334

ED_016126_00001214-00001

Other	Funding in the amount of $666 is requested for participant educational workshops to be used for meeting space and light refreshments related to program implementation. Funding in the amount of $6,400.91 is requested for cooking classes, including space rental and instructors.	$7,066.91
Indirect Charges	Funding is requested in the amount of $21,739.14, to cover WE ACT's indirect cost at 15%.	$21,739.14
		Total Year 1 Budgeted Costs = $181,384.30
Year 2 of 3	Description	Total
Personnel	Micaela Martinez, Director of Environmental Health will provide support on the development and implementation of the program study. Funding in the amount of $5,750 is requested at 5% FTE. MEDILL Northwestern University, Evanston, IL 60091

April 10, 2023
U.S. Environmental Protection Agency
Washington, D.C.

Dear EPA Award Reviewers:

The proposed project from Atma Connect, a community based organization working in Puerto Rico on community led resilience, and their partners, helps address a key unmet need in Puerto Rico to build awareness of water quality issues, engage residents in water quality testing, and improve water quality through helping residents and small water systems identify threats to water quality and implement solutions, including helping people obtain the resources needed to upgrade septic systems.

If the proposal submitted by Atma Connect is selected for funding by EPA, it is my intent to collaborate to provide outreach communications by graduate science and environmental journalism students who will report on water quality issues and solutions in Puerto Rico. The Medill Comer Foundation Scholarship program, for which I am the PI, and Medill itself facilitate compelling techniques for reporting on science, the environment and climate change. We network with top environmental scientists from across the country and travel to report on stories of international concern.

The outreach program through Medill's embedded reporting capstone pairs graduate students with field research programs and initiatives such as Atma Connect for several weeks. Comer and Medill funding cover the costs of these partnerships. We participate in research and programming, produce service journalism for our partners, and provide communications workshops as well as producing stories for major media. Students have joined NOAA storm chasers and researchers documenting the increasing retreat of the glaciers in Mongolia. One student scuba dived into the Great Barrier Reef this spring to transplant coral with marine biologists and another worked with Scripps researchers exploring Pacific Ocean marine life for promising medicinal applications. We have published stories with *National Geographic, The New Scientist, Bulletin of the Atomic Scientists, Indian Country Today, Discover, Washington Post, Undark, Huffington Post, Astronomy* magazine and other media.
My research partners include the Comer Foundation, the Institute for Sustainability and Energy at Northwestern with water resources among the many focus areas, the Center for Native American and Indigenous Studies at Northwestern, Northwestern's Department of Earth and Planetary Sciences, and the Midwest Climate Summit.
The Atma Connect proposal fits key goals of the embedded reporting partnerships including education, environmental justice, health and social services as well as neighborhood rehabilitation.

Respectfully,
Abigail Foerstner
Abigail Foerstner
Associate Professor
Director – Graduate Science Journalism

Government of Puerto Rico

CERTIFICATE OF AUTHORIZATION TO DO BUSINESS IN PUERTO RICO

I, **Elmer L. Roman, Secretary of State** of the Government of Puerto Rico;

CERTIFY: That **ATMA CONNECT CORPORATION**, register number **445932**, is a **Foreign Non Profit Corporation** organized under the laws of California duly authorized to do business in Puerto Rico on this **23rd of June, 2020 at 05:21 PM**.

IN WITNESS WHEREOF, the undersigned by virtue of the authority vested by law, hereby issues this certificate and affixes the Great Seal of the Government of Puerto Rico, in the City of San Juan, Puerto Rico, today, **June 23, 2020.**

Elmer L. Roman
Secretary of State

RE: Letter of Commitment and Support for Environmental Justice Collaborative Problem-Solving (EJCPS) Cooperative Agreement Program for Atma Connect

Dear Sir or Madam,

I am writing this letter to commit the support of the Environmental Protection Network (EPN) to Atma Connect and their application to the Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program, should it be funded by EPA.

Atma Connect is a registered community organization in Puerto Rico, working to build community resilience through mutual support, helping residents engage with governments, spread their solutions, and take collective action. Their platform for neighbors helping neighbors provides community leaders and local organizations the ability to document, validate, and share the impact they are making in their communities.

EPN's network of more than 550 EPA alumni—with expertise in air, water, toxic substances, hazardous waste, and just about any issue that EPA works on—provides direct pro bono capacity-building technical assistance and training to under-resourced communities to address and advance community identified issues and goals. Our staff will serve as a navigator to connect Atma Connect to experts within our volunteer network, as well as other technical assistance providers across the country. Our national network of volunteers (including scientists, lawyers, engineers, economists, and others with decades of experience in environmental regulations, grants, bureaucracies, and policies), their connections inside and outside of government, and their vast experience with federal grantmaking, will play a unique and critical role in supporting successful collaborations and negotiations as Atma Connect and other stakeholders work toward long-term progress and solutions to environmental and public health issues.

EPN volunteers are tracking closely the new PFAS regulation and will work to advise the water quality network in Puerto Rico that Atma Connect will be bringing together about how to access resources to address PFAS pollution in Puerto Rico.

We look forward to participating in the EJCPS and supporting Atma Connect's work to advance transformative environmental justice projects.

Thank you,

Michelle Roos

Michelle Roos
Executive Director
Environmental Protection Network

1.0 PROGRAM OBJECTIVES

Project Title: Grassroots Leadership, Education, Safe Water Quality Network in Puerto Rico
Project Location: Puerto Rico, with a focus on rural areas
Applicant Information: Atma Connect, Meena Palaniappan, meena@atmaconnect.org
Brief Description of the Applicant Organization: Atma Connect is a community based organization in Puerto Rico, working to build community resilience by growing grassroots networks and citizen agency. We help residents develop knowledge and solutions and take collective action. Our mobile app, AtmaGo, supports neighbors-helping-neighbors and provides community leaders and local organizations the ability to document, validate, and share the impact they are making in their communities. Our current projects in PR involve connecting local farmers and residents to build food security, training residents in citizen journalism, digital literacy and women's leadership, and developing mutual aid response capability to climate-driven disasters.

Project Abstract: Our project will mitigate the health risks from water contamination stemming from poor and failing septic systems and establish a multistakeholder network to promote near and long-term solutions. In Puerto Rico, drinking water is pervasively contaminated, posing a risk to health, yet residents are overwhelmingly unaware of the problem. With 55% of buildings on septic systems, the problem is widespread and complex, involving lack of public knowledge, lax regulatory enforcement, poverty inhibiting septic system upgrades, and absence of alarms by health professionals. Our project focuses on **five (5)** goals: **(1)** Expand and strengthen a Safe Water Quality Network of residents, community organizations, private sector entities, and health and environmental agencies as the engine to conduct a massive education campaign that mobilizes Puerto Ricans to come together and collaborate towards short and long-term solutions; **(2)** Disseminate to residents guidance, tools, and affordable and no-cost options for testing water and septic systems; **(3)** Assist homeowners and building owners to access public funding programs for septic system upgrades (such as EPA, FEMA, and USDA); **(4)** Engage academics and health professionals to collaborate on data gathering to assess health impact from contaminated water; and **(5)** Collect Lessons Learned from this project. Our ultimate goal is to facilitate the engagement of residents, especially from disadvantaged communities, in promoting impactful solutions that will ensure safe drinking water throughout the island. The network will be a durable resource for addressing this complex issue, and additional water safety issues, such as PFAS.
Project Type(s): Training and public education; Development of a Safe Water Quality Network
Special Considerations: Climate Change and Disaster Resiliency, Rural Areas
Environmental Issues: Puerto Rico's water is highly contaminated, mainly by leaking septic systems. One of the largest sources of water quality problems is the widespread existence of old and substandard septic systems that are discharging into groundwater. Studies from 2012 estimate the number of domestic septic tanks in Puerto Rico at approximately 560,000 built under minimal regulations. These septic tanks directly or indirectly discharge approximately 165 mgd of sanitary water into the island's environment, and nearly nearly 70% of residents are receiving tap water with illegally high levels of bacteria and other contaminants
List of Project Partners: Asociación Enlace, Environmental Protection Network, Finca Higuaca, SaniPlant, University of Puerto Rico, Northwestern University
QAPP for your project? Yes **Small CBO Set Aside Track for $150,000 projects?** No

ED_016126_00001244-00001

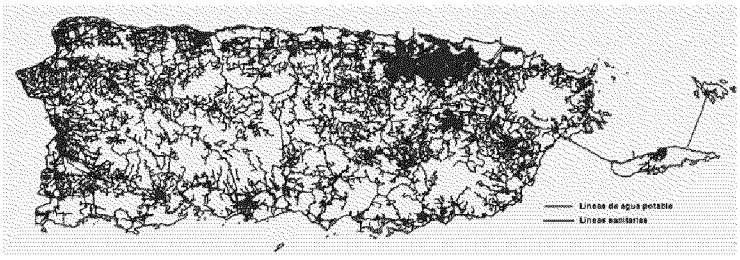
1.b. Environmental and Public Health information of the Underserved Community:

Puerto Rico has been historically underserved for decades,[1] and especially over the past five years, as hurricanes Maria and Irma devastated the island and left residents without power and water for weeks, with some customers not connected to power today.[2] Puerto Ricans live in widespread poverty, as the island's average household income is about one-third of the U.S. average, and its poverty rate is more than twice that of the poorest state.[3] Meanwhile, the territory's unemployment rate has stayed at almost twice the national average for the past decade, at times reaching double digits.[4]

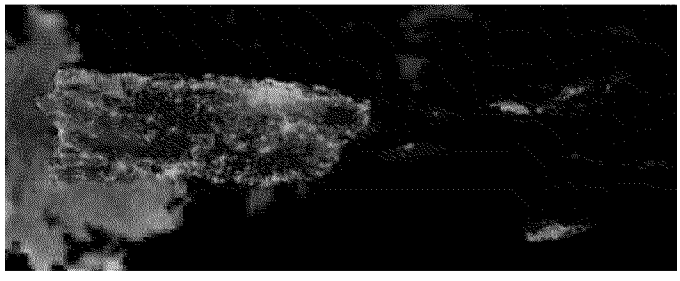
The effects of these devastations - natural, economic, and leadership - on Puerto Rico's water supply have been particularly pronounced. As noted by Mekela Panditharatne, an attorney at the Natural Resources Defense Council, in her Washington Post article,[5] most Puerto Ricans were not accessing consistently potable water before the storm pummeled the island's already strained infrastructure. Nearly 70% of residents were receiving tap water with illegally high levels of bacteria and other contaminants.[6] PRASA, the Island's water company, pled guilty to violations of the Clean Water Act repeatedly in the past[7]. San Juan, the capital of Puerto Rico and the most populous municipality, was named the city with the worst water in the U.S. last spring by the Natural Resources Defense Council. Additionally, water quality in Puerto Rico is worsened by flooding and sea-level rise associated with Climate events.

In 2016, the EPA stopped providing funds for Puerto Rico's water authority. This was a financial decision; Puerto Rico's water authority is in debt (as is the electric company). Once it failed to pay back EPA loans, it lost access and couldn't continue using those funds. But PRASA was in serious trouble before that, as it had been falsely announcing infrastructure upgrades when, in fact, it was not actually making those upgrades.

PRASA reached a settlement with the EPA in 2015 for, among other things, releasing raw sewage into the water system. The EPA charged that "the overflows from PRASA's collection system present an imminent and substantial endangerment to persons who come into contact with discharged waters contaminated with raw sewage."



A USGS study in 2018 found widespread contaminants, including lead in 64% of samples and copper in 100%. A follow-up study some months after this found that contaminants from pesticides to pharmaceuticals to artificial sweeteners were present at levels harmful to human health in every sample.[8]



One of the largest sources of water quality problems is the widespread existence of old and substandard septic systems that are discharging into groundwater. Many systems are more than 20 years old and were poorly constructed from the outset. Due to poverty, a substantial number of households cannot afford to upgrade faltering systems. Studies from 2012 (Quiñones, 2012) estimate the number of domestic septic tanks in Puerto Rico at approximately 560,000 built

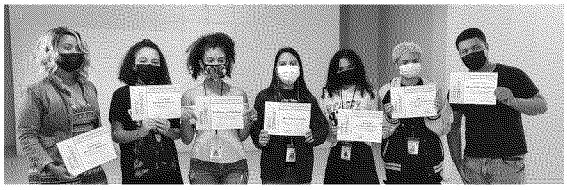
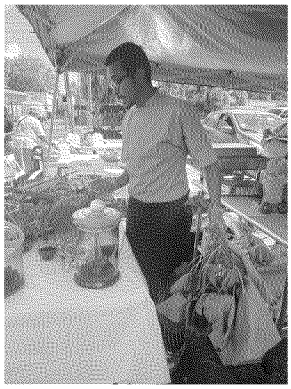
under minimal regulations.[9] These septic tanks directly or indirectly discharge approximately 165 mgd of sanitary water into the island's environment. While the regulations have since been revised, regulatory enforcement is spotty and local septic system professionals (members of our team) inform us that building owners frequently ignore compliance.

The website https://www.recursosaguapuertorico.com/Pozos-Septicos-P2.html shows a graph by PRASA on their distribution of drinking water pipes and sanitary water collection trunks. The website states that there is no data on the location of most of the septic tanks in Puerto Rico; however, it is possible to obtain an idea of the zones or regions on the Island where residential septic tanks predominate by seeing a lack of sanitary water collection trunks (in red), compared to the availability of drinking water distribution pipes (in blue). Moreover, any satellite nocturnal image of Puerto Rico obtained from these past 10 years showcases the population density spread across the Island, as seen in the following 2019 night image obtained from Twitter repost by @Tíratepr.

The use of septic tanks is widespread. PRASA's records establish that of approximately 1.2 million of its residential customers, 41.5% are not connected to its sanitary system and discharge used water into septic tanks, directly into the land, or into bodies of water. Likewise, PRASA estimates that 20,555 commercial clients, 3,801 municipal and central government facilities, and 231 industries discharge their sanitary water to structured septic tanks.[10]



The vast scope of the septic system contamination is daunting, yet our informal survey reveals little to no public awareness of the contamination or the health risks. Water contamination of this nature has been linked to chronic illnesses, including cancers, immune system dysregulation, thyroid issues, and more.[11][12] High levels of exposure to common pollutants in the water have been shown to affect human fertility, and result in low birth rate babies[13], babies with learning disorders, lowered testosterone[14] and sperm count in men who were exposed in utero, and a host of other problems passed on, invisibly, to the next generation.[15]



1.c. Organization's Historical Connection to Underserved Community:

Since 2017, Atma has worked in Puerto Rico to establish a broad network of partners to launch projects that strengthen community ties and address community needs, especially with respect to disaster resilience, health, environmental justice, digital inclusion, women's leadership and

community behavior change. We have a network of over 50 community based and environmental justice organizations in Puerto Rico with whom we work on resilience projects. Our efforts cause us to consult regularly and design programs with diverse social organizations, such as National Park Service's San Juan National Historic Site, the Instituto de Participatión Ciudadana del Municipio Autónomo de Toa Baja, the Centro de Calidad de Vida Puerta de Tierra, Fundación Nacional para la Cultura Popular, Corporación La Fondita de Jesús, the G8, Comité de Desarrollo Social y Cultural de Daguao Inc., and of course, the partners who comprise our team for this project.

Atma Connect specializes in supporting mutual aid after disasters (especially through its mobile app, AtmaGo, that coordinates neighbors-helping-neighbors), and mobilizing citizens to address community needs through ongoing collaboration with community organizations and decision-makers In Puerto Rico, Atma has offered educational workshops in which 285 people were trained (a mix of in-person and online) in digital literacy, disaster resilience and women's leadership (98 women participated in the latter). Atma reached 76,000 views in Puerto Rico with our online content for women leaders.

Atma trained 115 Puerto Ricans in citizen journalism, using our hyperlocal social network AtmaGo, (pr.atmago.com), designed for grassroots information sharing and neighborhood building. Workshop participants indicated 99% trust in the information being shared on AtmaGo (compared to only 7% of Americans trusting in mainstream media).[16]

Recently, Atma has been working with farmers and community-based organizations on promoting island food security, including Garrochales Produce, the Red de Huertos del Caño Martín Peña, Cómite Pro Desarrollo Maunabo, and Cómite Desarrollo Social y Cultural Daguao. Our program encourages Puerto Ricans to tend community gardens. Currently, we are also hosting farm-to-table community events with local growers and chefs to encourage young people to become interested in food farming in Puerto Rico.

Moreover, Atma has been focused on building community resilience with the government, communities and community leaders. In Collaboration with the National Parks Service' San Juan National Historic Site, we conducted a virtual series, Voces de la Communidad, that brought to the attention of the listening public the history of the participating communities, current issues each community faces, and highlights of the work of community leaders.

1.d. EJCPS Model

Our project to address drinking water contamination is informed by and supports the

[16] https://news.gallup.com/poll/355526/americans-trust-media-dips-second-lowest-record.aspx

ED_016126_00001244-00004

Environmental Justice Collaborative Problem Solving 7 step model shown above, as described below:

1: Issue Identification, Community Vision & Strategic Goal setting: In the course of our work with vulnerable communities to improve food security and resilience, we became interested in addressing the lack of drinking water after disaster incidents. Our studies uncovered the shocking fact that drinking water is contaminated across the island and yet few residents know about it, nor is it a significant action item for public health officials or policy decision-makers. To address an important source of water contamination - poor and failing septic systems - requires broad public awareness of the problem and health risks, leading to calls for public and private interventions. Our project's initial goal is to raise public awareness of the link between poor septic systems and widespread water contamination and consequent health risks in Puerto Rico.

2: Community Capacity Building and Leadership Development: For this project, we leveraged our existing relationships to assemble the initial diverse coalition of players - CSOs, academia, government, the private sector, universities, and arts groups - who are committed to working together to educate diverse stakeholders about the water contamination problem and what they can realistically do about it. The coalition will broaden throughout the project and strengthen into the Safe Water Quality Network. Key ways we will build capacity and leadership are: (i) Train citizen journalists and help them to place fact-driven stories in diverse outlets, including social media, school papers, community organization bulletins, church newsletter (or other religious group), media etc; (ii) Through outreach, direct residents to an online knowledge resource to learn about the problem and potential solutions encompassing policy and enforcement changes, and connect them to DIY testing or professional testing and infrastructure servicers; (iii) Introduce the Safe Water Quality Network to government officials to request co-creation of policies and plans that address septic system hazards (and eventually other concerns) to the water supply; (iv) Bring educational material to public spaces - critical to reaching hard to access rural populations; (v) Encourage health officials and academic researchers to develop and report data on health effects of septic-system related water contamination; (vi) Encourage professional societies and business leaders, such as realtor associations and mortgage lenders, to inform building purchasers about septic system hazards and low-cost methods for testing and making upgrades; (vii) Enable interested parties to access existing government programs that offer resources for upgrading septic systems.

3: Consensus Building and Dispute Resolution: While everyone wants good water, the contentious question is always, who pays the costs of septic system remediation? By informing and connecting diverse stakeholders, we are working to create community-wide consensus around the importance of action to address the poor quality of drinking water in Puerto Rico. At this early stage, our first objective is widespread problem recognition. Should the problem be disputed, we believe that by encouraging health officials and academic researchers to develop and report data on water pollution and related health consequences, we equip advocates with facts and tools needed to effectively disarm those who may dispute the claim that drinking water is contaminated in Puerto Rico.

4: Multi-Stakeholder Partnership and Leveraging of Resources: The widespread water contamination that stems from poor and failed septic systems is a complex problem that must be addressed from numerous angles and will necessarily require a multi-stakeholder approach over

ED_016126_00001244-00005

an extended period. Our project uses a broad coalition to raise awareness of the problem across the general public and with key stakeholders, as well as to initiate some near-term remediation actions. Our partners each bring some critically valuable resources to the project. In some cases, they are contributing subject matter expertise, which will be leveraged for developing factual educational information about the problem and possible actions. In other cases, they bring the ability to convene key stakeholder groups, which is important to raising public awareness. Those with water testing expertise will contribute by training residents how to conduct a home water quality assessment. To forge long-range solutions to this challenging problem will necessarily involve multi-stakeholder partnerships. For example, we will bring health professionals and environmental research academics together in order to encourage them to work collaboratively to build data that persuasively demonstrate the linkage between contaminated water in Puerto Rico and health consequences.

5: Constructive Engagement: A principal objective of this project is to provide a central meeting place for diverse stakeholders to share information and connect around advocating for healthy drinking water and better standards and enforcement for septic systems. Atma developed its digital infrastructure, AtmaGo, expressly for the purpose of linking diverse voices and groups so they could effectively engage with each to build more resilient communities. (AtmaGo has reached 10M people in Indonesia, where it has been deployed for 7 years). In Puerto Rico, water contamination from septic system failure is impossible to address as a single-cause problem, nor does it lend itself to a single solution or a quick resolution. Instead, it presents an outstanding example of a complex environmental justice issue that requires a sustained collaborative effort by numerous stakeholders. This project seeks to strengthen the multistakeholder coalition, the Safe Water Quality Network, and provide virtual and in-person meeting grounds for such stakeholders to work together in a constructive manner on near and long-term remediation strategies.

6: Sound Management and Implementation: Atma has an impressive track record of leading projects for major organizations, including Mercy Corps, Red Cross, USAID, CISCO, Nature Conservancy, and others. It has received various prestigious awards for successfully implementing projects that engage communities and result in beneficial impact. Atma's CEO is an environmental engineer with substantial experience in water management programs. Atma has a major role in implementing the recently awarded USEPA Environmental Justice Thriving Communities Technical Assistance Centers program. Atma's Director of Partnerships formerly directed stakeholder engagement and public-private partnership for FAA's NextGen Airspace Program ($13B public-private partnership) and numerous NASA multi-stakeholder programs (including the $150M program that spawned drones). Atma's BOD has included high-credential people (senior directors at Green Carbon Fund, Amazon, Build It Green, Earth Justice) and its program staff and financial staff are highly experienced at timely and accurate management and reporting.

7: Evaluation, Lessons Learned, and Replication of Best Practices: Atma is a leader in promoting impact evaluation of community-based projects and it practices a rigorous assessment of projects it leads. Atma's assessment practices involve (i) identifying the project's theory of change; (ii) creating clear goals and measurable milestones; (iii) involving stakeholders in project formulation and evaluation; (iv) capturing impact stories and data, and sharing them widely; (v) inviting post-project review by team members, sponsors, and key contributors. Atma shares lessons learned through the Ashoka network of Changemakers

(Atma's CEO is an Ashoka Fellow), and through published articles and interviews. Atma also reapplies best practices from its own experience and from others in its work.

1.e. Project Linkages:

All citizens deserve to have access to safe drinking water. Unfortunately, in Puerto Rico, the drinking water is highly contaminated, something residents have not been made aware of. Puerto Rico is poor, with 51% of the population living at or below the poverty line, a level much higher than any of the 50 states. 1800 families' income does not exceed $5,000 per year, and the median household income is just $22,000 annually. Moreover, Puerto Rico has been devastated by two hurricanes and is likely to face continuing disruption and damage from storms and rising sea levels. Climate change worsens water quality on the island. Much of the problem with water quality is in remote rural areas which we will take a creative approach to reaching through schools, and a traveling interactive exhibition.This project responds to the EPA's Strategic Plan, Goal 2, Objective 2.1, "Promote Environmental Justice and Civil Rights at the Federal, State, and Local Levels" because it enables poor, underserved and vulnerable communities to identify and understand the causes of an environmental health hazard and helps them to mobilize the public and key stakeholders in order to access the decision-making process so appropriate steps are taken to create a healthy environment in which to live.

1.f. Partner and Collaboration:

Organization	Relationship	Role in Partnership
Asociación Enlace Asuntos Comunitarios de Sabana Seca	Subgrantee for community engagement activities as specified	**Center for Community Re-education and Integration**: Will hold workshops of home water quality assessments in Toa Baja, Toa Alta, Dorado, and Cataño, potentially expanding to other municipios and will hold activities to insert the community in the participation of improvements to the septic wells and runoff waters in their community. i.e:Science Fairs or school competitions. **Data Collection**: Will encourage citizens to use available financing and provide guidance, and will provide and/or do reach out to provide locations and events to present the exhibition. **Testing Center**: Will collect community data in Toa Baja, Toa Alta, Dorado, and Cataño, potentially expanding to other municipios on Water Quality, Septic Tanks, and Contaminated runoff water. **Connection Activities**: Will serve as a liaison between Atma and other organizations of interest, such as our partners the Environmental Territorial Board and National University College, that can collaborate or participate in this project.
Environmental Protection Network	Non profit partner, non financial relationship	Staff will serve as a navigator to connect Atma Connect to experts within our volunteer network, as well as other technical assistance providers across the country. Our national network of volunteers (including scientists,

ED_016126_00001244-00007

		lawyers, engineers, economists, and others with decades of experience in environmental regulations, grants, bureaucracies, and policies), their connections inside and outside of government, and their vast experience with federal grantmaking. EPN volunteers are tracking closely the new PFAS regulation and will work to advise the water quality network in Puerto Rico about how to access resources to address PFAS pollution in Puerto Rico
Finca Higuaca	Private sector partner, non financial relationship	Connecting Atma`s team to networks of farmers from the southwest of Puerto Rico, schools, Yauco and Guánica municipalities and community organizations and volunteers so that we can provide trainings and resources to these networks of organizations about water quality, through an engaging interactive exhibit. We will also support in helping to apply for grants to help fund these septic system and water quality improvements.
SaniPlant	Private sector partner, non financial relationship, provider of in-kind and volunteer services	Assist in providing technical assistance to community organizations, presenting at schools, and providing low-cost septic system testing and training
Northwestern University, Medill School of Journalism	University Partner, provider of in-kind services through existing funded scholarship program for graduate environmental journalism students	Will collaborate to provide outreach communications by graduate science and environmental journalism students who will report on water quality issues and solutions in Puerto Rico. The Medill Comer Foundation Scholarship program facilitates compelling techniques for reporting on science, the environment and climate change. We network with top environmental scientists from across the country and travel to report on stories of international concern.
Ingrid Padilla, University of Puerto Rico	University of Puerto Rico Professor of Hydrology, in-kind services	Will provide expertise and guidance on water quality issues so they can be shared with local people, organizations, and institutions in Puerto Rico.

In addition to these partners, we have reached out to, and are in conversation with these individuals and entities, and will be collaborating with them during the implementation of the project:

ED_016126_00001244-00008

Mr. Raul Santini, Departamento de Recursos Naturales y Ambientales
Mrs. Johanna Concepción, Dewey University, for volunteers to develop the exhibit
Mr. Carlos Velázquez-Figueroa, RCAP Solutions, Rural community solutions non profit
Mrs. Mayra Toro, Secretary, Environmental Health Division of the PR Department of Health
Mrs. Evelyn Huertas, USEPA Caribbean Region

We will also bring to the collaboration our extensive network and add additional partners as the project progresses. Atma Connect has been working in Puerto Rico over the past several years, and in implementing our projects including Voces de Comunidad, De la Tierra a tu Mesa, and resilience projects, we have partnered with over 50 community based organizations, government agencies, elected officials, private companies, and non profit organizations. Including:

- **Community Based Organizations:** Asociación Comunitaria Llanos Tuna; Coorporación Palo Seco Hacia Adelante; Asociación de Vecinos de San Juan (AVISAJ); Comité de Desarrollo Social y Cultural de Daguao Inc.; Movimiento Social Naguabo Somos Todos; Corporación Piñones se Integra; G8; Barrio Obrero San Ciprián; Garrochales Produce & Garrochales Clásico; Impacto Comunitario La Perla; Programa de Conservación de Murciélagos de PR; Brigada PDT; La Fondita de Jesús, Asociación Enlace Asuntos Comunitarios de Sábana Seca, Semillas de Esperanza, Inc.; Team Warrior News; GRUET
- **Government offices:** Joint Chiefs Landscape Restoration Partnership; National Parks Service's San Juan National Historic Site; Centro de Calidad de Vida de Puerta de Tierra; Instituto de Cooperativismo y Participación Ciudadana del Municipio Autónomo de Toa Baja; US Fish and Wildlife Service
- **Non Profit Organizations:** Mercy Corps; American Red Cross, Puerto Rico Public Health Trust;
- **Private Organizations (donors for Puerto Rico):** First Bank; Vodafone; Tito's Vodka
- **Other types of organizations, including schools and universities:** Escuela Superior José Vizcarrondo Añeses; Finca Escuela de La Perla; Women in Ag Science; Urbana Planifica; Colegio de Agrónomos; Universidad de Mayagüez

2.0 Project Activities / Milestone Schedule / Detailed Budget Narrative

2a. Project Activities

Goal 1: **Expand and strengthen a Safe Water Quality Network of residents, community organizations, private sector partners, and health and environmental agencies as the engine to conduct a massive education campaign that mobilizes Puerto Ricans to come together and collaborate towards short and long-term solutions to water contamination from failing septic systems.**
Outcome 1: Puerto Ricans are educated about the water quality issues on the island, and at least 75% of those reached by our educational content state they will take action on water quality, (e.g., test water quality, contact their elected official, share with neighbors, apply for funding to improve septic systems) when surveyed.

Task 1.1 Make widely accessible, on a website, translated, community friendly short form content, including material from https://www.epa.gov/septic/septicsmart-education-materials so that it is actionable for the public of Puerto Rico on septic systems, water contamination,

ED_016126_00001244-00009

mitigation measures, and serves as a homebase for the projects' work.
Milestone 1.1.1 Create short form and accessible content based on expert information from partners as specified above including SaniPlant, University of Puerto Rico, EPN, and other collaborators including USEPA, DRNA, PR Health Department, and others, and engage community members in creating peer to peer content that spreads this information widely.
Milestone 1.1.2 Create a website home, and upload comprehensive content of Milestone 1.1.1.

Task 1.2 Execute media, social media and in-person campaign to spread information on water quality.
Milestone 1.2.1 Reach at least 75,000 people with social media and media content that leads to behavior change to improve water quality. Measure this behavior change in surveys.
Milestone 1.2.2 Crowdsource stories of change from local people and community leaders about water quality and spread via media and social media.
Milestone 1.2.3 Create an interactive traveling exhibition on how water quality is affected by septic systems so that people can experience first hand and in a sensory way the importance of proper waste water treatment.
Milestone 1.2.4 Introduce the traveling interactive exhibition about water quality, in a minimum of 10 stops, at venues including malls, art galleries, hotels, schools and other public spaces. We expect to reach a minimum of 200 people per stop, for a minimum total of 2,000 people.
Milestone 1.2.5 Three Citizen Journalism Trainings (CJT) in partnership with Northwestern University School of Journalism to train community leaders and youth in schools, communities, on citizen journalism related to water quality. Training of at least 50 leaders and youth.

Task 1.3 Initiate the Safe Water Quality Network bringing together affected communities, decisionmakers, and stakeholders and explore opportunities to coordinate and have ongoing collaboration.
Milestone 1.3.1 Map of decision makers created.
Milestone 1.3.2 Host first meeting where decision makers and affected communities can explore ongoing interaction to promote improved water quality

<u>Goal 2</u>: Disseminate to residents guidance, tools, and affordable and no-cost options for testing water and septic systems
Outcome 2: Increase in number of Puerto Ricans with information on water quality, with the tools and information needed to test their own water supply and septic systems, so that they can take informed steps to protect their health.

Task 2.1. Identify and source a list of approved water and septic system testing kits, with information on cost, where to procure, and the parameters tested, with our partners.
***Milestone 2.1.1*:** Identify resources for water quality testing with information on cost, where to procure, and the parameters tested.
***Milestone 2.1.2*:** Identify resources for septic system testing with information on cost, where to procure, and the parameters tested.

Task 2.2 Widely disseminate resources for water quality and septic system testing.
***Milestone 2.2.1*:** Disseminate these resources online and as part of the traveling exposition experience (Milestone 1.2.3 and Milestone 1.2.4).
If water quality testing kits are made available at low cost to Atma Connect, these will be distributed, and a small number are in the budget to be disseminated. If low or no cost reliable

tests are available we will procure and disseminate further. Additionally, we will collaborate with Government and Academic institutions to connect to existing databases online so that residents can upload their tested information. We will create a QAPP for this data.

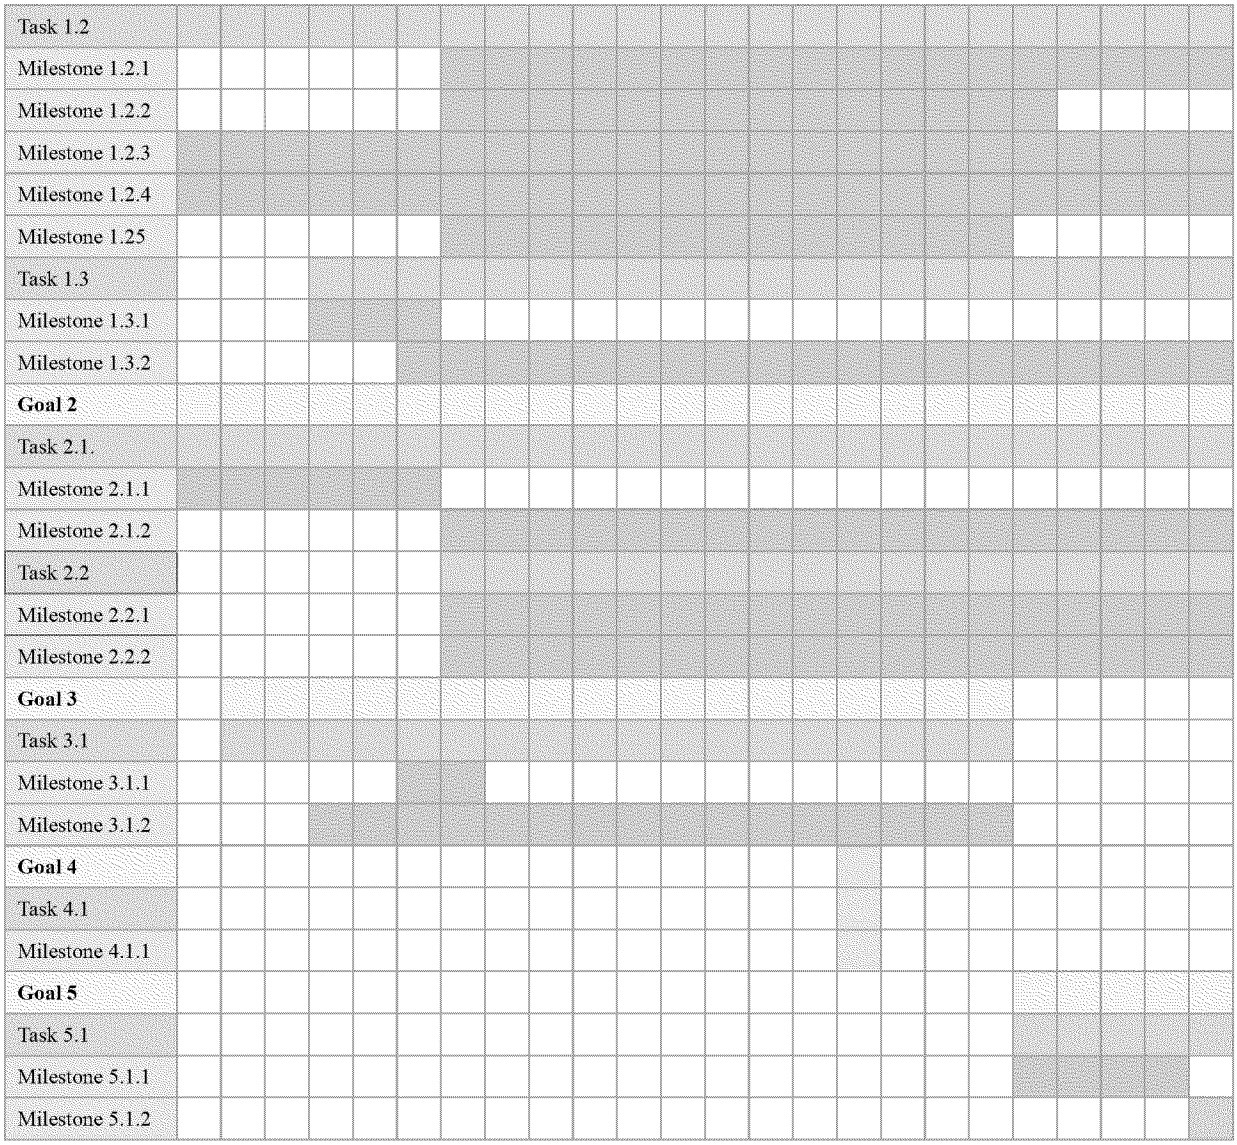
<u>Goal 3</u> Assist building and homeowners to access funding sources such as EPA, FEMA, and USDA for septic system upgrades
Outcome 3: Those with connections to buildings with septic systems (homeowners, realtors, commercial property owners) will gain funding for upgrades to their septic systems.

Task 3.1. Conduct a widespread outreach and public information campaign as part of the traveling exposition, targeting homeowners and building owners, letting them know about the availability of funds for upgrades.
Milestone 3.1.1 Document that information on septic system resources have reached over 1000 people through our online and offline programs.
Milestone 3.1.2 Document over 100 Puerto Ricans, both homeowners and commercial property owners trained in applying for septic system upgrades. This will be done through the town hall meetings as described below.

<u>Goal 4:</u> Connect residents to official information and encourage academics and health professionals to collaborate on data gathering to assess health impacts.
Outcome 4: Residents have access to official information from the academic, health, and government community so they are informed and can take action to protect their health.

Task 4.1: One or two townhalls with academics and health professionals and engaging 100 people in receiving information on water quality and getting resources to protect it.
Milestone 4.1.1 Conduct townhalls with academics and health professionals and the community.

<u>Goal 5: Collecting Lessons Learned</u>
Outcome 5: Improve water quality regulation, enforcement, and engagement in Puerto Rico by ensuring the lessons learned are collected, recorded, and shared.



Task 5.1 Creation of reports, surveys, and interviewing participants on the success and learnings of the program, and what needs to be improved
Milestone 5.1.1 Workshop with program partners to deconstruct successes and failures of the program
Milestone 5.1.2 All reports shared with program partners, funders, the US Government, and local municipal governing bodies.

2.b. Milestone Schedule

ED_016126_00001244-00011

2.c. Itemized Budget Sheet / Budget Narrative: See Attached Budget and Budget Justification

3.0 Environmental Results – Outputs, Outcomes, an Performance Measures (Logic Model)

3.a. Environmental Results (Logic Model): See Attachment in Other Attachments

3.b. Performance Measurement Plan

Based on the defined outputs and outcomes, we have an extensive system of tracking every person reached in person and online, and measuring behavior change. Our online systems are realtime and offline activities are tracked and recorded meticulously weekly in our databases and reviewed monthly through our Organizational and Project KPI data review. We collect detailed quantitative data (how many people, women, youth, professionals), evidence of activities including photos and quotes from participants, and survey data. We also collect quantitative data from our app and social media channels, the collection of qualitative data based on user interviews and focus-groups. Our internal data is gathered through analytics

services such as Google Analytics and Mixpanel. This is reviewed monthly and is presented to USEPA as requested, weekly, monthly, quarterly, or annually.

We will measure behavior change throughout the project to report outcomes. We have extensive experience doing this in online and offline surveys. Atma will use survey data as the main method of measuring behavior change metrics over the course of the project, as is our standard measurement procedure which we have had great success with in the past.

These surveys will be delivered previously to all training sessions, as well as distributed online. A pre survey will also be given to participants at training sessions, speeches, town halls, at the interactive exhibit measuring current levels of awareness and willingness to take action.

The main measurement goals we will be targeting will be:

- 75% of Puerto Ricans surveyed indicate they would change their behavior to access improved water quality (including testing septic systems, drinking water quality testing, accessing financial resources, advocating for improved policies and resources)
- 75% of Puerto Ricans surveyed said their knowledge of water quality increased
- 60% of Puerto Ricans surveyed said they would share information they received about water quality with their neighbors, family, and community
- 75% of Puerto Ricans surveyed said they would upgrade their systems if funding was made available

3.c. Sustainability Plan and Environmental Justice Integration

Our theory of change is that once Puerto Ricans come to learn that their drinking water is contaminated, and that the contamination may cause health consequences for the current and even future generations, they will be incentivized to seek remediation and meaningful solutions. The nature of the water contamination problem stemming from septic system failure is not given to simple and quick fixes. Our objective is to raise awareness of the problem and its serious health implications, and demonstrate some near-term mitigation strategies, such as water quality testing and access for building owners to public programs that offer funding for septic system upgrades.

Importantly, we intend that the network of players established and strengthened in the course of the project, The Safe Water Quality Network, will be a viable *ongoing* vehicle for representing community priorities to decision-makers. We have intentionally created a project task that involves introducing The Safe Water Quality Network to key decision-makers so they come to see the SWQN as an entity that can facilitate the involvement of affected stakeholders in policy development, data gathering, or program implementation, as needed. Similarly, we created a project task to map key decision-makers so the SWQN has a roadmap of who it will need to continue to interact with after the project concludes.

We believe the traveling exhibit that forms a key part of our outreach methodology is especially durable; it can be used to educate community members long after the project terminates, and will appeal to all age groups. We will ensure that a member of the SWQN takes stewardship of the exhibit and commits to continue its deployment after the project concludes. The educational materials that we assemble for the Safe Water Quality website (another project task) will be maintained as a knowledge resource beyond the life of the grant by Atma. Of course, the

ED_016126_00001244-00013

SWQN represents an important set of relationships that can be tapped in the future for other water quality initiatives, such as PFAS, which has already been identified in the Puerto Rico water supply.

Atma has a long term interest and has continuously maintained our online knowledge sharing hubs through the support of multiple partners including private sector partners. We are continuously operational in supporting community resilience in every community we enter.

4.0 Programmatic Capability

4.a. Organizational Experience

Atma Connect is a community based organization that creates bottom up networks and amplifies community voices towards environmental justice and community resilience. We believe in the power of "people helping people" and that people are resourceful and ingenious and it is their voices, solutions and ideas which need to drive community development activities. Atma Connect builds resilience among people through resilience events, trainings and workshops, and with our platform for neighbors helping neighbors—AtmaGo (https://pr.atmago.com/). We have been working in Puerto Rico since 2019, after the island was devastated by Hurricane Maria, and we are connecting people and communities across the island to build resilience. Our platform has reached over 10M people in Indonesia, and is also in Ukraine.

Atma has won numerous awards for its innovative and impactful approaches, which include solutions that can locate and support hard-to-reach individuals and communities striving to bring environmental justice to their communities. Atma's track-record includes:

- A peer-to-peer local disaster response network that reached millions of people and supports "mutual aid," where neighbors help neighbors;
- A peer-to-peer community development portal where community groups can promote their activities, coordinate volunteers, and showcase their impact;
- A Covid-19 info and peer to peer communication platform that reached over 3.5M people. In a survey, 85% of user said they changed their behavior after interacting with the platform; covi19.atmago.com
- A knowledge sharing exchange designed for farmers with limited education, so they can help each other with best practices;
- In-person digital literacy training sessions to help under-included populations, especially women, to access digital tools and resources.

Atma has engaged communities through in-person and virtual trainings and events, and through digital platforms that organizations like USAID, American Red Cross, The Nature Conservancy, and Mercy Corps use to reach front line communities and create behavior change, and brings nearly a decade of work in outreach and community engagement, sponsored by large foundations such as Ford Foundation, and technology companies including Cisco, Qualcomm, Amazon Web Services, and Twilio.

We have extensive experience in financial management of complex awards including being the largest subawardee for the USAID MADANI civil society support initiative in Indonesia to FHI360. We managed $950,000 in funding on a monthly cost-reimbursement basis through

ED_016126_00001244-00014

detailed month by month reporting for 4 years. Our budget for this project increased every year because of Atma's superior programmatic execution abilities, excellent and timely quarterly program reporting, and strong financial controls and reporting. We've also managed numerous high profile corporate grants of up to $650,000 from Qualcomm and Cisco, among others. We have successfully spent all funds on time and on budget, while delivering high quality impact.

4.b. Staff Experience / Qualifications of Project Manager (PM)

Erika Marrero is the Project Manager, she was born and raised in Puerto Rico. Intrinsically connected to her roots, one of her greatest motivations is to improve the quality of life of Puerto Ricans by giving them the tools to make informed decisions, and thus develop a better country. Erica serves as Project Manager for this grant. Since starting her career 12 years ago, Erika has worked and collaborated with organizations that nurture Puerto Rican culture and value, such as Fundación Dr. Francisco López Cruz, Museo del Mar Maritime Museum, Museum of the Americas, National Park Service's San Juan National Historic Site, the University of Puerto Rico, and other circus and martial arts organizations, such as ACirc, School of Performing Arts and Puerto Rico JuJitsu Academy. At Atma, Erika has been in charge of the design, planning, implementation and community outreach of the Digital Literacy and Citizen Journalism Workshops, the Voces de la Comunidad program, and, more recently, the De la Tierra a tu Mesa project, which lays the foundations for a network between farmers, markets, community and non-profit organizations, communities, and general inhabitants of Puerto Rico to access secure food. Erika is also daughter of a social worker mother, and a PRASA waterways planner father.

Ren Robbins, is Director of Partnerships at Atma Connect, is a seasoned project manager and a recipient of numerous Federal awards for leadership in public-private partnership. As Founder and longtime CEO of the AmTech Center for Collaboration, she developed large scale partnerships, including the NASA- industry partnership to develop drones and sensors for monitoring air quality. She was instrumental in developing the precursor to Relief Web under a grant with the U.S. Department of State. She acted as Partnership Manager for the $18B Federal program to redesign the air transportation infrastructure. The organization she managed administered $500M of government funding to multi-stakeholder project teams for cutting edge research and development. She is deeply involved in social impact work with low income communities and has substantial credentials in the arena of social impact measurement. She is conversant in Spanish.

Meena Palaniappan, CEO, Founder of Atma Connect is in the Project Oversight role, and has worked on Environmental Justice and Citizen Monitoring for over 25 years. She is an Ashoka Fellow, Fulbright Fellow, named in Ideas that are Changing the World, and an awardee of the Million Lives Club. She has worked in EJ since the 90s, prior to founding Atma Connect. She was instrumental in forming the highly successful West Oakland Environmental Indicators Project (https://woeip.org/), which has pioneered community driven environmental indicators. She also helped form Ditching Dirty Diesel, a regional network of environmental justice organizations.These initiatives have measurably improved air quality, infrastructure, and community health in communities, while raising millions of dollars in local and regional funding for environmental justice. In her role as head of Pacific Institute's Community Strategies for Sustainability and Justice Program, she served as Technical Assistance provider to numerous community-led environmental justice efforts across California, and co-authored

ED_016126_00001244-00015

numerous reports including: Neighborhood Knowledge for Change, Paying With Our Health, Community Based Participatory Research and Advocacy.

c. Expenditure of Awarded Grant Funds

Atma Connect as a 501-c-3 non profit organization, and a recognized non profit community organization by the Puerto Rico government, has extensive experience managing U.S. Government Subawards. We will adhere to the timeline and workplan detailed above to ensure timely spending of grant funds according to the agreed upon schedule. The financial team also produces monthly financial reports that are approved through all the levels of financial checks and balances and submitted to donors and partners. Additionally, though we are not required to due to our annual budget size, for the last 5 years we have completed annual financial reviews from an independent auditor, which we have attached 2 in the Other Attachments section.

We have received and managed $950,000 over 4 years a subaward for Civil Society Strengthening from USAID and FHI360 through the $25,000,000 MADANI program. We are managing this large scale cost-reimbursable grant, and will manage this funding in the same format: The Operations and Program Director is responsible for processing all incoming invoices/bills and check requests by preparing the bills for coding. When an invoice or check request arrives, Operations and Program Director reviews invoices and sends to Bill.com. Bookkeeper/ Accounting Firm processes and codes the invoices in Bill.com. The Operations and Program Director and the CEO are notified of the invoices. The assigned Manager reviews and approves the invoice. Once approved and coded, the Bookkeeper enters into Quickbooks as a bill. The Bookkeeper then schedules the bills for payment via Bill.com. The Operations and Program Director and the CEO are notified of the scheduled payment.

Roles and Responsibilities

Name	Title	Years of Experience	Roles and Responsibilities	Separation of Responsibility
Meena Palaniappan	CEO	25	Budget creation, monitoring, and bill approval	Master Admin
Eos de Feminis	Financial Administrator	25	Bill approval according to approved budget	Custom Access
Indra Alfonso	Operations and Program Manager	10	Processing all incoming invoices/bills and check requests by preparing the bills for coding	Company Admin
Smarter Good	Accounting Firm	20	Processes and codes the invoices in Bill.com. Develops monthly reports	Accounting Firm Access

5.0 Past Performance

5.a. Past Performance

1. USAID MADANI Civil Society Support Initiative as a subgrantee to FHI360, Atma Connect implemented digital literacy, citizen journalism, and storytelling for social impact trainings and workshops for 32 Civil Society Organizations (CSO) across Indonesia, created a dedicated Covid-19 (covid19.atmago.com) platform with critical information, free telecounseling, and peer-to-peer behavior change content, we built and socialized a platform for CSO capacity building and technical assistance, simpulmadani.atmago.com.
Total Value: $950,000 Dates: April 2020-Present
Reporting and Execution: We met and exceeded all programmatic and financial reporting requirements for this complex multi-year award. Our reports were submitted on time and we met and exceeded expected outputs and outcomes. Program: Every week, we reported on number of people reached, conducted weekly update meetings with the lead partner, submitted highly lauded quarterly progress reports that exceeded expectations, leading to increasing budgets every year. We exceeded set targets for KPIs every quarter, and submitted progress reports prior to the deadline every quarter. Financial: As a cost-reimbursable subgrant, we submitted monthly financial reports which were submitted on-time and with no errors.

2. Vodafone Americas Foundation We built a women helping women platform to lift up community leaders in Puerto Rico so they can learn from and inspire one another, document and share their impact through an online platform, and gather supporters and resources to expand their work. We also created a Voices of the Community Program to share the successes of women leaders across Puerto Rico.
Total Value: $160,000 Dates: 2018-2022
Reporting and Execution: We completed quarterly and yearly progress reports that were on-time and exceeded all reporting requirements and tracking of outputs and outcomes. We completed financial reports on-time and met all requirements. As a result, we received year over year continued grant funding over three years for work in Puerto Rico.

3. Qualcomm Corporation Wireless Reach: Women's Empowerment and Public Safety Qualcomm worked to empower women through the AtmaGo mobile app. AtmaGo's tools enable women, families, governments and authorities to connect with each other to prevent, detect, respond, and recover from these local issues.An independent evaluation by CIPG showed that AtmaGo increased social cohesion, and reduced mortality, morbidity and economic loss from disaster.
Total Value: $650,000 Dates:2019-2022
Reporting and Execution: We completed online quarterly and yearly progress reports including financial, programmatic and KPI tracking that were on-time and exceeded all reporting requirements and tracking of outputs and outcomes. We completed financial reports on-time and met all requirements. As a result, we received year over year continued grant funding over three years and were highlighted by Qualcomm in a national event as a partner.

4.Cisco Systems: Disaster Preparedness and Resilience Award. Cisco Foundation was the flagship funder who helped Atma to develop and launch the AtmaGo app to improve the resilience of low-income communities in Indonesia and globally so that they can prevent, respond to and recover from disasters and chronic threats. Through our work together, we

reached millions of people with critical information on food, water, shelter, and disaster, and expanded AtmaGo to Puerto Rico to address disaster and community resilience needs.
Total Value: 650,000 Dates: 2017-2022
Reporting and Execution: We completed online quarterly and yearly progress reports including financial, programmatic and KPI tracking that were on-time and exceeded all reporting requirements and tracking of outputs and outcomes. We completed financial reports on-time and met all requirements. As a result, we received year over year increases in grant funding over four years, which was an additional year of funding than Cisco usually provides to its partners because of our above and beyond execution and reporting abilities in line with Cisco goals.

Other Example Awards and Grants:
DFID Amplify Urban Resilience Challenge in partnership with USAID, the Rockefeller Foundation and Global Resilience Partnership (2016 - 2018) - Atma was able to fund citizen journalism, women's empowerment, and pilot CSO partnerships that developed models for using our technology to build the capacities of local governments. **Twilio - Disaster Communication.** With the support of Twilio, In 2019 and 2020, we made significant progress towards our goal to reduce mortality and morbidity in disasters and empower people to prevent the next disaster. We achieved this by expanding the reach and impact of disaster communication for vulnerable communities and by supporting greater numbers of people in crisis and reducing response times. Through this project, Atma reached an additional 2,030,482 people with disaster, crisis, and community information. In addition, we directly reached over 1,000 people through disaster prevention and resilience events.
Reporting and Execution: In all of our work, Atma Connect has met and exceeded programmatic goals for outputs and outcomes, leading to increases in grant sizes for ongoing projects. We have also met and exceeded financial reporting requirements. Everything is completed on time or ahead of schedule. We complete annual audit reviews of our finances although our size does not currently require this.

6.0 Quality Assurance Project Plan (QAPP) Information

This project will require a Quality Assurance Project Plan (AQPP), which will be developed upon notice of award.

Bronx River Alliance

40 C.F.R. 5 and 7 Policies and Procedures

Based on employee handbook

EQUAL OPPORTUNITY EMPLOYMENT STATEMENT

Bronx River Alliance (the Alliance), in recognition of its responsibility to its employees, clients, and to the communities in which it operates, is committed to equality of opportunity. To this end, the Alliance's policy is to comply with the laws, regulations, and orders that provide for and impose obligations on employers with respect to equal employment opportunity.

Accordingly, the Alliance conducts its business and practices in a manner that fully complies with applicable federal, state, and local laws governing equal employment opportunity. The Alliance's compliance with such laws is intended to eliminate discrimination against employees or applicants for employment on account of race, color, religion, sex, sexual orientation, marital status, age, national origin, veteran's status, disability, or other factors unrelated to a person's ability to do the job. To achieve these goals and make the Alliance a stronger organization and a more rewarding place for all employees to work, the Alliance:

- Recruits, hires, trains, and promotes persons in all job classifications without regard to race, color, religion, sex, sexual orientation, marital status, age, national origin, veteran's status, or disability.
- Ensures that promotion decisions comply with the principles of equal opportunity.
- Ensures that compensation, benefits, transfers, layoffs, recall, training, education, social and recreational programs, and similar policies, benefits, and programs are administered without regard to race, color, religion, sex, sexual orientation, marital status, age, national origin, veteran's status, or disability.

The Alliance, through responsible managers and maximum cooperation between management and employees, strives to ensure that all personnel actions are administered in accordance with this policy, so that all employees may enjoy a work environment free from all forms of discrimination.

The Executive Director is responsible for this policy's implementation. Any employee with a suggestion, problem, or complaint should feel free to contact the Executive Director or the Director of Finance and Administration.

The Alliance prohibits any form of retaliation against any employee for filing a complaint under this policy or for assisting in a complaint investigation. Anyone found to be engaged in any type of unlawful discriminatory conduct will be subject to corrective action, up to and including termination.

ANTI-HARASSMENT POLICY

It is the Bronx River Alliance policy that all employees are to be treated with dignity and respect. This standard applies no matter what the interaction and in every phase of operations. It includes interactions with coworkers or third parties who deal with the Alliance. Supervisory personnel who are required to give performance feedback, whether of a positive or negative nature, are expected to do so in a constructive, respectful manner. Action contrary to these types of behavior will not be accepted or tolerated.

Getting to know one another does not give anyone the right to take verbal or physical liberties. Conduct characterized or meant as teasing, joking, playfulness, or even a compliment, can contribute to harassment if it is *unwelcome* by the recipient.

The Alliance does not tolerate any individual verbally or physically harassing any other individual on the basis of that person's color, race, creed, national origin, sex, sexual orientation, gender, marital status, partnership status, age, military status, alienage, citizenship status, domestic violence victim status, disability, genetic information, or any other status protected by law.

The Alliance prohibits all forms of sexual harassment, including unwelcome sexual advances, requests for sexual favors, and other inappropriate verbal or physical conduct of a sexual nature. The Alliance will impose appropriate corrective action up to and including dismissal on any employee who engages in such prohibited action where:

- there is an attempt made to make submission to such conduct a term or condition of an individual's employment; or
- the submission or rejection of such conduct is used as a basis for any employment-related decision; or
- such conduct has the purpose or effect of substantially interfering with an individual's work performance or creating an intimidating, hostile, or offensive work environment.

Reporting Procedure

- Any incidents of harassment or treatment in an unlawful, discriminatory manner, whether personally experienced or observed, should be promptly reported, in confidence, to the immediate supervisor. If employees feel it is appropriate given the particular circumstances, and if they feel comfortable doing so, employees may also communicate directly with the source of the harassing behavior.
- If an employee feels uncomfortable discussing the matter with the immediate supervisor, the incident should be reported directly to the supervisor's supervisor or the Director of Finance and Administration who will make efforts to find a location for a private and confidential conversation and will undertake an investigation.
- If an employee feels uncomfortable discussing the matter with the supervisor's supervisor or Director of Finance and Administration, the incident should be reported to the Executive

Director. If a complaint is against the Executive Director, notification should be made directly to the chair of the board of directors who will undertake an investigation.

- Information regarding a complaint will be held in confidence to the extent possible and will be disclosed only on a need-to-know basis in order to effectively investigate and resolve the matter.
- Supervisors are required to report all complaints brought to their attention to the Director of Finance and Administration and Executive Director or, if the complaint involves the Executive Director, to the Chair of the Board of Directors.

If the Alliance's investigation determines that an employee or third party is guilty of harassing an employee, appropriate action will be taken against the offending individual, including corrective action against an offending employee up to and including termination.

The Alliance prohibits any form of retaliation against any employee who in good faith makes a complaint under this policy or assists in a complaint investigation.

NJ EJ Education Collaborative Logic Model

Current Conditions: OBC residents across NJ face disproportionate environmental and public health stressors but lack sufficient capacity to effectively engage in decision-making that affects environmental conditions in their communities.

Desired Outcome: OBC residents across NJ are empowered with sufficient knowledge and expertise to effectively engage in environmental decision-making to help reduce environmental burdens and increase environmental benefits in their communities.

Resources and Inputs	Activities	Outputs	Audience	Short-term Outcomes (6-12mo)	Intermediate Outcomes (12-24 months)	Long-term Outcomes (3+ years)
-Hub Leader staff time -NJEJA staff time -Comms mgr time -Hub member orgs time -Kean U. staff time -NJDEP staff time -Participant time -Website contractor time -Video editor time	-Quarterly meetings of Collaborative Team (CT) of hub leaders and partners -1:1 meetings between Hub Leaders and project manager -Each hub recruits 2-3 organizations to their hubs -Each hub member group recruits 2-3 community members to attend quarterly seminars -Each hub meets twice with its member groups -CT plans youth inclusion -CT investigates credentialing options -DEP pilots curriculum with Hub Leaders -DEP collects feedback -DEP modifies curriculum -CT conducts 4 quarterly seminars	-Recruit 2-3 hub member organizations per hub leader -Recruit 10 participants per hub -Launch media outreach at each hub -Conduct 4 quarterly seminars -15 participants certified -Graduation ceremony -EJ tour conducted -create 10 - 12 virtual modules -Launch website	-Residents and CBOs in OBCs in NJ -Coordinate with TCTAC hubs	-Hub Leaders and members have structure for networking -Hubs have access to curriculum to increase capacity	-Increased outreach capability in each region from social media builds community and inter-community ties -Trained participants use new EJ knowledge base to increase OBC civic engagement capacity	-OBC residents' peer mentoring further expands capacity to participate in statewide environmental decision-making processes and public engagement opportunities -OBC residents are better able to engage in

	-CT solicits and incorporates feedback after each seminar -CT plans and attends EJ tour -CT plans and attends graduation -CT links participants through social media group -Kean integrates seminars into onsite Summer Youth Program -DEP integrates seminars into Summer Youth Inclusion Program -CT and contractor develop modules for website -NJEJA oversees development of web platform by contractor -Communications Mgr. develops social media and marketing strategy				-Certifications give green employment advantages to graduates -OBCs are better prepared to respond/communicate to community emergencies	local processes including green teams, environmental commissions, zoning/planning boards -OBC residents are better prepared to be seated on local bodies -OBC residents are better prepared to develop solutions to community issues

KEAN
John S. Watson Institute for
URBAN POLICY & RESEARCH

Partner Letter of Commitment

April 13, 2023

Nicky Sheats, Ph.D., Esq.
Director, Center for the Urban Environment
John S. Watson Institute for Urban Policy and Research
Kean University

Melissa Miles
New Jersey Environmental Justice Alliance (NJEJA)
PO Box 1398
Summit, NJ 07902

Dear Ms. Miles,

The Center for the Urban Environment of the John S. Watson Institute for Urban Policy and Research at Kean University is pleased to confirm our commitment to serve as an educational consultant in support of the Environmental Justice Collaborative Problem-Solving (EJCPS) Cooperative Agreement Program anticipated to start on or about 11/1/2023 for a period of 36 months.

We understand that NJEJA will support this team by acting as the lead applicant and will provide overall project management for the Hub Leaders, hub member organizations and the seminar participants.

Our expectations are that the Center for the Urban Environment will:

- Attend relevant meetings with Hub Leaders and NJEJA
- Recruit member organizations and participants
- Hire Interpreters as needed
- Solicit feedback from member orgs and participants
- Host one hybrid recruiting meeting for local member orgs
- Help plan and attend an EJ tour
- Track financial and non-financial data
- Submit required reports

For our expertise and participation, NJEJA will award the Center for the Urban Environment:

ED_016126_00001279-00001

Potential Seminar Topic Categories and Modules

Framing: Environmental Justice and DEP's Role

- DEP Introduction: What is DEP and what role does it play in EJ?
  Overview of the jurisdiction, functions, and structure of DEP, and how its activities and decisions impact environmental justice. Discussion of premise for these seminars: increasing accessibility of engaging with DEP and environmental decision making for residents of OBCs across the state.
- EJ Advocate Introduction: Purpose of this training for EJ Communities
  Discussion about why such trainings can help equip residents of overburdened communities engage effectively with environmental decisions affecting their communities. Brief overview of best practices for EJ advocacy in NJ.

Regulatory

- Permits
  - How to read a permit and submit comments
    Broad overview of DEP permits including where to find them on the website, key components, what type of information to look for and how to submit comments.
  - Permit examples to demonstrate how to read a DEP permit
    - *Air, Energy & Materials Sustainability (AEMS) permit.*
    - *Water Resources Management permit.*
    - *Watershed & Land Management permit.*
  - Facilitated Discussion

- EJ Law
  - EJ Law and rules overview
    Key elements of NJ's EJ Law and implementation rules, including types of facilities impacted, definition of overburdened communities (OBCs), adversely impacted OBCs, Environmental Justice Mapping and Planning (EJMAP) tool, enhanced public engagement process, and Environmental Justice Impact Statement (EJIS).
  - EJ Law details
    - Environmental Justice Impact Statement (EJIS)
      Purpose and components of an EJIS, the brief summary provided with public hearing announcement, how community members can request access, and how to read and comment on an EJIS.
    - Public engagement requirements and best practices
      Discuss enhanced public engagement requirements for facilities subject to the EJ Law, how to testify at the public hearing, how to submit comments and best practices to enhance community engagement.
    - Environmental Justice Mapping and Planning (EJMAP) tool
      Demonstration of how to use EJMAP, navigate tabs, and find information using an example location.
  - Facilitated Discussion

Environmental Tools

- Overview of environmental monitoring and data tools
  Overview of environmental monitoring including, goals, limitations, and environmental data tools available on DEP's website.

DRAFT

- Tool demonstration
  - What's in My Community Tool: AEMS and SRP tools
    Demonstration of how to use the AEMS and SRP What's in My Community tools.
  - DEP DataMiner
    Demonstration of how to find various types of information in DEP DataMiner.
  - Healthy Community Planning New Jersey (HCP-NJ)
    Demonstration of how to find and interpret reports on the Healthy Community Planning NJ website using a sample community.
- Facilitated Discussion

Funding

- Key sources of infrastructure and other funds and how to obtain those funds
  Discussion of major sources of funding available to NJ communities for environmental projects, what goes into developing a successful application for overburdened communities (OBCs), and how to find assistance for the application process.
- Example funds and processes
  - Water infrastructure
    Presentation of key water infrastructure funds available to NJ communities, their requirements, prioritization or assistance available for OBCs, and discussion of factors that contribute to an effective application and project using example of a successful project in an OBC.
  - Green acres
    Discussion of requirements of Green Acres funds, prioritization or assistance available for OBCs, and use the example of a Green Acres project in an OBC to explore best practices for a successful application.
  - Air, climate and clean energy
    Discussion of types of funding available for air quality, climate mitigation, and clean energy, their requirements, and best practices for successful projects.
- Facilitated Discussion

New Jersey Community Case Studies

- Policy
  - NJ's EJ Law
    Overview of the history of the mobilization and strategies that led to the development, passage, and enactment of NJ's EJ Law and lessons for enacting environmental policy change.
  - Newark and Camden EJ Ordinances
    Overview of municipal EJ ordinances in Newark and Camden, history of mobilization that led to enactment, strengths and weaknesses of these ordinances, and how to enact similar ordinances in other municipalities.
- Community Projects
  Exploration of community level projects implemented through community initiative or engagement, including best practices, lessons learned, and how to replicate similar projects.
  - Community Air Monitoring
  - Brownfield cleanup and redevelopment
  - Green Infrastructure
  - Climate Resilience Planning
- Facilitated Discussion

Communications Mgr.	$ 60,000	
Executive Director	$ 75,000	
Support Staff:	$ 125,000	
	total	**$380,000**

Fringe

NJEJA staff's benefits are approximately 30% of their salaries = **$ 114,000**

Travel

There will be some local & regional travel for NJEJA staff = **$5,000**

Equipment

No likely equipment costs = **$ 0**

Supplies

This will likely be in the form of light refreshments at each gathering = **$2,500**

Contractual Costs

Videographer/Editor = **$60,000**

- This is to professionally film each educational module, edit them and upload them to a website for free public use.

Web master = **$10,000**

- A web master will create the website structure to house the video modues and ensure it's easy for public use.

Other

Hub Leaders: for 3 Hub Leaders (not including NJEJA) as subawardees, the funding will pass through NJEJA to Isles, Inc., NAAC, and O.C.E.A.N., Inc. @ $80,000 over 3 years = **$240,000**

Kean University: As the academic partner over 3 years they will receive = **$50,000**

Participant Stipends: approximately 40 participants @ $100/seminar x 4 seminars = **$16,000**
Possible bonus for extra participation/more participants, etc. = **$4,000**

Extra Costs

To attract quality partners and participants, most of the grant funding budget had to be directed to the subawardees, leaving a gap that NJEJA must fund = **$381,500**

Total Costs = $881,500

- Year 1 = $10,000
- Year 2 = $20,000
- Year 3 = $20,000

We are well-suited to provide educational assistance as described under this RFA, and we have a long track record of educating and empowering communities to address pressing Environmental Justice threats.

Sincerely,

Nicky Sheats

NEW JERSEY ENVIRONMENTAL JUSTICE ALLIANCE

Resume Summaries

Chris Tandazo, Statewide EJ Organizer

New Jersey Environmental Justice Alliance | New Jersey
Statewide Environmental Justice Organizer (formerly Community Connections Program Manager)
February 2021 - Present

Connecting EJ grassroots organizations in NJ to build NJEJA's membership and create an EJ Movement stronghold in NJ.

- Conduct grassroots and community outreach and events including developing and executing online organizing campaign strategies
- Contribute to and file comments/testimony on proposed legislation in conjunction with the staff and board.
- Serve as a bridge between the policy field and community engagement by connecting local EJ coalitions to statewide and national efforts.
- Coordinate and co-lead relevant NJEJA Committees and coalitions.

Cooperative Climate Futures (CCF) | New York City, NY
Co-founder | Research & Development Officer. February 2020 - Present

Founding member of CCF, a collective of community organizers, designers, researchers, and farmers that seeks to support the mobilization towards climate and environmental justice by building community-led ecological interdependence.

- Co-developed & co-designed The Hub, an online climate education platform
- Conducted a Community Beta Test to gather feedback on The Hub
- Manage internal communications between members and partners
- Prepare, write, and edit grant proposals

Dr. Cynthia Hall

New Jersey Environmental Justice Alliance, Summit, NJ
Community Education Manager (formerly Law and Policy Program Manager) 2023-present

Develops curricula on environmental justice issues in NJ; Facilitates workshops, courses, and programs for community groups

Rowan University, Department of Environmental Sciences, Glassboro, NJ
Adjunct Professor 2022-present

Teaches courses on Soils, Contaminants in the Environment, and Global Environmental Change

Free Haven Farms, Lawnside, NJ
Co-Founder and Scientist 2017-present

Farm and manage 6 acres of growing space, operate weekly farmer's markets and 200+ member Community Supported Agriculture (CSA);
Facilitate educational programs that encourage and teach people how to grow their own Food

West Chester University, Department of Earth and Space Sciences, West Chester, PA

Instructor of Geosciences 2019-2022
Assistant/Associate Professor 2008-2019
Adjunct Professor, Frederick Douglass Institutute 2007
Taught undergraduate/graduate courses in Environmental Sciences and Geochemistry; Conducted research with undergraduate/graduate students on lead contamination and environmental justice; Served on various committees at department, college, university levels

Dyna Anderson

New Jersey Environmental Justice Alliance (NJEJA) January 2023 – Current
Communications and Engagement Manager (formerly called Program Manager)

- Compose and implement a range of content, such as newsletters, website copy, brochures, and press releases and daily social media, to support communications, marketing activities and strategic alliances.
- Analyze data and provide reports highlighting the accomplishments and shortcomings of communication initiatives and strategies.
- Arrange press conferences and respond to media queries and contact reporters and other press personnel.
- Organize volunteers, helpers, suppliers, and other parties to assist with promotional events.
- Participate in the Healthy Ports Coalition

Global Foundation for Girls (GFG), Remote August 2021 - Present Youth Development & Policy Officer

- Manage youth policy work on Birth Justice, Gender Based Violence, and Children in Crisis.
- Support the development and launch of GFG's policy and digital advocacy work and materials
- Research and support GFG movement-building work through network and outreach, leading a webinar series, and various program-related events.
- Support and recruit MSW interns and develop structure, training & workshop materials for the international youth fellowship program.
- Develop an interactive policy map for up-to-date Reproductive Justice and Birth Justice state-by-state policy information

Sarah Baldwin

NJEJA | Trenton, NJ May 2022 — Present
Operations Manager

- Oversee and manage internal processes and systems for a statewide nonprofit organization focused on eliminating environmental injustice in low-income communities
- Manage high-level organizational functioning by integrating various systems (grants management, payroll, accounting, etc.) and companies
- Support programmatic staff with event coordination and planning; monitor and update financial reports as needed; lead external communications via social media and email

Bloustein School of Planning and Public Policy | New Brunswick, NJ August 2021 — January 2022
Assistant, Career Services

- Planned and moderated relevant speaker events, focusing on engaging experts in environmental and transportation policy; created marketing materials; drafted and proofread Communications materials

NEW JERSEY ENVIRONMENTAL JUSTICE ALLIANCE

Melissa Miles

Executive Director NJEJA JULY 2020 - PRESENT

Leadership of a statewide organization with local, regional and national influence:

- Building organizational infrastructure through strategic planning and action
- Supporting frontline organizations with Environmental Justice policy expertise
- Educating and organizing social justice organizations on EJ issues and campaigns
- Working with the NJ Department of Environmental Protection to promulgate the rules for the recently passed Cumulative Impacts/EJ Law
- Working with state agencies to center EJ and to promote mandatory emissions reductions in climate change mitigation policy
- Cultivating relationships with foundation staff and grant writing and reporting
- Managing staff, consultants, volunteers and interns Environmental Justice Manager

IRONBOUND COMMUNITY CORPORATION MARCH 2018 – JULY 2020

Working closely with colleagues and allies to further the work of the department and the agency including:

- Organizing legal and academic partners to support our EJ campaigns
- Testifying at hearings hosted by local and national government agencies
- Participating meaningfully in organizational visioning, strategic planning and leadership transitions
- Representing the organization amongst various stakeholder groups
- Fostering partnerships with other grassroots and base building organizations towards realizing common goals
- Sharing the department's broad scope of work with potential partners, allies and funders
- Grant writing and reporting as part of a leadership team
- Speaking to local and national media about environmental and climate justice issues and policies
- Writing job descriptions and leading hiring team for new organizer position
- Supervising and mentoring Community Organizer

SECTION F - OTHER BUDGET INFORMATION

21. Direct Charges: = $437,936

22. Indirect Charges: = $ 62,064

23. Remarks: Indirect charges per our Negotiated Indirect Cost Rate Agreement/NICRA with the USDOL, our cognizant agency.

B. Equal Opportunity Is the Law

1. It is against the law for PathStone as a recipient of Federal financial assistance to discriminate on the following bases:

   - Against any individual in the United States, on the basis of race, color, religion, sex, national origin, age, disability, political affiliation or belief; and
   - Against any beneficiary of programs financially assisted under Title I of the Workforce Innovation and Opportunity Act (WIOA) of 2014, on the basis of the beneficiary's citizenship/status as a lawfully admitted immigrant authorized to work in the United States, or his or her participation in any WIOA Title I-financially assisted program or activity.

2. The recipient must not discriminate in any of the following areas:

   - Deciding who will be admitted, or have access, to any WIOA Title I-financially assisted program or activity;
   - Providing opportunities in, or treating any person with regard to, such a program or activity; or
   - Making employment decisions in the administration of, or in connection with, such a program or activity.

3. What to Do If You Believe You Have Experienced Discrimination

   If you think that (a) you have been denied the rights you are entitled to under the Workforce Innovation and Opportunity Act (WIOA), Americans with Disabilities Act and/or Equal Employment Opportunity Act as published, or (b) if you think that you have been subjected to discrimination under a WIOA Title I-financially assisted program or activity, or (c) if you think that your Civil Rights have been violated, you may file a complaint within 180 days from the date of the alleged violation. PathStone staff is required to assist you, upon request, in filing such a complaint. You may file this complaint with either:

   - The Vice President of Human Resources, PathStone, 400 East Avenue, Rochester, NY, 14607; or
   - The Director, Civil Rights Center (CRC), U.S. Department of Labor, 200 Constitution Avenue NW, Room N-4123, Washington, DC 20210.

If you file your complaint with the recipient, you must wait either until the recipient issues a written Notice of Final Action, or until 90 days have passed (whichever is sooner), before filing with the Civil Rights Center (see address above).

If the recipient does not give you a written Notice of Final Action within 90 days of the day on which you filed your complaint, you do not have to wait for the recipient to issue that Notice before filing a complaint with CRC. However, you must file your CRC complaint within 30 days of the 90-day deadline (in other words, within 120 days after the day on which you filed your complaint with the recipient).

If the recipient does give you a written Notice of Final Action on your complaint, but you are dissatisfied with the decision or resolution, you may file a complaint with CRC. You must file your CRC complaint within 30 days of the date on which you received the Notice of Final Action.

ED_016126_00001304-00002

SUMMARY OF RESPONSIBILITIES

PathStone	Participant	3rd Party Program Site
Keep appointments	Keep appointments	Keep appointments

Total				$241,765

The Director of Puerto Rico Training & Employment Operations is responsible for overall project management, direction, staffing, performance, qualitative reports, strategic partnerships and contracts, program-wide compliance and model integrity, and compliance with all local Human Resources requirements with the assistance of the PathStone's Human Resources Department. The Project Administrator will provide day-to-day supervision, program monitoring, guidance and services for the

regional field offices; Arecibo, Barceloneta, Utuado. The Community Resiliency Developers provide and coordinate outreach and recruitment services; case management; career and training services; participant tracking and follow-up; relationships and referrals in the catchment sectors for their field offices. The Program Analyst will provide budget development and monitoring, fiscal analyses, field office need forecasts and budget adjustments, including tracking appropriate expenditures and documentation of grant, match and leveraged funds, and completing close out procedures. The Program Analyst will also deliver budgeting and financial management training and technical assistance to all staff in this program.

b. Fringe - $75,697

Fringe Benefit Detail Chart	
Fringe Benefit	Percentage
F.I.C.A.	7.65
Unemployment Insurance	4.50
Short Term Disability	0.23
Long Term Disability	0.47
Life Insurance	0.35
E.A.P. Plan (Employee Assistance Program)	0.08
Workers' Compensation	1.10
Pension Plan	4.70
Cafeteria Plan & Family Health Insurance Subsidy	12.23
Total	31.31

c. Travel - $17,788

Travel includes mileage reimbursement at the rate of $ .655/mile for program-related travel in staff personal vehicles (estimated 1,323 miles per year per staff (7,938 miles); total $5,199)

The number of trips involving airfare/ground transportation, lodging, meals and incidentals is estimated at 1 per year for 3 years. The purpose of the trips are for 2 staff to attend the annual grantee meeting.

The total non-mileage reimbursement travel budget of $12,588.84 is broken down as follows:

Airfare: Estimated 3 round-trips (1 per year) = $1,315.80

Lodging: Estimated 3 trips averaging 3 night's stay (1 per year) = $3,157.92

Ground Transportation: Estimated 3 trips requiring ground transportation (1 per year) = $612.00

Meals and Incidentals: Estimated 15 days (5 days per trip) = $1,208.70

d. Equipment - $0
e. Supplies - $16,766

The cost of basic supplies (pens, paper, printer cartridges, staples, tape, envelopes, business cards and filing materials) needed to support local project delivery is project at $61 per month: $2,196. Costs for postage are projected at $1,800. Costs for printing of program promotions and outreach materials is projected at $2,400. Technology costs for 2 staff laptops, 2 projectors, CDs, software, etc. are projected at $3,170. Costs for staff workstations for 2 staff (desk, chair, mat and table) are projected at $3,600. Costs for emergency backpacks to be provided to module one graduates, 50 backpacks at $45 per backpack, is projected at $2,250. Costs for 30 additional backpacks, 10 to be distributed at each community event, is projected at $1,350.

f. Contractual - $0
g. Construction - $0
h. Other - $85,920

Costs for services to participants ($44,550): Costs for disaster and emergency survial and response training is projected at $19,750; $4,000 each for module one for two cohorts, $2,900 each for module two for two cohorts plus $1,175 each for certification for two cohorts, and $1,800 each for module three for two cohorts. Costs for transportation of participants is projected at $2,000. Costs for Automated External Defibrillator and CPR training are projected at $1,200. Costs for development and expansion of community resource plans to minimize exposure to pollutants in the event of natural disasters in underserved communities and vulnerable populations is projected at $21,600; $2,400 per community (Arecibo, Barceloneta, Utuado) per year over three years.

Costs for service delivery sites ($31,320): Facility costs are projected as follows: Rent at $20,520; Utilities at $5,400; Phone/DSL connection at $5,400.

Costs related to quality and partners ($10,050): Recruitment of qualified staff is projected at $300; this includes print and online advertisement to obtain candidates for program positions. Training/Staff development is projected at $4,500. Costs for partner meetings are projected at $2,250. Costs for final community event for sharing and leaning from the program and updated community disaster response plans in projected at $3,000.

i. Total Direct Charges - $437,936
j. Indirect Charges - $62,064

Indirect costs of $62,064 are calculated at 19.55% on the sum of Personnel plus, Fringe Benefits ($241,765+$75,697=$317,461), according to our attached Indirect Cost Rate Agreement (NICRA) with the U.S. Department of Labor, our cognizant agency.

k. Total - $500,000

Logic Model for

EJCPS in Arecibo, Barceloneta and Utuado, Puerto Rico - PathStone

Goals

Assist residents of underserved, high poverty, rural, Hispanic communities to develop emergency preparedness and disaster resiliency skills and plans to minimize exposure to pollutants, exploitation, injury and illness and maximize healthy recovery and thriving before, during and after natural disasters

Assumptions

- Established partnerships with referral sources will yield eligible individuals to enroll
- Established partnerships with community partners accepting referrals for technical assistance and other resources.
- Qualified staff will be retained to provide services they have been trained / certified to deliver:
- Space and other program resources will continue to be available
- Election outcomes in target communities will not impede project implementation or timeline

(Add additional as necessary)

Inputs

- Organization structure, knowledge, policies, procedures, data system
- US EPA funding
- Program Staff - existing experienced staff
- Program resources (space, materials, program data)
- Community sites for use
- Partners to provide referrals & supp services
- Training / Education partners
- Community support
- EPA Project Officer

Potential Barriers

- Environmental impact (COVID, natural disaster, racial issues and social unrest)
- Trauma from historical and experienced violence
- Local or national political change leading to decreased funding/interest in supporting capacity bldg

Activities

Activities	Outputs (*Describe metrics*)
Program intake (interview, assess, explore needs, screen)	-Number of Intakes=115 (This and all outputs below verified by documentation)
Deliver · Training: Disaster/Emergency Response - module 1	-Number of Individuals complete training = 100 -Number of Individuals attain ICS/NIMS certification = 35
Deliver · Training: Disaster/Emergency Response - module 2	-Number of Individuals complete training = 25 -Number of Individuals attain FCC certification = 10
Deliver · Training: Disaster/Emergency Response - module 3 Quarterly partner reviews	-Number of Individuals complete training = 22 Documentation of plans
Facilitate Community Response Plan review/renew	New / renewed Community Response Plan by each community = 3
Semi-Annual Reporting Follow up/one year	Reports submitted on-time/accepted = 2 per year = 6 total 2026 follow up reports submitted = 2

Outcomes

Shorter Term

Individuals experiences success from new skills and knowledge planned at enrollment (goal achieved; self reports)

Residents gains skills and knowledge for smooth entry into resiliency activities including Community Response Plan (Observation of use of new skills; self-reports)

Individuals engaged in project activities

Residents gain skills and knowledge to undertake desired resiliency activities (demonstration, observation)

Participants have capacity increase enabling moves toward self-sufficiency, care of others (self-report; observation)

Partners work in alignment

Community has new Community Response Plan better suited to their needs

In compliance with EPA requirements

Longer Term

Participant gains self-efficacy - believes can plan the work and work the plan to accomplish desired outcome - statements made

Growth + development of positive relationships between partner stakeholders from project work and successes

Participant continues to gains skills and knowledge and progresses on resiliency path (demonstration, observation, self- or other-reports)

Participant makes changes in behavior/ engagement with community members/ partners that minimize negative consequences and maximize positive outcomes and opportunities - with all other items above, participant becomes more resilient - capable of dealing with life and disaster situations (demonstration, observation, self- or other-reports)

Community becomes more resiliant; more effective before/during/after disaster (demonstration, observation, self- or other-reports)

Project is replicated with EPA support

Attachment to SF424 for #14

14. Areas Affected by Project (Cities, Counties, States, etc.):

Arecibo, Barceloneta and Utuado municipios (counties) in Puerto Rico

PROJECT SUMMARY PAGE

Puerto Rico Planning for Locally-Led Adaptation Project

Project Location: Puerto Rico communities Sardinas, Culebra | La Margarita, Salinas | La 23, Loiza

Applicant Organization: Sociedad Ambiente Marino (SAM) is a non-profit organization with over 25 years of experience in climate and ocean conservation awareness, coral reef restoration, community capacity building, and technical support in Environmental Impact Assessment and Marine Resource Management. SAM is a pioneer and leader aquaculture and restoration of natural coastal barriers across the Puerto Rican archipelago and the Caribbean. Our commitment is to strengthen coastal nature-based solutions and enhance the livelihoods associated with coastal ecosystem. To this end, SAM operates through strong community engagement, hands-on experiences, and has been working on climate and ocean governance through the PR Citizen Assemblies partnership.

Project Abstract The Puerto Rico Planning for Locally-Led Adaptation (PlaLLA) project aims to improve the adaptive capacity of underserved communities in Puerto Rico to the adverse impacts of climate change. In this project the organization will work together with communities and municipalities to mainstream locally-led adaptation (LLA) in community management, sectorial, municipal and national planning. The proposed project builds on the PR Citizen Assemblies, which have identified the need for decentralized climate strategies. At its core, the PlaLLA aims to increase the capacities of disadvantaged communities and local governments to adapt to climate variability and change by contributing to local, regional, and federal strategies that foster collective action and cooperation at different levels. The project will deploy the environmental justice collaborative problem-solving model from its inception in order to build and strengthen capacities for climate justice. To this end we have identified three components: (1) improve participation pathways in resilience planning through the coordination of a series of regional citizen climate dialogues to define local and national priorities, (2) strengthen technical capacity of local actors and governments for participatory decision-making through a municipal leaders workshop, and (3) incorporate LLA considerations into community, local, and national planning processes, working closely with municipal governments and national bodies to integrate the proceedings from the citizen assemblies, Community Climate Adaptation Plans, and supporting direct interventions co-designed with members of project communities.

Project Type	Facilitating engagement of disadvantaged communities in Local, State and Federal advisory groups, rulemakings, and other public processes
Special Considerations	Climate Change, Disaster Resiliency, and/or Emergency Preparedness & Rural Areas
Environmental Issues	The coastal communities of this project face risks of sea level rise hurricane winds, 100 year floods, air toxics cancer risk, drought, landslide, among others.
Project Parnerts	Climate Trace PR, Urbana Planifica, Taller Salud, CIEL, Asociación de Residentes de La Margarita, Hispanic Foundation
QAPP will be developed	Yes
Small CBO Track for $150,000 projects	No

Environmental and Public Health information of the Underserved Community
Puerto Rico is divided into 78 Municipalities, 44 of which (56%) are coastal municipalities. According to Census data (ACS) 43.5% of people in Puerto Rico live in poverty and 98.5% of people in Puerto Rico are Hispanic. This project proposes working with three underserved communities of Puerto Rico: Comunidad Sardinas, Culebra, PR; Comunidad La Margarita, Salinas PR; y Comunidad La 23, Loiza, PR.

These communities share characteristics that make their population disproportionately vulnerable to the impact of environmental events such as hurricanes, sea level rise, flooding, storm surge, drought, erosion, and earthquakes. Additionally, all community have a high air toxics cancer risk (higher in La Margarita and Culebra) and other environmental issues due to their proximity to a superfund site (91-93%), and in Margarita case to hazardous waste proximity (56%). Both La Margarita and La 23 are close to an RMP facility (54% and 62% respectively) as well. Not only are they vulnerable on environmental terms, but also on economic impact terms.

The following table summarizes data, concerning our target communities, obtained from EJSCREEN:

	POC	Income per capita	Hispanic	Less than HS percentile	Low income	Not in labor force	Risk rating*
Culebra	91%	$15,830	92%	65%	96%	45%	198.7
Loiza	97%	$9,515	100%	86%	97%	97%	210.4
Salinas	97%	$9,860	100%	87%	97%	64%	78.3

* According to the Puerto Rico Portal of Threats and Risks

Poverty, lower income, lower level of education, and race are factors that have a direct impact on vulnerability and the ability to recover from adverse environmental events. As shown by the data, demographics in our communities increase vulnerability and have an adverse effect on resilience and recovery after a disaster. Our project will help communities enhance their adaptive capability and support their self-management in the future.

Organization's Historical Connection to Underserved Community
Sociedad Ambiente Marino is a community-based organization that has been working with coastal marginalized communities for over 20 years, specifically in Culebra, PR to promote marine environment conservation through local to regional field studies, research works, and implementation and advocacy of safe and sustainable development approaches. Our aim is to promote local economic development and coastal resilience by leading in marine rehabilitation, conservation, scientific research, and education. We have focused our efforts on developing the oldest community-based coral aquaculture and reef rehabilitation program in the Caribbean. Our work with communities has resulted in the identification of expectations and support for the designation of a network of Marine Protected Areas in Puerto Rico, which has guided our technical support to governments and advocacy work. Additionally, we have provided capacity

building in low-cost coral farming to foster community-based participation in the management of their coastal social-ecological systems. Although the majority of our coral farms are in the Marine Protected Area in Culebra, we provide community workshops, hands-on citizen science projects, and research opportunities to students across Puerto Rico and the Caribbean. Also, through the Citizens Climate Assembly partnership, we have been working to elevate the voices of the community in La Margarita, Salinas into national and international forums, including COP26, during the past 3 years. Furthermore, through our partner Urbana Planifica, we have a collaborative relationship with La 23 in Loíza, providing community planning support and creating easy-to-understand, visual materials that help La 23 and other communities in Loíza access services, engage in municipal and national planning processes, and fight for change.

EJCPS Model

Delivering long-term adaptation outcomes will require locally led, locally owned, and locally implemented processes that reflect and support those in the frontlines. We need to shift from a top-down approach of adaptation to a new paradigm where decision-making power is decentralized and resources are redistributed to empower local actors to build resilience against climate impacts. PlaLLA intends to utilize the Environmental Justice Collaborative Problem-Solving (EJCPS) Model to facilitate multi-sectoral collaborations that co-produce and share knowledge, co-design pathways of action, and co-create sustainable relationships for locally-led adaptation. Through the EJCPS Program, PlaLLA will bring together stakeholder groups and resources to address climate-related problems, needs, and aspirations of underserved and marginalized communities in Puerto Rico. While PlaLLA draws from all seven elements, it centers: (1) Issue Identification, Visioning, and Strategic Goal-Setting; (2) Development of Multi-Stakeholder Partnerships and Leveraging of Resources; (3) Constructive Engagement with Other Stakeholders, and (4) Evaluation.

Issue Identification, Community Vision & Strategic Goal Setting - PlaLLA emerges from r a series of citizen assemblies and ongoing forums held between 2019 and 2022. These assemblies identified a pressing need for decentralized climate strategies and for oportunities to develop community climate plans. Building on existing community leadership and experiences, we develop this proposal and include clear goals, priorities, and implementation measures for co-designed Community Climate Adaptation Plans. We will engage community groups through meetings and knowledge-sharing spaces to identify pressing concerns and priority areas. We will also examine previously articulated goals and visions to ensure alignment and continuity. To advance the sustainability of the project, we will work closely with community leaders to identify potential partners from different stakeholder groups who can contribute resources and expertise.

Multi-Stakeholder Partnerships & Leveraging Resources - PlaLLA will mobilize multi-stakeholder partnerships in order to develop networks and communities of practice that help strengthen community capacity to tackle climate challenges. Further, the project will engage a core group of partners to set the project roadmap and identify available resources for project activities and sustainability beyond EJCPS.

Constructive Engagement by Relevant Stakeholders - PlaLLA is committed to promoting and sustaining constructive engagement with key stakeholder groups, including municipal and state government actors, NGOs, and private firms. The project involves developing a strategic plan based on the roadmap provided by the Community Core Group and enagage with key stakeholder groups as a way to identify implementation oportunities as well as to address potential challenges in a timely manner. The project also involves dialogues with municipal leadership to incorporate recommendations, private sector and academic institutions to provide funding, technical support, or partner recruitment, and multi-level conversations to strengthen relationships leading to long-lasting and high-impact collaborations and mobilization.

Evaluation- Project Managers will prepare submit project reports every six months to EPA and perform periodic evaluation and feedback check-ins in order to secure an iterative learning process . A monitoring and evaluation plan will be developed with key indicators and milestones to track progress over time. The results of the program will be shared in a broad event, highlighting lessons learned and best practices for replication. Additionally, we will actively seek opportunities to share our experience and provide technical assistance to other communities looking to implement similar projects.

Project Linkages

The PlaLLA project directly supports the EPA Strategic Plan, Goal 2, Objective 2.1, "Promote Environmental Justice and Civil Rights at the Federal, Tribal, State and Local Levels" by integrating environmental and climate justice into climate action. PlaLLA is committed to (a) help increase the adaptive capacity of historically underserved and overburden communities in Puerto Rico; and (b) promote inclusive, locally-led climate adaptation planning processes as a way of building local capacity. PlaLLA seeks to increase the capacities of disadvantaged communities and local governments by forging connections across spatial scales: from the affected communities in their locale to and across broader political and regional scales; 2) social sectors: community-based organizations, government agencies at various levels (municipal, regional, national), and NGO's; and 3) knowledge agents, including both producers and users. Drawing from regional citizen climate dialogues, workshops and stakeholders convenings, PlaLLA will direct actionable climate adaptation research and social impact projects that bring meaningful and sustainable change.

Partners and Collaboration

Climate Trace PR Climate Trace is a Puerto Rican non-governmental organization (NGO) that build capacity for real climate governance, climate justice and public participation in climate decisions at the local, regional, and international level. It is the project coordinator of the Puerto Rico Citizens Assemblies partnership, serving as an alternative participation proposal and empowerment platform to facilitate knowledge-sharing, access to information and sovereign consultation and reflection. Their role would include leading the facilitation and coordination of Regional Climate Assemblies, and supporting the co-design of participatory decision-making processes in the communities for the development of Community Climate Plans.

Urbana Planifica Urbana Planifica is a digital platform and a non-profit organization focused on making planning information, activities, and environments sensible, meaningful, and usable for as many people as possible. It collaborates with nonprofit and community groups to create easy-to-understand, visual materials that help communities access services, engage in planning processes, and fight for change. Broadly, Urbana Planifica works on three main areas: planning education and access to public information, network-building between local communities and advocacy and community development organizations, and community-based plan-making.Their role will include supporting the co-design of participatory decision-making processes in the communities for the development of Community Climate Plans.

Taller Salud Taller Salud is a community based women-led organization dedicated to improving women's access to health care, to reducing violence within the community and to encourage economic growth through education and activism. Founded in 1979, Taller Salud is an independent, non-government based, non-profit 501(c)(3) organization. Taller Salud will support community planning and outreach in Loíza, PR.

Centro Interdisciplinario de Estudios del Litoral (CIEL) The Interdisciplinary Center for Coastal Studies (CIEL in spanish) is a research center attached to the Department of Social Sciences of the Faculty of Arts and Sciences of the University of Puerto Rico Mayagüez Campus. Based on interdisciplinary study and applied research, CIEL provides research, education, and training about coastal social processes with emphasis on the relationship between humans, society and the environment. The role of CIEL would be to provide technical support for capacity building sessions, as well as helping in building collaborative partnerships with other stakeholders to develop solutions to coastal adaptation issue(s) at the community level.

Asociación de Residentes de La Margarita is a community-based organization dedicated to holistically improve the social well being of adjacent communities through the defense and reinvigoration of the natural and cultural heritage, education, recreation, sporting, and endogenous sustainable development. Their work is based on the transformation of the excluded communities of the south east region of Puerto Rico. The community has been organizing for a long time but officially incorporated as a non-profit 501(c)(3) organization in 2020. La Margarita Resident Asociation will lead community planning and outreach for Community Climate Adaptation Plan.

Hispanic Federation is the nation's premier Latino nonprofit membership organization. Founded in 1990, HF seeks to empower and advance the Hispanic community, support Hispanic families, and strengthen Latino institutions through work in the areas of education, health, immigration, civic engagement, economic empowerment, & the environment. The Hispanic Federation can provide technical and planning support to the communities and local practitioners, access to communities already working on climate recovery plans, as well as help in building collaborative partnerships with other stakeholders to develop and support solutions to coastal adaptation issue(s) at the community level.

Project Activities

According to the Global Climate Risk Index 2021, Puerto Rico tops the list of areas most affected by climate impacts from 2000 to 2019. This vulnerability is caused by multiple factors, including the archipelago's rapid and unplanned development near the coastal zone, a longstanding financial crisis, and historical disinvestment in public infrastructure and prepardness. Despite the pressing need for it, the government has not been able to advance projects that prioritize local adaptive capacity with adequate governance and design principles. Moreover, at the local level, with limited capacity for sustainable planning and community engagement, municipal land use plans rarely include measures for climate adaptation or meet the diverse needs of their communities.

General Context

The Puerto Rico archipelago is located in the northeastern portion of the Caribbean plate between the North Atlantic and the Caribbean Sea, with an area of 3,425 square miles. The main island, which accounts for 99 percent of Puerto Rico's area, is the eastern-most and the smallest of the Greater Antilles. Its geographical landscape includes coastal areas and a mountainous interior with the highest elevation being 1,338 meters (4,390 feet) above mean sea level. Vieques and Culebra islands are located to the east and are populated year-round, while Mona, Monito and Desecheo at the west, and Caja de Muertos at the South are natural reserves. Approximately 419,000 of its population live within the coastal zone (1 kilometer inland with additional distance for key natural systems), and 2.3 million live within the 44 coastal municipalities of Puerto Rico (Diaz and Hevia 2011).

In terms of economic development, Puerto Rico is going through an economic and social crisis as a result of a severe and lasting recession. The Gross Domestic Product (GDP) has decreased in 0.6 percent since 2020 showcasing the chronic stagnation of productive activity. The island economy shrunk by an aggregate of 14% between 2007 and 2016. The unstable economic situation combined with the impacts of climate-induced events has resulted in migration outflows that impact social cohesion, cultural and heritage loss, and leaves a higher burden on those who stay without appropriate macroeconomic and debt policies. Decades of fiscal and economic mismanagement have created chronic deficits, low employment levels, large informal economy, high debt, government corruption, tax evasion, predatory rent-seeking behavior in public and private sector, weak productive base, high levels of private consumption and public indebtedness. These deficits led to the establishment of a Fiscal Board, which has proposed a suite of austerity measures it its Fiscal Plan that not only impose severe damages on the 35 million of Puerto Rico residents but also create a much harder landscape for the expansion of climate policies. Currently, six year after Hurricane Maria, Puerto Rico still lacks a climate plan or strategy to protect its residents.

Environmental and Climate Change Context

Puerto Rico holds assets, including its natural, diversity that if leveraged could make important contributions to a more sustainable, inclusive, and resilient post-pandemic society. Puerto Rico is home to some of the world's most impressive natural and manmade wonders, such as 799 miles of coastline with over 300 beaches, vibrant biodiverse coral reefs, El

Yunque rainforest (the only subtropical rainforest in the U.S. National Forest System), The Mona Island that is home to more than 100 endangered species; and 51 natural protected areas that conserve wetlands, dry forests, rainforests, caves,caverns, groundwater, cays,islets, and critical habitats for many species of flora and fauna. Coral reefs have the highest biodiversity of any marine ecosystem, with some 91,000 described species of reef taxa. And while terrestrial biodiversity is not as high as coral reefs of the Caribbean, endemism among terrestrial flora and fauna is particularly high in Puerto Rico. Puerto Rico ranks 13th with 78.9% the highest percentage of endemic amphibians above Chile, Papua New Guinea, the United States, Mexico, Brazil, India and China (IUCN 2012). All these features explain why Puerto Rico has been affectionately given the name *la Isla del Encanto*, the Island of Enchantment. Without healthy ecological systems Puerto Rico would not be able to boast such wonders.

Goal 1. Improve participation pathways in adaptation planning

Task 1.1 Initiate and launch the PlaLLA process. Host a multilevel launch event where CSO, NGO, local and national government, private sector, academia, and philanthropies learn about the project.

Deliverable: PlaLLA launching workshop report.

Task 1.2 Coordinate Regional Citizen Climate Assemblies. Design and host regional consensus building, representative, transparent and open climate assemblies to develop a robust national climate strategy that lays out the pace, scale, and impact of actions across the natural and built environment that are necessary to protect Puerto Rico and its people, and bring the island's actions in line with the Paris Agreement.

Deliverable: 5 Regional Citizen Climate Assemblies

Task 1.3 Communicate recommendations to Puerto Rico Mitigation, Adaptation, and Resilience Plan, including social innovations regarding modes of participation, transparency, and accountability.

Deliverable: Draft recommendations for the Climate Change Committee of Experts and Advisors (CEACC, spanish acronym)

Goal 2 Strengthen technical capacity of local actors and governments for participatory decision-making

Task 2.1 Develop policy and decision makers and implementers capacity building series. Create in-person and online training material for local governments and practitioners on a) the importance of climate change adaptation planning and implementation (including vulnerabilities, potential impacts and opportunities) locally-led adaptation and climate action; b) the proposed process to design, implement and update municipal and regional adaptation/land-use plans; c) methodologies and critical issues to implement adaptation measures supported by community members.

Deliverable: Three training sessions offered to policy and decision makers and implementers from relevant institutions at national and local levels, Training at least 10 policy decision-makers and implementers

Task 2.2 Provide public participation and resource training and information for community members. These workshops will include expert presentations, interactive

discussions, small group break-out sessions on best practices, negotiation and conflict resolution skills, Justice40 opportunities, CBDG funds, and case studies.

Deliverable: Two training sessions for civil society, non-governmental organizations, and local communities. At least 30 civil society members trained.

Task 2.3 Establish of a Public Participation community of support and practice through the workshops and knowledge-sharing opportunities facilitated through this program.

Deliverable: At least one island-wide community case studies sharing events led by the voices spearheading systemic changes at the ground level.

Goal 3 Incorporate LLA consideration into community, local, and national planning processes

Task 3.1 Host participatory meetings to identify, discuss, and prioritize climate risk and solutions with community residents, taking into consideration their socio-economic context. These will be co-planned with the respective Community Lead.

Deliverables: Kick-off meetings in each community. At least 10 participatory meetings in each community. Report on Community Climate Vulnerabilities

Task 3.2 Consolidate the inputs developed in a Community Climate Adaptation Plan document that explicitly presents the prioritized adaptation solutions.

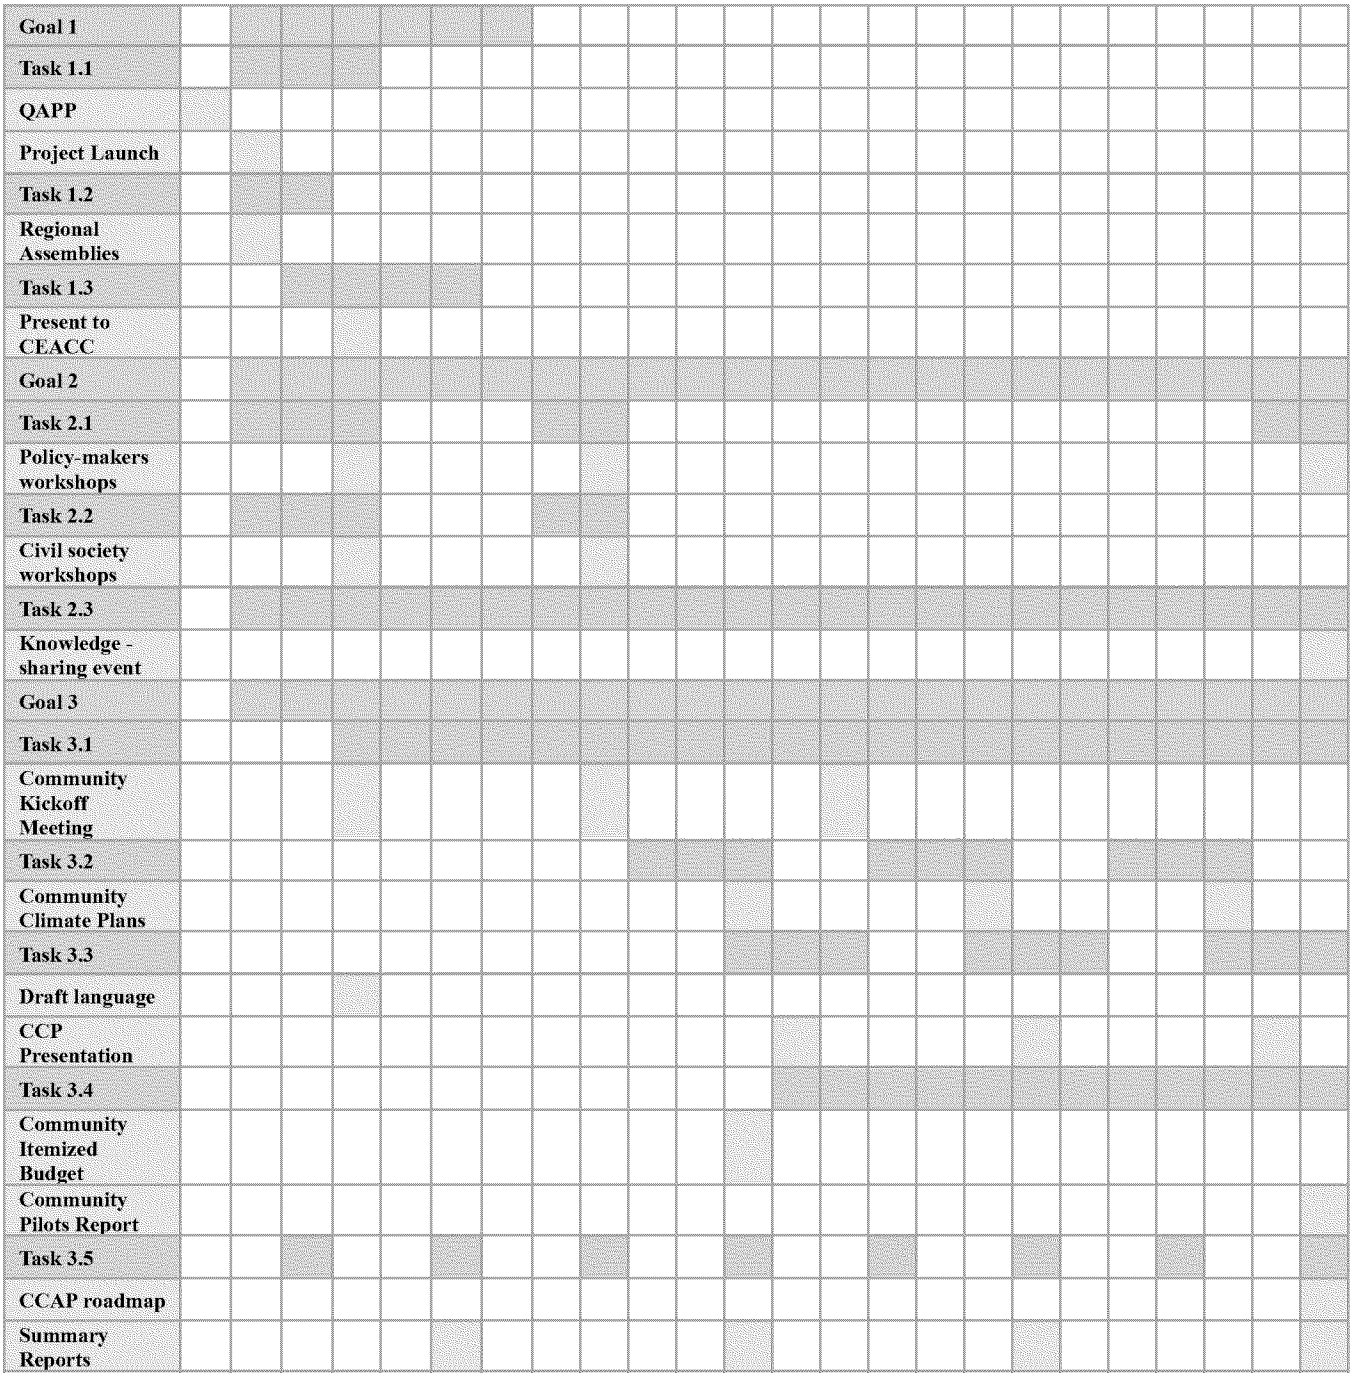
Deliverable: Community Climate Adaptation Plan document, including priority adaptation actions at the sector, community, and municipal level.

Task 3.3 Present Community Climate Adaptation Plans to local governments to integrate LLA recommendations and enable suitable and effective engagement pathways for improved municipal land-use and regional plans that integrate access to information, public participation, accountability, and education in climate and environmental matters.

Deliverable: Draft language on participatory formulation and implementation of municipal and regional plans, Presentation of Community Climate Adaptation Plans (CCAP) led by community members.

Task 3.4 Support direct interventions co-designed with members of the communities selected in the project, allocate fund toward implementation or creating a pilot for a suitable intervention from the Community Climate Adaptation Plan.

Deliverable: Three direct community interventions, Community Pilot Report



Task 3.5 Identify other stakeholders that might have an interest in this work (e.g. in government, philantropies, and universities) and invite them to the CCG meetings.

Deliverable: Quarterly meetings (8), CCAP implementation roadmap

Milestone Schedule

The 2-year Gantt chart below show the goals (pink) and activities (blue) timeline and the milestones (green) of the project.

	Year 1												Year 2											
Month:	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3	4	5	6	7	8	9	10	11	12

Budget Narrative
See Attached Budget and Budget Justification

Environmental Results – Outputs, Outcomes, an Performance Measures (Logic Model)

Environmental Results
See Attachment

Performance Measurement Plan

PlaLLA project includes a comprehensive evaluation plan developed to determine success in meeting the goals of increasing public awareness, knowledge, modified attitudes regarding environmental issues, and behaviors that promote individual and community resilience. Specific goals, objectives, and activities have been delineated in the above sections. The performance measurements for the project derive from the Logic Model, and include the following activity measures and outcomes:

# of residents engaged in the national climate plan process (target = 100)
Inclusion of participation and LLA provisions in PR Climate Mitigation, Adaptation, and Resilience Plan
# of residents aware of climate impacts in each community (target = 100 residents x 3)
# of local policymakers and practitioners trained in LLA and participatory processes (target = 10)
# of residents trained in public participation and resource mobilization (target = 30)
residents provide support and input through the CCAP process (target = 50)
of local stakeholders committed to project and addressing community's issues (target = 1 govt, partners, 1 local nonprofit, and 1 university)
# of community leaders trained and ready to support implementation (target = 3)
national CBOs learning from the project (target = 40).
of stakeholders participating in efforts to address community issues (target = 2 govt. partners, 2 local nonprofits and 1 university).
# of national stakeholders learning about project (target = 20)
# of municipal plans including participatory and locally-led adaptation (target =3)

Tracking will be undertaken using Excel, showing baseline data, the project targets and progress towards these tracks. The Project Assistant is responsible to lead this work. Quantitative data will be supplemented with qualitative data and information arising from the quarterly meetings of the CCG. The Co-PMs will collect information, collect the field data, and provide the progress reports throughout the project period as per the RFA requirements. The evaluation design includes both process and product evaluation to:

1. Better determine the effectiveness of the program for participants
2. Document that project objectives were carried out and achieved in terms of: assistance documentation, knowledge gain measurement (pre and post evaluations), plans completed for each community, and meeting minutes.
3. Provide information about service delivery that will be beneficial to the program staff using perception questionnaires.
4. Enable program staff to make changes that improve program effectiveness

The CCG will use the information gathered during the planning, implementation, and evaluation processes to interpret, report findings, and recommend modifications for improving the project for future implementations.

Sustainability Plan and Community Vision
We plan to utilize the results and momentum of PlaLLA to achieve the communitys' goals and objectives by: (1) building on previous articulated vision and ongoing work already being done in and by the community groups; (2) gathering available information of climate impacts, existing plans relevant to the project, and inviting the participation of local government and other stakeholders; and (3) developing clear courses of action for next steps in a community driven process; and (4) mobilizing key actors and stakeholders to help with implementation.

It is essential to note the community's current work and initiatives related to the project's objectives. We intend to align the project's activities with these existing efforts to create a more comprehensive and cohesive approach to addressing climate adaptation issues. This approach will help build on the community's vested interest in the project's success and create a shared sense of ownership and responsibility for its outcomes.

A key aspect of this work involves carefully planning how to leverage PlaLLA outcomes to maximize the project's impact beyond this project. To this end this project offers:

National visibility: As part of the island-wide Climate Citizen Assemblies partnership led by Climate Trace PR, participants are part of a island-wide effort to lift their recommendations to shape climate agenda. We will also create knowledge-sharing spaces where lessons learned and best practices can be shared with other communities, policy makers, and academia. By documenting the project's activities, outcomes, and lessons learned during the process, we hope to create a blueprint for others to follow. This approach will help promote the project's success and impact beyond the community, creating a ripple effect that can benefit other communities facing similar challenges.

Resource mobilization: By leveraging the power of multilevel partnerships and Justice40 opportunitiesto ensure Community Climate Adaptation Plans are implementable and fundable by identifying opportunities and potential implementation partners. Additionally, we intend to leverage PlaLLA's momentum to attract additional resources and support for future community initiatives. By demonstrating the project's impact and success, we seek to generate interest and facilitate funding opportunities. This can help sustain the project's momentum and contribute to achieving the community's long-term goals.

Transferability: We will work on integrating locally-led adaptation and climate justice considerations in local and national government operations to normalize participatory planning. This project also collaborates with a wide range of expertise, which in addition to fostering innovation will provide a framework to easily share best practices with other communities.

Programmatic Capability

Organizational Experience
Sociedad Ambiente Marino (SAM) has led projects that integrate local and marginalized communities and fisher villages for strengthening proper participatory management of the coral reefs and coastal planning. It has carried out a myriad of community-based projects and provided

research and hands-on opportunities to community members and student volunteers through years of dedicated work. Through their work SAM fosters inter and trans-disciplinary dialog among practitioners, scientists, managers, base community volunteers, and other cross-sectorial stakeholders. SAM is an active member of the Community Advisory Board of the Natural Reserve Canal Luis Peña in Culebra PR, where they lead most conservation efforts. Specifically, it has worked for over 20 years in Culebra improving coastal protection, promoting marine-related economy, and sustainable development. SAM currently is the protector and manager of the oldest community-based coral aquaculture and reef rehabilitation program in the Caribbean. We have coordinated stakeholder engagement to inform our technical support and participation in coastal planning processes. Moreover, we have also work with additional coastal communities through trainings and coral rehabilitation programs. SAM is also a member of the Citizens Climate Assembly partnership which has been working over four years in developing innovative pathways and empowerment to citizens to shape and oversee government climate policies are credibly implemented. SAM and its network of established partners will be key for connecting with the community, providing capacity building, and identifying implementation partners.

Figure 1. Sociedad Ambiente Marino work. On the left, a group of students and Culebra community is led by SAM in the coral restoration field work. On the right, a PR Climate Citizen Assembly

Partnerships and Governance

Project Managers (PM) - Isatis Cintron-Rodriguez and Ariam L. Torres Cordero are responsible for overseeing the process from start to finish. They will be responsible for the development, consistency and timeline of the project. Cintron-Rodriguez and Torres-Cordero will oversee all project activities, including: budget management, work planning, staff training and mentorship to meet objectives within the project timeframe. Specifically, they will chair the Community Cour Group and coordinate work among the different stakeholders for timely, rigorous, and collaborative project progress. They will work closely with the Project Assistant (PA)

Project Assistant (PA) - The Project Assistant will work with the PMs and three Community Leaders to oversee the project's activities. This will involve supporting the project workplans and consulting with the PM and three Community Leader on decision points. They will responsible for communication, scheduling, project progress tracking, consolidating inputs, supporting the design and facilitation of the regional assemblies. Additionally, they will be significantly involved in the writing of reports and Community Climate Adaptation Plans.

Community Leads - The Community Leader will be responsible for overseeing the Community Climate Adaptation Plan process including the community meetings outreach and dissemination. They will support the PM in the consolidation of inputs. The community leader will help identify existing or potential leaders among residents in the community. We have identified one community lead in Culebra, the community we have worked for the longest, and we will work with our CBO partners to identify the community leads for Salinas and Loiza.

Community Core Group - The Community Core Group (CCG) will be made up by the PMs, CL, and partner organizations. The CCG will ensure consensus-building and integrity, recommend expansions or modification to project components, review annual work plans, resolve challenges, and promote effective integration and global awareness. They will also help ensure the implementation of the plans is fully resourced after EJCPS is finished.

Staff Experience / Qualifications of Project Manager (PM)

Project Co-Manager. Isatis M. Cintron-Rodriguez, PhD, Project Co-PM. She is a Postdoctoral Fellow at Columbia Climate School supporting partially Sociedad Ambiente Marino as an investigator. Isatis is a Climate Governance and Participation specialist, manager and researcher with over 10 years of experience. She has a long track record of institutional capacity building, technical support and community organizing around environmental policy, climate science, human rights, multilateral process. She is the founder of Climate Trace and serves as a Board Member and Regional Coordinator for Latin America for Citizens Climate International, leading and coordinating a team of 30 focusing on outreach and expanding the civic space at the local, regional and international level since 2015. Additionally, she supports countries around the world in the negotiation and national processes to implement people-centered climate action in decision-making. She specializes in the design and deployment of participatory processes, such as citizens assemblies. She has won the National Science Foundation Graduate Fellow Award and her work has been supported by the Union of Concerned Scientists to make citizens' assemblies to build a community-led NDC for Puerto Rico, a blueprint that has served to coordinate and deploy citizens assemblies globally for broadening spaces for civic engagement at the local and international levels. She is part of the coordinating teams of the UN communities Education Communication and Outreach Stakeholders and Human Rights and Climate Change. PM Cintron-Rodriguez has experience and a host of tools to smooth project administration and management: policy and procedures manuals, terms of reference for roles, social media guidelines, co-creation protocols, strategic plans, and partnership agreements.

Project Co-Manager. Ariam L Torres Cordero, is the co-founder Urbana Planifica and Postdoctoral Research Scholar at Columbia World Projects. Ariam earned his doctorate in regional planning from the University of Illinois, Urbana-Champaign in 2022. His research

focuses on alternative forms of planning that seek to advance more socially and environmentally just recovery processes for disadvantaged communities in post-disaster environments. Between 2019 and 2021, Ariam was a research fellow at the Center for Puerto Rican Studies at Hunter College in New York. In that capacity, he investigated disaster governance models in five different U.S. jurisdictions: Louisiana, South Carolina, Texas, Florida, and Puerto Rico, and wrote the article: "What is possible? Policy Options for Long-term Disaster Recovery in Puerto Rico," published in CENTRO Journal. Ariam has taught classes on social inequality, planning history and theory, plan-making, and disaster recovery at the Graduate School of Planning and the College of General Studies at the University of Puerto Rico, Río Piedras. He is also the co-founder and co-executive director of the non-profit organization Urbana Planifica, which focuses on planning research, education, and civic support in Puerto Rico.

Project Assistant. Monica Flores has 10 years of experience organizing and facilitating processes for diverse sectors around social and environmental justice issues. She is currently a Phd student in Environmental Sciences at the University of Puerto Rico focusing Watershed Management from a socio-environmental perspective. In her Climate Trace's Community Outreach Coordinator role, she supports the design and implementation of the Puerto Rico Climate Citizens Assemblies partnership. Previous works include supporting climate adaptation and vulnerability research projects as part of the Coastal Research Planning Institute of Puerto Rico. Flores also coordinated the Energy Constituents Roundtables for the National Institute of Energy and Island Sustainability (INESI, in Spanish), involving government, academia, unions, private sector, community leaders and civil society in general.

Community Leader. Nicolás Gómez Andújar is a coastal community and resource practitioner. He is a Field Technician at Sociedad Ambiente Marino. Gomez is part the Community Advisory Board of the Natural Reserve Canal Luis Peña. He also facilitates the self-management of the Culebra Fisheries Association and an organization of fisherfolk and sea workers on the island, since 2021. Through the design and implementation of collective agreements, the transmission of knowledge to a new generation, and gender equity, he hopes to create ecological sustainability, food security, and community well-being. He has won the Open Society Puerto Rico Youth Fellowship to support his work in the Culebra Fisheries Association. Andújar is a marine scientist and coastal conservation practitioner. He completed his bachelor's degree in environmental sciences at the University of Puerto Rico at Río Piedras and his master's degree in marine resource management at Oregon State University.

Administrative Contact, Samuel Suleiman is the Founder and Executive Director of Sociedad Ambiente Marino. He is an experienced director of resources with a demonstrated history of project management, partnership building and working with communities and higher education institutions. Skilled in Nonprofit Organizations, ArcGIS, Program Evaluation, Mitigation, and Lecturing. Strong human resources professional graduated from Universidad de Puerto Rico. Suleiman will support the contracting, payment, and finance reporting.

Expenditure of Awarded Grant Funds

In the event of being awarded the funds, the organization's finance administrative executive will be in charge of the management and drawdown of the funds. The organization has created a bookkeeping system with Excell pivot tables to track accounts, expenditures, invoices, record

transactions, etc. The organization will use the federal procurement process following the purchase thresholds as established in the 2 CFR 200. The Project Manager will submit requisition forms with proper justification to be approved by the Executive Director at the moment of acquiring materials or services are needed for the implementation of the goals described in this proposal. The project manager will also approve every quote related to this project to validate that the services described are in compliance with the scope of work of this project and with EPA's Guidance on Participant Costs.The organization's accountant will support the finance administrative executive and generate accounting reports, file tax returns, and advise financial decision making.

Past Performance

Project & Management	Source of Support	Amount	Award Period	Reporting requirements (timeliness)
Ocean Community Engagement and Awareness using NASA Observations and Science for Hispanic/Latino students (OCEANOS) *Description:* This project is a collaboration between [NASA/Ames] Sociedad Ambiente Marino; Caribbean Coastal Ocean Observing System (CARICOOS); University of Puerto Rico, Mayagüez; EcoExploratorio: Science Museum; and the Ecology Workshop of PR. The objective is to train low-income Hispanic/Latino high school and undergraduate students on technical skills for NASA data management and analysis. The aim is to improve scientific literacy and STEM engagement of this population in marine and coastal sciences.	NASA	$2.7 million	2022-2026	*Ongoing* During the first year (2022) we focused on educational modules development. Currently, we are piloting the modules with 20 students. Every month, all organziations involved take stock of progress towards task and goals set in Work Plan.
Stony coral tissue loss disease (SCTLD): An integrative study for the management and conservation of susceptible coral species *Description:* This project objective is to provide valuable information to the scientific community and the government of Puerto Rico on how to	NOAA	$286,000	2020-2022	Status reports were submitted every six month. Final Report was submitted on time and is under final submission from NOAA.

manage susceptible coral populations to ensure species survival and reconlonize coral colonies impacted by the SCTLD.				
Restoring the three-dimensionality of hurricane-impacted coral reefs in Puerto Rico *Description:* This project aims to restore four coral reefs in Culebra severely impacted by Hirricanes Maria and Irma, leaving Culebra unprotected from wave action. The project uses a multi-method restoration approach that combines outplanting artificial coral colonies using 3D printing with multispecies outplants.	National Fish and Wildlife Foundation	$1.6 millones	2020-2023	Status reports are submitted every 3 months A final report is due in September 2023
Restoring the seagrass-coral reef continuum habitats across heavily hurricane-impacted coastal areas in Culebra Island, Puerto Rico *Description:* These restoration efforts support livelihood and food security. Over the project period, 21,000 endangered corals and 4,128 seagrass plugs will be outplanted adjacent to coral sites to speed up natural recruitment and recovery.	NOAA	$704,451	2020-2023	*Ongoing* This project was managed by reimbursement mode which guaranteed outcome delivery on time. Status reports are prepared every six months to evaluate progress and fulfill NOAA requirements.
Impact of the invasive sea vine Halophila stipulacea on native seagrasses, invertebrates, and fish assemblages *Description:* This project aims to improve the understanding on the resilience capacity of native seagrass and associated organisms under the	NOAA	$68,000	2020-2021	Status reports are prepared every six months to evaluate progress and fulfill NOAA requirements. Nos Quedamos EPA-R-OEJECR-OCS-23-01 - PKG00279168

Total Budget= $500,000

Personnel ($163,050)

1. NQ Executive Director and Project PI, Full-Time (10% of $115,000/year=$11,500 x 3 years= $34,500): The NQ's Executive Director will oversee the project team and all project activities. She will oversee the development of curriculum for the Youth Leaders and Organizers and another for the Community (working directly with the Curricula Development Consultant); monitor progress against milestones; review financial expenditures, and coordinate and submit all reporting/documentation required by the EPA. She will also coordinate with key partners, local coalitions and stakeholders, state and local elected officials to engage in the activities outlined in the proposal.

2. Community Organizer, Full-Time (20% of $45,000/year= $9,000 x 3 years=$27,000): Community Organizer will provide significant input and guidance on the development of the curricula for the Youth Leaders and Organizers, and will work with NQ leadership to implement the youth curricula in Year Two of the grant period. These activities include: participation in trainings and workshops; collaboration with the Environmental Literacy Team to plan and present community programs/events.

3. Resiliency Organizer, Full-Time (20% of $55,000/year=$11,000 x 3 years= $33,000): Will contribute to the development of two curricula, one for the Youth Leaders and Organizers and another for the Community. They will also oversee the work of the evaluation consultant.

4. EJ Program Coordinator, Full-Time (30% of $65,000/year=$19,500 x 3 years=$58,500): The EJ Program Coordinator will facilitate communication with the curriculum multi-stakeholder Curricula Design Development Team (CDDT) and handle all administrative functions with the project.

5. Communications Director, Full-Time (5% of $67,000/year=$3,350 x 3 years=$10,050): The Communications Director will coordinate all outreach activities with the community, develop communication resources, and inform the community about the community trainings. They will coordinate communication with Congressman Torres' office.

Fringe Benefits (25% of $163,050= $40,762.50)

Fringe Benefits will cover health insurance, payroll taxes, social security, worker's comp and social security.

Supplies ($2,000)

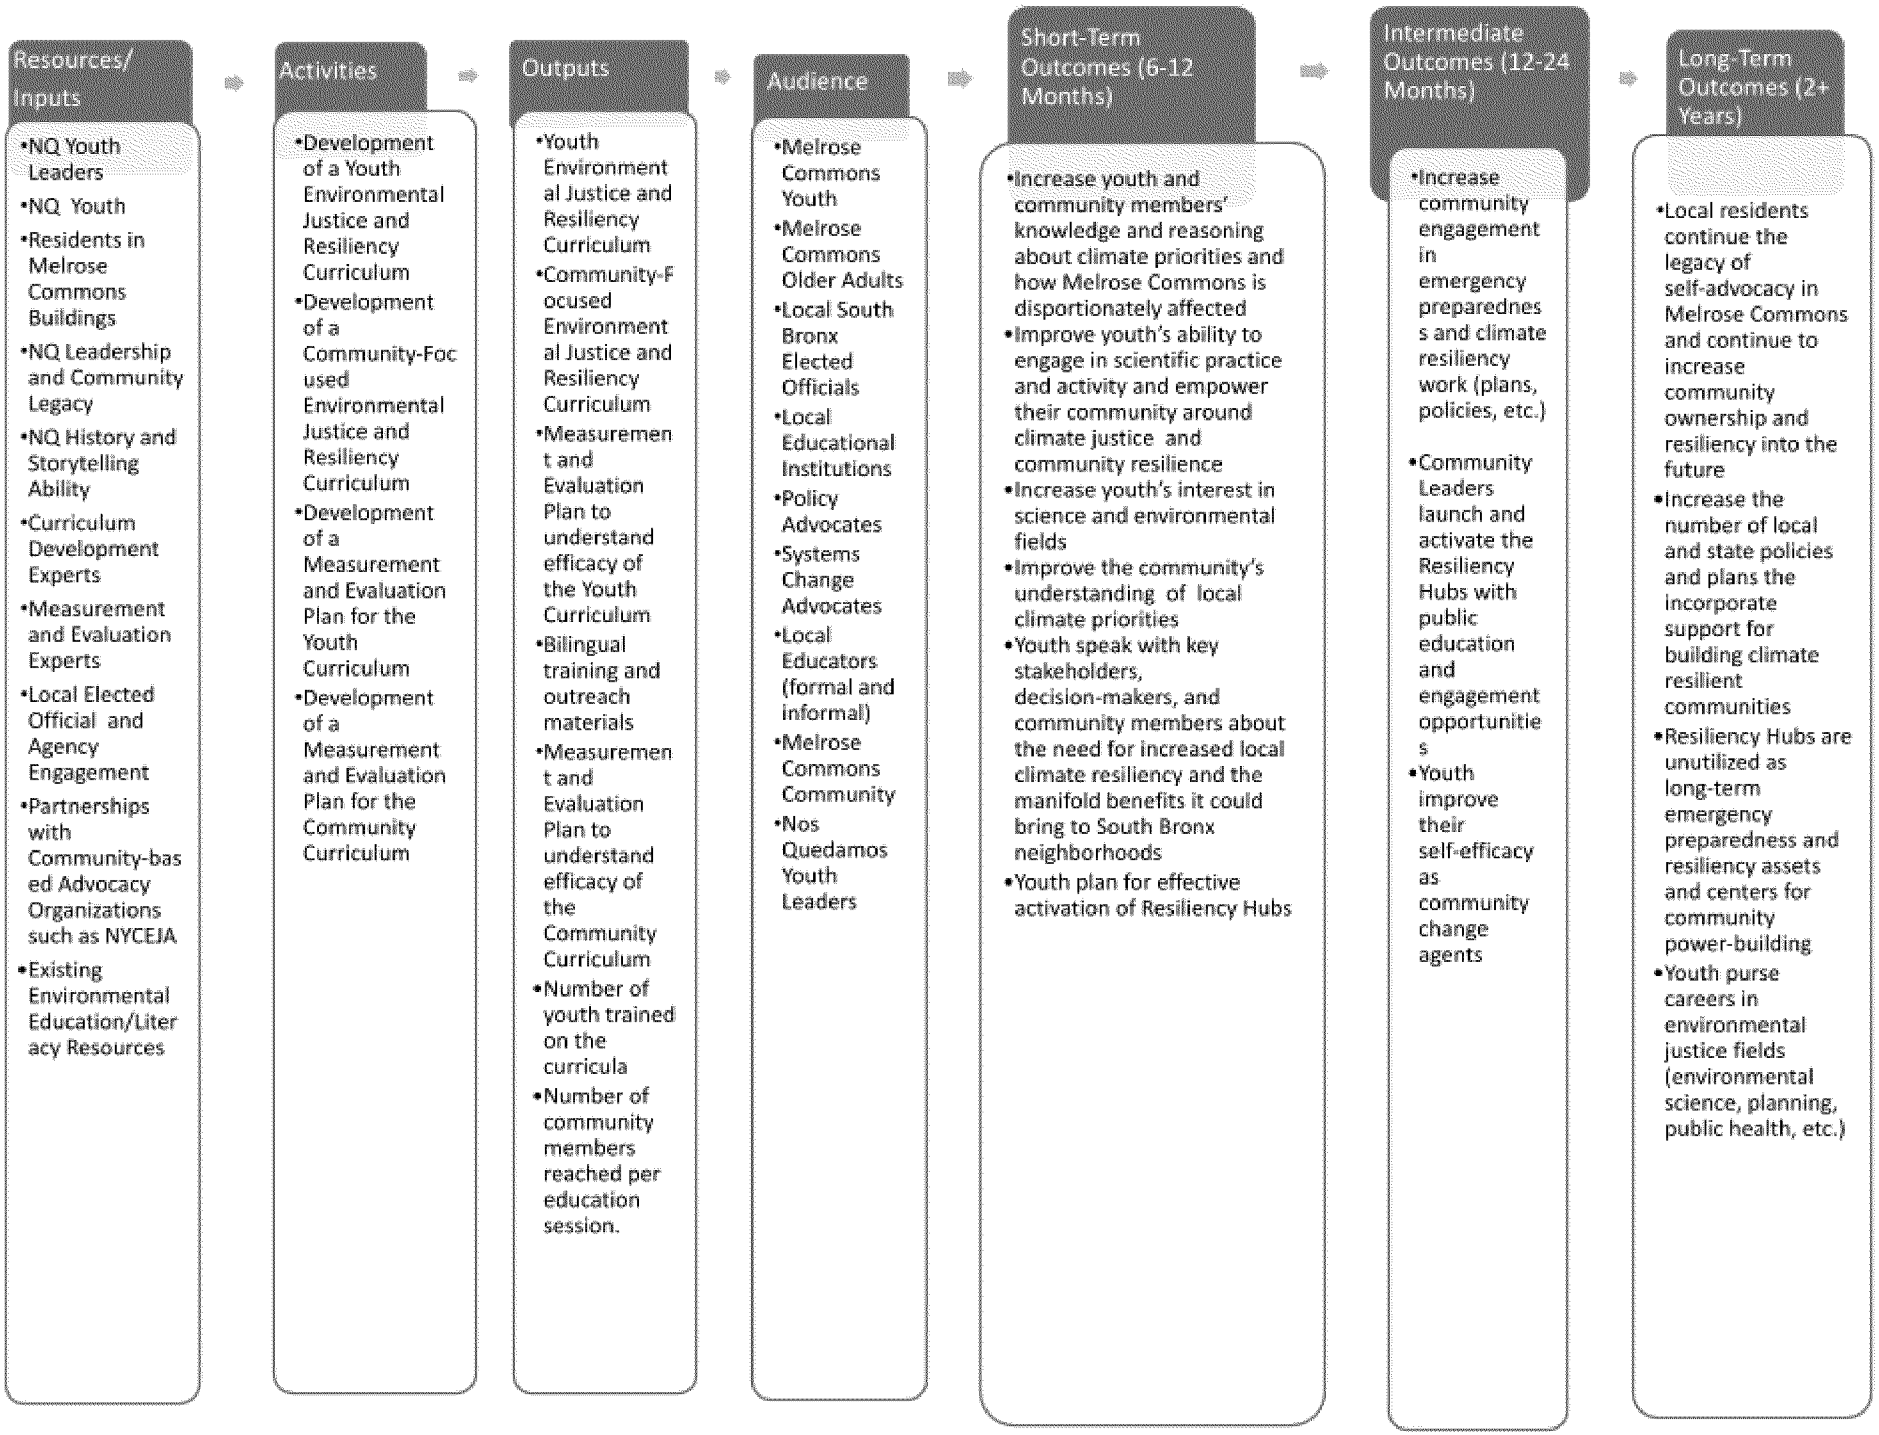
This includes the cost of printing and production of materials for community outreach and 3-6 community trainings.

Contractual (3 consultants @$60,000 each=$180,000)

1. **Monitoring and Evaluation EJ Consultant ($60,000):** This consultant will support leading the performance management and evaluation plan for NQ's funding. This will include

conducting an evaluation of the project including outputs (process measures) and outcome identified in the logic model

2. **Curricula Development Consultant ($60,000):** This individual/company will have subject matter expertise in instructional design and curricula development, and will lead the development process of the curricula for both the Youth Leaders and the wider community. They will map out behavioral learning objectives, sessions/workshops, activities, that help improve participants knowledge, skills, and abilities.
3. **EJ SME Curricula Development Consultant ($60,000):** This individual/company will have subject matter expertise in Environmental Justice with some curricula development experience. They will ensure all accurate and relevant information is included in the curricula.



Other ($93,806.25)

1. **Translator Fees ($2,806.25):** This includes the translation of outreach and training materials and having specific translators at the 3-6 community workshops.
2. **Stipends for Youth and Community Attendees/Collaborators ($31,000):** Stipends will be given to Youth Leaders and community members for participation in curricula development and related activities, and participation in pilot training and evaluation activities.
3. **Partner Sub-Grant- NYC-EJA ($60,000):** This key partner will be compensated for contributions to the review of the curricula, providing specific feedback to NQ and the multi-stakeholder Curricula Design Development Team (CDDT). Meeting bimonthly with key staff about the curricula development and support the testing of the curricula. (Note that other key patterns will contribute to the project in-kind.)

Indirect ($20,381.25)

This includes 10% of the total personnel ($163,050) & fringe benefit expenses ($40,762.50), a total of $203,812.5

Nos Quedamos EPA EJCPS Logic Model

Congress of the United States
Washington, DC 20515

March 29, 2023

U.S. Environmental Protection Agency (EPA)
Office of Environmental Justice and External Civil Rights (OEJECR)
1200 Pennsylvania Avenue, N.W.
Washington, DC 20460

To Whom it May Concern at OEJECR,

I write to express support for the application submitted by We Stay/Nos Quedamos Inc. (NQ) in response to the Environmental Protection Agency's Environmental Justice Collaborative Problem-Solving (EJCPS) 2023 Grant Cycle.

For three decades, NQ has served Melrose Commons as a rooted responder and advocate for the community. Since their early days, NQ has harnessed the power of committed local residents and business owners resolved to remain a part of Melrose Commons and act as equal partners with the City of New York to resist displacement and develop sustainable, healthy, livable communities. NQ has engaged with my office considerably and we have partnered together to increase emergency preparedness and climate resiliency for the South Bronx as a whole. Under the leadership of Executive Director Jessica Clemente, NQ is well positioned to continue their large-scale initiatives around community led climate resiliency and emergency preparedness to develop and implement training curricula that will empower and strengthen the South Bronx communities they serve. As proposed in NQ's EPA EJCPS project, my office will partner with NQ to raise the profile of project activities, conduct community outreach and engagement, and distribute key information through our deep networks.

I am enthusiastic about the potential impact of the proposed project to address information and skills gaps within the community, and build pipelines for marginalized residents towards careers and advocacy roles in the environmental justice and resiliency spheres. Our shared values and past partnership make us well-equipped to work together to further climate justice and resiliency in Melrose Commons and the South Bronx. Please accept my recommendation for their application, and I look forward to supporting this project as one that significantly improves environmental literacy and resilience in Melrose.

Thank you for your consideration.

Sincerely,

Ritchie Torres
Member of Congress

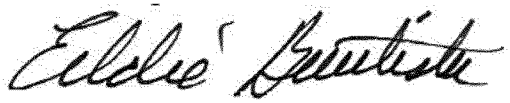
Washington, DC 20460

To Whom it May Concern at OEJECR:

I am writing to express my support for the application as submitted by We Stay/Nos Quedamos Inc. in response to the Environmental Protection Agency's Environmental Justice Collaborative Problem-Solving (EJCPS) 2023 Grant Cycle.



Founded in 1991, the New York City Environmental Justice Alliance (NYC-EJA) is a non-profit, 501(c)3 citywide membership network linking grassroots organizations from low-income neighborhoods and communities of color in their struggle for environmental justice. NYC-EJA empowers its member organizations to advocate for improved environmental conditions and against inequitable environmental burdens by the coordination of campaigns designed to inform City and State policies. Through our efforts, member organizations coalesce around specific common issues that threaten the ability for low-income communities of color to thrive. Nos Quedamos is a long-time member of NYC-EJA, and an active coalition member. Most recently, NQ worked with the NYC-EJA to explore ways to incorporate their community resilience projects into NYCEJA campaigns, including NY Renews and Climate Justice Work for All. NYCEJA has also provided NQ with an Environmental Justice graduate fellow from Pratt institute who is supporting NQ's larger initiatives.

Building on our long-standing partnership, NYC-EJA will support NQ's proposed EPA EJCPS project by serving on the Curricula Design Development Team (CDDT). NYC-EJA will be a part of the team that engages stakeholders to identify youth and community knowledge gaps, desired skills among youth and the general community in Melrose Commons, and desired abilities among youth and the general public in Melrose Commons. These knowledge, skills, and abilities gaps will then be addressed during the curriculum development and measurement and evaluation phases. NYC-EJA will also leverage our deep local networks to support knowledge sharing, community outreach and engagement, and ongoing advocacy efforts related to the project.

Please accept my recommendation for their application, and I look forward to supporting this project as one that significantly improves environmental literacy and resilience in Melrose.

To Whom it May Concern at OEJECR,

I am writing to express my support for the application as submitted by We Stay/Nos Quedamos Inc. (NQ) in response to the Environmental Protection Agency's Environmental Justice Collaborative Problem-Solving (EJCPS) 2023 Grant Cycle.

The Institute for Sustainable Communities (ISC) Partnership for Resilient Communities (PRC) program works to transform the national urban climate resilience field by increasing the number of leaders of color in the urban field of practice, advancing approaches that build the resilience of people and places through influence-building and policy approaches, community education, and engagement, and the installation of clean energy and green infrastructure. NQ has been a PRC cohort member for the past 4 years, receiving financial awards and technical assistance to support their larger climate resiliency initiatives, including community education, blue/green infrastructure development, and advocacy efforts. Reflective of the strength of NQ's vision, and the leadership of Executive Director Jessica Clemenets, ISC has invited NQ to present on their work at multiple conferences and covenings.

ISC will support NQ's proposed EPA EJCPS project by supporting shared learning opportunities between NQ and other organizations serving EJ communities nationwide. ISC will also contribute subject matter expertise around resiliency and climate justice through technical assistance, and support NQ's sharing out of the work they produce through this project, utilizing our deep networks. Our shared values and past partnership make us well-equipped to work together with NQ to further climate justice and resiliency in Melrose Commons and the South Bronx. Please accept my recommendation for their application, and I look forward to supporting this project as one that significantly improves environmental literacy and resilience in Melrose.

Sincerely,

Sonia Joshi

Director of U.S. Programs

1.0 PROGRAM OBJECTIVES

a. Project Summary

Project Title: Nos Quedamos Climate Justice, Community Resilience, and Emergency Preparedness Curricula for South Bronx Youth and Adults

Project Location: Melrose Commons, Bronx, NY 10451-4456

Applicant Information

We Stay/Nos Quedamos, 754 Melrose Avenue, Bronx, NY 10451-4446, Jessica Clemente, Executive Director

Brief Description of Applicant Organization: WE STAY/Nos Quedamos, Inc. (NQ) is a non-profit community development corporation committed to the collective self-determination of the people of Melrose Commons in the South Bronx. Our work respects, supports, and involves the community in plans and policies addressing issues of long-term affordable housing, open space, environmental justice, and community renewal.

Are you applying for the Small CBO Set Aside Track for $150,000 projects? No

Project Abstract: Due to a long history of economic, social, and environmental injustice, the South Bronx community NQ serves is ill-prepared for events associated with climate change such as flooding, frequent storms, blackouts, brownouts, and the urban heat island effect. As a frontline organization serving this disproportionately vulnerable constituency, NQ recognizes community resilience to climate change as a critical gap in the fabric of Melrose Commons, and we have undertaken significant steps toward increasing resilience in the form of physical infrastructure. Local Climate Resiliency Hubs currently in development at three public sites within the Melrose footprint will be outfitted with key blue-green infrastructure, inducing broadband access, solar panels, stormwater collection and treatment, refrigerators, wireless charging stations etc. During emergencies, the Hubs will act as community-led crisis coordinating centers, and in non-crisis times they will be activated as centers for community learning, organizing, and power-building, where residents gain the tools to advocate for long-term climate justice. Before the Hubs launch, NQ must bolster community knowledge and support of climate justice, community resilience, and emergency preparedness to truly operationalize the Hubs in a manner that paves the way for community leadership in these areas. NQ proposes to develop and implement training curricula for Melrose Commons residents, ultimately building the capacity of local Youth Leaders to train the wider community, deeply engage in local resilience issues, pursue careers in environmental justice and related fields, and advocate for local, state, and national policies that increase the resilience of environmental justice communities nationwide.

Project Type(s): Development and pilot implementation of climate justice, community resilience, and emergency preparedness curricula.

Special Considerations: This project qualifies for the Climate Change/Disaster Resiliency special consideration.

Environmental Issue: Climate Resilience and Adaptation

List of Project Partners*:* The NYU Urban Futures Lab (academic institution); New York City Environmental Justice Alliance (community based organization); Institute for Resilient Communities (philanthropic organization); U.S. Representative Ritchie Torres (federal government representative); NYC Emergency Management (government agency)

Will you need to develop a QAPP for your project? Yes

b. Environmental and Public Health information of the Underserved Community: The target audience for our proposed project includes youth and adults in Melrose Commons, a vulnerable community in the South Bronx. In spite of recent revitalization and redevelopment efforts, Melrose Commons suffers disproportionately from poverty, violence, and disease, and its residents have limited access to resources and opportunities to improve their quality of life. Community District 1 (CD1), where Melrose Commons is located, ranks among the most disadvantaged neighborhoods in New York City. CD1's population is 72% Hispanic, 25% Black, 2% white, 1% Asian, 1% Other. 42% are foreign-born, and 35% say they have limited proficiency in English. CD1 has an unemployment rate of 15.4%, the third highest among the city's 51 community districts. More than one in four CD1 residents (27.6%) live below the federal poverty index. 55% of residents spend 35% or more of their income on rent, 25% higher than the city average and the 4th highest among all districts. Assault-related hospitalizations and incarceration rates are both more than triple the citywide average.

Community health is a critical issue for our community. Melrose Commons is located in a food swamp, and residents face higher rates of heart disease, diabetes, and other chronic diseases reflective of a lack of sufficient health resources. Rates of obesity and diabetes (42%, 20%) in CD1 are nearly twice those citywide (24%, 11%). A quarter of children in grades K through 8 have obesity; this is higher than the citywide rate of one in five. A long history of inequitable development contributes greatly to these deleterious health outcomes, which, in combination with drastically reduced community resilience, represent a serious and growing threat to residents. Large manufacturing zoned areas, a disproportionate share of waste transfer stations, and the Hunts Point food distribution center all cause heavy truck traffic that has polluted the air in our communities for many decades. As a result, the Bronx has some of the highest rates of asthma in the US. The South Bronx has the eighth highest asthma hospitalization rate for children ages 5 to 14, which is nearly triple the citywide rate, and adult hospitalizations are considerably higher than rates across the city. Rates of death from asthma in the Bronx are about three times higher than the national average.

The environmental conditions in Melrose exacerbate the economic, social and health challenges that continue to burden residents, particularly in the wake of COVID. Melrose Commons has been overburdened by extensive brownfield sites. In many cases, brownfield sites are clustered along a single block, which impedes the viability of residential and commercial streets. Sections of CD1 have E-Designations for noise pollution, air pollution, and hazardous materials, and include NYC Open Petroleum Spill Locations, NYS Resource Conservation & Recovery Act Facilities, and NYS Brownfield and Voluntary Cleanup Program Sites. Furthermore, CD1 does not have sufficient open space, which is critical for improving environmental conditions and providing natural air filtering. Without taking into consideration the open space provided by community gardens, there are only 14 publicly accessible open spaces within a 1⁄4 mile ratio. This amount of active open space resources does not meet City guidelines. Although community gardens are not considered parks, the impact that these gardens have in our neighborhoods is clear. Yet, as housing demand increases and gentrification persists, many community gardens are at risk of being sold to developers, robbing our communities of more vital assets with the potential to mitigate climate change, foster community resilience, and serve as hubs of community preparedness, urban agriculture,

composting and carbon sequestration, as well as civic engagement and activism, youth programs, wellness, and more.

In the South Bronx, intensifying climate change has accelerated high water events, flooding, brownouts/blackouts, and leakage of toxins, due to highly stressed infrastructure and existing environmental issues. When Hurricane Sandy hit NYC in 2012, Melrose Commons was designated an emergency staging area; however, the community was unprepared and left without much outside assistance. Learning from this pivotal experience, NQ identified climate preparedness, adaptation, and resilience as a vital area of focus. When Hurricane Ida swept through NYC last year, the Major Deegan Expressway became overwhelmed by water, disrupting the movements of Bronxites for days. During heat waves, citywide use of air-conditioning strains the grid, increasing the likelihood of blackouts and brownouts in our area. For heat-vulnerable residents living in energy-inefficient homes, lack of power during a heat wave increases risks of dangerous heat exposure and leaves many residents without a means of communication. Additionally, the confluence of more frequent extreme weather events and the COVID-19 pandemic highlights disproportionately distributed climate vulnerabilities and deleterious health outcomes in our community. As COVID has created greater economic, social, and health challenges for residents, it is more essential than ever that NQ unite Melrose to build resilience in the aftermath of the compounded crises of a global pandemic and climate change.

In recent years, NQ has made leading and engaging the community to advance climate resilience and disaster/emergency preparedness in Melrose a top strategic priority. In collaboration with the Mayor's Office of Environmental Remediation and a New York University Capstone Team, we have engaged in research and studies to develop a holistic Equitable Neighborhood Development Plan to empower Melrose Commons residents and our stalwart institutions to achieve greater community resilience. As the first step in implementing that plan, we are currently developing three Climate Resiliency Hubs in Melrose with full capital funding from the NYS Downtown Revitalization Initiative. Housed at local community gardens and featuring broadband access, solar panels, stormwater collection and treatment infrastructure, and other climate change mitigation and response tools, the Hubs will serve as both vital community resilience assets and demonstration projects that will educate residents, dispel feelings of disempowerment, and instill pride, hope, and belief in the community's capacity to endure and thrive in the face of climate change. During emergencies, the Hubs will act as community-led crisis coordinating centers, providing access to freshwater and resources such as refrigeration, charging stations, and necessities, while serving critical communication functions. In non-crisis times, the Hubs will be activated to educate community members about hazards; engage residents and businesses on steps they can take to respond before, during, and after hazardous events; connect members of the community to the resources necessary to prepare for and withstand the impacts from any hazard event; and provide engagement and educational opportunities to enhance individual adaptive capacity. Just as importantly, the Hubs will serve as focal points and gathering spaces for community organizing and power-building, where residents gain the information, skills, and tools to advocate for community priorities and long-term climate justice. The Hubs sit at the nexus of community resilience, emergency management, climate change mitigation, and social equity, providing opportunities

for communities to become more self-determining, socially connected, and successful before, during, and after disruptions.

Our proposed EJCPS-funded project will equip NQ and our community with a key tool to realize this vision for the Hubs and the broader community-driven resilience movement in the South Bronx. With EPA support, NQ will develop two environmental justice training curricula, one for Melrose Commons Youth Leaders and one for the wider Melrose Commons community. Designed to bolster community knowledge and build strong resident support/leadership for climate justice, resilience, and emergency preparedness initiatives–and to drive the enthusiasm, energy, and robust participation that the Hubs need to deliver on the vision shared above–the curricula will provide comprehensive engaging, and impactful participatory instruction on the following topics:

- The neighborhood's history of partnership, teamwork, and transformative community power, including achieving and implementing the Melrose Urban Renewal Plan;
- Environmental Justice challenges and their specific impacts on Melrose residents;
- Climate Change and its disproportionate impacts on underserved, overburdened communities like Melrose;
- Emergency Preparedness, including identifying key environmental and health risks Melrose residents face and how we can increase resiliency to those hazards; and
- Advocacy and the opportunities to address community concerns through collective action to shape public decisions and investments.

Via the participatory-learning style through which we will deliver these curricula, residents will increase their understanding of the personal and community impacts of climate change, and develop a sense of their power and efficacy to respond and seize control over their futures. By preparing Youth Leaders to "own" and lead trainings for the wider community, the project will uplift the energy and wisdom of local youth and inspire them to educate and engage their peers, family members, neighbors, and decision makers around climate impacts and environmental justice. With our support and encouragement, NQ Youth Leaders completing the curricula and training will continue engaging deeply in environmental justice work, participating in related internships, pursuing positions on local youth boards, and contributing to NQ's city-wide EJ coalition work. Community members participating in the training will gain the information they need to support advocacy campaigns around increased resilience, emergency preparedness, and climate justice. Ultimately, this project will serve as a key component to creating a climate-resilient Melrose Commons and a climate-resilient South Bronx.

c. Organization's Historical Connection to Underserved Community: Nos Quedamos (NQ) began its work in 1992, when NYC proposed the Melrose Urban Commons Renewal Area, which designated 30 blocks in Melrose to be developed for middle-income New Yorkers. This site, however, was already home to roughly 6,000 predominantly black and brown, low- and very-low-income Melrose residents. Outraged by the injustice of their displacement, the local community banded together to create the We Stay/Nos Quedamos Committee, which drafted and passed an alternative proposal called the Melrose Commons Urban Renewal Plan, resulting in the development of affordable housing for over 4,000 Melrose families and seniors and

nearly one million square feet of commercial real estate space, including a medical group, pharmacy, supermarket, and restaurant. As a part of the alternative proposal, NQ's founder, Yolanda Garcia, achieved an unprecedented deal with New York City, ensuring that housing needs would not be met at the expense of open space, and preserving 14 community garden spaces in Melrose Commons. Our generative work as innovators of the "Melrose Urban Renewal Plan" has become a one-of-a-kind, nationally and internationally recognized case study in transformative community power. Our work created an entire footprint in Melrose Commons, protecting and expanding affordable housing, open space, community resources, and vital assets within that footprint, while supporting the needs of the vibrant, diverse community that remains and thrives today.

Melrose Commons represents a successful approach to community-driven development where local residents participated in the planning process, helping achieve a design and development strategy that addressed local needs and culture. In 2012, this neighborhood revitalization plan and the 18-year ongoing implementation of sustainable infill development earned a Stage II LEED-ND Silver certification under the LEED for Neighborhood Development Pilot Program from the US Green Building Council. LEED-ND is a rating system to evaluate with measurable criteria the design and construction of development projects. It recognizes projects that seek to protect and enhance the health and quality of the natural environment and the community with sustainable building practices, and Melrose was the first NYS neighborhood to receive the certification, in recognition of our team's commitment to pedestrian-oriented mixed-use, mixed-income development that maintains open space and sustainable design.

Empowered by its high-profile success, NQ has since served as a leader in community-driven development and a critical support hub for Melrose residents, assisting with a variety of economic and social issues. NQ centers the self-determination of the residents of Melrose in everything we do, and direct input from the community is the driving force behind all NQ programs and services. Aside from monitoring major trends and emerging needs in our community, we rely on regularly solicited resident feedback to guide our programming, building and maintaining relationships with the 4,000 tenants of our 19 affordable housing development, the wider Melrose community, and our network of Bronx and citywide partners to ensure that NQ can act as the community's voice of advocacy and speak their truth. NQ's recent successes include engaging, organizing, and educating tenants around larger issues of affordable housing by helping to form tenant leadership teams; collaborating with artists, arts and culture organizations, and related stakeholders to preserve and amplify the cultural DNA of the South Bronx by creating a comprehensive map of cultural assets in Melrose and Morrisania; and forming the Asociación Huerto y Cultura, a coalition of seven Melrose community gardens that worked together to support the preservation of open space and community resilience. NQ has been successful in its mission not only through physical redevelopment but by preserving the culture and identity of those who remain in the South Bronx. NQ is proud to have been an agent for change, with achievements including:

- South Bronx Environmental Health and Policy study published: This study analyzed exposure to waste management facilities and the regulatory and policy issues that affect environmental decision-making and confronted environmental racism in the neighborhood.

- 1.6 acre, $6.6M construction of Yolanda Garcia Park, which, in addition to providing new green space and playgrounds for Bronxites of all ages to enjoy, honors a true pillar of the community: Yolanda Garcia, a well-known and widely respected community activist. Yolanda Garcia's contributions as the founding member of Nos Quedamos continue to make a lasting impact on the Bronx and NYC Parks.
- Over 25 years of organizing and advocacy for the preservation of open space, environmental health, and social justice in Melrose and the South Bronx
- Two recently awarded Downtown Revitalization Initiative (DRI) grants to revitalize portions of the South Bronx by providing low-cost broadband access for the community of Melrose and increasing community resilience via the installation of photo-voltaic panels and stormwater runoff at 3 local community gardens
- Development of the South Bronx Land and Community Resource Trust (SBxL&CRT) to expand community engagement in the future development of their own neighborhoods, ensuring sustainable development, deep affordability, and community ownership
- Total investment value of over $500,000,000 in Melrose

As an organization founded and led by frontline community members, NQ has long recognized that a deep history of marginalization and disinvestment has left people of color, immigrants, and low-income populations disproportionately vulnerable to climate impacts, and that Green Development is vital to addressing these injustices. As we move forward into the next era of NQ's legacy, we are seizing the opportunities that climate change preparation provides to address the root causes of disproportionate exposure and vulnerability to climate impacts and enhance our community's capacity for self-determination.

d. EJCPS Model: This project deeply and meaningfully addresses Elements 2, 4, and 7 of the EJCPS Model. These elements are: Community Capacity-Building and Leadership Development, Multi Stakeholder Partnership and Leveraging of Resources, and Evaluation, Lessons Learned, and Replication of Best Practices, respectively . This project builds upon the extensive work NQ has conducted to address the EJCPA Model Element 1, Community Vision and Strategic Planning. Eleven years ago, Melrose Commons was decimated and without power or electricity as a result of Superstorm Sandy, a deadly hurricane which swept up and down the East Coast of the United States. NQ's neighborhood, Melrose Commons, was left without any outside or municipal services or support for the first 72 hours after the storm hit. Following this traumatic event, Melrose residents and NQ identified resilience and emergency preparedness as severely lacking in our neighborhoods through a series of needs assessments and community listening sessions. With deep community input, NQ identified Climate Resiliency Hubs as a part of an overall strategy to increase resilience in Melrose. A grant from the Downtown Revitalization Initiative (DRI), a New York State economic development funding stream, funded the design and construction of the three Hubs currently in development in Melrose Commons.

NQ is now prepared to move into the next phase of this work which center on Community Capacity-Building and Leadership Development (Element 2 of the EJCPS Model), to deeply and fully equip the Melrose residents to activate the Hubs as vital resilient infrastructure, and as key public spaces supporting community cohesion, ongoing environmental learning, and climate justice advocacy. Developing a thorough and culturally-appropriate training, participatory learning, and active engagement strategy for youth and

adults is the next task NQ must undertake to ensure Melrose has a knowledgeable, powerful, motivated, and effectual base with the skills and resources to withstand emergency events and build a resilient Melrose Commons into the future. The curricula developed through the proposed project will move residents from disengagement to participation to leadership around climate justice issues affecting their own neighborhoods.

This project will engage community-based partners, university partners, local elected officials, local emergency management government staff, advocacy groups, and resource hubs to develop effective curricula specifically designed to train our priority populations on a wide variety of topics. This is analogous to Element 4 of the EJCPS Model - Multi Stakeholder Partnership and Leveraging of Resources. Working together with multiple stakeholders that bring differing priorities and subject matter expertise, NQ will marry these lenses with community resident experiences to develop curricula that are impactful, engaging, and provide residents a comprehensive view of the issues..

With any intervention, it is critical to measure and evaluate outcomes to ensure effectiveness. NQ is embedding a measurement and evaluation protocol within the project design. The project is also structured in such a way that the measurement and evaluation will be led by an experienced evaluator but implemented partly by NQ staff, thereby building organizational capacity to collect evaluation data long after project completion. This measurement and evaluation portion of the project is reflective of Element 7 of the EJCPS model - Evaluation, Lessons Learned, and Replication of Best Practices.

e. Project Linkages: NQ's proposed project is directly in line with the EPA's Strategic Plan Goal 2, Objective 2.1 of promoting environmental justice and civil rights at the Federal, Tribal, State, and Local Levels. The project will equip Melrose Commons residents with the knowledge and tools necessary to build local capacity for emergency preparedness and climate resilience, and prepare them to lead effective advocacy efforts toward federal, state, and local policy and practice changes that achieve increased resilience in Melrose Commons and other environmental justice communities nationwide. By developing comprehensive and culturally appropriate curricula complete with performance measures that facilitate continuous improvement, NQ will have the tools to increase community understanding of the multi-faceted impacts of climate change on their lives and neighborhoods. This understanding is necessary to motivate and empower community members to advocate for local, state, and national policies that promote resilience, and establishes a critical on-ramp for Youth Leaders from marginalized communities to paths they otherwise may have considered out of reach: formal environmental education, internships, assistantships, etc. in climate justice and related fields.

f. Partner and Collaborate: Implementation of this project requires a multi-stakeholder and interdisciplinary team of content-knowledge experts, measurement and evaluation experts, and neighborhood residents deeply engaged and connected to Melrose Commons. NQ will work in partnership with the NYU Urban Futures Lab, NYC Emergency Management, the New York Environmental Justice Alliance (NYC-EJA), the Partnership for Resilient Communities (PRC, a program of the Institute for Sustainable Communities), and US Representative Ritchie Torres to develop, implement, and optimize two environmental justice resiliency curricula that educate, engage, and galvanize self-efficacy in South Bronx youth and adults. (Note that

partners restricted from receiving EPA funding through this award as a sub-grant have committed to contributing in-kind to the project.)

The New York City Environmental Justice Alliance (NYC-EJA): NYC-EJA is a non-profit organization with extensive political advocacy experience and an expansive network to share information and build momentum and support for community resilience initiatives. NYC-EJA is the project partner with the deepest political networks of support and experience in leading political advocacy campaigns, while also having extensive knowledge around environmental data and data analysis. They will be instrumental in providing technical assistance and contacts that strengthen the impact of this environmental literacy project. They will collaborate on the planning and implementation of the youth and adult curricula and will be a part of the curricula development team.

NQ has a long history as an active NYC-EJA steering committee member, and NQ's ED has recently been actively involved with REVitalize, a collaboration of community based organizations that addresses the opportunities and challenges associated with community energy planning and community-owned solar. NYC-EJA and NQ have facilitated dialogues with public officials and agencies to target and dismantle state regulatory barriers to community co-owned renewable energy projects, as well as articulate policy and programmatic recommendations to inform future government-community partnerships and support community-based energy planning. Additionally, NQ, along with 5 other community-based organizations in NYC-EJA's network, led and organized local CAMP-EJ air quality monitoring campaigns in Brooklyn and the South Bronx By prioritizing community participation, youth education, and leadership development NYC-EJA member organizations successfully collected thousands of hours of air quality measurements over the course of more than two years. A comprehensive report was recently released on the air quality monitoring campaigns, which will be used in the completed curricula.

NYC Emergency Management: NYC Emergency Management helps New Yorkers before, during, and after emergencies through preparedness, education, and response. It is the agency responsible for coordinating citywide emergency planning and response for all types and scales of emergencies. NQ has already made significant steps to formalizing a partnership with NYC Emergency Management, including participating as a featured speaker at the NYC Emergency Management Community Preparedness Symposium on March 7th, 2023. At the Symposium, NQ's Executive Director, Jessica Clemente, discussed the ongoing community-led development of the Resiliency Hubs initiative, the design and intention of the Hubs, and NQ's key partnerships that are critical to the activation and sustainability of the Hubs, and their potential for scalability in similar communities throughout NYC and the nation. This offices' support will be key as NQ implements the developed curricula. NYC Emergency Management will promote and generate public support for the importance of learning about emergency preparedness and serve as subject matter experts in emergency preparedness. NYC Emergency Preparedness has demonstrated their commitment to working with environmental justice communities addressing the challenges associated with climate change and NQ is confident they will continue to work with our organization into the future to increase the resilience of our South Bronx neighborhoods.

NYU Urban Future Lab (NYU UFL): NYU UFL is part of the NYU Tandon School of Engineering and serves as an innovation hub for clean energy, sustainable urban infrastructure,

and deep decarbonization in New York City. NYU UFL is on the forefront of connecting frontline communities to sustainable, resilient, climate-change solutions. In 2021, the UFL awarded NQ with the Urban Future Prize, a first time funding stream connecting community based EJ organizations with cleantech innovators. NQ's and NYU UFL's collaboration has continued past the scope of the Prize, and the UFL will serve on the curricula development team as climate-change solution subject matter experts. The UFL will guide the development of the curricula in a way that also prioritizes exposing Melrose residents to opportunities for continued education and/or professional experience in the green energy and resilience sectors.

The Partnership for Resilient Communities (PRC): The PRC is a program housed within the Institute for Sustainable Communities, dedicated to transforming urban climate resilience and increasing the number of leaders of color in the urban field of practice. The PRC advances its work by building the resilience of people and places through influence-building, policy, community education, community engagement, and installation of clean energy infrastructure. NQ has been a member of the PRC grantee cohort for the past three years and as a result of cohort membership, engages regularly with PRC and national partners who share knowledge and exchange ideas around resilience initiatives. PRC representatives will advise the curricula development team as community engagement and resiliency subject matter experts. They will contribute resources, knowledge, and best-practice learning methods around resilience for the priority youth and adult populations. Because of the PRC's focus on underserved communities, they have a unique insight into curricula that will resonate with NQ's base and meet the needs of the Melrose Commons community in a culturally appropriate way.

Representative Ritchie Torres: Mr. Torres is a U.S. Representative for NY's 15th Congressional District, which includes NQ's catchment area. Rep. Torres has supported NQ's work for several years and was elected based on a political platform that held up environmental justice and the Green New Deal as key focus areas. Mr. Torres recognizes that black and brown communities are on the frontlines of the environmental crisis, and they must be prioritized in the agenda to fight climate change. Mr. Torres' support will be key in the second and third years of the proposed project as NQ implements the developed curricula. He will promote and generate public support for the project. Mr. Torres has demonstrated his vested interest in climate justice work and NQ is confident he will continue to work with our organization into the future to ensure the presence of political-level support for NQ's initiatives.

2.0 PROJECT ACTIVITIES / MILESTONE SCHEDULE / DETAILED

a. Project Activities: Step One: Contract Curricula Design and Evaluation Consultants: NQ will contract with curricula design and evaluation consultants in the development of the youth and adult environmental justice, resiliency, and disaster preparedness curricula. These consultants will be the experts in curricula design and have extensive experience in working with environmental justice communities on building culturally-relevant and responsive curricula. NQ will release an RFP and solicit Scopes of Work from consultants in Quarter 4 of 2023, use a staff panel to interview and select two consultants for the curricula work and one consultant for the evaluation work. NQ will contract with these consultants by the end of Quarter 1 in 2024.

Step Two: Launch a Multi-Stakeholder Curricula Design Development Team (CDDT): When the consultants for the curricula development work and evaluation work have been

identified and contracted, NQ will gather the following entities for a kickoff meeting for the project: NQ Youth Leaders, NQ Adult Leaders, curricula design consultants, measurement and evaluation consultant, NYU Urban Futures Lab (NYU UFL) representatives, New York City Environmental Justice Alliance (NYC-EJA) representatives, and NQ staff and leadership. NQ staff will lead this meeting and set out the key objectives, milestones, timelines, communication strategies, and deliverables for the project. Modifications to any of the project timelines, within reason, will be discussed and agreed upon in the meeting. This meeting will occur by the end of Quarter 1 in 2024.

Step Three: Conduct a Survey and Assessment of Existing Resources to Guide Curricula Development and Conduct Focus Groups and Visioning Sessions to Determine Key Curricula Content Areas: Beginning in Quarter 2 of 2024, the curricula design consultants will work with the CDDT to conduct a thorough survey of existing environmental justice, community resilience, and emergency preparedness curricula and resources. The team will survey resources provided by the National Oceanic and Atmospheric Administration (NOAA), the EPA, and others to identify materials the team can build upon. As a part of this process, representatives from the Partnership for Resilient Communities (PRC) will support NQ in facilitating shared learning opportunities with 2 to 3 community-based organizations (CBOs) from across the United States with established youth and/or community climate resiliency training programs. These sessions will assist NQ to utilize best practices around curricula development and implementation. This project will also leverage Technical Assistance provided through our current contract with NOAA for environmental literacy programming (a scope of work that does not overlap with that proposed here for EPA funding) to identify relevant NOAA resources and materials that can guide the development of curricula. By the end of Quarter 3 of 2024, the curricula design consultants will present the results of their survey of existing resources to the CDDT during 1-2 CDDT working sessions.

In Quarters 2 and 3 of 2024, the evaluation consultant will lead the CDDT in assessing community interest and motivation relevant to the curricula design. This assessment will take into account the results of focus groups and interviews with NQ youth leaders and staff undertaken over the previous year. The evaluation consultant will then conduct a series of focus groups and visioning sessions with the wider community, conduct skills and knowledge assessment on key curricular content areas related to the intersection of climate resilience with housing, poverty, community health and other issues. By the end of Quarter 3 of 2024, the evaluation consultant will present key takeaway results along with an overview report to the CDDT during 1-2 CDDT working sessions. Results of this process will help define the objectives and target outcomes for each training curriculum. By the end of Quarter 3 of 2024 the Evaluation consultant will present an overview report with key takeaway results of the focus groups and visioning sessions to the CDDT during 1-2 CDDT working sessions. Results of this process will help define the objectives and target outcomes for each training curriculum.

Step Four: Conduct Planning and Content Development Sessions: Based on the activities to date, the Curricula Design consultants will develop initial curricula outlines and present them to the CDDT during 2-3 project team working sessions. Each working session will include in-depth discussions of key content areas, and preferred instructional strategies for each identified content area (with variances for different target audiences– youth leaders and wider community). After the working sessions, the Curricula Design consultant will revise

curricula, developing more detailed training programs for each identified area. By the end of 2025 Q1, the CDDT will produce draft Youth and Community curricula ready for wider input.

In Quarters 1 and 2 of 2025, the Evaluation Consultant will develop an evaluation plan that aligns with the curricula and includes the input provided as a part of participant formative assessments. The Evaluation Consultant will present the evaluation plan to the CDDT by the end of Quarter 2 of 2025 through 2-3 CDDT working sessions that include deep discussion of performance measures and target outcomes.

Step Five: Pilot Delivery and Evaluation: In Quarters 3 and 4 of 2025 NQ Staff will design and produce all training materials and deliver training youth curriculum to the current cohort of Youth Leaders. The Evaluation Consultant will support the NQ Team to implement the evaluation of the training curriculum with the Youth Leaders. In Quarters 1 and 2 of 2026 NQ Youth Leaders will plan and deliver three to six community trainings using the adult curriculum developed during the project period. Key project partners including NYC-EJA and Representative Ritchie Torres' office will support with outreach to ensure maximum engagement is achieved. The Evaluation Consultant will support the NQ Youth Leaders to evaluate the pilot trainings with the adult participants. The Evaluation Consultant will develop a report with analysis and findings from the evaluation plan, pilot testing of the curricula, and recommendations for the training moving forward. Based upon the results of the initial evaluation activities, the Curricula Design consultants will support the CDDT in modifying and finalizing the curricula during Q3 - Q4 of 2026.

b. Milestone Schedule

Task 1: Contract Curricula Design and Evaluation Consultants
Milestone 1.1: Release RFP, solicit Scopes of Work from, and contract with curricula design and evaluation consultants.

Timeline: Q4 2023 - Q1 2024

Task 2: Launch multi-stakeholder Curricula Design Development Team (CDDT)
Milestone 2.1: Hold a kick-off meeting for the project and include NQ project staff and youth leaders, Evaluation and Curricula Design consultants, and project partners. Review key objectives, milestones, and timelines for the project.

Timeline: Q4 2023 - 2024 Q1

Task 3: Conduct Survey and Assessment of Existing Resources to Guide Curricula Development; Conduct Focus Groups and Visioning Sessions to Determine Key Curricula Content Areas
Milestone 3.1: Curricula Design consultant to work with CDDT and conduct a thorough survey of relevant existing curricula and resources.
Milestone 3.2: Project partners from PRC to support NQ in facilitating shared learning opportunities with 2 to 3 community-based EJ organizations across the US with established youth and/or community climate resiliency training programs.
Milestone 3.3: NQ to leverage Technical Assistance available through NOAA and identify relevant NOAA resources and materials that can be integrated into curricula.

Milestone 3.4: Curricula Design consultant to present survey results (with an overview report) to the CDDT during 1-2 full project team working sessions.
Milestone 3.5: Evaluation Consultant to conduct a series of focus groups and visioning sessions with the wider community where skills and knowledge will be assessed and key curricular content areas related to local needs will be identified (i.e. intersection of climate resiliency with Housing, Poverty, Community Health, etc.)
Milestone 3.6: Building on evaluation activities (focus groups and interviews with NQ youth leaders and staff) undertaken during the project period and over the previous year, the Evaluation Consultant will work with the CDDT to assess community interest and motivation relevant to curricula design.
Milestone 3.7: Evaluation consultant will present key takeaway results (with an overview report) to the CDDT during 1-2 full project team working sessions.
Timeline: (3.1 -3.7) Q2 - Q3 2024

Task 4: Conduct Planning and Content Development Sessions
Milestone 4.1: Curricula Design consultant to develop initial curriculum outlines, and present them to the CDDT during 2 to 3 full project team working sessions.
Milestone 4.2: After the working sessions, Curricula Design consultants to revise curricula, and develop more detailed training programs for each identified area. By the end of 2025 Q1, the CDDT will produce draft Youth and Community curricula ready for wider input.
Timeline: (4.1 and 4.2) Q4 2024 - Q1 2025
Milestone 4.3: Evaluation consultant to develop an evaluation plan that aligns with the curricula (inclusive of participant formative assessments) to present to the CDDT through 2 to 3 full project team working sessions that include deep discussion of performance measures and target outcomes.
Timeline: Q1 - Q2 2025

Task 5: Contract Curricula Design and Evaluation Consultants
Milestone 5.1: Pilot Delivery and Evaluation
Timeline: Q3 - Q4 2025
Milestone 5.2: NQ Youth leaders plan and deliver 3 to 6 community trainings.
Timeline: Q1 - Q2 2026
Milestone 5.3: Evaluation Consultant to support the project team to implement the evaluation of the training curricula (Youth Leaders and Community). This will include a report with analysis and findings from the evaluation plan, results from the pilot testing of the curricula, and recommendations for the training curricula moving forward.
Milestone 5.4: Curricula Design consultant will support the project team to modify and update curricula.
Timeline: Q3 - Q4 2026

c. Itemized Budget Sheet / Budget Narrative: Included as an attachment

3.0 ENVIRONMENTAL RESULTS – OUTPUTS, OUTCOMES, AND PERFORMANCE MEASURES

a. Environmental Results (Logic Model): Included as an attachment

b. Performance Measurement Plan: As a key quality-control measure and efficacy measure of this project, NQ will contract an EJ-focused measurement and evaluation consultant. The evaluation of the project will follow the tenets of developmental evaluation characterized by a collaborative approach, with timely responsiveness and feedback in the dynamic context of the project as it emerges. It will be informed by social science research best practices and to ensure cultural responsiveness in all aspects of the design, interactions with all stakeholders will entail respect of their circumstances and expertise, close observations and careful listening, and facilitation of reciprocal exchange of knowledge. The evaluation for the project will be divided by two stakeholder groups, NQ youth and NQ adult community members. The outcomes for each of these groups are as follows:

NQ Youth. This group's **environmental literacy** will be assessed with a framework describing the **strands of science learning in informal settings** (National Research Council, 2009) reflecting their cognitive, affective, and behavioral change. These include

- **developing interest in science** (in this case, continued or future interest in environmental careers or in higher education);
- **gaining science knowledge** (e.g., learning scientific phenomenon related to climate priorities, such as heat islands, flooding, the working of solar hubs; and interpreting information from datasets)
- **engaging in scientific reasoning** (e.g., critical thinking about local climate priorities and theorizing about potential solutions);
- **reflecting on science as a way of knowing** (e.g., drawing on evidence to make decisions about creating resilient systems, through solar hubs);
- **engaging in scientific practice and activities** (e.g., data collection, analysis, synthesis, designing climate solutions); and
- **identifying with the scientific enterprise** (e.g., self-perceptions as a scientist).

Additionally, their **civic engagement** with community members will be assessed with tools used in service-learning contexts, such as, the Civic Action Scale (Moely, Mercer, Ilustre, Miron, & McFarland, as cited in Bringle et al., 2004) measuring future intention to be actively involved in their community and making a positive difference.

Community members

- **Understanding of scientific phenomenon** as related to local climate priorities (e.g., heat island effects) perceived self-efficacy as change agents to create just resilience solutions in Melrose Commons.
- Perceptions of **social capital growth** (Aldrich & Meyer, 2015) to tackle local climate priorities, and
- **Perceived benefits from engagement in community gardens** (e.g., social, physical and mental health-focused) based on Moyle and Weiler's (2017) research.

For all groups

- **Perceptions of local climate resilience priorities** based on indicators of resilience in Melrose Commons (e.g., social, ecological, economic, infrastructure) (Cutter, Barnes, Berry, Burton, Evans, Tate, & Webb, 2008); and
- **Connections between social and ecological aspects of local resilience** (Gupta, LaMarca, Nock, Ardalan, & Flinner, 2020);
- **Sense of empowerment** will be assessed through their perceptions of self-efficacy as community change agents (e.g., Sherer et al. 1982); optimism and hope for environmental stewardship (Ojala, 2012); and
- **Perceptions of personal resilience** to be effective future leaders in Melrose Commons (Gupta, LaMarca, Rank, Flinner, & Ardalan, 2021.

The evaluator will utilize several techniques including semi-structured interviews, focus groups (see below), formative assessments and educational assessments to measure the outcomes and objectives identified in the project Logic Model and above.

- **Semi-structured Interviews**. These will be conducted with 2-4 Youth Leaders and NQ Staff who lead and participated in the youth curricula. These interviews will help develop a better understanding of the outcomes achieved during different sessions of the youth training and where improvements in the curricula could be made.
- **Focus groups and Visioning Sessions.** Up to two visioning sessions will be held with the wider community to assess the community knowledge and skills on key curricular content areas related to the intersection of climate resiliency with housing, poverty, community health and other issues. Following the launch of Youth Leaders training curricula, the Evaluation Consultant will lead a focus group with participants to better understand the strengths, weaknesses, and outcomes reached through the youth curricula. A similar focus group will be conducted following the delivering of the pilot tested community curricula.
- **Formative and educational assessments.** During the training with Youth Leaders, NQ staff will deliver formative assessments at the end of each training module. Formative assessment techniques will include chain notes, directed paraphrasing, and minute papers. The evaluator will help NQ staff analyze formative assessments to gauge participant learning, identify points of weakness, and refine the learning approaches. During the community sessions, the evaluator will assist NQ staff with preparing summative assessments that take place during training, tours and discussions.

The evaluation will be conducted after approval from an institutional review board that provides external review oversight of human subjects research.

c. Sustainability Plan and Community Vision: As an organization founded and led by frontline community members, NQ has long recognized that a deep history of marginalization and disinvestment has left people of color, immigrants, and low-income populations disproportionately vulnerable to climate impacts. Through this lens, NQ sees environmental literacy not just as a priority, but as a vital necessity. NQ must cultivate an educated, organized neighborhood base, dispel feelings of disempowerment, and overcome dependency on

government systems and assistance in order to achieve long-term climate resilience. Youth Leaders engaged during the project period will gain the background knowledge required to understand the impact of climate injustice and the need for increased community climate resilience, as well as the skills to make the case for increased resources to political leaders, elected officials, and city and state agencies. Residents from the wider community will become well-versed in climate resiliency issues and invigorated to solve the problems that lie ahead. As a result of the proposed project, a more engaged and knowledgeable Melrose Commons will emerge, increasing community capacity to thrive through climate-related emergencies, and to champion on-going climate resilience efforts throughout the South Bronx and beyond.

4.0 PROGRAMMATIC CAPABILITY

a. Organizational Experience: NQ possesses the experience, capacities, and core existing programs to fully implement and maximize the impact of the proposed project. First and foremost is our deep connection to the Melrose community. NQ leadership and staff are uniquely positioned to reach and engage the community because we are a part of that community and we understand unspoken rules, cultural traditions, and social guidelines that are generally incomprehensible to outsiders. All staff are from the Bronx and have personal experience of the social and economic issues that challenge our community's ability to survive and thrive, and so we can connect with community members genuinely and cultivate the trust necessary for effective programming. Our current staff of seven includes six women and one man. All are bilingual (ENglish/Spanish) and identify as Latinx and Hispanic, which is representative of the Melrose and South Bronx community. In addition, with a full roster of year-round community programming, NQ has many touchpoints with residents, offering ample opportunities to engage them in the proposed project. In addition to direct services reaching 100's of residents/year, we present community events reaching 100's more at Yolanda Garcia Park and the network of local community gardens and open spaces that feature cultural music, theater, film, and celebrations. These events are held monthly through the winter months and increase in frequency as the weather gets warmer. In the summer, we provide cultural community programming at least twice a month. Events are planned around days of cultural significance for the traditionally Hispanic community, as well as new cultures that now call Melrose home. In addition to enhancing our capacity for community engagement, these activities raise NQ's profile as a "Trusted Messenger" and allow us to identify and address all types of community challenges.

Of particular relevance for the proposed project is NQ's Youth Leadership and Organizing program. Designed to cultivate the next generation of Melrose Leaders and ensure that we will continue to build upon Melrose's legacy of community-led change and empowerment, this program enrolls approx. 10 Youth Leaders per year. As key drivers of NQ's community outreach efforts, they engage intergenerational residents of NQ's affordable housing developments by going door-to-door, phone banking, tabling, and making announcements at neighborhood events. As part of their increasing responsibility within NQ's larger climate justice initiatives, they routinely lead community discussions with residents to gather ideas and input about the issues facing the neighborhood, and they provide neighbors information and guidance on how to address those issues through the lens of environmental

justice, grassroots organization, and community self-determination. As such, NQ Youth Leaders are positioned to receive training; engage Melrose residents in community trainings; expand interest, enthusiasm, and participation in the Hubs and associated programming; and inspire residents to participate in and lead campaigns/initiatives as part of the community's long-term progress to become increasingly more resilient.

NQ is also building community leadership that extends beyond the Youth Organizing and Leadership Development Program. Currently, we are actively cultivating community leaders and assembling resources to provide stipend support for the creation of a Resiliency Hub Stewardship Committee. The Stewardship Committee will foster democratic participation in and community-driven leadership of both our implementation of the Hubs and our broader climate resilience movement in Melrose. It will be governed through consensus building, participatory budgeting, and other models of cooperative ownership. Expanding our focus out from Melrose, NQ holds seats on the Climate Justice 4 All steering committee and is an active member of the New York City Environmental Justice Alliance (NYCEJA). NQ also works closely with a number of organizational partners aligned with our proposed EJCPS project goals and vision, including the the National Association for Latino/a Community Asset Builders (NALCAB), NYC Department of Housing and Preservation Development, the NYC Community Land Trust Initiative, Bronx Cooperative Development Initiative, the Bronx-Wide Platform Committee, NYC Parks and Recreation Department, and GreenThumb. We recently mobilized with great success as part of the Southern Boulevard Coalition, which coordinated the efforts of local CBOs with a long-standing history of community organizing and planning work in the area to ensure that the Southern Boulevard Rezoning process prioritizes equitable development and advances the community's climate resilience priorities.

An extension of NQ's history of effective collaboration with government, politicians, corporations, and community stakeholders to achieve our policy goals and funding priorities, all of the above partnerships, programs, and coalitions provide NQ with venues for engaging NQ Youth Leaders and Melrose residents–who will receive our climate resilience curricula–in immediate and meaningful advocacy campaigns to bolster the sense of empowerment and self determination in our community.

b. Staff Experience / Qualifications of Project Manager (PM): The PM for this project will be NQ Executive Director Jessica Clemente. Jessica will oversee the project team and all project activities. She will oversee the development of curricula; monitor progress against milestones; review financial expenditures, and coordinate and submit all reporting/documentation required by the EPA. She will also coordinate with key partners, local coalitions and stakeholders, state and local elected officials to engage in the activities outlined in the proposal. Jessica majored in Environmental Science at SUNY Purchase. After graduating, she served as Project Manager for the NYU School of Medicine's "South Bronx Environmental Health and Policy Study." The study, sponsored by the Environmental Protection Agency and Congressman Jose E. Serrano in partnership with four local community organizations—the Point CDC, Nos Quedamos, the Sports Foundation, and Youth Ministries for Peace and Justice—allowed her to work closely with researchers and community partners on the relationships between air quality and public health. This work led Jessica to pursue a Master of Urban Planning at the New York University Robert F. Wagner Graduate School of Public Service. In 2011 Jessica was asked to become the

CEO of NQ, and under her leadership, the organization has grown, increasing staff and program/service diversity. Jessica is also an active member of key environmental and climate justice coalitions, including NYC-EJA and Climate Works 4 All.

Community Organizer Carmen De Jesus will provide significant input and guidance on the development of the curricula and she will work with NQ leadership to implement the youth and community trainings. Carmen started working with NQ through New York City's Summer Youth Employment program after her junior year at Lehman College. She calls the Bronx home and had previously interned at NQ's close partner organization, The Point. As an intern, she started working at the reception desk before plugging into NQ's core EJ work, which transformed her understanding of what community empowerment and social change meant. Growing up, she heard the common narrative that, to really succeed, young people needed to find a way out of their low-income neighborhoods. The common attitude was that young people like her did not have the power to bring change to their communities, but she saw, through working with NQ, that youth could become empowered leaders bringing housing, resources, and economic stability into their communities. After obtaining her Bachelors in Arts with a minor in Human Rights from Lehman College, Carmen joined NQ as a full-time staff member in 2020 and has led the planning and implementation of the youth organizing program, empowering local youth and providing them with opportunities to develop leadership skills, using an environmental justice framework as a tool for empowerment and mobilization.

Other key staff that will support implementation of this project include our Resiliency Organizer, Communications Director, and Environment Justice Coordinator. Our Resiliency Organizer, Imani Cenac, will support the development of both curricula, and provide support to the Youth Leaders during their community-wide workshops. Imani Cenac first engaged with NQ as a member of our original youth cohort and rose quickly through the organization. Currently, she coordinates NQ's work with the community gardens and helps lead the youth organizing program. NQ's Communication Director, Edwin Pagán, will coordinate outreach activities with the community, develop communication resources, and inform the community about the community workshops. Edwin will also coordinate communication with Congressman Torres' office. Edwin has been with NQ since 2018 and has over 30 years of experience in the non-profit sector in leadership and management roles. He has technical expertise as a producer, cinematographer, camera-operator, writer, and editor; and, he brings a wealth of skills that helps NQ elevate their communication in the community. Finally, NQ will engage a Environmental Justice Coordinator in the project, and they will be responsible for facilitating communication with the curriculum multi-stakeholder Curricula Design Development Team (CDDT) and handle administrative functions for the project.

c. Expenditure of Awarded Grant Funds, and plan for compliance: NQ has an effective and efficient system for managing awarded grant funding. NQ's Chief Financial Officer, Norma Segura, is responsible for ensuring that NQ's financial controls, systems, and procedures follow best practices and are in-line with the EPA Compliance Standards. NQ will submit the Administrative Capability Questionnaire prior to the awarding of grant funds.

5.0 PAST PERFORMANCE: For the following list of contracts, NQ met all reporting requirements to date, with timely reporting on progress towards achieving the expected outputs and

outcomes of those agreements. We have submitted acceptable final technical reports under all completed contracts.

- National Oceanic and Atmospheric Administration *(in progress)*, $213,978
- New York State Downtown Revitalization Initiative *(in progress)*, $630,000
- New York State Council on the Arts *(in progress)*, $148,500
- New York City Department of Housing and Preservation (FY22, FY23), $98,500
- New York CIty Office of Temporary and DIsability Assistance (FY22, FY23), $60,000

6.0 QUALITY ASSURANCE PROJECT PLAN (QAPP) INFORMATION

This project will involve the use of existing environmental data and will require a QAPP.

Youth Ministries for Peace and Justice (YMPJ) EPA EJCPS Logic Model
EPA-R-OEJECR-OCS-23-01 - PKG00279168

Total Budget= $500,000

Personnel ($90,000)

1. **Project Director, Siddhartha Sanchez, @ 10% of Full Time ($37,500=$12,500/year x 3 years):** The Project Director will oversee the Steering Committee, HIA Consultant, and the Evaluation Consultant. He will provide overall direction for the project and engage with key stakeholders and the EPA.
2. **Outreach Specialist, Part-Time ($52,500=$17,500/year x 3 years):** The outreach specialist will coordinate the engagement of residents for 2 community listening sessions (screening process for HIA) and community engagement and input throughout the HIA (appraisal and reporting process for HIA).

Fringe Benefits (27% of $90,000=$24,300)

Fringe Benefits is 27% of $90,000, which is $24,300. It will cover health insurance, payroll taxes, social security, worker's comp and social security.

Supplies ($500)

This includes the cost of printing and production of materials for community listening sessions and community engagement and input events throughout the HIA.

Contractual ($318,770)

1. **Health Impact Assessment (HIA) Consultant ($200,000):** This includes the entire budget for the 3 years for a HIA consultant, which will include a team of individuals from a company who will deliver the screening, scoping, appraisal, and reporting processes of the HIA.
2. **Evaluation Consultant ($45,000):** This consultant will be responsible for the evaluation and monitoring plan and performance measurements for the funded project. See section 3.0 of the project narrative, outputs, outcomes & performance measures; the consultant is responsible for these deliverables.
3. **Translation Services ($1,200):** This includes the translation of outreach materials and having specific translators at community vision sessions and outreach events.
4. **Grant Administration Contractor ($72,570):** This will include the on-going communication with EPA and YMPJ on grant deliverables, financial reporting, progress reports, navigating changes in scopes of work, etc. This will also include support for the development of RFPs for HIA Consultant and the Evaluation Consultant.

Other ($55,000)

1. **Subgrants to Steering Committee Members ($15,000 total per year x 3 years = $45,000):** Subgrants will be given to Steering Committee Member organizations for their active participation in Steering Committee meetings, community outreach and engagement efforts, review of HIA data, contributions the the development of recommendations, and review of the final HIA report.

2. **Community Member Stipends ($10,000):** This will support stipends for community members to participate in Community Visioning sessions and other community engagement activities and input throughout the HIA process.

Indirect ($11,430)

This includes 10% of the total personnel ($90,000) and fringe benefits ($24,300) expenses, $114,300.

1.0 PROGRAM OBJECTIVES

a. Project Summary

Project Title: Bronx River Waterfront Redevelopment Health Impact Assessment

Project Location: Bronx, NY, 10472 (Target area includes east and west sides of the Bronx River in the South Bronx neighborhoods of Hunts Point/Longwood and Soundview/Parkchester)

Applicant Information: Youth Ministries for Peace and Justice (YMPJ); 1384 Stratford Avenue, Bronx, NY, 10472-1604; David Shuffler, Executive Director

Brief Description of Applicant Organization: YMPJ transforms blighted South Bronx neighborhoods and changes the systems that negatively impact them. As a key grassroots CBO serving the Bronx River and Soundview neighborhoods, YMPJ prepares residents to lead community-driven development campaigns and initiatives for environmental justice, economic opportunity, and fundamental change within systems of oppression.

Are you applying for the Small CBO Set Aside Track for $150,000 projects? No

Project Abstract: YMPJ will lead a formal community-driven Health Impact Assessment to investigate the health impacts/benefits of redevelopment scenarios for brownfield sites located along the Bronx River waterfront in our underserved and environmentally overburdened South Bronx catchment area. In partnership with the New York Dept. of State, YMPJ is currently leading a diverse community coalition to develop a Brownfield Opportunity Area (BOA) Plan for this target area through a participatory process to analyze and inventory zoning, land-use, and ownership patterns; brownfield, abandoned, and vacant sites; parks and open spaces; key buildings and historically significant areas; transportation and infrastructure systems; and natural and environmental features in the area. Using that inventory, we will identify a short list of catalytic priority sites and potential redevelopment options for each based on community and stakeholder input. Focused on a community and population that faces harsh social determinants of health and dramatic health disparities in the form of high rates of asthma, cancers, cardiovascular disease, obesity, diabetes, and other ailments, our proposed HIA will consider improvements in air quality, healthy food access and local food production/sovereignty, availability of high quality open space for outdoor recreation and safe streets for active transportation, and a range of issues related to climate resilience and disaster preparedness, including strengthening stormwater management, expanding green infrastructure, and addressing built-environment- and housing-related risks extreme heat.

Project Type(s): Our HIA will focus on the following issues: air quality & asthma, water quality, healthy food access, reduced vehicle travel and fuel emission, stormwater issues and green infrastructure, emergency preparedness, and disaster resiliency.

Special Considerations: This project qualifies for the Health Impact Assessment (HIA) special consideration (and includes an emphasis on Climate Change/Disaster Resiliency).

Environmental Issue: Environmental justice, air/water quality, climate change, disaster/ emergency preparedness, and access to open space, active transportation, and healthy food.

List of Project Partners: Core project partners will include Bronx River Alliance, Loving the Bronx, Bronx Health REACH, Montefiore Health System, NYC Department of Health and Mental Hygiene (NYC DOHMH), Placemaking Solutions, and Fordham University. Our project will also engage impacted South Bronx residents and dozens of other local organizational stakeholders.

Will you need to develop a QAPP for your project? Yes

ED_016126_00001376-00001

b. Environmental and Public Health information of the Underserved Community. YMPJ proposes a Health Impact Assessment (HIA) to investigate the health impacts/benefits of redevelopment and activation scenarios for brownfield sites located along the Bronx River waterfront in our underserved and environmentally overburdened South Bronx catchment area. This target area includes the west shore of the Bronx River extending from Starlight Park southward to Westchester Avenue; as well as the east shore of the Bronx river extending from Westchester Avenue southward to Lafayette Avenue and Soundview Park. In partnership with the New York Dept. of State, YMPJ is currently leading a diverse community coalition to develop a Brownfield Opportunity Area (BOA) Plan for this target area through a community-driven process to analyze and inventory zoning, land-use, and ownership patterns; brownfield, abandoned, and vacant sites; parks and open spaces; key building and historically significant areas; transportation and infrastructure systems; and natural and environmental features in the area. Using that inventory, we will identify a short list of catalytic priority sites and potential redevelopment options for each based on community and stakeholder input. Our proposed HIA will build upon and leverage significant New York State investment and ongoing collaborative work by providing impacted residents and stakeholders a tool and process to comprehensively assess potential redevelopment plans at priority sites to ensure that they yield the greatest returns in the form of improved health, environmental, and other outcomes and reduced disparities/inequities and other burdents.

For the purposes of providing environmental and health information on our underserved community, the target area is part **Bronx County** and includes p**ortions of New York U.S. Congressional Districts 14 and 15**. The area most closely aligns with two NYC Community Districts: Bronx District 2, including Hunts Point and Longwood neighborhoods, and **Bronx District 9**, including the Parkchester and Soundview neighborhoods.

A community of "sensitive populations." Bronx County is in the 100th percentile for overall social vulnerability according to the Centers for Disease Control and Prevention Agency for Toxic Substances and Disease Registry Social Vulnerability Index (CDC/ATSDR SVI). A majority of residents within our target area are members of one or more sensitive population(s). According to the NYC Department of Health (NYC Health), minorities make up 96.5% of the combined population of Bronx Districts 2 and 9. Of that total, more than 90% are either Latino (63.9%) or Black (23.9%). High percentages of residents live in poverty (32% in District 2 and 29% in District 9). The community also faces high unemployment rates (12% in District 2 and 9% in District 9) and well over half of all households are rent burdened (58% of households in District 2 and 55% in District 9 spend more than 30% of their income on housing). According to the Congressional District Health Dashboard Data, New York U.S. Congressional Districts 14 and 15 are dramatically higher than the national average for all these characteristics: Unemployment is 26% higher in Congressional District 14 and 96% higher in Congressional District 15 than the national average; rent burden is 15% and 29% higher respectively; and the percentage of children living in poverty is 34% and 132% higher (24.7% in District 14 and 38% in District 15 compared to the national average of 16.4%). According to 2020 US Census Data 5 year estimates, 25% of the population comprises children and 23% of residents are aged 60+.

Toxic Triangle and food swamp. Our proposed target area is home to the "Toxic Triangle" formed by the Bruckner, Cross Bronx, and Sheridan Expressways, and the Bronx River Parkway. These roadways and the development patterns they catalyzed—with a lack of green

space and high concentrations of heavily polluting factories and other industrial concerns that have brought intense truck traffic to neighborhood streets—expose residents to environmental hazards that impact all aspects of their lives. Air pollutant levels in this catchment are some of the highest in the nation, with the community's exposure to diesel particulate matter in the 95th-100th percentile (NATA, 2014). The EJSCREEN environmental justice indexes put Bronx County in the 87th percentile or higher nationwide for all of the following: PM2.5, Ozone, Diesel Particulate Matter, Air Toxics Cancer Risk, Air Toxics Respiratory Hazard, and Traffic Proximity. Also according to EJSCREEN, our target area has recorded underground storage tanks and hazardous waste proximity in the 95% to 100% percentile nationwide, and it is presumed that proper assessment of area sites will identify soil, soil vapor, and/or groundwater impacts.

Our target area is also a "food swamp," where unhealthy food options greatly outnumber healthy ones. While we have high concentrations of fast food restaurants, which make calorically dense, nutrient poor food options quick and convenient to obtain, we suffer a scarcity of supermarkets, farmers' markets, and other places to purchase healthy food. According to NYC Health, there are 20 bodegas (small storefronts with limited, generally unhealthy food options) for every supermarket in Bronx District 2 (Hunts Point/Longwood) and 13 bodegas for every supermarket in Bronx District 9 (Parkchester/Soundview). Reflective of this reality, the NYC Health 2019-2021 Community Health Assessment found the Bronx to be the lowest among the 5 boroughs in percentage of adults ages 18 and older who report eating one or more servings of fruits and/or vegetables in the last day; and highest among the 5 boroughs in the percentage of adults ages 18 and older who report drinking one or more 12 ounce sugar-sweetened beverage on average per day (with Parkchester/Soundview reporting the highest neighborhood rate, 4 points over the next highest neighborhood).

Members of our South Bronx community also engage in less physical activity on average. The Congressional District Health Dashboard indicates that the percentage of adults who reported engaging in no physical activity in the last 30 days was 24% higher than the national average in District 14 (35.1% versus 26.8%) and 47% higher than the national average in District 15 (39.4% versus 26.8%). This is consistent with NYC Health's 2019-2021 Community Health Assessment, which found the Bronx to be the lowest among the 5 boroughs in percentage of adults ages 18 and older who reported participating in any physical activity in the last 30 days. While 81% of Manhattan residents reported physical activity in the last 30 days and two of that borough's neighborhoods hit 90%, just 70% of Bronx residents reported physical activity in that time period with Hunts Point/Longwood tied for the city's lowest rate of 65%. The lack of safe, accessible, and attractive opportunities for outdoor recreation no doubt contributes to our community's low rates of physical activity. Despite the past successes of YMPJ and our allies, such as improvements to the Bronx River waterfront and the development of the Bronx River Foodway (described below), open space comprises just 4.5% of the total land within the communities we serve, according to the NYC Department of Planning. That is significantly below the Bronx average of 31.8%. Making matters worse, the majority of that limited open space in our community is inaccessible, unpleasant, and outright dangerous.

Health disparities. Not surprisingly, our community's unhealthy built environment has left South Bronx residents to face grave health disparities (compounded by negative social determinants of health or SDOHs). With an asthma rate 8-12 times higher than the national average, south Bronx residents suffer the eighth-highest asthma hospitalization rate for children

ages 5 to 14 in the country. According to NYC Health, the Bronx hospitalization rate is 70% higher than the rest of NYC and 700 percent higher than the rest of New York State, excluding New York City. We also have some of the highest cancer risks correlated with air pollution in the nation (90-95th percentile) and suffer from some of the highest respiratory hazards in the nation, ranking in the 95th-100th percentile nationally in NATA.

The South Bronx's severe air pollution and high asthma rates exacerbate (and are exacerbated by) chronic health conditions which are also driven by insufficient access to healthy foods and safe outdoor recreational opportunities. For example, asthma is correlated with both obesity and cardiovascular disease morbidity, with recent studies showing people with asthma are 2x as likely to be diagnosed with heart disease or heart failure. Reflective of these statistics, the most current NYC Health data shows that our target area's two Community Districts have adult obesity rates of 42% (District 2) and 32% (District 9), compared to the citywide average of 24%; adult hypertension rates of 38% and 34% respectively compared to the citywide average of 28%; and diabetes rates of 20% and 16% compared to the citywide average of 11%. These rates put residents of our South Bronx neighborhoods far above national averages for the prevalence of these ailments. According to the CDC/ATSDR SVI, Bronx County residents have 24% higher cardiovascular disease mortality rates, 24% higher obesity rates, and 52% higher diabetes rates than the U.S. population as a whole. Congressional District Health Dashboard data for NY Congressional Districts 14 and 15 reflect those figures. Compared to national averages, Districts 14 and 15 respectively have 24% and 44% higher rates of cardiovascular disease death and 17% and 40% higher rates of diabetes.

Unfortunately, environmental and health impacts/disparities translate into disproportionately high mortality and premature death rates for residents of our South Bronx target neighborhoods. Premature deaths (deaths before 65) are 56.4% higher in District 2 and 29.5% higher in District 9 than the citywide average (50.0% and 23.% higher respectively for premature deaths from heart disease, 13.8% and 16.9% higher for premature deaths from cancer, and 72.6% and 64.5% higher for premature deaths from diabetes). Infant mortality rates in both Districts are also higher than the NYC-wide average, and preterm birth rates are 11.8% in District 2 and 10.5% in District 9 compared to the citywide average of 9.2% and the Bronx borough average of 10.4%.

Climate vulnerability. All of the above characteristics of our underserved community make us disproportionately vulnerable to the impacts of climate change. Our high poverty rates, aging housing, and other harsh SDOH, combined with our disproportionate rates of all the health ailments described above, make it difficult for South Bronx residents to respond to and recover from shocks and stressors. Our built environment only adds to this vulnerability. With scant open space (less than 5% as mentioned above) and industrial facilities and parking lots comprising strong majorities of our proposed target area, our community is essentially a water-impervious heat island. Combined with the Bronx River's armored shoreline and lack of a vegetative buffer, that landscape makes the community highly susceptible to flooding, which is made all the more dangerous by the presence in our land and water of legacy contaminants from our heavy history of contamination/pollution.

Our recent past has demonstrated how quickly and severely our community can be impacted by a crisis or emergency. During the pandemic, our area was recognized by the Mayor's Task Force on Racial Inclusion and Equity (TRIE) as one of the hardest hit by the equity

burdens and other impacts of COVID-19. "Super storms" of recent years have made important roadways impassable and otherwise impacted infrastructure in ways that have stranded and isolated residents, keeping them from their jobs and other needed services. In addition to increasing risk of dangerous power outages, extreme heat events leave community members–many who live in aging, inefficient homes with poor indoor air quality and no air conditioning–at severe risk for heat exposure that can lead to grave outcomes when combined with our high rates of comorbidities. Because these are rapidly ascending threats to the people we serve, climate change and emergency preparedness will be featured elements of our HIA.

Proposed environmental/public health results and community benefits. Building from our recent equitable redevelopment initiatives in the South Bronx–which have spurred improvements in transportation infrastructure, enhanced green space, and expanded healthy food access–YMPJ and partners will engage community residents and stakeholders in a Health Impact Assessment (HIA) to evaluate the impact/benefits of redevelopment scenarios within our target area. More specifically, we will assess the extent to which specific community-identified design interventions at identified sites will improve air quality, increase healthy food access and physical activity, and reduce rates of asthma, cancer, cardiovascular and respiratory illness, as well as chronic conditions like diabetes and obesity, while ultimately improving mortality rates. The HIA will also consider impacts/benefits related to climate change, including whether assessed interventions will better protect and prepare the community and residents for potential emergencies/disasters related to extreme weather (i.e., heavy precipitation and flooding, severe winds, extreme heat).

c. Historical Connection to Underserved Community. Since 1994, YMPJ has worked to address injustices caused by a long history of heavy industrialization and environmental exploitation throughout the South Bronx. We primarily operate in the frontline Environmental Justice communities of Bronx River and Soundview, which sit centrally within the target area for our proposed project. As a key grassroots organization serving our area, YMPJ brings people together, builds collective power, and prepares South Bronx residents to lead community-driven campaigns that address the environmental hazards and socio-economic inequities seriously challenging our residents and families.

YMPJ's work and record of success in the South Bronx is made possible by the trust we have cultivated with vulnerable, hard-to-reach residents through decades of: 1) commitment to community leadership development and participatory action, and 2) the provision of critical direct services that provide residents the support needed to overcome barriers to their health/ well-being and participate fully in civic life. That trust is significantly deepened by the fact that YMPJ recruits its staff and leadership directly from the communities we serve, with the belief that our programs and services will produce the best results if they are shaped and spearheaded by the people who are most impacted by the challenges/inequities we address. Reflecting that principle and commitment, YMPJ's staff and Board is predominantly South Bronx natives who are members of underserved and environmentally overburdened populations that will benefit through our EJCPS project. Our team of 7 full-time staff includes two Black men, two Hispanic men, one Black woman, one Latina woman, and one Southeast Asian woman. Members of our team have also been DACA recipients and dealt with immigration system challenges. Our organizational culture and structure, which is deeply intertwined with our membership structure, fosters this community leadership pipeline. As members become more

involved, they can take on greater responsibility in our campaigns and initiatives, becoming paid Community Organizers and ultimately serving on our Leadership Committee.

Over the last 28 years, YMPJ has leveraged our position as "trusted messenger" to elevate local residents' voices–and center their vision for their own neighborhoods–in a variety of community decisions and projects through open meetings, resident-led committees, and other bottom-up strategies. In the Organizational Experience section below, we summarize our recent successes in guiding multiple equitable redevelopment projects in our catchment from initial concept to operational reality. Through intentional programming like community visioning sessions and collaborative decision-making strategies, all of those projects–including the Bronx River Foodway, Morrison Plaza, and Soundview Economic Hub (all described below)–were strongly shaped by the expressed aspirations of residents and their desire to address environmental and public health issues and meet social, cultural, and economic needs.

Our longstanding air quality work is an important example of our collective-impact, community-driven approach to environmental justice and community health. In response to community prioritization of deep action on local air pollution, we worked with South Bronx neighbors to develop a resident-led enhanced air monitoring program. For more than a decade (and with EPA support), we have equipped South Bronx community members to collect data and mobilize their neighbors to join the effort. To date, we have trained 110 South Bronx residents to perform daily air quality testing with stationary air monitors and weekly testing with portable air monitors. In 2009, YMPJ also partnered with researchers at New York University and three other South Bronx community groups to lead a citizen-science-based asthma study. NYU's mobile laboratory collected samples at eight sites in the South Bronx to measure ground-level pollution concentrations and middle school students conducted personal monitoring via a "backpack study." As this project demonstrated, the community YMPJ serves is not just our constituency, but our primary collaborator in organizational activities. Importantly, participants could see firsthand the powerful impact of their efforts. The results of the resident-led air monitoring supported the assertion that the Bronx's highways, industrial facilities, and truck traffic expose residents to more air pollutants than other New Yorkers–a message we used to great effect in our successful campaign to secure and shape the $1.8 billion NYS investment in the redevelopment of the Sheridan Expressway and local transportation infrastrcuture (see the Organizational Experience section for more details).

To maintain these deep ties to the community over time, YMPJ interacts with residents tens of thousands of times each year through the following activities:

YMPJ community events and programming. YMPJ hosts monthly open Community Meetings, Saturday Soup Kitchen meals, community conversations at Bronx River Foodway, workshops on window-sill gardening and nutritious cooking lessons, foraging tours at the Foodway, Zumba and other group exercise classes, recreation opportunities like canoeing tours and walking events, and biking events at Open Streets locations which include bike-riding lessons, group bike rides, bicycle repair, and more. We have also held high profile street fairs, including Back to School and Community Wellness events, partnering with local providers such as Montefiore Health Systems (a key partner in our proposed HIA) to provide health check-ups and hypertension screenings, and distributing fresh produce baskets to attendees. Used as an educational and community-building tool, these highly popular offerings enable us to engage

over 5,000 children, families, and community members each year, and provide vital connection points we can use to deliver key information and engage residents in our larger initiatives.

Workshops and direct services. We also provide workshops and direct services designed to support the majority Black and Hispanic immigrant populations that make up nearly one-third of our community. Know Your Rights (KYR) workshops have been an integral part of YMPJ's outreach to South Bronx immigrants for over a decade. Held at various partner institutions to meet undocumented residents in spaces where they feel safe–including St. Joan of Arc Church, Sotomayor Community Center, and Emerald Isle Immigration Center–our KYR workshops provide accessible, up-to-date information on immigration laws and regulations. We've reached approx. 500 individuals annually at these events. We also interact with EJ-impacted residents through one-on-one immigration legal services and benefit application assistance. In the last 3 years, YMPJ has provided over 550 individuals with these vital direct services, and approx. 700 more through free tax preparation services that have resulted in over $1,000,000 in refunds to the Soundview/Bronx River community annually. Our reach will soon increase significantly, as YMPJ was selected by the NYC Administration for Children's Services (ACS) as the backbone organization for the soon-to-be launched Parkchester/Soundview Family Enrichment Center (FEC)--one of nine FECs to be located in neighborhoods hit particularly hard by the equity burdens and other impacts of COVID-19. Programming and services provided at the FEC will support family functioning and increase access to advice and resources addressing life challenges around parenting, financial issues, relationships, food and nutrition, and stress management. Serving over 2,000 residents per year, the FEC will strengthen our standing as a key community gathering place, and create increased opportunities to engage residents.

Outreach. Mobilizing our team of Youth Leaders, Outreach Specialists, and active base of community leaders, YMPJ regularly does poster advertising, door-to-door canvassing, and flyer distribution on critical neighborhood corridors. These "on-the-ground" approaches are vital in communities facing a stark digital divide. Leveraging longstanding partnerships, YMPJ also provides monthly announcements at places of worship and distributes printed materials via tabling at local schools, houses of worship, public housing, and other CBOs. For our COVID-19 awareness campaign during the pandemic (see more in Collaborations), this enabled us to touch approximately 10,000 residents/year. YMPJ also effectively uses mass communications tools–from our monthly newsletter to a full complement of social media channels–to reach residents and stakeholders with important information. These capacities have enabled us to connect with approximately 20,000 individuals/year. When combined, our "all of the above" community engagement education strategies equip YMPJ and our partners with the capacity to reach our South Bronx priority population with important information and messaging. Reflecting our effectiveness in connecting with very hard-to-reach populations, YMPJ conducted a highly effective 2020 Census outreach initiative, which reached 1,974,001 community residents through the strategies described above.

Community-Driven Participation. Underserved residents of the South Bronx were deeply involved in developing the project proposed in this application through their participation over time in community meetings, listening sessions, and other forums we held to gather input/feedback on precursor projects that led to and laid the foundation for our HIA, including the brownfield/community-design planning initiatives and specific equitable redevelopment projects described in the Organizational Experience section. Both directly

through public gatherings we will hold as part of our EJCPS project and indirectly through representation by community organizations via their participation in our Steering Committee and other stakeholder roles, South Bronx residents will have the opportunity to weigh in on key project decisions, including the sites and scenarios to include in our HIA and the specific health impacts we will assess in the process.

d. EJCPS Model. This project incorporates the following **EJCPS Model Elements:**

Issue Identification, Community Vision, & Strategic Goal Setting: All of YMPJ's major programs and initiatives including this proposed HIA include intensive community visioning work, where residents and stakeholders explore challenges in the community, identify areas they want to see strengthened, and develop collaborative solutions. Over 20 years of deep community work have included monthly organizing meetings, door-to-door canvassing, events, word-of-mouth, and tabling at local schools, houses of worship, public housing, and other CBOs. YMPJ's public programming creates another entry point for residents to become involved in our larger initiatives and campaigns. In addition, we have direct contact with community members on a regular basis through our roster of direct services, including free tax preparation services, Saturday Soup Kitchen meals, immigration and entitlement services, employment services, youth enrichment programs, etc. At its core, YMPJ is a community-led, immigrant driven organization, and our deep roots in the community allow us a unique view of the self-identified challenges most affecting residents, and insight into the most impactful strategies and solutions.

Community Capacity-Building and Leadership Development: The project will equip local community leaders and residents with health and built-environment related data and analysis to most effectively address issues of brownfield sites, pollution, air quality, climate vulnerability, emergency preparedness, and lack of green space and connectivity which continue to adversely affect public health, while also building residents' civic awareness and engagement in environmental justice advocacy and stewardship.

Consensus Building and Dispute Resolution: The steering committee for this project is the core decision-making body for the HIA, and will be comprised of individuals from participating partner organizations, as well as local stakeholders that represent key constituencies of people that live, work, and/or study in the affected zip codes and Community Districts. All members who join will be expected to sign onto a statement of principles. By joining the steering committee, members commit to: 1) help to set overall strategy, 2) grow the impact of the HIA and ensure broad participation and engagement, 3) take a leadership role in designing and facilitating community meetings, 4) participate in meetings with other relevant stakeholders, including elected officials, 5) act as the rapid response team when urgent decisions need to be made, and 6) strive to make all decisions through consensus.

Multi-Stakeholder Partnerships and Leveraging of Resources: As a backbone organization in the South Bronx, YMPJ has a long history of leading multi-stakeholder collaborations that effectively leverage resources from multiple sectors to maximize outcomes. The partnerships represented by this project leverage both resources of expertise (including the Department of Health's contribution of data collection, analysis, and reporting), as well as resources (including the new River House headquarters of the Bronx River Alliance).

Constructive Engagement by Relevant Stakeholders: This project will involve ongoing engagement of key partners, including The Bronx River Alliance, Loving the Bronx, the Department of Health, Montefiore, Bronx Health REACH, and Fordham University. The Bronx

ED_016126_00001376-00008

River Alliance and Loving the Bronx will be key project partners in engaging the public. Fordham will be a key partner for engagement and network building at the organizational level.

e. Project Linkages. YMPJ's proposed HIA is directly and closely aligned with the EPA's Strategic Plan Goal 2, Objective 2.1 of promoting environmental justice and civil rights at the Federal, Tribal, State, and Local Levels by "empower(ing) and build(ing) capacity of underserved and overburdened communities to protect human health and the environment." As described throughout this narrative, YMPJ and our South Bronx allies–who are members of and represent directly impacted communities–are "increasingly well organized and equipped to develop (our) own visions of wellbeing and resilience, advocate for change, and influence public policy." Our proposed HIA is a next step in a progression of resident-driven environmental justice and climate resilience achievements that have included influencing major infrastructure and transportation system redevelopment in the South Bronx; reclaiming and activating underutilized spaces in our neighborhoods to expand resident access to healthy foods and quality outdoor recreation opportunities and drive other community benefits; and putting the operational and programmatic control of these community redevelopment/infrastructure projects in the hands of local residents and CBOs. In many cases, we have earned, secured, and appreciated the support of key federal, state, and local officials in these projects, thus demonstrating our capacity to influence key policy decision makers and impact systems. The immediate precursor to and foundation for our proposed HIA is our New York State BOA Planning project, which has involved residents and CBOs organizing and positioning ourselves to inventory community assets and challenges; establish community concerns, solutions, priorities, and aspirations; and ultimately set forth visions and plans for the future of our neighborhoods–all through official government mechanisms that are connected to public resources and authorities that will play a role in realizing those visions/plans. To again borrow language in the FY 2022-2026 EPA Strategic Plan describing Objective 2.1, our proposed project will "actively engage and support impacted communities to influence program implementation and maximize the benefits from the investment of resources to achieve meaningful change on the ground." In addition, it will contribute to E.O. 14008's Justice40 goals/mandates and promote climate resilience in a frontline EJ community. In fact, YMPJ was a member of the first Justice40 Accelerator cohort, established to support frontline EJ communities to access Jutsice40 funding.

f. Partner and Collaborate. Through a wealth of experience across issue areas and initiatives, including the equitable redevelopment campaigns described in the Organizational Experience section, YMPJ has honed methods and techniques to determine collective goals with our partners and implement coordinated action plans. In the next section, we describe the key partners for our proposed HIA. Importantly, YMPJ will reach beyond that core project team and leverage our broad network of South Bronx, citywide, state, and federal partnerships to: 1) ensure that the full array of relevant voices and perspectives are represented in developing our HIA, and 2) fill any gaps in coalition capacity that we identify as we implement project activities.

Along with our own credibility as a highly respected, known, and trusted community messenger, YMPJ regularly collaborates with a range of deeply embedded South Bronx institutions that will expand our ability to engage impacted residents in community conversations/meetings and other project activities. Among many others, those organizations include Catholic Charities, St. Joan of Arc Church, Children's Aid Society, Banana Kelly, NYCHA's

Bronx River Community Center, and NYCHA's Soundview Houses. Several of these groups have worked closely with YMPJ through our role as Neighborhood Coordinator in our catchment for the Mayor's Taskforce on Racial Equity and Inclusion (TRIE). During the height of the pandemic, our TRIE team of CBOs, public housing developments, and other stakeholders disseminated COVID-19 vaccination information in the South Bronx; coordinated and deployed community resources; and provided real-time feedback to the City to ensure a strong response and recovery. More recently, the City has funded YMPJ to lead our local TRIE coalition in engaging South Bronx neighborhoods in NYC's first-ever citywide participatory budgeting (PB) process.

Perhaps most closely aligned to the subject matter of our HIA, YMPJ's NYS Brownfield Opportunity Area (BOA) Coalition is currently developing strategies and actions steps to ensure meaningful public participation in the development of a Brownfield Opportunity Area Plan for our South Bronx target area. The 19 Coalition members include representatives of **Government agencies:** NY Department of State, NYC Departments of Housing Preservation and Development, Planning, and Transportation, the NYC Housing Authority, the Bronx Borough Office, Mayor's Office of Environmental Remediation, Bronx Community Board 3 and 9, and the Office of Congressman Jose Serrano; **Nonprofits:** Loving the Bronx, NYC Economic Development Corporation, Phipps Houses, The Point CDC, and Pratt Center for Community Development; and **Local businesses:** York Studios, Signature Urban Properties, Sustainable Development Inc., and Jenna Concrete Corporation. Because these stakeholders have an important role to play in ensuring that our HIA reflects the collective wisdom and expertise in the community–and will have a strong hand in implementing the recommendations developed through our HIA–YMPJ will keep them regularly updated on the progress of our EJCPS work and opportunities to participate. In addition to the BOA Coalition, YMPJ will also engage Bronx Health REACH, a coalition working to eliminate racial disparities in diabetes and heart disease in the southwest Bronx. In addition to providing a forum for YMPJ to partner with health providers and community health leaders, we have worked with Bronx Health REACH partners on Complete Streets and micro-mobility efforts which may prove highly relevant in our HIA.

EJCPS Steering Committee Members. The following partners will join YMPJ as members of our project development team and serve as the core of our project Steering Committee. YMPJ has long collaborative relationships with all of these partners, and are engaged with each across a variety of on-going initiatives. (Note that partners restricted from receiving EPA funding through this award as a sub-grant have committed to contributing in-kind to the project.):

Bronx River Alliance (BxRA): BxRA serves as a coordinated voice for the river, and works in harmonious partnership to protect, improve and restore the Bronx River corridor and greenway so that they can be healthy ecological, recreational, educational and economic resources for the communities through which the river flows. As a founding partner, YMPJ is an integral ally to the Alliance. BxRA will serve on the Steering Committee and contribute expertise on environmental factors affecting South Bronx residents.

Fordham University Center for Community Engaged Learning (CCEL): CCEL facilitates collaboration between local CBOs through experiential learning, research, and civic engagement. Surey Miranda-Alarcon, CCEL's Director of Campus and Community Engagement, formerly served as Bronx Borough Director and previously worked at the Mayor's Office of Immigrant Affairs, and the NYC Commission on Human Rights. CCEL will serve on the Steering Committee and contribute expertise on community engagement and network building.

Placemaking Solutions Group: By facilitating community dialogue and the development of project design and management strategies, Place Solutions Group helps communities "build dynamic places where local enterprises of all kinds can thrive and communities can celebrate their diversity and uniqueness." Also a member of our BOA Coalition, they will serve on the Steering Committee and contribute expertise on equitable built environment design.

NYC Dept of Health and Mental Hygiene (NYC DOHMH): The NYC DOHMH has a long history of collaboration with YMPJ. Most recently, in June 2020, YMPJ collaborated with NYC DOHMH on the 2024 Take Care New York: 2019-2021 Community Health Assessment and Community Health Improvement Plan. NYC DOHMH will work to support the implementation of the proposed Health Impact Assessment (HIA) by providing access to available data, resources, and support, as well as serving as trusted advisors on the Steering Committee.

Montefiore: The Montefiore Health System, which includes 10 member hospitals and more than 200 outpatient ambulatory care sites, has partnered with YMPJ on community health programming, providing health check-ups, nutrition education, and hypertension screening at their public events and partnering with the as part of the NYC DOHMH's #Not62 Coalition, dedicated to improving Bronx County's last place health ranking. As part of this application, the Montefiore will offer YMPJ access to available data, resources, and support, as well as serving as trusted advisors as YMPJ undertakes the HIA in this area.

2.0 PROJECT ACTIVITIES / MILESTONE SCHEDULE / DETAILED

a. Project Activities: Step One: RFP Development and Contractor Onboarding. With support and feedback from core project partners, YMPJ will create and disseminate a Request for Proposals for an HIA Consultant and Evaluation Consultant for the project. The HIA Consultant will conduct the majority of research and data analysis; participate in components of the Measurement and Evaluation (M&E) plan; and manage the drafting and production of our HIA Report. The Evaluation Consultant will lead the evaluation and monitoring plan and performance measures throughout the project period (see more about their deliverables in section 3.0). In the first quarter of the project period (Q4 2023), YMPJ will release the RFP, interview potential candidates, and enter into a contract with the chosen Consultants.

Step Two: Form the Steering Committee and Engage in the Screening Process. In Q1 of 2024, YMPJ will convene our internal HIA team, core project partners, and the HIA Consultant for an initial planning or kickoff meeting(s). To ground this team in a common understanding of the HIA process, the meeting(s) will focus on questions such as: Why is an HIA warranted and what are the goals/purposes? What are the steps involved and corresponding objectives, milestones, and timelines? What are the universe of targeted health issues and intervention scenarios that should be considered? How will the HIA be used? How will it complement and leverage ongoing community-driven brownfield planning by the NYS BOA coalition and accelerate progress in activating underutilized spaces in the South Bronx?

At the initial meeting(s), the core project team will also develop a comprehensive list of stakeholders whose engagement and participation will ensure the effectiveness and community representativeness of the HIA (and our ultimate success in implementing its recommendations). From that list, we will identify a subset of key stakeholders–including directly impacted community members–to recruit for our Steering Committee. YMPJ will reach out to those potential Steering Committee members to provide detailed information, discuss the value they

will bring to the project, and ask them to participate. Before the end of Q1 of 2024, members of the Steering Committee will be named and an initial convening will be held to confirm key objectives, roles and responsibilities, milestones, and timelines for the project. In addition, YMPJ staff will work with Steering Committee members to set up a regular ongoing meeting schedule.

Once the Steering Committee is convened, (Q1/Q2 of 2024), we will begin the HIA screening process which will include at least two community listening sessions with residents in the project target area and the stakeholders identified in our initial project planning meetings (see above). In advance of these sessions, YMPJ and the HIA Consultant will collaborate–with input from the Steering Committee–to develop materials, presentations, and other tools to guide participants in sharing their perceptions of health impacts in their community, their view of the affected population groups, and their priorities and aspirations for potential specific redevelopment interventions at key community sites. The work completed to date by the NYS BOA planning coalition will provide a foundation for developing those materials and leading that discussion. Following the listening sessions, the Consultant will guide the Steering Committee in defining the health impacts, population groups, and interventions on which the HIA will focus.

Step Three: Scoping and Project Planning: In Q3 and Q4 2024, the HIA Consultant will lead YMPJ and the Steering commitment in developing two plans: 1) a detailed Work Plan for completing all steps and components of the assessment that will also define the specific research questions to guide the assessment, the analytic methods that will be used, and any other study policies or protocols that will be followed; and 2) a Community and Stakeholder Participation Plan that will guide engagement with impacted residents and stakeholders through the remainder of the HIA process. This planning will be shaped by activities in Step Two (i.e., the health impacts, affected populations, and interventions established for the HIA).

The HIA Consultant will collaborate with the YMPJ team and Steering Committee to develop materials and tools that will enable the community to both visualize how the potential equitable redevelopment interventions will impact health challenges in the area and share their views on potential solutions or scenarios. Leveraging ongoing stakeholder CBO meetings and other regularly occurring gatherings in the community, the project team will also begin to convene and schedule opportunities to use those materials and tools to engage residents in conversations about community health concerns and potential benefits associated with redevelopment of waterfront properties in the specified area. Continuing through the remainder of the project period–in accordance with the Community and Stakeholder Participation Plan–these conversations will be consistently structured and implemented to provide valid, useful data or input for the HIA recommendations and report.

Step Four: Appraisal: From Quarter 4 of 2024 to Quarter 2 of 2025, the Consultant will implement the Appraisal process with frequent check-ins with and feedback from YMPJ and the Steering Committee. This will involve conducting a literature review of the impacts of brownfield redevelopment on resident health; surveying and analyzing existing health impact and SDOH data for the target area; developing a comprehensive overview that includes community profiles and the local policy landscape; and laying out the data that can be used to assess interventions and the gaps/limitations in that data. As mentioned in Step Three, the project team will continue to lead interviews, focus groups, workshops, and other engagement/conversations with key constituencies during this period. By the end of Q2 of 2025, the HIA Consultant will synthesize and collate all of the input from this process, including data

collected and analyzed and the resident/stakeholder feedback gathered from the community engagement work–for the Steering Committee.

Step Five: Recommendations: In Q2 of 2025, the HIA Consultant will synthesize inputs developed during Step Four to facilitate discussions/deliberations by the Steering Committee on actionable recommendations for designing or enhancing prospective redevelopment plans in the target area to maximize positive health impacts and minimize negative ones. In other words, the recommendations will translate the assessment findings into feasible community-driven brownfield redevelopment options or plans. To enhance their likelihood of receiving continued attention and consideration–and ultimately being adopted and implemented–the Steering Committee will shape the recommendations to build on (and feed into) the NYS BOA planning process and related initiatives that will continue after the HIA is completed.

Step Six: Reporting: During Q3 2025 - Q1 2026, the HIA Consultant will draft a Health Impact Assessment Report that includes the data, analysis, and results that arose from each of the Screening, Scoping, Appraisal, and Recommendations steps. The Steering Committee will provide the Consultant guidance in drafting the report and provide detailed feedback on initial drafts. We will also make a near-finalized draft public and available for comment and community feedback for a defined period. During Q2 - Q4 2026, YMPJ and the Steering Committee will finalize and formally adopt the report. As soon as the report is complete, all Steering Committee members will share the report widely with their networks, at community meetings and other public events, and with local elected officials to ensure the report reaches a wide audience of engaged citizens. Among other forums, YMPJ and Steering Committee members will present the report to the NYS BOA Planning Coalition in a dedicated meeting. This will serve as an important first opportunity to feed the HIA and its recommendations into continuing discussions about brownfield redevelopment projects in the South Bronx.

b. Milestone Schedule.

Task 1: RFP Development and Contractor Onboarding/*Step One*
Milestone 1.1: Develop and share an RFP for HIA Consultant and Evaluation Consultant
Milestone 1.2: Select an HIA Consultant and Evaluation Consultant and establish a contract.
Timeline: 2023 Q4

Task 2: Form the Steering Committee and Engage in the Screening Process/*Step Two*
Milestone 2.1: YMPJ staff will hold a kick-off meeting for the project, including YMPJ project staff, HIA Consultant, and project partners. At the meeting, objectives, milestones, timelines, and an overview of the HIA processes will be discussed. **Timeline:** 2024 Q1
Milestone 2.2: YMPJ will establish a representative steering committee that will consist of YMPJ project staff, the HIA Consultant, community partners, and community members. Roles and responsibilities of the steering committee will be defined. **Timeline:** 2024 Q1
Milestone 2.3: YMPJ will conduct a minimum of 2 community listening sessions with residents in the target areas to better understand their perceptions of health impacts in their community and affected population groups, and prioritize specific redevelopment interventions (based on NYS BOA planning to date by our community coalition for that work). **Timeline:** 2024 Q1-Q2
Milestone 2.4: The HIA Consultant will lead the steering committee through a series of meetings to assess feedback from community listening sessions, define health impacts and

affected population groups, and select 1-3 specific interventions prioritized for assessment. This will help to focus resources on the most significant health impacts. **Timeline:** 2024 Q1-Q2

Task 3: Scoping and Project Planning/*Step Three*
Milestone 3.1: The Steering Committee and the HIA Consultant will identify specific goals for the HIA. This includes specific redevelopment interventions that will be subject to HIA, the related impacts to be assessed, and the best approaches to assessment (ie. risk analysis, cost-benefit analysis, etc.) **Timeline:** 2024 Q3
Milestone 3.2: The HIA Consultant in collaboration with the steering committee will develop a detailed work plan for the HIA. **Timeline:** 2024 Q3-Q4
Milestone 3.2: The Steering Committee will also develop a customized Community and Stakeholder Participation Plan specific to the HIA to ensure consistent community participation throughout the process. **Timeline:** 2024 Q3-Q4

Task 4: Appraisal/*Step Four*
Milestone 4.1: The HIA Consultant will survey and analyze existing health impact and SDOH data and share results with the Steering Committee. This will develop understanding of community profiles, policy landscape, literature reviews, and data gaps. **Timeline:** 2024 Q4-2025 Q2
Milestone 4.2: With support and engagement from the Steering Committee, The HIA Consultant will lead interviews, focus groups, and other workshops with key constituencies needed to collect community input. **Timeline:** 2024 Q4-2025 Q2
Milestone 4.3: The HIA Consultant will synthesize and collate information from interviews/focus groups/workshops (Milestone 4.1) through the lens of completed data collection/analysis (Milestone 4.2), and work with the Steering Committee to characterize expected health effects of identified redevelopment interventions, quantitatively where feasible. **Timeline:** 2024 Q4-2025 Q2

Task 5: Recommendations/*Step Five*
Milestone 5.1 The Steering Committee with support from the HIA Consultant will develop actionable recommendations for enhancing the redevelopment plans for identified interventions to maximize positive health impacts and minimize negative ones. **Timeline:** 2025 Q2

Task 6: Reporting/*Step Six*
Milestone 6.1: The HIA Consultant will develop a report outlining the findings and recommendations from the HIA. The Steering Committee will give guidance to the development of the report. **Timeline:** 2025 Q3-2026 Q1
Milestone 6.2: YMPJ and Steering Committee members finalize the report and share it widely with their networks including at YMPJs (see section f above): programming at the Bronx River Foodway, community meetings, public programming at Morrison Plaza, and other YMPJ programming and stakeholder groups. **Timeline:** 2026 Q2-Q3
Milestone 6.3: YMPJ and Steering Committee will present the report to the NYS BOA Planning Coalition in a dedicated meeting. **Timeline:** 2026 Q4

c. Itemized Budget Sheet and Budget Narrative. Please see attachments.

3.0 ENVIRONMENTAL RESULTS – OUTPUTS, OUTCOMES & PERFORMANCE MEASURES

a. Environmental Results (Logic Model). Please see attachment.

b. Performance Measurement Plan. As a key quality-control measure and efficacy measure of this project, YMPJ will consult with an EJ-focused measurement and evaluation consultant. The evaluation of the project will follow the tenets of health impact evaluation based on reliable, applicable, and relevant structural, process, and outcome key performance indicators. At the start of the project, YMPJ will work collaboratively with an evaluation consultant on the development of a detailed monitoring and evaluation plan for the development of the HIA and other key milestones established under YMPJ proposal. Since the primary focus of this funding is the development of the HIA (screening, scoping, development of recommendations, reporting), the performance management plan will primarily focus on a process evaluation and reporting approach, but will include some performance measures for the short and intermediate outcomes outlined in the logic model. Once HIA recommendations are made, outcome and impact evaluations will be conducted (outside of this funding period). The process evaluation will be guided by measuring the outputs.

Process evaluation performance measures will be guided by measuring the outputs in the logic model, which are the Community Engagement Plan, Community Listening Sessions, HIA Work Plan, HIA Recommendations, and the HIA Report. The evaluator will report these results gathering documentation and review of one, but not limited to the following: Steering Committee agendas, meeting minutes from Steering Committee, #s and representation of individuals (organization/agency name, constituency, etc.) who attend and/or contribute to the outputs, plans, recommendations, and reports. The evaluator will work with YMPJ to integrate tracking of these performance measures into existing monitoring, evaluation, and reporting plans and requirements.

In addition to performing process evaluation, the Evaluator will conduct an **outcome evaluation for the short-term outcomes and some of the intermediate outcomes in the logic model**. This process will involve document reviews (plans, minutes from Community Listening Sessions, Steering Community meetings, external data sources), surveying key stakeholder groups (Steering Committee, community members, etc.), and conducting either focus groups or key informant interviews with key audiences. These key audiences include community residents near the BOA sites, Steering Committee members, YMPJ staff, and HIA consultants. Ultimately, these outcome evaluation measures will help YMPJ and partners better understand what led to the successful development of the HIA, what challenges/barriers existed and continue to exist, and how the community can best contribute to the redevelopment scenarios that improve the health and environmental outcomes for residents near brownfield sites.

At the conclusion of the funding period, the Evaluator will prepare a report which outlines the following elements of the HIA and the project:

- An evaluation of the HIA process as compared with the HIA plan and applicable standards and consideration of whether the process used was appropriate given the decision-making context, needs, objectives, and resources available.

- A description of the HIA's impact on decision-making and an evaluation of available evidence that suggests whether and how the HIA played a role in decisions or contributed to changes in decision-makers' knowledge, attitudes, or positions.
- A discussion of whether the HIA achieved its initial objectives.
- Acknowledgement of plans for future outcome evaluation or discussion of limitations that prevent such an evaluation.

c. Sustainability Plan and Community Vision. YMPJ is a leading member of the South Bronx community, with a deep local network, including our diverse community of residents, local organizations and institutions, elected officials, and government agencies, as well as businesses and funders committed to our mission. Our deep network allows us a birds-eye view of the challenges faced by our community, and the unique ability to curate the most effective partnerships to address those challenges with efficiency and impact. All of YMPJ's major programs and initiatives include intensive community visioning work, where residents and stakeholders explore challenges in the community, identify areas they want to see strengthened, and develop collaborative solutions. As described explicitly in this work plan, the program directly involves community members in essential capacities, inspiring commitment to achieving project goals. The public education component of the program will provide information to thousands of community members on how the environmental justice issues addressed by this project affect them, and illustrate their vested interest in sustaining the project's momentum into the future.

4.0 PROGRAMMATIC CAPABILITY

a. Organizational Experience. Throughout our history, YMPJ has built grassroots community power to address the impacts of inequitable development, heavy industrialization and environmental exploitation targeting our majority-BIPOC "underserved" and "environmentally overburdened" South Bronx neighborhoods. This has consistently involved leading diverse local coalitions and engaging residents in participatory processes to assess community health, environmental justice, economic, and other challenges and design/implement corresponding community-driven solutions. That work has been centered on focus areas that will be considered in our proposed HIA, including **improving air quality and addressing asthma** and **reclaiming, redesigning, and activating community spaces** to increase food access, reduce vehicle travel and fuel emissions, expand green infrastructure/open space, and advance climate/disaster resilience and emergency preparedness.

Improving air quality and addressing asthma (and related health impacts). For well over a decade, YMPJ has led community-driven campaigns to improve air quality and address astronomical rates in the community of asthma and related ailments. As described in the above Historical Connection to Underserved Community section, we have coordinated community-led air quality monitoring and related studies with support from the EPA, the NYS Dept. of Environmental Conservation, and others. The evidence gathered through this work supported our assertion that the Bronx's highways, industrial facilities, and truck traffic disproportionately expose South Bronx residents to toxic pollutants, was instrumental to our recent success in influencing NYS Governor Andrew Cuomo to allocate $1.8 billion to the redevelopment of local

transportation infrastructure which caused dangerous traffic on residential streets, disconnecting residents from green space, disrupting pedestrian and bicycle transportation, and isolating many residents from community assets. In the grassroots campaign that led to that big win, YMPJ galvanized the community and local stakeholders, leveraged regional business interests, facilitated community visioning sessions and monthly stakeholder meetings, and engaged local policymakers and key government agencies to create a Community Plan that reclaimed 28 acres of waterfront land for commercial development, housing, and open space.

Reclaiming, activating, and redesigning community spaces for Environmental Justice. In the late 1990s, YMPJ launched a public awareness campaign and enlisted help from environmental groups and local agencies to reclaim the dangerously contaminated Bronx River and its blighted waterfront. This work led to removal of dozens of cars and thousands of abandoned tires from the River and contributed to the waterway's gradual restoration. Building on this success, YMPJ has since led the development of several large green community sites along the River, as well as a longstanding US EPA/Brownfields Opportunity Areas partnership; the Loral Brownfield and Starlight Park Remediation campaigns; and the Stormwater Mitigation campaign.

In 2015, YMPJ worked with the South Bronx Overall Economic Development Corp. to develop a US EPA-funded area-wide plan and redevelopment strategy for brownfield sites along the Bronx River/Sheridan Expressway corridor. Building off the US DOT's 2013 Sheridan-Hunts Point Land Use and Transportation Study, the plan proposed enhanced community uses along the waterfront and improved streetscapes and pedestrian routes to safely connect residents to neighborhood parks, the waterfront, and the Bronx River Greenway. In the years since, YMPJ has continued to implement improvements envisioned in the area-wide plan. In 2016, a YMPJ-led local coalition launched the Bronx River Foodway at Concrete Plant Park: a policy-shifting project that established the first ever public foraging site and food forest in a NYC Park and strengthened the growing network of green spaces in the South Bronx that have attracted significant recent government investments. That same year, YMPJ led a Community Needs Assessment and enlisted local residents, CBOs, politicians, corporate partners, and others to ignite the equitable redevelopment of Morrison Plaza–a large-scale, $9 million project which opened last November. As the Plaza official manager, YMPJ has worked closely with NYC Department of Transportation to activate the Plaza as a community asset for the neighborhood. For example, we are responsible for community programming and the operations of the weekly Southeast Bronx Farmers Market at the site. Additionally, In recognition of our role in the Sheridan Expressway Redevelopment, NYS DOT awarded YMPJ programming rights to the 30,000 sq ft highway underpass located at the Bruckner Expressway and Bronx River Ave. We are now transforming the underpass into the Soundview Economic Hub (SEH): A community-driven space that will connect local communities; stimulate the local economy by providing opportunities for food manufacturers, vendors, and service providers; and serve as a vibrant community space for hosting an array of intergenerational programs focused on food, culture, physical activity, job training, and more.

The three specific equitable community redevelopment projects described above–the Bronx River Foodway, Morrison Plaza, and SEH–comprise key spokes of YMPJ's South Bronx Food Sovereignty Network (SBxFSN), a multi-pronged initiative to transform the South Bronx from "food swamp" into a vibrant foodscape that supports increased community health, wealth, and

resilience through a coordinated network of critical food system sites. Combined with ongoing area-wide brownfield redevelopment planning efforts with the US EPA and our NY Dept. of State BOA Coalition, the SBxFSN is part of our broader vision of reshaping the South Bronx built environment to foster community health by connecting green spaces, parks, markets, gardens, and gathering spots via safe, attractive streets and activity-friendly routes.

In all of the above initiatives, YMPJ implemented community-driven participatory approaches that provided impacted residents and stakeholders opportunities for "meaningful involvement." As with our proposed activities and milestone for this project, this work has included building coalitions and making collaborative decisions through some form of steering committee like we propose above for our Health Impact Assessment; hosting community conversations, visioning sessions, or other meetings to gather feedback from the community with a focus on impacted residents; engaging government agency officials and other subject matter experts with skills and experience directly relevant to the project; and facilitating ongoing two-way communications with a range of community organizations to keep stakeholders apprised of our activities and provide them chances to share their views and ideas.

b. Staff Experience / Qualifications of Project Manager. Siddhartha Sanchez, Director of Community Development and Planning, is YMPJ's Project Manager for the proposed work. Sidd has over 15 years of experience in the private, public, and non-profit arenas in the Bronx, and deep relationships across sectors and in both City and State government. Sidd will oversee the Steering Committee, provide overall direction for the project, and engage with key stakeholders and the EPA. YMPJ Executive Director David Schuffler (in-kind time) will provide broad oversight for our HIA. David has experience managing state and federal grants; building partnerships with government agencies and local organizations; and overseeing staff duties and responsibilities while tracking deliverables and expenditures under large government contracts of $500,000 and more. Importantly, David has led our organization through all of the equitable redevelopment projects, brownfield planning and assessment processes, and other community design efforts described above. In addition, an Outreach Specialist will coordinate the engagement of residents for 2 community listening sessions (screening process for HIA) and community engagement and input throughout the HIA (appraisal and reporting process for HIA).

c. Expenditure of Awarded Grant Funds, and plan for compliance: YMPJ's Chief Financial Officer ensures that YMPJ's financial controls, systems, and procedures follow best practices and are in-line with the EPA Compliance Standards.

5.0 PAST PERFORMANCE: For the following list of contracts, YMPJ met all reporting requirements, with timely reporting on progress towards achieving the expected outputs and outcomes. We have submitted acceptable final technical reports under all agreements: **Department of Youth and Community Development** - General Operating ($50,000 FY20): *Successfully completed*; **Department of Youth and Community Development** - General Operating ($40,000 FY20): *Successfully completed*; **NYC Human Rights Administration** (NYC HRA) ($60,000 in FY21): *Successfully completed*; **NYC HRA** ($60,000 in FY20): *Successfully completed*; **NYC Small Business Administration** ($20,000 in FY19): *Successfully completed*

6.0 QUALITY ASSURANCE PROJECT PLAN (QAPP) INFORMATION.
This project will involve the use of existing environmental data and will require a QAPP.

EJCPS Budget Detail Template

Project Term November 1, 2023 - October 31, 2025

	Description	Total
Personnel	▪ Fairfax, VA Lead Organizer @ $69,241.12 annual salary X 15% of time on project for $10,386.17 per year = $20,772.34 for two years ▪ Prince William, VA Lead Organizer @ $69,500 annual salary X 15% of time on project for $10,452 per year = $20,850 for two years ▪ Richmond, VA Lead Organizer @ $69,500 annual salary X 15% of time on project for $10,452 per year = $20,850 for two years ▪ Fairfax, VA Organizer I @ $44,416.53 annual salary X 20% of time on project for $8,883.31 per year = $17,766.61 for two years ▪ Fairfax, Organizer II @ $43,000.05 annual salary X 20% of time on project for $8,600.01 per year = $17,200.02 for two years ▪ Prince William, VA Organizer I @ $46,155.62 annual salary X 20% of time on project for $9,231.12 per year = $18,462.25 for two years ▪ Prince William, Organizer II @ $43,000.05 annual salary X 20% of time on project for $8,600.01 per year = $17,200.02 for two years ▪ Richmond, Organizer I @ $43,000.05 annual salary X 20% of time on project for $8,600.01 per year = $17,200.02 for two years ▪ Fairfax, VA Promoter @ $38,480 annual salary X 30% of time on project for $11,544 per year = $23,088 for two years ▪ Prince William, VA Promoter @ $38,480 annual salary X 30% of time on project for $11,544 per year = $23,088 for two years ▪ Richmond, VA Promoter @ $38,480 annual salary X 30% of time on project for $11,544 per year = $23,088 for two years	$219,565.26

Fringe Benefits	▪ Fairfax, VA Lead Organizer 21.85% of salary (includes medical, dental, life insurance @ 10.52%, FICA @ 7.65%, Workers Comp @ 1.78%, Retirement @ 1.26%, Unemployment @ .64%) = $4,538.79 for two years ▪ Prince William, VA Lead Organizer 21.85% of salary (includes medical, dental, life insurance @ 10.52%, FICA @ 7.65%, Workers Comp @ 1.78%, Retirement @ 1.26%, Unemployment @ .64%) = $4,555.73 for two years ▪ Richmond, VA Lead Organizer 21.85% of salary (includes medical, dental, life insurance @ 10.52%, FICA @ 7.65%, Workers Comp @ 1.78%, Retirement @ 1.26%, Unemployment @ .64%) = $4,555.73 for two years ▪ Fairfax, VA Organizer I 21.85% of salary (includes medical, dental, life insurance @ 10.52%, FICA @ 7.65%, Workers Comp @ 1.78%, Retirement @ 1.26%, Unemployment @ .64%) = 3,882 for two years ▪ Fairfax, Organizer II 21.85% of salary (includes medical, dental, life insurance @ 10.52%, FICA @ 7.65%, Workers Comp @ 1.78%, Retirement @ 1.26%, Unemployment @ .64%) = $3,758.2 for two years ▪ Prince William, VA Organizer I 21.85% of salary (includes medical, dental, life insurance @ 10.52%, FICA @ 7.65%, Workers Comp @ 1.78%, Retirement @ 1.26%, Unemployment @ .64%) = $4,0340 for two years ▪ Prince William, Organizer II 21.85% of salary (includes medical, dental, life insurance @ 10.52%, FICA @ 7.65%, Workers Comp @ 1.78%, Retirement @ 1.26%, Unemployment @ .64%) = $3,758.20 for two years ▪ Richmond, Organizer I 21.85% of salary (includes medical, dental, life insurance @ 10.52%, FICA @ 7.65%, Workers Comp @ 1.78%, Retirement @ 1.26%, Unemployment @ .64%) = $3,758.20 for two years ▪ Fairfax, VA Promoter 21.85% of salary (includes medical, dental, life insurance @ 10.52%, FICA @ 7.65%, Workers Comp @ 1.78%, Retirement @ 1.26%, Unemployment @ .64%) = $5,044.73 for two years ▪ Prince William, VA Promoter 21.85% of salary (includes medical, dental, life insurance @ 10.52%, FICA @ 7.65%, Workers Comp @ 1.78%, Retirement @ 1.26%, Unemployment @ .64%) = $5,044.73 for two years ▪ Richmond, VA Promoter 21.85% of salary (includes medical, dental, life insurance @ 10.52%, FICA @ 7.65%, Workers Comp @ 1.78%, Retirement @ 1.26%, Unemployment @ .64%) = $5,044.73 for two years	$47,975.01
Travel	▪ Local mileage for 8 organizing staff and 3 promoters for field work: 25 miles per person month @ $0.655/mi. X 48 months = $8,646	$8,646.00
Equipment	NA	$0.00
Supplies	▪ Printing and Copying of outreach and education materials, pamphlets, flyers, et. est. @ 1.50 per copy for 2500 copies per year for 2 program years = $7,500. ▪ Electronic notepads for 3 Promoters and 5 Organizers/Outreach workers to perform field duties @ $750 each for the 1st program year = $6,000 ▪ Miscellaneous supplies for staff on this project, inc. pens, pencils, paper, sticky notes, etc. = $752.63 per year for the full program term (2 years)	$15,005.26

Contractual	NA	$0.00
Construction	NA	$0.00
Indirect Costs	CASA's Federally Approved Indirect Rate = 13.30% of total direct costs.	$38,728.47
Other	▪ Subaward to Chesapeake Climate Action Network for planning, capacity-building support, outreach assistance, and area expertise = $80,000 over two years ▪ Subaward to Coalition for Smarter Growth for planning, technical advice, capacity building support, outreach assistance, and area expertise = $80,000 over two years ▪ Gas cards for community members completing outreach activities, community forums, pop-up events, etc.) 14 per month for the full project term at $30 each = $10,080	$170,080.00
		$500,000.00

CASA Virginia Safe Streets Project Expansion EJCPS Logic Model

Resources/ Inputs	**Activities**	**Outputs**	**Audience**	**Short-term Outcomes** (6-12 months)	**Intermediate Outcomes** (12-24 months)	**Long-term Outcomes** (2+ years)
– Partnering organizations – Staff time – In-kind contributions – Sub-grantee funding – Transportation costs (gas cards)	– Initiate planning campaign (with partner collaboration) in Prince William County and Richmond to identify geographic areas of focus and issues of focus for campaign – Assemble Stakeholder Advisory Committee to plan survey and host regular meetings to shape campaign – Generate and distribute survey to identify and prioritize environmental/ public health needs of community residents in English and Spanish via	– Host 6 in-person community forums in first 6 months to introduce survey and education about campaign – Distribute 500 surveys (250/year) via in-person door-knocking outreach promoters across three regions as well as via virtual/online/text platforms – 5,000 homes/residents receive education related to energy burden, indoor air pollution, and climate-related damage to homes – Hold 12 (6/year) pop-up events on the street and at bus	– Immigrant and working-class communities – Local, city, and state governments – Related decision makers (Virginia Department of Transportation, etc.) – Local partners	– Increase in local community awareness of issues including pedestrian safety, air pollution, public transportation options (target =1,800 residents) – Increase in number of community stakeholders involved in project (target = 8 entities including government, faith-based, educational institutions, etc.) – Increase in local community awareness on climate-related topics including energy burden, indoor air pollution, and climate-related	– Increase in number of immigrant and working-class (disadvantaged) community members participating in state and federal public processes, such as meetings regarding better access to public transportation – Increase in number of community members utilizing public transportation, walking, and bicycles instead of private vehicles as a result of climate education – Installation of permanent pedestrian medians	– Tangible physical investments in safe structures that include the following: – Construction of bike lanes, better lighting on public thoroughfares – Increase in more high-visibility speed limit signs to ensure pedestrian safety and reduce emissions – Permanent pedestrian medians – More safe pedestrian crosswalks/designated crossing areas – Reduced number of curb cuts

	door knocking and virtual dissemination – Generate and distribute educational materials with topics related to energy burden, indoor air pollution, and climate-related damage to homes and campaign flyers in English and Spanish via door knocking and virtual dissemination – Identify key entities and decision makers that are needed to achieve specific outcomes (example: speed limit reductions) – Notify organizational staff and identified key entities and decision makers about the campaign – Launch website and social media around new 'Safe Streets' expanded	stops – Hold 24 community meetings (12/year) with other community groups – Host 12 (6/year) Stakeholder Advisory Group meetings – Distribute 300 post-surveys 1 year after project completion via in-person door-knocking outreach promoters across three regions as well as via virtual/online/text platforms		damage to homes (target = 5,000 residents) – Increased understanding of environmental justice related issues and challenges through results of survey, pop-up events, community meetings, and Stakeholder Advisory Committee meetings – Installation of temporary safety measures where feasible to address immediate concerns such as high visibility crosswalks at key intersections, automated speed warning signs, temporary median refuges, and temporary sidewalk connections	– Installation of pedestrian-activated stop signals at important crossing points in the long gaps between existing traffic signals – Increase in number of community members implementing knowledge learned through education including accessing IRA benefits, weatherization efforts, taking steps against indoor air pollution, etc. – Safer and better connected walking and biking facilities – Bus service improvements for higher frequency service, and better all-day and weekend service – Established and regular consultation by the county and state with the community on road	– Better sidewalks, bicycle facilities/racks (places to lock and park bikes), and access to improved bus stops. – Established and regular consultation by the county and state with the community on road safety and design, as well as bus service planning and BRT planning. – Decrease number in pedestrians involved in auto-accidents – Improved indoor air quality in homes of community members and homes equipped with more energy-efficient modifications – Overall reduction in emissions and air pollution

	campaign – Plan and initiate campaign announcements via press releases, media advisories, etc. – Host community forums to introduce survey and education about campaign – Host pop-up events on the street and at bus stops to execute survey and education on campaign – Host community meetings with community groups, churches, schools, etc. to invite stakeholders into campaign, ensure widespread community involvement, and spread information about campaign in order (to create stakeholder advisory groups				safety and design, as well as bus service and BRT planning	

	– Review survey results, data, and identify findings, compile with information from stakeholder advisory groups and committee – Draft report with recommendations – Distribute post-surveys one year after project completion to community members who have engaged with the project to follow up and see if improvements have been made					

ABIGAIL SPANBERGER
7TH DISTRICT, VIRGINIA

Congress of the United States
House of Representatives

SPANBERGER.HOUSE.GOV

April 14, 2023

Dear Administrator Regan,

I am writing to request you provide full and fair consideration of the application submitted by CASA for the Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program funding opportunity as awarded by the U.S. Environmental Protection Agency.

As I understand it, the purpose of this program is to provide financial assistance to eligible organizations working to address local environmental or public health issues in their communities. The program assists recipients in building collaborative partnerships with other stakeholders such as local businesses and industry, local government, medical service providers, and academia to develop solutions to environmental or public health issues at the community level.

If awarded, CASA intends to expand its Safe Streets campaign to Prince William County, Fairfax, and Richmond. The Safe Streets program engages marginalized voices in the pursuit of reduced emissions and associated air pollution through increased pedestrian and cyclist safety and improved access to public transportation options. CASA says this project will expand its base of climate advocates within the areas of Richmond, Fairfax, Manassas, and Prince William County; deepen members' understanding of climate justice, transit equity, and environmental justice; engage and educate allies and decision makers about the need to invest in environmental justice communities and opportunities available to do so; and achieve tangible changes to reduce fossil fuel emissions through increased transit and safe transportation systems for pedestrians and cyclists.

For the past decade, CASA has been an anchor organization serving Virginia's immigrant and working-class residents – using a proven approach of providing culturally and linguistically appropriate services and programs that meet the immediate needs of the community. Therefore, CASA is positioned to use this funding to effectively facilitate stakeholder advisory groups to ensure members of the public, especially low-income and immigrant communities, are involved in the process, provide feedback, and work in partnership with local governments to develop safer streets for the community.

I thank you for your time and attention to this grant application, as well as your service to the constituents of Virginia's Seventh District.

Kind Regards,

Abigail Spanberger
Member of Congress

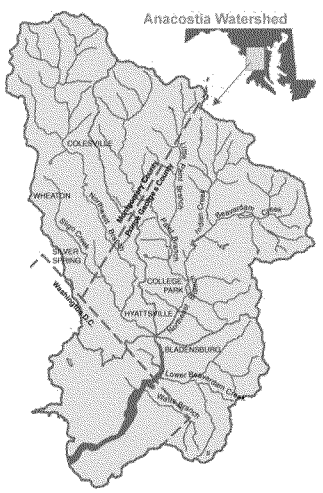
Engaging Diverse Communities in the Anacostia Watershed

Anacostia Riverkeeper & Partners'

Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program Proposal



ANACOSTIA PARKS & COMMUNITY COLLABORATIVE

CHEER Community Health and Empowerment through Education and Research

Joe's Movement Emporium

Montgomery Green

PROTECT | RESTORE | CONNECT DC | MD

The Environmental Justice Challenge in Our Watershed

In DC's Ward 7 & 8, otherwise known as "East of the River", over 90% of residents are Black or African American

However, BIPOC participation in recreation and educational outreach in the watershed is disproportionately low

In Maryland's upper Anacostia tributaries, over 20% of residents identify as Hispanic, and many community members first language is Spanish

Yet, most education and outreach opportunities do not include spanish language materials or any bilingual programming

Anacostia Riverkeeper & Community Partners' Solution

Listening Tour into Diverse Communities

Working with partners in diverse neighborhoods, Anacostia Riverkeeper will first embark on a listening tour.
In this series of events, ARK will attend 12+ community events a year (community groups, school or church nights, food drives, etc) and talk to residents about their perception and barriers to recreation & engagement on the river.

Expanding Existing Programs to Improve Access

Anacostia Riverkeeper has a strong repertoire of events and programming that promote engagement in the watershed, including family fishing events, after-school educational programming, and boat tours. Funding & insight from the listening tour will allow ARK to expand and dedicate programming for residents of these diverse neighborhoods

New "*Anacostia Evening*" Programming

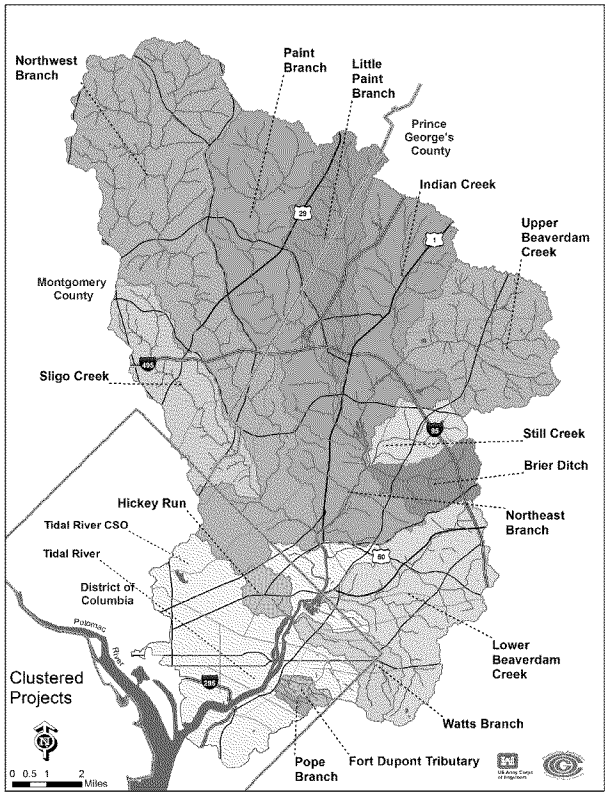
To further celebrate and engage these diverse communities, Anacostia Riverkeeper will work with local community group to create a summer evening festival series in local parks in these underserved neighborhoods within the watershed, providing watershed fun, games, and educational opportunities, as well as a hub for other environmental justice & public health programming.

Environmental & Social Outcomes

2,000+ community members from underserved communities will have opportunities to engage with their watershed.

Partnerships with smaller community nonprofits will empower them to advocate for environmental justice within their community

Diverse residents will build a healthy & lasting relationship with the watershed that is the backbone of their community



ANACOSTIA RIVERKEEPER®

Engaging Diverse Communities in the Anacostia Watershed

Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program (EJCPS)

Diverse Communities, Environmental Justice & the Anacostia Watershed

The Anacostia watershed covers parts of both Montgomery County and Prince George's County in Maryland and flows through seven of the eight Wards in the District of Columbia with over 800,000 people calling it home. The communities that makeup the watershed are highly diverse racially, ethnically, and socioeconomically, something that's to be expected in a highly developed urban area surrounding the nation's capital.

DC Residents East of the River - In the District, Wards 6, 7, and 8 encompass most of the Anacostia watershed in DC and their residents typically have the strongest connection to the river due to their close proximity. While these three Wards make up ~37% of the District's population, over 20% of families in both Ward 7[1] and 8[2] live below the poverty line while their population is over 90% Black or African American. Just by looking at the geography of the Wards, 7 and 8 east of the river while 6[3] is west of the river, you can see the stark racial divide that still exists in the community with over 90% of Wards 7 and 8 population identifying as Black or African American and only 30% identifying the same in Ward 6 west of the river. These communities have long suffered environmental racism in the form of highway construction, industry, and pollution.

[3] https://www.dchealthmatters.org/demographicdata?id=131493&sectionId=935

Prince George's County Residents[4] - Prince George's County is a working class area with a history and high density of industrial practices and heavy urbanization (2,003 residents per square mile). As of 2022 Prince George's County has a total population of 947,000 people, 64% of which identify as Black or African American and 20.5% of which identify as Hispanic or Latino. Only 34.5% of county residents record having a college education with 11.5% of residents living below the poverty line. With almost 50% of the watershed contained within its boundaries, Prince George's County has some of the largest impacts on both river and community health, a fact that can be in conflict with numerous public parks and access points along the river that are often rendered useless due to flooding, trash, or unsafe conditions.

Montgomery County Residents[5] - Montgomery County, MD has a population of 1,053,000 as of the 2022 census, with 20% identifying as Black or African American and 20% as Hispanic or Latino. The average income is almost $30,000 higher in Montgomery County than in Prince George's County and only has 8% of its residents living below the poverty line. While Montgomery County is typically seen as a less urbanized and diverse location, the communities surrounding the Anacostia portions of the county are highly eclectic and oftentimes see the most recreation due to the appeal of the shared resource that is the Anacostia and its tributaries. Unfortunately there is a strong disparity in the county's LatinX community as they often have the highest rates of recreation around the watershed, but have often been left out of past outreach and environmental education initiatives due to language barriers and poor outreach efforts.

Unfortunately, like many urban rivers, the Anacostia not only has a past marred by environmental pollution, but also a form of social and cultural pollution via gentrification, unequal access to basic city services, and unjust development practices. Watershed residents in Maryland and the District of Columbia have a strong history of river recreation and stewardship that was eroded through industrial pollution, community fragmentation, and lengthy inaction in restoring the river. When the District's black residents were barred from city swimming pools decades ago they turned to the Anacostia as a source of recreation and enjoyment in a time when city services were dictated by the color of your skin. In time even this opportunity was closed off to District residents east of the river as highways, infrastructure, and industrial complexes were built along the river, making the river unsafe to recreate in and further removing Anacostia residents from their river. This trend was only repeated further up the watershed in Prince George's County and Montgomery County as development pushed black and LatinX residents

ED_016126_00001403-00003

further away from rivers and streams while simultaneously making it harder for them to access and enjoy natural spaces.

Presently, the Anacostia River is seeing a strong resurgence and return to its past natural state, thanks to the combined effort of the DC government, environmental groups, and the strongly engaged Anacostia community. As the river becomes healthier and safer for people to come in contact with, recreation opportunities will be essential in helping Anacostia residents and visitors reconnect with their river. Studies have shown that river recreation still persisted when the Anacostia was degraded and still persists in present day in numerous watershed communities. Recent Anacostia Riverkeeper water quality results even indicate that a large majority of the mainstem Anacostia would be safe to swim in during most of the recreation season. However, while the potential for recreation and reconnection has increased over recent years, threats to human health and safety still exist in the form of sewage overflows, trash and debris, and toxic sediments. It's for these reasons that river education, outreach, and collaboration within these communities is so essential so that residents can feel a renewed sense of ownership for the river while also being informed about current issues still facing it today.

Watershed Partnerships

Anacostia Riverkeeper works in collaboration with local groups, legal counsel, federal and local government officials, foundations, and community members to ensure well-written environmental laws, enforcement of the existing laws, public awareness of environmental and health issues, and the cleanup and prevention of pollution of the river and its tributaries. Selected existing partnerships include:

Alliance for the Chesapeake Bay ARK works with Alliance on water quality monitoring. Alliance helped develop the methods and protocols used in the District monitoring program.

***Anacostia Parks and Community Collaborative** Anacostia Riverkeeper is a long-time member of APACC, and we have worked with ARK on various community listening sessions and events.

***Community CHEER** is a public health non-profit in the Hispanic Long Branch neighborhood of Montgomery County. ARK partners with CHEER on several youth outreach programs related to water quality.

***Defensores de la Cuenca** connects the Latino community in Maryland with the environment. ARK partners on 2021's Faith and Fishing grant is also involved in Anacostia Riverkeeper's bilingual outreach in Montgomery County for water quality monitoring and trash cleanups.

DC Audubon Society ARK partners with DC Audubon on several outreach efforts, including Wingspan Wednesday (a monthly game night) and birding boat tours, engaging young working professionals on the watershed.

Earth Conservation Corps ARK partners with ECC on the Friday Night Fishing program as well as on the maintenance of the District Bandalong Litter Traps.

EcoLatinos partners with ARK on Spanish language environmental outreach in Montgomery and Prince George's County, MD.

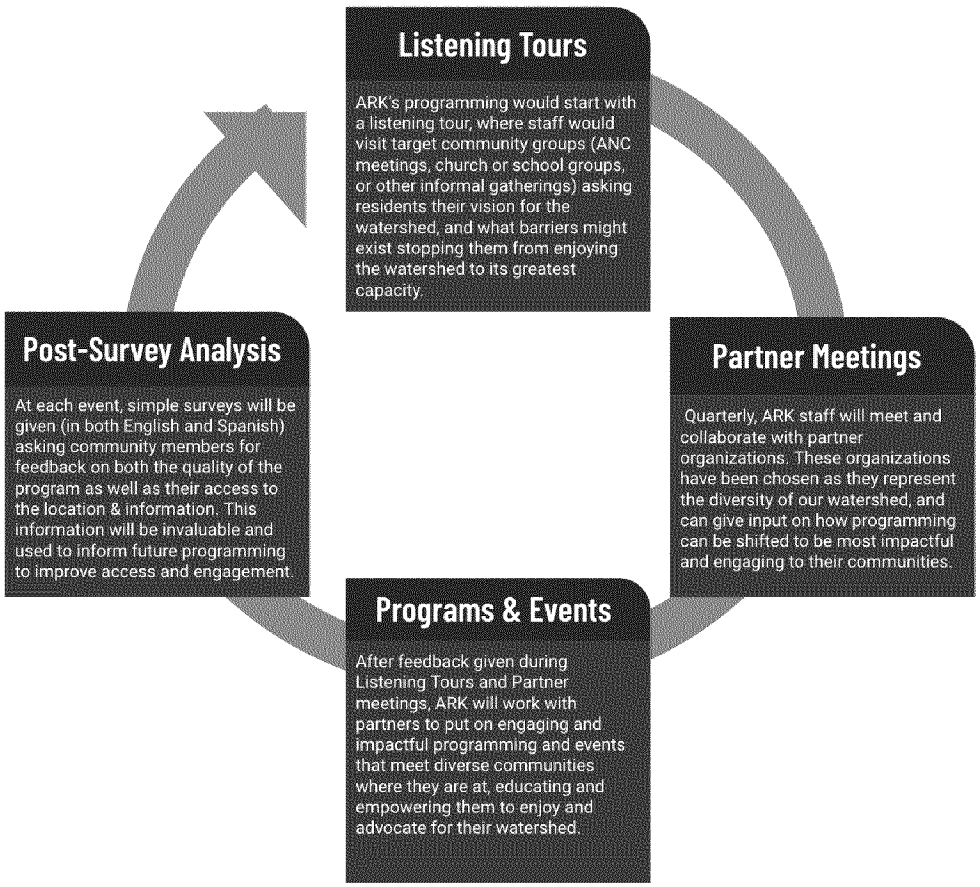
***Joe's Movement Emporium**, **StreamTeam** Joe's workforce team will work with ARK to maintain Bandalong Trash Traps, as well as partnering on outreach related to water quality and litter clean ups in Montgomery and Prince George's county.

Latin American Youth Center LAYC runs the Montgomery County Conservation Corps and will field the team maintaining the first Bandalong Litter Trap in Montgomery County, MD.

Nature Forward ARK works with NF specifically on a citizen science water quality monitoring program that covers all District waters. ANS helps ARK recruit and monitor waters in Rock Creek.

ED_016126_00001403-00005

***One Montgomery Green** partners with ARK on outreach and trash cleanups in Montgomery County.



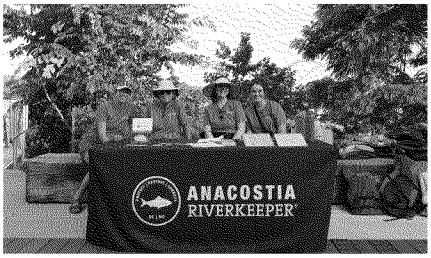
Ward 8 Woods in conjunction with George Washington University started up a new water quality monitoring program this year and collaborates with ARK in youth development as contractors for Bandalong trash trap maintenance.

As this is a collaborative grant, ARK is utilizing strong partnerships with local organizations in these diverse communities in order to better connect with the community we hope to serve. Specific groups we are writing in as contracted partners in this grant include:

- **Anacostia Parks and Community Collaborative**- Will partner with ARK as a local contact for BIPOC communities in Ward 7 and 8 in the District, helping host an *Anacostia Evening* at Anacostia Park, as well as organizing stops on the listening tour.
- **Community CHEER**- Will partner with ARK as a local contact within the Spanish-speaking Maryland communities, helping host an *Anacostia Evening* at Long Branch Community Center, as well as organizing stops on the listening tour.
- **Joe's Movement Emporium** Will partner with ARK as a local contact for diverse communities in Prince George's county, helping host an *Anacostia Evening* at Bladensburg Waterfront Park, as well as organizing stops on the listening tour.
- **One Montgomery Green**- Will partner with ARK to provide opportunities and organization for listening tour events to better connect with diverse Maryland communities, and also help provide bilingual outreach and opportunities.

A Collaborative Solution to Community Engagement

Anacostia Riverkeeper (ARK) will leverage the Environmental Justice Collaborative Problem-Solving model in the completion of this project. When working to engage with BIPOC and Spanish-speaking groups, it is critical that ARK staff leans into community members and existing community groups in order to ensure the work is done equitably, and raises up voices within the community to lead the work.



ARK will engage with individuals from the community through *Listening Tours* where staff visits communities asking the tough questions regarding the communities thoughts and visions for the watershed, but also engage with both contractual partners and other existing community groups in the watershed to further understand what the the needs of the community, and working to remove barriers preventing community members to engage equitably.

Anacostia Riverkeeper has been a trusted name in the Anacostia community since 2009, working with watershed residents and visitors to further our goal of a swimmable and fishable Anacostia River. Working towards this goal we focus on five (5) key program areas: accessibility, water quality, trash mitigation, green infrastructure, and advocacy. All of these programs work together to not only further clean the river, but also reunite a previously strong but fractured Anacostia community with their river. This proposal will combine vital Anacostia Riverkeeper program areas into one comprehensive and collaborative project with the intent of creating a more unified and engaged Anacostia community where all watershed residents feel a shared ownership of their local river.

All Riverkeeper programs have a central focus of engaging with the Anacostia community and getting them out into the watershed and engaging with their home river. This project reimagines pre existing organizational skills and programs in a way that will better engage the full watershed community, no matter location or socioeconomic status.

In order to meet project objectives, Anacostia Riverkeeper (ARK) and community partners will host four event types to better serve their communities and increase engagement in diverse communities

1. **Listening Tours** One of ARK's first goals will be to better understand what roadblocks might exist that limit residents' understanding and engagement with the watershed. We will meet diverse residents in their communities, focusing on BIPOC and Spanish-speaking groups; attending neighborhood groups, school or church events, or other formal or informal community events. While staff is at events, we will ask the tough questions on the public's perspective on the watershed's health as well as what barriers might exist limiting their engagement with the watershed.

2. **Anacostia Evenings** ARK will work with partner organizations to host a series of evening events in these diverse and underserved communities that might not otherwise have access to watershed-based festivals. At these events, ARK will provide snacks, drinks, t-shirts, watershed education & entertainment. This will include shorter boat tours (*Anacostia Experience)* , *Family Fishing*, and educational games for kids. Partner organizations will also table, providing residents a one-stop-shop to learn more about environmental justice in their communities.

3. **Educational Outreach** ARK will target non-traditional youth education groups in these diverse communities to provide educational opportunities to youth. These could range from after-school programs, mentorship clubs (i.e. Boys & Girls clubs, etc), scouting groups, youth groups, camps, and more. These programs would be available in both English and Spanish. Programming content at these could include:

   - Water Quality in the Anacostia
   - Plastic Pollution
   - Environmental Policies & Initiatives
   - Climate Change and Urban Heat Islands
   - Access to Nature and Mental Health
   - Environmental Justice & Advocacy

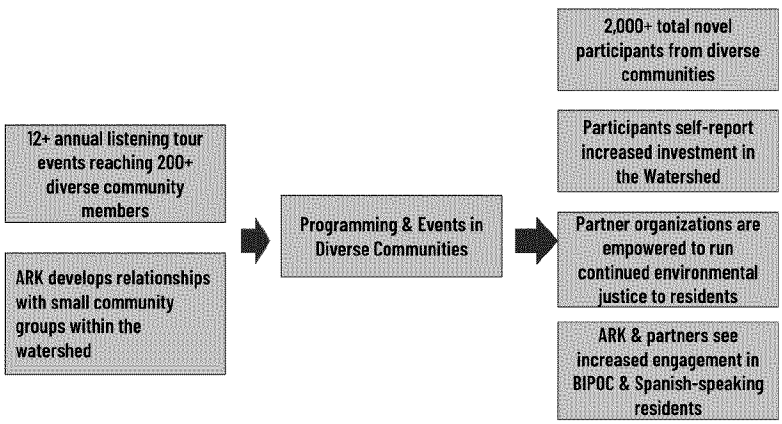
4. **Boat Tours** ARK has an existing educational boat tour program, however funding has been limited in previous years. Through this program, ARK will set aside 20 boat tours annually for groups from these diverse target communities in order to allow them to "skip the line" and have easier access to the river that makes up the backbone of their community.

2023 - 2026 TIMELINE
Engaging Diverse Communities in the Anacostia Watershed
EJ Collaborative Problem-Solving Cooperative Agreement Program (EJCPS)

Yearly events	**12) listening sessions** • (6) where each partner designs a listening session to best reach their key audience • (6) ARK/partners attending existing diverse events across the watershed	**(3) *Anacostia Evenings*,** programming can include: • (3) 45-minute *Anacostia Experience* boat tours • (1) *Family Fishing* station • (1) Water quality monitoring station • (1) educational station • various partner stations	**(20) 1-hour *Anacostia Experience* boat tours**	**(12) stand-alone educational events**

	Q1 (Jan - Mar)	Q2 (Apr - Jun)	Q3 (Jul - Sep)	Q4 (Oct - Dec)
2023				• Partners meetings • Planning for upcoming listening session
2024	• (6) listening tour events • (3) stand-alone educational events	• *Anacostia Evening* (Anacostia Park) • (10) *Anacostia Experience* boat tours • (3) stand-alone educational events • (2) listening tour events	• *Anacostia Evening* (Bladensburg) • (10) *Anacostia Experience* boat tours • (3) stand-alone educational events • (2) listening tour events	• *Anacostia Evening* (Long Branch) • (3) stand-alone educational events • (2) listening tour events
2025	• (6) listening tour events • (3) stand-alone educational events	• *Anacostia Evening* (Long Branch) • (10) *Anacostia Experience* boat tours • (3) stand-alone educational events • (2) listening tour events	• *Anacostia Evening* (Anacostia Park) • (10) *Anacostia Experience* boat tours • (3) stand-alone educational events • (2) listening tour events	• *Anacostia Evening* (Bladensburg) • (3) stand-alone educational events • (2) listening tour events
2026	• (6) listening tour events • (3) stand-alone educational events	• *Anacostia Evening* (Bladensburg) • (10) *Anacostia Experience* boat tours • (3) stand-alone educational events • (2) listening tour events	• *Anacostia Evening* (Long Branch) • (10) *Anacostia Experience* boat tours • (3) stand-alone educational events • (2) listening tour events	• *Anacostia Evening* (Anacostia Park) • (3) stand-alone educational events • Submit final report

A full timeline of the project is attached to this proposal.



Anacostia Riverkeeper is asking for three years of $50,000 of funding for this project. Money will go towards staff time for planning and attending various events, equipment and maintenance for fishing and boat tours, educational materials, and funding to pay contractual partners. Additionally, funding has been set aside in the budget in order to compensate local organizations and individuals (artists, educators, etc) contributing to the Anacostia Evening events. More information can be found in the itemized annual budget included.

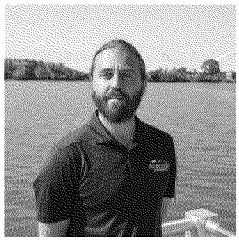
Proposed Budget Overview	
Staff Time	$29,940
Event Supplies & Rentals	$22,200
Outreach Materials Costs	$14,079
Boat Tours	$33,300
Partners & Contracts	$50,481
Three Year Total	$150,000

Successful performance of this project is directly tied to the number of community members engaged/reached and their level of behavioral change to one of increased connection to the Anacostia. The four education and outreach areas of this project are intended to meet audiences where they are through a variety of different mediums (e.g., on river boat tours, riverside events, educational walking tours, etc).

Anacostia Riverkeeper hopes that successful programming will lead to multiple short- and long-term outcomes for the watershed and its residents. Short-term goals include:

- 600+ residents from diverse communities engaged in listening tours.
- ARK will develop or strengthen relationships with 10+ community groups interested in Environmental Justices in the watershed.
- 2,000+ individuals will engage in watershed recreational and educational opportunities.

With increased access and engagement in the watershed by both diverse residents and community groups, ARK hopes to see increased engagement and investments in the watershed. These long-term outcomes include:



- 90% of participants self-report an increased interest and intent to continue recreation in the watershed
- ARK continues collaboration with community groups in the watershed to provide long-term, sustainable recreation and education opportunities to the watershed.
- ARK and partner groups see increasing participation in programming from BIPOC and Spanish-speaking community members.

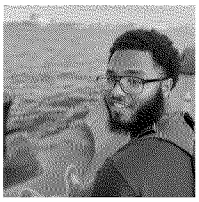
We see this grant as the beginning of a watershed-wide, coalition-based effort to connect underserved communities to their local waterways. Through direct collaboration on major events like the Anacostia Evenings series, as well as smaller community outreach, the project will strengthen our existing partnerships and forge new ones. Emphasizing outreach and education will allow the project to be self-sustaining for growth and continuation—the more people learn about the river and recreation opportunities, the more people will engage with and be stewards of the river on their own. One of the key goals of this project is to empower our partner organizations to expand their environmental programming and be able to implement these recreation and education activities with their communities after the grant period has lapsed. We bring our environmental expertise to the project, and hope that over the project timeline we can share this with our partners. Through the three-year period of the project, we plan to transition to a more hands-off approach to programming, turning over more direction and responsibility to our partner organizations. This will create a gradual transition to allow them to take over after the grant period is over.

Organizational Capacity

As an organization, our primary programmatic goals that help us achieve our mission are centered on trash mitigation, advocacy, water quality, stormwater reduction, and river access. All these programs have a strong community component, whether it's having local volunteers collect water quality samples or taking a school group out on a free educational boat tour. Our primary audiences are local river lovers and the communities that live along the river in the District of Columbia, Prince George's County, and Montgomery County. In the District, we focus most of our programs in Wards 6, 7, and 8; historically black and underserved communities who were some of the first stewards of the river and have strong shared emotional bonds with the fate of the river. While in Maryland our members come from all walks of life, united by a shared love for the outdoors and a commitment to protect their local natural resources. Examples of the scope and reach of our work include: over 900 attendees of all ages to our free family Friday Night Fishing events in the summer; providing over 2,100 participants with free educational boat tours each year; working with over 600 volunteers each year to help remove more than 20,000lbs of trash from the watershed; and training over 70 citizen science volunteer monitors to collect almost 300 water samples each year. With this proposal, we plan to grow our existing programming and infrastructure to better serve some of the more diverse communities within our watershed.

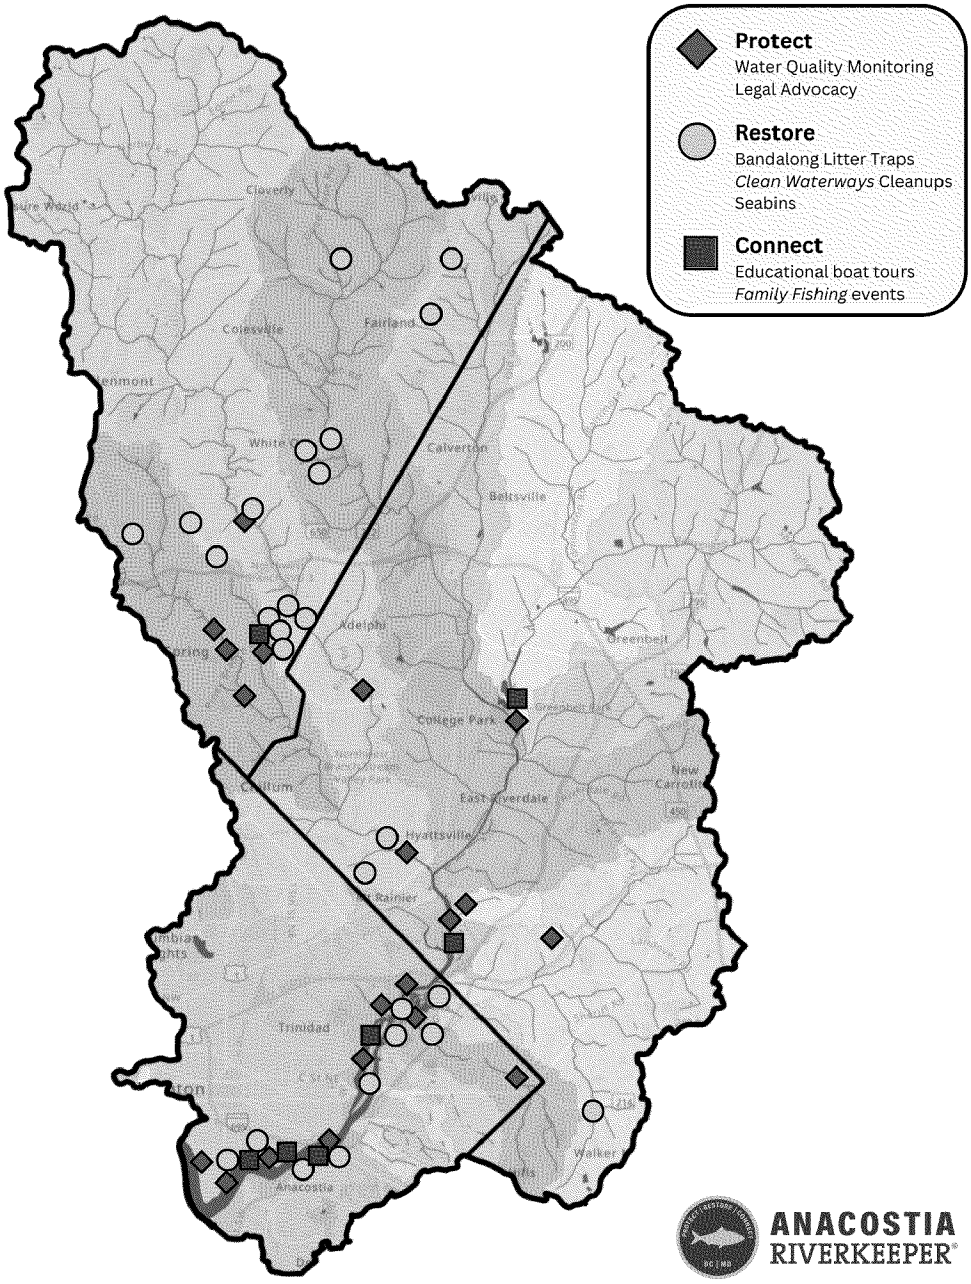
Trey Sherard is the Anacostia Riverkeeper and is beginning his twelfth year with the organization advocating for and connecting people to the Anacostia River. An experienced community organizer, Trey leads a majority of our outreach, advocacy, and programs. He coordinates Anacostia Riverkeeper's *Clean Waterways* cleanup series, *Friday Night Fishing*, management of eight Bandalong litter traps in DC and MD, and ARK's green infrastructure program. He serves as DC Vice-Chair of the Anacostia Watershed Community Advisory Committee and serves on Mayor Bowser's Leadership Council for a Cleaner Anacostia River. Trey also guides the majority of ARK's *Anacostia River Explorer* boat tours, which will be a critical component of this project. USCG 100 ton Captain's License, B.S. Biology Duke University.

Quinn has worked at Anacostia Riverkeeper for five years and is currently Director of Operations. She has organized our Friday Night Fishing series and many of our cleanup events for the past few years. She is also currently managing a Trash Cleanup and Outreach grant in Montgomery County that engages 6 partners over 18 events this year. Quinn oversees scheduling and logistics across all watershed programs. Additionally, she develops and maintains public-facing outreach materials, organizational knowledge management systems, and designs and executes social media and newsletter content. Quinn earned her B.A. in Organizational Sciences from the George Washington University.



Maureen works as our Program Manager of the Water Quality monitoring program at Anacostia Riverkeeper. In this role, Maureen collaborates with project partners to recruit and train water quality volunteers, manages monitoring and data analysis during the summer recreational season, and writes both public and scientific reports on findings. She also leads our educational work, focusing on providing engaging activities to children and families in the watershed. Before joining ARK, Maureen earned her M.S. in wildlife sciences from Auburn University and worked for eight years as a middle school science teacher in DC Public Schools.

Petra is our project coordinator on Water Quality monitoring, where she coordinates with volunteers and partner organizations, analyzes water samples, and processes and communicates results with the public. Petra creates outreach materials focused on sharing vital information about the health and history of the Anacostia to empower residents to engage with their river. She is also one of our boat tour guides. Petra earned her B.A. from Williams College where she studied chemistry and environmental studies.



Glenn, a native resident of DC, is passionate about protecting the environment, especially when it comes to issues facing underrepresented communities. He is a graduate student pursuing a PSM in Urban Agriculture from the University of The District of Columbia. He also serves as a park steward for Friends Of Oxon Run in Southeast DC. At ARK, Glenn manages the Seabins program which collects trash in local marinas and is one of our boat tour captains.

Anacostia Riverkeeper approaches each new year from a mindset of stable growth. While the primary issues facing the Anacostia are well known, we as an organization continue to keep an eye on new research and technologies, emerging threats to the rivers, and marked growth in our programs and campaigns. Our work for each new year is framed by the question: what can we do to help protect the river, help to restore it to its past beauty, and help connect local communities to their river in an equitable way? Currently grants of note include:

- **"Anacostia River Explorers"** *District of Columbia Department of Energy & Environment # RFA 2022-2203-WPD*
    - The project purpose is to offer at least 250 educational boat tours of the Anacostia River with a budget of $78,000 annually in order to educate them about the Anacostia River.
    - Ongoing programming since 2015, Anacostia River Explorers have held over 1,400 tours that have reached 17,500 DC residents and guests.
- **"Trapping Trash in the Anacostia Watershed"** *District of Columbia Department of Energy & Environment RFA#2019-1921-WPD-Grant#01*
    - Manage 8 Bandalong Litter Traps in North America along with subcontractors. These were the first Bandalong Litter Traps in North America, for a total of $127,376 over the three years.
    - Conduct public outreach and data management for trash data collected from the traps annually.
- **"Litter Cleanups By and For Diverse Communities"** *Chesapeake Bay Trust Award #21706*
    - $43,934 for a series of litter cleanup events to engage geographically and ethnically diverse audiences in Montgomery County's Anacostia watershed
    - Collaborating with six diverse partner organizations, including both environmental non-profits and community groups.
    - Will host a series of 12 cleanup events in 2023-2024, as well as six bilingual community outreach events.
- "**What's in the Water: Engaging the Prince George's County Community in Water Quality"** *Chesapeake Bay Trust Award #21410*
    - $28,135 to train a team of volunteer water quality monitors and implement seasonal water quality testing
    - Collaborates with local environmental and arts partners to recruit and train volunteers, as participate and share results in in end-of season environmental *Festival Del Rio Anacostia*

Anacostia Riverkeeper has a long history of grant compliance with both federal and non-federal funders. With grant dollars coming from entities like the District of Columbia, the National Fish and Wildlife Foundation, and private foundations alike we are fully equipped to meet all administrative and staff-level requirements that necessitate managing grant funds including but not limited too: providing annual financial statements upon request, grant document retention and organization, and consistent project/budgetary reporting. Being familiar with the process of receiving, distributing, and managing grants up to $200,000 we are prepared to respond to any requests for review of organizational procedures, legitimacy, or project progress. It's a core principle of ours that all awarded funds are spent deliberately, transparently, and according to the proposed project budget which we intend to carry forward with this proposal.

Narrative Proposal for EJCPS Program
EPA-R-OEJECR-OCS-23-01

ENVIRONMENTAL JUSTICE COLLABORATIVE PROBLEM-SOLVING (EJCPS) COOPERATIVE AGREEMENT PROGRAM

Track 1

Program Objectives 1.0

Title: Developing a National Model Environmental Community Operative Promotora (ECO Promotoras) for multi-generational, culturally competent environmental health workers to bridge the gap between Hispanics and Environmental Health

Project Location: Washington Metropolitan Area

Centro de Apoyo Familiar (CAF) is a 501(C)3 organization based in 6801 Kenilworth Ave, Suite 110, Riverdale, MD 20737. Walkiria Pool is the president and main contact. Mrs. Pool is best contacted through email; wpool@mycaf.org. CAF is not applying to the Small CBO Set Aside Track.

CAF's mission is to transform communities through economic and educational empowerment in collaboration with community and faith-based organizations. Currently, CAF is involved in empowering the Hispanic community to have meaningful engagements with environmental health and justice initiatives through partnerships environmental justice coalitions, and funding from our partners. CAF is cochair of the Mid Atlantic Justice Coalition, a local coalition looking to remediate environmental injustices and funding from the Equity Fund is helping CAF reach Hispanic families with climate change awareness and education.

Abstract: Centro de Apoyo Familiar is a Hispanic-Serving Institution and through the EJCPS grant will form a comprehensive and holistic train-the-trainer curriculum to develop environmental health Promotoras- Environmental Community Operative (ECO) Promotoras. CAF will draw from its over 10 years of working the train-the-trainer model on EPA environmental health grants to develop a comprehensive training curriculum which will empower these ECO-Promotoras to work with their communities- the Hispanic Community and other underserved and disadvantaged communities- to mitigate disproportionate and adverse environmental health outcomes, and organize community efforts to increase participation in environmental justice issues within communities and local governments.

Narrative Proposal for EJCPS Program
EPA-R-OEJECR-OCS-23-01

Project Type: Training and Public Education

Special Considerations: Climate Change

Environmental Issue: Environmental Health and Environmental Justice Education

Project Partners: University of Maryland, Johns-Hopkins University, CAF Connector's Network

CAF will not develop a QAPP for this project.

B. Environmental and Public Health Information of the Underserved Community

CAF serves with multiple generations of Hispanic Families, which in Maryland and Virginia are a vulnerable population overburdened with numerous negative health outcomes, including chronic diseases and cultural and socioeconomic factors which are complex determinants of health. Through the **ECO Promotora** program, CAF will use its highly successful Promotora model used in conjunction with the CAF Connector's Network (CCN) to empower diverse Hispanic communities on topics such as Indoor Air and Water Quality, Healthy Homes, and environmental justice (including climate change justice). CAF works with the CCN, a network of faith-based and community organizations that help CAF effectively reach communities that are notoriously hard to work with because of mistrust in institutions, multiple preferred languages, and other cultural barriers and challenges.

Through the Promotora model, replicated in over 5 EPA grants (SEE PAST PERFORMANCE), CAF has been able to successfully empower underserved and hard-to-reach communities through transformational information, shift behaviors for improved health outcomes, and unite communities over common issues including but not limited to recycling practices, energy conservation, use of chemicals in the home, and identification and removal of health hazards in the home, to only name a few. Through the **ECO Promotora** program, CAF will concatenate and solidify its many train-the-trainer modules into one, to form a comprehensive and impactful program for environmental health workers to serve their communities as citizen scientists.

There are multiple environmental justice issues within the Hispanic community which are reflected in environmental health outcomes. On average, Hispanic families tend to be lower income[1] which also translates into worse health outcomes and increased environmental exposures. It is estimated that about 80% of Hispanics do not live in housing that meets EPA clean air quality standards[2], resulting in higher rates of respiratory diseases compared to other demographic groups. Despite these issues, with the proper information, many of the risks associated with environmental justice and structural level factors including those afflicting low-income communities and those

with poor housing options can be mitigated through awareness and changes in behavior. CAF empowers Promotoras in these communities to identify environmental health and justice issues in their communities, and to subsequently empower other members of the community with the same information and resources available. This in turn creates longstanding environmental knowledge reserves through this train-the-trainer approach. This approach is sustainable and has dimensional effects, crossing language barriers, generations, and transcends socioeconomic determinants of health. To this day, the information used in earlier EPA-funded CAF projects still circulates in the community long after the program is no longer being funded. This is because the information is retained through the community and community members can rely on CAF as a trusted and respected resource. Through the intentional training of environmental health workers, CAF will empower families to improve public health through the **ECO Promotora** holistic approach.

Through a community assessment completed in 2022, CAF found that low air quality, a reduction of greenspaces, and environmental pollution in Hispanic neighborhoods were all very concerning issues for local Hispanic Families, and through the **ECO Promotora** program, Promotoras will not only learn about the identification and causes of these issues, but also practical steps they can take at the individual, local, and governmental levels to effect change. The **ECO Promotora** program will conduct successful–outreach and educational activities that will result in better outcomes, improved public health, and train multi-generational Promotoras in a bilingual and culturally appropriate setting, so that all information is accessible and applicable.

C. **Organization's connection to the Underserved Community:**
CAF has over 15 years in working with, for, and developing programs for the multi-cultural, multi-lingual, and multi-generational Hispanic community. The Hispanic community is diverse due to the complex generational changes and migration histories. Parents who immigrate to the United States integrate into the American culture, but their children are born into it forming two very different experiences, which require different outreach strategies not limited to the language which is used, but also the most effective media for outreach, and how information is shared and retained[3].

CAF has worked with the Hispanic community through many EPA-funded train-the-trainer projects, research studies, youth summer programs, and community outreach events to address local environmental and public health issues, including the high prevalence of heavy metals, high rates of childhood asthma, indoor air pollution, water pollution, recycling education, and other projects. Many disproportionate health outcomes that burden Hispanic and other communities of color have been successfully mitigated through these programs.

This results in communities which although united, have to be approached from different angles including different languages, reading levels, technological

adroitness, and audience outreach. CAF has straddled these differences through many EPA funded program, and will continue to serve the historically hard to reach Hispanic community. Many of the gains CAF has been able to make with the Hispanic community is through a understanding of where best to approach Hispanic community members- largely through faith-based organizations.

The outreach and impact CAF is able to have in the Hispanic community is through a compound effort by CAF's culturally competent and highly knowledgeable staff, and the connection we have with the community through the CCN. The CCN is CAF's Connectors Network of over 400 faith-based and community organizations that strive to serve their communities and combat obstacles that disproportionately affect marginalized communities. Faith-based and small local organizations are pillars of support for the Hispanic community as a whole, regardless of religious affiliations. Often times these organizations serve vulnerable community members through food and clothing drives, back to school fairs and resources, and in more recent years, vaccination drives. CAF leverages the helpful spirit these organizations foster to bring even more resources to communities including environmental health workshops, train-the-trainer programs, and other indispensable programs. Working with the CCN is a two-way street where they identify community needs and CAF supplies programs and resources to help these communities overcome challenges. Discussions about the effectiveness of programs, recurrent community needs, and novel issues are ongoing and exist beyond the duration of a program ensuring a successful and impactful relationship with the community in need and fostering strong bonds with the impacted communities.

When a community issue is identified, such as higher rates of respiratory diseases in Hispanic families, CAF works with community members to identify the factors which have caused the issue and with experts in that field to create an easy to understand training module complete with printed and virtual resources. In the City of Lawrence, MA, one of the biggest issues that this community faces includes elevated rates of asthma. Through the Healthy Homes Program, CAF created a training module that included a home assessment to identify and remediate factors inside of the home which were likely contributing to the development and/or exacerbation of these respiratory diseases which were not limited to asbestos, using harsh chemicals in non-ventilated areas, and other life-style choices. Promotoras, who are very much part of the communities they are empowering, report back the success they have had in distributing and teaching the information, the challenges they have had, and questions that surfaced during these workshops. CAF incorporates this feedback continuously into its programs to improve educational materials that are effective. For years, CAF has incorporated part 1 of the EJCPS model to identify issues and set forth a plan to remediate these issues with community members. CAF helps to empower community members to lead initiatives and helps to build capacity through Promotoras, an approach which encompasses part 2 of the EJCPS model. CAF also incorporates part

7 of the EJCPS model, in evaluating these programs with community members to push forward, into other programs, the most effective aspects of the program.

This very successful program reached hundreds of participants, and many community members reported behavioral changes, knowledge gains, and most importantly, better respiratory health. This program was successful because of the easy to read, English and Spanish low-literacy materials generated for this program, the broad distribution potential Promotoras have within their communities, the support of local faith-based organizations to provide venues and access to community members, and the professional and financial support of the local EPA.

This program is one of CAF's many programs that positively impact Hispanic health outcomes, and effect change that move Hispanics to engage more with environmental health and justice initiatives in their communities. CAF has piloted and deployed other programs in air quality, water quality, healthy homes, and other topics which have had profound generational impacts within the Hispanic community.

D. **EJCPS Model:**

CAF's model closely follows key aspects of the EJCPS Model. We are deeply motivated in educating the Hispanic community about environmental health and healthy homes. CAF has worked with the Hispanic community for over 15 years, and through our experience and surveying we have found that environmental health ranked very low when it came to issues identified in these communities. However, overall health, poor air quality, greenspace removal, and other topics, which ***are*** in fact environmental health issues were ranked very highly as major problems faced by these communities. CAF works to help these families and communities correctly identify issues and set strategic goals (part 1 of the model) to mitigate these issues.

CAF works with multi-generation Promotoras, empowered through the train-the-trainer model across generations to not only train adults, but also young adults, and even teenagers to become community trainers and advocates for behavioral changes to improve public health and increase community and individual level awareness of environmental health and environmental justice. In fact, Promotoras and participants have reported that once they see the connection, they change their behaviors. They report less asthma exacerbations, fewer headaches, conserve more energy, and properly dispose of chemicals and pharmaceutical products, to name a few of the positive outcomes from these trainings.

Through this proposal, CAF seeks to strengthen its utilization of part 4 of the EJCPS model. Part 4 of the EJCPS model includes multi-stakeholder partnership and leverages other resources. Material from our prior successful programs which includes educational materials on environmental health and justice, climate change, air and water quality, healthy homes, and heavy metal toxicity, among other topics

will be integrated to develop a comprehensive curriculum and be used to train environmental health workers with our innovative curriculum in the State of Maryland, Virginia, and D.C. Promotoras will receive a certificate for completing the training and reaching their outreach goals. CAF will leverage connections with the State Government, local universities, including UMD's Sacoby Wilson, and other field experts to solidify this training curriculum with expert environmental health and justice researchers and leaders.

E. **Project Linkages:**
Central to the **ECO Promotora** program is taking decisive actions to advance environmental justice and civil rights in a program designed to be scaleable to vulnerable and hard-to- reach communities. Through the **ECO Promotora** program, members of these communities will be empowered to become leaders within their communities to increase their community's awareness of the environment, how it impacts their lives and health, and advance environmental justice goals within robust existing and organized community structures. The Promotora model empowers and trains leaders within the target community, so that the educational empowerment these communities receive is pertinent to them, important to them, and tailors to their level of understanding and need.

By engaging with state government leaders to certify the environmental health worker training, CAF will successfully address Objective 2.2, to promote Environmental Justice and Civil Rights at the Federal, Tribal, State, and Local Levels. The ECO Promotora program will engage these communities to become aware of how their environment affects their health, take individual action based on their resources when appropriate, and create the structures and provide support to organize communities for collective action by engaging with their larger community, communicating and working with local government, and collaborating within networks of EJ groups.

This program will increase engagement with communities that are less likely to interact with EJ issues by making environmental justice issues identifiable and actionable. Many members of these communities are injured and disadvantaged by EJ issues, but cannot identify them as EJ issues, when in fact properly diagnosing an issue can lead to 'treatment' strategies to solve these issues. In community surveys CAF has conducted, one of the top issues identified is the amount of trash pollution in their neighborhoods lowering quality of life. Waste may seem as an insignificant issue in the grand scheme of things, but it has profound consequences on health. Families with children as well as individuals are less likely to want to interact with public spaces if they are dirty and polluted, leading to lifestyles where going to a park and gleaning the health benefits from doing so are less likely. Active utilization of parks increases physical and emotional health, and promotes environmental education and interpersonal contact, all profound health impacts for both young and old community members[4]. Communities have a lot to gain from usable parks, but internal leadership within these communities is needed to create ownership and initiatives of public

spaces. The ECO Promotora program would engage issues through the training of Promotoras on this subject among other extremely important topics, and leverage our current structures of faith-based organizations and community members to empower more community members and tailor an action strategy to the location, the people, and the issue.

Promotoras are not just community educators, but agents of change to address issues that are difficult to fix from the outside. Many initiatives created by organizations outside of communities fail or perform meagerly, because they do not engage with community members correctly and are not aware of the motivators and challenges that these communities face. The Promotora model overcomes these issues entirely, while increasing community power and leadership around EJ issues. Promotoras are also community scientists who receive training and ensure that the latest information circulates and reaches their communities.

F. **Partner and Collaborate:**

This program will rely on the collaboration of Washington Metro Area community faith-based organizations that form part of CAF connectors' network program. Through CAF Connectors program, a network of churches that work in collaboration with CAF, we have developed a successful replicable model that reaches every neighborhood across the city and among people that have not benefited from many of the services available to them. CAF has utilized this model in previous projects because it presents an opportunity to extend outreach deep into the community to engage people that are the hardest to reach and the most underserved. The churches serve an important role in the lives of Latino residents because they are safe and familiar spaces where people of the same culture gather, and they are staffed by people with a shared history and lived experiences who are able to effectively offer information, guidance, and support. The churches serve as quasi social service agencies and they build on the greatest strength of the Latino community, which is a spirit of mutual support for each other and for those with the greatest need. Working in this environment, we plan to engage and utilize the talents of Latino individuals in the churches and build their skills in communicating environmental health messages in new and innovative ways. To this end, CAF will also work with academic collaborators, including Dr. Lesliam Quiros-Alcala from Johns Hopkins University. Dr. Quiros-Alcala is a bilingual, culturally competent, environmental health scientist with over 15 years of experience (and 9 years of collaboration with CAF on Environmental Health and Justice projects) in research dissemination and teaching/mentoring in higher education in English and Spanish and has ample experience in science communication among a wide array of audiences including underserved Black and Brown communities. By combining the expertise of outreach of faith-based organizations with the technical expertise of researchers, CAF will translate research recommendations into action in Hispanic and low-income homes through the train-the-trainer model. CAF will also partner with Dr. Sacoby Wilson

from the University of Maryland to provide capacity building support to pass onto Promotoras. This partnership will help develop citizen scientists within the Hispanic community, and bring them closer to research initiatives which are specifically for the benefit of historically marginalized communities. These collaborations are long-standing and CAF has worked with these collaborators in the past and will continue these collaborations into the future to help empower disadvantaged communities on other projects.

The faith-based organizations will be responsible for recruiting participants, providing venues for outreach and public education, and other outreach related tasks while CAF's research partner, Dr. Quiros-Alcala will help update curriculum and also provide workshops for training-the-trainer activities. An added benefit of having Dr. Quiros-Alcala be a part of our team is that youth in our communities will have a role model, as her participation will help increase and diversify the pool of individuals pursuing careers in environmental and public health to address pressing issues in these communities. The lived experiences of youth pursuing careers in the field will help expand ongoing efforts to improve the environment and health in these underserved communities. Dr. Quiros-Alcala also has ample experience working in immigrant and underserved communities and has worked with many vulnerable populations, including communities that are of color/low-income, children, pregnant women and women of reproductive age, and vulnerable worker populations often overburdened with both chemical and non-chemical stressors. Dr. Wilson from the University of Maryland will help integrate citizen science training into CAF's ECO Promotora training. CAF will provide financial support to the faith-based organizations and our research collaborator Dr. Lesliam Quiros-Alcala.

2.0 Program Objectives

a. Project Activities

I. Compile environmental health worker curriculum on essential topics related to environmental health and environmental justice in collaboration with local environmental health and justice professionals.
   a) Air Pollution
   b) Water Pollution
   c) Indoor Air Pollution
   d) Respiratory Issue Prevention
   e) Children's Environmental Health
   f) Physical activity
   g) Identification and strategies to avoid Chemicals Indoors
   h) At Work Environmental Risks for Vulnerable Communities
   i) Recycling/ Composting
   j) Environmental advocacy and Organizing

II. Create digital and printed copies of the curriculum
   a) Promotoras will be able to use this material to provide trainings

III. Teach the curriculum to 50 Promotoras with an emphasis on bilingual education, citizen science, and youth
IV. Promotoras will meet with community members to identify the needs of the community and then set up workshops with the resources CAF provides.
    a) Each promotora will have an outreach of 50 community members each
V. Evaluate the success of the curriculum and the methodology used to teach Promotoras and community
VI. Continue training and adding to the curriculum

b. Milestone Schedule

Timeline	2023-2024											
	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May	June	July	Aug	Sep
Logistics and Curriculum Compilation												
Recruitment of Environmental Health Worker: First Cohort												
Training Promotoras with Environmental Health Workers + Certification												
Community outreach by Environmental Health workers												
Evaluation and Debrief of the Program												

Timeline	2024-2025											
	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May	June	July	Aug	Sep
Update Curriculum based on evaluation and debriefing from program implementation												
Recruitment of Environmental Health Worker: Next Cohort												
Training Promotoras with Environmental Health Workers + Certification												
Community outreach by Environmental Health workers												
Evaluation and Debrief of the Program												

Timeline	2025-2026											
	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May	June	July	Aug	Sep
Evaluation and Debrief of the Program												
Final Report Generation												

*CAF will comply with all reporting requirements

c. **Itemized budget sheet/ Budget Narrative** (SEE ATTACHMENTS FOR DETAILED BUDGET NARRATIVE- SHEET 2 OF ATTACHED BUDGET)

3.0 Environmental Results

a. Logic Model (SEE ATTACHMENTS)

b. Performance Measurement Plan (SEE ATTACHMENTS)

c. Sustainability Plan and Community Vision

The ECO-promoter program is designed to be sustainable and easily replicable to have profound impacts in the Hispanic community. The resources created by this project will be able to be used long past the time scope of this project and the curriculum will be used to train new promoters during and after project time-frame. The ECO-promoter program will have long-term positive implications in the health impacts of disadvantaged families, develop leadership capabilities of community

environmental health workers with lived experience and intimate connections to front-line communities, serve as a first-introduction and pipeline to STEM and future environmental health and justice work by investing in the empowerment and practical environmental advocacy and action skills in youth. CAF will track the attitudes and perceived importance of environmental health and advocacy in participants (ECO-Promoters) to quantify the progress and perceived importance placed on the environment, climate, and necessity for behavioral changes and organizing. CAF's environmental health curriculum will be holistic by working directly with communities to increase quality of life in the immediate present, but also prepare the Hispanic community to advocacy to environmental health and justice decisions in their local communities. This forward thinking approach will have profound impacts on communities now and also in the future.

4.0 Programmatic Capability

a. Organizational Experience

Over the last eleven years, CAF has been providing environmental education and awareness to low income minority families with children younger than 19 years old. Below is a list of EPA funded projects conducted in the last three years. CAF has complied with all federal reporting requirements for all projects, filed progress reports, final reports on outputs and outcomes, and final technical reports on time and complied with all post award evaluation protocols. CAF has longstanding relationships working with the EPA and specialized staff and expert connections to successfully complete the terms of EPA grants and positively affect communities through EPA funded opportunities.

b. Staff Experience and Qualifications of Project Manager (PM) (SEE ATTACHMENTS FOR RESUME OF PM)

Damaris Frias-Batista will be the project manager of the proposed project and she will oversee the project as a whole. She is the Chief Operating Officer and Co-founder of *Centro de Apoyo Familiar* (CAF). Ms. Frias brings years of experience in the area of managing and coordinating EPA funded projects as well as other community projects by recruiting churches, training and supervising Promotoras as well as collecting organizing and developing information, data, reports and evaluations for the projects. Mrs. Frias is a Dominican Born Hispanic, who has lived experience living a predominantly Hispanic Community and has served her community through environmental heath education for over 5 EPA funded programs. She has been the Program director of EPA healthy community funded program, Healthy Families: Healthy Homes and sub-director and coordinator of the EPA funded projects *Casas Sanas Niños Sanos – Healthy Homes Healthy Children, the Latino Youth Lead Environmental Awareness and Action* an Environmental Justice project, *the Lawrence Healthy Childcare Network,* some of those projects conducted in collaboration with the JSI Research & Training Institute, Inc. Mrs. Frias holds a BA in Psychology from University of Massachusetts at Boston and a M.A. in Mental Health with an specialty in children, youths and families from Southern New Hampshire University. Mrs. Frias

lead on one of the EPA sub-groups for MAVD in the city of Lawrence, MA and also forms part of the Massachusetts Governer's Advisory Council on Latino Empowerment, a position set to expire in 2027.

c. Expenditure of Awarded Grant Funds

CAF has a centralized Accounting Department that supports project and corporate activities through management of CAF's finances and cash (both payables and receivables). CAF treats financial management as a priority for project accountability with professional accounting staff that tracks expenditures by project, category, and function. CAF has received several state and federal grants including EPA grants and Cooperative Agreements in the last 8 years managed by CAF Financial Director and our accountant staff whom has successfully completed all reports and project deliverables on schedule and on time.

5.0 Past Performance

a. Organizational Experience

Over the last eleven years, CAF has been providing environmental education and awareness to low income minority families with children younger than 19 years old. Below is a list of EPA funded projects conducted in the last three years. CAF has complied with all federal reporting requirements for all projects, filed progress reports, final reports on outputs and outcomes, and final technical reports on time and complied with all post award evaluation protocols. Recent projects in the past three years are listed below.

I. Grant Agreement # HC - 00A00680-0; 10/1/2020 – 9/30/2021; *Healthy Families: Healthy Homes Project*; $35,000; EPA Healthy Communities grant program; Project Officer Eugene Benoit; Final Report submitted on time.
I. Grant Agreement # HC - 00A00525: 10/01/2019 – 09/30/2020; Healthy Families: Healthy homes; $25,000; EPA Healthy Communities grant program; Project Officer Eugene Benoit; Final report Submitted on time.
I. Grant Agreement # EQ – 96368001; 11/18/2019 – 11/17/2020; *Healthy Families: Homes Homes*; $30,000; EPA Environmental Justice; Project Officer Anita Provenzo; Final Report submitted on time documenting outputs and outcomes.

CAF was able to successfully complete and manage these agreements and meet the reporting requirements under those agreements in a thorough and timely manner. CAF also submitted timely and acceptable final technical reports under the agreements. These grants build upon on the experience, community connections, and trust garnered within communities and community leaders to comprehensibly address needs such as air and water quality, environmental toxins, and cultural practices in the home which affect health outcomes.

Mr. Jacob Burney
Office of Environmental Justice & External Civil Rights
Environmental Protection Agency
Washington, D.C.

Re: Letter of Commitment

Dear Mr. Burney,

My name is Dr. Lesliam Quirós-Alcalá, and I am as Assistant Professor in the Department of Environmental Health and Engineering at the John Hopkins University Bloomberg School of Public Health. This letter serves to express my commitment to the Collaborative Problem Solving proposal entitled, "Developing a National Model for the training of Environmental Community Operative Promoters (ECO-promoters) for multi-generational, culturally competent, environmental health workers to bridge the gap between Hispanics and Environmental Health" being submitted by the Centro de Apoyo Familiar (CAF).

I am an Environmental Health Scientist and Exposure Scientist by training and have over 15 years of research and community engagement experience working with vulnerable and underserved, low-income communities of color. This includes working with immigrant families, farmworkers, salon workers, women of reproductive age or who are pregnant, and children. I am fully bilingual and have ample experience providing training and workshops in both English and Spanish on many topics in the field of environmental health and environmental justice. For example, as part of my prior collaborations with the Children's Environmental Health Network and Icahn School of Medicine at Mount Sinai, I led workshops in English and Spanish to caregivers in both California and Puerto Rico covering a breadth of topics in environmental health. I also teach a vulnerable worker populations course at Johns Hopkins University that is taken by public health professionals, including physicians, nurses, and health insurance providers and have developed course material in environmental health and environmental justice with a focus on vulnerable populations. I have also worked closely with CAF since 2016 on field research related to vulnerable populations.

In the last twenty years CAF has recruited and trained >200 Hispanic and Black "promotoras" (community health workers) from the more than 400 faith-based communities with whom they have active and vibrant relationships. The ECO-promotoras program that CAF is proposing will build on the solid success it has already had in developing culturally competent, multi-generational "promotoras". With offices in Prince Georges' County, Maryland, Washington, DC, Arlington, Virginia, Lawrence, and Massachusetts CAF is truly capable of developing, beta testing and "rolling-out" a bilingual national program like the one described in this proposal.

As part of this continued collaboration with CAF, I am committed to contributing to the ECO-promoters' training curriculum throughout the three years of grant funding by offering them the following workshops/ trainings:

1. **Intro to Environmental Justice –** Future ECO-promotoras will learn how to define environmental justice, trace the history of environmental justice and examine how it interconnects with other social and environmental issues.
2. **Climate Justice & Climate Science** – Future ECO-promoters will learn about the basics of climate science, how to define climate justice while understanding the use of climate justice

3. to examine the disproportionate impacts of climate change and discover how Marylanders are and will be impacted by climate change.
4. **Environmental Health Impacts-** Future ECO- promotoras will learn how to define environmental health and explore environmental health basics and analyze disproportionate environmental health impacts in Maryland.
5. **Mapping Tools -** Future ECO-promotoras will learn how mapping tools are created and their relevant uses, learn the basic tools and operations of MD EJSCREEN and EPA EJScreen and learn how to use the mapping tools to examine a climate justice issue where they live in Maryland.
6. **Community Capacity-Building and Advocacy -** Future ECO-promotoras will learn about stakeholder engagement, the best practices for building partnerships and how to incorporate strategies for organizing and mobilizing the public.
7. **Community Science & Conducting Community-led Climate Change Inquiry -** Future ECO-promotoras will learn how to define Community Science & Citizen Science and learn how to explore a variety of different community science tools such as Hyper-local air quality monitoring, Photovoice and Block Assessments.
8. **Green & Natural Infrastructure** - Future ECO- promotoras will learn about salutogenic features and strategies to mitigate extreme heat, flooding, & pollution, and use mapping and community science tools, such as photovoice & park equity mapper, to find gaps in access to green and natural infrastructure.
9. **Climate Change Adaptation Approaches / Climate Disaster Risk Reduction Strategies** - Future ECO- promotoras will learn how to site, plan, maintain, & evaluate mitigation approaches, like green/blue roofs, green/blue walls, food forests, rain gardens, tree plantings, stormwater BMPs, etc.

I want to note that Johns Hopkins was recently awarded a Community Health Engagement Core Center grant from the National Institute of Environmental Health Sciences. The Center will lead an effort to build capacity in community-engaged research aimed at understanding the mechanistic links between environmental exposures and adverse health outcomes and translate these findings into action to improve the health of vulnerable individuals in communities across the greater Maryland region. The project will build partnerships between communities in the region – Baltimore, Washington, D.C., and some areas of Pennsylvania – to address their environmental concerns. The Center will provide training, support, and access to environmental health experts to facilitate the creation of lasting community-investigator partnerships aimed at tackling the pressing environmental concerns of our communities. I am a Co-Investigator in this Center and responsible for overseeing topics related to environmental exposures. CAF is also an existing partner for the Center. This collaboration with the Center will be leveraged to further expand the efforts being proposed.

Finally, I will work with CAF leadership to develop the curriculum and provide workshops for training-the-trainer activities for the program they are proposing that aims to become certified by the state of Maryland. I will also provide support and guidance for data analysis for this project, while making sure goals and outcomes are being met. I am certain that the proposal that CAF is leading will be transformative at the regional, state, and national level. The proposed program can easily be expanded to encompass not only Hispanic communities, but all types of communities everywhere throughout the nation, reaching wider audiences. In summary, I am committed to the success of this project and fully support this proposal.

Sincerely,

Lesliam Quirós-Alcalá, PhD, MSc

Narrative Proposal for EJCPS Program
EPA-R-OEJECR-OCS-23-01

ENVIRONMENTAL JUSTICE COLLABORATIVE PROBLEM-SOLVING (EJCPS)
COOPERATIVE AGREEMENT PROGRAM

Track 1

Program Objectives 1.0

Title: Developing a National Model Environmental Community Operative Promotora (ECO Promotoras) for multi-generational, culturally competent environmental health workers to bridge the gap between Hispanics and Environmental Health

Project Location: Washington Metropolitan Area

Centro de Apoyo Familiar (CAF) is a 501(C)3 organization based in 6801 Kenilworth Ave, Suite 110, Riverdale, MD 20737. Walkiria Pool is the president and main contact. Mrs. Pool is best contacted through email; wpool@mycaf.org. CAF is not applying to the Small CBO Set Aside Track.

CAF's mission is to transform communities through economic and educational empowerment in collaboration with community and faith-based organizations. Currently, CAF is involved in empowering the Hispanic community to have meaningful engagements with environmental health and justice initiatives through partnerships environmental justice coalitions, and funding from our partners. CAF is cochair of the Mid Atlantic Justice Coalition, a local coalition looking to remediate environmental injustices and funding from the Equity Fund is helping CAF reach Hispanic families with climate change awareness and education.

Narrative Proposal for EJCPS Program
EPA-R-OEJECR-OCS-23-01

Abstract: Centro de Apoyo Familiar is a Hispanic-Serving Institution and through the EJCPS grant will form a comprehensive and holistic train-the-trainer curriculum to develop environmental health Promotoras- Environmental Community Operative (ECO) Promotoras. CAF will draw from its over 10 years of working the train-the-trainer model on EPA environmental health grants to develop a comprehensive training curriculum which will empower these ECO-Promotoras to work with their communities- the Hispanic Community and other underserved and disadvantaged communities- to mitigate disproportionate and adverse environmental health outcomes, and organize community efforts to increase participation in environmental justice issues within communities and local governments.

Project Type: Training and Public Education

Special Considerations: Climate Change

Environmental Issue:Environmental Health and Environmental Justice Education

Project Partners: University of Maryland, Johns-Hopkins University, CAF Connector's Network

CAF will not develop a QAPP for this project.

B. Environmental and Public Health Information of the Underserved Community

CAF serves with multiple generations of Hispanic Families, which in Maryland and Virginia are a vulnerable population overburdened with numerous negative health outcomes, including chronic diseases and cultural and socioeconomic factors which are complex determinants of health. Through the **ECO Promotora** program, CAF will use its highly successful Promotora model used in conjunction with the CAF Connector's Network (CCN) to empower diverse Hispanic communities on topics such as Indoor Air and Water Quality, Healthy Homes, and environmental justice (including climate change justice). CAF works with the CCN, a network of faith-based and community organizations that help CAF effectively reach communities that are notoriously hard to work with because of mistrust in institutions, multiple preferred languages, and other cultural barriers and challenges.

Through the Promotora model, replicated in over 5 EPA grants (SEE PAST PERFORMANCE), CAF has been able to successfully empower underserved and

hard-to-reach communities through transformational information, shift behaviors for improved health outcomes, and unite communities over common issues including but not limited to recycling practices, energy conservation, use of chemicals in the home, and identification and removal of health hazards in the home, to only name a few. Through the **ECO Promotora** program, CAF will concatenate and solidify its many train-the-trainer modules into one, to form a comprehensive and impactful program for environmental health workers to serve their communities as citizen scientists.

There are multiple environmental justice issues within the Hispanic community which are reflected in environmental health outcomes. On average, Hispanic families tend to be lower income[1] which also translates into worse health outcomes and increased environmental exposures. It is estimated that about 80% of Hispanics do not live in housing that meets EPA clean air quality standards[2], resulting in higher rates of respiratory diseases compared to other demographic groups. Despite these issues, with the proper information, many of the risks associated with environmental justice and structural level factors including those afflicting low-income communities and those with poor housing options can be mitigated through awareness and changes in behavior. CAF empowers Promotoras in these communities to identify environmental health and justice issues in their communities, and to subsequently empower other members of the community with the same information and resources available. This in turn creates longstanding environmental knowledge reserves through this train-the-trainer approach. This approach is sustainable and has dimensional effects, crossing language barriers, generations, and transcends socioeconomic determinants of health. To this day, the information used in earlier EPA-funded CAF projects still circulates in the community long after the program is no longer being funded. This is because the information is retained through the community and community members can rely on CAF as a trusted and respected resource. Through the intentional training of environmental health workers, CAF will empower families to improve public health through the **ECO Promotora** holistic approach.

Comment[Lesliam Quiros-Alcala1](Done): Improper wording. Do not use "confrontational resource" not sure what you are trying to say, but for sure I would remove this.
Do you want to say "trustworthy and respected resource" instead?

Comment[Lesliam Quiros-Alcala2](Done): Edited ...here you don't want to say "increase health outcomes" bc it can be interpreted as more health problems. I think what you want to say is improve health so I edited.

Through a community assessment completed in 2022, CAF found that low air quality, a reduction of greenspaces, and environmental pollution in Hispanic neighborhoods were all very concerning issues for local Hispanic Families, and through the **ECO Promotora** program, Promotoras will not only learn about the identification and causes of these issues, but also practical steps they can take at the individual, local, and governmental levels to effect change. The **ECO Promotora** program will conduct successful–outreach and educational activities that will result in better outcomes, improved public health, and train multi-generational Promotoras in a

bilingual and culturally appropriate setting, so that all information is accessible and applicable.

C. **Organization's connection to the Underserved Community:**
CAF has over 15 years in working with, for, and developing programs for the multi-cultural, multi-lingual, and multi-generational Hispanic community. The Hispanic community is diverse due to the complex generational changes and migration histories. Parents who immigrate to the United States integrate into the American culture, but their children are born into it forming two very different experiences, which require different outreach strategies not limited to the language which is used, but also the most effective media for outreach, and how information is shared and retained[3].

CAF has worked with the Hispanic community through many EPA-funded train-the-trainer projects, research studies, youth summer programs, and community outreach events to address local environmental and public health issues, including the high prevalence of heavy metals, high rates of childhood asthma, indoor air pollution, water pollution, recycling education, and other projects. Many disproportionate health outcomes that burden Hispanic and other communities of color have been successfully mitigated through these programs.

This results in communities which although united, have to be approached from different angles including different languages, reading levels, technological adroitness, and audience outreach. CAF has straddled these differences through many EPA funded program, and will continue to serve the historically hard to reach Hispanic community. Many of the gains CAF has been able to make with the Hispanic community is through a understanding of where best to approach Hispanic community members- largely through faith-based organizations.

The outreach and impact CAF is able to have in the Hispanic community is through a compound effort by CAF's culturally competent and highly knowledgeable staff, and the connection we have with the community through the CCN. The CCN is CAF's Connectors Network of over 400 faith-based and community organizations that strive to serve their communities and combat obstacles that disproportionately affect marginalized communities. Faith-based and small local organizations are pillars of support for the Hispanic community as a whole, regardless of religious affiliations. Often times these organizations serve vulnerable community members through food and clothing drives, back to school fairs and resources, and in more recent years, vaccination drives. CAF leverages the helpful spirit these organizations foster to bring

even more resources to communities including environmental health workshops, train-the-trainer programs, and other indispensable programs. Working with the CCN is a two-way street where they identify community needs and CAF supplies programs and resources to help these communities overcome challenges. Discussions about the effectiveness of programs, recurrent community needs, and novel issues are ongoing and exist beyond the duration of a program ensuring a successful and impactful relationship with the community in need and fostering strong bonds with the impacted communities.

When a community issue is identified, such as higher rates of respiratory diseases in Hispanic families, CAF works with community members to identify the factors which have caused the issue and with experts in that field to create an easy to understand training module complete with printed and virtual resources. In the City of Lawrence, MA, one of the biggest issues that this community faces includes elevated rates of asthma. Through the Healthy Homes Program, CAF created a training module that included a home assessment to identify and remediate factors inside of the home which were likely contributing to the development and/or exacerbation of these respiratory diseases which were not limited to asbestos, using harsh chemicals in non-ventilated areas, and other life-style choices. Promotoras, who are very much part of the communities they are empowering, report back the success they have had in distributing and teaching the information, the challenges they have had, and questions that surfaced during these workshops. CAF incorporates this feedback continuously into its programs to improve educational materials that are effective. For years, CAF has incorporated part 1 of the EJCPS model to identify issues and set forth a plan to remediate these issues with community members. CAF helps to empower community members to lead initiatives and helps to build capacity through Promotoras, an approach which encompasses part 2 of the EJCPS model. CAF also incorporates part 7 of the EJCPS model, in evaluating these programs with community members to push forward, into other programs, the most effective aspects of the program.

Comment[Lesliam Quiros-Alcala3](Done): This does not make sense as an adjective here (the word "propagate" is incorrect). remove.

Formatted[sunfrias]: Font: (Default) Nimbus Roman, 12 pt

This very successful program reached hundreds of participants, and many community members reported behavioral changes, knowledge gains, and most importantly, better respiratory health. This program was successful because of the easy to read, English and Spanish low-literacy materials generated for this program, the broad distribution potential Promotoras have within their communities, the support of local faith-based organizations to provide venues and access to community members, and the professional and financial support of the local EPA.

This program is one of CAF's many programs that positively impact Hispanic health outcomes, and effect change that move Hispanics to engage more with environmental health and justice initiatives in their communities. CAF has piloted and deployed other programs in air quality, water quality, healthy homes, and other topics which have had profound generational impacts within the Hispanic community.

D. **EJCPS Model:**

CAF's model closely follows key aspects of the EJCPS Model. We are deeply motivated in educating the Hispanic community about environmental health and healthy homes. CAF has worked with the Hispanic community for over 15 years, and through our experience and surveying we have found that environmental health ranked very low when it came to issues identified in these communities. However, overall health, poor air quality, greenspace removal, and other topics, which ***are*** in fact environmental health issues were ranked very highly as major problems faced by these communities. CAF works to help these families and communities correctly identify issues and set strategic goals (part 1 of the model) to mitigate these issues.

CAF works with multi-generation Promotoras, empowered through the train-the-trainer model across generations to not only train adults, but also young adults, and even teenagers to become community trainers and advocates for behavioral changes to improve public health and increase community and individual level awareness of environmental health and environmental justice. In fact, Promotoras and participants have reported that once they see the connection, they change their behaviors. They report less asthma exacerbations, fewer headaches, conserve more energy, and properly dispose of chemicals and pharmaceutical products, to name a few of the positive outcomes from these trainings.

Comment[Lesliam Quiros-Alcala4](Done): Again consider replacing this word with promotoras throughout the entire doc. "Promotora" is viewed more as related to the entertainment industry and use of "promotora" reinforces and highlights your target population.

Reply[Lesliam Quiros-Alcala5](Done): As I read the document, your intended goal does not come across to me when I read that word throughout the doc

Through this proposal, CAF seeks to strengthen its utilization of part 4 of the EJCPS model. Part 4 of the EJCPS model includes multi-stakeholder partnership and leverages other resources. Material from our prior successful programs which includes educational materials on environmental health and justice, climate change, air and water quality, healthy homes, and heavy metal toxicity, among other topics will be integrated to develop a comprehensive curriculum and be used to train environmental health workers with our innovative curriculum in the State of Maryland, Virginia, and D.C. Promotoras will receive a certificate for completing the training and reaching their outreach goals. CAF will leverage connections with the State Government, local universities, including UMD's Sacoby Wilson, and other

Comment[Lesliam Quiros-Alcala6](Done): This sentence is too long so your message gets lost.

Reply[Lesliam Quiros-Alcala7](Done): I edited the sentence. Make sure it is still accurate with my edits

field experts to solidify this training curriculum with expert environmental health and justice researchers and leaders.

E. **Project Linkages:**

Central to the **ECO Promotora** program is taking decisive actions to advance environmental justice and civil rights in a program designed to be scaleable to vulnerable and hard-to- reach communities. Through the **ECO Promotora** program, members of these communities will be empowered to become leaders within their communities to increase their community's awareness of the environment, how it impacts their lives and health, and advance environmental justice goals within robust existing and organized community structures. The Promotora model empowers and trains leaders within the target community, so that the educational empowerment these communities receive is pertinent to them, important to them, and tailors to their level of understanding and need.

By engaging with state government leaders to certify the environmental health worker training, CAF will successfully address Objective 2.2, to promote Environmental Justice and Civil Rights at the Federal, Tribal, State, and Local Levels. The ECO Promotora program will engage these communities to become aware of how their environment affects their health, take individual action based on their resources when appropriate, and create the structures and provide support to organize communities for collective action by engaging with their larger community, communicating and working with local government, and collaborating within networks of EJ groups.

This program will increase engagement with communities that are less likely to interact with EJ issues by making environmental justice issues identifiable and actionable. Many members of these communities are injured and disadvantaged by EJ issues, but cannot identify them as EJ issues, when in fact properly diagnosing an issue can lead to 'treatment' strategies to solve these issues. In community surveys CAF has conducted, one of the top issues identified is the amount of trash pollution in their neighborhoods lowering quality of life. Waste may seem as an insignificant issue in the grand scheme of things, but it has profound consequences on health. Families with children as well as individuals are less likely to want to interact with public spaces if they are dirty and polluted, leading to lifestyles where going to a park and gleaning the health benefits from doing so are less likely. Active utilization of parks increases physical and emotional health, and promotes environmental education and interpersonal contact, all profound health impacts for both young and old community members[4]. Communities have a lot to gain from usable parks, but internal leadership within these communities is needed to create ownership and initiatives of public

spaces. The ECO Promotora program would engage issues through the training of Promotoras on this subject among other extremely important topics, and leverage our current structures of faith-based organizations and community members to empower more community members and tailor an action strategy to the location, the people, and the issue.

Promotoras are not just community educators, but agents of change to address issues that are difficult to fix from the outside. Many initiatives created by organizations outside of communities fail or perform meagerly, because they do not engage with community members correctly and are not aware of the motivators and challenges that these communities face. The Promotora model overcomes these issues entirely, while increasing community power and leadership around EJ issues. Promotoras are also community scientists who receive training and ensure that the latest information circulates and reaches their communities.

F. **Partner and Collaborate:**

This program will rely on the collaboration of Washington Metro Area community faith-based organizations that form part of CAF connectors' network program. Through CAF Connectors program, a network of churches that work in collaboration with CAF, we have developed a successful replicable model that reaches every neighborhood across the city and among people that have not benefited from many of the services available to them. CAF has utilized this model in previous projects because it presents an opportunity to extend outreach deep into the community to engage people that are the hardest to reach and the most underserved. The churches serve an important role in the lives of Latino residents because they are safe and familiar spaces where people of the same culture gather, and they are staffed by people with a shared history and lived experiences who are able to effectively offer information, guidance, and support. The churches serve as quasi social service agencies and they build on the greatest strength of the Latino community, which is a spirit of mutual support for each other and for those with the greatest need. Working in this environment, we plan to engage and utilize the talents of Latino individuals in the churches and build their skills in communicating environmental health messages in new and innovative ways. To this end, CAF will also work with academic collaborators, including Dr. Lesliam Quiros-Alcala from Johns Hopkins University. Dr. Quiros-Alcala is a bilingual, culturally competent, environmental health scientist with over 15 years of experience (and 9 years of collaboration with CAF on Environmental Health and Justice projects) in research dissemination and teaching/mentoring in higher education in English and Spanish and has ample

experience in science communication among a wide array of audiences including underserved Black and Brown communities. By combining the expertise of outreach of faith-based organizations with the technical expertise of researchers, CAF will translate research recommendations into action in Hispanic and low-income homes through the train-the-trainer model. CAF will also partner with Dr. Sacoby Wilson from the University of Maryland to provide capacity building support to pass onto Promotoras. This partnership will help develop citizen scientists within the Hispanic community, and bring them closer to research initiatives which are specifically for the benefit of historically marginalized communities. These collaborations are long-standing and CAF has worked with these collaborators in the past and will continue these collaborations into the future to help empower disadvantaged communities on other projects.

The faith-based organizations will be responsible for recruiting participants, providing venues for outreach and public education, and other outreach related tasks while CAF's research partner, Dr._Quiros-Alcala will help update curriculum and also provide workshops for training-the-trainer activities. An added benefit of having Dr. Quiros-Alcala be a part of our team is that youth in our communities will have a role model, as her participation will help increase and diversify the pool of individuals pursuing careers in environmental and public health to address pressing issues in these communities. The lived experiences of youth pursuing careers in the field will help expand ongoing efforts to improve the environment and health in these underserved communities. Dr. Quiros-Alcala also has ample experience working in immigrant and underserved communities and has worked with many vulnerable populations, including communities that are of color/low-income, children, pregnant women and women of reproductive age, and vulnerable worker populations often overburdened with both chemical and non-chemical stressors. Dr._Wilson from the University of Maryland will help integrate citizen science training into CAF's ECO Promotora training. CAF will provide financial support to the faith-based organizations and our research collaborator Dr. Lesliam Quiros-Alcala.

Comment[Lesliam Quiros-Alcala8](Done): Feel free to play with this language. Not trying to show off at all, but to make the pt that our kids need role models that look like them or at least share their culture to inspire them to pursue these careers ...

2.0 Program Objectives

Project Activities

I. Compile environmental health worker curriculum on essential topics related to environmental health and environmental justice in collaboration with local environmental health and justice professionals.

a) Air Pollution
b) Water Pollution
c) Indoor Air Pollution

d) Respiratory Issue Prevention
e) Children's Environmental Health
f) Physical activity
g) Identification and strategies to avoid Chemicals Indoors
h) At Work Environmental Risks for Vulnerable Communities
i) Recycling/ Composting
j) Environmental advocacy and Organizing

II. Create digital and printed copies of the curriculum
   a) Promotoras will be able to use this material to provide trainings
III. Teach the curriculum to 50 Promotoras with an emphasis on bilingual education, citizen science, and youth
IV. Promotoras will meet with community members to identify the needs of the community and then set up workshops with the resouces CAF provides.
   a) Each promotora will have an outreach of 50 community members each
V. Evaluate the success of the curriculum and the methodology used to teach Promotoras and community
VI. Continue training and adding to the curriculum

Milestone Schedule

Timeline	2023-2024											
	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May	June	July	Aug	Sep
Logistics and Curriculum Compilation												
Recruitment of Environmental Health Worker: First Cohort												
Training Promotoras with Environmental Health Workers + Certification												
Community outreach by Environmental Health workers												
Evaluation and Debrief of the Program												

Timeline	2024-2025

	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May	June	July	Aug	Sep
Update Curriculum based on evaluation and debriefing from program implementation												
Recruitment of Environmental Health Worker: Next Cohort												
Training Promotoras with Environmental Health Workers + Certification												
Community outreach by Environmental Health workers												
Evaluation and Debrief of the Program												

Timeline	2024-2026											
	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May	June	July	Aug	Sep
Evaluation and Debrief of the Program												
Final Report Generation												

*CAF will comply with all reporting requirements

3.0 Environment Results

Formatted[sunfrias]: Font: 14 pt, No underline

a. Logic Model (SEE ATTACHMENTS)

b. Performance Measurement Plan

Performance Measurement Plan

Outputs

I. **ECO Promotora** Curriculum
II. Environmental Health Home Assessment
   a) Indoor air quality assessment
   b) Chemicals in the home assessment

c) Other Household toxins that affect vulnerable populations such as children and elderly

III. Environmental Risk At Work Assessment

IV. Community Environmental Assessment
   a) Pamphlet Guide to Reducing Carbon Footprint through Behavioral Changes

V. 50 trained promotoras
   a) a minimum outreach of 30 people per promotora for a total of 1500 community members benefiting from these workshops.

Outcomes

Short-term

I. Knowledge gains and behavioral changes in the following areas
   a) Bettering indoor air quality as per the pre and post indoor air quality assessments
   b) Use and storage of harsh chemicals in the home as indicated by the pre and post indoor air quality assessment
   c) Consequences of exposure to heavy metals and mitigation strategies as indicated by the pre and post Other Household Toxins assessment

Intermediate Outcomes

I. Workshop members will work as a group to identify environmental risks that their community is facing

II. Propose strategies to overcome these issues as a community

Long-term Outcomes

I. Reduction in Negative Health Outcomes

II. More engagement with environmental health and justice initiatives in the Hispanic community

c. Sustainability Plan and Community Vision

The ECO_Promotora program is designed to be sustainable and easily replicable to have profound impacts in the Hispanic community. The resources created by this project will be able to be used long after the time scope of this project and the curriculum will be used to train new Promotoras during and after the project time-frame. The ECO_Promotora program will have long-term positive implications in the health impacts of disadvantaged families, develop leadership capabilities of community environmental health workers with lived experience and intimate connections to front-line communities, serve as a first-introduction and pipeline to

STEM and future environmental health and justice work by investing in the empowerment and practical environmental advocacy and action skills in youth. CAF will track the attitudes and perceived importance of environmental health and advocacy in participants (ECO_Promotoras) to quantify the progress and perceived importance placed on the environment, climate, and necessity for behavioral changes and organizing.

CAF's environmental health curriculum will be holistic by working directly with communities to increase quality of life in the immediate present, but also prepare the Hispanic community to advocacy to environmental health and justice decisions in their local communities. This forward-thinking approach will have profound impacts on communities now and also in the future with versatile promotoras able to touch upon a variety of environmental topics. This bilingual model has the capacity to become a national program, and it will help Hispanic communities learn how to define environmental justice, trace the history of environmental justice and examine how it interconnects with other social and environmental issues.

4.0 Programmatic Capability

CAF has longstanding relationships working with the EPA and specialized staff and expert connections to successfully complete the terms of EPA grants and positively affect communities through EPA-funded opportunities.

Damaris Frias-Batista will be the Project Manager of the proposed project and she will oversee the project as a whole. She is the Chief Operating Officer and Co-founder of *Centro de Apoyo Familiar* (CAF). Ms. Frias brings years of experience in the area of managing and coordinating EPA funded projects as well as other community projects by recruiting churches, training and supervising promotoras as well as collecting organizing and developing information, data, reports and evaluations for the projects. She has been the Program Director for our EPA healthy community funded program, Healthy Families: Healthy Homes and sub-director and coordinator of the EPA funded projects *Casas Sanas Niños Sanos – Healthy Homes Healthy Children, the Latino Youth Lead Environmental Awareness and Action* an Environmental Justice project, *the Lawrence Healthy Childcare Network,* some of those projects conducted in collaboration with the JSI Research & Training Institute, Inc. Ms. Frias holds a BA in Psychology from University of Massachusetts at Boston and a M.A. in Mental Health with an specialty in children, youths and families from Southern New Hampshire University. Ms. Frias led one of the EPA sub-groups for MAVD in the city of Lawrence, MA and also forms part of the Massachusetts

Governer's Advisory Council on Latino Empowerment, a position set to expire in 2027.

5.0 Past Performance

a. Organizational Experience

Over the last 11 years, CAF has been providing environmental education and awareness to low income minority families with children younger than 19 years old. Below is a list of EPA funded projects conducted in the last three years. CAF has complied with all federal reporting requirements for all projects, filed progress reports, final reports on outputs and outcomes, and final technical reports on time and complied with all post award evaluation protocols. Recent projects in the past three years are listed below.

Comment[Lesliam Quiros-Alcala9](Done): Numbers 10 and above can and should be written as numbers

1. Grant Agreement # HC - 00A00680-0; 10/1/2020 – 9/30/2021; *Healthy Families: Healthy Homes Project*; $35,000; EPA Healthy Communities grant program; Project Officer Eugene Benoit; Final Report submitted on time.
2. Grant Agreement # HC - 00A00525: 10/01/2019 – 09/30/2020; Healthy Families: Healthy homes; $25,000; EPA Healthy Communities grant program; Project Officer Eugene Benoit; Final report Submitted on time.
3. Grant Agreement # EQ – 96368001; 11/18/2019 – 11/17/2020; *Healthy Families: Homes Homes*; $30,000; EPA Environmental Justice; Project Officer Anita Provenzo; Final Report submitted on time documenting outputs and outcomes.

CAF was able to successfully complete and manage these agreements and meet the reporting requirements under those agreements in a thorough and timely manner. CAF also submitted timely and acceptable final technical reports under the agreements. These grants build upon on the experience, community connections, and trust garnered within communities and community leaders to comprehensibly address needs such as air and water quality, environmental toxins, and cultural practices in the home which highly impact public health.

b. Staff Experience and Qualifications of Project Manager (PM) (SEE ATTACHMENTS FOR RESUME OF PM)

Damaris Frias-Batista will be the Project Manager of the proposed project and she will oversee the project as a whole. She is the Chief Operating Officer and Co-founder of *Centro de Apoyo Familiar* (CAF). Ms. Frias brings over 10_years of experience in the area of managing and coordinating EPA-funded projects as well as other community projects by recruiting churches, training and supervising promotoras

as well as collecting organizing and developing information, data, reports and evaluations for the projects. Ms. Frias is a native of Dominican Republic with ample lived experiences that have made her an effective communicator and leader who has served her community through environmental health education on over 5 EPA-funded programs. She has been the Program Director of EPA healthy community funded program, Healthy Families: Healthy Homes and sub-director and coordinator of the EPA funded projects *Casas Sanas Niños Sanos – Healthy Homes Healthy Children, the Latino Youth Lead Environmental Awareness and Action* an Environmental Justice project, *the Lawrence Healthy Childcare Network,* some of those projects conducted in collaboration with the JSI Research & Training Institute, Inc. Ms. Frias holds a BA in Psychology from University of Massachusetts at Boston and a M.A. in Mental Health with a specialty in children, youths and families from Southern New Hampshire University. Ms. Frias led one of the EPA sub-groups for MAVD in the city of Lawrence, MA and also forms part of the Massachusetts Governer's Advisory Council on Latino Empowerment, a position set to expire in 2027.

c. Expenditure of Awarded Grant Funds

CAF has a centralized Accounting Department that supports project and corporate activities through management of CAF's finances and cash (both payables and receivables). CAF treats financial management as a priority for project accountability with professional accounting staff that tracks expenditures by project, category, and function. CAF has received several state and federal grants including EPA grants and Cooperative Agreements in the last 8 years managed by CAF Financial Director and our accountant staff who have successfully completed all reports and project deliverables on schedule.

DEJCP
Delaware Environmental Justice Community Partnership

CHECinc

DELAWARE ENVIROMENTAL JUSTICE COMMUNITY PARTNERSHIP (DEJCP)

FACT SHEET

Statement

Addressing environmental justice and building community power on the frontlines, especially in rural communities is a top priority of the Community Housing & Empowerment Connections Inc. (CHEC) and its partners of the Delaware Environmental Justice Community Partnership (DEJCP).

[HYPERLINK "https://www.nbejn.com/nbejn-health"]

History

The DEJCP [HYPERLINK "https://www.nbejn.com/our-history"]

The Delaware Environmental Justice Community Partnership (DEJCP), a collective of community organizations and individuals, is the only statewide organization in Delaware that primarily focuses on climate and environmental justice issues and whose leadership and membership are predominately black women, Indigenous and people of color directly impacted by environmental inequities. With emphasis on amplifying the voices of the most affected individuals, the DEJCP aim to successfully move environmental justice from the margin to the mainstream of environmental policy discussions. The DEJCP has served the Environmental Justice communities in all three counties by influencing public policy initiatives, advocating for beneficial legislation, providing testimony at public hearings on environmental proposals, and educating about environmental justice through public articles, studies, and presentations over the past three decades.

DEJCP is a state-based multi-level consortium of grassroots community organizations, environmental and social justice groups, expert consultants, government and elected officials working together to effectively prevent, reduce and eliminate environmental and social injustices in Delaware's most vulnerable communities. There are a number of regional and national groups that focus on climate, energy, environmental and social justice across the country seeking alignment with community-led, state-based organizations like DEJCP, but find it difficult to effectively engage, without designated infrastructures. To support the national efforts and fulfill our state goals to effectively engage, educate, empower and employ; and extend climate, environmental and social

ED_016126_00001434-00001

justice to the most impacted communities in Delaware, Community Housing & Empowerment Connections Inc. (CHEC) will take the lead in developing and managing the DEJCP.

African Americans are 79 percent more likely than whites to live in neighborhoods with toxic industrial pollution that poses the greatest health dangers. Across the US, Blacks, Indigenous and people of color are organizing their communities to fight back against environmental racism. This fight includes the inadequate resilience to climate change and inequitable assistance in BIPOC communities of color. DEJCP provides BIPOC organizations the unified support to win their fight for environmental justice. We work to make our community level struggles a statewide matter. We do this by creating space for residents, community organization leaders and members to build alliances and connect their work, share resources, and strategically target systemic racism throughout the state.

Our Work

CHEC as the lead agency of the DEJCP, is a community-based non-profit organization with an extensive history in substance abuse and violence prevention programming with special emphasis on environmental justice. It is the mission of (CHEC) to build, healthy, strong, sustainable communities through advocacy, community engagement and partnerships. CHEC was a co-author of the *Environmental Justice for Delaware, Mitigating Toxic Pollution in New Castle County Communities* report in 2017, that highlighted health impacts of toxic pollution in seven black communities in comparison to one elite white community. CHEC implemented several nationally recognized evidenced-based programs; led the development of the Wilmington Prevention Coalition, the New Castle Prevention Coalition; a lead partner of the Delaware Concerned Residents for EJ and currently leading the development of the Delaware EJ Community Partnership and Building Community Power through: Community Air Monitoring Networks , Community BreatheLife Campaign, and Community Justice40 Task Force to monitor and enforce implementation of federal Justice40 Initiative at the community level . The executive director of CHEC most recently served as Co-PI for a ACCEL Sponsored Retreat on *Health Impacts of Toxic Pollution: Developing Community-Engaged Research,* alongside the Director of Neighborhood and Revitalization Office at Delaware State University.

DEJCP works to Build Community Power on the Frontlines through the following projects and priorities areas:

Current Projects:

- Community Air Monitoring Network 4 Delaware (Youth and Healthy Homes Assessments)
- Clean Energy Future 4 All
- Community BreatheLife Campaign
- Neighborhood Youth Messaging Mascots
- Community Justice100 Task Force

Priorities Areas:

- Communication
- Leadership Development
- Advocacy Tools and Training
- Data and Information (Transportation, Public Health
- Relationship and Trust
- Innovative Philanthropy

Our Partners

(CHEC) and its current partners: Let the Truth Be Told Newsletter, Minority Workforce Development Coalition, State NAACP Health Committee, Southern Delaware Alliance for Racial Justice; Clean Air Council, Delaware Concerned Residents for EJ will collaborate in the development of the DEJCP and Coordinating Council to provide a *One Stop Shop* to coordinate social, climate, energy and environmental justice resources, trainings, and associated programs more equitably in Delaware. Other local, regional and national agencies/groups serving as Allies of the partnership are: Christiana Care Health Services, ACCEL, BEA Fund, Climate Justice Alliance, National Black Environmental Justice Network, Dream.org/Green for All, Delaware State University and John Hopkins University and many others as appropriate.

Local Partners:

Clean Air Council (The Council), officially created in 1967, is a member-supported environmental organization serving the Mid-Atlantic Region that includes Delaware. The Council is dedicated to protecting and defending everyone's right to a healthy environment. The Council works through a broad array of related sustainability and public health initiatives, using public education, community action, government oversight, and enforcement of environmental laws. By 1970, the Council was recognized by the American Heritage Publishing Company as one of the top 12 conservation organizations in the Nation most worthy of public support. In 1975, the Council developed the first regional air quality reporting system called AIRS. This system was regarded as a model air quality index by the Federal government.

Sussex Health and Environmental Outreach Project (SHEOP), an environmental justice group set up to help disadvantaged communities, communities of color, and in underserved areas in Sussex County deal with environmental and health issues related to contaminated drinking water and air pollution. SHEOP consider this situation to be a public health problem. With that in mind, are looking to connect with community health entities, such as the Healthy Communities Initiative, to address the environmental and related health problems in Sussex County.

Minority Workforce Development Coalition (MWDC) established in 2010, is a group of individuals, community-based organizations, businesses and government agencies working together to advocate for the compliance and enforcement of the Code of Federal Regulation (CFR) to increase fair and equal jobs and economic development opportunities for low income, environmental justice and frontline communities in Delaware. MWDC utilizes the five steps of the strategic prevention framework: assessment, capacity, planning, implementation and monitoring to achieve its goals.

Delaware State Conference NAACP Health Committee-Environmental & Climate Justice program provides toolkits, campaigns and support community leadership in addressing this human and civil rights issue by advocating for three objectives: 1) reduce Harmful Emissions, Particularly Greenhouse Gases; 2) advance Energy Efficiency and Clean Energy and 3) Strengthen Community Resilience and Livability.

Sierra Club-Delaware Chapter (SC) a conservation organization founded by John Muir in 1892 is a subsidiary of one of the nation's largest environmental organizations with more than two million members and supporters. The successes range from protecting millions of acres of wilderness to helping pass the Clean Air Act, Clean Water Act, and Endangered Species Act. More recently, made history by leading the charge to move away from the dirty fossil fuels that cause climate disruption and toward a clean energy economy. The Delaware Sierra Club a statewide membership organization of the national organization with over 1,500 members. The purpose includes working to explore, enjoy and protect the environment here in Delaware and protecting the health of Delawareans from pollution and making a just transition away from fossil fuels and other polluting industries to a clean and fair economy.

Delaware Concerned Residents for Environmental Justice (DCR4EJ) is a collective of environmental justice community residents whose mission to is to inform and empower communities to take action to protect the fundamental rights to clean air, water, land and food.
The group operates based on the six Jemez Principles of Environmental Justice that include: Inclusive, Bottom-Up Process, Speak for Ourselves, Work in Solidarity, and Self Transformation.

Delaware State University, Center for Neighborhood Revitalization and Research bridges the research practice gap by serving as a practicing academic partner with communities, nonprofit and other social service providers, and government agencies involved in community and neighborhood revitalization. The work is guide by three primary goals:

1. Developing mutually beneficial research partnerships designed to advance and sustain neighborhood vitality by invigorating the culture and the economy.

2. Providing student service learning, internships and research opportunities aimed at preparing graduate and undergraduate students with the knowledge, skills and experiences necessary to be the first choice of employers.
3. Supporting faculty research designed to help solve real-world problems.

National Partnership Efforts:

A recent study, *Environmental Justice for Delaware, Mitigating Air Pollution in New Castle County Communities,* a collaborative with Community Housing & Empowerment Connections Inc. (CHEC), Delaware Concerned Residents for Environmental Justice (DCR4EJ), Union of Concerned Scientists (UCS), Coming Clean (CC) and Environmental Justice Health Alliance (EJHA), have found that people of color and those living in poverty are exposed to higher levels of environmental pollution than Whites or people not living in poverty. Studies have also found that, compared to national averages, a significantly greater percentage of Blacks (African Americans), Latinos (Hispanics), and people at or near poverty levels tend to live near major highways, ports, industrial facilities that use large quantities of toxic chemicals and present a risk of major chemical disasters with potentially severe health consequences for residents in nearby communities. Environmental justice requires attention to, and actions to address, the disproportionate health and other quality-of-life impacts on these communities. This harm is amplified by the cumulative impacts from other negative socioeconomic and health factors, such as the lack of access to health care, public transportation, and healthy foods; poor housing conditions; and stress from unemployment, poverty, and crime, among the other exacerbating factors in systemic racism and Covid-19.

Additionally, The NAACP's Environmental and Climate Justice Program, in partnership with the Clean Air Task Force and with support from the National Medical Association, developed the study, *Fumes Across the Fence-Line: The Health Impacts of Air Pollution from Oil and Gas Facilities on African American Communities.* The report highlighted the life-threatening burdens placed on communities of color near oil and gas facilities are the result of systemic oppression perpetuated by the traditional energy industry, which exposes communities to health, economic, and social hazards. Communities impacted by oil and gas facility operations remain affected due to energy companies' heavy polluting, low wages for dangerous work, and government lobbying against local interests. The nature of the vulnerability of African American and other person of color fence-line communities is intersectional--subject to connected systems of discrimination based on social categorizations such as race, gender, class, etc.

Environmental Justice is defined as: Equal and fair distribution of environmental burdens and benefits to all people and communities, regardless of race, gender, income, age or where you live, work, play or learn.

Environmental problems manifest in local communities and show up in our schools, churches, playgrounds, and in our homes.

Goals:

Through the Delaware Environmental Justice Community Partnership, local youth, parents, schools, businesses, faith-based organizations, and other community stakeholders may access resources and achieve equity and environmental justice where they live. The DEJCP shall collaborate with local and national organizations to obtain two primary goals:

1. Establish and strengthen collaboration among community residents, academies, climate, energy and environmental groups; as well as federal, state, local, and tribal governments to support the efforts of environmental justice and associated problems through partnerships.
2. Prevent, reduce and/or mitigate environmental pollution in low income, communities of color, and over time, the public at large with 100% emissions reductions targets by addressing the factors in a community that increase health risks and promote factors that minimize those risks.

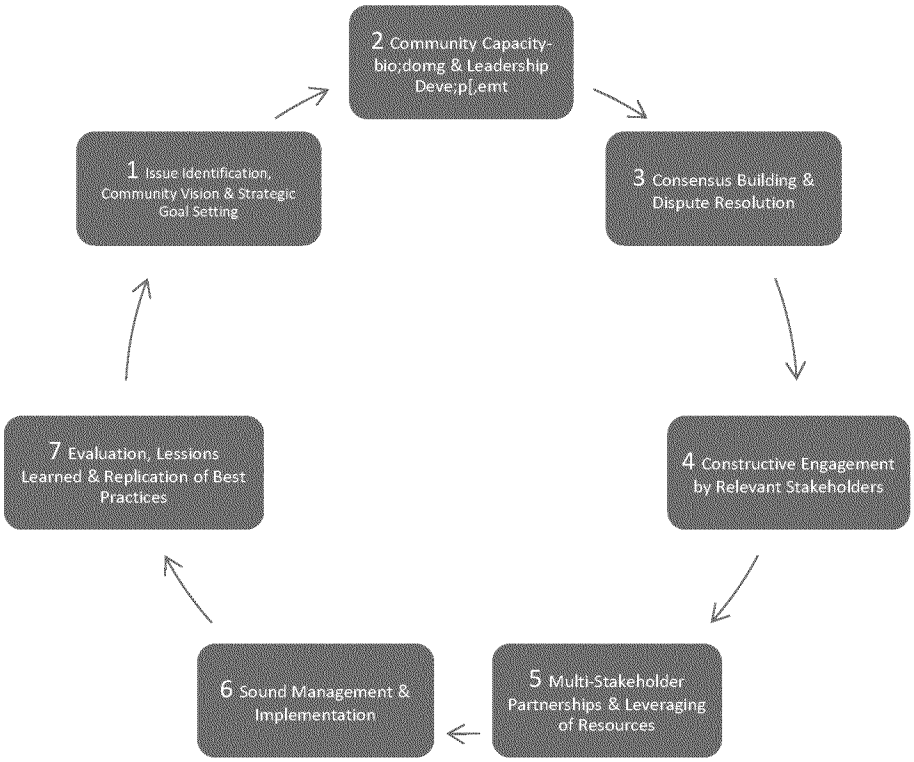
Organizational Structure:

The Delaware Environmental Justice Community Partnership, functions as a statewide EJ infrastructure to effectively resource community stakeholders in Delaware most vulnerable communities. Our members are constituency of the communities we serve. Each group and/or sectors retains its identity, but all agree to work together toward a common goal of building a statewide, accessible resource hub to engage and inform EJ communities in Delaware. **The structure of DEJCP operates as a Coordinating Council to serve as the decision-making body for the Partnership. As the lead agency, CHEC will house the DEJCP project's resource center and website; interns from local colleges/universities will serve as support staff for the project; and four county-level EJ Ambassadors will lead the development of EJ community coalitions in each county (Wilmington, New Castle, Kent and Sussex).** Participants of the DEJCP are expected to share information at the county level and work with stakeholders within their communities to identify and address local environmental problems and create sustainable community-level change through education, programs/policies and partnerships.

Now, more than ever, DEJCP is necessary to provide a system of pertinent and accessible social and environmental resources for impacted residents; assist local leaders to organize and identify the environmental issues unique to their communities and tools to effectively prevent, reduce and mitigate impacts of environmental pollutants at all levels throughout the state.

DEJCP Coordinating Council Requirements include a) partnership/coalitions must be located and comprised of members working/residing in underserved communities where disproportionate burdens of environmental pollution occur; b) partnership/coalitions shall be comprised as follows:

4 residents of an environmental justice community,
4 county level representatives,



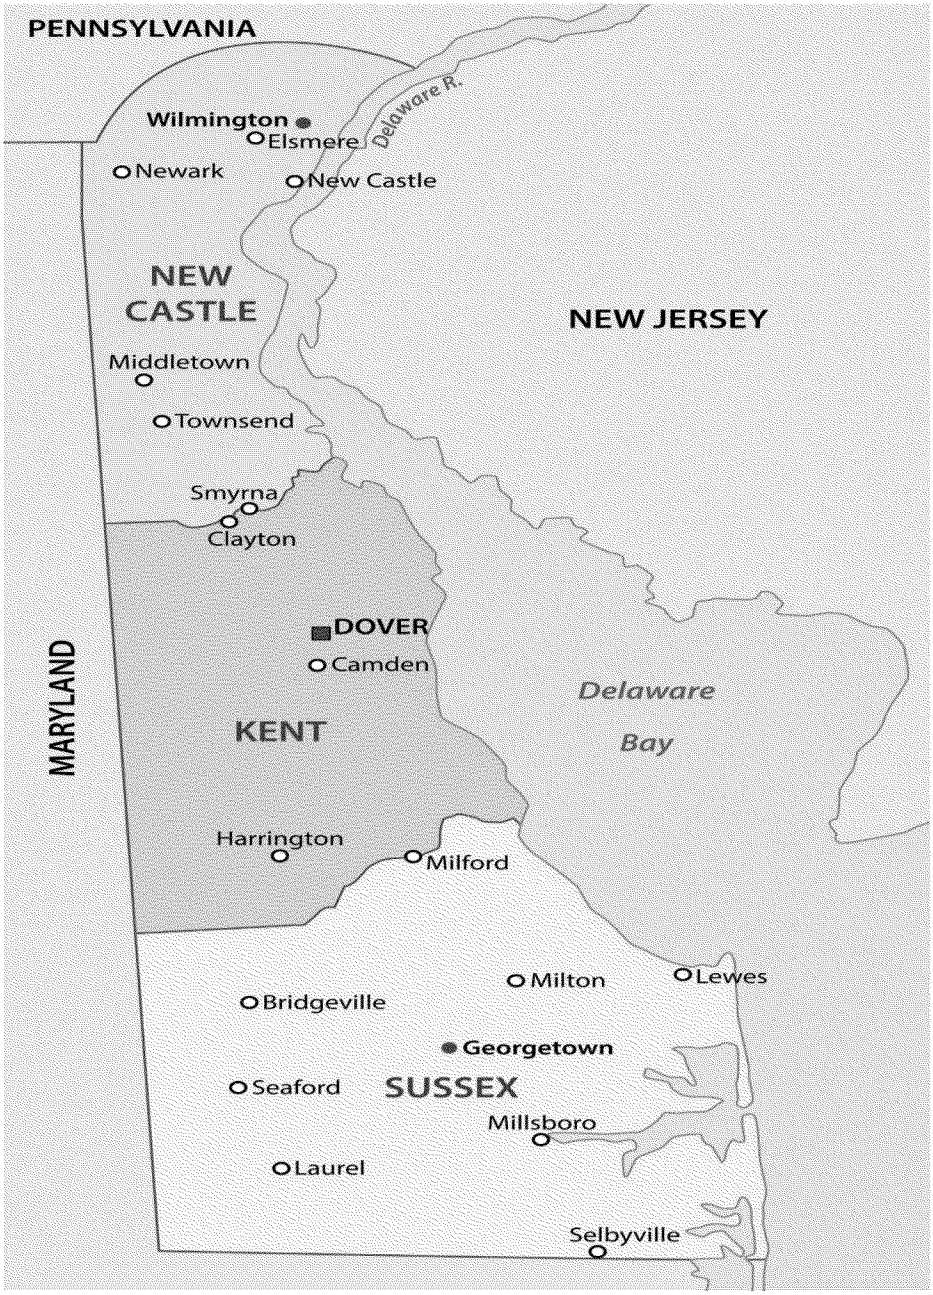
4 representatives of environmental justice organizations,
1 representative of a college/university
1 statewide elected official,
1 environmental legal representative
1 public health representative,
1 representative of an environmental protection agency,
1 community environmental justice Lead Agency/Director

While the partnership requires representation as identified above, there are a number of other ally groups associated with the partnership.

Development of DEJCP founded and led by:
Penny Dryden, executive director of CHEC Inc.,
January 2019

ED_016126_00001434-00007

EPA Collaborative Problem-Solving Model



Elements of the Collaborative Problem-Solving Model:

1. Issue Identification, Visioning, and Strategic Goal-Setting;
2. Community Capacity-Building and Leadership Development;
3. Development of Multi-Stakeholder Partnerships and Leveraging of Resources;
4. Consensus Building and Dispute Resolution;
5. Constructive Engagement with Other Stakeholders;
6. Sound Management and Implementation; and
7. Evaluation

These elements are cross-cutting and interdependent and should be utilized in a proactive, strategic, and iterative manner. Determining which elements to undertake, and in what order, can vary greatly, however, depending upon the unique facts and circumstances surrounding each environmental and/or public health issue. Not all the elements are required to be used in every situation. Rather, the CPS Model and its seven elements can be viewed as a "tool box" filled with different tools that can be used as needed.

Map of Delaware, by Counties

*The proposed Community-led Air Quality Monitoring in Rural Communities in Southern Delaware includes Kent and Sussex County only.

FRIENDS of ANACOSTIA PARK

RSTOR Logic Model

Resources/ Inputs

- Friends Corps workforce development
- Training partners: Ward 8 Woods, Casey Trees, Anacostia Riverkeeper
- Local community providing input for park future
- National Park Service guidance and admin

Activities

- Litter removal from riparian forest
- Litter removal from high-traffic areas
- Development and maintenance of native tree canopy
- Invasive plant species removal
- Community forums facilitating participatory planning

Outputs

- Provide 18 green jobs for local community members
- Remove 30,000 pounds of trash from park
- Source, plant and maintain 50 native trees around park
- Remove 1,000 square feet of invasive species in park riparian forests and coastal meadows
- Engage 2,000+ local residents through Friends Corps led programming, community cleanups, and forums focused on steps residents can take to be park conservationists

Communities Served

- 155,000 Ward 7 & 8 residents
- 1, 770,000 annual park visitors
- Returning citizens, senior citizens, dislocated workers
- 30+ APACC organizations who power community forums

Short-term Outcomes (6-12 months)

- Less trash accumulating in the Park's high traffic areas
- Increased beautification of the Park resulting in more visitors
- Increased visibility of local residents leading cleanups strengthens conservation culture in Southeast DC
- Educating residents living in the watershed about the different ways that human behavior impacts the health of the River

Intermediate Outcomes (12-24 months)

- Significantly reduce single-use plastics, microplastics, and hazardous chemicals entering the the River after heavy rainstorms
- Canopy development will increase shade, mitigate stormwater, stabilize coastal soil, reduce erosion, improve water quality, filter pollutants, and promote infiltration to groundwater table
- Mitigate stormwater runoff by removing invasives plants that harm ecosystem and prevent watershed balance

Long-term Outcomes (2+ years)

- Engender a sense of pride around restoration efforts, change perception of a trash-filled park
- Power community organization Intersectionality and coalition building
- Create the next generation of park environmental stewards by providing youth education
- Support increased nature and outdoor practices that address mental, physical, and social wellness of marginalized communities

Friends of Anacostia Park respectfully requests $150,000 for the execution of the Friends Corps RSTOR initiative--which will empower Ward 7 and 8 residents to manage stormwater runoff through tree planting, trash removal and invasive species eradication. This initiative also carves out convening space for park-goers to commune, get educated on the current state of the Anacostia River's health and build a ward-wide campaign to reduce litter and single-use plastics.

The success of this initiative relies heavily on facilitation from our Friends Corps—FoAP's workforce development program that connects local residents with living wage green jobs in the Park. In addition to leading the in-park conservation effort, Corps members lead program development and facilitation—ensuring FoAP's programs are community-responsive. As the budget indicates, a total of $59,472 is being allocated for the onboarding of 6 Friends Corps members—augmenting our capacity for facilitating the aforementioned youth programming. Friends Corps members occupy different "slots," depending on their personal goals and interests.

- Core Competency Friends Corps members stay with FoAP for multiple seasons and lead our core programming areas. They develop workplans built around personal S.M.A.R.T. Goal(s) that are used for mid and end-of-season evaluations. Core Competency Corps members are paid $23/hr. for 30 hours a week for 26 weeks. $27,464 has been allocated to cover 22% of two Core Competency Corps members time for three years—one leading the Visitor Engagement team and the other leading the Grounds team. These Corps members will be the logistics specialists behind the implementation of the RSTOR initiative.
- Seasonal Friends Corps members, on the other hand, are content with part-time, seasonal work and support each team leader—*or* they are interested in receiving additional support for outside employment at the end of the season. Seasonal Corps members are paid a living wage of $22/hr. for 25 hours a week for 26 weeks. $21,146 has been allocated to cover 21% of two Seasonal Corps members time for three years—one assisting the Visitor Engagement Lead and the other assisting the Grounds Lead.
- Lastly, Rotational Friends Corps members come to FoAP with unique and specific interests/abilities that are nurtured during a year-long training program. They gain workforce development skills and seek employment with a partnering organization at the end of the FoAP programming season. Rotational Corps members are paid a living wage of $20/hour for 20 hours a week for 26 weeks (the duration of the programming season). $10,862 has been allocated to cover 17% of two Rotational Corps members time for three years—one working with the Visitor Engagement team and the other working with the Grounds team.

We have allocated $30,925 plus fringe (at 30%) of $9,278 representing about 13% of our Director of Program's bandwidth. The Director of Programs--Lydia Daniel--leads the recruitment, onboarding, training and evaluation of our Friends Corps--so she will be responsible for identifying the two new candidates we will be bringing onto the team. As the Project

Manager, she also will manage our partnerships with Casey Trees and Ward 8 Woods, ensuring that their scope of work is in compliance with National Park Service directives.

We have allocated $25,250 plus fringe (at 30%) of $7,575 representing about 13% of our new Friends Corps Manger's bandwidth. The Friends Corps Manger—LaShauntya Moore—coordinates and manages daily Corps member schedules and responsibilities around grounds and visitor engagement, daily Park events/operations, programs, and partners. With the Director of Programs and Friends Corps Manager handling the design and conceptualization of RSTOR initiative, Corps members can lead the on-the-ground implementation.

Our Community Forums--which will convene folks from the community to discuss stormwater management and what residents can do about it--has certain costs associated with it. We have also set aside $500 for the creation of ads and flyers that can be distributed throughout the community $1,000 for entertainment support that will make the events more festive.

We have already engaged Ward 8 Woods around their vision for the Anacostia Park forest patch remediation, and they estimate that it will cost around $13,000 per year to remove 30,000 pounds of trash and 1000 square feet of invasive plants. $4,000 has been allocated to cover 30% of this contract. Exactly $2,000 of this grant is reserved for the sourcing, purchase and transportation of medium-to-large sized trees that will be planted around the Anacostia Park Skating Pavilion in Partnership with Casey Trees. $10,000 has been allocated to cover the fee associated with training from the Anacostia Watershed Society.

The total cost of this effort--$150,000--will go a long way towards beautifying Anacostia Park, reducing the amount of polluted runoff flowing into the Anacostia River and educating residents about their role in remediating the River.

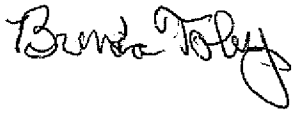
Members of the Environmental Protection Agency Grantmaking Committee,

I would like to offer my commitment and support to Grounded Strategies in their pursuit of funding through the Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program.

Should this funding be awarded to Grounded, they will be creating an intentional meadow on a vacant lot for the purposes of:

- Enhancing the natural infrastructure value of an underutilized vacant parcel in order to:
    - Capture and filter stormwater, which has historically been an issue in our region, causing overflows of sewage from our combined sewer system into watercourses used for recreation
    - Provide critical habitat for insect and bird species of conservation concern, identified in the Pennsylvania Wildlife Action Plan 2015-2025
    - Mitigate the urban heat-island effect
    - Augment pollination services for nearby agricultural endeavors
- Educating neighborhood, city, and county residents about the value of natural infrastructure within urban areas so that:
    - Neighborhood residents are adequately equipped and skilled to install micro-meadows on their own property
    - City residents are more aware of the issues surrounding natural infrastructure
    - County residents are better able to advocate for natural infrastructure installations (where appropriate) when public comment for regional planning efforts is solicited
- Propagating native plants for further meadow installations



I commit to offering my support to Grounded in the following ways:

- Participating in roundtable discussions with neighborhood residents to better understand and address their concerns surrounding natural infrastructure installation and management
- Assisting Grounded with getting the word out about the value of natural infrastructure in communities, and the disparities in its current presence in our region
- Providing Training developed by Grounded to neighborhood residents on the following topics
    - Native plant care and establishment
    - Environmental Justice implications of greenspace development and natural infrastructure
- Connecting neighborhood, City, and County residents I know to the following resources
    - Grounded's Lots to Love resources, which can aid in the establishment of meadows and other natural infrastructure

Thank you for considering Grounded as a possible recipient of the Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program grant.

Sincerely,
Brenda Toley

4/7/23

Members of the Environmental Protection Agency Grantmaking Committee,

I would like to offer my commitment and support to Grounded Strategies in their pursuit of funding through the Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program.

Should this funding be awarded to Grounded, they will be creating an intentional meadow on a vacant lot for the purposes of:

- Enhancing the natural infrastructure value of an underutilized vacant parcel in order to:
  - Capture and filter stormwater, which has historically been an issue in our region, causing overflows of sewage from our combined sewer system into watercourses used for recreation
  - Provide critical habitat for insect and bird species of conservation concern, identified in the Pennsylvania Wildlife Action Plan 2015-2025
  - Mitigate the urban heat-island effect

Preaward Compliance Review Report for All Applicants and Recipients Requesting EPA Financial Assistance

Note: Read Instructions before completing form.

I. A. Applicant/Recipient (Name, Address, City, State, Zip Code)

Name: Bridgeport Economic Development Corporation

Address: 10 Middle St Fl 14

City: Bridgeport

State: CT: Connecticut Zip Code: 06604-4257

B. Unique Entity Identifier (UEI): XYM7KJ422CU3

C. Applicant/Recipient Point of Contact

Name: Edward P Lavernoich

Phone: Ex. 6 Personal Privacy (PP)

Email: lavernoich@brbc.org

Title: President

II. Is the applicant currently receiving EPA Assistance? ☐ Yes ☒ No

III. List all pending civil rights lawsuits and administrative complaints filed under federal law against the applicant/recipient that allege discrimination based on race, color, national origin, sex, age, or disability. (Do not include employment complaints not covered by 40 C.F.R. Parts 5 and 7.)

None.

IV. List all civil rights lawsuits and administrative complaints decided against the applicant/recipient within the last year that alleged discrimination based on race, color, national origin, sex, age, or disability and enclose a copy of all decisions. Please describe all corrective actions taken. (Do not include employment complaints not covered by 40 C.F.R. Parts 5 and 7.)

None.

V. List all civil rights compliance reviews of the applicant/recipient conducted under federal nondiscrimination laws by any federal agency within the last two years and enclose a copy of the review and any decisions, orders, or agreements based on the review. Please describe any corrective action taken. (40 C.F.R. § 7.80(c)(3))

None.

VI. Is the applicant requesting EPA assistance for new construction? If no, proceed to VII; if yes, answer (a) and/or (b) below.

☒ Yes ☐ No

a. If the grant is for new construction, will all new facilities or alterations to existing facilities be designed and constructed to be readily accessible to and usable by persons with disabilities? If yes, proceed to VII; if no, proceed to VI(b).

☒ Yes ☐ No

b. If the grant is for new construction and the new facilities or alterations to existing facilities will not be readily accessible to and usable by persons with disabilities, explain how a regulatory exception (40 C.F.R. 7.70) applies.

VII.	**Does the applicant/recipient provide initial and continuing notice that it does not discriminate on the basis of race, color, national origin, sex, age, or disability in its program or activities? (40 C.F.R 5.140 and 7.95)**	☒ Yes	☐ No
	a. Do the methods of notice accommodate those with impaired vision or hearing?	☐ Yes	☒ No
	b. Is the notice posted in a prominent place in the applicant's/recipient's website, in the offices or facilities or, for education programs and activities, in appropriate periodicals and other written communications?	☒ Yes	☐ No
	c. Does the notice identify a designated civil rights coordinator?	☐ Yes	☒ No
VIII.	**Does the applicant/recipient maintain demographic data on the race, color, national origin, sex, age, or disability status of the population it serves? (40 C.F.R. 7.85(a))**	☐ Yes	☒ No
IX.	**Does the applicant/recipient have a policy/procedure for providing meaningful access to services for persons with limited English proficiency? (Title VI, 40 C.F.R. Part 7, *Lau v Nichols* 414 U.S. (1974))**	☐ Yes	☒ No

X. If the applicant is an education program or activity, or has 15 or more employees, has it designated an employee to coordinate its compliance with 40 C.F.R. Parts 5 and 7? Provide the name, title, position, mailing address, e-mail address, fax number, and telephone number of the designated coordinator.

NA

XI. If the applicant is an education program or activity, or has 15 or more employees, has it adopted grievance procedures that assure the prompt and fair resolution of complaints that allege a violation of 40 C.F.R. Parts 5 and 7? Provide a legal citation or applicant's/ recipient's website address for, or a copy of, the procedures.

NA

For the Applicant/Recipient

I certify that the statements I have made on this form and all attachments thereto are true, accurate and complete. I acknowledge that any knowingly false or misleading statement may be punishable by fine or imprisonment or both under applicable law. I assure that I will fully comply with all applicable civil rights statutes and EPA regulations.

A. Signature of Authorized Official	B. Title of Authorized Official	C. Date
Edward P Lavernoich	President	04/13/2023

For the U.S. Environmental Protection Agency

I have reviewed the information provided by the applicant/recipient and hereby certify that the applicant/recipient has submitted all preaward compliance information required by 40 C.F.R. Parts 5 and 7; that based on the information submitted, this application satisfies the preaward provisions of 40 C.F.R. Parts 5 and 7; and that the applicant has given assurance that it will fully comply with all applicable civil rights statures and EPA regulations.

A. *Signature of Authorized EPA Official	B. Title of Authorized Official	C. Date

Instructions for EPA FORM 4700-4 (Rev. 04/2021)

General. Recipients of Federal financial assistance from the U.S. Environmental Protection Agency must comply with the following statutes and regulations.
Title VI of the Civil Rights Acts of 1964 provides that no person in the United States shall, on the grounds of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. The Act goes on to explain that the statute shall not be construed to authorize action with respect to any employment practice of any employer, employment agency, or labor organization (except where the primary objective of the Federal financial assistance is to provide employment). Section 13 of the 1972 Amendments to the Federal Water Pollution Control Act provides that no person in the United States shall on the ground of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under the Federal Water Pollution Control Act, as amended. Employment discrimination on the basis of sex is prohibited in all such programs or activities. Section 504 of the Rehabilitation Act of 1973 provides that no otherwise qualified individual with a disability in the United States shall solely by reason of disability be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. Employment discrimination on the basis of disability is prohibited in all such programs or activities. The Age Discrimination Act of 1975 provides that no person on the basis of age shall be excluded from participation under any program or activity receiving Federal financial assistance. Employment discrimination is not covered. Age discrimination in employment is prohibited by the Age Discrimination in Employment Act administered by the Equal Employment Opportunity Commission. Title IX of the Education Amendments of 1972 provides that no person in the United States on the basis of sex shall be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity receiving Federal financial assistance. Employment discrimination on the basis of sex is prohibited in all such education programs or activities. Note: an education program or activity is not limited to only those conducted by a formal institution. 40 C.F.R. Part 5 implements Title IX of the Education Amendments of 1972. 40 C.F.R. Part 7 implements Title VI of the Civil Rights Act of 1964, Section 13 of the 1972 Amendments to the Federal Water Pollution Control Act, and Section 504 of The Rehabilitation Act of 1973.

Items "Applicant" means any entity that files an application or unsolicited proposal or otherwise requests EPA assistance. 40 C.F.R. §§ 5.105, 7.25. "Recipient" means any State or its political subdivision, any instrumentality of a State or its political subdivision, any public or private agency, institution, organizations, or other entity, or any person to which Federal financial assistance is extended directly or through another recipient, including any successor, assignee, or transferee of a recipient, but excluding the ultimate beneficiary of the assistance. 40 C.F.R. §§ 5.105, 7.25. "Civil rights lawsuits and administrative complaints" means any lawsuit or administrative complaint alleging discrimination on the basis of race, color, national origin, sex, age, or disability pending or decided against the applicant and/or entity which actually benefits from the grant, but excluding employment complaints not covered by 40 C.F.R. Parts 5 and 7. For example, if a city is the named applicant but the grant will actually benefit the Department of Sewage, civil rights lawsuits involving both the city and the Department of Sewage should be listed. "Civil rights compliance review" means: any federal agency-initiated investigation of a particular aspect of the applicant's and/or recipient's programs or activities to determine compliance with the federal non-discrimination laws. Submit this form with the original and required copies of applications, requests for extensions, requests for increase of funds, etc. Updates of information are all that are required after the initial application submission. If any item is not relevant to the project for which assistance is requested, write "NA" for "Not Applicable." In the event applicant is uncertain about how to answer any questions, EPA program officials should be contacted for clarification.

Preaward Compliance Review Report for All Applicants and Recipients Requesting EPA Financial Assistance

Note: Read Instructions before completing form.

I. A. Applicant/Recipient (Name, Address, City, State, Zip Code)

Name: CLICK INC

Address: 41 CLUB ROAD

City: Windham

State: CT: Connecticut Zip Code: 06280

B. Unique Entity Identifier (UEI): VKCGYERQRGS1

C. Applicant/Recipient Point of Contact

Name: Sydney Clements

Phone: Ex. 6 - Personal Privacy (PP)

Email: Ex. 6 Personal Privacy (PP)

Title: Program Manager

II. Is the applicant currently receiving EPA Assistance? ☐ Yes ☒ No

III. List all pending civil rights lawsuits and administrative complaints filed under federal law against the applicant/recipient that allege discrimination based on race, color, national origin, sex, age, or disability. (Do not include employment complaints not covered by 40 C.F.R. Parts 5 and 7.)

IV. List all civil rights lawsuits and administrative complaints decided against the applicant/recipient within the last year that alleged discrimination based on race, color, national origin, sex, age, or disability and enclose a copy of all decisions. Please describe all corrective actions taken. (Do not include employment complaints not covered by 40 C.F.R. Parts 5 and 7.)

V. List all civil rights compliance reviews of the applicant/recipient conducted under federal nondiscrimination laws by any federal agency within the last two years and enclose a copy of the review and any decisions, orders, or agreements based on the review. Please describe any corrective action taken. (40 C.F.R. § 7.80(c)(3))

VI. Is the applicant requesting EPA assistance for new construction? If no, proceed to VII; if yes, answer (a) and/or (b) below.

☐ Yes ☒ No

a. If the grant is for new construction, will all new facilities or alterations to existing facilities be designed and constructed to be readily accessible to and usable by persons with disabilities? If yes, proceed to VII; if no, proceed to VI(b).

☐ Yes ☐ No

b. If the grant is for new construction and the new facilities or alterations to existing facilities will not be readily accessible to and usable by persons with disabilities, explain how a regulatory exception (40 C.F.R. 7.70) applies.

VII. **Does the applicant/recipient provide initial and continuing notice that it does not discriminate on the basis of race, color, national origin, sex, age, or disability in its program or activities? (40 C.F.R 5.140 and 7.95)** ☒ Yes ☐ No

a. **Do the methods of notice accommodate those with impaired vision or hearing?** ☒ Yes ☐ No

b. **Is the notice posted in a prominent place in the applicant's/recipient's website, in the offices or facilities or, for education programs and activities, in appropriate periodicals and other written communications?** ☒ Yes ☐ No

c. **Does the notice identify a designated civil rights coordinator?** ☒ Yes ☐ No

VIII. **Does the applicant/recipient maintain demographic data on the race, color, national origin, sex, age, or disability status of the population it serves? (40 C.F.R. 7.85(a))** ☒ Yes ☐ No

IX. **Does the applicant/recipient have a policy/procedure for providing meaningful access to services for persons with limited English proficiency? (Title VI, 40 C.F.R. Part 7, *Lau v Nichols* 414 U.S. (1974))** ☒ Yes ☐ No

X. **If the applicant is an education program or activity, or has 15 or more employees, has it designated an employee to coordinate its compliance with 40 C.F.R. Parts 5 and 7? Provide the name, title, position, mailing address, e-mail address, fax number, and telephone number of the designated coordinator.**

XI. **If the applicant is an education program or activity, or has 15 or more employees, has it adopted grievance procedures that assure the prompt and fair resolution of complaints that allege a violation of 40 C.F.R. Parts 5 and 7? Provide a legal citation or applicant's/ recipient's website address for, or a copy of, the procedures.**

For the Applicant/Recipient

I certify that the statements I have made on this form and all attachments thereto are true, accurate and complete. I acknowledge that any knowingly false or misleading statement may be punishable by fine or imprisonment or both under applicable law. I assure that I will fully comply with all applicable civil rights statutes and EPA regulations.

A. Signature of Authorized Official	B. Title of Authorized Official	C. Date
Leigh A Duffy	Executive Director	04/14/2023

For the U.S. Environmental Protection Agency

I have reviewed the information provided by the applicant/recipient and hereby certify that the applicant/recipient has submitted all preaward compliance information required by 40 C.F.R. Parts 5 and 7; that based on the information submitted, this application satisfies the preaward provisions of 40 C.F.R. Parts 5 and 7; and that the applicant has given assurance that it will fully comply with all applicable civil rights statures and EPA regulations.

A. *Signature of Authorized EPA Official	B. Title of Authorized Official	C. Date

Instructions for EPA FORM 4700-4 (Rev. 04/2021)

General. Recipients of Federal financial assistance from the U.S. Environmental Protection Agency must comply with the following statutes and regulations.
Title VI of the Civil Rights Acts of 1964 provides that no person in the United States shall, on the grounds of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. The Act goes on to explain that the statute shall not be construed to authorize action with respect to any employment practice of any employer, employment agency, or labor organization (except where the primary objective of the Federal financial assistance is to provide employment). Section 13 of the 1972 Amendments to the Federal Water Pollution Control Act provides that no person in the United States shall on the ground of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under the Federal Water Pollution Control Act, as amended. Employment discrimination on the basis of sex is prohibited in all such programs or activities. Section 504 of the Rehabilitation Act of 1973 provides that no otherwise qualified individual with a disability in the United States shall solely by reason of disability be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. Employment discrimination on the basis of disability is prohibited in all such programs or activities. The Age Discrimination Act of 1975 provides that no person on the basis of age shall be excluded from participation under any program or activity receiving Federal financial assistance. Employment discrimination is not covered. Age discrimination in employment is prohibited by the Age Discrimination in Employment Act administered by the Equal Employment Opportunity Commission. Title IX of the Education Amendments of 1972 provides that no person in the United States on the basis of sex shall be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity receiving Federal financial assistance. Employment discrimination on the basis of sex is prohibited in all such education programs or activities. Note: an education program or activity is not limited to only those conducted by a formal institution. 40 C.F.R. Part 5 implements Title IX of the Education Amendments of 1972. 40 C.F.R. Part 7 implements Title VI of the Civil Rights Act of 1964, Section 13 of the 1972 Amendments to the Federal Water Pollution Control Act, and Section 504 of The Rehabilitation Act of 1973.

Items "Applicant" means any entity that files an application or unsolicited proposal or otherwise requests EPA assistance. 40 C.F.R. §§ 5.105, 7.25. "Recipient" means any State or its political subdivision, any instrumentality of a State or its political subdivision, any public or private agency, institution, organizations, or other entity, or any person to which Federal financial assistance is extended directly or through another recipient, including any successor, assignee, or transferee of a recipient, but excluding the ultimate beneficiary of the assistance. 40 C.F.R. §§ 5.105, 7.25. "Civil rights lawsuits and administrative complaints" means any lawsuit or administrative complaint alleging discrimination on the basis of race, color, national origin, sex, age, or disability pending or decided against the applicant and/or entity which actually benefits from the grant, but excluding employment complaints not covered by 40 C.F.R. Parts 5 and 7. For example, if a city is the named applicant but the grant will actually benefit the Department of Sewage, civil rights lawsuits involving both the city and the Department of Sewage should be listed. "Civil rights compliance review" means: any federal agency-initiated investigation of a particular aspect of the applicant's and/or recipient's programs or activities to determine compliance with the federal non-discrimination laws. Submit this form with the original and required copies of applications, requests for extensions, requests for increase of funds, etc. Updates of information are all that are required after the initial application submission. If any item is not relevant to the project for which assistance is requested, write "NA" for "Not Applicable." In the event applicant is uncertain about how to answer any questions, EPA program officials should be contacted for clarification.

Instructions for EPA FORM 4700-4 (Rev. 04/2021)

General. Recipients of Federal financial assistance from the U.S. Environmental Protection Agency must comply with the following statutes and regulations.
Title VI of the Civil Rights Acts of 1964 provides that no person in the United States shall, on the grounds of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. The Act goes on to explain that the statute shall not be construed to authorize action with respect to any employment practice of any employer, employment agency, or labor organization (except where the primary objective of the Federal financial assistance is to provide employment). Section 13 of the 1972 Amendments to the Federal Water Pollution Control Act provides that no person in the United States shall on the ground of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under the Federal Water Pollution Control Act, as amended. Employment discrimination on the basis of sex is prohibited in all such programs or activities. Section 504 of the Rehabilitation Act of 1973 provides that no otherwise qualified individual with a disability in the United States shall solely by reason of disability be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. Employment discrimination on the basis of disability is prohibited in all such programs or activities. The Age Discrimination Act of 1975 provides that no person on the basis of age shall be excluded from participation under any program or activity receiving Federal financial assistance. Employment discrimination is not covered. Age discrimination in employment is prohibited by the Age Discrimination in Employment Act administered by the Equal Employment Opportunity Commission. Title IX of the Education Amendments of 1972 provides that no person in the United States on the basis of sex shall be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity receiving Federal financial assistance. Employment discrimination on the basis of sex is prohibited in all such education programs or activities. Note: an education program or activity is not limited to only those conducted by a formal institution. 40 C.F.R. Part 5 implements Title IX of the Education Amendments of 1972. 40 C.F.R. Part 7 implements Title VI of the Civil Rights Act of 1964, Section 13 of the 1972 Amendments to the Federal Water Pollution Control Act, and Section 504 of The Rehabilitation Act of 1973.

Items "Applicant" means any entity that files an application or unsolicited proposal or otherwise requests EPA assistance. 40 C.F.R. §§ 5.105, 7.25. "Recipient" means any State or its political subdivision, any instrumentality of a State or its political subdivision, any public or private agency, institution, organizations, or other entity, or any person to which Federal financial assistance is extended directly or through another recipient, including any successor, assignee, or transferee of a recipient, but excluding the ultimate beneficiary of the assistance. 40 C.F.R. §§ 5.105, 7.25. "Civil rights lawsuits and administrative complaints" means any lawsuit or administrative complaint alleging discrimination on the basis of race, color, national origin, sex, age, or disability pending or decided against the applicant and/or entity which actually benefits from the grant, but excluding employment complaints not covered by 40 C.F.R. Parts 5 and 7. For example, if a city is the named applicant but the grant will actually benefit the Department of Sewage, civil rights lawsuits involving both the city and the Department of Sewage should be listed. "Civil rights compliance review" means: any federal agency-initiated investigation of a particular aspect of the applicant's and/or recipient's programs or activities to determine compliance with the federal non-discrimination laws. Submit this form with the original and required copies of applications, requests for extensions, requests for increase of funds, etc. Updates of information are all that are required after the initial application submission. If any item is not relevant to the project for which assistance is requested, write "NA" for "Not Applicable." In the event applicant is uncertain about how to answer any questions, EPA program officials should be contacted for clarification.

Our Letter Dated:
March 23, 1988
Addendem Applies:
No

Dear Applicant:

This modifies our letter of the above date in which we stated that you would be treated as an organization which is not a private foundation until the expiration of your advance ruling period.

Your exempt status under section 501(a) of the Internal Revenue Code as an organization described in section 501(c)(3) is still in effect. Based on the information you submitted, we have determined that you are not a private foundation within the meaning of section 509(a) of the code because you are an organization of the type described in section 509(a)(1) and 170(b)(1)(A)(vi).

Grantors and contributors may rely on this determination unless the Internal Revenue Service publishes notice to the contrary. However, if you lose your section 509(a)(1) status, a grantor or contributor may not rely on this determination if he or she was in part responsible for, or was aware of, the act or failure to act, or the substantial or material change on the part of the organization that resulted in your loss of such status, or if he or she acquired knowledge that the Internal Revenue Service had given notice that you would no longer be classified as a section 509(a)(1) organization.

If we have indicated in the heading of this letter that an addendum applies, the addendum enclosed is an integral part of this letter.

Because this letter could help resolve any questions about your private foundation status, please keep it in your permanent records.

If you have any questions, please contact the person whose name and telephone number are shown above.

Sincerely yours,

Eugene D. Alexander
District Director

Letter 1050(DO/CG)

ED_016126_00000027-00001

1.0 PROGRAM OBJECTIVES

a. Project Summary Page

Project Title: Bridgeport Thermal Loop Phase II: Park Avenue EJ Corridor

Project Location: The Phase II project is specifically located on Park Avenue, between South Avenue and Fairfield Avenue, in the South End Neighborhood Revitalization Zone (SENRZ) in Bridgeport, CT. Participating/benefitting properties lie in US Zip codes 06604 & 06605.

Applicant Information: Bridgeport Economic Development Corporation 10 Middle Street FL14 Bridgeport, CT 06604-4257 Edward P. Lavernoich, President lavernoich@brbc.org
Main Ex. 6 - Personal Privacy (PP) Mobile Ex. 6 - Personal Privacy (PP)

Brief Description of Applicant Organization: The Bridgeport Economic Development Corporation (BEDCO), an affiliate of the Bridgeport Regional Business Council (BRBC), is a non-profit community economic development corporation formed under US IRS laws as a 501(c)3 entity and recognized as a charitable organization in good standing by the State of Connecticut. BEDCO can undertake a broad range of economic and community development activities with a determined focus of helping public, private and neighborhood partner organizations implement their own worthy ideas. Selected 2023 Project Activities and/or Goals: Act as fiduciary/fiscal agent/program manager of the Community Environmental Benefit Fund (CEBF) for the Bridgeport Environmental Task Force (ETF); Complete CT DEEP closeout for environmental remediation in Seaview Avenue Industrial Park, achieving "No Further Action" status; Contract for and process awarded $4.77 Million State brownfield remediation and infrastructure grants for Cherry Street Lofts Phase III and Phase IV projects; Assist the East End NRZ and City of Bridgeport in the initial stages of developing the "Mt. Growmore" Agricultural and Wellness Campus.

Grant Request: This application is made for the $500,000 level award.

Project Abstract: NuPower Thermal, LLC (NuPower), in cooperation with the Bridgeport Economic Development Corporation, (BEDCO) is proposing to construct and extend a second phase district energy heating loop (Phase II) of approximately 1200 feet. Phase II will allow zero emission thermal heat to be provided to a number of stakeholder entities that exclusively serve vulnerable and marginalized inner-city populations. Additional end users may also be added in this area. The proposed Phase II project area is within a designated distressed community as well as an environmental justice community. Air pollution levels are significant in the immediate area. By connecting these facilities to a low temperature hot water thermal loop there will no longer be a need to continually run their natural gas fired heating systems thereby eliminating GHG emissions and correspondingly improving indoor air quality. Additionally, energy costs for beneficiaries will be reduced as well as the costs for equipment maintenance.

Project Type: A small-scale infrastructure construction. An EPA grant would be used only for a portion of this purpose, with other (majority of) costs being borne by local and private sources.

Special Considerations and Environmental Issues: Climate change and indoor air quality.

List of Project Partners: New Neighborhoods, Inc. (Franklin and Eleanor Senior Apartments) Bridgeport YMCA, part of Central Connecticut Coast YMCA; City of Bridgeport Board of Education; Bridgeport Rescue Mission; Mercy Learning Center; SENRZ: and NuPower Thermal, LLC (the Thermal Loop developer).

QAPP: At the time of application, it is believed that a QAPP will not be required for this project.

ED_016126_00000031-00001

b. Environmental and Public Health Information of the Underserved Community: The proposed Phase II project area is within a designated distressed community as well as a designated environmental justice community. The neighborhood is a low-income area, with a large percentage of the population being people of color. The entirety of the Phase II project is within 1,000 feet of Interstate 95, and 3,000 feet of several natural gas fired electric plants and a shuttered coal plant. Pollution levels are significant in the immediate area as a result. The thermal loop extension will service stakeholders in two census tracts: 09001070900 and 09001070600. The Council on Environmental Quality Climate & Economic Justice Screening Tool designated these tracts as disadvantaged and overburdened. The population of these two census tracts is predominantly minority. This project will assist in mitigating poor air quality in a marginalized community and will be a part of improving health outcomes for the resident and client populations. The pollutant levels in the immediate area are among the highest in the state:

- The 3-yr average (day design value) for PM 2.5 in Bridgeport is 22 ug/cubic meter, the highest in Connecticut.
- The National Ambient Air Quality Standard (NAAQS) is 35*.
- In 2019, Bridgeport was the only area monitored with any days over 100 on the DEEP Air Quality Index for PM 2.5*.
- According to the American Lung Association, Fairfield County, in which Bridgeport is located, has the highest ozone concentration in the eastern United States and the 20th most polluted ozone rating in the U.S.
- Connecticut ranks in the 10 highest states in the percentage of adults with asthma. While this statistic applies to the entire state the percentages are higher in Bridgeport due to recognized socio-economic factors. The Census Tracts for which service will be provided share the following socio-economic statistics: Low Life Expectancy-96th-88th percentile Low Income- 95-59th percentile Adults with Asthma-86-68th percentile Adults with Diabetes-88-75th percentile.

c. Organization's Historical Connection to Underserved Community: The Bridgeport Economic Development Corporation (BEDCO), an affiliate of the Bridgeport Regional Business Council (BRBC), is a non-profit economic development corporation formed under US IRS laws as a 501(c)3 corporate entity and recognized as a charitable organization in good standing by the State of Connecticut. BEDCO can undertake a broad range of economic and community development activities with a determined focus of helping public, private and neighborhood partner organizations implement their worthy ideas. BEDCO is governed by its own Board of Directors, comprised of nominees from the BRBC Board of Directors, and appointees from the City of Bridgeport's Mayor.

BEDCO was incorporated in 1974 and commenced project operations in 1976 after receiving formal IRS recognition. It has operated continuously since then, at varying levels of staffing and project activity. BEDCO was originally formed to create additional and agile local capacity for project management related to industrial and commercial development activity. While its economic development activity continues, BEDCO has evolved rapidly in recent years to address the lack of formal capacity among Bridgeport's neighborhood organizations, many of them

unincorporated and lacking staff. These circumstances have dire consequences for Bridgeport, and the need for capacity is acute.

BEDCO has current or recent partnership arrangements with the East End Neighborhood Revitalization Zone, the East Side Neighborhood Revitalization Zone, the Downtown Special Services District, the Black Rock Merchants Association, and the Bridgeport Environmental Task Force In each of these arrangements, BEDCO has served as the successful applicant/ grantee, and/or financial fiduciary for projects or programs that were initially conceived and proposed by the other organizations; in some of those cases those organizations were not legally eligible to apply for or receive the grants/funding directly.

More about BEDCO's organizational structure, history and current activities can be seen here: https://www.brbc.org/index.php/home/bridgeport-economic-development-corporation
The informal strategic plan and mission statement of BEDCO is one and the same: Identify companies/ organizations/ residents working on good ideas and help if we can. In the case of neighborhood organizations this help has often been provided by BEDCO with no compensation or negligible compensation required. In recent years, BEDCO has attracted modest corporate support to pursue these initiatives and continues to do so.

BEDCO's has a long history of participating in and often managing brownfield remediation work in the City of Bridgeport's low-income neighborhoods. While this work continues, BEDCO's most prominent recent environmental justice work has been in its role as fiscal agent, fiduciary, and program manager for the Bridgeport Environmental Task Force (ETF). Excerpted from the ETF's website, https://environmentaltaskforce.org/ : "**The Environmental Task Force (ETF) committee, working with the Bridgeport Economic Development Corporation (BEDCO), is managing a $2 Million Community Environmental Benefits Fund. That funding process was established by the Community Environmental Benefit Agreement (CEBA) between PSEG Power Connecticut, the City of Bridgeport, and representative community organizations on February 26, 2016. The ETF, along with BEDCO, are requesting Proposals from individuals and organizations serving the Bridgeport community, including departments of the City's government that are referenced in the CEBA. Selected proposals will be evaluated and considered for funding. For funding consideration, the proposals must advance "*the intents and purposes underlying the adoption of the US Environmental Justice Act including, but not limited to, achieving maximum public health and environmental benefit for the air quality in the neighborhoods surrounding Bridgeport Harbor Station*." Proposals should detail programs, projects, and/or other initiatives that will contribute to the long-term public benefit and wellbeing of the community by addressing health and environmental needs relating to infrastructure, health services, outreach, education, and energy efficiency.**
The CEBA emphasizes the attraction of non-local funding sources to supplement the Community Environmental Benefits Fund: "*The funding agreement shall include provisions to encourage the Designated Organization* (BEDCO)*, the City and the ETF to seek and apply for additional funding as available from governmental, quasi-governmental, and charitable entities and institutions and other programs to increase or supplement the funds available for the purposes stated therein and described above.*" The ETF and BEDCO plan to do that as separate entities, and also require selected proposers to do that as well; proposals that

ED_016126_00000031-00003

provide evidence of the attraction or leveraged funding from non-local sources will receive more favorable consideration than proposals that do not." The referenced Request for Proposals process attracted 23 separate proposals from local/ community organizations, of which 16 were chosen by the Environmental Task Force for allocations from the CEBF. Notably, 3 of the entities chosen for allocations proposed projects related to air quality in the South End or West End of the City, all of which are currently in progress.

Community Driven Participation: The South End Neighborhood Revitalization Zone committee embraced the thermal loop concept early on in its development (see Testimony to State Legislature). Individual organizations on Park Avenue were approached in recent months with the opportunity to connect with the thermal loop, and have embraced it for both the financial savings potential, and the potential to improve outdoor and indoor air quality in the neighborhood.

d. EJCPS Model Utilization

EJCPS Model Element 1- Community Vision and Strategic Planning. The South End Neighborhood Revitalization Zone (SENRZ) Strategic Plan (amended 2022) resulted from an extensive Community Engagement Process (p. 35-37) and references both the fuel cell energy facility (part of Phase I) and district heating and cooling loop (p.49) https://bridgeportct.gov/filestorage/341307/341419/342516/SouthEnd_NRZ_Plan_2014_Approved_modified_2022.pdf

EJCPS Model Element 4- Multi-Stakeholder Partnerships and Leveraging of Resources. The beneficiaries/ stakeholders on Park Avenue have been presented with an opportunity to participate in (connect to) a Thermal Loop Phase II project. Several have been aware of the SENRZ Strategic Plan and welcome the extension of the thermal loop into their portion of the South End neighborhood. Connecting with the thermal loop is not compulsory in any way, just an opportunity. EPA EJ grant funding will enable the mobilization of an estimated $3.6 Million in private capital for the Phase II project.

e. Project Linkages

The Bridgeport Thermal Loop Phase II: Park Avenue EJ Corridor project supports EPA Strategic Plan Goal 2, Objective 2.1, by "Building capacity and climate resilience and maximizing benefits to overburdened and underserved communities", through improved outdoor and indoor air quality and the opportunity for beneficiaries to realize cost savings related to heating and cooling. These reduced expenses allow the stakeholder organizations (all not-for-profit in some form) to re-route the money that would have otherwise been spent on heating and cooling to preserve and/or expand services. In addition, the Phase II project supports federal, state, and local government policies related to energy conservation, air quality improvements, and operational affordability in a disadvantaged/ marginalized/ underserved community.

f. Partner and Collaborate

The Bridgeport Thermal Loop project, taken in its entirety (Phases I and II), is a partnership of private industry (NuPower Thermal, Approved Storage and Waste Hauling, Inc.), government (City of Bridgeport Board of Education), higher education (University of Bridgeport), and the various not-for-profit entities in the Phase II: Park Avenue EJ Corridor. As cited earlier, Phase II partners are expected to include the Bridgeport YMCA, part of Central Connecticut Coast YMCA; City of Bridgeport Board of Education; Bridgeport Rescue Mission; Mercy Learning Center; New Neighborhoods, Inc. (Franklin and Eleanor Senior Apartments). The expectation is that these partners will connect with the thermal loop when the Phase II extension is completed, but only if they deem on an individual case basis whether the connection makes financial and operational sense for them. Conversations are on-going with each of these entities; the Commitment Letters obtained to-date can be found in the Attachments.

Applicable requirements in 2 CFR Part 200, EPA Guidance of Participant Support Costs

If awarded the EPA EJ $500,000 grant will be part of a total Phase II project with an estimated gross cost of $4,124,810. The EPA EJ grant will be utilized to partially shoulder the costs of extending the thermal loop to the property boundaries of the beneficiaries/stakeholders. This specific component of the Phase II project, including that portion funded with private capital, will be competitively procured in compliance applicable federal/EPA policies.

2.0 PROJECT ACTIVITIES/ MILESTONE SCHEDULE

a. Project Activities

Necessary background: NuPower Thermal LLC (NuPower) is the parent company to The Bridgeport Thermal Limited Liability Company which received a thermal carrier license by act of the Connecticut Legislature. This license allows the company the ability to install and operate thermal pipe in the city streets, similar to gas or electric utilities. NuPower will begin construction of Phase I of the thermal loop in spring/summer 2023. Phase I consists of a 9.66 mega-watt fuel cell installation located at 600 Iranistan Avenue in Bridgeport that connects to an underground pipe heating system. The thermal pipe system is already contracted to connect to major institutions (University of Bridgeport & the new Bassick High School), and a private employer (Approved Storage and Waste Hauling DBA Future Healthcare Systems) in the city's South End neighborhood. Residual (waste) heat from the fuel cells is utilized to create hot water which is piped to customers. District heating is highly efficient. Over 8000 annual tons of GHG emissions will be reduced because of Phase I. The electricity generated by the fuel cells will be sold under a 20-year contract to United Illuminating, the local utility. All Phase I contracts and government approvals have been secured. Significant heat capacity is available beyond the Phase I commitments. NuPower and BEDCO determined that a Phase II continuing north from the fuel cell installation would provide significant benefit to other stakeholders along Park Avenue. While district energy is considered one of the most environmentally beneficial and efficient means of heating and cooling, the up-front capital costs of Phase II extension are significant, and cannot be borne solely through private financing. Each of the participating stakeholders will connect to the thermal loop by installation of a heat exchanger that bypasses an existing gas boiler and provides hot water to the building's existing heating system. Heat exchangers are proven technology and typical in this form of arrangement. A 2-inch lateral pipe will run from the heat exchanger to the main trunk line in Park Ave. NuPower will install heat exchangers and

ED_016126_00000031-00005

controls at no cost to the stakeholders. Once connected to the heating loop the stakeholders no longer run their natural gas boilers and therefore generate no emissions. Boilers are left in place to provide emergency back-up in the remote possibility of a system shutdown. Stakeholders will be charged for heat, but at a 10 per cent discount on conventional gas consumption. In addition to reduced cost stakeholders will also dramatically reduce annual boiler maintenance costs.

b. Milestone Schedule

The construction of the Phase II Thermal Loop extension is expected to commence in October 2023, with the expectation that it will be completed within 12 months. Public permits for street opening in the Phase II area must be obtained from the City of Bridgeport. The majority of the thermal pipe laying in the public streets are planned for spring 2024, and assuming street opening permits have been obtained, can be accomplished in 90-120 days. The stakeholder properties are expected to be connected and retrofitted with heat exchangers prior to December 2024.

c. Itemized Budget (for illustrative purposes only; will be included in Attachments)

If awarded, the EPA EJ $500,000 grant would be utilized toward the "Piping Installation" cost.

Capital Cost Breakdown	
Pipe Material	818,932
Piping Installation	1,455,878
Piping Total	**2,274,810**
Equipment	378,000
Equipment Installation	522,000
Equipment Total	**900,000**
Fuel Cell Site Equipment	105,000
Fuel Cell Site Equipment Installation	145,000
Fuel Cell Site Upgrade Total	**250,000**
Engineering	301,000
Construction Management	399,000
Engineering and CM Total	**700,000**
Total	**4,124,810**

3.0 Environmental Results- Outputs, Outcomes and Performance Measures

a. Environmental Results/ Logic Model. See attachment.

b. Performance Measurement Plan. The project performance will be measured by the continuity of the thermal loop service. When the thermal loop is operational, there will be no emissions from on-site machinery (e.g., boilers), and hence improved indoor air quality and cost savings. EPA's accepted conversion factor for greenhouse gases will be utilized. NuPower will monitor the reduction of natural gas usage of each participating facility as part of its routine billing practice.

c. Sustainability Plan and Community Vision

The City of Bridgeport's 2019 Master Plan of Conservation and Development includes the Guiding Principle of a Healthy Community that through Goal 4.8.2 will "Protect and improve air quality; Continue to reduce carbon dioxide and other noxious emissions." Actions: 1: Work with City Engineering Department and Bridgeport Schools to identify measures that can be taken to reduce emissions from City and School buildings.

The South End Neighborhood Revitalization Zone (SENRZ) Strategic Plan (2014,amended 2022) resulted from an extensive Community Engagement Process (p. 35-37) and references both the fuel cell energy facility (part of Phase I) and district heating and cooling loop (p.49).

The beneficiaries/stakeholders in the Thermal Loop Phase II project have a "double bottom line" that encourages their participation: Improved indoor air quality, and financial savings related to heating and cooling costs. The outcomes of the Bridgeport Thermal Loop project in both phases are intended to be demonstration projects with outcomes that encourage future projects of the same type in Bridgeport and elsewhere.

4.0 Programmatic Capability

a. Organizational Experience. The Bridgeport Economic Development Corporation (BEDCO) has successfully managed numerous grant funded projects during its existence, successfully managing public procurement and grant compliance. The proposed project will be construction-intensive but relatively simple to oversee from a grantee perspective, as an experienced construction manager, Waldron Engineering & Construction, Inc., has been retained by NuPower.

b. Staff Experience/ Qualifications of Project Manager.
BEDCO, at present, has one permanent employee. Edward Lavernoich, BEDCO's President, has

ED_016126_00000031-00007

had approximately 30 years of experience during his career in initiating and managing brownfield redevelopment projects, including Bridgeport's West End, where a well-conceived Chapter 132 Municipal Development Plan initially managed by Lavernoich attracted $12 Million of state and federal support. That public investment funded the acquisition, clearance and remediation of sites that ultimately accommodated approximately $100 Million of private investment and triggered other private investment in the area. BEDCO typically retains necessary technical expertise and project management assistance via contractual services. Lavernoich is experienced in managing multiple consultants and vendors on a project.

NuPower has selected Waldron Engineering to be the General Contractor for the entire Thermal Loop including the Park Avenue expansion. This entails providing the engineering and construction for the entire thermal system throughout Bridgeport's South End. Phase I and Phase II of the project are estimated to cost approximately $14 million and will include all of the projects' components including pipeline installation, customer site mechanical work and instrumentation controls. Waldron will similarly be responsible for the thermal loop's expansion along Park Avenue as a natural outgrowth of their general contractor role for the entire thermal loop system. Grant Page, Director of Construction, will oversee the project's implementation. Further information on Waldron can be found at www.Waldron.com . Note: If awarded, the EPA EJ $500,000 grant will be utilized exclusively for the pipeline/piping installation. A sub-contractor for the piping installation portion of the project, (estimated at $1,455,878) will be procured in accordance with applicable federal grant requirements.

c. Expenditure of Awarded Grant Funds.

The awarded EPA EJ grant funds would be requested on a "cash on delivery" basis; they would be the last funds into the project, after all other funds are expended, and all elements of the project's implementation are completed.

5.0 Past Performance.

The Bridgeport Economic Development Corporation does not have relevant past performance experience related to federal or non-federal grants for this type of project.

6.0 Quality Assurance Plan (QAPP) Information.

At the time of this application, it is believed that a QAPP will not be required.

EPA KEY CONTACTS FORM

OMB Number: 2030-0020
Expiration Date: 06/30/2024

Authorized Representative: *Original awards and amendments will be sent to this individual for review and acceptance, unless otherwise indicated.*

OMB Number: 2030-0020
Expiration Date: 06/30/2024

Preaward Compliance Review Report for All Applicants and Recipients Requesting EPA Financial Assistance

Note: Read Instructions before completing form.

I. A. Applicant/Recipient (Name, Address, City, State, Zip Code)

Name: Green Beverly

Address: 100 Cummings Center, Suite 350-E

City: Beverly

State: MA: Massachusetts Zip Code: 01915

B. Unique Entity Identifier (UEI): NTWNSMLK28Y7

C. Applicant/Recipient Point of Contact

Name: Dean Berg

Phone: Ex. 6 Personal Privacy (PP)

Email: dean@greenbeverly.org

Title: Executive Director

II. Is the applicant currently receiving EPA Assistance? ☐ Yes ☒ No

III. List all pending civil rights lawsuits and administrative complaints filed under federal law against the applicant/recipient that allege discrimination based on race, color, national origin, sex, age, or disability. (Do not include employment complaints not covered by 40 C.F.R. Parts 5 and 7.)

IV. List all civil rights lawsuits and administrative complaints decided against the applicant/recipient within the last year that alleged discrimination based on race, color, national origin, sex, age, or disability and enclose a copy of all decisions. Please describe all corrective actions taken. (Do not include employment complaints not covered by 40 C.F.R. Parts 5 and 7.)

V. List all civil rights compliance reviews of the applicant/recipient conducted under federal nondiscrimination laws by any federal agency within the last two years and enclose a copy of the review and any decisions, orders, or agreements based on the review. Please describe any corrective action taken. (40 C.F.R. § 7.80(c)(3))

VI. Is the applicant requesting EPA assistance for new construction? If no, proceed to VII; if yes, answer (a) and/or (b) below.

☐ Yes ☒ No

a. If the grant is for new construction, will all new facilities or alterations to existing facilities be designed and constructed to be readily accessible to and usable by persons with disabilities? If yes, proceed to VII; if no, proceed to VI(b).

☐ Yes ☐ No

b. If the grant is for new construction and the new facilities or alterations to existing facilities will not be readily accessible to and usable by persons with disabilities, explain how a regulatory exception (40 C.F.R. 7.70) applies.

VII. **Does the applicant/recipient provide initial and continuing notice that it does not discriminate on the basis of race, color, national origin, sex, age, or disability in its program or activities? (40 C.F.R 5.140 and 7.95)** ☒ Yes ☐ No

a. **Do the methods of notice accommodate those with impaired vision or hearing?** ☒ Yes ☐ No

b. **Is the notice posted in a prominent place in the applicant's/recipient's website, in the offices or facilities or, for education programs and activities, in appropriate periodicals and other written communications?** ☒ Yes ☐ No

c. **Does the notice identify a designated civil rights coordinator?** ☐ Yes ☒ No

VIII. **Does the applicant/recipient maintain demographic data on the race, color, national origin, sex, age, or disability status of the population it serves? (40 C.F.R. 7.85(a))** ☐ Yes ☒ No

IX. **Does the applicant/recipient have a policy/procedure for providing meaningful access to services for persons with limited English proficiency? (Title VI, 40 C.F.R. Part 7, *Lau v Nichols* 414 U.S. (1974))** ☒ Yes ☐ No

X. **If the applicant is an education program or activity, or has 15 or more employees, has it designated an employee to coordinate its compliance with 40 C.F.R. Parts 5 and 7? Provide the name, title, position, mailing address, e-mail address, fax number, and telephone number of the designated coordinator.**

XI. **If the applicant is an education program or activity, or has 15 or more employees, has it adopted grievance procedures that assure the prompt and fair resolution of complaints that allege a violation of 40 C.F.R. Parts 5 and 7? Provide a legal citation or applicant's/ recipient's website address for, or a copy of, the procedures.**

For the Applicant/Recipient

I certify that the statements I have made on this form and all attachments thereto are true, accurate and complete. I acknowledge that any knowingly false or misleading statement may be punishable by fine or imprisonment or both under applicable law. I assure that I will fully comply with all applicable civil rights statutes and EPA regulations.

A. Signature of Authorized Official	B. Title of Authorized Official	C. Date
Dean Berg	Executive Director	04/14/2023

For the U.S. Environmental Protection Agency

I have reviewed the information provided by the applicant/recipient and hereby certify that the applicant/recipient has submitted all preaward compliance information required by 40 C.F.R. Parts 5 and 7; that based on the information submitted, this application satisfies the preaward provisions of 40 C.F.R. Parts 5 and 7; and that the applicant has given assurance that it will fully comply with all applicable civil rights statures and EPA regulations.

A. *Signature of Authorized EPA Official	B. Title of Authorized Official	C. Date

Instructions for EPA FORM 4700-4 (Rev. 04/2021)

General. Recipients of Federal financial assistance from the U.S. Environmental Protection Agency must comply with the following statutes and regulations.
Title VI of the Civil Rights Acts of 1964 provides that no person in the United States shall, on the grounds of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. The Act goes on to explain that the statute shall not be construed to authorize action with respect to any employment practice of any employer, employment agency, or labor organization (except where the primary objective of the Federal financial assistance is to provide employment). Section 13 of the 1972 Amendments to the Federal Water Pollution Control Act provides that no person in the United States shall on the ground of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under the Federal Water Pollution Control Act, as amended. Employment discrimination on the basis of sex is prohibited in all such programs or activities. Section 504 of the Rehabilitation Act of 1973 provides that no otherwise qualified individual with a disability in the United States shall solely by reason of disability be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. Employment discrimination on the basis of disability is prohibited in all such programs or activities. The Age Discrimination Act of 1975 provides that no person on the basis of age shall be excluded from participation under any program or activity receiving Federal financial assistance. Employment discrimination is not covered. Age discrimination in employment is prohibited by the Age Discrimination in Employment Act administered by the Equal Employment Opportunity Commission. Title IX of the Education Amendments of 1972 provides that no person in the United States on the basis of sex shall be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity receiving Federal financial assistance. Employment discrimination on the basis of sex is prohibited in all such education programs or activities. Note: an education program or activity is not limited to only those conducted by a formal institution. 40 C.F.R. Part 5 implements Title IX of the Education Amendments of 1972. 40 C.F.R. Part 7 implements Title VI of the Civil Rights Act of 1964, Section 13 of the 1972 Amendments to the Federal Water Pollution Control Act, and Section 504 of The Rehabilitation Act of 1973.

Items "Applicant" means any entity that files an application or unsolicited proposal or otherwise requests EPA assistance. 40 C.F.R. §§ 5.105, 7.25. "Recipient" means any State or its political subdivision, any instrumentality of a State or its political subdivision, any public or private agency, institution, organizations, or other entity, or any person to which Federal financial assistance is extended directly or through another recipient, including any successor, assignee, or transferee of a recipient, but excluding the ultimate beneficiary of the assistance. 40 C.F.R. §§ 5.105, 7.25. "Civil rights lawsuits and administrative complaints" means any lawsuit or administrative complaint alleging discrimination on the basis of race, color, national origin, sex, age, or disability pending or decided against the applicant and/or entity which actually benefits from the grant, but excluding employment complaints not covered by 40 C.F.R. Parts 5 and 7. For example, if a city is the named applicant but the grant will actually benefit the Department of Sewage, civil rights lawsuits involving both the city and the Department of Sewage should be listed. "Civil rights compliance review" means: any federal agency-initiated investigation of a particular aspect of the applicant's and/or recipient's programs or activities to determine compliance with the federal non-discrimination laws. Submit this form with the original and required copies of applications, requests for extensions, requests for increase of funds, etc. Updates of information are all that are required after the initial application submission. If any item is not relevant to the project for which assistance is requested, write "NA" for "Not Applicable." In the event applicant is uncertain about how to answer any questions, EPA program officials should be contacted for clarification.

Education

University of Connecticut, Storrs, CT| September 2020-Present

PhD Student, Department of Geography, College of Liberal Arts and Sciences, Certificate in College Instruction

University of Connecticut, Storrs, CT |September 2014-May 2016

Bachelor of Arts, College of Liberal Arts and Sciences, Major: Psychology Minor: Digital Marketing & Analytics

Experience

Eastern Connecticut State University, Adjunct Professor, Willimantic, CT | January 2023-Present

- Classes taught: Geography of Food
- Facilitate student outreach amongst community food system partners

UConn, Sustainable Community Food Systems Program, Intern Supervisor, Storrs, CT |May 2022-September 2022

- Supervise undergraduate fellows for their field placements in the program
- Act as a liaison between field placement sites and administrative team

UConn Geography Department, Teaching Assistant, Storrs, CT | September 2020-Present

- Assist students with class material via office hours and email
- Worked in the following classes: Introduction to Geography, Fall 2020, Spring 2021 | Globalization, Fall 2021 | Economic Geography, Spring 2022 | New Digital Worlds of Geographic Information Science, Spring 2022

Windham Community Food Network Coordinator, Willimantic, CT | November 2017-Present

- Administer and coordinate community programs (Mesa Comunitaria, Plant-A-Row, community survey initiatives)
- Build partnerships with agencies and utilize their resources to create a stronger local food system
- Create systems for program management to ensure projects are executed smoothly and completed on time
- Organize and promote events and fundraisers (Know Your Farmer Fair, Community yoga series, and Veggiestock)
- Manage fundraising/grant writing and budget documents
- Maintain website, social media, contact list database and newsletter
- Develop informational resource guides (Local Buying Guide, and Food System Resource Guide)
- Recruit and oversee volunteers and interns from the community and local universities

Institute for Sustainable Energy, Sustainability Specialist, Willimantic, CT | July 2019-July 2020

- Calculated and reported Eastern Connecticut State University's Greenhouse Gas Emissions and sustainability practices
- Revised and expanded on ECSU's 2009 Climate Action Plan
- Researched best climate change mitigation practices and adapted them to Eastern's campus
- Coordinated faculty, staff and student engagement in climate change initiatives
- Facilitated Green Campus Committee meetings and other climate change centered events on campus

New Connecticut Farmers Alliance, Part-Time Coordinator, Willimantic, CT | April 2018-November 2019

- Planned conferences, meetings and events for farmers ranging from 5-100 participants
- Arranged and documented Steering Committee meetings
- Created marketing and informational material for members
- Managed membership database, ListServ, social media accounts and website
- Sustained relationship with National Young Farmers Coalition and other CT Agriculture agencies

University of Connecticut Geography Department, Administrative Assistant, Storrs, CT | December 2015-May 2016

- Managed confidential data including department credit card transactions, faculty salary information, and Promotion, Tenure and Reappointment (PTR) files
- Worked closely with students, faculty, university staff, local organizations, community members and parents
- Assisted in the coordination of Department events including the colloquium series and annual award ceremony

Connecticut Geographic Alliance, Operations Manager, Storrs, CT | October 2014-July 2016

Work History

Market Manager – Willimantic Farmers Market March 2023-Current

Handling day-to-day management of local farmer's market, including website, advertising, applications, inquiries, newsletters, fundraising and grant writing.

Educational Program Assistant 1 – UConn Extension March 2022-Current

Part time position assisting 4-H, EFNEP, Master Gardeners, and Livestock programs. Responsibilities include fiscal duties, creating educational materials, advertising, website updates, social media management, and facilitating collaboration between educators.

Community Table Coordinator – Windham Community Food Network January 2022-Current

Part time position managing the Community Table Program: recruiting volunteers, collaborating with community partners, sourcing, coordinating with recipients, conducting outreach, fundraising and grant writing/development.

Farmer – Foliota Farm March 2022-Current

Developed a small farm business on residential land specializing in regenerative farming techniques. We produce cut flowers and herbs which are sold locally.

Farm Hand – Assawaga Farm April 2021-November 2021

Apprenticeship on an organic, regenerative farm with an emphasis on soil microbiology health, low soil disturbance, and hand work. Daily activities included seeding, transplanting, harvesting, composting, going to market and more.

Farm Hand – Cloverleigh Farm April 2020-November 2020

Involvement in all farm duties required for organic vegetable production at a CSA farm. Performed seeding, watering, and care in a hoop house, transplanting, irrigation setup, plant maintenance, integrated pest management, harvesting, and front of house CSA distribution.

GIS Technician – MassGIS November 2018 – November 2019

Duties included integrating municipal address data for the State 911 department as part of the Next Generation emergency system in Massachusetts. Included collaborations with town agencies, GIS departments, and schools.

Field Manager – ARCAmazon 2017 – May 2018

Responsibilities included scheduling, team management, hiring, website development, small construction projects, marketing, onboarding, and data entry and analysis. Additional responsibilities included project design and implementation of research focused on mycology and agroforestry, leading volunteers in field research, and educating student groups. Assisted in land management strategies and development of a protected watershed corridor.

Executive Director and Cofounder, Hoja Nueva September 2014 – March 2017

An engaging and rewarding experience developing an agroforestry initiative in the Peruvian Amazon alongside local agricultural co-ops. Responsibilities included developing organizational structure and non-profit paperwork, coordination of activities and projects, design and implementation of two experimental cacao plots, budgeting, management of team members, collaboration with the agricultural community, and design and oversight of lodge construction.

Ph Ex. 6 - Personal Privacy (PP) | Ex. 6 - Personal Privacy (PP)

EDUCATION

Doctor of Philosophy, Environmental Biology, University of Massachusetts, Boston, MA
Bachelor of Science, Biology, University of North Dakota, Grand Forks, ND

ADMINISTRATIVE POSITIONS

Executive Director, Institute for Sustainability
Eastern Connecticut State University, Willimantic, Connecticut.....July 2022 – current

Primary responsibilities: provide effective and strategic leadership for restructuring the Institute for Sustainable Energy and the Center for Sustainable Energy Studies; collaborate to develop an interdisciplinary academic program in sustainability; engage the students in campus sustainability initiatives; cultivate community partnerships and outreach; supervise Institute staff; identify and secure funding to support Institute operations.

Key Activities and Initiatives

- Oversee 2022 STARS Sustainability Rating submission
- Lead restructuring of the Institute and obtain Board of Regents approval as part of the 7-year continuation process. Support same for the Center for Sustainable Energy Studies
- Collaborate to develop and implement New England Sustainable Cannabis Certification
- Implement best practices through engagement with Association for the Advancement of Sustainability in Higher Education, Second Nature, and Northeast Campus Sustainability Consortium
- Engage students in substantive internship opportunities within the Institute and identify relevant external opportunities
- Support development and implementation of sustainability actions on campus and in the community

Interim Dean, School of Arts and Sciences
Eastern Connecticut State University, Willimantic, Connecticut.....July 2021 – June 2022

Primary responsibilities: effective leadership of 14 departments, 25 diverse academic programs, the liberal arts core curriculum, 145 full time and ~180 part time faculty during a period of transition; supervise the associate dean, 14 chairs, and support and technical personnel; initiate implementation of an academic plan in each department to support processes for ongoing review, improvement, and alignment with mission; manage the Global Field Studies Office and support course development; active engagement with university recruiting and marketing initiatives; strategic engagement with course scheduling and staffing in collaboration with associate dean, chairs, and registrar.

Key Activities and Initiatives

- Collaborated with faculty to establish new undergraduate (Cannabis Cultivation minor) and graduate (Data Science Masters) curricula
- Facilitated departmental processes of review and revision of program curricula
- Partnered with department chairs and associate dean to solve significant staffing challenges
- Engaged with university-wide strategic planning initiatives to further the liberal arts mission
- Supported professional development of faculty for teaching and scholarship or creative activity
- Collaborated in CSU NSF Louis Stokes New STEM Pathways Implementation-Only Alliance
- Lead President's Cabinet retreat on the future of Sustainability at Eastern
- Built institutional capacity within the Fine Arts Instructional Center with strategic staff hires
- Contributed to staffing decisions with large fiscal impacts for FTE and support personnel
- Collaborated with Institutional Advancement to conceive and inaugurate the Charles Booth Memorial Scholarship that supports students participating in Global Field Courses
- Collaborated with Institutional Research to conceive and initiate the development of a dynamic alumni database that is both available to and editable by faculty
- Supported development and implementation of the Early Science Research Program (EESRP) for High School Dual Enrollment. Supervised part-time EESRP Coordinator.
- Supported development of faculty-conceived DCF alternative admissions and first year program to increase enrollment and support diversity initiative
- Supported development of faculty-conceived High School Literary Festival to support enrollment and outreach goals.
- Managed combined budgets of approximately $350,000

Director, University Honors Program

Eastern Connecticut State University, Willimantic, Connecticut.....August 2017 – July 2021

Key Responsibilities and Initiatives

- Managed interdisciplinary academic program of 100 students
- Chaired the Honors Council of six faculty representatives from across both schools
- Individually mentored and advised all first-year students and a majority of advanced students
- Recruited program applications in person and online
- Oversaw admissions, dismissals, and appeals processes
- Collaborated with admissions staff to recruit admitted students
- Recruited faculty for honors courses and council memberships
- Implemented formal assessment of thesis proposals, theses, and honors colloquia
- Managed $7000 budget

John C. Hicks Endowed Chair for Undergraduate Research

Eastern Connecticut State University, Willimantic, Connecticut .....August 2014 – August 2018

Key Responsibilities and Initiatives

- Director of the Church Farm Center for Arts and Sciences
- Obtained Board of Regents approval for 7-year continuation
- Organized annual seminar and workshop series
- Organized annual attendance of 15 students/faculty at regional UGR conferences ECSC or TriBeta
- Organized annual TriBeta Induction and Biology Awards Ceremony
- Chaired the department's host committee for the 2016 TriBeta conference at Eastern
- Managed ~$7000 Budget: student research grants, conference travel funds, mentor awards
- Coordinated with Institutional Advancement to administer Freeman Fund and Wolff funds

Ex. 6 Personal Privacy (PP)

ACADEMIC POSITIONS

Professor, Department of Biology
Eastern Connecticut State University, Willimantic, Connecticut.....August 2017 – present

Associate Professor, tenured, Department of Biology
Eastern Connecticut State University, Willimantic, Connecticut.....August 2011 – August 2017

Assistant Professor, Department of Biology
Eastern Connecticut State University, Willimantic, Connecticut.....August 2007 – August 2011

Assistant Professor, Tenure-Track, Department of Natural Science
Wayne State College, Wayne, Nebraska.....August 2005 – May 2007

1-Year Assistant Professor, Department of Biology
Eastern Connecticut State University, Willimantic, Connecticut.....August 2004 – May 2005

Part-time Faculty Positions as a Ph.D. Candidate
Massachusetts College of Pharm & Health Science, Boston, Massachusetts.....January – May 2004
University of Massachusetts, Boston, Massachusetts.....September – December 2003
Bentley University, Waltham, Massachusetts.....2002 – 2003

LEADERSHIP POSITIONS

The Waterbird Society is an international scientific, not-for-profit organization established in 1976 and dedicated to the study and conservation of waterbirds. This society was created to establish communication and coordination between people studying and monitoring aquatic birds, and to contribute to the protection and management of stressed populations or habitats of these species. This organization is volunteer-led except for the Editors of our peer-reviewed journal *Waterbirds*. The positions I held are elected positions and non-compensated.
https://waterbirds.org/

2022 - 2023 **President**, The Waterbird Society

- Responsible for the operations of the Society
- Chair bi-annual and *ad hoc* meetings of the 17-member Council
- Oversight of financial and legal matters – annual operating budget: $145,000 plus three endowments totaling $ 1.3 million in support of research grants
- Assign chairs for 17 committees
- Collaborate with the local committee to host the annual meeting

2020 - 2021 **Vice President**

- Chaired the Scientific Program for the 2020 & 2021 Annual Meetings
- Chaired the 2020 and 2021 Virtual Meeting Committee including all aspects of virtual production
- Interviewed and contracted online platform service for 2021 Annual Meeting.
- Managed the removal of an ineffective journal Editor and with the President, tasked the chair of the Publications Committee with restructuring the Editor-in-Chief position and creating a Managing Editor position. Served as a primary public-facing contact for authors whose submissions were significantly delayed during this period.
- Managed the process and resolution of the first Code of Conduct complaint
- Oversaw financial and legal matters – Annual operating budget: $133,000 and three endowments to support research granting totaling $ 1.3 million

Ex. 6 Personal Privacy (PP)

- Chaired International Awards and Recognition Committee

2015 - 2019 **Secretary**

- Assembled annual reports from 17 committee chairs, disseminated to council members in advance of the annual council meetings
- Recorded official minutes during the annual and *ad hoc* council meetings, distributed for review, approval, and direction of action items
- Chaired the 2019 annual council meeting with the VP when the president could not participate
- Managed a conduct complaint during the 2019 annual meeting which led to the development and adoption of an official Code of Conduct policy for the society.
- Hosted the annual members' business meetings to report actions and initiatives of the Council
- Distributed and tabulated ballots annually for the election of officers (1-2) and councilor positions (3-4)

2009 – 2017 **Co-Chair**: Outreach and Communications Committee of The Waterbird Society
2009 – 2011 **Elected Council Member** of The Waterbird Society

2012-2013 **President,** Lebanon Cooperative Nursery School, Lebanon, Connecticut

- Oversight of the Board of Directors and all policymaking
- Oversight of state inspection and licensing of facility
- Responsibility for fundraising and annual budget of $35,000
- Managed personnel: termination of the head teacher, advertising, and interviews, with subsequent hire of a permanent, certified early childhood educator.

SCHOLARSHIP

Seabird Conservation: population genetic and demographic studies of threatened and endangered seabirds to directly enhance conservation and management strategies.

PEER-REVIEWED PUBLICATIONS (* DENOTES UG STUDENT AUTHOR) 1997 – 2022

In my field the last author placement denotes a Primary Investigator involved in all aspects of the project from concept to publication working closely with the first author.

21- Ex. 6 Personal Privacy (PP) 2023 Weak genetic structure, shared nonbreeding areas, and extensive movement in a declining waterbird. *Ornithological Applications* XX:XXX-XXX

20 - Ex. 6 Personal Privacy (PP) 2022 Understanding widespread declines for Common Terns across inland Canada: Productivity estimates, causes of reproductive failure, and movement of Common Terns breeding in the large lakes of Manitoba. *Avian Conservation and Ecology* 17(1): 14 https://www.ace-eco.org/vol17/iss1/art14/

19- Ex. 6 Personal Privacy (PP) 2021 Extra-pair paternity in a species with frequent extra-pair courtship feedings, few extra-pair copulations, and male-biased parental care. *Journal of Ornithology* 163: 437-444 https://link.springer.com/article/10.1007/s10336-021-01954-1

18- Ex. 6 Personal Privacy (PP) 2021 Metapopulation connectivity mitigates permanent loss of historical genetic diversity in a federally endangered seabird. *Ornithology Applications 123*(4): 1-17 https://doi.org/10.1093/ornithapp/duab037

17- Ex. 6 Personal Privacy (PP) 2017 Conservation implications of long-distance migration routes: regional metapopulation structure, asymmetrical dispersal, and population declines. *Biological Conservation. 209: 263-272* https://doi.org/10.1016/j.biocon.2017.02.012

16- Ex. 6 Personal Privacy (PP) 2017. Population Structure of the Eurasian Whiskered Tern (*Chlidonias hybrida*), a species exhibiting range expansion. *Waterbirds. 40(2): 105-117* https://doi.org/10.1675/063.040.0203

15- Ex. 6 Personal Privacy (PP) 2017. Range-wide patterns of population differentiation of Eurasian black terns (*Chlidonias niger niger*) related to use of discrete staging sites. *Journal of Ornithology* 158(2): *365-378* https://doi.org/10.1675/063.040.0203

Form 990 required: Yes

Dear Taxpayer:

We're responding to your request dated Feb. 05, 2019, about your tax-exempt status.

We issued you a determination letter in February 1987, recognizing you as tax-exempt under Internal Revenue Code (IRC) Section 501(c)(3).

We also show you're not a private foundation as defined under IRC Section 509(a) because you're described in IRC Sections 509(a)(1) and 170(b)(1)(A)(vi).

Donors can deduct contributions they make to you as provided in IRC Section 170. You're also qualified to receive tax deductible bequests, legacies, devises, transfers, or gifts under IRC Sections 2055, 2106, and 2522.

In the heading of this letter, we indicated whether you must file an annual information return. If you're required to file a return, you must file one of the following by the 15th day of the 5th month after the end of your annual accounting period:

- Form 990, Return of Organization Exempt From Income Tax
- Form 990EZ, Short Form Return of Organization Exempt From Income Tax
- Form 990-N, Electronic Notice (e-Postcard) for Tax-Exempt Organizations Not Required to File Form 990 or Form 990-EZ
- Form 990-PF, Return of Private Foundation or Section 4947(a)(1) Trust Treated as Private Foundation

According to IRC Section 6033(j), if you don't file a required annual information return or notice for 3 consecutive years, we'll revoke your tax-exempt status on the due date of the 3rd required return or notice.

You can get IRS forms or publications you need from our website at www.irs.gov/forms-pubs or by calling Ex. 6 Personal Privacy (PP).

If you have questions, call Ex. 6 Personal Privacy (PP) between 8 a.m. and 5 p.m.,

EXTENDED TO NOVEMBER 15, 2022

Form **990**

Department of the Treasury
Internal Revenue Service

Return of Organization Exempt From Income Tax

Under section 501(c), 527, or 4947(a)(1) of the Internal Revenue Code (except private foundations)

Ex. 6 - Personal Privacy (PP)
Ex. 6 - Personal Privacy (PP)

Education: Bachelors of Architecture and Fine Arts, Rhode Island School of Design, 1992

Experience:

Turner Construction, Boston 1993 - Dec 1997, I held the following positions:

- Assistant Engineer: For an addition to New England Medical Center, I handled all the shop drawings for interior work. Acted as liaison between subcontractors and the architect.
- Field Engineer: Outside survey work (during winter!) for the Harvard Institute of Medicine project.
- Cost Department: As a member of the cost department I was responsible for tracking expenditures and adding that data to the itemized report for management review. The report ultimately tracked the anticipated profit for a project given what had been spent to date and what was anticipated.
- Sales Department: Reviewed owner invitations for proposals, etc. Generated Turner's proposal and presentations in concert with the Business Development Manager and the General Manager. Prepared proposals for projects such as the Peabody Essex Museum addition, a Massachusetts state prison and the Staples headquarters. (Favorite proposal cover - picture of a model of the Staples building made from... staples.)

Shepley Bulfinch Architects, Boston Jan 1998 - Nov 2002, I worked with the following clients:

- Yale New Haven Hospital: For the renovation of an existing space for pediatric patient offices, I interacted with the users to understand their needs, created construction documents and worked on construction phasing.
- Boston Children's Hospital, Boston: I worked with a team on a multi-story addition to the main building from schematic drawings through completion of construction documents. During the earlier phases I drew floor plans. As the project evolved I coordinated the structural, plumbing, HVAC, and electrical consultants as well as coordinating their work with the architectural drawings. (Noteworthy coordinating: Coordinating the details of the dumpster location with a dumpster company to ensure adequate space for drop off and pick up of dumpster.)

November 2002 - present

- Raised and homeschooled two kids, K-12, the elder having graduated in spring 2021, the younger on track for 2023.
- Designed three house additions/renovations.
- Worked with a lawyer to incorporate a small homeschooling organization with the State of Massachusetts as a legal non profit. Currently president of said group.
- Worked with a public adjuster to settle the insurance claim for my parents' fire loss. As part of that loss I coordinated oil remediation work with the State of NH and an environmental clean up company.

Green Beverly September 2022 - present, part time, www.greenbeverly.org

- Working on grant brainstorming, will be managing the grants won in the coming year.
- Along with my co-leader, we canvassed Beverly for food to rescue from the local supermarkets. Once secured, we found and coordinated off takers for said food. We are building from scratch a long term food diversion project for Green Beverly.

United States Environmental Protection Agency

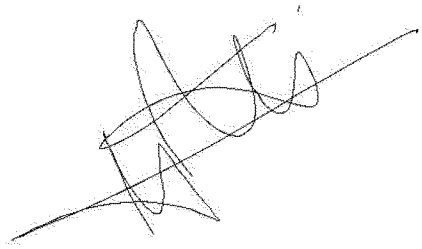
RE: Proposal to *The Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program*

To whom it may concern:

ecoWAVEus LLC is an enthusiastic supporter and partner in the Green Beverly proposal to *The Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program* for the project titled "*Equitable Clean Air and Climate Relief Pilot*". The project period is 3 years after receipt of the project award.

The purpose of this project is to design and pilot a building decarbonization model within our EJ communities. This model will involve several components ranging from landlord/tenant relationships, energy efficiency and electrification upgrades, innovative heat pump technology for efficient cooling and heating, and equitable financial models designed to save everyone money. The intent of the model is to distribute the ongoing cost savings realized from heat pump technology to the tenants and the landlords in order to incentivize change. In addition to cost savings, the tenants will benefit from more efficient cooling on the hot summer days, cleaner air quality, and comfortable heat during the winter. Landlords benefit from infrastructure updates and manageable investment returns. And, we all benefit from reduced greenhouse gas emissions!

Our company is excited about participating in this project, as it encourages cooperation between various parties in the transition to a greener energy landscape. By implementing a building decarbonization model in EJ communities, we aim to provide equal opportunities for access to renewable energy solutions, ensuring a positive and lasting impact on the environment and the communities we serve. This work is closely aligned with our mission. As a company that specializes in installing heat pump water heaters and heat pumps, we are excited to contribute our expertise to this project while fostering cooperation with local tradespeople. Our strong connections within the community ensure seamless collaboration, ultimately driving the successful implementation of sustainable energy solutions. Our work facilitates the widespread adoption of clean energy technologies and promotes sustainable living practices. Our key program areas include Residential Energy Solutions: We offer customized energy efficiency solutions for homeowners, including solar power systems, heat pumps, and energy storage. Our goal is to help homeowners reduce their carbon footprint and save on energy costs, while also



increasing the value of their property and Commercial Energy Solutions: We work with businesses and organizations to implement cost-effective, sustainable energy solutions.

This letter serves to acknowledge that ecoWAVEus will serve as a Partner in the delivery of this project. As a Partner, we agree to serve as an active member and contributor to the planning portion of the project, and, if feasible, to the implementation of the pilot as well. Our role will be to contribute our experience with heat pump technology and relationships with local tradespeople to provide input and help guide the assessment, planning, and implementation activities of the project.

We look forward to participating in this project and value the important contributions this project will make to transform our Beverly EJ Community. This project will provide greater access and opportunities to develop our clean air, building decarbonization, energy bill relief, and hot day relief for both our EJ populations and their landlords. We look forward to strengthening our partnerships with the participating organizations in the region and developing collaborative project ideas and shared learning to improve our communities. I strongly encourage The United States Environmental Protection Agency to support this proposal.

Please contact me with any questions. I can be reached at Ex. 6 Personal Privacy (PP) or by email Ex. 6 - Personal Privacy (PP)

Sincerely,

Alejo Maqueda, Owner of ecoWAVEus LLC

ACTION INC.

United States Environmental Protection Agency

RE: Proposal to *The Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program*

To whom it may concern:

Action Inc. is an enthusiastic supporter and partner in the Green Beverly proposal to *The Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program* for the project titled "*Equitable Clean Air and Climate Relief Pilot*". The project period is 3 years after receipt of project award.

The purpose of this project is to design and pilot a building decarbonization model within our EJ communities. This model will involve several components ranging from landlord/tenant relationships, energy efficiency and electrification upgrades, innovative heat pump technology for efficient cooling and heating, and equitable financial models designed to save everyone money. The intent of the model is to distribute the ongoing cost savings realized from heat pump technology to the tenants and the landlords in order to incentivize change. In addition to cost savings, the tenants will benefit from more efficient cooling on the hot summer days, cleaner air quality, and comfortable heat during the winter. Landlords benefit from infrastructure updates and manageable investment returns. And, we all benefit from reduced greenhouse gas emissions!

Action Inc. looks to assist in this pilot through the delivery of specific energy saving and decarbonizing measures for participating income eligible participants. This work is closely aligned with our mission. The mission of Action Inc. is to build an equitable and resilient community by creating opportunities for all on Cape Ann and its surrounding communities. Our work facilitates access to many assistance programs with the goal of reducing financial strain and improving the overall well-being for the residents of our community. Our key program areas include fuel assistance, energy services,

ACTION INC.

affordable housing, emergency shelter, adult & youth education, job training, financial empowerment, and more. Several of Action programs have a substantial overlap with the goals of this pilot, most notably our energy services program. Through this program Action facilitates the delivery of energy saving and decarbonizing measures such as weatherization, lighting and appliance upgrades, health & safety barrier mitigation, high efficiency heating upgrades including cold climate heat pumps, and much more.

This letter serves to acknowledge that Action Inc. will serve as a Partner in the delivery of this project. As a Partner, we agree to serve as an active member and contributor to the planning portion of the project, and, if feasible, to the communication to our EJ communities as well. As an active partner in the planning process, we understand that we will receive a stipend of $5,000. Our role will be to contribute our experience and relationships with community stakeholders to provide input and help guide the assessment, planning, and implementation activities of the project.

We look forward to participating in this project and value the important contributions this project will make to transform our Beverly EJ Community. This project will provide greater access and opportunities to develop our clean air, building decarbonization, energy bill relief, and hot day relief for both our EJ populations and their landlords. We look forward to strengthening our partnerships with the participating organizations in the region and developing collaborative project ideas and shared learning to improve our communities. I strongly encourage The United States Environmental Protection Agency to support this proposal.

Please contact me with any questions. I can be reached at Ex. 6 - Personal Privacy (PP) or by email at Bdelaney@actioninc.org.

BeverlyBootstraps
EMBRACE · EDUCATE · EMPOWER

April 7, 2023

United States Environmental Protection Agency

RE: Proposal to *The Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program*

To whom it may concern:

Beverly Bootstraps is an enthusiastic supporter of the Green Beverly proposal to *The Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program* for the project titled *"Equitable Clean Air and Climate Relief Pilot"*. The project period is 3 years after receipt of project award.

The purpose of this project is to design and pilot a building decarbonization model within our EJ communities. This model will involve several components ranging from landlord/tenant relationships, energy efficiency and electrification upgrades, innovative heat pump technology for efficient cooling and heating, and equitable financial models designed to save everyone money. The intent of the model is to distribute the ongoing cost savings realized from heat pump technology to the tenants and the landlords in order to incentivize change. In addition to cost savings, the tenants will benefit from more efficient cooling on the hot summer days, cleaner air quality, and comfortable heat during the winter. Landlords benefit from infrastructure updates and manageable investment returns. And, we all benefit from reduced greenhouse gas emissions!

As a social service agency, Beverly Bootstraps staff work with underserved people in our community. We see the effects of costly heating and cooling and help our clients apply for heating and utility assistance. In addition, we have our own fund to help our clients stay warm in the winter months. We also witness the health effects of inadequate heating or cooling and the stress it creates for people. In addition, we work closely with landlords who struggle to keep rents contained due to increased costs of heating. This project is closely aligned with our work and will make a positive impact on the people we serve.

This letter serves to acknowledge that Beverly Bootstraps will support Green Beverly in the execution of their project. Our role will be to contribute our experience and relationships with community stakeholders to provide input and help guide the assessment, planning, and implementation activities of the project.

We look forward to participating in this project and value the important contributions this project will make to transform our Beverly EJ Community. This project will provide greater access and opportunities to develop our clean air, building decarbonization, energy bill relief, and hot day relief for both our EJ populations and their landlords. I strongly encourage The United States Environmental Protection Agency to support this proposal.

Edward P. Lavernoich
President
Bridgeport Economic Development Corporation (BEDCO)

Lavernoich received a BA from the University of Connecticut, a Master of City Planning (MCP) from the University of Rhode Island, and a Master of Science (MS) in Financial Management from the Graduate School of Business at Fairfield University. He received certification as an Economic Development Finance Professional from the National Development Council in 1988.

Lavernoich was a 26-year employee of the City of Bridgeport's Office of Planning and Economic Development (OPED), promoted 5 times under 4 different Mayoral administrations. He has served as Interim Director of OPED on three separate occasions for Mayors Fabrizi (2003-4), Finch (2008), and Ganim (2016) during Mayoral administration transitions. He served as the Town of Trumbull's Director of Economic & Community Development for 3 years prior to coming to BEDCO as President. Previously, he had been a BEDCO Board member for more than 20 years. He is a former Board Member and Clerk of the Steel Point Infrastructure Improvement District, former Treasurer and Loan Committee Chairman of the Grow Bridgeport Fund and Community Capital Fund, and former Executive Director of the Bridgeport Redevelopment Agency.

Lavernoich has provided testimony before the Connecticut State Legislature on urban development, property tax, and environmental issues. He is a lifetime resident of Connecticut.

Ex. 6 Personal Privacy (PP)

Vice President of Construction

WALDRON

Professional Qualifications

BS, Marine Engineering, Massachusetts Maritime Academy
MBA, Franklin Pierce College

Years of Experience

With Waldron: 12 years
With Other Firms: 13 years

Professional Certifications

OHSA 30-Hour Certified

Background

Ex. 6 Personal Privacy (PP) is the Vice President of Construction and is responsible for all aspects of Waldron's construction operations and success. Ex. 6 Personal Privacy (PP) has over 25 years of experience in the industrial construction industry including power generation, industrial processing, and water and wastewater treatment. Ex. 6 Personal Privacy (PP) has oversight of the execution of all construction projects and services for Waldron. He is also responsible for constructability reviews, cost opinion development, and project scheduling in support of Waldron's engineering group. Previously, he has held positions as Senior Estimator, Project Manager, Construction Manager, Project Engineer, Maintenance Engineer, and various roles in power plant operations and maintenance.

Experience

Senior Estimator – Methuen Construction Company – Plaistow, NH
Primarily responsible for the complete pricing and estimating for process mechanical piping, process equipment, and controls for industrial projects. Projects ranged in size from $1M to over $100M in hard bid and alternative delivery markets. Duties included complete bid management for specific projects, steel fabrication and erection project management, equipment procurement, proposal writing, and teammate development.

Baystate Medical Center CHP Project – Springfield, MA
Served as on-site Construction Manager to oversee the construction of a 5 MW Solar turbine and 21.4 kpph Rentech HRSG. Work included installation of a Broad USA steam absorption chiller, CAT black start generator, auxiliary equipment, excavation, foundations, structural steel, electrical distribution, architectural finishes, and controls.

Twin Rivers Technologies Manufacturing Corp. – Quincy, MA
Project Manager for a 1.8 MW CHP installation at an industrial fatty acid and glycerin manufacturing plant. Project work included demolition, excavation, deep foundations, concrete, site work & utilities, structural & miscellaneous steel, heavy mechanical rigging, electrical & controls work, power piping, MEP disciplines, fire suppression & alarm, and architectural finishes.

Milford Regional Medical Center – Milford, MA
Performed project estimating for an 800 KW CHP resulting in the award of an EPC contract. Scope included excavation, buried utilities, micro-pile installation, foundation, electrical & controls work, piping, and rigging & setting of equipment. Duties included coordination with Milford building and gas inspector, permitting, field layout of micro-piles, and project oversight.

Generadora Electrica del Norte (GENOR) – Puerto Barrios, Izabal, Guatemala
Engineering Project Manager and Construction Manager for the detailed design and construction of a 5 MW waste heat recovery organic rankine cycle power plant. Project included foundations, structural steel, turbomachinery, waste heat recovery heat exchangers, electrical distribution equipment, evaporative condensers, control & fire systems, and plant auxiliaries. CM duties included staffing of site team using local personnel, daily project status reporting, QA/QC oversight, engineering construction support, and design liaison services to home office.

Proctor & Gamble/Gillette, South Boston Manufacturing Center – Boston, MA
Served as on-site Construction Manager responsible for the installation, testing, and commissioning for a 7.5 MW Solar turbine and 100,000 lb/hr Rentech HRSG. Work included installation of cogeneration equipment, structural steel, driven piles, foundations, 13.8kV switchgear, medium & low voltage breakers, auxiliary equipment, architectural finishes, and controls.

Public Service of New Hampshire – Manchester, NH
Manager of the generation engineering group responsible for supporting the utility's fossil and renewable energy plants with project management, project economic analyses, constructability reviews, and technical evaluations. Projects included feasibility studies for biomass co-firing with coal, peaking combustion turbine replacement, photo-voltaic array installation, wind turbine projects, hydro power maximization studies, equipment replacement studies, fuel oil boiler conversion to biomass studies, and turbine fire protection studies.

Canaan Hydro – Canaan, VT
Project Manager responsible for the engineering, design, subcontracting, permitting, and construction of a 1,400 ft. long, 9 ft. diameter steel penstock along the Connecticut River serving a 1 MW utility owned hydro station. Work included demolition of the existing wooden stave penstock, historic displays, ground water and soils testing, penstock installation, foundations, and site improvements. Project required extensive interaction—and compliance with—state and federal agencies including the Federal Energy Regulatory Commission, Army Corps of Engineers, Vermont and New Hampshire State Historic Preservation Offices, Vermont Department of Environmental Conservation, and local officials.

Schiller Station – Portsmouth, NH
Project Manager for marine terminal upgrades at the main coal unloading facility at the 150 MW power station. Responsibilities included dock inspection, berthing studies, engineering, bidding, subcontracting, and installation management. Scope of work was removal and reinstallation of existing structural protective coating, fender and shear chain replacement, and application of marine hardware protective coatings.

Merrimack Station – Bow, NH
Project Engineer responsible for the technical specifications, budget, engineering, bidding, subcontracting, and on-site construction management for the installation of a new automated coal

ED_016126_00000052-00003

sampling system. The scope of work included on-site layout, concrete foundation, equipment setting, existing conveyor belt modifications, and electrical & controls installation.

Garvins Falls Hydro – Bow, NH
Provided oversight for the installation of new station generator step up transformers and breakers. Project included electrical demolition, on-site contractor oversight, concrete flat work, utility relocations, and new equipment installation and testing.

Ayers Island Hydro – Bristol, NH
Provided oversight for the engineering, bidding, and subcontracting for the installation of the main station isolation breaker in the utility substation. Work included coordination of the electrical engineer with utility protection engineering, procurement, project controls, and oversight of installation.

Eastman Falls Hydro – Franklin, NH
Provided oversight for the bidding and subcontracting for dam resurfacing. Work included project coordination with hydro personnel and contractor for work scheduling, project controls, and oversight of surface prep, reinforcement, and installation of shot-crete to existing dam surface.
Harvard University: Blackstone Station – Cambridge, MA
On site Construction Manager responsible for heavy demolition, site utilities, fuel oil storage tanks, structural steel and concrete, mechanical & electrical systems, and instrumentation and controls for a new 150,000 lb/hr boiler, 5 MW steam turbine & auxiliaries, and 2 MW standby diesel generator.

Tractebel/Suez (NECCO Facility) – Revere, MA
Served as Construction Coordinator for HVAC upgrades and support steel modifications for reciprocating engine driven generator overhaul gantries.

Consolidated Edison Development – Newington, NH
Served as Construction Coordinator for miscellaneous steel fabrication, installation of water treatment systems, prefabricated steel building erection, HVAC, and electrical power and controls installation to support continuous oil firing for the 525 MW combined cycle plant.

Fitchburg State College – Fitchburg, MA
Boiler fireman for the school's central thermal plant. Operated firetube boilers, watertube boilers, steam chillers, and plant auxiliary equipment. Performed plant equipment maintenance and repairs.

WORK EXPERIENCE

GREEN BEVERLY
Beverly, MA

Executive Director (5/21 to present)
Built nonprofit organization based on Quadruple Helix Model of Innovation to be a resource for local residents, local businesses and local educational systems
Architecting and coordinating local sustainability projects that benefit the community
Synchronizing with the City of Beverly to implement educational and communications oriented actions from the Resilient Together climate action plan

CLEAN ENERGY ADVISORY COMMITTEE (CEAC)
Beverly, MA

Volunteer Member (4/19 to present)
Contributor to home town community engagement initiative
Co-coordinator of home town sustainability fair
Providing various decision support tools like an estimated GHG inventory

PATH TO A GREEN HOME
Beverly, MA
Provider of residential sustainability software and campaigns for cities and communities

Founder (10/18 to present)
Developed first of its kind sustainable lifestyle app that integrates the citizen, local business community, and the municipality
Developed and Marketed first of its kind, Home Sustainability Plan for homeowners
Developed and Marketed actionable residential campaign for cities and communities
Numerous speaking engagements on various sustainability topics
Gut remodel of own home to dramatically reduce carbon footprint

SAJAN, INC. / AMPLEXOR
River Falls, WI
Leading provider of language translation service and technology.

Strategic Account Director (6/09 to 12/19)
Exceeded account growth quota in all 10 years
Managed a portfolio of business between $8M-$10M annually
Managing global accounts such as IBM, Cisco, Nike, Johnson Controls, UPS, VMware, and CrossFit
Combination of hunting and expanding existing accounts

VP Worldwide Sales (1/08 to 5/09)
Promoted into position - reporting to CEO - to drive Sajan revenue worldwide.
Achieved 50% year over year growth in first year
Grew direct sales team from 10 to 13 reps
Developed sales methodology utilizing Salesforce.com
Developed repository for sales tools and competitive collaboration
Worked with Operations to streamline the Sales to Operations handoff

Managing Director, East (6/07 to 12/07)
Hired into position - reporting to CEO - to drive Sajan's revenue in the Eastern region.
Developed sales tools such as Strategic Account Plans
Developed sales training program

STELLENT, INC. (purchased by Oracle in1/07)
Minneapolis, MN
Leading manufacturer of web-based Content Management and GRC software with annual sales of $120M.

Director, Strategic Alliances (4/06 to 5/07)
Promoted into position - reporting to VP Strategic Partners - to drive revenue through Stellent's strategic alliances.
Build corporate and field level go-to-market plans with key alliances including PwC, KPMG, Deloitte, Protiviti, Approva and BearingPoint.
Set up working relationships in the field between Stellent sales representatives and the corresponding partner representative.
Manage pipelines for joint sales opportunities with each alliance partner.
Assist with sales strategy on accounts that involve an alliance partner.
Execute joint marketing activities like eseminars, executive breakfast seminars, trade shows, press briefings, whitepapers and marketing collateral with key alliances.
Manage the internal marketing activities of driving awareness of the alliance within the Stellent sales force and the alliance partner field.
Developed a new joint market business case and go-to-market plan around eDiscovery with Protiviti.

Secured several new name accounts like Fujitsu, El Paso Energy and Avocent.

Director, Compliance Applications (4/03 to 4/06)
Promoted into position - reporting to EVP Compliance - to initiate and build Stellent's GRC practice.
Investigate Sarbanes-Oxley / GRC market and build Go-to-Market plan.
Negotiated an alliance agreement with Protiviti – the leading risk management firm.
Directed 150% year over year growth by providing direct sales support and strategy to vertical sales team of 13 worldwide – accumulating more than $6M in sales.
Secured several new name accounts like American Honda, Costco and La-Z-Boy.
Investigate new markets in related areas like JSOX, Bill 198, and OMB-A123.
Assist product marketing and management with the development of sales tools and product specifications.
Accomplished top rankings by industry analysts: considered a 'visionary' by Gartner in the Financial Compliance Process Management Software Magic Quadrant and a 'Strong Performer' by Forrester in the GRC Compliance Software Wave.

Director, Product Management (4/01 to 4/03)
Promoted into position - reporting to VP Marketing - to provide product management for all of Stellent's enterprise software products.
Manage team of three product managers that oversee product management of 25 products.
Instrumental in landing the two largest Content Management deals (each multi-million dollars in software) in Stellent's history.
Released Stellent v6 which included three new servers – a Collaboration Server, a Connection Server, and our first pure J2EE server.
Accomplished top rankings by industry analysts: considered a 'leader' by META Group, given the top 'visionary' position in Gartner's Magic Quadrant, and a ranking within the top 3 in Forrester's Content Management report.
Manage joint marketing relationship with Adobe.

Director, Product Marketing (4/00 to 4/01)
Promoted into position - reporting to VP Marketing - to provide product management and product marketing for all of Stellent's enterprise software products.
Increased Product Marketing group to 5 people - which are responsible for marketing requirements, pricing and packaging, 3rd party technology relationships, competitive analysis, fact sheets, presentations, white papers, and corporate demonstrations.
Integrated technology from two acquisitions into the Stellent product line.
Added three new products to the Stellent Content Management Suite.
Increased the price of the main Stellent products by 300%.
Providing sales training for sales staff that is growing at 25% quarter-to-quarter.
Accomplished ranking of 4th (out of 12) in Forrester's Content Management report.

Product Marketing Manager (6/98 to 4/00)
Hired into position - reporting to VP Marketing - to provide product management and product marketing for the Stellent product line.

Launched the Xpedio product line - which re-branded Stellent as a Content Management vendor and is now responsible for $15M in quarterly revenue.
Increased the product offering from 8 to 15 products in six months by re-packaging and by 'productizing' several service offerings.
Performed market analysis, product planning, and internal communications on 15 products in the Stellent product family.
Organized quarterly sales training sessions for worldwide sales representatives and resellers.
Installed a formal process for turning market requirements into development plans.
Instituted regular web seminars that continue to be our best source of leads.

STRUCTURAL DYNAMICS RESEARCH CORPORATION (SDRC)
Cincinnati, OH
Third largest manufacturer of CAD/CAM/CAE/PDM Engineering software with sales of $350M and an 8% market share. Acquired Camax Manufacturing Systems in June '96.

CAM Marketing Specialist (2/97 to 6/98)
Initially promoted to position - reporting to Director, CAM Business - to provide technical expertise for creating / implementing a CAM strategy. With a change of Directors in October, my focus switched to leading the creation / implementation of our corporate Data Translation strategy.
Utilizing a 7 person cross-departmental team to create a strategy based on Market Opportunity & Corporate Direction. The strategy concept was presented and approved based on revenues of $110M and costs of $7M over a 5 year period.
Coordinating deliverables with two other marketing programs - one targeting the replacement of a competitive system and the other targeting a new market.
Leading the negotiation with a 3rd party for the development of one deliverable. Contract is royalty based with royalties of approximately $1M per year.
Investigating market needs and competitive systems for best pricing and packaging strategy.
Creating a WEB page for internal communication of the program.

CAM strategy consisted of migrating 2 products ($20M annual revenues) into a third ($3M annual revenues) while maintaining short term revenue.
Involved cross-departmental leaders early to identify internal organizational issues / costs as well as possible customer (approx. 12,000) issues.
Investigated worldwide customers' needs as well as competitors to chart future development of all three products.
Charted product pricing & packaging changes that would help the customer base transition through the product consolidation.
Charted 5 year financials for CAM business that showed a dip in the first year but a 4x increase over 5. Upon presenting proposal and financial plan to Executive staff approval was given to proceed with product consolidation.

Application Engineer - European Operations (6/96 to 2/97)
With Camax Manufacturing Systems acquisition, task was to provide technical assistance in integrating Camax reseller network with SDRC direct sales.
Provided new product training to resellers.
Provided product / industry knowledge to direct sales for internal training and prospect visits.

CAMAX MANUFACTURING SYSTEMS
Minneapolis, MN
Privately held CAM software developer with 160 employees (2 main locations), worldwide reseller network, and annual revenues of $20M.

International Applications Engineer (2/93 to 6/96)
Worked to build up the International Support Team from 1 to 6 people. During this time revenues grew from $2.8M to $7M. Reseller network consisted of approximately 40 resellers in 25 countries.
Visited resellers regularly (7 trips / year) to provide technical training as well as assist in user seminars and prospect visits. Organized annual technical conferences.
Communicated regional market needs back to product development.

Customer Support Engineer (6/91 to 2/93)
Provided telephone hotline support for high end CAM product to both domestic and international customers / resellers.
Participated in product development teams for new product enhancements.

CATERPILLAR PAVING PRODUCTS INC.
Minneapolis, MN

Industrial Engineer (5/90 to 8/90)
Designed and implemented assembly fixtures
Utilized CAD to upgrade plant layout

WARNER ELECTRIC BRAKE & CLUTCH
Marengo, IL

Manufacturing Engineer (5/89 to 1/90)
Reduced set-up and cycle times for operations
Participated in the set-up of a JIT line

EDUCATION / INTERESTS

BS, Applied Technology University of Wisconsin - Stout, 1991
Graduate classes, Manufacturing Systems Engineering University of St. Thomas
Squash, Scuba Diving, House / Yard work

Summary

Leader in the fields of Clean Energy and Sustainability

Competent in Spanish and English

Strong interpersonal skills

Effective engagement in resource poor settings

Founding member of two successful 501(c)3 nonprofits

Experience

City of Beverly / Clean Energy Advisory Committee
2017 - present, Beverly, MA USA

Chair, 2020-present

Co-created two City Council approved resolutions to increase Beverly's commitment to work toward achieving 100% renewable energy

Collaborated on various City-initiated projects and programs including

- increased municipal solar
- more robust electric vehicle support
- a climate resiliency program in partnership with Salem
- green municipal aggregation
- the hiring of the City's first Sustainability Director

Credited for committee-wide effort to increase sustainability awareness, earning state and nation-wide recognition

Green Beverly / Director of Events & Coaching
2020 - present, Beverly, MA USA

Achieved 501(c)3 status, 2021

Participated in design and scaling of a community driven nonprofit dedicated to fulfilling narrow and broad initiatives aimed at directly reducing local greenhouse gas emissions

Founding member and representative of leadership team

Responsible for robust community engagement efforts including events,

workshops, and dynamic coaching program

Commitment to diversity, equity, inclusion, and justice at all points of decision making

Global Child / Spanish Teacher
2017 - present, Boxford, MA USA

Planned and presented weekly lessons for each of the five elementary schools in Beverly

Incorporated innovative cultural sensitivity components to support and enrich learning environment for students of all contexts and backgrounds

Natural Living and Learning Center / Administrator and Educator
2022 - present, Salem, MA USA

Developed and implemented alternative education infrastructure and program

Serve as lead educator for multi-leveled Spanish language program

ASAPROSAR Development Fund, Inc. / Founding Member
2000 - present, Beverly, MA USA

Inspired by 1995 multi-service public health organization, Asociación Salvadoreña Pro Salud Rural (ASAPROSAR), in Santa Ana, El Salvador

Achieved 501(c)3 status for local ASAPROSAR Development Fund, 2000

Elicited financial and moral support via hands-on service trips and written communications to improve public health conditions including more sustainable living practices for resource poor in and near Santa Ana

Prepared successful grant to fund first philanthropy director

Frequently utilized Spanish language

Quincy Community Action Programs, Inc. / Special Projects
1999 - 2002, Quincy, MA USA

Planned projects to support the needs of low income population within a diverse urban community including food and home heating assistance

Frequently utilized Spanish language

Women, Infants, & Children / Certified Nutrition Assistant
1995, Dorchester, MA USA

Earned Nutrition Assistant certification 1995

Provided nutrition consultation for pregnant women and mothers of various backgrounds in an urban setting

Frequently utilized Spanish language

RE: Proposal to *The Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program*

To whom it may concern:

The YMCA of the North Shore is an enthusiastic supporter and primary partner in the Green Beverly proposal to *The Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program* for the project titled "*Equitable Clean Air and Climate Relief Pilot*". The project period is 3 years after receipt of project award.

The purpose of this project is to design and pilot a building decarbonization model within our EJ communities. This model will involve several components ranging from landlord/tenant relationships, energy efficiency and electrification upgrades, innovative heat pump technology for efficient cooling and heating, and equitable financial models designed to save everyone money. The intent of the model is to distribute the ongoing cost savings realized from heat pump technology to the tenants and the landlords in order to incentivize change. In addition to cost savings, the tenants will benefit from more efficient cooling on the hot summer days, cleaner air quality, and comfortable heat during the winter. Landlords benefit from infrastructure updates and manageable investment returns. And, we all benefit from reduced greenhouse gas emissions!

We are very excited to be a collaborator on this project. Currently we have over 300 units of housing with more planed for the future. This work is closely aligned with our mission. Our mission is to strengthen communities, educate and nurture children and promote healthy living in spirit, mind and body. We help to provide over 500 people with a clean, safe and affordable place to call home. This program will help to provide more efficient and affordable sources of energy for our residents. Our work facilitates providing housing to a wide range of people. We have family housing and individual housing that is all affordable housing. We have income limits and many of our residents have very little discretionary income. Any cost saving to our residents would help in a major way to their quality of life. Any cost savings to our properties would help us to continue to pursue new opportunities in affordable housing.

This letter serves to acknowledge that the YMCA of the North Shore will serve as a Primary Partner in the delivery of this project. As a Partner, we agree to serve as an active member and contributor to the planning portion of the project, and, if feasible, to the implementation of the pilot in our EJ housing communities as well. Our role will be to contribute our experience and relationships with community stakeholders to provide input and help guide the assessment, planning, and implementation activities of the project.

We look forward to participating in this project and value the important contributions this project will make to transform our Beverly EJ Community. This project will provide greater access and opportunities to develop our clean air, building decarbonization, energy bill relief, and hot day relief for both our EJ populations and their landlords. We look forward to strengthening our partnerships with the participating organizations in the region and developing collaborative project ideas and shared learning to improve our communities. I strongly encourage The United States Environmental Protection Agency to support this proposal.

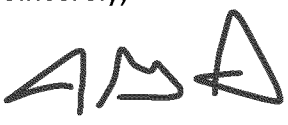
RE: Proposal to *The Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program*

To whom it may concern:

Salem Plumbing is an enthusiastic supporter and Partner in the Green Beverly proposal to *The Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program* for the project titled "*Equitable Clean Air and Climate Relief Pilot*". The project period is 3 years after receipt of project award.

The purpose of this project is to design and pilot a building decarbonization model within our EJ communities. This model will involve several components ranging from landlord/tenant relationships, energy efficiency and electrification upgrades, innovative heat pump technology for efficient cooling and heating, and equitable financial models designed to save everyone money. The intent of the model is to distribute the ongoing cost savings realized from heat pump technology to the tenants and the landlords in order to incentivize change. In addition to cost savings, the tenants will benefit from more efficient cooling on the hot summer days, cleaner air quality, and comfortable heat during the winter. Landlords benefit from infrastructure updates and manageable investment returns. And, we all benefit from reduced greenhouse gas emissions!

This work is closely aligned with our mission. Our mission is to provide our customers (plumbers, HVAC, electricians) with the latest products and technologies that they can use to help their end clients live in comfort while saving energy and money. We help to educate our customers (tradespeople) on the latest heat pump and domestic hot water heat pump products. As a distributor of plumbing and heating products, we're continually keeping an eye on the latest innovations in order to give our customers a competitive advantage.



This letter serves to acknowledge that Salem Plumbing will serve as a Partner in the delivery of this project. As a Partner, we agree to serve as an active member and contributor to the planning portion of the project, and, if feasible, to the implementation of the pilot as well. Our role will be to contribute our experience with heat pump technology and relationships with

local tradespeople to provide input and help guide the assessment, planning, and implementation activities of the project.

We look forward to participating in this project and value the important contributions this project will make to transform our Beverly EJ Community. This project will provide greater access and opportunities to develop our clean air, building decarbonization, energy bill relief, and hot day relief for both our EJ populations and their landlords. We look forward to strengthening our partnerships with the participating organizations in the region and developing collaborative project ideas and shared learning to improve our communities. I strongly encourage The United States Environmental Protection Agency to support this proposal.

Please contact me with any questions. I can be reached at Ex. 6 - Personal Privacy (PP) or by email Ex. 6 Personal Privacy (PP).

Sincerely,

Jason Sevinor
President

Preaward Compliance Review Report for All Applicants and Recipients Requesting EPA Financial Assistance

Note: Read Instructions before completing form.

I. A. Applicant/Recipient (Name, Address, City, State, Zip Code)

Name: Maverick Landing Community Services Inc.

Address: 31 Liverpool Street

City: East Boston

State: MA: Massachusetts Zip Code: 02128

B. Unique Entity Identifier (UEI): J2PMH8K9F1X7

C. Applicant/Recipient Point of Contact

Name: Rita Lara

Phone: Ex. 6 Personal Privacy (PP)

Email: Rita@mavericklanding.org

Title: Executive Director

II. Is the applicant currently receiving EPA Assistance? ☐ Yes ☒ No

III. List all pending civil rights lawsuits and administrative complaints filed under federal law against the applicant/recipient that allege discrimination based on race, color, national origin, sex, age, or disability. (Do not include employment complaints not covered by 40 C.F.R. Parts 5 and 7.)

N/A

IV. List all civil rights lawsuits and administrative complaints decided against the applicant/recipient within the last year that alleged discrimination based on race, color, national origin, sex, age, or disability and enclose a copy of all decisions. Please describe all corrective actions taken. (Do not include employment complaints not covered by 40 C.F.R. Parts 5 and 7.)

N/A

V. List all civil rights compliance reviews of the applicant/recipient conducted under federal nondiscrimination laws by any federal agency within the last two years and enclose a copy of the review and any decisions, orders, or agreements based on the review. Please describe any corrective action taken. (40 C.F.R. § 7.80(c)(3))

N/
a

VI. Is the applicant requesting EPA assistance for new construction? If no, proceed to VII; if yes, answer (a) and/or (b) below.

☐ Yes ☒ No

a. If the grant is for new construction, will all new facilities or alterations to existing facilities be designed and constructed to be readily accessible to and usable by persons with disabilities? If yes, proceed to VII; if no, proceed to VI(b).

☐ Yes ☐ No

b. If the grant is for new construction and the new facilities or alterations to existing facilities will not be readily accessible to and usable by persons with disabilities, explain how a regulatory exception (40 C.F.R. 7.70) applies.

VII. **Does the applicant/recipient provide initial and continuing notice that it does not discriminate on the basis of race, color, national origin, sex, age, or disability in its program or activities? (40 C.F.R 5.140 and 7.95)** ☒ Yes ☐ No

a. **Do the methods of notice accommodate those with impaired vision or hearing?** ☒ Yes ☐ No

b. **Is the notice posted in a prominent place in the applicant's/recipient's website, in the offices or facilities or, for education programs and activities, in appropriate periodicals and other written communications?** ☒ Yes ☐ No

c. **Does the notice identify a designated civil rights coordinator?** ☒ Yes ☐ No

VIII. **Does the applicant/recipient maintain demographic data on the race, color, national origin, sex, age, or disability status of the population it serves? (40 C.F.R. 7.85(a))** ☒ Yes ☐ No

IX. **Does the applicant/recipient have a policy/procedure for providing meaningful access to services for persons with limited English proficiency? (Title VI, 40 C.F.R. Part 7, *Lau v Nichols* 414 U.S. (1974))** ☒ Yes ☐ No

X. **If the applicant is an education program or activity, or has 15 or more employees, has it designated an employee to coordinate its compliance with 40 C.F.R. Parts 5 and 7? Provide the name, title, position, mailing address, e-mail address, fax number, and telephone number of the designated coordinator.**

Rita Lara, Executive Director
Maverick Landing Community Services Inc
31 Liverpool Street, Boston MA 02128 (tel) Ex. 6 - Personal Privacy (PP)

XI. **If the applicant is an education program or activity, or has 15 or more employees, has it adopted grievance procedures that assure the prompt and fair resolution of complaints that allege a violation of 40 C.F.R. Parts 5 and 7? Provide a legal citation or applicant's/ recipient's website address for, or a copy of, the procedures.**

Maverick Landing Community Services Inc. has board a grievance procedure in place to assure prompt and fair resolution of all complaints.

For the Applicant/Recipient

I certify that the statements I have made on this form and all attachments thereto are true, accurate and complete. I acknowledge that any knowingly false or misleading statement may be punishable by fine or imprisonment or both under applicable law. I assure that I will fully comply with all applicable civil rights statutes and EPA regulations.

A. Signature of Authorized Official	B. Title of Authorized Official	C. Date
Rita Lara	Executive Director	04/14/2023

For the U.S. Environmental Protection Agency

I have reviewed the information provided by the applicant/recipient and hereby certify that the applicant/recipient has submitted all preaward compliance information required by 40 C.F.R. Parts 5 and 7; that based on the information submitted, this application satisfies the preaward provisions of 40 C.F.R. Parts 5 and 7; and that the applicant has given assurance that it will fully comply with all applicable civil rights statures and EPA regulations.

A. *Signature of Authorized EPA Official	B. Title of Authorized Official	C. Date

Instructions for EPA FORM 4700-4 (Rev. 04/2021)

General. Recipients of Federal financial assistance from the U.S. Environmental Protection Agency must comply with the following statutes and regulations.
Title VI of the Civil Rights Acts of 1964 provides that no person in the United States shall, on the grounds of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. The Act goes on to explain that the statute shall not be construed to authorize action with respect to any employment practice of any employer, employment agency, or labor organization (except where the primary objective of the Federal financial assistance is to provide employment). Section 13 of the 1972 Amendments to the Federal Water Pollution Control Act provides that no person in the United States shall on the ground of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under the Federal Water Pollution Control Act, as amended. Employment discrimination on the basis of sex is prohibited in all such programs or activities. Section 504 of the Rehabilitation Act of 1973 provides that no otherwise qualified individual with a disability in the United States shall solely by reason of disability be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. Employment discrimination on the basis of disability is prohibited in all such programs or activities. The Age Discrimination Act of 1975 provides that no person on the basis of age shall be excluded from participation under any program or activity receiving Federal financial assistance. Employment discrimination is not covered. Age discrimination in employment is prohibited by the Age Discrimination in Employment Act administered by the Equal Employment Opportunity Commission. Title IX of the Education Amendments of 1972 provides that no person in the United States on the basis of sex shall be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity receiving Federal financial assistance. Employment discrimination on the basis of sex is prohibited in all such education programs or activities. Note: an education program or activity is not limited to only those conducted by a formal institution. 40 C.F.R. Part 5 implements Title IX of the Education Amendments of 1972. 40 C.F.R. Part 7 implements Title VI of the Civil Rights Act of 1964, Section 13 of the 1972 Amendments to the Federal Water Pollution Control Act, and Section 504 of The Rehabilitation Act of 1973.

Items "Applicant" means any entity that files an application or unsolicited proposal or otherwise requests EPA assistance. 40 C.F.R. §§ 5.105, 7.25. "Recipient" means any State or its political subdivision, any instrumentality of a State or its political subdivision, any public or private agency, institution, organizations, or other entity, or any person to which Federal financial assistance is extended directly or through another recipient, including any successor, assignee, or transferee of a recipient, but excluding the ultimate beneficiary of the assistance. 40 C.F.R. §§ 5.105, 7.25. "Civil rights lawsuits and administrative complaints" means any lawsuit or administrative complaint alleging discrimination on the basis of race, color, national origin, sex, age, or disability pending or decided against the applicant and/or entity which actually benefits from the grant, but excluding employment complaints not covered by 40 C.F.R. Parts 5 and 7. For example, if a city is the named applicant but the grant will actually benefit the Department of Sewage, civil rights lawsuits involving both the city and the Department of Sewage should be listed. "Civil rights compliance review" means: any federal agency-initiated investigation of a particular aspect of the applicant's and/or recipient's programs or activities to determine compliance with the federal non-discrimination laws. Submit this form with the original and required copies of applications, requests for extensions, requests for increase of funds, etc. Updates of information are all that are required after the initial application submission. If any item is not relevant to the project for which assistance is requested, write "NA" for "Not Applicable." In the event applicant is uncertain about how to answer any questions, EPA program officials should be contacted for clarification.

Serving the hungry, homeless and addicted of Coastal Connecticut since 1993.

To Whom It May Concern:

Please be advised that we are in discussions with NuPower Thermal LLC, the developers of the Bridgeport Thermal Loop to determine the benefits of connecting to an extension of their thermal loop heating system.

Reducing air emissions and improving air quality are goals the Bridgeport Mission strongly supports.

We look forward to working with NuPower Thermal LLC & BEDCO to complete the review process. We are optimistic the project will benefit our facility and the City of Bridgeport.

Thank you for your consideration.

Yours truly,

To Whom It May Concern:

Please be advised that Alpha Community Services YMCA and the Bridgeport YMCA, both branches of Central Connecticut Coast YMCA, are working with the developers of the Bridgeport Thermal Loop to explore the potential use of thermal hot water to heat our facilities located at the South End Community Center on Ex. 6 Personal Privacy (PP) and at the Bridgeport YMCA on Ex. 6 Personal Privacy (PP).

The reduction of greenhouse gas emissions in Bridgeport is a worthy goal which we strongly endorse.

We look forward to working with NuPower Thermal, LLC & BEDCO to confirm mechanical arrangements and overall benefits.

Thank you for your consideration.

Sincerely,

Best,

Carmen Colon

April 11, 2023

To Whom It May Concern:

Please be advised that we are collaborating with the developers of the Bridgeport Thermal Loop to utilize thermal hot water to pre-heat our steam system

We are committed to supporting the project and thereby reducing our carbon footprint.

We look forward to working with NuPower Thermal, LLC & BEDCO to finalize the project. We feel this project will have a positive impact on the city.

Thank you for your consideration.

Yours truly,

Charles Dippolito Jr.

CT GENERAL ASSEMBLY FEBRUARY 16, 2017

Testimony in Support of

H.B. 6304 - AN ACT ESTABLISHING A PILOT PROOGRAM FOR A DISTRICT HEATING NETWORK and HB 6312 - AN ACT CONCERNING DISTRICT HEATING SYSTEM INCENTIVE PAYMENTS On Behalf of Bridgeport South End Neighborhood Revitalization Zone, (NRZ)

Chairwoman Reed & Chairmen Winfield, Formica and members of the Energy Committee:

The Bridgeport South End Neighborhood Revitalization Zone supports efforts to reinvigorate the south end of Bridgeport. The proposed District Energy project could be very beneficial to the South End. The project is projected to decrease heating costs for its customers while significantly reducing use of carbon fuels. This results in a significant cut in greenhouse gas emissions.

HB 6304 will strongly support these efforts by establishing a pilot program consisting of a small combined heat and power plant between downtown and the south end. This CHP plant will help reduce overall project costs, which directly benefits the customers.

HB 6312 clarifies the District Heating grant methodology used in the Conservation and Load Management Plan to be consistent with the intent of the General Statute. In this way, the full District Heating grant amount will be correctly calculated and made available for this exciting technology.

District Energy systems have benefited the urban vitality, health and appeal of a number of cities including, St. Paul, Nashville and Seattle. The District Heating project will also generate significant economic development, projected at $50 million along with the creation of construction and full time jobs.

We encourage the Committee to support this opportunity for Bridgeport.

Title: Principal Gifts Officer

II. Is the applicant currently receiving EPA Assistance? ☐ Yes ☒ No

III. List all pending civil rights lawsuits and administrative complaints filed under federal law against the applicant/recipient that allege discrimination based on race, color, national origin, sex, age, or disability. (Do not include employment complaints not covered by 40 C.F.R. Parts 5 and 7.)

IV. List all civil rights lawsuits and administrative complaints decided against the applicant/recipient within the last year that alleged discrimination based on race, color, national origin, sex, age, or disability and enclose a copy of all decisions. Please describe all corrective actions taken. (Do not include employment complaints not covered by 40 C.F.R. Parts 5 and 7.)

V. List all civil rights compliance reviews of the applicant/recipient conducted under federal nondiscrimination laws by any federal agency within the last two years and enclose a copy of the review and any decisions, orders, or agreements based on the review. Please describe any corrective action taken. (40 C.F.R. § 7.80(c)(3))

VI. Is the applicant requesting EPA assistance for new construction? If no, proceed to VII; if yes, answer (a) and/or (b) below.

☐ Yes ☒ No

a. If the grant is for new construction, will all new facilities or alterations to existing facilities be designed and constructed to be readily accessible to and usable by persons with disabilities? If yes, proceed to VII; if no, proceed to VI(b).

☐ Yes ☐ No

b. If the grant is for new construction and the new facilities or alterations to existing facilities will not be readily accessible to and usable by persons with disabilities, explain how a regulatory exception (40 C.F.R. 7.70) applies.

VII. **Does the applicant/recipient provide initial and continuing notice that it does not discriminate on the basis of race, color, national origin, sex, age, or disability in its program or activities? (40 C.F.R 5.140 and 7.95)** ☒ Yes ☐ No

a. **Do the methods of notice accommodate those with impaired vision or hearing?** ☒ Yes ☐ No

b. **Is the notice posted in a prominent place in the applicant's/recipient's website, in the offices or facilities or, for education programs and activities, in appropriate periodicals and other written communications?** ☒ Yes ☐ No

c. **Does the notice identify a designated civil rights coordinator?** ☐ Yes ☒ No

VIII. **Does the applicant/recipient maintain demographic data on the race, color, national origin, sex, age, or disability status of the population it serves? (40 C.F.R. 7.85(a))** ☒ Yes ☐ No

IX. **Does the applicant/recipient have a policy/procedure for providing meaningful access to services for persons with limited English proficiency? (Title VI, 40 C.F.R. Part 7, *Lau v Nichols* 414 U.S. (1974))** ☒ Yes ☐ No

X. **If the applicant is an education program or activity, or has 15 or more employees, has it designated an employee to coordinate its compliance with 40 C.F.R. Parts 5 and 7? Provide the name, title, position, mailing address, e-mail address, fax number, and telephone number of the designated coordinator.**

XI. **If the applicant is an education program or activity, or has 15 or more employees, has it adopted grievance procedures that assure the prompt and fair resolution of complaints that allege a violation of 40 C.F.R. Parts 5 and 7? Provide a legal citation or applicant's/ recipient's website address for, or a copy of, the procedures.**

For the Applicant/Recipient

I certify that the statements I have made on this form and all attachments thereto are true, accurate and complete. I acknowledge that any knowingly false or misleading statement may be punishable by fine or imprisonment or both under applicable law. I assure that I will fully comply with all applicable civil rights statutes and EPA regulations.

A. Signature of Authorized Official	B. Title of Authorized Official	C. Date
Amanda Robinson	Executive Director	04/14/2023

For the U.S. Environmental Protection Agency

I have reviewed the information provided by the applicant/recipient and hereby certify that the applicant/recipient has submitted all preaward compliance information required by 40 C.F.R. Parts 5 and 7; that based on the information submitted, this application satisfies the preaward provisions of 40 C.F.R. Parts 5 and 7; and that the applicant has given assurance that it will fully comply with all applicable civil rights statures and EPA regulations.

A. *Signature of Authorized EPA Official	B. Title of Authorized Official	C. Date

Instructions for EPA FORM 4700-4 (Rev. 04/2021)

General. Recipients of Federal financial assistance from the U.S. Environmental Protection Agency must comply with the following statutes and regulations.
Title VI of the Civil Rights Acts of 1964 provides that no person in the United States shall, on the grounds of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. The Act goes on to explain that the statute shall not be construed to authorize action with respect to any employment practice of any employer, employment agency, or labor organization (except where the primary objective of the Federal financial assistance is to provide employment). Section 13 of the 1972 Amendments to the Federal Water Pollution Control Act provides that no person in the United States shall on the ground of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under the Federal Water Pollution Control Act, as amended. Employment discrimination on the basis of sex is prohibited in all such programs or activities. Section 504 of the Rehabilitation Act of 1973 provides that no otherwise qualified individual with a disability in the United States shall solely by reason of disability be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. Employment discrimination on the basis of disability is prohibited in all such programs or activities. The Age Discrimination Act of 1975 provides that no person on the basis of age shall be excluded from participation under any program or activity receiving Federal financial assistance. Employment discrimination is not covered. Age discrimination in employment is prohibited by the Age Discrimination in Employment Act administered by the Equal Employment Opportunity Commission. Title IX of the Education Amendments of 1972 provides that no person in the United States on the basis of sex shall be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity receiving Federal financial assistance. Employment discrimination on the basis of sex is prohibited in all such education programs or activities. Note: an education program or activity is not limited to only those conducted by a formal institution. 40 C.F.R. Part 5 implements Title IX of the Education Amendments of 1972. 40 C.F.R. Part 7 implements Title VI of the Civil Rights Act of 1964, Section 13 of the 1972 Amendments to the Federal Water Pollution Control Act, and Section 504 of The Rehabilitation Act of 1973.

Items "Applicant" means any entity that files an application or unsolicited proposal or otherwise requests EPA assistance. 40 C.F.R. §§ 5.105, 7.25. "Recipient" means any State or its political subdivision, any instrumentality of a State or its political subdivision, any public or private agency, institution, organizations, or other entity, or any person to which Federal financial assistance is extended directly or through another recipient, including any successor, assignee, or transferee of a recipient, but excluding the ultimate beneficiary of the assistance. 40 C.F.R. §§ 5.105, 7.25. "Civil rights lawsuits and administrative complaints" means any lawsuit or administrative complaint alleging discrimination on the basis of race, color, national origin, sex, age, or disability pending or decided against the applicant and/or entity which actually benefits from the grant, but excluding employment complaints not covered by 40 C.F.R. Parts 5 and 7. For example, if a city is the named applicant but the grant will actually benefit the Department of Sewage, civil rights lawsuits involving both the city and the Department of Sewage should be listed. "Civil rights compliance review" means: any federal agency-initiated investigation of a particular aspect of the applicant's and/or recipient's programs or activities to determine compliance with the federal non-discrimination laws. Submit this form with the original and required copies of applications, requests for extensions, requests for increase of funds, etc. Updates of information are all that are required after the initial application submission. If any item is not relevant to the project for which assistance is requested, write "NA" for "Not Applicable." In the event applicant is uncertain about how to answer any questions, EPA program officials should be contacted for clarification.

Letter of Support

To Whom It Concerns:

We have participated in the Windham Food Network's Gleaning Program for 2 years running. It is very well-run and easy to be a part of, and I imagine it's a great resource for the organizations receiving the fresh food that is gleaned. There is always excess food on a farm, no matter the size, that is headed for the compost pile or just left in the field. We are so glad to see the food we don't have a market for going to good use in our community. We are thrilled that the highest quality food can reach the homes of socially disadvantaged people who otherwise wouldn't have access to it.

The Gleaning team has been responsive and respectful when working on our farm. They are hard-working and well-coordinated. With a continued funding source they will continue to do high-quality impactful work in the Eastern CT food shed. I highly recommend that they receive funding to continue their good work.

Sincerely,

Charlotte Ross

Owner/Farmer at Sweet Acre Farm

Willow Valley Farm
26 Moose Meadow Road
Willington, CT 07279
Ex. 6 Personal Privacy (PP)
Ex. 6 - Personal Privacy (PP)

To Whom It Concerns:

As a small, diversified vegetable farmer, I am keenly aware of any waste produced on our farm. We try our best to find appropriate outlets for extra produce, and the Windham Community Food Network's gleaning program has helped us tremendously to make use of extra produce while it is still fresh. We have been participating in this program for several years – having someone come to our farm to pick up and/or harvest extra vegetables has made it possible for products to find good homes instead of ending up in our compost pile. Our busy schedules don't allow the time to do this work ourselves while still being productive and profitable.

This program helps meet our needs, as farmers, while providing much healthier options to local families and pantries in need. Most local food distributions are unable to provide/distribute fresh food due to refrigeration and facilitation constraints. The gleaning program makes it possible for more families to eat healthy without the cost and transportation barriers that they may be used to.

Thank you for considering our proposal!

Sincerely,

Jackie Kulig

To:
From: Jessica Larkin-Wells
Re: Food System Capacity Building Grant Letter of Support
Date:

Dear ____,

I would like to offer Spring Valley Student Farm's support for the Windham Community Food Network's Food System Capacity Building Grant proposal to expand their gleaning and processing programs. Spring Valley Student Farm (SVSF) is UConn's small vegetable farm, where 11 undergraduate students live and work to grow produce for UConn's Dining Services. SVSF student farmers engage with the local community to learn, grow, and support. We are lucky to be neighbors and partners with the Windham Community Food Network, a fantastic organization that sets the example for community-centered food systems change.

We are a strong supporter of the Windham Community Food Network's gleaning program, and we are committed to working with the WCFN throughout program expansion. Last summer, we harvested 1,000lbs of produce before the drought set in, and we are excited to resume gleaning next spring. We will continue to support the project through volunteer gleaning work from SVSF-affiliated UConn students. We also intend to expand the gleaning program on our end by developing gleaning curricula and internship opportunities for student volunteers through the SVSF Gleaning Corps.

The WCFN has demonstrated their commitment to food system resiliency in the greater Windham area and deserve more resources to grow this program. Again, we at SVSF feel honored to participate in the wonderful work being done by the WCFN in our part of the state.

Sincerely,

Jessica Larkin-Wells, Farm Manager

Brown Farm
PO BOX 169
Ex. 6 Personal Privacy (PP)
Scotland CT 06264
Ex. 6 - Personal Privacy (PP)

To Whom It Concerns:

I am the co-owner and farmer of Brown Farm in Scotland CT. We are a small diversified farm and have been part of the Windham Community Food Network's gleaning program for several years. This program has helped us with our excess produce by coordinating produce pick-ups and even helping with harvesting. The gleaning program then distributes the produce from our farm (and others like us!) to families in need in our community.

The positive impact this program has on both the farmers and the families is huge. During the season farmers do not have the bandwidth to seek additional sales channels for excess produce, so most of the time it goes to waste. WCFN consistently and efficiently picks up our extra produce and gives me peace of mind knowing that it's going to families in need. The families that receive the produce are grateful to have access to fresh, local, nutrient packed fruits and vegetables to offset their food bill.

I look forward to continuing to be a part of the Windham Community Food Network's gleaning program for years to come – food, and all of the labor to grow it, cannot be wasted when there are hungry families to feed and in need.

Sincerely,

Jenna Aldrich

Farmer / Co-Owner Brown Farm

Letter of Support

3/31/2023

To Whom It Concerns:

I am the owner/farmer of Cobblestone Farm, a mixed vegetable operation in Mansfield Center. Cobblestone Farm has been working with the Windham Community Food Network (WCFN) since 2019 to connect area residents with high quality local produce. Through the WCFN's gleaning efforts, Cobblestone Farm has directed 100's of heads of lettuce, nearly 1000 lbs of tomatoes, and other vegetables to community soup kitchens and food insecure families. Just this week, volunteers from our local high school will work with WCFN to harvest and wash 500 lbs of turnips that will be distributed throughout the winter. Without WCFN, all these vegetables would have gone to waste. And with the grants WCFN has secured in the past, farmers are compensated for participating in the gleaning projects, which is very valuable as it does take extra time to coordinate gleanings.

WCFN is well-poised to continue and grow their gleaning efforts. They have a clear track record of success, have been excellent partners to work with, and are responsive to community needs. WCFN has a strong connection with our local community kitchen (CLiCK), our local food co-op, and other community partners that will help them see their project to fruition. The idea of processing gleaned produce into value-added products that will support WCFN's fundraising efforts is an excellent way to capitalize on some of the less popular produce. The Windham region is very responsive to community support projects, and I'm sure WCFN will be successful in selling any value-added products they produce.

On behalf of Cobblestone Farm, I enthusiastically look forward to continued work with WCFN in their gleaning efforts.

Sincerely,

Diane Dorfer

Owner-farmer

Debra A. Roy
Executive Director

Equal Housing Opportunity

April 13, 2023

United States Environmental Protection Agency

RE: Proposal to *The Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program*

To whom it may concern:

The Beverly Housing Authority is an enthusiastic supporter of Green Beverly's proposal to *The Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program* for the project titled "*Equitable Clean Air and Climate Relief Pilot*". The project period is 3 years after receipt of project award.

The purpose of this project is to design and pilot a building decarbonization model within our EJ communities. This model will involve several components ranging from landlord/tenant relationships, energy efficiency and electrification upgrades, innovative heat pump technology for efficient cooling and heating, and equitable financial models designed to save everyone money. The intent of the model is to distribute the ongoing cost savings realized from heat pump technology to the tenants and the landlords in order to incentivize change. In addition to cost savings, the tenants will benefit from more efficient cooling on the hot summer days, cleaner air quality, and comfortable heat during the winter. Landlords benefit from infrastructure updates and manageable investment returns. Moreover, we all benefit from reduced greenhouse gas emissions!

The Beverly Housing Authority is the City of Beverly's largest low-income housing provider. In addition to maintaining 650 state and federal public housing units, the Beverly Housing Authority administers both the federal housing choice voucher program and the state Massachusetts rental voucher program. A program such as this will benefit both landlords and tenants financially and ultimately helping the environment as well.

As a supporter of Green Beverly's programs, the Beverly Housing Authority looks forward to assisting low-income housing providers throughout the community with information about the program to landlords participating in our voucher program in hopes that it may improve the lives our low-income voucher holders. This project will provide greater access and opportunities to develop our clean air, building decarbonization, energy bill relief, and hot day relief for both our EJ populations and their landlords. We look forward to strengthening our partnerships with the participating organizations in the region and developing collaborative project ideas and shared learning to improve our communities. I strongly encourage The United States Environmental Protection Agency to support this proposal.

Please contact me with any questions. I can be reached at Ex. 6 - Personal Privacy (PP) or by email Ex. 6 - Personal Privacy (PP)

Central Maine Community Health
Attn: Corrie Brown, MSW, PS-C, Director
300 Main St.
Lewiston, ME 04240

Dear Corrie:

It is with pleasure that I submit this letter of commitment to your project to reduce the health impact of indoor toxins on communities disproportionately affected in Lewiston and Auburn, Maine.

The Maine Indoor Air Quality Council (the Council or MIAQC), is a nonprofit organization formed in 1998. Our mission is to create healthy, productive, and environmentally sustainable indoor environments through education, communications, and advocacy. In the 25 years since our formation, we have worked hard to identify indoor pollutants that impact occupant health here in Maine, and have developed common-sense solutions based on well-researched and reviewed best practice principles. Reducing the risk of exposure to things indoors that can make people sick is our number one priority.

As a project partner, we anticipate our robust body of knowledge of indoor environmental issues and strategies to reduce exposure to them will help you meet the needs of your target audience. We'll share the knowledge gained from our own EPA-funded work on managing mold and moisture problems in Maine rental properties, as well as what we've learned about landlord-tenant communications. We anticipate the work we do through your project will not only benefit Lewiston and Auburn, but will also improve our own long-term ability to implement workable solutions to meet the needs of other disadvantaged Maine communities outside of the Lewiston-Auburn area.

The Maine Indoor Air Quality Council commits to:

1) Provide at least one individual to participate in all of the planning team sessions throughout the three years of the project. Because MIAQC is a member organization with a robust membership of professionals who design, construct, operate, maintain, investigate, and remediate buildings, as well as those who approach indoor environments from the public health perspective, we can provide additional individuals as needed to participate in project sessions as we move through the project workplan and tackle specific contaminants, issues, and concerns.

2) We will actively participate in your environmental scan of existing resources, as well as identify any gaps in available resources.

3) When needed, we will provide additional guidance on or adoption/development of additional resources for identified indoor pollutants.

4) Throughout the project, we will provide ongoing technical assistance to you and your workplan partners on best practices to create and maintain healthier indoor environments.

The Maine Indoor Air Quality Council's anticipated cost for these services to help you achieve your project goals is $30,000 for the full three-years of the project.

The Council wishes you luck with your project application, and looks forward to working with you to achieve our mutual goals.

Sincerely,

Christine G. Crocker, Executive Director

Central Maine Community Health/Healthy Androscoggin
Attn: Corrie Brown, Director
300 Main St.
Lewiston, ME 04240

To Whom it May Concern,

AK Health and Social Services (AKHSS) is a community-based organization that serves the immigrants, refugees, asylum seekers and BIPOC communities in Lewiston and Auburn, Maine. Abdikhadar Shire, a former refugee, and immigrant, founded the non-profit to respond to the unique challenges New Mainers face. We use needs assessments to identify community issues and then create specialized programs to help solve them.

As a committed partner in Central Maine Community Health/Healthy Androscoggin's EJCPS proposal, AKHSS intends to identify at least one staff member to participate in a maximum of 15 collaborative sessions over the next three years, participate in an environmental scan of existing resources and gaps, support the creation of educational material(s), disseminate educational materials through our programs, and participate in evaluation efforts throughout the three-year award. It is with our agreement that AKHSS will receive $45,000 over the entirety of the award to support our participation and efforts as a committed partner with Central Maine Community Health/Healthy Androscoggin.

We thank you for the opportunity to participate in the improvement of the health and wellbeing of the communities we serve.

Sincerely,

Abdikhadar Shire

Central Maine Community Health/Healthy Androscoggin
Attn: Corrie Brown, Director
300 Main St.
Lewiston, ME 04240

To Whom it May Concern,
YWCA Central Maine aims to provide programming that builds community through strengthening intercultural relationships and valuing the needs and contributions of all our members, guided by a belief in appreciation of diversity and equitable opportunity for all people in our community. We offer accessible and culturally appropriate resources for health and wellness, recreation, childcare, and advocacy.

As a committed partner in Central Maine Community Health/Healthy Androscoggin's EJCPS proposal, the YWCA intends to identify at least one staff member to participate in a maximum of 15 collaborative sessions over the next three years, participate in an environmental scan of existing resources and gaps, support the creation of educational material(s), disseminate educational materials through our programs, and participate in evaluation efforts throughout the three-year award. It is with our agreement that the YWCA will receive $45,000 over the entirety of the award to support our participation and efforts as a committed partner with Central Maine Community Health/Healthy Androscoggin.

We thank you for the opportunity to participate in the improvement of the health and wellbeing of the communities we serve.

Sincerely,

Melanie LaMore Gagnon

EXPERIENCE

Executive Director, March 2022 - present
Substance Use Prevention Manager, Healthy Androscoggin, Lewiston, ME
February 2016 - March 2022

Convenes collaborations with multiple stakeholder organizations and individuals to address complex health issues. Maintains positive working relationships with local agencies and other community members. Works within the direction of the Central Maine Community Health Corporation (CMCHC) Board to develop and implement a strategic plan for community health across CMH's service areas. Convenes the Lewiston Auburn Regional Community Health Committee (LARCHC) and the Healthy Androscoggin Advisory Committee (HAAC). Identifies where the CMCHC Board and LARCHC/HAAC can leverage support for state and local policy with community health impact. Educates legislative contacts on best practices for public health. Directs and oversees day-to-day operations of Healthy Androscoggin. Identifies and secures financial resources for Healthy Androscoggin including grants, sub-contracts and donations and other financial support from various entities. Oversees fiscal operations for all funding streams and reports progress to Board of Directors. Works with Managers and Grant Coordinator to submit financial reporting to funders

Adjunct Faculty, University of Maine Farmington
January 2019-June 2019
Develop course curriculum and supporting documents. Provide education and instruction that is time-sensitive, relevant, and presented in a manner that allows for various disabilities.

Community Care Team, Social Work Care Manager, Androscoggin Home Care and Hospice, Lewiston, ME
April 2012-February 2016
Federal initiative that partners with primary care physician offices to reduce inappropriate health care utilization cost, increase patient health, and connect patient with community resources to improve barriers affecting health. Provide education, support, and communication with the goal of improving the overall health of the whole person. Developed program processes, referral networks, and collaborative partnerships with local resources.

Prevention Programs Manager, AdCare Educational Institute of Maine, Augusta, ME
June 2008 – June 2012
Administration of prevention programs throughout the state. Responsibilities included supervision of staff, budget management, grant writing, resource management, strategic planning, training coordination, research and evaluation. Participated on local, state, and federal committees and boards associated with reducing substance abuse.

Experience

Ex. 6 Personal Privacy (PP) has experience in research, project coordination, and grant management including program design, implementation, evaluation, budgeting, contracting, reporting, and multi-partner collaboration. Ex. 6 Personal Privacy (PP) specializes in policy development and analysis related to public health, health care, and social justice issues including health equity, community-clinical linkages, healthy homes, tobacco treatment, and behavioral health.

At Healthy Androscoggin she manages federal and state grants for healthy eating, physical activity, and lead poisoning prevention programs. She is involved in policy, system, and environmental change work as well as overseeing programs that empower community members to lead healthy and safe lives. In her seven years as an evaluator she connected program design and implementation with the complexities of monitoring and evaluation. Working alongside clients, Ex. 6 Personal Privacy (PP) used data collection tools, evaluation models, stakeholder input, and performance measurement to determine how well a program is delivering results and identify changes that would improve the program.

Prior to turning her focus to evaluation and research, Ex. 6 Personal Privacy (PP) spent much of her professional life as a policy and program coordinator. Ex. 6 Personal Privacy (PP) began her career as a drug court case manager in Lewiston, Maine and was promoted to be the statewide Family and Juvenile Drug Court Coordinator for the Maine Judicial Branch. Later, as the State Coordinator for the Maine Center for Disease Control and Prevention's Maine Community Transformation Grant (CTG), Ex. 6 Personal Privacy (PP) was responsible for managing all components of the statewide intra-agency policy and project objectives for a large federal grant as well as supporting statewide policy initiatives for all public health strategies. Ex. 6 Personal Privacy (PP) is skilled in working across state and local programs, agencies, and offices as well as advocacy groups to implement policy and environmental change objectives. Through her work in the public health sector as well as her time managing court-based programs, Ex. 6 Personal Privacy (PP) gained experience in focusing on disparate populations such as behavioral health, LGBTQ, youth, immigrants, and refugees.

Ex. 6 Personal Privacy (PP) has a special interest in cultural competency and implicit bias. She conducts training on how to mitigate implicit bias and has used her understanding to recommend improvements to municipal, legal, and health care organizations in Maine, and to help the Massachusetts court system address implicit bias in judicial evaluations.

Professional Affiliations

Ex. 6 Personal Privacy (PP) serves as co-chair on the Board of Directors for the Center for Wisdom's Women in Lewiston, Maine. She was a founding member and former president of the Board of Directors for the Maine Alliance for Drug Treatment Courts. She is a member of the American Public Health Association (APHA) and the Maine Public Health Association (MPHA). Ex. 6 Personal Privacy (PP) is also a notary public and professional wedding officiant.

Project Examples

Physical Activity and Nutrition

Healthy Kids, Healthy Future Technical Assistance Program
The Maine CDC, along with partner MCD Public Health, launched the Healthy Kids Healthy Future Technical Assistance Program initiative to increase statewide capacity to implement evidence-based programming that promotes healthy choices for eating and activity in early care and education (ECE) sites in Maine. The evaluation included focus groups with ECE providers, as well as interviews with ECE technical assistance providers from Maine Roads to Quality and Let's Go! Obesity Prevention Program. Ex. 6 Personal Privacy (PP) conducted quantitative and qualitative evaluation project components, such as a pilot of the online Go NAPSACC platform in Maine, performance monitoring for ECE providers using the online tool, and the implementation and evaluation of an ECE Learning Collaborative. As lead evaluator for this project Ex. 6 Personal Privacy (PP) developed evaluation questions, gathered input, analyzed data, and reflected on annual findings for use in program improvement.

Farm to Early Care and Education in Maine
As part of her work with the Physical Activity and Nutrition in Early Care in Education (PAN in ECE) State Advisory Group, Ex. 6 Personal Privacy (PP) facilitated the strategic planning process for Maine's Farm to ECE workgroup which aims to promote ECE initiatives that connect young children with healthy, locally-grown foods, and support farmers in their communities. Partners from SNAP-Ed, Let's Go!, Maine Farm to School Network, Maine Department of Education , Maine CACFP Program, Good Shepherd Food Bank, Maine Roads to Quality, and Maine Cooperative Extension were guided through a process to identify the group's mission, purpose, goals, objectives, and strategies for establishing Farm to ECE work in Maine. Ex. 6 Personal Privacy (PP) facilitated planning meetings, developed a logic model, and wrote a strategic workplan to guide the work moving forward and also to apply for grant funding and leverage existing resources to support Farm to ECE in Maine.

Healthy Homes

EPA Environmental Justice Collaborative Problem-Solving Grant
This Environmental Protection Agency grant addressed the ongoing need for safe and healthy housing in the downtown Lewiston area for underserved communities that reside in rental unit housing. The project team led a strategic planning process to bring together diverse partners and stakeholders in order to find innovative strategies for improving housing and preventing childhood lead poisoning. Ex. 6 Personal Privacy (PP) conducted the evaluation of this project and monitored all outcomes for grant reporting.

Healthy Homes Ambassador Project
Environmental Protection Agency grant funds were used to expand workshop offerings to include important home health hazards and to create curricula that are culturally appropriate for diversifying immigrant and refugee populations. The Healthy Homes model uses diverse community members who are trained as Ambassadors to provide home-based public health education to their neighbors. Ex. 6 Personal Privacy (PP) created a performance monitoring and evaluation plan that included survey tool development and documented behavior change.

Access to Culturally Competent Care

Colon Health Rx
This two-year Maine Cancer Foundation grant addressed the incidence of colorectal cancer in Lewiston/Auburn by expanding education and screening for colorectal cancer in adult African immigrants and refugees. Working with a local Federally Qualified Health Center, Colon Health Rx connected patients to a culturally appropriate workshop on general colon health and colorectal cancer. Ex. 6 Personal Privacy (PP) led the evaluation component of this project and provided project management and data analysis.

Rural Health Transformation Initiative
Central Maine Healthcare's Rural Health Transformation Initiative, funded by Maine Health Access Foundation, served individuals living at high risk for chronic disease in Maine's rural western counties. The objective was to expand upon United Ambulance's successful Community Paramedicine Home Visit Program by adding collaborative partnerships with integrative care at outpatient levels to keep patients at home and out of the emergency department. Ex. 6 Personal Privacy (PP) was the lead for this project which included research, interviewing partners on qualitative and quantitative results, patient cost analysis, and presentations on project learnings.

Racial and Ethnic Approaches to Community Health (REACH)
This federally funded project from the U.S. Centers for Disease Control focused on helping health care agencies in central Maine increase their cultural competency to improve health care access for African immigrant and refugee populations. For this project, Ex. 6 Personal Privacy (PP) adapted national organizational assessment tools on Culturally and Linguistically Appropriate Services (CLAS) Standards for use in a structured quality improvement process with eight partner health and wellness agencies, including a local Federally Qualified Health Center and multiple hospital systems. Ex. 6 Personal Privacy (PP) served as both the program coordinator and the lead evaluator of the project.

Substance Use Prevention and Tobacco Use and Exposure Prevention

Tobacco 21 Law: Preventing Youth Smoking through Community Education
The Tobacco 21 project created a multi-platform, evidence-based, and engaging media campaign with two target audiences; teens and adults. Campaign materials were developed to target adults and teens living in the community to increase awareness and knowledge of the Tobacco 21 law and to prevent youth tobacco initiation. Ex. 6 Personal Privacy (PP) analyzed media metrics to determine the most effective ways of advertising, consulted on overall project planning, conducted focus groups, and provided a final report of all findings.

Cannabis Use Among Pregnant and Breastfeeding Women
This innovation project focused on assessing knowledge, attitudes, and beliefs relating to cannabis use among pregnant and/or breastfeeding women, and looked at the capacity for screening and treatment among health and social service providers. As part of this project Ex. 6 Personal Privacy (PP) helped design data collection tools, analysis results, created presentations and reports, and provided recommendations to partners for future planning and implementation.

Chronic Disease Prevention and Management

Maine CDC Diabetes Prevention and Control Program
Ex. 6 Personal Privacy (PP) conducted employer and insurer focus groups and interviews to develop an implementation model by which the Maine CDC's National Diabetes Prevention Program and Diabetes Self-Management and Education Support Program can be promoted and expanded in the employer community. Those learnings were then used to facilitate a strategic planning process with the Diabetes Action Alliance of Maine and to draft pilot opportunities between the Maine CDC Diabetes team, local chambers, and Maine based employers.

Healthy Maine Works (HMW) Advisory Committee Strategic Plan Development
The Maine CDC enlisted the team at Hart Consulting, Inc. to document the history and lessons learned from worksite wellness efforts supported by the agency over the past 15 years. The research conducted was then used to inform a strategic planning process for the workgroup. Ex. 6 Personal Privacy (PP) worked with the HMW team to identify goals of initiative and to develop and prioritize SMART objectives and action steps to support HMW in efforts to improve worksite wellness with businesses throughout Maine.

1.0 PROGRAM OBJECTIVES | PROJECT SUMMARY PAGE

Project Title: Nothing About Us Without Us: Scaling Non-Partisan, Community-Based Climate Action across Geographies

Project Location: Norfolk City County, Virginia; Accomack County, Virginia; Berks County, Pennsylvania; Mason County, Washington; Forrest County, Mississippi; Washington County, Mississippi; and Santa Cruz County, Arizona.

Applicant Information:

Name: The Climate Initiative
Address: Ex. 6 Personal Privacy (PP), Cape Porpoise ME 04014
Main Contact Information: Amanda Robinson, Principal Gifts Officer, amanda@theclimateinitiative.org

Brief Description of Applicant Organization

The Climate Initiative (TCI) educates, empowers, and activates youth (age 13 to 23) to local climate action through no-cost education, coalition-building, and civic engagement programs.

We believe youth are key to solving the climate challenge because they influence and foster climate concern among their parents, communities, and decision-makers. Our goal is to develop a cohesive youth voice that influences decision-makers to embrace climate solutions. TCI aims to educate, empower and activate 1 million youth to reach this goal by 2025.

Project Abstract

Our project will bring our programming to seven rural communities across five states. These states were selected through a robust analysis of the vulnerability index with an overlay of both rural locations and ones where TCI feels confident that we have the ability to make a considerable impact in the climate education space. This is further supported by data from our Mobilize platform, a digital resource that allows youth, educators and adult allies to connect based on location. This project will bring educational materials, educator retreats, leadership training for youth, and the capacity for community conversations to incorporate county-wide engagement in the climate crisis across a multitude of stakeholders and led primarily by youth and educators.

Project Type*:* Public education and training

Special Considerations: Rural Areas, Climate Change/Disaster Resiliency

Environmental Issue: Climate Education
Will you need to develop a QAPP for your project? No

B. Environmental and Public Health information of the Underserved community

The Climate Initiative (TCI) empowers youth voices for climate action. We aim to educate, empower and activate youth ages 13-23 to be climate leaders and focus on localized, tangible action.

At TCI we know that we can start a movement by engaging communities locally; and connecting with what they love and value. We believe that all voices are necessary, and we know the power of youth voices in the climate movement. TCI encourages youth to lead their communities to act locally and think globally. We know that we can solve climate change by empowering individuals to use their circles of influence to create collective action. By engaging all voices, grassroots movements can grow, influencing others, and shifting policy. In order to best engage with youth, we need a robust engagement from the communities they live in and opportunities to directly engage with educators. We offer a full suite of programming that trains educators on climate education to empower their students in classrooms as well as offer opportunities for youth to engage on specific climate action projects and leadership opportunities. Youth are key climate leaders because they often have the capacity to be agents of change less burdened by entrenched ideologies and move the hearts and minds of others in their communities.

Over the past two years we have implemented this programming in areas where we have Regional Coordinators for the youth to engage with and learn from across the United States. To access and educate as many youths as we can, we develop a very localized outreach approach geared around engaging with community leaders that are champions in climate action.

TCI plans to bring our full suite of climate education programming to seven counties across five states through this project. These localities are divided by county: Norfolk City County, Virginia; Accomack County, Virginia; Berks County, Pennsylvania; Mason County, Washington; Forrest County, Mississippi; Washington County, Mississippi; and Santa Cruz County, Arizona. These locations were selected through our analysis of the vulnerability index overlaid with an analysis of rural locations to fit the scope of the EPA request and matched with areas of growth for TCI. All regions fall within the scope of areas where we have staff managing outreach, and this project will enable us to deepen our outreach to rural areas.

The environmental and public health issues that our project seeks to address are non-partisan, science based climate education. Education is the cornerstone to change, which is critical work as we face the climate crisis. By bringing these education opportunities to rural areas, we are providing a new scope of education and leadership development that can augment under-resourced communities in a way that leads to consistent, effective strategies to address climate change.

These communities benefit from these results because they are being provided with the tools they need to be empowered to do this work. We set them up for long-term success as their needs concerning climate change continue to evolve and change. In addition, our three-year engagement with these communities is supported by a permanent online network as well as consistent access to free educational resources geared towards both youth and educators via our website. Our educational resources will always be free.

The innovativeness of our model is that we bring tested educational opportunities to communities and meet them where they are on their climate journey. Rather than going into a new area prescribing what we think the environmental issues are, we work with youth, educators and other community stakeholders to provide opportunities for education and action on what matters most to that community. That being said, we do not enter these areas uninformed and our regional coordinators to landscape analysis and community needs assessments to help guide the conversation and options for that community. This is described more in part C.

C. Organization's Historical Connection to Underserved Community | The applicant will be evaluated on the description of the strong connection between their organization and the underserved community as that term is defined in this announcement.

Norfolk City County, Virginia | TCI Regional Coordinators have conducted comprehensive landscape analyses and community needs assessments including this community. Enhanced connectivity with Virginia-based communities grows from TCI's co-founder's deep personal and familial connections within this geography. Residents (youth, educators, community members, community leaders, and organizations) have self-reported the demand and necessity for this project and will directly drive the project planning, decision-making, and execution of grant activities beyond the timeline of this grant and will be involved in the monitoring and evaluation framework ultimately applied to this project. TCI has met with great success employing the novel model of Community Conversations designed to address each community's specific local environmental and public health issues. Community Conversations, hybrid Learning Lab educational modules, Climate Action Toolkits, state-specific Policy (literacy) Toolkits, Regional Educator Retreats, National Educator Retreats, and our Youth Ambassador network are all designed to easily apply to various geographies wrestling with unique climate challenges. In just two years, Learning Labs are now used in all 50 states and 16 countries, demonstrating the efficacy of a community-based, localized approach to a global challenge.

Accomack County, Virginia | TCI Regional Coordinators have conducted comprehensive landscape analyses and community needs assessments including this community. Enhanced connectivity with Virginia-based communities grows from TCI's co-founder's deep personal and familial connections within this geography. Residents (youth, educators, community members, community leaders, and organizations) have self-reported the demand and necessity for this project and will directly drive the project planning, decision-making, and execution of grant

activities beyond the timeline of this grant and will be involved in the monitoring and evaluation framework ultimately applied to this project. TCI has met with great success employing the novel model of Community Conversations designed to address each community's specific local environmental and public health issues. Community Conversations, hybrid Learning Lab educational modules, Climate Action Toolkits, state-specific Policy (literacy) Toolkits, Regional Educator Retreats, National Educator Retreats, and our Youth Ambassador network are all designed to easily apply to various geographies wrestling with unique climate challenges. In just two years, Learning Labs are now used in all 50 states and 16 countries, demonstrating the efficacy of a community-based, localized approach to a global challenge.

Berks County, Pennsylvania | TCI Regional Coordinators have conducted comprehensive landscape analyses and community needs assessments including this community. Residents (youth, educators, community members, community leaders, and organizations) have self-reported the demand and necessity for this project and will directly drive the project planning, decision-making, and execution of grant activities beyond the timeline of this grant and will be involved in the monitoring and evaluation framework ultimately applied to this project. TCI has met with great success employing the novel model of Community Conversations designed to address each community's specific local environmental and public health issues. Community Conversations, hybrid Learning Lab educational modules, Climate Action Toolkits, state-specific Policy (literacy) Toolkits, Regional Educator Retreats, National Educator Retreats, and our Youth Ambassador network are all designed to easily apply to various geographies wrestling with unique climate challenges. In just two years, Learning Labs are now used in all 50 states and 16 countries, demonstrating the efficacy of a community-based, localized approach to a global challenge.

Mason County, Washington | TCI Regional Coordinators have conducted comprehensive landscape analyses and community needs assessments including this community. Residents (youth, educators, community members, community leaders, and organizations) have self-reported the demand and necessity for this project and will directly drive the project planning, decision-making, and execution of grant activities beyond the timeline of this grant and will be involved in the monitoring and evaluation framework ultimately applied to this project. TCI has met with great success employing the novel model of Community Conversations designed to address each community's specific local environmental and public health issues. Community Conversations, hybrid Learning Lab educational modules, Climate Action Toolkits, state-specific Policy (literacy) Toolkits, Regional Educator Retreats, National Educator Retreats, and our Youth Ambassador network are all designed to easily apply to various geographies wrestling with unique climate challenges. In just two years, Learning Labs are now used in all 50 states and 16 countries, demonstrating the efficacy of a community-based, localized approach to a global challenge.

Santa Cruz County, Arizona | TCI Regional Coordinators have conducted comprehensive landscape analyses and community needs assessments including this community. Residents (youth, educators, community members, community leaders, and organizations) have self-reported the demand and necessity for this project and will directly drive the project planning, decision-making, and execution of grant activities beyond the timeline of this grant and will be involved in the monitoring and evaluation framework ultimately applied to this project. TCI has met with great success employing the novel model of Community Conversations designed to address each community's specific local environmental and public health issues. Community Conversations, hybrid Learning Lab educational modules, Climate Action Toolkits, state-specific Policy (literacy) Toolkits, Regional Educator Retreats, National Educator Retreats, and our Youth Ambassador network are all designed to easily apply to various geographies wrestling with unique climate challenges. In just two years, Learning Labs are now used in all 50 states and 16 countries, demonstrating the efficacy of a community-based, localized approach to a global challenge.

Forest County, Mississippi | TCI Regional Coordinators have conducted comprehensive landscape analyses and community needs assessments including this community. TCI Board of Directors member (General Russel Honoré) and TCI's Southern Regional Coordinators provide enhanced connectivity with Mississippi-based communities. Residents (youth, educators, community members, community leaders, and organizations) have self-reported the demand and necessity for this project and will directly drive the project planning, decision-making, and execution of grant activities beyond the timeline of this grant and will be involved in the monitoring and evaluation framework ultimately applied to this project. TCI has met with great success employing the novel model of Community Conversations designed to address each community's specific local environmental and public health issues. Community Conversations, hybrid Learning Lab educational modules, Climate Action Toolkits, state-specific Policy (literacy) Toolkits, Regional Educator Retreats, National Educator Retreats, and our Youth Ambassador network are all designed to easily apply to various geographies wrestling with unique climate challenges. In just two years, Learning Labs are now used in all 50 states and 16 countries, demonstrating the efficacy of a community-based, localized approach to a global challenge.

Washington County, Mississippi | TCI Regional Coordinators have conducted comprehensive landscape analyses and community needs assessments including this community. TCI Board of Directors member (General Russel Honoré) and TCI's Southern Regional Coordinators provide enhanced connectivity with Mississippi-based communities. Residents (youth, educators, community members, community leaders, and organizations) have self-reported the demand and necessity for this project and will directly drive the project planning, decision-making, and execution of grant activities beyond the timeline of this grant and will be involved in the monitoring and evaluation framework ultimately applied to this project. TCI has met with great success employing the novel model of Community Conversations designed to address each

community's specific local environmental and public health issues. Community Conversations, hybrid Learning Lab educational modules, Climate Action Toolkits, state-specific Policy (literacy) Toolkits, Regional Educator Retreats, National Educator Retreats, and our Youth Ambassador network are all designed to easily apply to various geographies wrestling with unique climate challenges. In just two years, Learning Labs are now used in all 50 states and 16 countries, demonstrating the efficacy of a community-based, localized approach to a global challenge.

D. EJCPS Model

Our project focuses on the following aspects of the EJCPS model:

(1) **Issue Identification, Community Vision and Strategic Goal Setting** - prior to applying for funding we completed a portion of this element in the lens of establishing our project goals and identifying the communities we aimed to serve. This work will further be augmented once we begin the full scope of the project where we will work with youth and educators to identify the main programmatic goals each county will have.

(2) **Community Capacity-Building and Leadership Development** - the bulk of our work will be within this element as the primary goal of this project is to equip youth and educators with the tools they need to experience non-partisan, science based climate action and begin the process of teaching and working as a community to address the most pressing climate issues in their county. These issues will range from rising sea level and heat to risks of wildfires and tornadoes, as well as impacts of flooding and droughts. Our online suite of resources enable educators to incorporate critical information about these topics as well as toolkits for community and individual action opportunities.

(4) **Multi-Stakeholder Partnerships & Leveraging of Resources -** part of our programming focuses on community conversations, which are opportunities for youth to lead conversations around the climate risks in the area and for all stakeholders to come together in a place of learning and earnest discussion on paths forward. These multi-stakeholder events allow communities to see a wide cross-section of opinions, concerns and opportunities and enable them to have honest conversations on the pathways available and to create the roadmaps to further community awareness, to mitigate adverse impacts and participate in the collaborative problem solving process.

E. Project Linkages | Please describe the following: Briefly describe how the project support EPA Strategic Plan Goal 2 Object 2.1 (Promote Environmental Justice and Civil Rights at the Federal, Tribal, State and Local Levels

Our project supports the EPA Strategic Plan Goal 2 Object 2.1 (Promote Environmental Justice and Civil Rights at the Federal, Tribal, State and Local Levels through our focus of seven rural counties across five states in the United States enables us to bring this work to areas that are in need of augmented climate support to anticipate, prepare for, adapt to and recover from the impacts of climate change. Each community will have the opportunity to adapt these resources to the most pressing climate needs that they are facing, making our national resources have extremely localized impacts that will best serve these communities rather than a one-size-fits-all approach.

F. Partner and Collaborate | As we have demonstrated in our proof of concept and pilot programming in Maine, California, Louisiana, Texas, Montana, and Florida, the proposed project will initiate and strengthen partnerships with government, NGOs, businesses, and educational institutions. Rollouts of TCI programming such as that which we are proposing here have engaged diverse local stakeholders in our trademark non-partisan format, and developed solutions that have addressed issues at the intersections of environmental and public health. This project will build upon our existing acumen with strategic and diverse partnerships for responsible project implementation towards longevity and localized empowerment of existing community stakeholders. Community partners will bring connectivity, deep local/institutional knowledge of challenges and interventions, a passion for improving the health and well-being of the places and people that they represent and love, and a specific and scalable approach to addressing community issues at large - beyond the scope of this grant and beyond the issues at the intersection of environment and public health. Through our Monitoring and Evaluation framework (developed with third-party consultants, PEER Associates), combined with pre and post community assessments (by community-based respondents affiliated with and also affected by the project) and continued educational resource and training (as needed) support and relationship-building from TCI Regional Coordinators and TCI Youth Ambassadors, community partners will be ideally suited for empowerment towards amelioration.

2.0 PROJECT ACTIVITIES / MILESTONE SCHEDULE / DETAILED

A | Project Activities

Our nationwide goal is that The Climate Initiative will engage 1 million youth in solutions-oriented, equitable climate action in support of meaningfully reducing the impacts of the climate crisis. In order to do this, we have three levels of engagement that we divide our work into. They are Level 1: Awareness, Level 2: Education, and Level 3: Empowerment. These levels work as a funnel, with an organization wide goal of building wide awareness and working towards empowering youth to be climate leaders. We have several strategies towards this work, as explained below:

Level 1: Awareness | Through organic social media content geared towards youth 12-23 and social media ad contact for educators, number of email sign ups and website views, we track and develop strategies to get our resources in front of a wide variety of educators and youth. The engaging content takes climate education and opportunities to engage with fellow youth and educators into bite size media opportunities that over time, build awareness.

Level 2: Education | This level assesses the number of folks that are educated with TCI resources. Here we are tracking the number of folks using educator and youth learning labs, the number of individuals introduced to those learning labs, engagement on our digital platform Mobilize, and the number of teachers attending National Teacher retreats. This also encompasses our policy work through the number of policy toolkits.

Level 3: Empowerment | This level of activity focuses on the number of youth participating in TCI programming. This includes Community Conversations, Learning Labs, Climate Action toolkits, policy toolkits, and participation in our Collegiate Climate Policy Toolkits.

Descriptions of our core programming we will provide to each of the seven counties include:

(1) Learning Lab Educational Modules educate youth on environmental issues prevalent in their communities and activate them to create and employ projects outside of the classroom that directly address the issues that are most important to them. Our work to this effect has created access via: beach cleanups, living shoreline monitoring/setup, saving landmarks like Maine's Goat Island, invasive species monitoring and removal, field studies courses, urban heat island monitoring, and providing educators with training

on incorporating outdoor education seamlessly into their curricula. Learning Labs are being used in all 50 states;

(2) Community Conversations: We provide leadership training to youth so that they can bring together all community stakeholders for positive, productive, solutions-oriented discussions on local cherished outdoor spaces and how to preserve and improve them. Community Conversations bring equitable representation to the table. Presently, we are engaged in an 18-month program with the towns of Kennebunkport and Kennebunk on providing extensive community conversations and town surveys to assess attitudes and proposed community solutions to climate change, with a particular focus on sea level rise. We are eager to bring our lessons learned from this program to more community conversations in other towns in Maine;

(3) **Climate Action Projects:** Each Learning Lab concludes with the task of creating climate action projects. Youth receive training/guidance/support and stipends to make their action projects reality. Funding and support ensure that under-resourced youth who want to participate can do so; and

(4) **Educator Retreats:** Our educator retreats meet the educator demand for professional development in environmental science and teaching climate science inside and outside of the classroom. The retreats are low to no cost for educators and give them the tools to bring environmental concepts and apply them outside of their classrooms.

B | Milestone Schedule

Milestone	**Month of Completion**	**Activities**
Project Launch	August 2023	Project plan finalized and evaluation plan finalized
Hiring of grant program manager	September 2023	A grant program has been hired to support all grant reporting needs and to facilitate effective project management across TCI roles
Fellows hired in targeted communities	October 2023	Youth fellows - aged 18+ are hired in each of the seven counties

Baseline Assessment Data Collection	October 2023	Youth fellows and educators have completed baseline data collection
Level 1: Awareness - public/youth brand recognition and becoming aware of TCI	October 2023 - 2026	Building awareness with youth in these counties. Strategies focus on social media outreach, connecting with local nonprofits, churches, city councils and other opportunities to engage digitally and in person.
Level 2: Education - number of people educated with TCI resources	October 2023 - 2026	Providing direct educator opportunities via Learning Labs and our online toolkits and in person/virtual event opportunities such as educator retreats
Level 3: Empowerment - number of youth participating in TCI programming	October 2023 - 2026	One on one engagement with fellows, youth in the counties and other methods for engaging with youth.
Level 4: Action - high level engagement, interns and mitigation	October 2023 - 2026	Supporting youth in developing and executing leadership opportunities in the climate space.
Yearly Program Evaluation	Annually in October	Annual evaluation of program metrics
Final Evaluative Summary	November 2026	Evaluation of entire program.

3.0 ENVIRONMENTAL RESULTS - OUTPUTS, OUTCOMES AND PERFORMANCE MEASURES

Environmental Results (Logic Model) – Please find in attachments.

Performance Measurement Plan – TCI employs a robust tripartite approach to performance assessment. For this proposed project, and historical projects (details can be provided upon request), we implement weekly internal tracking, reporting, analysis, and optimization of Objectives and Key Results (included in the Logic Model/Theory of Change and referenced as Milestones in this application), Key Performance Indicators (more detailed internal tracking on different depth categories of programmatic reach), and the Monitoring and Evaluation Framework developed with third-party consultants (PEER Associates) and funded by the Gordon and Betty Moore Foundation. These instruments are enhanced by the oversight and monitoring and evaluation by an Accelerator Program Fellow provided by the Morgridge Family Foundation and an Atlas Corps fellow onboarding and (fully funded separately) to ensure objective reporting and performance assessment relative to milestones and existing organizational metrics through the project's duration.

Sustainability Plan and Community Vision - TCI and local community stakeholders will be able to use the results and momentum of this project to achieve community goals and objectives. Marketing campaigns by age range and geography that have been used in other pilot program locations will leverage the outcomes of this project; especially the model for implementation and the applicability to other local communities facing a number of challenges. The communities have a direct interest in sustaining project momentum.

4.0 Project Leadership

Our Programs team is led by Leia Lowery, the Deputy Executive Director and Head of Programs and Partnerships. She brings over 20 years of experience in education, curriculum development, and community engagement, specializing in facilitating dynamic educational experiences that create critical thinkers, life-long learners, and productive citizens. As a co-founder of the Kennebunkport Climate Initiative, the programs she helped create continue to inspire The Climate Initiative's programmatic approach and youth impact. She is a speaker and trainer at national conferences and her passion has led to innovations in local programs. Her work as an educator and community building resulted in her winning the Gulf of Maine Council Visionary Award in 2019, as well as her programs being featured in the National Land Trust Alliance magazine. The work is supported by our Assistant Director of Programs and Education Lead, as well as supplemented by our regional coordinators and fellows. In particular, we be hiring a

grants program manager for this project as well as five fellows for each of the states doing this work.

5.0 Past Performance

King Philanthropies ($6 million): TCI successfully managed and completed multiple years of reporting. TCI provided adequately and timely reporting (in person and via detailed narrative and financial reporting), meeting reporting requirements and expected outputs and outcomes and submitting exceptional final reports.

Elmina B. Sewall Foundation ($15,000): TCI successfully managed and completed reporting in a timely manner via narrative and financial reporting, meeting reporting requirements and expected outputs and outcomes and submitting an exceptional final report; a grants program to which we were invited to apply again this year.

David and Lucile Packard Foundation ($250,000): This is an active grant. TCI has thus far successfully managed the project and provided in-person reporting to existing and new officers, exceeding reporting requirements and tracking/meeting outcomes and outputs.

Gordon and Betty Moore Foundation ($212,500): This is an active grant. TCI has thus far successfully managed the project and provided reporting to program officers, exceeding reporting requirements and tracking/meeting outcomes and outputs.

Hewlett Foundation ($200,000): TCI successfully managed and completed mid-year and final reporting in a timely manner, exceeding reporting requirements and expected outputs and outcomes.

6.0 Quality Assurance Project Plan (QAPP) Information

Our project will utilize existing environmental data.

The Climate Initiative Budget Detail & Descriptions

	Description	Total
Personnel	One full time grant program manager One part time fellow per State (5 states at $20 per hour average 15 hours/week)	$50,000 x 3 = $150,000 $78,000 x 3 = $234,000
Fringe Benefits	Budgeted at 15% of personnel costs	$57,600
Travel	Travel within selected communities and site visits from The Climate Initiative Headquarters staff	$9,400
Equipment	Laptop stipend for new full time staff ($1000 per new hire) Work from home office stipend ($300 per new hire)	$1,000
Supplies		
Contractual	Monitoring and Evaluation services, provided by Peer and Associates ($5,000 per year for three years) Teacher Engagement Contracts (Approx $1500 per teacher engagement x approx 5 teachers)	$3,500 x 3 = $10,500 $7,500 x 3 = $22,500
Construction	n/a	n/a
Indirect Costs	n/a	n/a
Other	Youth and Teacher Outreach via Social Media Advertising	$5000 x 3 = $15,000

		TOTAL: $500,000

The Climate Initiative (TCI) Logic Model

v4c, 8-22-22

If by 2025 we engage 1 million youth in <u>solutions-oriented</u>, equitable climate action, then we will meaningfully reduce the impacts of the global climate crisis

*The **LONG TERM GOAL** is to empower youth voices to grow a generation of actively engaged community members, decision makers, and leaders*

What We Do

work directly with **Youth**

- Ambassador program
- Policy Toolkits
- Climate Action Toolkits
- Competitions | Youth Action Grants
- Learning Lab | Student Lab
- Stories of Change program
- Social media

support **Educators**

- Learning Lab
- Climate Educator Retreats
- Stories of Change program
- Social media | Mobilize community

engage **Communities**

- TCI Events
- Community Conversations
- Outgoing grants
- Partner with businesses, non-profits, municipal, state, tribal, territorial governments

promote **Principles**

- Be scientific
- Prioritize equity
- Be non-partisan
- Invest in networks
- Embrace urgency
- Focus locally
- Invoke curiosity, passion for knowledge
- Embrace kindness

How Youth Change

Educate

Demystify climate change via tangible solutions

- Youth understand how ***global*** climate issues affect their ***local*** community
- Youth understand the "3 lenses," i.e., the ***interconnectedness*** of ecological, socio-cultural, and economic concerns in their community

Empower

Instill in youth a sense of agency & leadership

- Youth effectively identify and ***champion*** actions and solutions
- Youth find and build ***hope***
- Youth use their ***voice*** to inspire engagement
- Youth see themselves as climate ***leaders***

Activate

Catalyze youth to engage community leaders

- Youth seek out and bring divergent, intergenerational, multicultural, &/or indigenous ***perspectives*** to climate solutions
- Youth ***engage*** multiple stakeholders throughout the action projects

Youth Action Pyramid

Greater youth agency, initiative, commitment

Greater reach, more TCI-driven

Level 5 — <u>Many</u> youth become "<u>High Level Change Agents</u>" by
- Collaborating to implement significant ***policy changes*** or major climate ***adaptation/mitigation projects***
- Holding ***leadership positions*** in groups and organizations

Examples: Representing TCI conferences, spearheading changes to policy, raising funds for or inventing climate friendly technologies, helping to create sustainability plans, etc.

Level 4 — <u>250,000</u> youth become "<u>Grassroots Change Agents</u>" by
- Choosing *education paths or careers* that intersect with climate and sustainability
- Mobilizing local leaders and organizations
- Taking initiative to *develop projects* as a TCI ambassador

Examples: presenting project ideas to local community leadership,, initiating energy conservation campaign, organizing community conversations, utilizing the TCI policy toolkits to drive policy change, etc.

Level 3 — <u>500,000</u> youth take "<u>Collective Action</u>" by
- *Volunteering* with TCI and/or partner organizations
- Participating in *Learning Labs*
- Attending *community conversations or TCI events*

Examples: writing letters/articles for news media, attending CCPI, implementing Climate Action Toolkits, webinars, etc.

Level 2 — <u>1 million</u> youth take "<u>Individual Action</u>" by
- Making climate friendly individual *lifestyle changes*
- *Interacting* with TCI social media or content resources

Examples: changing consumption habits, toolkit downloads, read/generate sharable resources, Ambassador sign-up, social media followers, email sign-ups, etc.

Level 1 — <u>25 million</u> youth made "<u>Aware of TCI mission</u>" via communications

Examples: Social media organic and paid content reach and website views.

ED_016126_00000083-00003

Dear Environmental Protection Agency Environmental Justice Collaborative Problem-Solving (EJCPS) Cooperative Agreement Program,

I am writing to express my full support for The Climate Initiative's (TCI) grant proposal focused on climate resiliency and adaptation, as well as facilitating the engagement of marginalized communities in Local, State, and Federal public processes. As an advisory board member of TCI and a long-standing international leader in the climate space, I have had the opportunity to witness first-hand the challenges faced by communities affected by climate change, especially those who are most vulnerable. As an atmospheric scientist, I firmly see climate action as a paramount, and understand the pivotal role that youth serve in communicating and advocating for climate action to protect the places we love.

The Climate Initiative's proposal addresses a critical need in our society today, focused on the most vulnerable communities as determined by the Center for Disease Controls' vulnerability index, prioritizing rural communities, which often are overlooked. With the increasing threats posed by climate change, it is essential that we take proactive measures to build resilience and adaptive capacity in our communities. The proposed activities, such as community conversations, teacher engagement, advisory groups, and workshops, will allow youth and diverse voices to be heard and incorporated into the decision-making processes.

I continue to be impressed by The Climate Initiative's commitment to engaging marginalized communities in these processes. These groups have historically been underrepresented in decision-making processes and have borne the brunt of the impacts of climate change. By providing a platform for communication and amplifying their voices, The Climate Initiative is helping to ensure that the solutions developed are equitable, effective, and sustainable.

I believe The Climate Initiative's proposal aligns well with the priorities and objectives of your granting agency. Their track record of success and commitment to community engagement makes them an ideal recipient of this grant. I strongly encourage you to support The Climate Initiative's proposal, as I am confident that it will have a significant positive impact on our communities and our environment.

Thank you for your consideration.

Sincerely,

Katherine Hayhoe

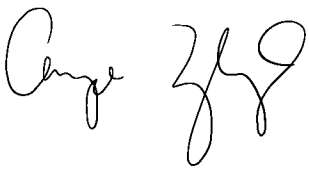
To whom it may concern at the Environmental Protection Agency,

I am writing to express my strong support for The Climate Initiative's grant proposal for the Environmental Protection Agency Environmental Justice Collaborative Problem-Solving (EJCPS) Cooperative Agreement Program. The proposal also prioritizes climate resiliency and adaptation and facilitates engagement of marginalized communities in Local, State, and Federal public processes, such as advisory groups, workshops, and rulemaking, with a specific focus on rural communities.

As a first-generation Asian-American Harvard sophomore studying economics and environmental science public policy, I have been a long-time advocate of the importance of mobilizing youth voices for climate action, ranging from stages such as COP15 and COP27 to local youth summits. My research indicates that the Climate Initiative's proposal aligns well with the priorities and objectives of your granting agency. The proposed activities will help more forward community-led conversations and action on air and other pollution monitoring, prevention, and remediation, and investments in low- and zero-emission and resilient technologies and related infrastructure and workforce development that help reduce greenhouse gas emissions and other air pollutants, climate resiliency, and adaptation, and facilitating engagement of marginalized communities in Local, State and Federal public processes, such as advisory groups, workshops, and rulemakings. The Climate Initiative promotes sustainable and equitable climate action, which is critical for the long-term well-being of our society and environment.

I am particularly impressed by The Climate Initiative's commitment to engaging youth in climate action, which is the core of TCI's operating model. This approach recognizes that the most effective solutions are those that are developed in partnership with the communities affected by these issues. By engaging communities in these processes, The Climate Initiative is empowering them to take control of their environmental health and well-being.

In addition, I appreciate The Climate Initiative's focus on engaging marginalized communities in nonpartisan Local, State, and Federal public processes. These communities have historically been underrepresented in decision-making processes and have borne a disproportionate burden of the impacts of climate change. By prioritizing their engagement, The Climate Initiative is helping to ensure that the solutions developed are equitable and effective.



Finally, I commend The Climate Initiative for focusing on rural communities in this proposal. These communities often face unique challenges related to climate change and environmental degradation and may have limited access to resources and opportunities. By prioritizing their needs and concerns, The Climate Initiative is helping to build more resilient and sustainable rural communities.

Overall, I believe The Climate Initiative's proposal is a strong and worthy candidate for your grant funding. Their commitment to community-led solutions, equitable engagement, and rural

development makes them an ideal recipient of this grant. I strongly encourage you to support The Climate Initiative's proposal.

Sincerely,

Angela Zhong

LTG Russel L. Honoré

Ex. 6 Personal Privacy (PP)

Baton Rouge, LA 70810

April 11, 2023

Dear Environmental Protection Agency Environmental Justice Collaborative Problem-Solving (EJCPS) Cooperative Agreement Program,

I am writing to express my full support for The Climate Initiative's (TCI) grant proposal focused on climate resiliency and adaptation, as well as facilitating the engagement of marginalized communities in Local, State, and Federal public processes. As a board member of TCI and a long-standing international leader on the topic of resilience, I have had the opportunity to witness first-hand the challenges faced by communities affected by climate change, especially those who are most vulnerable. As a decorated 37-year army veteran, I firmly see climate action as a national security issue, and the pivotal role that youth serve in correcting the fight for climate action to protect the places we love.

The Climate Initiative's proposal addresses a critical need in our society today, focused on the most vulnerable communities as determined by the Center for Disease Controls' vulnerability index, prioritizing rural communities, which often are overlooked. With the increasing threats posed by climate change, it is essential that we take proactive measures to build resilience and adaptive capacity in our communities. The proposed activities, such as community conversations, teacher engagement, advisory groups, workshops, and rulemaking, will allow youth and diverse voices to be heard and incorporated into decision-making processes.

In particular, I am impressed by The Climate Initiative's commitment to engaging marginalized communities in these processes. These groups have historically been underrepresented in decision-making processes and have borne the brunt of the impacts of climate change. By providing a platform for their voices to be heard, The Climate Initiative is helping to ensure that the solutions developed are equitable, effective, and sustainable.

I believe The Climate Initiative's proposal aligns well with the priorities and objectives of your granting agency. Their track record of success and

commitment to community engagement makes them an ideal recipient of this grant. I strongly encourage you to support The Climate Initiative's proposal, as I am confident that it will have a significant positive impact on our communities and our environment.

Thank you for your consideration.

Respectfully,

Russel L. Honoré
LTG, USA Ret.

Director of Programs and Outreach

Innovative thought leader in education and community building, engaging all people through dynamic educational experiences to produce a passion for the environment, lifelong learning, and community action.

Career Profile

Innovative Educator using best practices to create effective new educational experiences

Community Engagement Leader connecting communities with youth to create solutions to pressing community issues such as climate change, alternative learners, and health.

Public Speaker and Trainer for educators and land trusts building their education models

Partnership Development connecting likeminded organizations to build capacity, and amplify missions and work toward common goals.

Work Experience

Director of Programs and Outreach

The Climate Initiative - November 2019-present

- Worked with major donors to establish the Kennebunkport Climate Initiative leading to over 2 million dollars in donations.
- Hired leadership team to establish business strategic plan.
- Filed for and organized initial 501c3 status and documentation.
- Created initial pilot programs including #speakclimate campaign reaching 20,000 youth through social media engagement.
- Led initial meetings to engage potential program partners and future funders.
- Hired Executive Director for the Kennebunkport Climate Initiative.
- Designed and developed core programming including curriculum materials currently in 42 states, and reaching over 18,000 students across the country
- Wrote copy for KCI (now TCI) Website
- Manage 8 remotely located staff
- Manage and maintain regional and national partnerships to scale efforts
- Designed and run 1 week national teacher retreat to train teachers in the TCI program methodology

Director of Education

Kennebunkport Conservation Trust · March 2010 - Present

- Responsible for the vision, development and promotion of programming for the Kennebunkport Conservation Trust's Trust in Education program.
- Created new partnership and a dual enrollment class with University of New England and Kennebunk High School.
- Increase program reach from ~200 students to over 1,900 per year.
- Develop curriculum consistent with the National Education Standards.
- Coordinate summer programming and fundraising activities for Trust in Education.
- Create and execute effective recruitment strategies to develop and maintain volunteer corps.
- Facilitate training seminars for teachers and land trust educators in community -based stewardship.
- Train, coach, and develop education support staff.
- Create newsletters, social media campaigns, and other communication strategies to engage community with Trust in Education.

Dear Applicant:

We're pleased to tell you we determined you're exempt from federal income tax under Internal Revenue Code (IRC) Section 501(c)(3). Donors can deduct contributions they make to you under IRC Section 170. You're also qualified to receive tax deductible bequests, devises, transfers or gifts under Section 2055, 2106, or 2522. This letter could help resolve questions on your exempt status. Please keep it for your records.

Organizations exempt under IRC Section 501(c)(3) are further classified as either public charities or private foundations. We determined you're a public charity under the IRC Section listed at the top of this letter.

If we indicated at the top of this letter that you're required to file Form 990/990-EZ/990-N, our records show you're required to file an annual information return (Form 990 or Form 990-EZ) or electronic notice (Form 990-N, the e-Postcard). If you don't file a required return or notice for three consecutive years, your exempt status will be automatically revoked.

If we indicated at the top of this letter that an addendum applies, the enclosed addendum is an integral part of this letter.

For important information about your responsibilities as a tax-exempt organization, go to www.irs.gov/charities. Enter "4221-PC" in the search bar to view Publication 4221-PC, Compliance Guide for 501(c)(3) Public Charities, which describes your recordkeeping, reporting, and disclosure requirements.

Sincerely,

Stephen A. Martin

I have reviewed the information provided by the applicant/recipient and hereby certify that the applicant/recipient has submitted all preaward compliance information required by 40 C.F.R. Parts 5 and 7; that based on the information submitted, this application satisfies the preaward provisions of 40 C.F.R. Parts 5 and 7; and that the applicant has given assurance that it will fully comply with all applicable civil rights statures and EPA regulations.

A. *Signature of Authorized EPA Official	B. Title of Authorized Official	C. Date

Instructions for EPA FORM 4700-4 (Rev. 04/2021)

General. Recipients of Federal financial assistance from the U.S. Environmental Protection Agency must comply with the following statutes and regulations.
Title VI of the Civil Rights Acts of 1964 provides that no person in the United States shall, on the grounds of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. The Act goes on to explain that the statute shall not be construed to authorize action with respect to any employment practice of any employer, employment agency, or labor organization (except where the primary objective of the Federal financial assistance is to provide employment). Section 13 of the 1972 Amendments to the Federal Water Pollution Control Act provides that no person in the United States shall on the ground of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under the Federal Water Pollution Control Act, as amended. Employment discrimination on the basis of sex is prohibited in all such programs or activities. Section 504 of the Rehabilitation Act of 1973 provides that no otherwise qualified individual with a disability in the United States shall solely by reason of disability be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. Employment discrimination on the basis of disability is prohibited in all such programs or activities. The Age Discrimination Act of 1975 provides that no person on the basis of age shall be excluded from participation under any program or activity receiving Federal financial assistance. Employment discrimination is not covered. Age discrimination in employment is prohibited by the Age Discrimination in Employment Act administered by the Equal Employment Opportunity Commission. Title IX of the Education Amendments of 1972 provides that no person in the United States on the basis of sex shall be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity receiving Federal financial assistance. Employment discrimination on the basis of sex is prohibited in all such education programs or activities. Note: an education program or activity is not limited to only those conducted by a formal institution. 40 C.F.R. Part 5 implements Title IX of the Education Amendments of 1972. 40 C.F.R. Part 7 implements Title VI of the Civil Rights Act of 1964, Section 13 of the 1972 Amendments to the Federal Water Pollution Control Act, and Section 504 of The Rehabilitation Act of 1973.

Items "Applicant" means any entity that files an application or unsolicited proposal or otherwise requests EPA assistance. 40 C.F.R. §§ 5.105, 7.25. "Recipient" means any State or its political subdivision, any instrumentality of a State or its political subdivision, any public or private agency, institution, organizations, or other entity, or any person to which Federal financial assistance is extended directly or through another recipient, including any successor, assignee, or transferee of a recipient, but excluding the ultimate beneficiary of the assistance. 40 C.F.R. §§ 5.105, 7.25. "Civil rights lawsuits and administrative complaints" means any lawsuit or administrative complaint alleging discrimination on the basis of race, color, national origin, sex, age, or disability pending or decided against the applicant and/or entity which actually benefits from the grant, but excluding employment complaints not covered by 40 C.F.R. Parts 5 and 7. For example, if a city is the named applicant but the grant will actually benefit the Department of Sewage, civil rights lawsuits involving both the city and the Department of Sewage should be listed. "Civil rights compliance review" means: any federal agency-initiated investigation of a particular aspect of the applicant's and/or recipient's programs or activities to determine compliance with the federal non-discrimination laws. Submit this form with the original and required copies of applications, requests for extensions, requests for increase of funds, etc. Updates of information are all that are required after the initial application submission. If any item is not relevant to the project for which assistance is requested, write "NA" for "Not Applicable." In the event applicant is uncertain about how to answer any questions, EPA program officials should be contacted for clarification.

Dear Applicant:

We're pleased to tell you we determined you're exempt from federal income tax under Internal Revenue Code (IRC) Section 501(c)(3). Donors can deduct contributions they make to you under IRC Section 170. You're also qualified to receive tax deductible bequests, devises, transfers or gifts under Section 2055, 2106, or 2522. This letter could help resolve questions on your exempt status. Please keep it for your records.

Organizations exempt under IRC Section 501(c)(3) are further classified as either public charities or private foundations. We determined you're a public charity under the IRC Section listed at the top of this letter.

If we indicated at the top of this letter that you're required to file Form 990/990-EZ/990-N, our records show you're required to file an annual information return (Form 990 or Form 990-EZ) or electronic notice (Form 990-N, the e-Postcard). If you don't file a required return or notice for three consecutive years, your exempt status will be automatically revoked.

If we indicated at the top of this letter that an addendum applies, the enclosed addendum is an integral part of this letter.

For important information about your responsibilities as a tax-exempt organization, go to www.irs.gov/charities. Enter "4221-PC" in the search bar to view Publication 4221-PC, Compliance Guide for 501(c)(3) Public Charities, which describes your recordkeeping, reporting, and disclosure requirements.

Sincerely,

Stephen A. Martin
Director, Exempt Organizations

U.S. Environmental Protection Agency

RE: Support for Green Beverly proposal to *The Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program*

To whom it may concern:

The City of Beverly is an enthusiastic supporter of the Green Beverly proposal to *The Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program* for the project titled "*Equitable Clean Air and Climate Relief Pilot.*"

The purpose of this project is to design and pilot a building decarbonization model within Beverly's environmental justice communities to distribute cost savings realized from heat pump technology to tenants and landlords. Renters will benefit from improved cooling on hot summer days, cleaner air quality, and comfortable heating during the winter. Landlords benefit from infrastructure updates and more manageable investment returns than available through existing energy efficiency programs.

This project aligns well with our Beverly & Salem Energy Challenge, launched after the completion of the City's climate action and resilience plan, designed to help residents access energy efficiency benefits, save money, and feel more comfortable at home year-round. To meet our target of reducing greenhouse gas emissions by 50% by 2030, we need to quickly scale decarbonization, especially in Beverly's existing aged housing stock. Tenant-occupied units are a priority group for our outreach given historically low participation in existing energy programs, and we are optimistic that this project led by Green Beverly can help to creatively bridge the split incentive issue between landlords and tenants and improve quality of life for our community members.

The City of Beverly Sustainability Office will serve as an active member and contribute to project planning and partnership development with our local institutions serving our EJ

DocuSign Envelope ID: 00F34B86-4635-4457-ABA5-358E9BEB94FF

community. I strongly encourage the U.S. Environmental Protection Agency to support this proposal.

Please contact me with any questions. I can be reached at Ex. 6 - Personal Privacy (PP) or by email at ekeefe@beverlyma.gov.

Sincerely,

Michael S. Regan
Administrator
Environmental Protection Agency

Re: Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program (EPA-R-OEJECR-OCS-23-01)

Dear Administrator Regan:

It is my pleasure to support this collaborative application led by Maverick Landing Community Services Inc. (MLCS). The proposed project, *"Leveraging Pandemic Response Networks and Social Cohesion to Develop a Community Resiliency HUB and Emergency Response Plan for Disadvantaged Communities in East Boston,"* aims to promote community and coastal resiliency.

The Executive Director of MLCS was named the 2020 City of Boston Community Champion by the Mayor's Office of Immigrant Advancement, in recognition of her organization's proven track record of serving the East Boston community. Throughout the pandemic, MLCS played a crucial role in providing food, housing assistance, and other vital services to residents, demonstrating its capacity to serve as a strong resiliency HUB in times of crisis. Their dedication and commitment to the community make them an ideal lead applicant for this project.

In collaboration with core partners that include Neighbors United for a Better East Boston, Veronica Robles Cultural Center, and Mutual Aid Eastie, which all run strong neighbor-to-neighbor models of support, the project will ensure deep reach among vulnerable communities. This project will engage a planning committee of East Boston residents in a problem-solving process that deepens leadership and understanding from vulnerable communities and results in the development of a community-informed East Boston HUB resiliency plan.

Additional partners include the Office of Technical Assistance and Technology at the Massachusetts Executive Office of Energy and Environmental Affairs, and the Northeast Waste Management Officials Association, which will provide training and technical assistance on locating contaminated sites, solid waste facilities and toxics users. Their local, specialized knowledge will help the East Boston community learn how to become more adaptable to climate and ecological conditions.

The City of Boston's current Natural Hazards Mitigation Plan provides for specific responses and interventions in East Boston, based on its vulnerability to coastal flooding,

existing heat islands, peninsular location, and concentrations of environmental justice populations. Maverick Landing Community Services and their collaborating partners can build on land use planning and coastal resiliency projects led by the Boston Environment Department and the Boston Planning and Development Agency, which center community engagement in their strategic initiatives. The Boston Office of Emergency Management will provide guidance to community leaders and resiliency corps members on best practices for equitable community emergency response, as well as access to climate resiliency plans from partner agencies across the country to help develop a climate adaptation and emergency preparedness plan that caters specifically to East Boston population groups.

The National Institute of Building Sciences estimates that every $1 of federal grants spent on mitigation saves $6 in recovery costs after an extreme event. By integrating and leveraging the expertise of these community and government partners, the project will create a comprehensive and collaborative approach to building a more resilient East Boston. I hope you find that this application meets EPA's goals for collaborative problem solving that is led by the communities most deeply affected. Your thoughtful consideration is appreciated.

Sincerely,

Michelle Wu

Re: Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program (EPA-R-OEJECR-OCS-23-01)

Dear Administrator Regan:

The United Way is pleased to write this letter of support for this collaborative application led by Maverick Landing Community Services Inc. (MLCS) on the proposed project, "Leveraging Pandemic Response Networks and Social Cohesion to Develop a Community Resiliency HUB and Emergency Response Plan for Disadvantaged Communities in East Boston."

I understand this project aims to promote coastal and community resiliency over the next three years by engaging a planning committee of East Boston residents in a problem-solving process that deepens leadership and understanding from vulnerable communities and results in the development of a community-informed East Boston HUB resiliency plan.

The United Way has recently funded MLCS with a one-year $16,000 visioning grant that will help this constellation of partners who have been working together since the pandemic to continue to envision the ways in which they will continue to work together to support a strong community fabric of support for vulnerable communities in East Boston.

I am delighted to see that while this award has not been formally announced yet, they are continuing to find ways to resource their work together to ensure that East Boston's most vulnerable population sustains resilience and health through the pandemic and whatever will follow during this critical point in time as we continue to face economic and environmental challenges.

Finally, in addition to being the United Way's CEO, I'm also a resident of East Boston and can say first hand that the community of East Boston will benefit greatly from a project that centers equity and the continued health of its most vulnerable community members.

Sincerely,

Re: Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program (EPA-R-OEJECR-OCS-23-01)

Dear Administrator Regan:

It is my pleasure to support this collaborative application led by Maverick Landing Community Services Inc. (MLCS). The proposed project, *"Leveraging Pandemic Response Networks and Social Cohesion to Develop a Community Resiliency HUB and Emergency Response Plan for Disadvantaged Communities in East Boston,"* aims to promote community and coastal resiliency.

Over the past three years, I have met, collaborated, and built meaningful ventures with the entire staff and team at MLCS. I was incredibly impressed with their thoughtfulness and commitment to their work and their strong collective approach, which I have found through my experiences and interaction with folks, to be authentically connected to the communities they serve and strongly rooted to the ideals and ethos of transformational social justice work in our region. During the height of the COVID-19 pandemic, MLCS was one of our most trusted partners and allies bringing unique perspectives and thought partnership that increased our learning and reflections going forward. This helped us provide meaningful funding and impactful partnerships to others in the sector.

I understand The Executive Director of MLCS was named the 2020 City of Boston Community Champion by the Mayor's Office of Immigrant Advancement, in recognition of her organization's proven track record of serving the East Boston community. Throughout the pandemic MLCS played a crucial role in providing food, housing assistance, and other vital services to residents, demonstrating its capacity to serve as a strong resiliency HUB in times of crisis. Their dedication and commitment to the community make them an ideal lead applicant for this project.

This project is a special consideration impact project with its focus on equitable assessment of the environmental dangers posed to the vulnerable Latinx immigrant community health in East Boston and is led in collaboration with core partners that know and represent this community well. These are the people closest to the pain. They include: Neighbors United for a Better East Boston, Veronica Robles Cultural Center, and Mutual Aid Eastie, which all run strong neighbor-to-neighbor and community models of support. This collaboration of partners will ensure deep reach among vulnerable communities. This project will engage a planning committee of East Boston residents in a problem-solving process that deepens leadership and understanding from vulnerable communities and results in the development of a community-informed East Boston HUB resiliency plan.

Additional partners include the Office of Technical Assistance and Technology at the Massachusetts Executive Office of Energy and Environmental Affairs, and the Northeast Waste Management Officials Association, which will provide training and technical assistance on locating contaminated sites, solid waste facilities and toxics users. Their local, specialized knowledge will help the East Boston community learn how to become more adaptable to climate and ecological conditions.

I will be eager to follow the development of this project should it be funded and will support it with connections and resources to agencies within my congressional district.

Sincerely,

Vetto A. Casado

Re: Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program
(EPA-R-OEJECR-OCS-23-01)

Dear Administrator Regan:

I write to you in support of the grant application by Maverick Landing Community Services (MLCS) to the Environmental Justice Collaborative Problem Solving (EJCPS) Cooperative Agreement Program for their proposal "Leveraging Pandemic Response Networks and Social Cohesion to Develop a Community Resiliency HUB and Emergency Response Plan for Disadvantaged Communities in East Boston". Maverick Landing Community Services, as well as the many local affiliate organizations they are partnering with on this project, comprise a critical support network for East Boston residents in need of essential services.

Located in the heart of an affordable housing development on the Boston waterfront, Maverick Landing Community Services is focused on building community resiliency. Throughout the COVID-19 pandemic, MLCS played a crucial role in providing food, housing assistance, and other vital services to residents, a neighborhood-wide logistical operation demonstrating their capacity to serve as a central resiliency hub in times of crisis. Since then, MLCS has also set up a housing support station for East Boston residents facing housing insecurity. Their dedication and commitment to the community make them an ideal lead applicant for this project.

Additionally, the organizations partnering with MLCS on this grant demonstrate the strength and effectiveness of inter-organizational ties in East Boston collaborating to serve local residents. While some organizations, such as the Northeast Waste Management Officials Association, will bring technical knowledge and expertise on coastal environment and pollution issues, others such as Neighbors United for a Better East Boston, Mutual Aid Eastie, and the Veronica Robles Cultural Center, specialize in neighbor to neighbor communications and the deep grassroots organizing that will be essential to the central community-driven aspect of this project. By engaging local underserved residents on these issues and soliciting feedback on potential solutions, MLCS and their coalition are ensuring that this project embodies the core of environmental justice principles.

Re: Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program (EPA-R-OEJECR-OCS-23-01)

Dear Administrator Regan:

The Northeast Waste Management Officials' Association (NEWMOA) is pleased to partner in this collaborative application led by Maverick Landing Community Services Inc. (MLCS) on the proposed project, "Leveraging Pandemic Response Networks and Social Cohesion to Develop a Community Resiliency HUB and Emergency Response Plan for Disadvantaged Communities in East Boston," which aims to promote coastal and community resiliency.

NEWMOA is a non-profit, non-partisan, interstate association whose membership is composed of the state environment agency programs that address pollution prevention, toxics use reduction, sustainability, materials management, hazardous waste, solid waste, emergency response, waste site cleanup, underground storage tanks, and related environmental challenges in Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Rhode Island, and Vermont. NEWMOA also works collaboratively with non-member states on issues and programs of national importance.

This project will engage a planning committee of East Boston residents in a problem-solving process that deepens leadership and understanding from vulnerable communities and results in the development of a community-informed East Boston HUB resiliency plan.

We have been involved in several planning meetings with MLCS and as part of this project we have agreed to support coastal resiliency planning in the first phase by identifying, using GIS data layers and other sources of information, contaminated sites, solid waste sites and sites using toxics in areas that may be affected by flood and storm events, and to work with the core partners to develop user-friendly hazard profiles.

ED_016126_00000094-00007

We are committed to participating in the proposed Project's coalition by contributing staff expertise and skills. NEWMOA, a $12,500 subcontract on this request, is prepared to dedicate our staff to participating in the project, including:

- Joining the Project Steering Committee and participating in meetings
- Reviewing GIS and other data sources to identify sites in areas that are likely to be affected by flooding or storm events
- Producing, with Project Steering Committee input, hazard profiles for community engagement
- Working with the Project Steering Committee to identify quality of life issues like noise, dust and odors.

We look forward to supporting equity centered and led community coastal and community resiliency planning efforts in East Boston.

Sincerely,

Martin Suuberg

Re: Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program (EPA-R-OEJECR-OCS-23-01)

Dear Administrator Regan:

Created by the 1989 Massachusetts Toxics Use Reduction Act (TURA), the Massachusetts Office of Technical Assistance (OTA) provides free and confidential toxics use reduction and pollution prevention assistance to Massachusetts manufacturers and businesses. Our scope of services includes incorporating chemical safety into climate change and severe weather resiliency planning to reduce the risk of industrial accidents. OTA has provided trainings for first responders and businesses to identify climate change vulnerabilities and chemical risks.
When called upon during this effort, OTA will partner with NEWMOA to offer services within our agency scope, which include the following activities:

- OTA has a map that utilizes MassGIS data and other available data that is searchable by Massachusetts zip codes and addresses and can present on other relevant existing resources so that community can find and utilize data. OTA and NEWMOA would provide trainings on how to use this map and other relevant available maps and resources to build capacity within the community.
- OTA can help recruit known TURA and Tier II filing manufacturers and provide these facilities with free and confidential toxics use reduction and pollution prevention technical assistance. OTA can also utilize existing Boston contacts and relationships to identify Boston specific emergency preparedness trainers, partners and resources.

We are submitting this letter of our support and look forward to supporting equity centered and led community coastal and community resiliency planning efforts in East Boston.

Sincerely,

Tiffany Skogstrom
OTA Director

Re: Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program (EPA-R-OEJECR-OCS-23-01)

Dear Administrator Regan:

Veronica Robles Cultural Center (VROCC) is pleased to be a community partner in this collaborative application led by Maverick Landing Community Services Inc. (MLCS) and will receive $12,000 in year one and in subsequent years to be outreach, media, and events partner in a three-year collaboration. The proposed project, "Leveraging Pandemic Response Networks and Social Cohesion to Develop a Community Resiliency HUB and Emergency Response Plan for Disadvantaged Communities in East Boston," aims to promote community resiliency and to build on a strong history of partnership and collaboration that began at the onset of the pandemic.

As part of this partnership, we will commit to 1) participating in steering committee meetings as needed 2) facilitate use of our social media and VROCC radio show with a reach of 10K+ to disseminate important project milestones and supporting the cohort leaders in broadening their reach in the Latinx immigrant communities of East Boston.3) Participating in 2 yearly educational events with youth dancer-led cultural act that showcases community resiliency and is leveraged to support a broader community as part of the problem solving process.

As a Latin American cultural center, VROCC seeks to both hold space for Latinos to engage in cultural activities, and share space with people from other cultural groups who wish to learn about our cultures.

VROCC has played a vital role in supporting the Latinx immigrant community during the pandemic and in partnership with the partners on this project. Through arts and culture VROCC has promoted community resilience and through its events and social and radio media outlets is a strong vehicle for messaging to the community.

We look forward to continuing to develop a strong resiliency community with MLCS and other partners on this grant.

Sincerely,

Veronica Robles

MUTUAL AID
EASTIE

Michael S. Regan
Environmental Protection Agency
Re: Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program (EPA-R-OEJECR-OCS-23-01)

Dear Administrator Regan:

Mutual Aid Eastie/ Apoyo Mutuo (MAE) is pleased to be a community partner in this collaborative application led by Maverick Landing Community Services Inc. (MLCS) and will receive $20,000 in year one and in subsequent years to be an outreach and education partner in a three-year collaboration. The proposed project, "Leveraging Pandemic Response Networks and Social Cohesion to Develop a Community Resiliency HUB and Emergency Response Plan for Disadvantaged Communities in East Boston," aims to promote coastal and community resiliency and to build on a strong history of partnership and collaboration that began at the onset of the pandemic.

As part of this partnership, we will commit to identifying and supporting at least 6 leaders to be part of the leadership cohort that will work with other community leaders from Mutual Aid Easton Boston and with a youth resiliency for supported by MLCS. We will participate in leadership steering committee meetings and project meetings and will also work with the evaluator to ensure a successful project. This project will engage a planning committee of East Boston residents in a problem-solving process that deepens leadership and understanding from vulnerable communities and results in the development of a community-informed East Boston HUB resiliency plan. We will also support outreach and education efforts to reach the broader community as we work to develop a strong community-informed plan.

MAE is positioned to support this project. Our mission is to support and strengthen connections across East Boston to foster greater resilience across the neighborhood. We have a longstanding partnership with MLCS, which is a founding member of MAE. Currently, we support 10 residents participating in a digital literacy course at MCLS. We also host and support Manualidades, a traditional art focused healing program developed by one of our neighbors. We are currently collaborating with Cosecha to support our neighbors take advantage of the opportunity to apply for driver's licenses. These are just a few of the many ways we connect with neighbors to strengthen the connections across the neighborhood.

We look forward to continuing to develop a strong resiliency community with MLCS and other partners on this grant.

Sincerely,

Leonard Olsen
Co-Facilitator, Mutual Aid East/ Apoyo Mutuo

Re: Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program (EPA-R-OEJECR-OCS-23-01)

Dear Administrator Regan:

Neighbors United for a Better East Boston (NUBE) is pleased to be a community partner in this collaborative application led by Maverick Landing Community Services Inc. (MLCS) and will receive $20,000 in year one and in subsequent years to be an outreach and education partner in a three-year collaboration. The proposed project, "Leveraging Pandemic Response Networks and Social Cohesion to Develop a Community Resiliency HUB and Emergency Response Plan for Disadvantaged Communities in East Boston," aims to promote coastal and community resiliency and to build on a strong history of partnership and collaboration that began at the onset of the pandemic.

As part of this partnership, we will commit to identifying and supporting at least 6 leaders to be part of the leadership cohort that will work with other community leaders from Mutual Aid Easton Boston and with a youth resiliency for supported by MLCS. We will participate in leadership steering committee meetings and in project meetings and will also work with the evaluator to ensure a successful project. This project will engage a planning committee of East Boston residents in a problem-solving process that deepens leadership and understanding from vulnerable communities and results in the development of a community-informed East Boston HUB resiliency plan. We will also support outreach and education efforts to reach the broader community as we work to develop a strong community-informed plan.

NUBE is positioned to support this project and will utilize its vast network as a civic engagement leader in East Boston where every year we directly canvas over 3,000 people and are among the strongest civic engagement groups in Boston with a 47 percent voter turnout rate.

We are building on a strong partnership with MLCS as a founding member of Mutual Aid Eastie/Apoyo Mutuo. We also host an abundant leaders' group that support the advancement of immigrant leaders in East Boston. Currently, over 16 of our leaders are taking a three-month long advanced digital literacy course at MLCS. We expect to draw from those leaders to identify the best candidates for the leadership cohort on this grant.

We look forward to continuing to develop a strong resiliency community with MLCS and other partners on this grant.

Sincerely,

Eny Lovo

Mail Code: 2202A
Washington, DC 20460

April 14, 2023

Dear Jacob Burney,

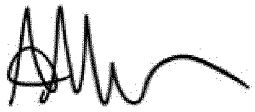
I am writing to express my full support for the Maverick Landing Community Services Resilience Hub Project for the EPA Environmental Justice Collaborative Agreement. As the Executive Director of Next Leadership Development, I have seen firsthand the importance of community resilience training in preparing for the increase in the number and intensity of disasters that disproportionately impact underserved people, especially the immigrant communities in East Boston.

The Resilience Hub Project is a critical initiative that will help to incorporate environmental justice and climate change issues into the project planning and implementation. This will ensure that the underserved communities in East Boston are adequately prepared for the climate induced challenges that lie ahead. We see Maverick Landing Community Services as a partner in resilience work and plan to share our lessons learned and best practices from our Resilience Hub initiative.

Next Leadership Development is committed to providing community resilience training for residents with translation available for $2,500 per course for up to 50 people. The size of each training can be adjusted, and the base cost is $50 per person per training. Our extensive emergency preparedness, response, and recovery experience makes us the ideal partner for this project. We believe that a collective approach to community preparedness and resilience is the key to success. Our focus on what people can do together as a community will help to ensure that the underserved communities in East Boston are adequately prepared for any challenges that may arise.

I would like to express my full support for the Maverick Landing Community Services Resilience Hub Project for the EPA Environmental Justice Collaborative Agreement. I look forward to working with them to ensure the success of this critical initiative.

Sincerely,



Dr. Atyia Martin
Executive Director

What does StarLuna Consulting do?

StarLuna Consulting, LLC is an anti-racism, social equity research, education, and consulting firm. It is also a Massachusetts state certified Women/Minority Owned Business Enterprise.

StarLuna provides:

- Action research services on questions related to social equity and governance;
- Guidance on working with or centering historically excluded and currently marginalized communities in planning or other governance processes;
- Community based learning opportunities around various areas of social justice including environmental justice, climate justice, and housing justice, among others.
- General social equity advising to initiatives or organizations seeking guidance to support equity-centered, justice supporting, anti-racist policies, operations, and practices.

Who is Ex. 6 Personal Privacy (PP)

I am the owner and principal of StarLuna Consulting, LLC. I am a long-time advocate, scholar, and educator focusing on issues at the intersection of social justice, social relations, and governance. I have been extensively involved in the development of community engagement, public dialogue, public learning, and public communication initiatives related to racial equity, social justice, and democratic governance. I have also served in formal and advisory capacities to community based organizations, foundations, and public institutions on a variety of racial equity issues.

Relevant Projects

Municipal Vulnerability Planning (MVP) Grant Redesign

Client: MVP Office, Executive Office of Energy and Environmental Affairs

I am the social equity advisor and stakeholder engagement specialist for the development of a MVP grant process. In this role, I led the stakeholder engagement process to assess experiences with and desires for the MVP program and planning grants. I created the Equity Council which is comprised of environmental justice advocates and activists across the state. I am also developing the training series (in partnership with All Aces, Inc) for future MVP participants focused on understanding environmental justice, social equity, the conditions creating social vulnerability, and measuring progress in creating equity-centered social resilience.

Boston Urban Forest Planning

Client: City of Boston

I was the social equity advisor to the Boston Urban Forest Plan development process led by Stoss Landscape Urbanism. I created and supported the Equity Council, which was comprised of residents and advocates from historically excluded and currently marginalized communities and was tasked with creating the priority goals, objectives, and main strategies around which the plan was created. I co-facilitated the Equity Council's decision-making processes and supported the larger Community Advisory Board workshops. The final plan can be found at: https://www.boston.gov/departments/parks-and-recreation/urban-forest-plan

ED_016126_00000094-00015

Social Equity Research and Policy Advising

Client: EPA, Office of Land and Emergency Management

Working with Industrial Economics, Inc (IEc), I led the design of a community based action research process to support EPA's Office of Land and Emergency Management's efforts to improve community engagement and participation in decision-making and regulatory processes. I also provided general advising on policy issues related to social equity and environmental justice.

Participatory action research: Community development in East Boston

Client: Community Commons

I supported the planning and implementation of a community based participatory action research project related to community development in East Boston. Community members concerned about a casino proposed for the neighborhood solicited assistance with doing a community-wide survey to assess concerns, goals, and aspirations of community members. Residents were involved in all aspects of implementing the research from design through data entry. They also guided the analysis of results and report writing. Reports can be found at: http://doi.org/10.5281/zenodo.3849111 and at http://doi.org/10.5281/zenodo.3849165.

Background

Ex. 6 Personal Privacy (PP) is a dedicated and passionate individual currently pursuing a degree at North Shore Community College. She serves as a Program Development Coordinator at Maverick Landing Community Services (MLCS), where her primary focus is on cultivating an equitable community by equipping community members with the necessary resources to thrive and fostering a sense of resilience and empowerment. Growing up in East Boston, Ex. 6 Personal Privacy (PP) experienced firsthand the challenges faced by many residents, including immigration struggles, social inequalities, and environmental concerns. These formative experiences ignited her passion for social justice and community activism, inspiring her to create meaningful change in the lives of others.

In her role at MLCS, Ex. 6 Personal Privacy (PP) designs and supports programs/services that address the unique needs of the community. These initiatives emphasize resilience, leadership skills, and a sense of belonging, which have had a lasting impact on the lives of youth and families. Some examples of her work at MLCS include developing youth mentorship programs, organizing community events, and collaborating with local organizations to expand resources and services for the community.

Prior to her work at MLCS, Ex. 6 Personal Privacy (PP) made significant contributions at Neighborhood of Affordable Housing (NOAH), where she developed and facilitated programs centered around environmental justice, leadership development, and civic engagement for local youth. Her efforts at NOAH included creating workshops on coastal resiliency and environmental justice, organizing community clean-up events, and advocating for sustainable urban planning policies. Ex. 6 Personal Privacy (PP) work at NOAH enabled her to combine her passion for environmental sustainability with her commitment to community engagement, empowering young people to become leaders and agents of change in their community.

With her strong background in program development, community engagement, and environmental justice, Ex. 6 Personal Privacy (PP) is a valuable asset in creating more equitable and sustainable communities. Her personal and professional experiences have informed her commitment to social justice and resiliency work, making her a compassionate and effective advocate for those who are often marginalized.

RELEVANT PROJECTS

ClimateCARE Program

Lead Youth Organizer | Neighborhood of Affordable Housing (NOAH)

NOAH's climateCARE program focuses on building a robust East Boston Resilience Network to address social and environmental justice issues with key stakeholders. Ex. 6 Personal Privacy (PP) worked with NOAH's youth workforce program to promote individual and collective action to reduce harm from potential climate change-related impacts and educate residents on risks and available solutions. Through the program, Ex. 6 Personal Privacy (PP) worked on many successful campaigns, which include:

- Urban Tree Planting Initivative: A youth led inivtiative where Ex. 6 Personal Privacy (PP) advocated for an increase in East Boston's tree canopy coverage, leading conversations with city officals on possible solutions.
- Adaptation Planning Working Group: Coordinated youth to be involved in important conversations with agency stakeholders and community representatives to coordinate plans that address coastal flooding and represent community interests.
- Youth EJ Getty's: Ex. 6 Personal Privacy (PP) organized monthly youth getty's, slang for get-togethers, an event series dedicated to edudating teens on the importance of enviromental justice in creative and engaging ways, including interactive workshops and guest speakers.
- Eastie EJ Tour: Ex. 6 Personal Privacy (PP) led environmental justice (EJ) tours in East Boston to educate community members and visitors on the impact of environmental injustices on their community. She worked with youth to teach them how to lead these tours, equipping them with the knowledge and skills needed to educate others on the importance of EJ and the interconnectedness of environmental and social justice issues. In addition to being an educational tool, the tours also provided a platform for youth to develop leadership skills and become agents of change in their community.

Boston Housing Support Station (BHSS)

Project Manager | East Boston Housing Coalition

The Boston Housing Support Station (BHSS), a collaborative effort among several organizations to fight displacement in East Boston. Ex. 6 Personal Privacy (PP) oversaw the implementation of the first station of the coalition, coordinating volunteers in educating community members on housing rights and managing a team to support housing applications. She helped ensure that vulnerable community members had access to the resources and support they needed to maintain stable housing and build a more resilient community.

Ex. 6 Personal Privacy (PP)

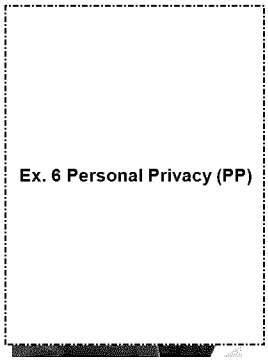
Ex. 6 Personal Privacy (PP)
Climate Advisor and Environmental Strategist

Email: Ex. 6 - Personal Privacy (PP)
Cell: Ex. 6 - Personal Privacy (PP)

Ex. 6 Personal Privacy (PP) is a globally recognized leader in harnessing the power of collaborative problem solving and ESG principles to design places that are sustainable, inclusive, and vibrant. A strategist, change maker, and climate defender, [redacted] travels widely to bring globally pioneering strategies to the United States that improve sustainability and resiliency for all people.

She works with boards, corporations, program staff and individual donors to develop comprehensive strategies that integrate policy, campaigns, and communications needed to achieve measurable results. She has extensive experience integrating Diversity, Equity, and Inclusion into program strategy and change management practices.

[redacted] previously served as Special Consultant to the Energy Foundation where she supported the implementation of the strategic plan. She was also Senior Vice President at the Energy Foundation where she oversaw the strategic implementation of a $160 million grants making budget aimed at reducing carbon emissions throughout the United States. Prior to that, she was Co-director of Climate at the Barr Foundation, based in Boston, where she developed strategies focused on transportation, climate resilience, and land-use, all critical levers for reducing emissions and protecting those most vulnerable to the impacts of climate change.



At EF, [redacted] led the national team that secured the Climate and Equitable Jobs Act in Illinois, galvanized the Clean Car goals for the United States, and provided expertise and advocacy support to the Biden Administration in support of the largest infrastructure package in the country's history. In Boston she was the brain trust behind the City of Boston's **Go Boston 2030** transportation planning process which set a new standard for public engagement; the Boston BRT Initiative, and helped catalyze **Climate Ready Boston**, the City's first comprehensive analysis of climate vulnerability and the first multi-neighborhood resilience plan in the United States.

[redacted] is a sought-after speaker, author, and visionary on issues of climate, community, and equity. She is a contributing author of *If We Want to Win, A Latine Vision for a New American Democracy*, which was publish November of 2021.

In Massachusetts, [redacted] serves on the Point32Health Foundation (formerly Tufts Health Plan Foundation), is Board of Director of the Boston Girls and Boys Clubs of Boston and of Amplify Latinx. She previously served on the board of directors for Hispanics in Philanthropy and was on the Massachusetts Governor's Latino Advisory Commission.

[redacted] earned her B.A. from the University of Southern California, a master's from Massachusetts Institute of Technology. She holds mediation and facilitation accreditations from Harvard Law School's Program on Negotiation and from the Center for Dispute Resolution in London, England.

She is a native Spanish speaker with roots in Cuba.

Dear Applicant:

We are pleased to inform you that upon review of your application for tax exempt status we have determined that you are exempt from Federal income tax under section 501(c)(3) of the Internal Revenue Code. Contributions to you are deductible under section 170 of the Code. You are also qualified to receive tax deductible bequests, devises, transfers or gifts under section 2055, 2106 or 2522 of the Code. Because this letter could help resolve any questions regarding your exempt status, you should keep it in your permanent records.

Organizations exempt under section 501(c)(3) of the Code are further classified as either public charities or private foundations. During your advance ruling period, you will be treated as a public charity. Your advance ruling period begins with the effective date of your exemption and ends with advance ruling ending date shown in the heading of the letter.

Shortly before the end of your advance ruling period, we will send you Form 8734, Support Schedule for Advance Ruling Period. You will have 90 days after the end of your advance ruling period to return the completed form. We will then notify you, in writing, about your public charity status.

Please see enclosed Publication 4221-PC, Compliance Guide for 501(c)(3) Public Charities, for some helpful information about your responsibilities as an exempt organization.

Title: ***Equitable Clean Air and Climate Relief Pilot***

Project Location: Beverly, Massachusetts

Green Beverly, 100 Cummings Center, Suite 350-E, Beverly, MA; Dean Berg, dean@greenbeverly.org

Brief Description of Applicant Organization -

Green Beverly aims to help all Beverly residents and businesses lead more sustainable lives through actionable information, inspiration, and education. We have engaged with more than 6,000 Beverly residents and businesses, hosted 23 events and workshops and reduced Beverly's carbon emissions by 5,000 mt CO2e last year. We connect with the community through free expert coaching, workshops, community projects, and social media engagement. Green Beverly has implemented numerous community-based projects - many of which support the EJ community.

Are you applying for the Small CBO Set Aside Track for $150,000 projects? (Yes/No) YES. Please find an employee roster attached that verifies our qualification for the Small CBO Set Aside Track.

Project Abstract -

We will design and execute a heat pump technology (HPT) pilot for our underserved families. Our main objective is to reduce air pollutants, provide affordable relief on the hottest summer days, provide efficient heating in the winter months and reduce our greenhouse gas emissions. All at a cost savings to the families and their landlords. We will do this through education, workshops, and coaching. Our goal is to reach 500 households through events, media and coaching. In our first year, we expect to have 50 homes weatherized, have 25 homes convert to hot water heaters and 15 homes convert to a heat/cool source. Our most desired outcome is that our educational efforts will encourage landlords, homeowners and tenants to make their homes more energy efficient. We also expect to witness a carbon reduction and cost savings to tenants and homeowners. The program will focus on Beverly, a coastal city on the North Shore with a population of approximately 40,000 people that includes Environmental Justice and food insecure populations (i.e., low income families, fixed income seniors and disability).

Project Type(s) - Education and Implementation of home heating changes

Special Considerations -

Our project is a community based pollution based prevention effort that is working to reduce the use of fossil fuels in Beverly and reduce the amount of toxins in the air that may come from natural gas, oil, or propane.

Environmental Issue - Our pilot program addresses air pollution.

List of Project Partners - YMCA of the North Shore Housing; ACTION, Inc; Beverly Bootstraps; City of Beverly; Beverly Housing Authority; Salem Plumbing; EcoWave; RiseUp Solar

Will you need to develop a QAPP for your project? (See Appendix H) Not applicable

b. Environmental and Public Health information of the Underserved Community -

In Beverly, 15.1% of the population lives in poverty, and thirteen percent of Beverly respondents report that they are of color. Beverly has neighborhoods classified as environmental justice populations based on the income and minority criteria. Our project seeks to address dangers caused by the use of fossil fuels in the home and the struggle to pay high utility bills, especially during the cold and very warm Massachusetts seasons. By providing our services to these neighborhoods, we are working to give these residents some protection from environmental and health hazards, and access to the decision making process that works to maintain a healthy environment where these residents live, work and learn.

As evidenced by the EJSCREEN tool, Beverly has neighborhoods directly impacted by disproportionate environmental and public health harms. Three neighborhoods have a population that falls into the 80th percentile for Limited English Speaking and one neighborhood that falls into the 95th percentile for Low Income. Three other neighborhoods are at the 80th percentile (for Low Income) Clearly these neighborhoods might not understand the ability to afford or learn about ways to get cleaner, safer and cheaper methods to heat and cool their homes.

Approximately 6,000 of our residents live in poverty. With an average of 2.5 people per household, that equates to about 2,400 households in Beverly living in poverty. According to NSCAP, 412 households applied and qualified for fuel assistance this past winter. Of note is that this number does not include households in subsidized housing. Clearly, we have a significant population struggling to make ends meet and many of these homes were in environmental justice communities.

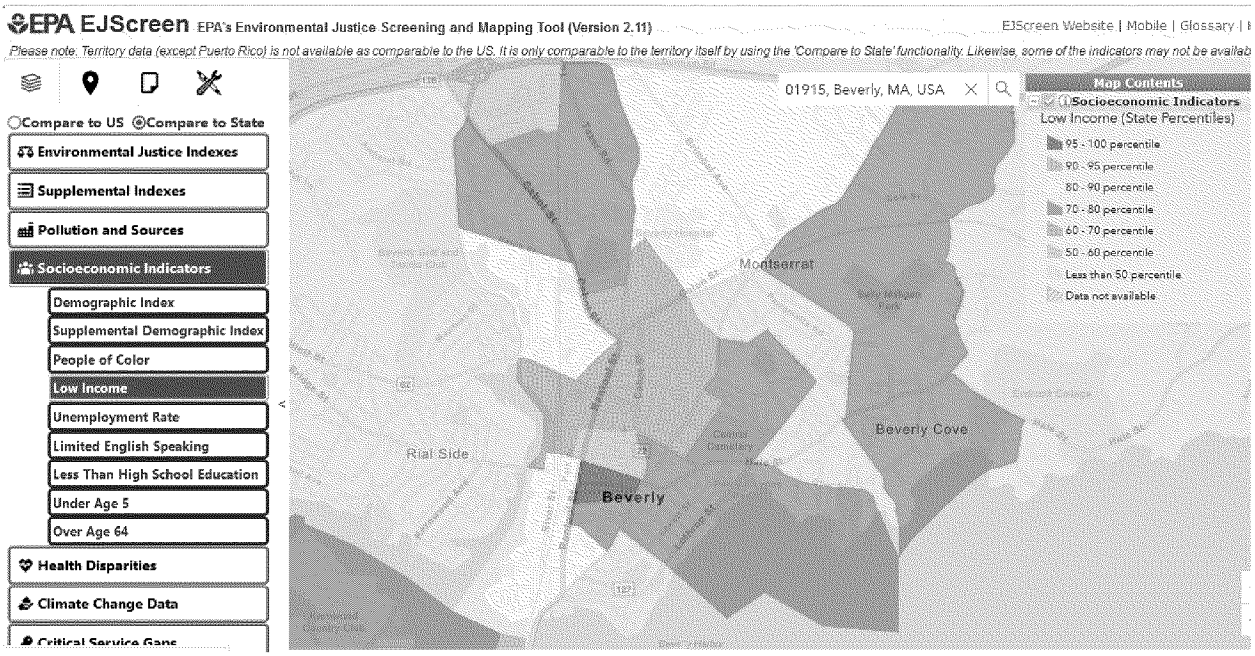
The City of Beverly is also experiencing an increase in food insecurity. Almost 3,000 households in Beverly lost an average of $163 a month in extra COVID-era benefits (The Boston Globe, 2023). Due to SNAP changes, increases in food prices, and rising heat and electric costs, Beverly Bootstraps saw over 200 more Food Pantry visits in March of 2023.

This winter brought increased utility costs to our region. A November NBC news story from November of last year stated that National Grid predicted that the average monthly electric bill would go up 64% and the average natural gas bill by 24%. This is a pattern that will likely continue, especially with increased inflation and political issues occurring worldwide that disrupt the supply of fossil fuels and electricity. While increased costs will affect all economic classes, it will impact those in the environmental justice communities harder. Many in this population struggle to pay for housing, food and utilities. Our HPT pilot program will provide them financial relief on heating and cooling bills.

Our HPT will likely bring down the cost for these households to heat their homes, as the HPT is more efficient. There are members of this community that currently rely on natural gas to heat and cool their homes. With HPT, these people can limit reliance on natural gas. A recent Harvard study found that natural gas used in homes throughout the Greater Boston area contains varying levels of volatile organic chemicals. When leaked, these chemicals are known to be

toxic, linked to cancer, and can form secondary health-damaging pollutants such as particulate matter and ozone. ttps://www.hsph.harvard.edu/c-change/news/natural-gas-used-in-homes/ While there are commonly known national gas leakage pathways, as in gas stoves, data reports the existence of a source of volatile organic chemicals in indoor and urban areas that is not currently accounted for in emissions inventories and provide a previously unaccounted for public health co-benefit associated with reductions of NG-methane emissions. In addition, the widespread use of natural gas has been linked to the largest source of urban methane.

As stated earlier in the application, our program relates to Climate Change and Health Impact Assessment considerations. Sources state that in the Boston area, temperatures in the summer are increasing, and we are experiencing more heat wave events (days over 90 degrees F). The summer of 2020 was marked as the hottest summer globally with 14 days reaching over 90 degrees. Scientists predict that in the 2030s, we could double that, due to climate change. With the HPT, we can mitigate climate and health risks from urban heat islands, which Beverly is. By providing more efficient air conditioning with the HPT, we are illustrating climate adaptation and resiliency. https://www.mapc.org/resource-library/extreme-heat/ Our heat pumps will help cool people's homes, efficiently, and without using fossil fuels or exposing families to natural gas. The HPT is also effective in reducing carbon emissions as it is an alternative to gas and oil burning furnaces and boilers . Therefore it is a community-led pollution prevention. Heat pumps for heating and cooling purposes are 300% more efficient and are an investment in low-and zero-emission and resilient technologies. The HPT will reduce greenhouse gas emissions and other pollutants caused by more traditional heating and cooling sources. https://www.nbcboston.com/news/local/mass-energy-price-hikes-go-into-effect/2879390/



The EJScreen map below shows the "Low Income" communities within Beverly. The red highlighted area (between Federal and Broadway) is comprised of 2-2.5 story homes built in the 1930s and 1940s. The majority of these homes are rental properties with little insulation, no central air conditioning, and fossil fuel heating systems. This neighborhood also consists of the largest non-English speaking population in Beverly. Below are a few street view images of this neighborhood.

Ex. 6 Personal Privacy (PP)

The lower left yellow area highlights “Goat’s Hill”. Much of the area is industrial, but the homes are larger apartment buildings built in the 1930s through the 1960s. These homes are also poorly insulated with no central air conditioning and have fossil fuel heating systems.

The upper left yellow section is “Gloucester Crossing”. This area consists mostly of triple-deckers that were built in the early 1900s to support the massive workforce at the United Shoe Machinery factory (now the Cummings Center). This is a densely populated rental community with homes that are poorly insulated, lack air conditioning, and are heated with oil and gas. Below are a few street view images of this neighborhood.

Ex. 6 Personal Privacy (PP)

c. Organization's Historical Connection to Underserved Community -

Green Beverly's mission is to serve all of the Beverly community and make our city a cleaner and sustainable area. Most of our services, such as coaching, public events, and green actions, are available free of charge. Many of our community projects are focused on assisting the underserved and environmental justice populations in Beverly. Some of our programs include food diversion, Green Up and Urban Ag. Our staff has developed and well established partnerships with community service organizations as the Beverly YMCA, the Beverly Housing Authority, NSCAP, ACTION, Inc, numerous faith groups, and Beverly Bootstraps. One of our board members and energy coaches, Isis Patterson, is a person of color, a renter in subsidized housing and is on the board of Harborlight Homes, a nonprofit advocating for affordable and inclusive homes on the North Shore.

For our food diversion program, we leveraged knowledge and experience from the local community based organizations addressing hunger. We relied on these organizations to share their knowledge. We partnered with local food pantries, as Bevelry Bootstraps, to distribute the food we rescued. The YMCA also assisted us with food distribution to various food insecure communities in Beverly and will be hosting our community cooler that stores food we rescue.

Our Green Up program subsidizes electric bills for low-income families who have upgraded to 100% clean electricity. Our staff have worked with and sought input from local agencies like the YMCA, Harborlight Homes and Beverly Housing Authority (BHA) to administer this program. These relationships are important to our outreach to the low-income community, which often is left out of energy efficient opportunities. We work with BHA and their tenants on programs, and they are the largest landlord of low-income housing in Beverly, with 650 units in their realm.

Urban Ag is a coalition of 14 partners across 5 Massachusetts cities and brings the viewpoint of the low-income and environmental justice community to our efforts. They are part of this research and planning process.

We have a two-year contract with the City of Beverly to provide education and coaching to Beverly landlords and tenants. We are developing an outreach plan, engaging our largest and smallest landlords and numerous renters in this undertaking. In fact, many from these groups are part of the Green Beverly team of staff and volunteers.

All of Green Beverly's services are offered free to the public and advertised across the city. This allows the underserved to participate and take advantage of our offerings and removes any financial barriers to participation. We also offer childcare and food to those residents that want to participate in our programs, including our coaching programs, workshops and educational outreach programs.

How did Green Beverly become involved with this community? About 6 years ago, a group of Beverly residents noticed that barriers prevented many people from practicing more sustainable living habits. Over the next few years, with absolutely no monetary budget, this group collaborated with and communicated with Beverly individuals, small businesses, environmental organizations and government representatives to plan community based activities. This is how we become associated with Beverly social service groups as Beverly Bootstraps and the YMCA. For instance, we saw that many food distributors were throwing away unused food, and there was a big population in Beverly facing hunger. We worked with engaged organizations and created food rescue operations.

d. EJCPS Model - Demonstrate how this application utilizes the Environmental Justice Collaborative Problem-Solving Model (Section I.B).

As part of this program, we plan to incorporate all seven elements.

Element one of the EJCPS model calls for identification of the problem, such as environmental contamination; envisioning possible solutions; and then setting goals to achieve those solutions. Green Beverly along with other community organizations have become aware of the problem caused with the need to rely less on fossil fuels, as natural gas; the urgency to address climate change; and the increased cost to heat and cool homes. In addition, many families are still experiencing financial stress caused by the pandemic and are struggling to pay utility, rent and food expenses. We have envisioned that we need to rely less on fossil fuels, as natural gas, and need to help alleviate the economic situations faced by the low-income population in Beverly. Using electricity in lieu of natural gas is also financially less expensive. With the HPT, we have developed a strategy that identifies the actions needed to get results here : introduce populations to the HPT. In addition, there are mandates at the federal and state level to transition to heat pumps. An obstacle is the lack of knowledge and the financial burdens that many face that prevent this from happening. This is especially true for the underserved and environmental justice communities in Beverly. Green Beverly and its partners will address this problem by working with entities that serve the environmental justice community, homeowners and landlords.

Element two requires community capacity-building and leadership development. Green Beverly will establish the program leaders and management strategies during the process of the planning. Consensus building and dispute resolution will be part of our project. Prior to establishing solutions, our staff will discuss how any disputes or disagreements will be processed as described in Element 3. As stated in Element 3, it is important to understand that there may be cases where disagreements about facts or the interpretation of data may arise. We expect this acknowledgement of possibility, the project leaders can jointly choose to use an expert or team of experts to conduct fact-finding in a neutral manner.

Addressing element 4, Green Beverly comes into this project with established professional partnerships as noted in this application. However, we fully expect additional important partners will come into play as we define and refine our overarching goals and objectives. As Element 4 states, "But exactly which stakeholders come together and when/how is unique to each situation or circumstance…" As each organization takes its place in the group, there will be opportunities to see what resources they bring to the table and how those resources can be leveraged in the group.

Relevant stakeholders will provide constructive engagement to this project process, addressing element 5. The City of Beverly will be a key player in the group. Green Beverly already has an excellent relationship with the Mayor and his Sustainability Director. Currently our staff meets with the Sustainability Director every other week to review all initiatives and projects. Green Beverly is actively reaching out to form partnerships with local businesses. Without a doubt, these relationships will prove invaluable throughout this project.

Sound management and implementation will drive this initiative just as it has for our approach to the USDA grant for food on the North Shore. As element 6 states, "Action plans, which include clear objectives, timelines, organizational commitments, and delegation of responsibilities." This will entail working groups that are laser focused on the different aspects of the project.

As element 7 states, "Projects that incorporate evaluation from the very beginning are usually stronger projects, with a clearer idea of vision, goals, objectives, strategies, actions, and measures of success. Evaluation helps to clarify the project's underlying assumptions and causal relationships. In addition, evaluation can enable the participants to proactively identify opportunities and deficiencies and make adjustments as early as possible." At the very outset, Green Beverly would lead the group to conclude how best to evaluate our project progress and how often to step back and take a macro view. Ultimately the lessons learned by this group would ideally help other local groups help their town to educate/install heat pumps for their respective environmental justice community. It will be critical to document our steps, the ups and the downs of the process, to be able to document a road map for other communities.

Communication and education is key to our efforts. The first step is to bring all stakeholders together and unify on a plan to advocate for HPT. Once together, we can create solid and specific objectives to pilot our HPT initiative.

e. Project Linkages

We plan to engage local government leaders in the process as we develop this program. We plan to engage the City of Beverly DIEB Director in the planning phase. We also will involve the city throughout the project and give them our feedback and input about this program, as well as a final report. Our Director meets with the City of Beverly's Sustainability director every two weeks, and he updates our City Council every two months. Green Beverly staff has a good relationship with our state legislative leaders Senator Lovely and Representative Parasilla. We will work with their legislative aides to engage both of them in our project. One of our earliest activities will be to conduct community stakeholder meetings to get input from those involved in different municipal departments. Our meetings are well documented and the findings will be distributed to officials at the city and state level.

f. Partner and Collaborate

CBO/Non-profit
YMCA of the North Shore Housing (Letter of Commitment)- a non-profit providing in-kind support during the planning process of this pilot. The YMCA will contribute significantly to the assessment of the Target Audience and the Creation of the Outreach/Educational plan portions of the project. The YMCA will provide resources to support the project throughout the duration
.
Action, Inc. (Letter of Commitment)- a non-profit providing support during the planning process of this pilot. Action, Inc. will contribute significantly to the Assessment of the Target Audience, the Creation of the Outreach/Educational plan, the Financial Model, and the Technology Assessment portions of the project. For a small stipend, Action, Inc. will provide resources to support the project throughout the duration of the project.

Beverly Bootstraps (Letter of Commitment) a local social service nonprofit that provides client services to the underserved population. Beverly Bootstraps will provide in-kind support during the planning process of this pilot, and will contribute significantly to the Assessment of the Target Audience and the Creation of the Outreach/Educational plan portions of the project. Beverly Bootstraps will provide resources to support the project throughout the duration.

Municipal/Government
City of Beverly (Letter of Commitment) will provide in-kind support and act as an active participant during the planning process of this pilot. The City of Beverly will contribute significantly to the Assessment of the Target Audience and the creation of the Outreach/Educational plan portions of the project. The City will provide resources to support the project throughout the duration.

Beverly Housing Authority (Letter of Support) - as a quasi State Agency that maintains 650 State and Federal housing units, they are the City's largest low income housing provider providing

in-kind support during the planning process of this pilot. The Beverly Housing Authority fully supports this pilot program and will actively provide input.

Industry
Salem Plumbing (Letter of Commitment) - Beverly business providing in-kind input into the planning process. Salem Plumbing will contribute significantly to the Technology Assessment portions of the project. Salem Plumbing will provide resources to support the project throughout the duration of the project.

ecoWAVE (Letter of Commitment) - local business providing in-kind input into the planning process. ecoWAVE will contribute significantly to the Technology Assessment portion of the project. ecoWAVE will provide resources to support the project throughout the duration.

Financial
RiseUp Solar (Letter of Commitment) - local financial services outfit that will commit to providing in-kind creative financing options during the planning process of this pilot. Rise Up Solar will contribute significantly to the Financial Modeling portion of the project. Rise Up Solar will provide resources to support the project throughout the duration of the project.

2.0 Project Activities / Milestone Schedule / Budget

a. Project Activities -

The planning phase of our HPT pilot program will consume the first nine months. We will need to target our initial audience, conduct a needs assessment and engage in conversation with the specific low income communities. We will create a financial model that will include incentives for participation and create a savings sharing model with landlords. Our staff will conduct a technology review of the community and assess the types of heat pumps that will be required for this population. Our team will develop an outreach and educational plan.

Within six months of our project, we will start the educational phase of the program. We will create social and other media to disseminate information about heat pump technology and the need for it in Beverly. We plan to host education workshops and work with our community partners, as Beverly Bootstraps, to share information about our program.

The pilot phase of our HPT program will start in year 2 and will continue through year 3. We will target two residential areas in environmental justice neighborhoods of Beverly. Our staff will work with them to invest in the HPT and to replace air conditioners, heating systems, and hot water heaters with heat pump technology.

The activity headers that you'll find in our attached Workplan are as follows:
1. Create a plan to transition heating/cooling systems to heat pumps
    a. Assess target audience
    b. Assess financial model
    c. Assess technology
2. Educate tenants and their landlords on the pilot program and benefits

a. Create an Outreach and Educational plan
b. Implement/Execute the Educational Plan

3. Execute on the Pilot Program
   a. Launch Pilot Program
   b. Pre -Installation
   c. Installation
   d. Final Report/Documentation

b. Milestone Schedule -

M1 - Target Audience Identified (Month 4)
M2 - Financial Model Created (Month 6)
M3 - Technology Solutions Identified (Month 9)
M4 - Outreach Plan Created (Month 4)
M5 - Outreach Commences (Month 4)
M6 - Launch Pilot (Month 10)
M7 - 6-month Review, Assessment, and Pilot Adjustment (Month 16)
M8 - Final Report and Scalability/Replication Plan (Month 36)

WP	Task	Indicators	Year 1												Year 2												Year 3											
Objectives and Activities (Mx=Milestones)			M1	M2	M3	M4	M5	M6	M7	M8	M9	M10	M11	M12	M13	M14	M15	M16	M17	M18	M19	M20	M21	M22	M23	M24	M25	M26	M27	M28	M29	M30	M31	M32	M33	M34	M35	M36
1	**Create a plan to transition heating/cooling systems to heat pumps**																																				
1.a	Assess target audience																																				
	a) Talk with partner orgs in Beverly to see what community is best	Data compiled																																			
	b) Review data for neighborhoods in Beverly to identify characteristics of neighborhoods	Data compiled																																			
	c) Meet with Community Ambassadors of EJ Communities	Data compiled																																			
	d) Use information from above for all partners to agree on community to concentrate on	Final report				M1																															
1.b	Assess financial model																																				
	a) Work with partners to understand incentives available	Data compiled																																			
	b) Work with partners to understand the general cost of products	Data compiled																																			
	c) Work with partners to create equitable financing models	Final Report						M2																													
1.c	Assess technology																																				
	a) Reach out to heat pump companies. Understand their product relative to MA temps	Data compiled																																			
	b) Research how particular products work with incentives	Data compiled									M3																										
2	**Educate tenants and their landlords on the pilot program and benefits**																																				
2.a	Create an outreach and educational plan																																				
	a) Work with Community Ambassadors to create education and outreach plan	Data compiled																																			
	b) A two pronged effort to keep reaching out and then tailor the outreach to what the community representative feels will have the best impact	Neighborhood completely canvased				M4																															
2.b	Implement/Execute the Educational Plan																																				
	a) Create modes of communication to educate owners/renters	Workshops and Mailings				M5																															
	b) Send out outreach/educational materials via priority channels	Distribution																																			
3	**Execute on the Pilot Program**																																				
3.a	Launch Pilot Program																																				
	a) Identify the owners/renters that will convert now (via coaching)	List										M6																										
	b) Identify owners/renters that can not convert now but want to be ready when the time comes. (via coaching)	List																																			
3.b	Pre-Installation																																				
	a) Coach owners/renters to put their personal product plan together	Document																M7																				
	b) Coach owners/renters to put their personal financial plan together	Document																																			
3.c	Installation																																				
	a) Acquire Quotes (minimum of 3)	Quotes																																			
	b) Installation of heat pumps/completion of weatherization	Product installed																																			
	c)Assess success of process with client - keep track of savings	Conversation and report																																			
3.d	Final Report Documentation																																				
	a) Compile report that summarizes the successful actions taken to complete education and installations, as well as the actions that did not work	Report																																			M8

c. Itemized Budget Sheet / Budget Narrative -

A complete budget narrative is submitted as an attachment.

PERSONNEL: $114,480

Senior/Key Personnel

Ms. Shelley Lee, Green Beverly Programming Director, Principal Advisor on Award, (5% / 1.80 calendar months).
Ms. Lee will serve as principal advisor for the project and will guide and oversee all work done by the Lead Project Manager. She will support outreach and partner communications, support outreach to recruit new/additional partners, participate in the development of agendas for partner planning meetings, and support meeting facilitation as needed. She will also support completion of recommendations, reports, and future implementation planning related to the project.

TBN, Lead Program Manager on Award (50% / 18.0 calendar months).
The Lead Program Manager, To Be Named, will manage all aspects of the project. He/she will coordinate all communications with the partners, manage the timeline/schedule, manage the budget, and escalate as needed. He/she will be involved in the analysis of the data, build business plans, produce recommendations/actions, and complete reports.

Ms. Julia Long, Green Beverly Community Engagement Director, (10% / 3.60 calendar months).
Ms. Long will serve as principal advisor for the project as it relates to community stakeholder outreach and engagement.

TBN, Coaches, (10% / 3.60 calendar months).
The Coaches will be engaged throughout the project to provide technical input and 1:1 coaching sessions with landlords and tenants.

TRAVEL: $0

SUPPLIES: $284

Estimated meeting supplies and printing costs for 12 quarterly planning meetings as well as other periodic meetings as needed.

CONTRACTUAL COSTS: $2,430

Bookkeeper @ $2,430

TOTAL DIRECT COSTS: $127,104

INDIRECT COSTS: $22,896

IDC Rate Agreement of 20% of Wages and Salaries.

TOTAL COSTS: $150,000

3.0 Environmental Results – Outputs, Outcomes, and Performance Measures (Logic Model)

a. Environmental Results (Logic Model)

Please see the Logic Model attached.

b. Performance Measurement Plan –

Green Beverly will use a project tracker to track overall project progress. Various tools will be used for specific activities. For example, a CRM will be used to track landlord and tenant activity and progress. Outreach efforts will be tracked through our contact database (part of SquareSpace). All engagement and planning meetings will include meeting minutes or recorded meetings if on-line.

c. Sustainability Plan and Community Vision –

The City of Beverly has a Climate Action Plan, which targets a 50% reduction in greenhouse gasses by 2030. Our Equitable Clean Air and Climate Relief Pilot addresses this problem by converting homes to HPT, which relies less on fossil fuels and is more efficient. In Beverly, the average home comprises 27% of the carbon footprint left by a household. If we can decarbonize this component (the home), it will bring us much closer to the goals set forth by the City. The intent is to scale the program to the broader environmental justice community and beyond after the pilot program. We will take our learnings from the pilot, adjust, and roll out to the broader Beverly community.

In addition to Green Beverly's progress towards reduced emissions (highlighted in section 4.0), the City has also made its own significant progress over the last several years. Our city boasts a near net-zero Police Station, numerous solar fields and parking lot canopies, electric school busses and city fleet. We also offer a curbside composting service and host numerous recycling events.

As the last task in the project is to create a final report along with a Scalability/Replication plan, the intent is for this to be available to any other communities that may want to leverage or learn from our pilot program.

4.0 Programmatic Capability

Green Beverly has the experience to successfully implement our Equitable Clean Air and Climate Relief Pilot program. We have raised awareness with climate crisis engagement and have encouraged thousands to make lifestyle changes which has resulted in reduced carbon

emissions in Beverly. During our first active year, we connected the community with free expert coaching, reduced Beverly carbon emissions by more than 5,000 mt CO2e, and grew from 0 to 2.500 followers. We engaged with more than 6,000 Beverly residents and business owners. Hosted over 20 free workshops and events and raised almost $300,000 in grants for large scale projects.

We know how to reach our environmental justice community in Beverly. Each year, we interact with over 500 residents at the farmers market and had over 2,000 in attendance at our fall pumpkin smash event. Clearly our staff knows how to take an idea, make it a program and see quality results. We remove financial barriers to participation in our community events, as we offer them free of charge. When possible, we also arrange for meals, childcare and transportation to our events. Our Farmers Market does accept SNAP for payment of purchases, and therefore provides a venue for us to interact with the members of the environmental justice communities.

Our program staff are qualified to successfully perform this pilot project. The following will be directly involved with this pilot program:

Dean Berg is involved in two fairly significant community engagements projects that approach citizen engagement from a community perspective. He integrates citizens with the local business community, local school system and city government. He utilizes a system-based approach to residential sustainability to yield the greatest impact. In addition, Dean is a landlord with experience converting multi-family buildings to hot water heat pumps and heat pumps for heating and cooling.

Shelley Lee, our Programming Director, will oversee the structure, progress, and success of the project. Shelley has an architectural background and an invaluable project management background.

Julia Long, our community engagement director, was born and raised in Ex. 6 Personal Privacy (PP). Clearly she knows the Beverly community. Her master's degree in International Public Health will be invaluable to our efforts to address health effects caused by increased temperatures.

Isis Patterson, one of our home energy coaches, has a solid relationship with the underserved in Beverly. She is on the board of Harborlight Homes, is a renter, a member of the NAACP and NSCAP Boards. She has community connections that will assist our efforts to bring this program to the environmental justice communities.

Sam Gifford is our coaching manager and a green certified real estate agent. He brings a plethora of home energy experience and his status as a landlord in Beverly connects us to a network of other local landlords.

c. Expenditure of Awarded Grant Funds, and plan for compliance with EPA's Pre-award Compliance Review for Nonprofit Organizations -

Even though we are asking less than $200,000, we are confident in our ability to comply with the EPA's Pre-award for Compliance Review. With a Capital Markets Finance professional on our board (Treasurer) and the CFO of a $12M non-profit on our board, we have implemented stringent systems and processes to manage large grants efficiently. For example, we are successfully managing a $198,000 grant from the USDA currently.

If the EPA were to request and review Green Beverly records to assess risk, you would find that we've had solid financial stability since our incorporation, solid financial management systems that can manage large grants and complex financial structures overall, a solid history of managing Federal grants as evidenced by our current USDA agreement, audit friendly records, and the ability to implement other requirements - whether statutory, regulatory or other.

5.0 Past Performance

In general, all Green Beverly agreements/projects are assigned a part-time project manager that utilizes our tools and systems to keep the projects on time, within scope, and within budget. Our tools and systems also track data throughout the duration of the project making the periodic reporting requirements simple to compile.

USDA grant for Urban Ag research. Green Beverly is 6 months into a 18 month grant and the agreement is tracking on target with our tracking system and a part-time project manager that is coordinating a 14 partner coalition.The project consists of a steering group and 4 working groups that meet monthly. As we are only 6 months into the grant, no formal reporting requirements have been required yet.

State Farm Community Assistance grant for Food Diversion. Green Beverly is 9 months into a 12 month grant and we're tracking nicely. For our Food Diversion project, we have co-project managers that both work part-time. Most of the initial targets have been achieved and the project is in the 'refinement' stage. No formal reporting requirements are required until the end of the project.

Walmart Environmental grant for Compostable Take-Out Containers. Green Beverly is 9 months into a 12 month grant and we are tracking 2 months early. We will have our initial scope completed by May 1st. We've been able to get ahead of schedule with a part-time project manager and solid tracking systems. We meet with the grant administrator (City of Beverly) monthly to provide a status update and will be writing up our final report after May 1st.
New England Biolabs Foundation grant for Food Diversion. Green Beverly completed the final agreement and reporting requirements on time (Dec. 31, 2022). We were able to successfully manage the agreement and final reporting requirements by tracking the necessary metrics throughout the project's duration and to compile the data into the final report on time.

Monarch Foundation grant for EJ Clean Electricity. Green Beverly is 18 months into a 36 month grant and has met the quarterly reporting requirements on time. By tracking the project metrics real-time, it is easy to create a quarterly report of project progress. As with all Green Beverly projects, we have a part-time project manager that is keeping the project within scope and budget.

Dear Applicant:

We are pleased to inform you that upon review of your application for tax exempt status we have determined that you are exempt from Federal income tax under section 501(c)(3) of the Internal Revenue Code. Contributions to you are deductible under section 170 of the Code. You are also qualified to receive tax deductible bequests, devises, transfers or gifts under section 2055, 2106 or 2522 of the Code. Because this letter could help resolve any questions regarding your exempt status, you should keep it in your permanent records.

Organizations exempt under section 501(c)(3) of the Code are further classified as either public charities or private foundations. We determined that you are a public charity under the Code section(s) listed in the heading of this letter.

Please see enclosed Publication 4221-PC, Compliance Guide for 501(c)(3) Public Charities, for some helpful information about your responsibilities as an exempt organization.

SESAME SOLAR

TURNKEY NANOGRIDS. SOLUTIONS INSIDE™

To Whom It May Concern:

I am pleased to provide this letter of support on behalf of Next Leadership Development and The Black Resilience Network, a membership community of Black organizations and leaders, supported by non-Black identifying people and organizations who work to strengthen disaster and climate resilience.

Sesame Solar is a majority woman-owned, small business with its headquarters and its plant located in Jackson, Michigan. Sesame Solar Solutions are currently deployed domestically and internationally to emergency 1st responders, governments, large corporations, military, and NGOs. Sesame Solar's mission is to decarbonize disaster response and off-grid power with our Mobile Nanogrids that can be setup by 1 person in 15 minutes, are, easy-to-use, and available anytime, anywhere. We aspire to mitigate the impacts of climate change while creating 100% renewably powered Solutions to help communities become more climate resilient, especially communities most vulnerable to the impacts of climate change.

In partnership with the Next Leadership Development, Sesame Solar aims to develop Disaster Response Solutions on the community level in order to solve large scale environmental or public health issues. Specifically, Sesame Solar will support the planning process for this program at no cost. We will partner with Next Leadership Development & the Black Resilience Network on the implementation of the national Resilience Hubs Program by collaborating on, and identifying and obtaining funding for Nanogrid deployments based on the needs identified during the planning process. Additionally, Sesame Solar will provide training on deploying and maintaining Mobile Nanogrid Solutions for local partners in Boston with Next Leadership Development. Finally, we will support other members of the Black Resilience Network Resilience Hubs Program.

This partnership is important to "to develop solutions that significantly address environmental or public health issue(s) in communities disproportionately burdened by environmental harms." (EPA 2023) Since it is the mission of Sesame Solar, Next Leadership Development, and the Black Resilience Network to make communities more climate resilient by strengthening disaster response capabilities, this partnership will not only benefit communities facing weather and other disasters, but will also advance racial justice amongst our many communities of color.

Thank you for taking the time to consider this letter of support. If after reading this letter you have any additional questions, or would like further information, please feel free to reach out to me at Ex. 6 Personal Privacy (PP) Ex. 6 Personal Privacy (PP) or by email at Ex. 6 - Personal Privacy (PP)

Sincerely,

Lauren Flanagan

United States Environmental Protection Agency

RE: Proposal to *The Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program*

To whom it may concern:

Rise Up Solar is an enthusiastic supporter and partner in the Green Beverly proposal to *The Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program* for the project titled "*Equitable Clean Air and Climate Relief Pilot*". The project period is 3 years after receipt of project award.

The purpose of this project is to design and pilot a building decarbonization model within our EJ communities. This model will involve several components ranging from landlord/tenant relationships, energy efficiency and electrification upgrades, innovative heat pump technology for efficient cooling and heating, and equitable financial models designed to save everyone money. The intent of the model is to distribute the ongoing cost savings realized from heat pump technology to the tenants and the landlords in order to incentivize change. In addition to cost savings, the tenants will benefit from more efficient cooling on the hot summer days, cleaner air quality, and comfortable heat during the winter. Landlords benefit from infrastructure updates and manageable investment returns. And, we all benefit from reduced greenhouse gas emissions!

Rise Up Solar is excited to support Green Beverly and participate in this project. While Rise Up has focused on solar projects to date, we have been looking to expand the program to include heat pumps and other clean energy technology. This work is closely aligned with our mission, and the project an excellent way to develop the expansion of our offerings. Our goal at Rise Up Solar is to enable community focused nonprofits to harness all of the environmental and economic benefits of solar and green technologies. We are philanthropic investors looking to provide nonprofits with affordable financing options for clean energy projects to which they may not typically have access. We have completed a number of solar projects in Massachusetts over the last few years, including partnerships with nonprofit groups such as Beverly Bootstraps (www.beverlybootstraps.org), Family Services of Merrimack Valley (www.fsmv.org) and the

Pine Street Inn (www.pinestreetinn.com). We have numerous relationships with developers and installers in the area, and we can help the nonprofit navigate some of the logistical challenges. With the enactment of the Inflation Reduction Act, the financing solutions are simpler than ever, and nonprofits can benefit directly from tax credit incentives. Rise Up Solar is currently focused on a direct lending model, with a flexible structure that typically allows the nonprofit to cover lending costs with tax credits and electricity savings over a ten-year period.

This letter serves to acknowledge that Rise Up Solar will serve as a Partner in the delivery of this project. As a Partner, we agree to serve as an active member and contributor to the planning portion of the project, and, if feasible, to the implementation of the pilot as well. Our role will be to contribute our experience with creative financing models to provide input and help guide the assessment, planning, and implementation activities of the project.

We look forward to participating in this project and value the important contributions this project will make to transform our Beverly EJ Community. This project will provide greater access and opportunities to develop our clean air, building decarbonization, energy bill relief, and hot day relief for both our EJ populations and their landlords. We look forward to strengthening our partnerships with the participating organizations in the region and developing collaborative project ideas and shared learning to improve our communities. I strongly encourage The United States Environmental Protection Agency to support this proposal.

Practitioner and academic with expertise in racial, social, climate, and environmental justice; emergency/disaster management; and organizational/policy development. Over 25 years of experience leading transformational change in local, state, and federal government, nonprofits, and businesses. Delivered hundreds of learning experiences, keynotes, and presentations in front of thousands of people internationally; led dozens of community engagement and planning processes, research projects, and implementation initiatives; and created/expanded several city departments.

Professional Highlights

Racial, Social, Climate, and Environmental Justice in Urban Resilience
Led the process of creating the first in the world citywide resilience strategy that embedded racial and social justice within climate and urban resilience efforts.

Organizational Development
Facilitated dozens of government, nonprofit, and private sector organizations in an organizational development approach to advancing racial equity/justice in DEI efforts.

Personal + Professional Development
Facilitated learning experiences for thousands of people in organizations to build knowledge and skills to advance racial justice using researched and tested approaches.

Public Health + Emergency Management + Homeland Security
Led many public health preparedness and emergency management efforts in Boston including the public health and healthcare response to the Boston Marathon Bombings. Conducted intelligence analysis at the federal level and developed policies and procedures for one of the first local fusion centers.

1.0 PROGRAM OBJECTIVES

a. Project Summary Page

Project Title	Black Resilience Hub Planning & Implementation
Project Location	City of Boston Neighborhoods & Zip Codes with the Highest Concentrations of Black Residents: Roxbury (02119), Dorchester (02121, 02122, 02124, 02125), Mattapan (02126), and Hyde Park (02136)
Applicant Information	Next Leadership Development, 120 Brookside Ave, Suite C2, Boston, MA 02130 Executive Director Dr. Atyia Martin, Ex. 6 - Personal Privacy (PP)
Description of Applicant Organization	Next Leadership Development's mission is to accelerate change and strengthen resilience in Black communities through leadership building, creating our own tables, and developing partnerships with allies. Our programmatic activities strengthen social/cultural, economic, environmental, infrastructure, and governance resilience before, during, and after emergencies and disasters. Our key ongoing activities include youth programming, emergency preparedness and response education and operations, capacity building for local mutual aid organizations, and the convening of a national coalition of Black organizations, experts, and towns focused on climate and disaster resilience.
Are you applying for the Small CBO Set Aside Track for $150,000 projects? No	
Project Abstract	Next Leadership Development's main objective for the Black Resilience Hub Planning Project is to expand the capabilities of Black communities and organizations to prepare for, respond to, and recover from climate emergencies and natural disasters, including the increases in pollution that can result from these and other disasters. According to the Federal Emergency Management Agency (FEMA), planning, organizing, equipping, training/educating, and exercising/evaluation are required to build capabilities. This project will facilitate a two-year process that will result in the following activities: • Plans Review & Gap Analysis: Collaborate with community organizations and residents to identify the disaster response and recovery gaps in emergency plans that will disproportionately burden Black communities • Government Priorities: Convene with city agencies to identify existing plans to address the gaps and coordinate opportunities for collaboration • Prioritization: Prioritize the list of gaps to determine a set of priorities for community-driven planning, organizing, equipping, and training/education to build the necessary redundancy to fill in the identified gaps • Planning: Develop a response and recovery plan for community-based organizations and partners with the appropriate community organizational structure; equip ourselves with resources; and train/educate on the plan, organizational structure, and the supporting resources to reduce the risk of pollution that can result from disasters

	• Implementation:Procure equipment and supplies; train/education partners and residents; and test our capabilities with an exercise The activities will build upon existing work and partnerships. The geographic focus will be on Roxbury, Dorchester, Mattapan, and Hyde Park with the highest concentrations of Black residents.
Project Type(s)	Training, demonstration, and public education
Special Considerations	Climate Change, Disaster Resiliency, and Emergency Preparedness
Environmental Issue	This project is cross cutting across several environmental issues that impact communities before and after disasters including: air, water, waste, and developments that use toxic materials.
Will you need to develop a QAPP for your project? Based on the criteria for this collaborative grant, we will need to develop a QAPP for the Black Resilience Hubs Project.

b. Environmental and Public Health information of the Underserved Community

Who is the community comprised of and what are the disproportionate environmental and/or public health issues they experience?

Next Leadership Development serves Black individuals and families, a population heavily burdened with the consequences of climate change and environmental degradation. Specifically, Black Americans are 75% more likely to live near facilities that produce environmental harms.[1] They face increased exposure to poor air quality which is why 13.4% of Black American children have asthma as compared to 7.3% of white children. Black children are also twice as likely to suffer from lead poisoning as white children.[2]

Hurricanes and other natural disasters in recent decades have tended to do the most damage in communities of color.[3] Indeed, in 2017 when Hurricane Harvey hit Texas, the neighborhood suffering the most damage was 49% nonwhite.[4] And of course, the damage caused by Katrina in 2005 was the costliest in seven neighborhoods, four of which were 75% Black.[5] This is due, in part, to the lack of greenspace in the urban areas where many Black families live. Greenspace limits the impacts of flooding and other natural disasters significantly, while concrete and other building materials make them worse.[6]

And when these events happen, they have greater impacts on the financial wellbeing of Black Americans. One study showed that while white families experiencing significant damage to their communities as a result of a natural disaster saw an increase in wealth because of generous reinvestment initiatives, Black families either saw smaller increases in wealth or overall decreases in their wealth.[7] Across the United States, Black individuals and communities are harmed more by pollution and natural disasters despite contributing to them the least.

The city of Boston is no exception. Recent studies show that historically redlined communities in the Boston area experience hotter temperatures than historically white neighborhoods.[8] Today, formerly redlined areas also have about 40% less tree cover than the once “best rated” areas,

[8] Reale. (2022, July 20). *Feeling the heat in Greater Boston? Blame historic racist housing practices.* GBH https://www.wgbh.org/news/local-news/2022/07/20/feeling-the-heat-in-greater-boston-blame-historic-racist-housing-practices

likely contributing to the differences in heat index. This continues to impact Black Bostonians as almost all of Boston's present Black population live in areas deemed hazardous for lending in the 1930s.[9] Additionally, economic injustices have created higher rates of food insecurity and poverty in Black communities in Boston.[10] Black people have seen the greatest increase in food insecurity in Massachusetts across all races and groups when comparing the Greater Boston Food Bank survey data from 2020 and 2021.[11]

Moreover, racial discrimination in housing practices resulted in "white flight" to suburbs outside of Boston, which further segregated the region's communities and prompted the construction of highways, many of which were built right through predominantly Black neighborhoods. All of this means that areas where Black Bostonians live tend to be more dangerous to their health. In fact, a study conducted by researchers at Northeastern University found that communities with high rates of minority populations in Massachusetts face a cumulative exposure rate to environmentally hazardous facilities and sites that is nearly nine times greater than that for low-minority communities.[12]

EJScreen statistics and Census Data reinforce the truth of these disparities. Based on the 2021 U.S. Census Bureau Population Estimates, the city of Boston has over 650,000 residents with 23.5% of those residents identifying as Black. Roxbury, Dorchester, Mattapan, and Hyde Park are neighborhoods in Boston with the highest concentrations of Black residents. These neighborhoods have rates of asthma among adults (18 years old or older) that are above the 90th percentile.[13] They are also above the 90th percentile, as compared to the rest of the state of Massachusetts, when it comes to a number of hazard indexes like hazardous waste, diesel, air toxics, superfund sites, and lead paint.[14]

Neighborhood	Zip Code	% of Black Residents
Boston	All	22.4%
Roxbury	02119	41.4%
Dorchester	02121	65.8%
	02122	31.51%
	02124	58.5%
	02125	31.5%
Mattapan	02126	80.4%
Hyde Park	02136	43.3%

Due to projections of sea level rise and the direct flooding impacts, much of the focus of climate resilience in Boston has been on the waterfront, East Boston, and specific areas of Dorchester that directly abut the Boston Harbor. However, the flooding will not be limited to those areas of

Boston. There are streams and rivers that run through Roxbury, Dorchester, Mattapan, and Hyde Park that would also flood. Because much of these areas lack trees and greenspace, rising waters would not be absorbed and mitigated. And all of this would exacerbate previously discussed inequities for Black communities.

What are the environmental/public health issue(s) that the project seeks to address?

Natural disasters often aggravate chronic health conditions and further degrade environments, especially in areas where nature is sparse and pollutants are commonplace. As described above, Black and brown communities are the populations that suffer the greatest health consequences of environmental harm. This is because it is the areas they live that businesses and governments set aside to build manufacturing plants that pollute, highways that injure air and land, and commercial developments that destroy ecosystems.[15] When disaster strikes, Black communities often do not have wetlands to reduce the severity of floods and drought.[16] They are exposed to hotter temperatures when hurricanes cause power outages. And they live closer to hazardous materials, which may be released during a natural disaster.

This project seeks to increase just outcomes for Black Bostonians after climate emergencies and other disasters. It will facilitate a process and tangible outcomes that ensure Black organizations and residents understand the complexities of the climate crisis and its implications for increasing and worsening disasters in the Boston area. It will also evaluate the city of Boston's emergency plans, identify gaps in those plans relevant to the city's Black residents, and provide organizations that serve Black Bostonians with the resources necessary to respond and recover from disasters.

Given the nature of climate disasters and their impact on Black communities, resultant emergency plans will address a number of environmental and public health issues. They will involve consideration of the extreme heat overburdening Black neighborhoods in Boston. They will involve analyzing the unequal access to adequate transportation of Black Bostonians, which puts them at greater risk when oncoming weather events require evacuation.[17] They will involve factoring in the greater health needs community members have as a result of past injustices. And they will involve addressing the harms posed by the combination of a potential natural disaster and community members' close proximity to hazardous materials.

Black communities are already underserved and underestimated during steady state or non-disaster times. And they are overexposed to climate emergencies and other disasters. The post-incident poor outcomes are amplified versions of pre-existing injustices communities are facing every day. But intentional action can help us combat them.

What are the environmental/public health results the project seeks to achieve and how will the underserved community benefit from those results?

The project seeks to achieve better health outcomes and a safer lived environment for Black Bostonians in the wake of natural disasters. It will do this by equipping CBOs serving Boston's Black communities with the resources they need to minimize environmental degradation and prevent the deterioration of Black residents' health. And it will identify what resources are necessary by educating parties involved on relevant environmental/public health issues and utilizing the insights provided by community members themselves.

Black Bostonians will benefit from having their economic, social, cultural, and health-related concerns factored into emergency planning. They will also benefit from the network of community organizations collaborating with them, rather than simply working on their behalf. Eventually, when a climate emergency does occur, they will benefit from fewer negative impacts to their health and local habitats.

Connecting CBOs, local governments, Black leadership, relevant industry professionals, and community members through this project will furthermore facilitate collaborations that increase better outcomes and improvements of present-day environmental and public health challenges. Black organizations and residents will have a much deeper understanding of the city's emergency plans because of their integral participation in the planning and implementation process. Finally, the community will benefit when the organizations that serve it are a part of emergency planning rather than an afterthought, as these are the organizations that end up picking up the slack that governments create when disasters strike.

We have a commitment from Sesame Solar Nanogrid to obtain in-kind resources to supply at least one of their units to Next Leadership Development to support Black communities. Sesame Solar Nanogrids produce renewable power quickly and easily, leveraging solar power and green hydrogen to provide mobile, reliable and renewable energy. This adds immediate and customized response capabilities for 132 gallons/500 liters of potable water per day, charging of up to 2400 cell phones or 4 - 6 homes, and a mobile space inside that can be used for a mobile emergency operations center, food and supplies deliveries, medical space (like what we used for the COVID-19 mobile vaccination), or pre and post disaster case management for residents to be support as they navigate resources.

The Sesame Solar Nanogrid capability will allow Next Leadership Development and Black community organizations to train for emergency response and to support recovery efforts in our communities. Additionally, it supports workforce development as we will be incorporating the 50 youth who attend our summer program each year to establish knowledge and skills in climate and disaster related employment opportunities.

c. The Connection between Next Leadership Development & Black Communities in Boston

Next Leadership Development has been helping Black Bostonians transition from surviving to thriving since 2003. Our work has included collaborating with community members to: [1] work collectively to meet survival or basic needs; [2] understand and address the pre-existing unjust conditions in communities and how they intersect with climate change and disaster impacts and outcomes; [3] prepare for, respond to, and recover from climate change and disaster impacts; and [4] understand the role of government and opportunities for collaboration.

When COVID-19 disproportionately killed and infected Black people in Boston starting in 2020, Next Leadership Development acted to collaborate with organizations across the country through this unprecedented health crisis. The nonprofit served as the backbone organization (based on the collective action model) of the Black Boston COVID-19 Coalition (BBCC). We managed the effort's website, social media, meetings, reports, mobile vaccination, and more. Next Leadership Development managed the BBCC testing and vaccination partnerships with existing sites and led the mobile testing and vaccination program, which resulted in over 10,000 residents being tested and vaccinated. This project contributed to the 87.1% full vaccination rate among Black Bostonians; in fact, in Boston, about 8% more Black Boston residents are fully vaccinated than white residents.[18] Moreover, Next Leadership Development has continued to play a key role in distributing COVID-19 test kits to community members through its food deliveries and wellness checks.

In 2021, in order to further support Black Bostonians' resilience and capacity to respond to emergencies, Next Leadership Development created the Boston Resilience Corps, the only community-based Community Emergency Response Team (CERT) in the city of Boston. This program trains its members on disaster medical operations, fire safety, search and rescue, as well as disaster simulation and assessment. The organization piloted this program by training 36 of its youth in FEMA CERT curriculum as a part of Next Leadership Development's Resilience Builder Summer Program. It has also trained 504 community members on less intensive emergency response programming.

In 2020 residents and partners inquired about accessing food - many households, especially isolated elders, were going hungry. We began a call campaign through our Operations Center representatives to reach out to Black elders in Boston who needed food. We worked to address this food insecurity for Black elders through a partnership with a local pantry. We stipended local residents to pick up a month's worth of food (some perishable and mostly nonperishable) from the pantry and deliver it to the homes of Black seniors.

The Black Resilience Hubs project in Boston is part of a national initiative developed by the Black Resilience Network, a coalition of historic Black towns and Black organizations from across the country. Next Leadership Development started the Black Resilience Network and acts as its backbone organization. In February 2023, we partnered with FEMA to host a Climate

---

[18] *Boston COVID-19 Vaccination Report*, the City of Boston (Jan. 2, 2023) https://www.boston.gov/government/cabinets/boston-public-health-commission/covid-19-boston,

Resilience Roundtable at the White House. Black Resilience Network member organizations reframed how federal agencies understand how disasters impact Black communities and their vital role in the climate and disaster resilience ecosystem.

How the underserved community's residents and/or organizations were involved in developing the current project plan and are part of the decision-making process?

A community-driven approach is core to Next Leadership Development's programming. One of its biggest projects, the Boston Resilience Network, has 792 members. These are organizations and individuals that collaborate on initiatives and volunteer to support the needs of their fellow community members - this includes utilizing the resources and connections Next Leadership Development facilitates for themselves or their organizations. The most dedicated members of this group meet regularly to connect with one another to collaborate on initiatives.

In the same spirit of collective care and action, Next Leadership Development developed a national coalition focused on climate and disaster resilience: The Black Resilience Network. This project would be part of a national effort in several cities to develop a community-driven Resilience Hub led by and for Black people and organizations. The work of the Black Resilience Network leverages just decision-making practices to ensure capabilities and power is distributed across all members of the coalition.

Next Leadership Development's leadership team itself is made up of the population it serves. Most of the Board of Directors are life-long Boston residents. All of the board members are Black. And its Executive Director is a Black woman from Boston who is also a disabled veteran. This is why the organization values community input so much: it is made up of community members from top to bottom who remain connected and accountable to residents.

d. Environmental Justice Collaborative Problem-Solving Model

Next Leadership Development has been a part of several local coalitions and facilitated explorations of issues, vision, and strategic goal setting regarding climate and disaster resilience in Boston. Most recently, we led the Black Boston Agenda Project's Climate and Environmental Justice Working Session with community members and partners. There were significant concerns regarding the disconnected and not publicly accessible plans for the City of Boston's emergency response to climate and justice emergencies. We synthesized the notes, conducted research, and realized that this issue was not being addressed with other organizations in Black communities. We followed up with participants and confirmed that they would be willing to partner on this project. Therefore, some parts of element one of the CPS model will not be a part of this project. We will be finalizing strategic goal setting with this project.

This project will require Next Leadership Development and all partners to go through the remaining elements of the CPS model - from Community Capacity-Building & Leadership Development to Evaluation, Lessons Learned & Replication of Best Practices. This project is

aligned with this approach because we practice an integrated approach that includes the public health approach, the Homeland Security Exercise and Evaluation Program, and the FEMA Continuous Improvement Process. These approaches all align with the CPS model.

e. Project Linkages

This project will promote Environmental Justice and Civil Rights at the local level. Civil Rights are those privileges guaranteed by the United States Constitution and include equal protection under the law. Equal protection prevents any government entity from treating similarly situated individuals differently, especially when the only difference between said individuals is their race. Unfortunately, as this application lays out, Black residents in Boston have been treated differently throughout history, resulting in dramatic disinvestments and extraction of economic, social, environmental, infrastructure, and governance health. This project therefore steps in to help mitigate problems when a local government provides a one-size fits all solution to a problem–in an effort to treat all people equally–without taking into account historical context or data-drive approaches that demand customization of approaches and support.

f. Partner and Collaborate

The partners that Next Leadership Development has obtained confirmed and preliminary commitment for this project is amazing. We are grateful for the opportunity to facilitate collaborative efforts across stakeholder groups and with community members too.

Next Leadership Development is committed to following all of the guidelines and requirements regarding partners as set forth by the Environmental Protection Agency (EPA). We understand that in order to obtain EPA approval our guidelines must include a requirement for a written agreement between the recipient, subrecipient, or contractor and the program beneficiary that:

1. Describes the activities that will be supported by rebates, subsidies, or other payments;
2. Specifies the amount of the rebate, subsidy or payment;
3. Identifies which party will have title to equipment (if any) purchased with a rebate or subsidy;
4. Establishes source documentation requirements (e.g. invoices) for accounting records; and,
5. Describes purchasing controls (e.g. price comparison requirements, negotiated volume discounts) to ensure that the amount of the rebate, subsidy, or payment is determined in a commercially reasonable manner as required by 2 CFR 200.404.

Black Mass Coalition [Community Based Organization]

The Black Mass Coalition will support this project by convening Black organizations and residents to bring their expertise to this initiative. They possess a network of Black and indigenous-led organizations, including: Black Economic Council of Massachusetts, Boston Ujima Project, City Life/Vida Urbana, Families for Justice as Healing, King Boston, North American Indian Center of Boston, Young Abolitionists, and Next Leadership Development. Their mission is to strengthen the socio-economic wellbeing of Black & Indigenous communities

while shifting the narrative and power to them in Massachusetts. This project supports their mission directly by both empowering Black community members to make decisions on issues that affect them and by seeking to mitigate environmental injustices that impact the socio-economic wellbeing of Boston's Black community. The Black Mass Coalition is a nonprofit organization; their participation therefore complies with 2 CFR Part 200 because they will simply be compensated for their actual direct and approved indirect costs such that they will not "profit" from the transaction.

Sesame Solar [Business]
By collaborating on, identifying, and obtaining funding for Nanogrid deployments based on the needs identified during the planning process, and by providing training on deploying and maintaining Mobile Nanogrid Solutions for local partners in Boston with Next Leadership Development. Sesame Solar is a provider of Mobile Nanogrids that help to minimize the climate impacts of disaster response and off-grid power. Their mission is to decarbonize disaster response, mitigate the impacts of climate change, and create 100% renewably powered energy solutions. By partnering with Next Leadership Development on this project, they can support their mission by providing the CBOs and the local Boston government insights into ways emergency response plans can minimize their impact on the climate. Next Leadership Development and the Black Resilience Network will continue to engage Sesame Solar for similar projects since their product and in-kind support are invaluable. Sesame Solar will only be providing in-kind support.

Citywide/At-Large City Councilor [Government]
City Councilor Julia Mejia has committed to convening city agencies to support this initiative. Her role in city government means she can contribute her expertise in legislative governance as well as her connections to city agencies. Her office is so passionate about this work, that she has committed to supporting this regardless of the results of her election. But her vested interest is in supporting the environmental resilience of her constituents. The support from Councilor Mejia is in-kind support.

Boston Public Health Commission [Government]
The Boston Public Health Commission's Office of Public Health Preparedness has committed to convening city departments, public health, and healthcare partners to identify their current priorities in their climate and disaster plans that address the disproportionate burden on Black communities. The Commission's mission is to promote public service and access to quality health care. They are dedicated to protecting, preserving, and promoting the health and well-being of all Boston residents. The agency therefore has a vested interest in supporting this project which promises to improve health outcomes for Black Bostonians. The Commission's support will be in-kind.

2.0 Project Activities / Milestone Schedule / Detailed

Project Management

Next Leadership Development has extensive experience with complex project management that we will bring to this project. We will begin with the PI developing the Quality Assurance Project Plan Development Tool (QAPP). Once we have an approved QAPP, we will finalize project management planning to ensure a clear work breakdown schedule of tasks and milestones with roles, responsibilities, and timelines. We will onboard a dedicated project manager and core team, including our partners, to review everyone's commitment for this grant, outreach to partners to confirm capacity, agreement on decision-making processes, and confirm a meeting schedule. During this part of the process, we will finalize the planning for our kickoff meeting with the broader partnership group. During the full kickoff meeting with partners, we will strengthen relationships, review and confirm the work plan, agree upon a meeting schedule, and identify additional partners.

Plans Review & Gap Analysis

In collaboration with our partners, Next Leadership development will identify and obtain City of Boston plans to review. These plans will include the emergency operations plan, public health preparedness plans, the hazard mitigation plan, and any recovery plans). While that process is in progress, we will conduct a literature review, including gray literature or non peer-reviewed papers/reports. We will specifically be identifying any patterns of how climate and emergency plans reinforce inequities in Black communities as well as strengths-based, community led efforts for equity and justice in climate action and disaster plans.

Once the City of Boston plans are received, we will review them to identify the ways that they may reinforce inequities in Black communities based on the literature review. What we learn from the literature review and the City of Boston plans will provide the foundation for developing community workshops to learn from CBO partners and community members about concerns or questions they may have. We will write a report that summarizes the existing literature, Boston plans, and community concerns and ideas for the future. This report will inform the convening of government agencies and other stakeholders.

Government & Stakeholder Priorities

Next Leadership Development will host a convening with city agencies, public health, healthcare partners, and community organizations in collaboration with the Boston Public Health Commission Office of Public Health Preparedness, the Office of At-Large City Councilor Julia Mejia, and the Black Mass Coalition. The purpose of the convening will be to: [1] determine specific actions or changes that city agencies and other stakeholders are taking to address the identified gaps in city plans; and [2] ways city agencies and stakeholders are willing to partner with CBOs in emergency response and recovery.

Prioritization

Next Leadership Development will reconcile the list of priorities from CBOs, residents, government, and other partners to identify the key concerns we need to integrate into our community response and recovery plans that will be facilitated by five designated CBOs in Roxbury, Dorchester, Mattapan, and Hyde Park (there will be two in Dorchester due to the geographic and population size).

The core team will design and schedule outreach and workshops to engage with CBOs and residents to prioritize the reconciled list of priorities with a focus on the ones that do not align with existing government and private sector priorities. Once we have confirmed the design, schedule, roles, and responsibilities with CBO partners, we will host a convening with community members to prioritize the list of community actions for response and recovery preparedness that incorporates climate and pollution mitigation and adaptation, addresses food insecurity, and pipeline/workforce development.

Planning
Once we have finalized priorities, Next Leadership Development will use that information to develop a Concept of Operations (ConOps) for community response and recovery coordination of information and resources in Black communities. With five sites/organizations being designated as Resilience Hubs, they will need back up power capabilities and radio communications to reach each other and our Community Communications Center. This backup power and communications capability will help Next Leadership Development activate and facilitate a coordinated response and recovery that supports residents in navigating available resources. We will develop a training for the partner CBOs on the ConOps, using the resources, and response and recovery skills needed based on analysis.

Implementation & Proof of Concept
Next Leadership Development will deliver the Concept of Operations & Equipment Training. This is where our partnership with Sesame Solar is critical - we will be integrating a nanogrid with hydrogen and solar powered energy and potable water generation for community members. The nanogrid will also enhance our mobile emergency operations center capabilities for preparedness, response, and recovery. Once we have trained on the ConOps, equipment, and nanogrid, we will have a community convening where we will practice implementing our plans and deploying our resources with community members. This will allow us to identify any opportunities for improvement and future equipment and training needs beyond the ones we have identified.

Final Report & Closeout
We will prepare a final report with process, lessons learned, promising practices, and next steps to share with EPA, partner CBOs, residents, government and private sector stakeholders, and the Black Resilience Network (national coalition).

b. Milestone Schedule

Project Activity	Products/Results	Timeline
Project Management	Project management planning - onboarding time for project manager and core team to review commitment for this grant; outreach to partners to confirm capacity; develop processes and meetings schedule proposals for the partners to review and adjust; and finalize planning for kickoff meeting	November - December 2023

Project Activity	Products/Results	Timeline
	The PI will coordinate the Quality Assurance Project Plan Development Tool (QAPP) and include the cost for developing your QAPP in your Detailed Budget.	
	Kickoff meeting with partners to strengthen relationships, review and confirm the work plan, agree upon a meeting schedule, and identify additional partners.	January 2024
Plans Review & Gap Analysis	Identify and obtain City of Boston plans to review (will include the emergency operations plan, public health preparedness plans, hazard mitigation plan, and any recovery plans).	January - March 2024
	Reviews existing literature (including gray literature) analyzing patterns of how climate action and emergency plans reinforce inequities	February - March 2024
	Review City of Boston plans	April - May 2024
	Conduct outreach and workshops to learn from CBO partners and community members on additional concerns or questions they may have	June - August 2024
	Document the disaster preparedness, response, and recovery gaps to prepare for convening	September - October 2024
Government Priorities	Host convening with City Agencies, partners, and community members to determine: • List of actions the City of Boston will take to address the identified gaps • Ways the City of Boston is willing to partner with CBOs	October 2024
Prioritization	Reconcile the list of priorities from CBOs, residents, government, and other partners	November 2024
	Design and schedule outreach and workshops to engage with CBOs, residents, and partners to prioritize the reconciled list of priorities with a focus on the ones that do not align with existing government and private sector priorities.	November - December 2024
	Confirm the design, schedule, roles, and responsibilities with CBO partners	January - February 2025
	Engage with partners and community members to prioritize the list of community actions for response and recovery preparedness that incorporates climate action, addresses food insecurity, and pipeline/workforce development.	March - May 2025
Planning	Development of a Concept of Operations (ConOps) for community response and recovery coordination of information and resources in Black communities.	June 2025

Project Activity	Products/Results	Timeline
	Identification of knowledge/skills, equipment, tools, technology, and other resources that we already have and what we would need to purchase to address priorities.	June 2025
	Development of a training plan for the ConOps, using the resources, and response and recovery skills needed based on analysis.	July 2025
Implementation & Proof of Concept	Purchase of identified equipment, supplies, technology or other resources	August 2025
	Delivery of Concept of Operations & Equipment Training	August - September 2025
	Host a community exercise to test our new plans, organizational structure, and training.	October 2025
Final Report & Closeout	Final report with process, lessons learned, promising practices, and next steps to share with EPA, partner CBOs, residents, government and private sector stakeholders, and the Black Resilience Network (national coalition).	November 2025

c. Itemized Budget Sheet / Budget Narrative

This has been submitted as an attachment to our Grants.gov application.

3.0 Environmental Results – Outputs, Outcomes, and Performance Measures (Logic Model)

a. Environmental Results (Logic Model)

This has been submitted as an attachment to our Grants.gov application.

b. Performance Measurement Plan

Throughout the performance period Next Leadership Development and its partners will track the success of the project both quantitatively and qualitatively. At all meetings, the group will take note of the number of community members, CBOs, Black leaders, government representatives, and commercial entities in attendance. This will allow it to ensure that a diverse group of minds are working at improving Boston's emergency response plan. It will also keep track of the number of gaps identified in the plan as well as how many gaps the group is able to ultimately address. Because this project involves the prioritization of gaps, the effort's collaborators will be able to assess performance by noting which gaps are closed. Moreover, to better understand the impact the project is having, the group will give meeting attendees opportunities to provide feedback. Having collaborators provide feedback throughout the performance period will give project leaders the opportunity to update their processes before continuing their work so that performance is constantly improving.

c. Sustainability Plan and Community Vision

Next Leadership Development will use the results and momentum of this project to strengthen the relationships necessary to ensure the revised emergency plans are properly rolled out. It will solidify these connections by continuing to collaborate with other CBOs on climate and disaster response initiatives, including through its ongoing programs with the Resilience Builder Summer Program and the Boston Resilience Corps.

All of our partners have a vested interest in sustaining the project's momentum as they are the entities that often have to shift priorities and resources when emergencies harm the communities we serve. Next Leadership Development therefore anticipates that they will continue to collaborate with us, so they know they will have both the supplies and capital they need when they are inevitably called to respond to a climate or health disaster.

Moreover, Next Leadership Development plans to use the activities and results of this project and the Black Resilience Network to establish similar initiatives in Black communities across the United States. The Black Resilience Hub Planning & Implementation will provide a blueprint to other identified cities and towns as to how to engage the proper stakeholders and thereby promote the resilience of Black individuals and families in climate and health emergencies. The disproportionate impacts of natural disasters are not only being borne by Black Bostonians, but by Black people across the country. So, Next Leadership Development will use lessons from this project to support them as well.

4.0 Programmatic Capability

a. Organizational Experience

Next Leadership Development's mission is centered on strengthening resilience in Black communities. Most recently through the Black Resilience Network, we have supported the response and recovery efforts for the Mississippi tornado from April 24th and 25th. We coordinated information and resources to address unmet needs in Black communities. We documented this information, needs, resources, and actions for situational awareness, also referred to in the emergency management discipline as a common operating picture, through our Black Resilience Network Operations Center Situation Report.

In addition to our national work, we coordinated information and response to COVID-19 for 18-months through the coalition, Black Boston COVID-19 Coalition. We led the advocacy and collaboration with elected officials, healthcare providers, community organizations, and academia to address the unmet needs in Black communities within the city of Boston.

Over the past 20 years, Next Leadership Development has built the infrastructure to successfully execute a project like this. We officially received our 501(c)3 designation 7 years

ago which has accelerated our efforts. We developed the Community Communications Center, which has a dedicated group of representatives and a manager that ensures the highest quality customer service for the phone calls, text messages, and webchats they receive from community members. The Community Communications Center Ex. 6 - Personal Privacy (PP) is also our infrastructure for emergencies at the national level where they support the Black Resilience Network Operations Center (844-OPS-CNTR) as our centralized information coordination and support infrastructure.

We have worked with community members and partners organizing to address the basic needs and questions they have on a regular basis. This familiarity helps us to organize and convene for ongoing climate and disaster injustices as well as during emergency situations.

b. Staff Experience / Qualifications of Project Manager (PM)

Dr. Atyia Martin is the Executive Director of Next Leadership Development. She was appointed by Mayor Martin J. Walsh as the Chief Resilience Officer for the City of Boston. In that role, she led the development and implementation of Boston's resilience strategy which was the first one in the 100 Resilient Cities network to make racial equity, social justice, and social cohesion a priority. She engaged over 11,000 people across government, community, businesses, and nonprofits to develop Resilient Boston: An Equitable, Connected City. She has also been an adjunct faculty member at Northeastern University in the Master of Homeland Security program. Previously, Dr. Martin was the Director of the Office of Public Health Preparedness at the Boston Public Health Commission. There, she was responsible for coordinating public health, healthcare, and community health preparedness; emergency management coordination among the public health and healthcare system via the Stephen M. Lawlor Medical Intelligence Center; psychological trauma response coordination; and education and training through the DelValle Institute for Emergency Preparedness.

Dr. Martin provides professional and personal development to the Next Leadership Development team to ensure they have the knowledge, skills, and tools necessary to successfully design and implement climate and disaster resilience related initiatives. Additionally, her time transforming the DelValle Institute for Emergency Preparedness, a nationally recognized training institute, and teaching related courses at Northeastern University puts her in a unique position to develop curriculum and learning experiences that are aligned with best practices in youth and adult learning methodologies, measuring impact, and creating supporting learning environments. Team members receive intensive onboarding, training, and real-world experience to establish a solid foundation for success. They also gain experiences in initiatives and programs outside of their assignment to fully understand the organization and the way their work contributes to a bigger picture.

Dr. Martin is both the founder and the Executive Director of Next Leadership Development, and she was born and raised in Boston, Massachusetts. As a disabled, Black woman and veteran, she identifies with much of the population Next Leadership Development serves. Dr. Martin and her husband, Roy Martin, co-founded Next Leadership Development in 2003. They did so

because they had witnessed hundreds of Black people in Boston trying to build a better life for themselves but stumbling in their journeys, not because they were not smart enough, committed enough, or talented enough, but because they did not have access to key information and resources. Using a mutual aid/collective care approach, they organized other Black people to help address unmet needs that prevented people from taking advantage of opportunities that they created for themselves. The types of resources and support are what many people may take for granted - for example money for transportation, a uniform, or work attire for a new job they earned.

Dr. Martin is not the only knowledgeable person on the team. Much of our work is a collective effort and all of the members of Team Next Leadership Development have been a vital part of the initiatives and responses outlined in this application.

c. Expenditure of Awarded Grant Funds

Next Leadership Development almost every required approach, procedure, and control for ensuring that the awarded grants funds will be expended in a timely, efficient, and effective manner. The only missing component is an audit, which we are preparing for with our accounting firm and in the process of seeking an external auditor to conduct the assessment. We are committed to meeting that requirement well before November 1, 2023. We will have our completed EPA Form 6600-09 submitted upon being awarded funding.

5.0 Past Performance

Grant/Assistance Agreement	Agreement Completion	Reporting Requirements
1. Shlomo Fund: Boston Mutual Aid Project Symposium	Convened mutual aid/community care organizations in Greater Boston to expand operational capacity and learn about emergency management resources from BPHC Office of Public Health Preparedness & FEMA HQ - Center for Faith Based & Neighborhood Partnerships. Completed all agreed upon commitments and deliverables. We currently have two additional agreements/grants from this funder. This includes on for the Boston Mutual Aid Project in collaboration with City Councilor Julia Mejia	All reporting requirements were met as specified by the funder.
2. MA Department of Public Health/ Health Resources in Action	Had two separate agreements for COVID-19 response, vaccination, testing, and education with all commitments and deliverables completed as documented in the contract.	All final project and financial reports were submitted as requested.

3. Barr Foundation via Black Boston COVID-19 Coalition	Contributed to funding for our mobile vaccination program to lease a retrofitted vehicle, partner with healthcare organizations, and cover the logistical and supply costs. All commitments and deliverables were completed as requested by the funder.	All project and financial reporting requirements were met.

6.0 Quality Assurance Project Plan (QAPP) Information

Yes, we will be collecting and compiling environmental information from computerized databases and information systems. We'll use these data to educate our collaborators on the facts backgrounding the environmental justice movement, so that they can combine this information with their lived experiences to make informed decisions about how to properly approach emergency response.

BOSTON PUBLIC HEALTH COMMISSION

OFFICE OF PUBLIC HEALTH PREPAREDNESS

April 14, 2023

Dear Next Leadership Development,

I am writing to express the strong support of the Boston Public Health Commission's Office of Public Health Preparedness for Next Leadership Development's Resilience Hub Project for the EPA Environmental Justice Collaborative Agreement.

Disasters disproportionately impact Black communities and other priority populations. It is essential that we prepare for the increase in the number and intensity of these events while addressing the environmental and social injustices that create this inequity. The Resilience Hub Project will focus on just that, incorporating environmental justice and climate change issues into the planning and implementation.

We are excited to partner with Next Leadership Development on this project. We are committed to supporting the convening of city departments, public health, and healthcare partners to identify their current priorities in their climate and disaster plans that address the disproportionate burden on Black communities. We are particularly looking forward to identifying ways we can continue to strengthen resilience through capacity building and collaboration with community partners and residents.

We believe that this project will be an important step in ensuring that our communities are prepared for the threats to public health that lie ahead. Thank you for the opportunity to partner on this critical issue.

Sincerely,

Stacey Kokaram
Office of Public Health Preparedness
Boston Public Health Commission

Environmental Protection Agency (EPA)

7-Putegnat Elementary School - 730 E. 8th Street, Brownsville Tx 78520
8-Paredes Elementary School - 3700 Heritage Trail, Brownsville Tx 78521
9-Hudson Elementary School - 2980 FM 802, Brownsville Tx 78521
10-Gonzalez Elementary School - 4350 Jaime Zapata Avenue, Brownsville Tx 78521
11 - Further sites in 2 other cities to be determined, pending grant funding.

4.0 Brief Description of Applicant Organization

Since One Tree Planted's establishment, the organization has been dedicated to making it easier for both individuals and businesses to give back to the environment, create a healthier climate, protect biodiversity, and help reforestation efforts. Projects are not exclusive to public lands, with many taking place on private lands and urban areas. During 2022, 52,793,657 trees were planted through 327 projects in 74 countries around the world, a result of working with partners across 80+ countries in North America, Latin America, Africa, Asia, Europe and the Pacific.

5.0 Are you applying for the Small CBO Set Aside Track for $150,000 projects? No

6.0 Project Abstract

One Tree Planted is launching a new initiative focusing on collaborating with local partners to address environmental justice issues in underserved schools, targeting under-resourced, disadvantaged districts in three US cities to improve equitable access to the benefits of urban trees. The project will provide an opportunity for local hands-on participation in urban tree planting projects while addressing inequalities and the need for trees to be planted equitably across urban school areas that have been classified as disadvantaged using the Council on Environmental Quality's Climate & Economic Justice Screening Tool and American Forests' Tree Equity Scores tool. By working collaboratively with on-the-ground partners, we seek to create long-lasting systemic change that reduces the urban heat island effect and help schools achieve tree equity in their communities.

One of the three pilot projects has been fully planned in collaboration with various partners in the City of Brownsville, Texas. Over 600 trees native to deep South Texas will be planted, with plans in place to plant trees at every Brownsville Independent School District facility. This 2023 pilot project will address environmental justice and tree equity throughout Brownsville, while also serving as a model for the remaining two projects that will be engaged & collaboratively implemented in 2024-2026.

The pilot project is part of a larger effort to implement long-term systemic change within urban school systems providing environmental education, improving water and air quality, reducing urban heat islands, and improving students' general well-being.

7.0 Project Type(s): Urban Forestry

8.0 List of Project Partners:

One Tree Planted and its partners will be planting trees in each of Brownsville's public schools. The schools are as follows (associated with Brownsville Independent School District, local government):

1-Aiken Elementary School
2-Besteiro Middle School
3-Egly Elementary School
4-Manzano Middle School
5-Keller Elementary School
6-Brite Elementary School
7-Putegnat Elementary School
8-Paredes Elementary School
9-Hudson Elementary School
10-Gonzalez Elementary School

Other planting partners for the Brownsville pilot include: City and Community Foresters (local government), Campus Administrators (local government), School District Maintenance Supervisor (local

government), Campus Custodial Supervisors (local government), the Public Information Officer (local government), and the Recycling Department Administrator (local government).

Should One Tree Planted be awarded the requested $500,000, which allows us to develop and implement two other pilot projects in different cities, we can make available the list of partners, as well as their letters of support, as the projects develop.

SECTION B: Environmental and Public Health information of the Underserved Community

1.0 Harms and Risks to Selected Underserved Community(ies)

Using the best available science provided by the Council on Environmental Quality's Climate & Economic Justice Screening Tool and American Forests, One Tree Planted has identified one of three US cities whose school district is in the greatest need of trees. The tool used to identify pilot cities, known as Tree Equity Scores, prioritizes planting trees in neighborhoods with a lack of tree canopy, as well as other priority indicators including: % of people of color; % of people in poverty; urban heat; % of people unemployed; health & wellness ratings; and % of children and seniors. Low scores on this tool represent communities in greatest need.

Brownsville, Texas, the host of our first of three pilots in urban school districts, is a city located in the southernmost part of the state, along the US-Mexico border. According to the U.S. Census Bureau, as of 2020, the estimated population of Brownsville is 182,913, and the median age is 30.9 years. The city is predominantly Hispanic or Latino, with that group comprising 96.1% of the population. The remaining population is composed of non-Hispanic whites (2.8%), Black or African American (0.7%), and other races (0.4%). During the 2020-2021 school year, BISD served 40,737 students, of which 69.9% were considered at risk of dropping out. Furthermore, 89.2% of the students were defined as “economically disadvantaged”.

Due to the nature of the Texas landscape and urban development, there is little to no tree canopy to be found on the grounds of many of Brownsville’s schools, creating the need to plant trees. Students who do not take recess under covered areas, such as a gymnasium, are subject to high temperatures, which can lead to dehydration, heat stroke, lethargy, among other issues, which are difficult for faculty to track and mitigate in a school setting.

2.0 Environmental & Public Health Issues Addressed

Most campuses within Brownsville ISD (BISD) are community schools. As such, BISD has a department solely dedicated to keep our parents and/or legal guardians involved in the education of their children. Each campus, including the ten campuses selected to receive trees, meet periodically to work with the campus administration and teachers to support and improve their children’s learning environment.

Unfortunately, various studies have shown that Brownsville has been ranked among the poorest cities in the country with generational poverty and with high levels of chronic illness. Furthermore, the 2018 EnviroAtlas Report, states "an estimated 80% of the Brownsville area population live beyond the easy walking distance of a park entrance". Planting trees in the school premises will provide access to all students, including those who do not have an easy walking distance to a park.

In the recent months, parents have expressed their concerns regarding the need to implement recess as part of the school day. Recess affords students time for recreational physical activity and socialization with their peers. Only 30% of Texas students between the ages of 6 and 17 engage in little more than 20 minutes of physical activity per day, well below the recommended 60 minutes per day. The Center for Public Education's recess investigation also revealed that children in high-minority, high poverty, or urban schools are far more likely than other children to not receive recess at all. First grade students enrolled in schools with a minority enrollment of at least 50% have no allotted time for recess in the schedule, along with schools with a poverty rate of over 75% and schools located in urban environments. The need for shaded recreational areas has been noted as one of the easiest and most sustainable solutions for providing students with grounds that will motivate them to be active during the school day while avoiding the health risks that come with direct exposure to high temperatures.

It is evident through aerial views that most public schools do not have the tree canopy coverage needed to provide students with shaded recreational areas. Unfortunately, no funds are currently allocated to purchase trees; however, Brownsville ISD has agreed to collaborate with One Tree Planted and provide the manpower to plant and maintain the trees and the curriculum to teach the students to become environmental stewards.

3.0 Environmental & Public Health Results and Benefits

One Tree Planted's urban school planting project will address environmental justice and tree equity amongst three pilot cities' school districts, beginning with furthering our pre-existing collaboration with the City of Brownsville to plant trees throughout the city's public schools. The information gathered regarding environmental and public health pertains to Brownsville; similar information will be reviewed and logged on the remaining 2 pilot cities once they are selected

a. Health of Public School Students

According to a study conducted by WalletHub on the "2020 Healthiest and Unhealthiest Cities in America," Brownsville ranked as the unhealthiest city in America out of the 174 cities selected and studied. The study highlights that "green spaces and the quality of parks" are among the 43 key indicators of good health. Unfortunately, Brownsville has few green spaces, especially within the city's schools, as most common areas are barren and uncovered. This lack of green spaces directly impacts students' desire to be outdoors and active, which has adverse effects on their physical and mental health. However, planting trees in the public schools in Brownsville can change this by providing students with access to a safe and inviting space to play and exercise, as well as an area to focus on

their mental health.

In light of these issues, planting trees in public schools in Brownsville can provide a healthy and safe space for students to engage in physical activity and improve their overall health, both physically and mentally.

Source: 2 South Texas Border Cities Rated Unhealthiest in US, Study Finds, 2018 EnviroAtlas Report, TX Reclaim Recess

b. Biodiversity

Aerial views of Brownsville public schools indicate a severe lack of tree canopy coverage. The removal of pre-existing trees during school construction has resulted in a significant reduction in the number of trees in the area. However, planting trees in public schools in Brownsville can help increase the local biodiversity. In addition to providing shaded areas for students to be active, new trees create habitats for birds, butterflies, bees, and other insects, which can contribute to a healthier local ecosystem. According to The Spruce, more than 590 bird species have been recorded in Texas throughout the seasons. Brownsville is a crucial stopover point for birds that are migrating from North to South America, and many species cannot be viewed easily elsewhere in the state. Planting trees in public schools can help to reestablish and reinforce habitats within the area, providing local and transient wildlife with a stronger foothold in the region. This, in turn, can contribute to increased biodiversity in Brownsville.

Furthermore, reestablishing habitats within the schools can allow students to experience local wildlife and ecosystems with ease, developing an appreciation for the outdoors. This can play a crucial role in fostering a sense of environmental stewardship in the next generation, which can lead to future efforts to protect local ecosystems.

Planting trees in public schools in Brownsville can help increase the local biodiversity by creating habitats for birds, butterflies, bees, and other insects. This, in turn, can contribute to a healthier local ecosystem and foster an appreciation for the outdoors in students.

Source: South Texas Birding Overview

c. Youth

An estimated 24.7% of the Brownsville metro area population live below the poverty line, compared to 12.8% of all Americans nationwide - a higher-than-average poverty rate. Only 24.2% of Brownsville public school students complete 4 years of high school or pass the GED, with a drop-out rate of 32%. Across broad populations, incomes tend to rise with educational attainment, though only 20.6% of adults 25 and older have a bachelor's degree or higher, compared to 35.0% of all Americans in the same age group. Over a third of those who attain a bachelor's degree or higher choose to study the field of Education and work in Brownsville schools or educational institutions.

The Brownsville Independent School District, with the financial support of One Tree Planted, has the opportunity to inspire and engage students to learn first hand on the positive effects of planting trees within their community. Planting trees can help public school students stay in school by providing a better learning environment. According to the Texas Trees Foundation, trees provide fun and engaging outdoor experiential learning areas, as well as recreational areas, that are preferred over classrooms, both by teachers and students.

These spaces cultivate student's knowledge and awareness of nature, which can lead to improved academic performance and attendance rates. Additionally, a study by The Nature Conservancy shows that spending time in nature can lead to a drop in anxiety and depression, which can also improve academic performance and attendance rates.

One Tree Planted understands that young people have immense potential to contribute to conservation and landscape restoration. Schools provide excellent opportunities to engage and enthuse young people about environmental restoration. For youth to actively champion conservation we need to improve their knowledge, attitude, skills, and practices. It is also important to build a critical mass of empowered and inspired youth networks to advocate for conservation. It is on this basis that One Tree Planted wants to build the capacity of the youth by encouraging their participation in the planting events. Students will learn how to properly plant and take care of trees through their guided science lessons, encouraging a personal stake in the grounds they will benefit from, the beautification of their schools, and inspiring an investment in their community and their own personal well-being.

Source: Brownsville, TX Ranks as One of the Poorest Big Cities in the Country, Texas Trees Foundation, Town Charts - Brownsville Education Data

The planting project allows the collaborating school districts to inspire and engage students to learn first hand on the positive effects of planting trees within their community. As projected in the Brownsville pilot, One Tree Planted's urban planting will also beautify the school communities and build habitats for birds, butterflies and other local wildlife, building new ecosystems that young students can find healthy ways to interact within. We will strive to obtain the same results within 2 more pilot cities in order to demonstrate the effectiveness of thriving green spaces within urban school environments.

SECTION C: Organization's Historical Connection to Underserved Community

1.0 History of Involvement with the Underserved Community

One Tree Planted seeks to turn long-term community plans into action. In 2022, One Tree Planted supported the planting of 140 trees at 7 schools in Brownsville, Texas, on the US-Mexico border. This project began in October 2021 as the City of Brownsville's Beautification Committee, in collaboration with the Brownsville Independent School District, initiated discussions with One Tree Planted around the possibility of being able to

manage a project that would allow us to plant trees in schools with low tree equity scores. Project funding was to be provided through a grant by One Tree Planted and Salesforce.

One Tree Planted was notified of the approval of the proposal in November 2021. A meeting was held with One Tree Planted and representatives of the City of Brownsville to go over the agreement, which was also signed by the City Manager on the same date. Because the tree planting season in the proposed area spans from late October through to December, all stakeholders began to meet during July 2022 to start detailed planning. In partnership with the local school district, One Tree Planted once again has the opportunity to plant trees with the city, focusing on planting in each of Brownsville's public schools, from 2023-25.

2.0 Results of Work Within Underserved Community

To thoroughly plan the project processes and determine the best location for the trees as well as the best native tree species for each school, multiple virtual and in-person meetings were held with the Community Forester for South Texas, the City Forester, School District Grounds Supervisor, School District Recycling Department Director and the Beautification Committee Chair. During September, One Tree Planted met virtually on a weekly basis and walk-throughs were scheduled with the Community Forester and the City Forester, along with the Campus Principals. The tree foresters provided their expertise to decide on what trees would be planted and the exact locations were designated. We also found out that some of the schools which had first been proposed were not going to be feasible locations; these were substituted with similar schools, based on their low tree equity score. One Tree Planted started the bid for trees during October and placed the orders that same month. Planting was set to begin mid-November, but due to the weather and other external factors we had to push the planting dates to begin on December 1st. The planting dates were then set for December 8th, 13th, 14th, 16th, and 21st.

The curriculum department staff were also involved in the process as they ensure students are learning about ecosystems as outlined in the Texas Essential Knowledge and Skills (TEKS). Parent volunteers, district / campus staff, students and community members were invited to participate in the tree planting events. The tree planting events consisted of an overview of the importance of trees within a community, specifically the roles students can play in advocating for a clean environment, as well as a Proclamation from the City of Brownsville for each school participating in the grant.

Of the 140 trees targeted, 136 were planted. The school communities have been appreciative recipients of the tree grant, having experienced a myriad of frustrations prior to the project in being unable to provide covered play areas for students. All schools involved in this series of plantings have expressed the willingness to maintain the trees. The school district board members, as well as City Officials, have invited the students back to their schools, after they become adults, to see how their trees have grown and become part of the landscape of their former school.

3.0 Community Driven Participation

The first of the three pilot projects that have been fully-planned and shovel-ready, One Tree Planted has ensured that Brownsville's residents and organizations were involved in developing the project plan and were part of the decision-making process in several ways. BISD has a dedicated department to engage parents and families at their respective schools; their mission is to educate parents by providing them with the skills and tools necessary to motivate their children to obtain academic success and become productive, self-driven citizens in a multi-cultural society.

This department collaborated with parents and families in the underserved community to develop the project plan and ensure that it meets their needs and expectations. Parental involvement is critical to the success of this project, as parents will take ownership of their children's education and actively work with campus staff to improve their community school. There will be an estimated 150 total parent volunteers from the 10 school campuses selected for the planting project; BISD estimates 750 total students from the 10 campuses will take part in the planting as well.

Students, parents, staff, and community members will be invited to participate in the ceremonial tree planting event. Each school listed in the grant application will sponsor their tree planting ceremony, and BISD will schedule tree ceremonies once a week during the months of October through to December, contingent on funding. This provides an opportunity for the underserved community's residents and organizations to be part of the decision-making process and actively contribute to the project's success. Furthermore, corporate sponsors are welcome to attend all tree planting events, providing an opportunity for them to engage with the underserved community and understand their needs and expectations.

Finally, anyone, including parents and community members, interested in serving as a BISD school volunteer is required to submit an online application. This application will be made available throughout the school year and will provide an opportunity for the underserved community's residents and organizations to actively participate in the project and decision-making process.

SECTION D: EJCPS Model

One Tree Planted's pilot in which trees are planted in under-resourced, under-served public schools is a project which aligns with various elements of the Environmental Justice Collaborative Problem-Solving (EJCPS) model, which is a community-based approach for identifying and addressing environmental challenges that disproportionately affect low-income and minority populations.

The EJCPS model emphasizes collaborative partnerships between community organizations, government agencies, and other stakeholders to develop and implement solutions that are tailored to the specific needs of each community. Model elements 1 - 4 (Strategic Goal-setting, Community Capacity Building, and Consensus Building, Multi Stakeholder Partnerships), which reflect these goals, have been accomplished by One Tree Planted and our Brownsville partners as part of our project development. We have established specific goals based on the needs and recommendations of various entities within the Brownsville community, developed workable plans and roles for the planting project, and established agreements. We find ourselves currently working to accomplish the most vital aspect of the EJCPS model element 5 (Constructive Engagement):

securing funding support from government or business entities in order to be able to move on to element 6 (Implementation). One Tree Planted's urban planting project in under-resourced public schools directly aligns with the goals of the EJCPS model and can help address environmental inequities in these communities.

SECTION E: Project Linkages to EPA Strategic Plan Goal 2, Objective 2.1 (Promote Environmental Justice and Civil Rights at the Federal, Tribal, State, and Local Levels)

This project will address environmental justice and tree equity amongst the City of Brownsville by planting trees throughout each of the city's public schools. Eight elementary schools and two middle schools will receive approximately twenty trees to be planted within their school premise. All students will have the opportunity to learn hands-on on how to maintain the trees as well as school staff being encouraged to plan activities involving the trees. Furthermore, BISD is working with the City of Brownsville to create environmental / recycling student clubs to engage students to become informed responsible citizens on the issues affecting the environment.

SECTION F: Partner and Collaborate

1.0 Goals and Use of Partnerships

The Brownsville Independent School District encompasses 95 square miles throughout the City of Brownsville. To cover this area, a tree planting team will be composed of City and Community Foresters, Campus Administrators, School District Maintenance Supervisor, Campus Custodial Supervisors, the Public Information Officer and the Recycling Department Administrator. Our partners in Brownsville are aware of their instrumental roles within the project, as follows:

- The City and Community Foresters will provide guidance to the schools on the best species of trees to plant (based on the soil), as well as provide the best practices to ensure the trees survive to maturity.
- The Campus Administrators are knowledgeable of the population their campuses serve and can encourage shared responsibility amongst the families, staff and students.
- The District Maintenance Department Supervisor provides years of experience in grounds maintenance and will guide the individuals who plant all the trees.
- The Campus Custodial Supervisors will provide the weekly maintenance, and when needed, receive assistance from the district maintenance grounds supervisor.
- The Public Information Officer will be responsible for the media publications.
- The Recycling Department Administrator will plan, develop and monitor the project from inception to completion.

2.0 Project Activities / Milestone Schedule

a. Project Activities

The campus walk-throughs will be scheduled in July 2023. Proposed tree locations will be marked on the campus maps. The maintenance department supervisor will cross reference proposed tree locations to the campus land surveys to mark potential hazards, such as underground utility lines. If tree location adjustments are required, the campus maps will be updated.

Following the school district's procurement procedures, the recycling department administrator will compile the quantities and tree species recommended at each campus and solicit quotes from three tree farms / nurseries. Once the quotes are received, the vendor will be selected by determining the best value for the district. By August 2023, the recycling department administrator will request a purchase order.

Several activities will be coordinated during the month of September. The recycling department administrator will schedule meetings with the campus parental groups to encourage ownership in the tree planting project. Meetings will also be scheduled with the maintenance department supervisor and the public information officer to develop a planting calendar. Once the dates are determined, the maintenance department supervisor will coordinate the delivery dates for each school and the public information office will schedule the publicity of the tree planting ceremonies. Campus administrators will then organize the tree planting event. They will invite parents, community members and their preferred grade level to the events. Interviews will be conducted by the school district instructional TV to promote the planting events within their school community.

Tree planting celebrations will be conducted (tentatively) every Friday during the month of October, November and December starting on October 6 through December 14, 2023. Day of the week is contingent to the district and state assessment dates. Participants, including students, will be invited to help plant trees using the ceremonial shovel.

During the months after the tree ceremonies, the recycling department will monitor the maintenance and care of the new planted trees. Opportunities for improvement will be communicated to the campus principal and their respective area supervisors.

b. Milestone Schedule

The below timeline reflects the planting milestones One Tree Planted has scheduled and has assumed funding is granted for the Brownsville pilot planting as well as the two additional cities, though they are to be determined.

Timeline	Task
April-December 2023	Complete first year of Brownsville project, planting 210 trees.
October 2023	Grant award notification.
November 2023 - April 2024	Begin outreach and planning to initiate 2024-2026 projects at two additional school systems in different cities through One Tree Planted's existing network of over 200+ planting partners across the

	United States, the majority of which support school-based tree planting projects.
May - December 2024	Complete second year of Brownsville project, planting 200 trees; complete first year of planting in 2 additional school systems.
2025	Complete third year of Brownsville projects, planting 220 trees; complete second year of planting in 2 additional school systems.
2026	Develop project impact videos for Brownsville; complete third year of planting in 2 additional school systems.

c. Itemized Budget Sheet / Budget Narrative - Submitted as Attachment

3.0 Environmental Results

a. Performance Measurement Plan

During the months after the tree ceremonies, the recycling department will monitor the maintenance and care of the new planted trees. Opportunities for improvement will be communicated to the campus principal and their respective area supervisors. The BISD Records and Recycling Department will monitor every tree planted. Mr. Ricardo Santoyo has been given the responsibility to visit every school on a weekly basis to ensure the trees are maintained. The current protocol is to visit each campus, meet with the head custodian, inspect each tree and report findings to Mrs. Micaela Escobar and Mr. Woody Sanchez.

BISD does not have a tracking system; however, there is constant communication to ensure the trees are maintained properly. The only barrier BISD has in using the spatial software or other database tool to manage trees and monitoring data is the cost. The Records Management and Recycling Department will provide support throughout the three years. Ricardo Santoyo is the person designated to monitor the maintenance and care of the trees and report back to Mrs. Escobar. Should the trees require professional maintenance, she will contact the city forester for guidance.

BISD Records Management & Recycling Department created a schedule for tree maintenance and care whereby campus staff, parents and students can pledge to care for the trees. The document requires a signature and it brings a higher expectation on the importance of keeping the trees alive. The BISD Maintenance Department Grounds Team, led by Mr. Woody Sanchez, will be responsible for the pruning of the trees. When pruning is needed, Mr. Ricardo Santoyo and/or the campus custodial staff, will notify Mr. Sanchez.

The campus custodial staff will mulch the trees. Mulch will be applied as needed. Ricardo Santoyo, Records & Recycling Staff Member, will visit every school on a weekly basis to ensure the trees have the mulch needed. If the trees need mulch, Ricardo Santoyo will deliver the mulch and supervise its

application to ensure it is done correctly. The campus custodial staff at each school will be responsible for watering the trees. They will water the trees three times a week for the first six months and twice a week afterwards. The Records & Recycling Department has a dedicated staff person (Ricardo Santoyo) who will visit every school on a weekly basis to ensure the trees are being watered.

b. Sustainability Plan and Community Vision

One Tree Planted helps to provide funding and resources to partners on the ground to build their capacity and to support impactful tree planting projects. We will be using this model through our on-going partners with the city of Brownsville, as well as the additional 2 pilot cities yet to be determined. In order to ensure that our planting partners are able to fulfill their commitments each year, we provide technical consultations with our team of experts on planting technique, methods, project design that will help make each project more efficient. Our goal is to help our planting partners identify and execute tree planting projects that provide co-benefits and support biodiversity and successful habitat restoration.

In addition, over the past several years, One Tree Planted has been collecting data from each planting project and has been in the process of building technical capacity, piloting drone use with a small cohort of planting partners. One Tree Planted is creating a system that organizes and automatizes data into one geospatial platform for analysis and data reporting purposes that will support monitoring for decades after a planting project is complete.

By providing 3 pilot cities with large-scale planting projects throughout their school districts, One Tree Planted aims to support that community's health and tree equity goals. Successful partnerships and planting projects will show that organized, systemic change throughout the school systems is not only possible but highly supported by the local community. Completion of planting projects within our pilot cities will provide One Tree Planted with the measurable outcomes and working experience needed to secure further funding for more urban school planting projects, as well as increased partnership from communities and businesses.

4.0 Programmatic Capability

a. Organizational Experience

One Tree Planted engages and impacts populations all over the world. In just eight years, we have managed to get over 91 million trees in the ground through new and established relationships with over 463 planting partners. In 2022 alone, we planted over 52 million trees within 327 planting projects in 74 countries across six regions and have potentially sequestered more than 10 million tons of carbon over the next 20 years. Through these projects, we helped to create 2,438 jobs, supported 50,582 farming families, and engaged over 32,000 volunteers to restore 97,769 hectares of land. In 2022, One Tree Planted coordinated 468 tree planting events worldwide and engaged and empowered over 26,254 women in developing countries. Our T.R.E.E.S. (Teaching Reforestation, Environmental Engagement, and Sustainability) program grew enormously in 2022, adding 355 new classroom registrations. By

collaborating with the World Resources Institute, The Jane Goodall Institute, and Rainforest Alliance, One Tree Planted has been able to maximize its impact with innovative solutions to restore the planet.

One Tree Planted has impacted populations at all levels. On a macro level, One Tree Planted has helped to reduce the negative effects of carbon emissions, air pollution, and global warming. It has inspired and engaged individuals, schools, foundations, and businesses to take action to combat climate change. It has restored landscapes for economic, social, and environmental well-being. On a micro level, it has supported community development by building and beautifying urban green space and improving air and water quality. It has helped underdeveloped communities become resilient and self-sufficient to develop sustainable economies, and provide income, food, and heating to support families. Its action and positive story-telling has inspired many and boosted the sense of community all around the world.

Our impact on global sustainability goals has been significant, warranting the honor of being named "Nonprofit Changemaker" by 1% for the Planet within their People for the Planet Awards in April 2020, as well as the Guidestar Platinum Seal of Transparency in 2020.

In 2021, One Tree Planted Won the Environmental Category of the Land Rover Above & Beyond Service Awards.

b. Staff Experience / Qualifications of Project Manager (PM)

Our Urban Forestry program is led by Tanner Haid, One Tree Planted's Director of Urban Forestry, who has been a constant advocate for urban forests for over a decade, building the largest volunteer tree planting and stewardship program in his home state of West Virginia. Mr. Haid is an ISA Certified Arborist and serves as the Chair of his local municipal Tree Board. As the Urban Forest Specialist at One Tree Planted, he has developed our global urban forestry program, with a specific focus on supporting underserved communities through high-impact community tree planting projects.

Supporting Mr. Haid are two project managers, Nilanjana Saha and Lauren Houtenbrink. Ms. Saha has a background in conservation and has spent nearly a decade managing and growing the urban tree canopy in the front range of Colorado and New York City. Ms. Houtenbrink has a background in urban forestry and environmental justice theory, having focused on projects from upstate New York to Southern California. Both project managers are ISA certified arborists.

c. Expenditure of Awarded Grant Funds, and plan for compliance with EPA's Pre-award Compliance Review for Nonprofit Organizations

One Tree Planted has well-established partnership with carefully vetted planting partners and continually seeks new local planting organizations that have the experience and capacity to carry out ecologically and socially appropriate restoration projects. One Tree Planted ensures that all aspects of the project are secured with the planting partners, including sources of seedling/trees, access to land with authorizations from appropriate authorities, and labor supply.

Once One Tree Planted receives notification that the proposal has been accepted and an award to be sent, we will then begin allocating funding to the project listed in the grant, restricting the funds. We also have controls on each project whereby we cannot freely add donations beyond the funding goal for each project.

One Tree Planted and its planting partners are bound by a legal agreement for each project that is taken on. If for some reason planting partners are unable to meet their planting obligations, our agreements require a refund of any advances made and they are only paid for any number of trees actually planted. Funders' donations would be allocated to another project that meets the donors requirements and they would be advised of the project change.

Many of our planting partners do not have the capacity to raise funds on their own, to the scale that is required for project implementation and completion. They diligently work to raise awareness and advocate for themselves, but their focus is primarily on on-the-ground planting operations. Partnering with One Tree Planted ensures that large-scale funding can be provided to get projects implemented and completed. As per project legal agreements, One Tree Planted pays its planting partners in installments and has the capacity and cashflow to start the initial project funding. Projects are paid out during the beginning, middle, and final stages of the work, with adequate reporting required on behalf of our partners before being issued payment.

5.0 Past Performance

One Tree Planted relies on the partnership and support of various entities in order to implement and complete planting projects throughout the country. One Tree Planted has partnerships with the World Resources Institute (WRI) and United States Forest Service (USFS), the Rainforest Alliance, The International Council for Research in Agroforestry (ICRAF) - all of whom have global reach. We have also received support from entities such as the Bezos Earth Fund and FedEx. Other partnerships include One Tree Planted as an implementation partner for the UN Decade on Ecosystem Restoration (2021-2030) and participation with the World Economic Forum's global One Trillion Trees Initiative.

Please see below for a selection of our assistance agreements from the last three years:

1. United States Forest Service Partnership Agreement - Starting in 2022, One Tree Planted has been working with the United States Forest Service to reforest sections of national forests in Florida, as well as the Ochoco National Forest in the Pacific Northwest. Both projects target areas that have seen wildfire devastation; the planting of area-appropriate pine will support ecosystem renewal and restore scenery. The planting projects begin in spring of 2022 and are set to finalize towards the end of 2023. One Tree Planted has committed to multi-year collaboration and reporting, with the performance expiration date set for March 2026.
2. Lesley L'Occitane NA - Since 2021, One Tree Planted has received 11 grants from L'Occitane NA for 16 reforestation projects across the United States and Canada. All projects were completed on time and

were reported on in a timely manner, which helped to secure additional funding in subsequent years, as well as matching funding from the L'Occitane Foundation (as of 2022, the matching funding is no longer provided). Some of the awards partially funded projects, while others funded projects in their entirety. All formal reports were submitted in the application portal by the required due dates and supplemented by a more informal, personalized impact report. L'Occitane was especially pleased to be invited to a video screening of One Tree Planted's *"Keep Cool: Fortifying British Columbia",* which focused on one of the projects they were funding.

3. Baker Hughes Foundation - Since 2021, One Tree Planted has received four grants from the Baker Hughes Foundation for 14 projects in countries all around the world. The timely completion and reporting of these projects played a pivotal role in securing additional funding in subsequent years. While some of the funding covered a portion of the project costs, others provided full funding for the projects. The Baker Hughes Foundation received formal reports by the due dates and also received informal, personalized impact reports. One Tree Planted was also invited to do a formal presentation via Zoom to the Board of Trustees to further report on the impact they made with their funding support.

6.0 Quality Assurance Project Plan (QAPP) Information (If applicable)

One Tree Planted partners with local planting organizations that have the experience and capacity to carry out ecologically and socially appropriate restoration projects. We remain closely engaged with our partners to monitor progress and require reporting and photos at several stages of the project. We track the total number of trees planted, tree species, survival rate, area under restoration, and the number of volunteers who engage in the tree planting, and testimonials from respective communities.

a. Outputs (Evaluation Criteria, Section V.A)

- Number of school districts systemically engaged in systemic tree planting initiatives.
- Number of schools participating in tree planting projects.
- Number of under-resourced and/or disadvantaged communities impacted.
- Number of trees planted.
- Number of students from underserved schools participating in tree planting events.
- Number of community leaders, parents, or other residents from underserved communities or associated with the schools participating in tree planting events.
- Number of jobs supported & created.
- Number of people impacted.

b. Outcomes (Evaluation Criteria, Section V.A.)

i.Short-term Outcomes

1. Support green job opportunities and worker skill development related to urban forestry & arboriculture

2. Cross-sector coordination on school greening efforts
3. Ecosystem services provided by trees, calculated using iTree Planting or other similar tools.

Ii. Long-term Outcomes

1. Reduction in temperatures in urban school areas due to urban heat island mitigation and planning.
2. Increase in equitable tree canopy coverage in multiple urban school districts.
3. Increase in outdoor activities in urban schools due to shaded recreational areas.
4. Long-term communications with underserved communities regarding public health in relation to tree equity.

c. Performance Measurement Plan (Evaluation Criteria, Section V.A.)

Urban Forestry proposals are submitted to us by local planting organizations, including grassroots conservation groups, governmental stewardship organizations, or global conservation organizations. Our experienced Urban Forestry Team vets the proposal using our Project Vetting criteria, which is influenced by best management practices and research in the field of urban forestry. When vetting projects, we assess project aspects that are essential to success, including stakeholder engagement, species selection and diversity, meaningful impact, community input and engagement, potential risks to young trees, necessary site preparations, proposed maintenance, and more.

One Tree Planted's pilot is vested in growing trees, not simply planting them, in underserved schools and communities. We have developed a cutting-edge monitoring program to ensure that trees planted grow into strong, healthy trees that benefit the community for generations. Our planting partners are required to have a data collection plan in place and be able to adapt their planting and maintenance efforts in response to the real-time data they collect. One Tree Planted requires reporting on all planting projects along with regular updates through the third year in order to track survival and other metrics of success.

For key projects such as this proposed pilot, we send One Tree Planted staff and Urban Forestry specialists for in-person technical visits to assess site performance and monitoring protocol implementation. During these visits, our team is able to get a full understanding of the status of the planted areas and trees. Because the technology to enable tree monitoring is constantly evolving, we are able to collect drone data on site visits to select partners. One Tree Planted uses a combination of commercial and public imagery sources to monitor tree canopy cover. Our monitoring processes are a key measurement tool, helping us ensure that the planting sites are protected and under stable conditions.

OMB Number: 2030-0020
Expiration Date: 06/30/2024

Preaward Compliance Review Report for All Applicants and Recipients Requesting EPA Financial Assistance

Note: Read Instructions before completing form.

I. A. Applicant/Recipient (Name, Address, City, State, Zip Code)

Name: One Tree Planted, Inc.

Address: 145 Pine Haven Shores Road, #1000D

City: Shelburne

State: VT: Vermont Zip Code: 05482

B. Unique Entity Identifier (UEI): EREENAD3MA19

C. Applicant/Recipient Point of Contact

Name: Rosa Rivera

Phone: Ex. 6 - Personal Privacy (PP)

Email: rosa@onetreeplanted.org

Title: Philanthropy Officer

II. Is the applicant currently receiving EPA Assistance? ☐ Yes ☒ No

III. List all pending civil rights lawsuits and administrative complaints filed under federal law against the applicant/recipient that allege discrimination based on race, color, national origin, sex, age, or disability. (Do not include employment complaints not covered by 40 C.F.R. Parts 5 and 7.)

One Tree Planted is not involved in pending civil rights lawsuits or administrative complaints filed under federal law against the applicant/recipient that allege discrimination.

IV. List all civil rights lawsuits and administrative complaints decided against the applicant/recipient within the last year that alleged discrimination based on race, color, national origin, sex, age, or disability and enclose a copy of all decisions. Please describe all corrective actions taken. (Do not include employment complaints not covered by 40 C.F.R. Parts 5 and 7.)

One Tree Planted has no lawsuits or administrative complaints that have been decided against the applicant/recipient within the last year that alleged discrimination based on race, color, national origin, age, sex, or disability.

V. List all civil rights compliance reviews of the applicant/recipient conducted under federal nondiscrimination laws by any federal agency within the last two years and enclose a copy of the review and any decisions, orders, or agreements based on the review. Please describe any corrective action taken. (40 C.F.R. § 7.80(c)(3))

One Tree Planted has no civil rights compliance reviews of the applicant/recipient conducted under federal nondiscrimination laws by any federal agency within the last two years.

VI. Is the applicant requesting EPA assistance for new construction? If no, proceed to VII; if yes, answer (a) and/or (b) below.

☐ Yes ☒ No

a. If the grant is for new construction, will all new facilities or alterations to existing facilities be designed and constructed to be readily accessible to and usable by persons with disabilities? If yes, proceed to VII; if no, proceed to VI(b).

☐ Yes ☐ No

b. If the grant is for new construction and the new facilities or alterations to existing facilities will not be readily accessible to and usable by persons with disabilities, explain how a regulatory exception (40 C.F.R. 7.70) applies.

VII. **Does the applicant/recipient provide initial and continuing notice that it does not discriminate on the basis of race, color, national origin, sex, age, or disability in its program or activities? (40 C.F.R 5.140 and 7.95)** ☒ Yes ☐ No

a. **Do the methods of notice accommodate those with impaired vision or hearing?** ☒ Yes ☐ No

b. **Is the notice posted in a prominent place in the applicant's/recipient's website, in the offices or facilities or, for education programs and activities, in appropriate periodicals and other written communications?** ☒ Yes ☐ No

c. **Does the notice identify a designated civil rights coordinator?** ☒ Yes ☐ No

VIII. **Does the applicant/recipient maintain demographic data on the race, color, national origin, sex, age, or disability status of the population it serves? (40 C.F.R. 7.85(a))** ☒ Yes ☐ No

IX. **Does the applicant/recipient have a policy/procedure for providing meaningful access to services for persons with limited English proficiency? (Title VI, 40 C.F.R. Part 7, *Lau v Nichols* 414 U.S. (1974))** ☒ Yes ☐ No

X. **If the applicant is an education program or activity, or has 15 or more employees, has it designated an employee to coordinate its compliance with 40 C.F.R. Parts 5 and 7? Provide the name, title, position, mailing address, e-mail address, fax number, and telephone number of the designated coordinator.**

Not applicable.

XI. **If the applicant is an education program or activity, or has 15 or more employees, has it adopted grievance procedures that assure the prompt and fair resolution of complaints that allege a violation of 40 C.F.R. Parts 5 and 7? Provide a legal citation or applicant's/ recipient's website address for, or a copy of, the procedures.**

Not applicable.

For the Applicant/Recipient

I certify that the statements I have made on this form and all attachments thereto are true, accurate and complete. I acknowledge that any knowingly false or misleading statement may be punishable by fine or imprisonment or both under applicable law. I assure that I will fully comply with all applicable civil rights statutes and EPA regulations.

A. Signature of Authorized Official	B. Title of Authorized Official	C. Date
Rosa Rivera	Chief of Sustainability	04/14/2023

For the U.S. Environmental Protection Agency

I have reviewed the information provided by the applicant/recipient and hereby certify that the applicant/recipient has submitted all preaward compliance information required by 40 C.F.R. Parts 5 and 7; that based on the information submitted, this application satisfies the preaward provisions of 40 C.F.R. Parts 5 and 7; and that the applicant has given assurance that it will fully comply with all applicable civil rights statures and EPA regulations.

A. *Signature of Authorized EPA Official	B. Title of Authorized Official	C. Date

Instructions for EPA FORM 4700-4 (Rev. 04/2021)

General. Recipients of Federal financial assistance from the U.S. Environmental Protection Agency must comply with the following statutes and regulations.
Title VI of the Civil Rights Acts of 1964 provides that no person in the United States shall, on the grounds of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. The Act goes on to explain that the statute shall not be construed to authorize action with respect to any employment practice of any employer, employment agency, or labor organization (except where the primary objective of the Federal financial assistance is to provide employment). Section 13 of the 1972 Amendments to the Federal Water Pollution Control Act provides that no person in the United States shall on the ground of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under the Federal Water Pollution Control Act, as amended. Employment discrimination on the basis of sex is prohibited in all such programs or activities. Section 504 of the Rehabilitation Act of 1973 provides that no otherwise qualified individual with a disability in the United States shall solely by reason of disability be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. Employment discrimination on the basis of disability is prohibited in all such programs or activities. The Age Discrimination Act of 1975 provides that no person on the basis of age shall be excluded from participation under any program or activity receiving Federal financial assistance. Employment discrimination is not covered. Age discrimination in employment is prohibited by the Age Discrimination in Employment Act administered by the Equal Employment Opportunity Commission. Title IX of the Education Amendments of 1972 provides that no person in the United States on the basis of sex shall be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity receiving Federal financial assistance. Employment discrimination on the basis of sex is prohibited in all such education programs or activities. Note: an education program or activity is not limited to only those conducted by a formal institution. 40 C.F.R. Part 5 implements Title IX of the Education Amendments of 1972. 40 C.F.R. Part 7 implements Title VI of the Civil Rights Act of 1964, Section 13 of the 1972 Amendments to the Federal Water Pollution Control Act, and Section 504 of The Rehabilitation Act of 1973.

Items "Applicant" means any entity that files an application or unsolicited proposal or otherwise requests EPA assistance. 40 C.F.R. §§ 5.105, 7.25. "Recipient" means any State or its political subdivision, any instrumentality of a State or its political subdivision, any public or private agency, institution, organizations, or other entity, or any person to which Federal financial assistance is extended directly or through another recipient, including any successor, assignee, or transferee of a recipient, but excluding the ultimate beneficiary of the assistance. 40 C.F.R. §§ 5.105, 7.25. "Civil rights lawsuits and administrative complaints" means any lawsuit or administrative complaint alleging discrimination on the basis of race, color, national origin, sex, age, or disability pending or decided against the applicant and/or entity which actually benefits from the grant, but excluding employment complaints not covered by 40 C.F.R. Parts 5 and 7. For example, if a city is the named applicant but the grant will actually benefit the Department of Sewage, civil rights lawsuits involving both the city and the Department of Sewage should be listed. "Civil rights compliance review" means: any federal agency-initiated investigation of a particular aspect of the applicant's and/or recipient's programs or activities to determine compliance with the federal non-discrimination laws. Submit this form with the original and required copies of applications, requests for extensions, requests for increase of funds, etc. Updates of information are all that are required after the initial application submission. If any item is not relevant to the project for which assistance is requested, write "NA" for "Not Applicable." In the event applicant is uncertain about how to answer any questions, EPA program officials should be contacted for clarification.

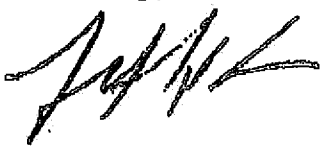
Form 990/990-EZ/990-N Required:
Yes
Effective Date of Exemption:
March 5, 2017
Contribution Deductibility:
Yes
Addendum Applies:
No

Dear Applicant:

We're pleased to tell you we determined you're exempt from federal income tax under Internal Revenue Code (IRC) Section 501(c)(3). Donors can deduct contributions they make to you under IRC Section 170. You're also qualified to receive tax deductible bequests, devises, transfers or gifts under Section 2055, 2106, or 2522. This letter could help resolve questions on your exempt status. Please keep it for your records.

Organizations exempt under IRC Section 501(c)(3) are further classified as either public charities or private foundations. We determined you're a public charity under the IRC Section listed at the top of this letter.

If we indicated at the top of this letter that you're required to file Form 990/990-EZ/990-N, our records show you're required to file an annual information return (Form 990 or Form 990-EZ) or electronic notice (Form 990-N, the e-Postcard). If you don't file a required return or notice for three consecutive years, your exempt status will be automatically revoked.



If we indicated at the top of this letter that an addendum applies, the enclosed addendum is an integral part of this letter.

For important information about your responsibilities as a tax-exempt organization, go to www.irs.gov/charities. Enter "4221-PC" in the search bar to view Publication 4221-PC, Compliance Guide for 501(c)(3) Public Charities, which describes your recordkeeping, reporting, and disclosure requirements.

Letter 947

Form **W-9**
(Rev. October 2018)
Department of the Treasury
Internal Revenue Service

Request for Taxpayer Identification Number and Certification

► Go to *www.irs.gov/FormW9* for instructions and the latest information.

Give Form to the requester. Do not send to the IRS.

Print or type. See Specific Instructions on page 3.

1 Name (as shown on your income tax return). Name is required on this line; do not leave this line blank.

Next Leadership Development Corporation

2 Business name/disregarded entity name, if different from above

3 Check appropriate box for federal tax classification of the person whose name is entered on line 1. Check only **one** of the following seven boxes.

☐ Individual/sole proprietor or single-member LLC ☑ C Corporation ☐ S Corporation ☐ Partnership ☐ Trust/estate

☐ Limited liability company. Enter the tax classification (C=C corporation, S=S corporation, P=Partnership) ► _____

Note: Check the appropriate box in the line above for the tax classification of the single-member owner. Do not check LLC if the LLC is classified as a single-member LLC that is disregarded from the owner unless the owner of the LLC is another LLC that is **not** disregarded from the owner for U.S. federal tax purposes. Otherwise, a single-member LLC that is disregarded from the owner should check the appropriate box for the tax classification of its owner.

☐ Other (see instructions) ►

4 Exemptions (codes apply only to certain entities, not individuals; see instructions on page 3):

Exempt payee code (if any) _____

Exemption from FATCA reporting code (if any) _____

(Applies to accounts maintained outside the U.S.)

5 Address (number, street, and apt. or suite no.) See instructions.

21 Central Avenue

6 City, state, and ZIP code

Boston, MA 02136

Requester's name and address (optional)

7 List account number(s) here (optional)

Part I Taxpayer Identification Number (TIN)

Enter your TIN in the appropriate box. The TIN provided must match the name given on line 1 to avoid backup withholding. For individuals, this is generally your social security number (SSN). However, for a resident alien, sole proprietor, or disregarded entity, see the instructions for Part I, later. For other entities, it is your employer identification number (EIN). If you do not have a number, see *How to get a TIN*, later.

Note: If the account is in more than one name, see the instructions for line 1. Also see *What Name and Number To Give the Requester* for guidelines on whose number to enter.

Social security number

			–			–				

or

Employer identification number

8	2	–	0	8	0	5	4	1	8

Part II Certification

Under penalties of perjury, I certify that:

1. The number shown on this form is my correct taxpayer identification number (or I am waiting for a number to be issued to me); and
2. I am not subject to backup withholding because: (a) I am exempt from backup withholding, or (b) I have not been notified by the Internal Revenue Service (IRS) that I am subject to backup withholding as a result of a failure to report all interest or dividends, or (c) the IRS has notified me that I am no longer subject to backup withholding; and
3. I am a U.S. citizen or other U.S. person (defined below); and
4. The FATCA code(s) entered on this form (if any) indicating that I am exempt from FATCA reporting is correct.

Certification instructions. You must cross out item 2 above if you have been notified by the IRS that you are currently subject to backup withholding because you have failed to report all interest and dividends on your tax return. For real estate transactions, item 2 does not apply. For mortgage interest paid, acquisition or abandonment of secured property, cancellation of debt, contributions to an individual retirement arrangement (IRA), and generally, payments other than interest and dividends, you are not required to sign the certification, but you must provide your correct TIN. See the instructions for Part II, later.

General Instructions

Section references are to the Internal Revenue Code unless otherwise noted.

Future developments. For the latest information about developments related to Form W-9 and its instructions, such as legislation enacted after they were published, go to *www.irs.gov/FormW9.*

Purpose of Form

An individual or entity (Form W-9 requester) who is required to file an information return with the IRS must obtain your correct taxpayer identification number (TIN) which may be your social security number (SSN), individual taxpayer identification number (ITIN), adoption taxpayer identification number (ATIN), or employer identification number (EIN), to report on an information return the amount paid to you, or other amount reportable on an information return. Examples of information returns include, but are not limited to, the following.

- Form 1099-INT (interest earned or paid)
- Form 1099-DIV (dividends, including those from stocks or mutual funds)
- Form 1099-MISC (various types of income, prizes, awards, or gross proceeds)
- Form 1099-B (stock or mutual fund sales and certain other transactions by brokers)
- Form 1099-S (proceeds from real estate transactions)
- Form 1099-K (merchant card and third party network transactions)
- Form 1098 (home mortgage interest), 1098-E (student loan interest), 1098-T (tuition)
- Form 1099-C (canceled debt)
- Form 1099-A (acquisition or abandonment of secured property)

Use Form W-9 only if you are a U.S. person (including a resident alien), to provide your correct TIN.

If you do not return Form W-9 to the requester with a TIN, you might be subject to backup withholding. See What is backup withholding, *later.*

RE: The Resilience Hub Project

Dear Jacob Burney,

I am writing to express my strong support for your Resilience Hub Project grant application to the EPA Environmental Justice Collaborative Agreement. As an At-Large Boston City Councilor, I am committed to advancing equity and justice for all residents of our city, particularly those who have been historically marginalized and underserved.

The Resilience Hub Project is a critical initiative that will help to prepare our communities for the increasing number and intensity of disasters that disproportionately impact Black people. This project will not only focus on disaster preparedness and response, but also on incorporating environmental justice and climate change issues into project planning and implementation.

I believe that this project will be an important tool in advancing our city's efforts to address the disproportionate burden of environmental harms and disasters on Black communities. By convening city departments, public health, and healthcare partners, we can identify current priorities in our climate and disaster plans and work together to ensure that they are responsive to the needs of our most vulnerable residents. I am so committed to supporting this work that I will be helping with all of the convenings regardless of my status as an elected official.

I am proud to partner with Next Leadership Development in this important work, and I urge you to support their efforts to create a more resilient and just Boston. If you have any questions, please email me at julia.mejia@boston.gov or call me at: Ex. 6 - Personal Privacy (PP)

Respectfully,

Julia Mejia
Boston City Councilor At-Large

Dear Applicant:

We are pleased to inform you that upon review of your application for tax exempt status we have determined that you are exempt from Federal income tax under section 501(c)(3) of the Internal Revenue Code. Contributions to you are deductible under section 170 of the Code. You are also qualified to receive tax deductible bequests, devises, transfers or gifts under section 2055, 2106 or 2522 of the Code. Because this letter could help resolve any questions regarding your exempt status, you should keep it in your permanent records.

Organizations exempt under section 501(c)(3) of the Code are further classified as either public charities or private foundations. We determined that you are a private foundation within the meaning of section 509(a) of the Code. You are required to file Form 990-PF annually.

For important information about your responsibilities as a tax-exempt organization, go to www.irs.gov/charities. Enter "4221-PF" in the search bar to view Publication 4221-PF, Compliance Guide for 501(c)(3) Private Foundations, which describes your recordkeeping, reporting, and disclosure requirements.

1200 Pennsylvania Avenue, NW
Washington, D.C. 20460

To Whom It May Concern:

I am writing to extend my support for the Brownsville Independent School District (BISD) One Tree Planted Project for the EPA Collaborative Problem grant application. The trees planted over the next three years will help reduce erosion, filter clean air, help reduce climate change, and even become homes for thousands of plants and animals.

Brownsville is located in on the southernmost border of Mexico and along the Gulf of Mexico. The Sabal Mexicana, Cordia Boissieri, Ehretia Anacua and Quercus Macrocarpa are the predominant tree species that grow well in Brownsville. BISD has 56 campuses throughout the city. The One Tree Plant Project will help support students K-12 expand their knowledge outside of the classroom.

The engagement of schools and the community will ensure that the trees planted will be nurtured and sustained. Students will be able to learn the characteristics of trees and the kind benefits it brings to our everyday lives, all while providing beautiful greenery.

I hope that you will give careful consideration this request by Brownsville Independent School District for One Tree Planted Project and its potential benefits to the community. Thank you for accepting this letter of support, and please feel free to contact me at Ex. 6 Personal Privacy (PP) if I can provide any assistance.

Sincerely,

Morgan LaMantia
State Senator

RE: EPA Environmental Justice Collaborative Grant Application – One Tree Planted

To Whom It May Concern,

On behalf of the City of Brownsville and its residents, particularly the students and staff at the Brownsville Independent School District (BISD), I write this letter of strong support for BISD's application for an EPA Environmental Justice Collaborative Grant through One Tree Planted.

Since 1999, the City of Brownsville has earned recognition as a Tree City USA, which means we are a community that makes planting and care of trees a priority. Our warm climate nine months out of the year and our close proximity to the equator, make it necessary to have more tree coverage and shade throughout Brownsville.

We strongly support One Tree Planted submitting a grant to help BISD schools plant trees for the next three years. It is our sincere desire to work together to ameliorate environmental challenges, better protect our vulnerable populations, and enhance the beauty of our City. Having the help and resources to plant more trees on BISD campuses will not only increase the supply of oxygen and reduce the amount of carbon dioxide in the air, but hopefully will stall global warming and provide more shady spots for children and adults to enjoy the outdoors during the day.

Sincerely,

Helen Ramirez, AICP
City Manager

TEXAS A&M FOREST SERVICE

LETTER OF SUPPORT for the Brownsville Independent School District, April 3, 2023

The Texas A&M Forest Service conserves and protects the resources and lands of the Lone Star State. TAMFS provides statewide leadership and technical assistance to ensure trees, forests and related natural resources are sustained for the benefit of all. As the South Texas Regional Forester for TAMFS, I work with communities to plant, care for, and conserve trees where people live, work, and play. I foster the appreciation and stewardship of urban forests by supporting tree planting and tree care activities.

The BISD planting of trees is an important project since it will provide multiple benefits. School Tree Planting projects help connect students to the benefits of trees and foster environmental stewardship. This project will also support the surrounding community by increasing Brownsville's tree canopy. Schools are a major property owner within the city and an important stakeholder of its urban forest.

Most of us recognize the beauty of trees and their other values. They help protect our waterways by intercepting storm water, stabilizing soil and using nutrients that would otherwise wash into waterways. Trees provide environmental benefits such as cleaning air and water. Trees also help moderate temperature and muffle noise. They even help improve air quality by absorbing harmful airborne compounds and by giving off oxygen. Spending time around trees and in nature also makes us healthier and improves our students' academic performances.

School Tree Planting projects connect students to the benefits of trees and foster environmental stewardship. Tree planting is a great way to increase student interest in their local environment and achieve academic goals. Each school tree planting provides educators with the opportunity to inspire school administrators, faculty, and students to affect positive change at their schools and, in turn, their communities.

When students plant trees, they can see for themselves the structure of trees, learn what they need and how they grow. Teachers can use the planting process to discuss the benefits trees provide, while including many subjects that their classes are studying. As trees mature, the trees can be a continuing, personalized way of relating what they've learned in books to visible, living examples.

Students become aware that they can play a role in protecting the environment through personal involvement. Ultimately, it is hoped that the experience will help them make intelligent decisions about conservation and use of our valuable natural resources.

I am in support of One Tree Planted and its assistance to the BISD schools to plant trees for the next three years. This tree planting program will be a learning opportunity to get students involved in the environment and conservation of our natural resources. Recent scientific studies suggest students are better able to concentrate, complete tasks, and follow directions after spending time in natural settings.

Sincerely,

Bill Green, Texas A&M Forest Service, cellphone: Ex. 6 Personal Privacy (PP); email: Ex. 6 - Personal Privacy (PP)

CITY OF BROWNSVILLE

6035 Jamie J Zapata Ave.
Brownsville, TX 78521

April 3, 2023

My name is Georgina Mota, City Forester for the City of Brownsville Texas. I have 17 years experience working as the Supervisor for the Greens Division of our city. During those 17 years I worked side by side with our two previous City Foresters. We consulted each other regularly on maintenance and care of our Urban Canopy, medians, right of ways and parks. We organized and took part in annual Arbor Day and Earth Day events and worked on a tree survey. I supervise the Beautification crews and have been active with Keep America Beautiful and Keep Texas Beautiful as well as other organizations like the Rotary Club and the Boy scouts, etc.

During 2022, Brownsville ISD collaborated with The Brownsville Beautification Committee and the City of Brownsville to plant 140 trees within the school district which expanded throughout the City limits. The Brownsville ISD took every consideration to make sure the trees were cared for and to give each tree planted the best chance of survival. The school district was meticulous with their records and kept constant contact with me, the City Forester as well as the Regional Forester Bill Green.

It was an honor to have witnessed the excitement of the students when BISD, in partnership with the City of Brownsville and the Beautification Committee planted 136 trees with the funding received from One Tree Planted. Students, parents, staff and community members joined the tree planting celebrations held at each school. Weeks after planting the trees, I have followed up with each school and their personnel to find what a difference these trees have made. Where at one time the playgrounds were bare there are now trees. Students, parents and staff gleam with pride at the difference the trees have already made just by making the playground more aesthetically pleasing. Seeing the trees grow full during the spring has everyone excited about the shade that these trees will be providing our children in the not so far future. Parents have been drawn into helping not only to care for the trees but have been encouraged to plant more trees at their homes due to their children's excitement from the tree plantings. Tree planting fever has caught on!

The City of Brownsville today is the largest city in the Rio Grande Valley with a population of approximately 185,000. Brownsville is located at the southern tip of Texas, along the Mexico border. Brownsville has been designated Tree City USA for the past 24 consecutive years. With the help of One Tree Planted and the Brownsville ISD our whole community will benefit by the increase in our Urban Canopy. By collaborating with the Brownville ISD, trees will be better

distributed to areas where the Urban Canopy may be lacking therefore providing a more balanced canopy throughout the entire City.

I support One Tree Planted submitting the application for an EPA Environmental Justice Collaborative Grant to plant more trees throughout the district. Students, at all levels, will be able to lean hands-on about trees and how it affects the planet.

If you have any questions please feel free to contact me at Ex. 6 - Personal Privacy (PP)

Thank you for your attention.

Sincerely,

Georgina Mota

Re: EPA Environmental Justice Collaborative Grant

Dear Ms. Micaela Escobar,

Please accept this letter as my formal support for the EPA Environmental Justice Collaborative Grant, through One Tree Planted at BISD. I support programs such as this one that help build our leaders of tomorrow and allow them to understand the importance on conserving our planet. I applaud BISD on the efforts to increase environmental awareness at the school district and the community.

Re: Letter of Support for the Brownsville Independent School District

To Whom It May Concern,

The Brownsville Independent School District is always in support of the beautification of our district's campuses. Our district encompasses 95 square miles and is the largest employer in the Rio Grande Valley. Approximately 6,000 employees have the challenge of serving a population of almost 38,500 students.

It is important to help our district environment and to give our students educational awareness and purpose by using "One Tree Planted". This exposure serves many educational fields. BISD recognizes and addresses the unique cultural lifestyles of South Texas with a broad selection of academic activities for all the students of BISD. The planting of trees and getting our students & community involved enhances the importance of environmental engagement and sustainability.

Through "One Tree Planted" and the City of Brownville a total of 136 trees were planted in the fall of 2022. The newly planted trees have helped provide our teachers with the perfect opportunity to use as an outdoor lesson (Science) on how to plant trees, maintain, and teach the types of wildlife habitats created by trees.

I am Manuel Hinojosa, FAIA BISD Architect, administrator for the Facilities & Maintenance Departments under the supervision of Dr. Nellie Cantu, Deputy Superintendent of Business and Operations, for BISD. Overseen with Genaro "Jerry" Martinez, Director of Maintenance, the grounds division's dedication to maintaining the appearance of the grounds and fields to the district. I also supervise the Facilities Dept. with all the District's construction, designs, and architectural needs.

It is an honor to support this most prestigious program such as "One Tree Planted", with the guidance of Ms. Micaela Escobar-Ramirez, Director.

Thank you.

Manuel Hinojosa, FAIA
BISD Architect

Brownsville
Nuestro Hogar – It's Our Town!
Brownsville Beautification Committee

KEEP BROWNSVILLE BEAUTIFUL

May 9, 2021

To whom it may concern,

The Brownsville Beautification Committee's (BBC) is an organization whose mission is to promote, plan, implement, and maintain community beautification projects through public relations, citizen involvement and resource agencies to enhance the quality of life of the citizens of Brownsville. BBC is also the driving force behind Keep Brownsville Beautiful (KBB), which is a community volunteer organization that encourages residents and businesses to be proactive in our mission to beautify our city. This is done through the organization and promotion of city wide cleanups, recycling events, tree planting events, and by helping us create and maintain landscaping and "green" areas that enrich and beautify the community. We specifically involve our youth in these projects, which helps to promote an eco-friendly culture in our community.

As part of our strategic plan, our organization has directed focus on reforesting our city and prioritizing areas of high impact to the quality of life of our community. Schools are certainly one of these areas that have preference in our mission. Planting trees in schools has a direct impact in the lives of our youth. By planting trees in schools we are able to lower the average temperature in the area, provide protection from UV-rays, improve the quality of the air, reduce the pollution, prevent flooding in the playgrounds, and close the tree equity gap in our schools.

As chairman of the board, I would like to pledge our full support to One Tree Planted in submitting the EPA Environmental Justice Collaborative Grant that will help BISD schools and collaborative partners plant trees for the next three years.

Sincerely,

Oscar Zertuche
BBC Chairman

Dear Sponsor,

We are writing this letter to express our sincere gratitude for your generous donation of trees to our school. Your donation will provide our students with the opportunity to learn about the importance of planting trees and to actually be part of this endeavor to make a positive impact on the environment.

As an education institution we teach students about Earth Science because of how much people interact with our planet. We believe that planting trees is an essential step in protecting the environment and promoting a sustainable future. Trees absorb carbon dioxide and other pollutants, improve air quality, reduce erosion, and provide a habitat for wildlife. They also contribute to the overall well-being of individuals by providing shade, reducing heat, and promoting a sense of calm.

As mentioned before, by providing our school with trees, you have enabled us to create a learning environment where students can observe and participate in the growth and development of these vital resources. This initiative will not only benefit our school but also the surrounding community and the world at large.

Once again, I would like to express my sincere gratitude for your generosity and for recognizing the importance of getting children involved in this project. Your donation will make a lasting impact on our students and the environment for years to come.

Sincerely,

Felipe Barrera
Principal Paredes Elementary

To Whom It May Concern,

I am writing this letter in support of One Tree Planted submitting the grant to help BISD plant trees for the next three years.

We are grateful for your commitment to promoting a sustainable environment and your willingness to make a difference in the lives of our BISD students.

Trees are an essential part of our ecosystem, providing many benefits such as clean air, shade, and a natural habitat for wildlife. By donating trees to our district schools, you are helping to create a healthier and more beautiful environment for our students to learn and play in.

Your initiative will also have a positive impact on our community by reducing our carbon footprint and improving the quality of life for all who live in the area.

We thank you for your support and generosity, and we look forward to planting and caring for these trees for years to come. Your contribution will not only benefit our students but also the generations to come.

Once again, thank you for your consideration, and we are excited to work together towards a greener and more sustainable future.

April 6, 2023

EPA Environmental Justice Collaborative Grant,

I am the school counselor at Russell Elementary School. I work with students in grades PreK through 5th grade on many different concerns including social skills, academic achievement, multicultural counseling, bullying, career and college readiness, as well as many other areas of a student's life. I have taken it upon myself to create a Kindness Club and a Recycling Club at our school. I know how important it is for students to feel a sense of belonging, purpose, and connectedness to the world around them. I have found that one of the most powerful and effective learning tools is for the students to spend time outside with nature. To that end, we have created butterfly gardens as well as vegetable gardens at our school. Our students love and appreciate being outdoors and it is so important to be under the shade of trees when being outside . Nature heals their hearts and souls as they explore and experience the many benefits that clean air, shady areas, and bright sun brings to their minds, spirits, and bodies. I am in total support of One Tree Planted to help BISD schools plant trees for the next three years.

Sincerely,
M. Moreno-Sweeney
Marbelia Moreno-Sweeney, M.Ed, CSC
School Counselor

Dr. René Gutiérrez
Superintendent

Dear Whom It May Concern,

I am writing to express Brownsville ISD's strong support for the One Tree Planted Project. As the Deputy Superintendent for Curriculum and Instruction and Human Resources of Brownsville ISD, I recognize the importance of instilling in our students the value of saving the earth and the need for hands-on experiences to achieve this goal.

The One Tree Planted Project is an excellent initiative that aligns with our mission of promoting environmental conservation and awareness. Through this project, our students can gain hands-on experiences in planting trees and learning how to make a positive impact on the planet. It is through grants like this that students get the opportunity to not just read about the importance of trees but actually becoming contributors of environmental awareness. We believe that Earth Day is a year-round effort and that supporting projects such as One Tree Planted is essential in achieving our goal of saving the planet and teaching students that we all contribute to said goal.

We are delighted to inform you that the grant will significantly benefit not only Brownsville ISD but the City of Brownsville as a whole, and we look forward to continuing our partnership with the One Tree Planted Project to support this worthy cause.

Thank you for considering our support for this project.

Sincerely,

Dr. Anysia Trevino
Deputy Superintendent, Brownsville ISD

Ex. 6 - Personal Privacy (PP)

Education

University of South Carolina — Columbia, SC
- Master of Library and Information Science — 8/94

University of Michigan — Ann Arbor, MI
- Bachelor of Music — 5/91

Experience

Providence (RI) Community Library
Library Director — 6/18 - Present

Assistant Library Director — 10/17 – 6/18

Youth Services Coordinator — 8/14 – 10/17

- Active member of four PCL administrative teams: Strategic Planning, Professional Development, Union Negotiations, and Regional Coordinators. Involved in hiring, training, staffing, and other strategic decisions.
- Served on PCL's Leadership Team: participated in updating job descriptions; creating new mission/vision; and, aligning organizational structure. (2015-2016).
- Prepared and managed the Youth Services budget, as well as specific grant program budgets.
- Evaluated grant funded programs and wrote reports to funders, including the United Way of RI, Institute for Museum and Library Services, Rhode Island Department of Transportation, and the Providence Shelter.
- Designed *Summer Reading in the Schoolyard* in partnership with Providence School Department, Providence Recreation Department, and Providence's Healthy Communities Office, funded by the United Way of RI: PCL's mobile library visited 10 PPSD elementary schools and 5 recreation centers weekly in the summer, bringing library programs and materials into the community to stem summer learning loss (2016-2019).
- Implemented year two of PCL's *Ready for K!* National Leadership Grant: planned professional development with Ready to Learn Providence; redesigned the program model with Youth Librarians and Specialists; aligned the budget with the new program model in cooperation with PCL's Chief Operating Officer; and, evaluated the effectiveness of the program (August 2014 – December 2015).

Rhode Island Office of Library and Information Services — 7/09 – 7/14
Youth Services Coordinator

- Coordinated the state-wide summer reading program: led workshops for librarians; engaged educators/artists; collected statistics; and, served as state representative to the Collaborative Summer Library Program.
- Developed Kids Reading Across Rhode Island, a one book/one state program for youth in grades 3-6, in partnership with the RI Center for the Book.
- Implemented continuing education programs for children's and teen librarians.
- Advised the RI Children's Book Award committee, a children's choice award (grades 3-6).

Providence (RI) Public Library — 6/96-6/09
Coordinator of Children's Programs (11/01-6/09)
Educational Support Services Coordinator (9/00-11/01)
L.A.R.K. (Learning and Reading Kits) Coordinator (6/96-9/00)

- Coordinated the development, promotion, and circulation of LARKs, kits containing thematic library materials, to preschool child care providers and educators in Rhode Island.

- Co-coordinated the Cradle to Crayons early literacy program series for families with children ages 1 to 3 in all 10 Providence Public Library locations.
- Collaborated with the library's two bilingual outreach specialists on a Bilingual Young Author's Story Writing Contest and a Día de los Niños: Día de los Libros celebration each spring (2000 - 2009).
    - 2004 Estela & Raúl Mora Award from Reforma
    - 2007 Designated a Día "Super-Site" and received a $5,000 grant from ALSC
- Assisted in managing the library's relationship with the Providence after School Alliance, serving Providence middle school students, including: grant writing; program evaluation; and, serving on a coordinating council.
- Co-coordinated the library's efforts as a partner in a city-wide collaboration, spearheaded by Ready to Learn Providence, designed to prepare children to enter school ready to learn: planned new outreach activities for Spanish speaking families and child care providers; redesigned Cradle to Crayons into a bilingual program; and, created 60 new circulating early literacy kits in Spanish and 20 new kits for toddlers (2002-2009).
- Eisenhower Professional Development Grants, partnership among Providence Public Library, Providence Public School Department, University of Rhode Island, and Rhode Island College: 80 Providence teachers designed innovative math, science, and literature kits for parents and teachers (grades K to 6) that met Standards and circulated from the Providence Public Library (1997-2001).

School Library Media Specialist Columbia, SC
Hopkins Elementary School 8/94-5/96

Professional Memberships and Activities

FabNewport Board (2020 – present)

Collaborative Summer Library Program
- Elected to Executive Board, Inclusion/Diversity Chair (June 2014 – May 2016)

American Library Association
- Co-Presented a *Ready for K!* poster session at the 2015 ALA Conference with PCL's Program Coordinator.
- Presented Providence Public Library's school-library partnerships on a 2004 ALA Conference panel.

Public Library Association
- Co-presented Providence Public Library's partnership with Ready to Learn Providence at PLA (March 2006).
- Presented Eisenhower grant projects with Providence School Department's Literacy Coach Coordinator at PLA (March 2000).

Instructions for EPA FORM 4700-4 (Rev. 04/2021)

General. Recipients of Federal financial assistance from the U.S. Environmental Protection Agency must comply with the following statutes and regulations.
Title VI of the Civil Rights Acts of 1964 provides that no person in the United States shall, on the grounds of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. The Act goes on to explain that the statute shall not be construed to authorize action with respect to any employment practice of any employer, employment agency, or labor organization (except where the primary objective of the Federal financial assistance is to provide employment). Section 13 of the 1972 Amendments to the Federal Water Pollution Control Act provides that no person in the United States shall on the ground of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under the Federal Water Pollution Control Act, as amended. Employment discrimination on the basis of sex is prohibited in all such programs or activities. Section 504 of the Rehabilitation Act of 1973 provides that no otherwise qualified individual with a disability in the United States shall solely by reason of disability be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. Employment discrimination on the basis of disability is prohibited in all such programs or activities. The Age Discrimination Act of 1975 provides that no person on the basis of age shall be excluded from participation under any program or activity receiving Federal financial assistance. Employment discrimination is not covered. Age discrimination in employment is prohibited by the Age Discrimination in Employment Act administered by the Equal Employment Opportunity Commission. Title IX of the Education Amendments of 1972 provides that no person in the United States on the basis of sex shall be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity receiving Federal financial assistance. Employment discrimination on the basis of sex is prohibited in all such education programs or activities. Note: an education program or activity is not limited to only those conducted by a formal institution. 40 C.F.R. Part 5 implements Title IX of the Education Amendments of 1972. 40 C.F.R. Part 7 implements Title VI of the Civil Rights Act of 1964, Section 13 of the 1972 Amendments to the Federal Water Pollution Control Act, and Section 504 of The Rehabilitation Act of 1973.

Items "Applicant" means any entity that files an application or unsolicited proposal or otherwise requests EPA assistance. 40 C.F.R. §§ 5.105, 7.25. "Recipient" means any State or its political subdivision, any instrumentality of a State or its political subdivision, any public or private agency, institution, organizations, or other entity, or any person to which Federal financial assistance is extended directly or through another recipient, including any successor, assignee, or transferee of a recipient, but excluding the ultimate beneficiary of the assistance. 40 C.F.R. §§ 5.105, 7.25. "Civil rights lawsuits and administrative complaints" means any lawsuit or administrative complaint alleging discrimination on the basis of race, color, national origin, sex, age, or disability pending or decided against the applicant and/or entity which actually benefits from the grant, but excluding employment complaints not covered by 40 C.F.R. Parts 5 and 7. For example, if a city is the named applicant but the grant will actually benefit the Department of Sewage, civil rights lawsuits involving both the city and the Department of Sewage should be listed. "Civil rights compliance review" means: any federal agency-initiated investigation of a particular aspect of the applicant's and/or recipient's programs or activities to determine compliance with the federal non-discrimination laws. Submit this form with the original and required copies of applications, requests for extensions, requests for increase of funds, etc. Updates of information are all that are required after the initial application submission. If any item is not relevant to the project for which assistance is requested, write "NA" for "Not Applicable." In the event applicant is uncertain about how to answer any questions, EPA program officials should be contacted for clarification.

EPA KEY CONTACTS FORM

OMB Number: 2030-0020
Expiration Date: 06/30/2024

Authorized Representative: *Original awards and amendments will be sent to this individual for review and acceptance, unless otherwise indicated.*

Service Experience

Agraphia Doctoral Student Writing Group

-Doctoral Student Leader (2017-2018)

Research Committee

-Doctoral Student Representative (2014-2016)

Professional Experience

University of Rhode Island **July 2022 - Present**
Adjunct Professor

-Teach LSC521- Public Library Service course
-Teach other courses based on departmental needs
-Develop materials for accelerated 7 week course
-Respond to student questions in a timely manner

Community Libraries of Providence **July 2022 - Present**
Bilingual Community Education Coordinator

-Serve as part of the CLPVD administrative team supervising library system
-Supervise South Providence Library daily operations
-Temporarily supervise Knight Memorial Library Dec. 2022 - June 2023
-Write local, state, federal and private grants
-Oversee Citizenship, ESOL, GED, and collaboration with College Unbound
-Develop library programming for teens, adults, and seniors
-Serve on 02905 Health Equity Zone Steering Committee
-Manage South Providence Library budget
-Manage staff personal development

Community Libraries of Providence **June 2021 - June 2022**
Olneyville Library Manager

-Oversee Olneyville Library daily operations
-Manage federal grant with Network for National Library of Medicine
-Offer bilingual library services
-Develop library programming for teens, adults, and seniors
-Develop relationships with community
-Manage budget
-Manage staff personal development

High Plains Library District **Oct. 2020 - June 2021**
Substitute Librarian

-Develop library programming
-Serve as person in charge
-Provide reference assistance
-Assist patrons in finding materials
-Technology instruction
-Manage library materials and resources

REFORMA Colorado **July 2020 - July 2021**
President

-Oversee the operation of REFORMA Colorado
-Expedite the business of the organization
-Officially represent REFORMA Colorado and build relationships with other organizations
-Create and distribute annual report
-Create and delegate responsibilities to special committees

REFORMA Colorado **Dec. 2019 - June 2020**
Vice President

-Chair annual conference
-Assist in carrying out the duties of the President
-Assume the duties of the President in the President's absence or incapacity
-Assume the duties of President after serving one year as Vice President

National Archive and Records Administration **June 2012 - Aug. 2012**
Applied Research Intern

-Manage 1940s Census and digital transfer to researchers
-Beta testing software for library wide deployment
-Computer repair
-Create presentation on importance of data visualization projects at archive
-Data collection for super computing labs
-Manage workshops by third party vendors

Boulder Public Library **Jan. 2012 - June 2012**
Practicum Scholar
-Assist catalogers in inputing data
-Create a 3D map of BPL for Google Maps
-Improve digital presence of BPL
-Assist other departments as needed

Denver Public Library **Aug. 2010 - June 2012**
Denver Public LEADers Fellowship

-Learn the operations of DPL libraries
-Work across DPL library system to understand library positions
-Attend seminars and workshops to learn best practices
-Volunteer at libraries across the DPL system and perform various functions including storytime, reference, and various other tasks

U.S. Senator Michael Bennet **May 2009 - Sept 2009**
Finance Intern

-Conducted research into political donors using social media and various databases
-Managed money at fundraising events
-Worked with planning committee in conducting fundraisers
-Assist in policy and research projects

HONORS AND AWARDS

-Bill and Melinda Gates Scholar
-Daniels Fund Scholar
-Hispanic Association of Colleges and Universities Scholar
-Latin American Education Foundation Scholar
-iConference Doctoral Colloquium 2018
-2019 Emerging Scholars International Conference on Sport & Society

Non-Academic Experience

Apple Inc. **Jan. 2015 - July 2016**
At-Home-Advisor

-Certified in iOS, Mac OS, Watch OS
-Identified hardware and software issues
-Maintained high customer satisfaction scores
-Trained customers in performing additional functions
-Used KMS to troubleshoot complex problems

Apple Inc. **Oct. 2009 - June 2011**
Specialist

-Guided customers in purchasing decisions
-Hosted training seminars and classes open to the public
-Hosted individual training courses
-Managed traffic flow in store
-Repaired iOS devices

Sigma Lambda Beta **May. 2007 - May. 2009**
President

-Led organization to 2009 CSU Student Organization of the Year Award
-Led organization to 2009 CSU Fraternity of the Year Award
-Work with community on cultural programming including public library
-Perform risk management for all events
-Oversee recruitment and retention of members

-Oversee grant writing
-Oversee fundraising

AT&T **May 2007 - April 2008**
Retail Support Channel

-Analyzed cell phone usage
-Guided customers in purchasing decisions
-Technical support for various electronic devices
-Trained in cell network function

Colorado Rapids **May 2006 - Sept. 2006**
Media Relations Intern

-Oversee and produce all Spanish content/social media for Rapids Media Group
-Write and distribute club-related press releases and advisories
-Oversee production of teams game notes and postgame recaps and notes
-Provide statistical analysis and research for news media
-Assist with coordination of club press conferences and events
-Present at every team function (games, practices, community events, fundraisers, etc.) to assist with any media coverage or statistical inquiries that may arise

Windsor Tribune **Aug. 2007 - May 2008**
Reporter

-General assignment reporter
-Covered health care
-Covered high school sports
-Wrote special interest stories

CTV 11 **Aug. 2004 - May 2008**
Reporter

-Edited audio
-Edited video
-Filmed footage for news and sports programming
-Hosted music video show
-Interviewed individuals for news stories
-Met strict deadlines

90.5 KCSU **Aug. 2005 - May 2007**
Reporter

-Hosted two hour music program
-Sports talk show personality
-Wrote and reported traffic updates

Rocky Mountain Collegian **Aug. 2004 - May 2008**
Reporter

-Beat writer for NCAA tennis
-Beat writer for NCAA softball
-Photographed athletic events when no photographer was available
-Wrote additional news articles as requested

Eagle Eye Newspaper **Sept. 2001 - May 2005**
Editor in Chief

-Edited all writing in newspaper
-Editor of entertainment section of newspaper
-Made certain content was accurate and fact checked
-Managed publishing of newspaper
-Worked with advertising department to raise funds for newspaper
-Wrote editorial, news and sports articles

City of Providence, Rhode Island
Emergency Management Agency
& Office of Homeland Security

Letter of Support: South Providence and Mount Pleasant Libraries

To Whom It May Concern,

The Providence Emergency Management Agency (PEMA) would like to express our full support and admiration for the Community Libraries of Providence, and all of the amazing and essential work they do to enhance the safety, education, wellbeing, and quality of life for the nearly 200,000 residents of Providence. In particular, the South Providence and Mount Pleasant Libraries, which serve some of the Cities most underserved populations, and areas of greatest need.

South Providence and Mount Pleasant Libraries are absolutely essential facilities for PEMA. The Agency consistently partners with these locations on multiple endeavors – from utilizing these locations as Emergency Cooling Centers in the summer, Emergency Warming Centers in the winter, community information hubs in support of public health and safety efforts, COVID-19 response partners, emergency information distribution hubs – without the continued partnership with Community Libraries of Providence, PEMA would simply not be able to execute a full community approach to these programs. Additionally, the Libraries are prefect locations for warming and cooling centers as they provide access to free programs, computers, WiFi, and resources. PEMA is able to provide water, masks, sanitizer, and funding for Sunday hours, allowing for these locations to support many efforts.

As PEMA continues to build community resilience and preparedness around climate change and changing environmental conditions, the partnerships we rely on today with the Community Libraries of Providence will only increase. PEMA also seeks to combat heat islands in the City, and Environmental Justice inequities – with the Community Libraries serving as perfect locations to do so. Therefore, the investment in South Providence and Mount Pleasant Libraries will allow these programs to not only continue, but expand in scope over the coming years. Additionally, the use of "green" HVAC systems serves as a positive model within the City.

Lastly, it should be noted that the Community Libraries of Providence believe in and drive the qualities of community stewardship and inclusiveness in all they do. All are welcome, and this shows. These qualities directly align with PEMA's vision of a whole-community, comprehensive emergency management program, further cementing our continued and effective collaboration.

Respectfully,

Clara Decerbo, PhD, CEM
Director of Emergency Management

Nourishing A Community: Growing Solutions to Food Insecurity, Food Waste, and Community Resilience to Climate Change and Crisis.

Program Objective

The Windham Community Food Network, fiscally sponsored by CLiCK, is focused on redistributing resources already in our community to build a sustainable alternative food system. As a result we host a gleaning operation that collects excess seeds, seedlings, and produce from local nurseries, farmers and community members and redistributes them to individuals and pantries in need in our community. Excess produce that is collected that cannot be immediately distributed is processed by CLiCK into value-added products to be used at a later date, such as surplus tomatoes into tomato sauce or frozen kale. This project increases capacity in those areas and develops a compost program that is essential to building a closed loop alternative food system that **minimizes food waste** from our community and provides **resiliency within the food system** to mitigate the impact of climate change and other crises.

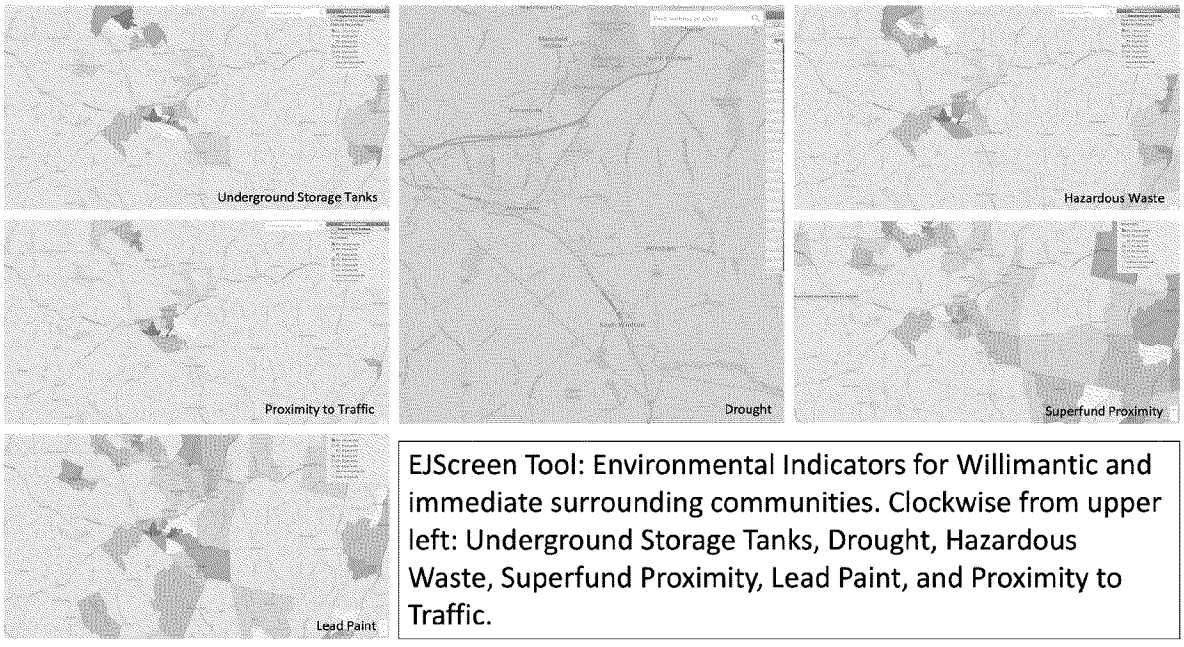
Description of Community and Organization

Communities within Tolland and Windham counties consist of a unique mixture of small agricultural producers, universities, urban clusters, and small towns dotted throughout this region, sometimes referred to as the "Quiet Corner" of Connecticut. Residents include a diverse population of college students, working poor, undocumented workers, ALICE (Asset Limited, Income Constrained, Employed) households, and aging populations. This project will benefit farmers in northeastern Connecticut, low-income and food-insecure residents of Windham, Willimantic, Mansfield, and surrounding rural towns of Ashford, Willington, and Chaplin, local food businesses and university students.

Without action to adapt, climate change is likely to result in increased food insecurity in the "Quiet Corner." Furthermore, the **impacts of climate change** on food systems and human health will not be evenly distributed but instead be disproportionately felt by particular segments of the community, including children and the elderly, communities of color and low-income families. Without targeted intervention, climate change will deepen existing inequities and exacerbate public health crises. Action to build a more resilient, equitable system of food production, and distribution must also consider the impacts on greenhouse gas emissions that contribute to climate change. Currently, agricultural and food production land use are a significant contributor to climate change, largely through methane and nitrous oxide. When food is wasted, water and land resources are also wasted. Additionally, combustion of food waste in waste-to-energy plants and decomposition of food waste in landfills contribute to pollution. Meanwhile, wasting food is happening simultaneously while many residents are experiencing severe food insecurity. A reduction in food waste could have substantial effects in both food insecurity and environmental impacts.

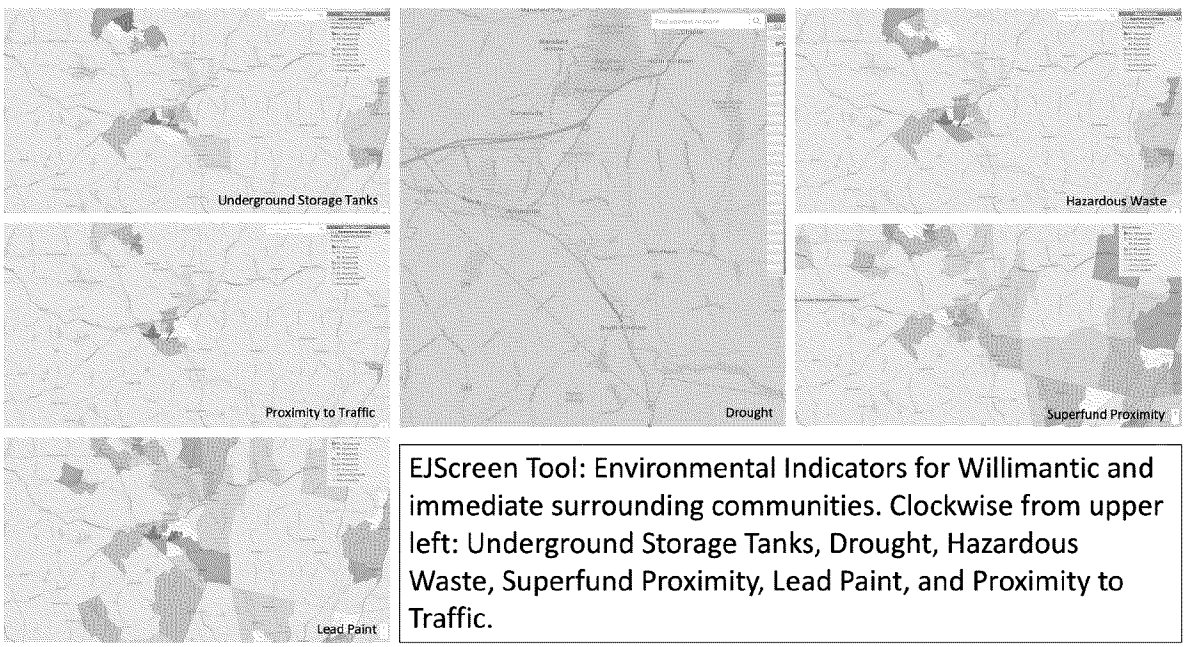
CLiCK, Inc. (Commercially Licensed Cooperative Kitchen) is a 501c3 non-profit in Windham, Connecticut. CLiCK's mission is to *Grow, Cook, Share*: Recognizing the historical and institutional injustices of the American food system, CLiCK aims to grow a locally-based, just, healthy, and sustainable food economy. CLiCK's facility is located at 41 Club Road, Windham, CT, 06280. CLiCK operates out of a single building, built over

ED_016126_00000134-00001



50 years ago for the Knights of Columbus and purchased by CLiCK in 2014. The building is 6,482 square feet, of which 2,095 square feet is commercial kitchen usage. The commercial kitchen began operation in February 2015. It currently houses 28 kitchen member businesses, ranging from well-established year-round businesses to farmer's market and food truck vendors to those who are just beginning on the certifications required to establish their businesses.

CLiCK and the other project partners have ongoing relationships with local producers as well as food vendors. CLiCK coordinates a non-profit commercial shared-use kitchen facility providing local farmers and culinary entrepreneurs access to affordable commercial kitchen space for food processing and storage, allowing them to develop food businesses in the economically distressed urban area of Windham, Connecticut and surrounding towns. CLiCK has secured funding in the past from the CT Dept of Agriculture for Farmer Viability and Farmer Value-added Products programs as well as USDA Rural Business Development grants to support new farmer businesses. Aspiring entrepreneurs, including local farmers, join CLiCK's membership structure to access kitchen space, storage space, and shared retail space, as well as a network of local culinary entrepreneurs, food safety training classes, licensing, business support, product marketing and more.The CliCK Kitchen is a multi-cultural, multi-service kitchen connecting farmers, chefs, and food-lovers. Our producers buy local ingredients, support local farms, and help to grow our local economy — right here in Windham County.



The Windham Community Food Network (WCFN), fiscally sponsored by CLiCK, works to create a more just and resilient local community and food system, by integrating local food system stakeholders in order to identify local needs and opportunities and meet them using local resources. WCFN members include community members, farmers, businesses, food assistance providers, social service agencies, municipal partners, and schools. A constituent-led food pantry, **Community Table/Mesa Comunitaria** (CT/MC) started by the WCFN, that increases access to nutritious food and community voice. Originally a response to COVID-19, the program has continued beyond initial funding through crowdfunding, shareholder participation and integration with other local food resources. The program delivers weekly boxes of food to 25 families, with an emphasis on reaching Latinx women, teens and elderly in Willimantic. These boxes are filled with food gleaned from local farmers, gardeners and pantries and supplemented with items purchased through community fundraising efforts. Stipends are provided to recipients to play a role in administering the program.

Our goal is to create a **self-sustaining local food system** that centers those most affected by the current inequity in the mainstream food system and redistributes resources already existing in our community. As a result, food grown and distributed here should reflect true constituent wants instead of just meeting basic needs. While significant work has taken place in the "Quiet Corner" to address **public health, food systems, climate mitigation and resilience, there has yet to be a collaboration targeting the environmental and public health impact of reducing food waste.** This project intends to bridge this gap by creating a self-sustaining gleaning and composting program that benefits both farmers and marginalized/ low-income individuals in Eastern Connecticut.

Summary of EJScreen Community Data

EJScreen Tool: Environmental Indicators for Willimantic and immediate surrounding communities. Clockwise from upper left: Underground Storage Tanks, Drought, Hazardous Waste, Superfund Proximity, Lead Paint, and Proximity to Traffic.

EJScreen Tool: Environmental Indicators for Willimantic and immediate surrounding communities. Clockwise from upper left: Underground Storage Tanks, Drought, Hazardous Waste, Superfund Proximity, Lead Paint, and Proximity to Traffic.

Programmatic Capability and Past Performance

The Windham Community Food Network (WCFN), fiscally sponsored by CLiCK, works to **create a more just and resilient local community and food system**, by integrating local food system stakeholders in order to identify local needs and opportunities and meet them using local resources. WCFN members include

community members, farmers, businesses, food assistance providers, social service agencies, municipal partners, and schools. Our goal is to create a self-sustaining local food system that centers those most affected by the current inequity in the mainstream food system and redistributes resources already existing in our community. As a result, food grown and distributed here should reflect true constituent wants instead of just meeting basic needs. This project intends to bring us closer to this goal by creating a self-sustaining gleaning program in Eastern Connecticut that benefits both farmers and marginalized/ low-income individuals in Willimantic, CT.

In 2019, the WCFN launched one of the f**irst organized gleaning programs in the state**. Beginning with two local farms we have been able to expand to four partners where we harvest excess produce and donate it to **local food pantries**. Farmers receive a stipend for their participation guaranteeing them income and an outlet for their surplus produce. To date the program has prevented over 8,396 lbs of produce from being wasted. We also glean seedlings and seeds from these partners and local nurseries and distribute these to local home gardeners through our Plant-A-Row program. These gardeners also donate back any surplus produce resulting in an additional 2,983lbs, not including any produce kept by these individuals to feed their families.

In 2020, the WCFN started **Community Table/Mesa Comunitaria (CT/MC), a constituent-led food pantry** that increases access to nutritious food and community voice. Originally a response to COVID-19, the program has continued beyond initial funding through crowdfunding, shareholder participation and integration with other local food resources. Both the participation of its recipients and fundraising support demonstrates the community's commitment to the program to continue and evolve. The program delivers weekly boxes of food to 35 families, with an emphasis on reaching Latinx women, teens and elderly in Willimantic. Stipends are provided to recipients to play a role in administering the program. These boxes are filled with food gleaned from local farmers, gardeners and pantries and **supplemented with value added products**.

In 2021, after noticing large influxes of produce over short bursts of time that overwhelmed pantries, we **partnered with CLiCK to process this surplus into value-added products that could be saved for when supplies dropped**. Cucumbers were processed into pickles, tomatoes were made into tomato sauce and kale was chopped and frozen.Shelf stable food, while still providing some nutrients to consumers, tends to contain excessive amounts of ultra-processed, calorie-dense, nutrient poor foods, which is reflected in unequal distribution of obesity, diabetes, and heart disease in low-income communities. By creating a stable source of nutritious, available shelf stable foods, we are addressing the **public health crisis** of metabolic diseases.

In Spring 2022 we placed a **24 hour community fridge** at the Willimantic Whitewater Park to broaden our reach; being placed strategically near a major homeless campsite so it's most accessible to those who need it. It's become a community space where gardeners, farmers, or individuals can donate food.

After establishing these systems we feel the WCFN is ready to expand our program again and develop strategies to create a self-sustaining program that will sell a line of value-added products that contribute to a financially self-sustaining structure within the food network.

The Windham Community Food Network has partnered with CLiCK to develop the **Willimantic Composting Coalition.** It is a multi prong composting approach in our community that focuses on reducing consumer/processing waste as well as education for consumers and businesses. As composting food waste not only reduces pressures on landfills, it also reduces the amount of methane that is realized during composition. Since 2017 we have operated 3 Waste Not Tents at a monthly (May-September) street festival in Willimantic, CT. Trash cans are removed or covered in the street and participants must dispose of their waste at one of our three tents. Each tent has a compost, can/bottle, recycling and landfill container. Community Advocates (volunteers who receive a stipend for their work with the project) help attendees sort their waste into the appropriate receptacle and educate the public on the correct methods for composting and how they can reduce their own waste. Attendees at these events are also encouraged to bring their own food scraps from home to dispose of. Each event is attended by 4,000-8,000 people, 100 vendors and 13 food vendors.

In 2019 we expanded our Waste-Not tent operations to include the Downtown Country Fair and Veggiestock. In 2021, we were contracted by Willimantic Brewing Company to manage the waste at Hop Fest, an annual beer festival attended by over 1,000 people. Working with event organizers we have developed policies to ensure that compostable flatware and dishes are used by food vendors at each event. CLiCK buys these compostable products wholesale and resells them to vendors to make it the most affordable option for these businesses.

In 2022, CLiCK began their in-house commercial composting program that generated a 551% increase in the amount of compost collected from members between February-September.

EJCPS Model

1. Issue Identification, Visioning, and Strategic Goal-Setting

The COVID-19 pandemic crisis resulted in a tremendous amount of food waste threatening community **resiliency**, while at the same time increased **food insecurity** in Windham. In response, The Windham Community Food Network (WCFN) worked to address this crisis-driven food issue by coordinating food donations, identifying available refrigeration space, and redistribution to feeding agencies. We built a comprehensive crisis network during this time to connect food suppliers with excess food to agencies feeding people. However, grocery stores and restaurants around us were throwing out large quantities of fresh food that we could have saved if we had a way to process it immediately.

Subsequently, CLiCK engaged in a small pilot program with the WCFN to process produce from GROW Windham and CLiCK's gardens into shelf-stable food products to return to food boxes (delivered to low-income families and pantries) as needed. CLiCK expanded the Food Rescue Program, working collaboratively with WCFN partners to accept, store, and process fresh produce from local farms, stores, and restaurants to ensure that excess food; that cannot be used by the Covenant Soup Kitchen or other local food pantries due to large quantities; were returned to these feeding programs to distribute at a later time when food donations are low.

Cumulatively, these community-based programs work to decrease food insecurity, reduce waste, and increase resiliency in our food system.

2. Community Capacity-Building and Leadership Development

Vision Statement Among Community Partners

Our goal is to create a self-sustaining local food system that centers those most affected by the current inequity in the mainstream food system and redistributes resources already existing in our community. As a result, food grown and distributed here will reflect true constituent wants instead of just meeting basic needs.

Mutual-aid is the framework we use to move toward local resilience and equity. This means facilitating projects and institutions that are driven by community members to promote equitable access- to power and resources - within the community. Food assistance infrastructure and decision-making is currently driven by funders and service providers rather than constituents. We seek to shift our role from "provider" to "ally" in this process by supporting marginalized voices to organize themselves to improve access to nutritious and culturally appropriate food at the immediate and root causes of this issue.

Our entry to this vision of community is through food access. In the US, food is treated as a commodity, rather than a right. In order to access healthy food, one must have access to employment that provides a living wage. Immigrant community members are particularly vulnerable, and have limited access to employment opportunities. We aim to build self-resilience among Latinx immigrant households, by connecting them directly with - and giving them control over - food resources, reducing their dependence on income to purchase them. Providing economic incentives will further ease the financial burden. These incentives build equity into our budget, as they recognize the expertise and commitment of shareholders, and make sure that the time of everyone at the table - not just service providers - is valued. These incentives also build sustainability into the project, as they create space for shareholders - who would not otherwise be able to afford to donate their time - to develop the skills and experience necessary to take ownership moving forward.

3. Consensus Building and Dispute Resolution

This proposal is the result of a Regional Food Systems Partnership collaboration. This is framed around a values-based collective of producers, community advocates, and distribution programs. Ideas for this proposal are derived from an online survey and two convenings of the partnership, in which partners identified shared values, priorities, and project ideas integrating the twin needs for producer viability and equitable food access. Both groups of beneficiaries, producers and community members, have had a voice in the development of this proposal.

Participating farmers were consulted individually in the development of the proposal; the resulting consensus was that a values-based collective facilitated by CLiCK would be mutually beneficial. This proposal centers on a closed loop system, started with a gleaning operation that collects excess seeds, seedlings, and produce from local nurseries, farmers and community members and redistributes them to individuals and pantries in need in our community. Excess produce that is collected that

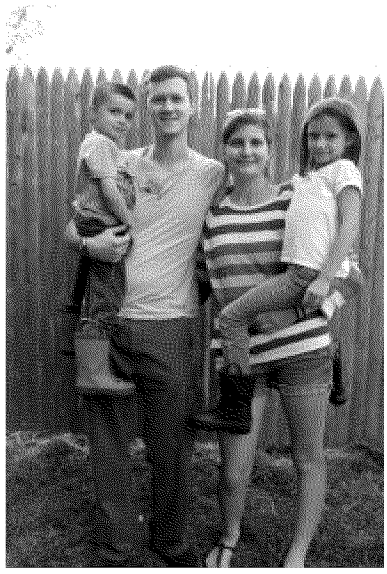
cannot be immediately distributed is processed by CLiCK into value-added products to be used at a later date, such as surplus tomatoes into tomato sauce or frozen kale. Partners identified that a compost program is essential to building an equitable and alternative food system that minimizes food waste from our community and provides resiliency within the system to mitigate the impact of climate change and other crises.

Community members have had a voice in the development of this proposal and the projects it supports at multiple levels. Most broadly, the partnership that developed this proposal includes Community Advocates, community members who identify and lead projects supported by the Windham Community Food Network. The Community Table/Mesa Comunitaria Foodshare at the heart of this proposal, was developed and is now maintained by two Community Advocates, who ensure recipient "shareholders" have a voice in all aspects of the projects. Finally, at the heart of the proposal is shareholder voice: they determine which products are distributed, decide logistics, and are compensated for packing and distribution of weekly food shares.

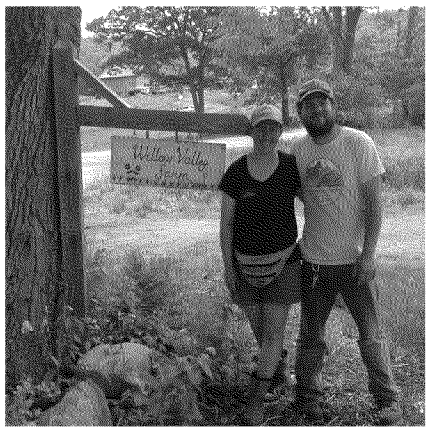
In the Community Table/Mesa Communitaria program specifically, shareholders are surveyed regularly on their wants for the program. This surveying effort drives the project as the goal is to customize each person's share to meet their individual needs.

4. Multi-Stakeholder Partnerships and Leveraging of Resources;

Project Partners



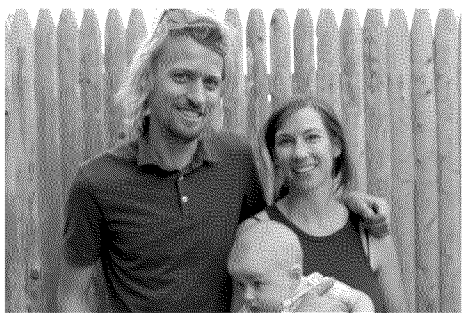
Windham Community Food Network



The WCFN has five years of experience procuring from small-scale producers in the area, all of whom are new, women-run farms. In that sense the Community Table/Mesa Comunitaria coordinated by WCFN is the "proof of concept" for this proposal. Currently, the WCFN provides a stipend to four farmers to facilitate gleaning on their farms, trains volunteers to assist with harvesting, and distributes the produce to community members who are without access to other resources. They also partner with CLiCK to facilitate processing and many local events and businesses to collect compost and community outreach.

Gleaning Partners

Brown Farm



Brown Farm is located on 9 acres of land in Scotland, CT. Owners, Jenna and John Aldrich, operate a no-till/no-dig operation and without using chemical fertilizers, herbicides, or pesticides. Since 2020 they have partnered with the Windham Community Food Network as gleaning partners, specifically providing many specialty Latinx crops desired by our constituents.

Willow Valley Farm: Is a third generation family farm located on 64 acres in Willington, CT, run by Spencer Cartabiano and Jackie Kulig. Using sustainable growing methods they are committed to protecting the Fenton River watershed and creating a bountiful place for wildlife while providing healthy petrochemical free produce to their local community.
A gleaning partner since 2019 they have supplied thousands of pounds of root vegetables and seedlings to our pantries.

Sweet Acre: Charlotte Ross and Jonathan Janeway own and operate Sweet Acre Farm, a Certified Organic farm located in Lebanon, CT. Relying on the diversity of their crops, ecosystem and soil health they produce vegetables, small fruit, eggs and cut flowers for Farmers Markets, wholesale restaurant & grocery and their CSA (community supported agriculture) program. Becoming a gleaning partner in 2021 has provided them with another much needed outlet for crops that would have otherwise been left in their field due to time constraints and/or lack of demand.

Cobblestone Farm: Is owned and operated by Diane Dorfer in Mansfield, CT. The farm grows a wide array of vegetables specializing in heirloom varieties and varieties they've bred on farm to thrive in their specific ecosystem. Since becoming an inaugural gleaning partner in 2019 Diane has provided our program with thousands of pounds of produce.

Processing Partners

CLiCK: Further surplus produce is then transported to CLiCK to be processed into shelf-stable products and redistributed. CLiCK has produced pickles, tomato sauce, and frozen and canned fruits and vegetables.

Educational Partners

University of Connecticut- Spring Valley Student Farm

Spring Valley Student Farm (SVSF) sprouted in Spring 2010 from a project planted by Residential Life. Since that time SVSF has blossomed into a year-round community for eleven student farmers living in two UConn houses 4.5 miles off-campus.

The student farmers learn about sustainable community living, organic food growing methods, and the business aspects of how food is harvested, processed, and presented to the UConn dining community. As stewards and ambassadors of the farm, the student farmers support Spring Valley Student Farm as an educational destination where everyone may come together to learn and grow. Spring Valley's partnership in the gleaning program provides labor instead of produce like other farmers. Student farmers travel with the WCFN to harvest the gleaned items from our other gleaning partners listed above. This experience provides the farmers with educational opportunities to experience a variety of sustainable growing practices across several farms while also providing peace of mind to our farm partners that trained volunteers are responsible for harvesting during their busy growing seasons.

Eastern Connecticut State University- Institute for Sustainability, Public Health, and Student Interns

Eastern is Connecticut's only public liberal arts institution, transforming lives guided by the core values of academic excellence, engagement, inclusion, integrity, empowerment, and social responsibility. Eastern serves the Hispanic community and other students of color through partnerships with scholarship programs including the Hartford, Waterbury, and New Haven Promise, and the Hispanic Alliance of New London. Eastern is the largest partner of the TheDream.US Foundation, providing scholarships to undocumented students from states that have prohibited them from financial aid for higher education.

Eastern is a leader in sustainability work guided by the Institute for Sustainability (IS). In 2022, we were recognized by the Association for Advancement of Sustainability in Higher Education with a Gold rating, and for thirteen years, noted on the Princeton Review list of Green Colleges. The Institute aims to connect individuals, non-governmental organizations, businesses, and communities in Connecticut to meet the challenges of our changing climate and to provide high-impact experiences for Eastern students to apply their learning about sustainable development with our community partners.

In line with Eastern's liberal arts mission, The Institute engages students in transdisciplinary internships so that students studying geography, public health, environmental sciences, entrepreneurship, and many other disciplines can build capacity for food waste reduction and composting on Eastern's campus and across the WCFN. Public health students will conduct process, impact, and outcome evaluations for the proposed activities. Environmental science and geography students will learn about community-based food system change, and entrepreneurial students will gain hands-on skills through working with the composting business.

<u>Composting Partners</u>

Willimantic Food Co-op

The Willimantic Food Co-op is a member owned and operated food store. Started in 1978 it is the longest running food cooperative grocery store in Connecticut. Since 2018, the WCFN has managed compost and waste for their annual Downtown

Country Fair which draws 1,000 attendees. In an effort to further minimize waste each food vendor is provided with metal silverware for attendees to use.

Willimantic Brewing Company

Since 2021 Willimantic Brewing Company has contracted with CLiCK and WCFN to manage food vendors and waste management for their annual beer festival, Hopfest which draws 1,600 attendees.

Willimantic Renaissance

Willimantic Renaissance hosts a monthly (May-September) street festival, Third Thursday. The event draws 4,000-8,000 attendees each month. Since 2017, the WCFN has managed the 3 Waste-Not tents which sort waste and educate the public on proper recycling and compost techniques. Since 2021 CLiCK has managed their 13 food vendors, providing them with their own composting buckets for pre-consumer food waste and outreach on compostable dining ware products available for purchase.

Grounded Coffee Company

Since 2022, Grounded Coffee Company has contracted the WCFN to pick up pre and post consumer food waste from their business each week. It is delivered to CLiCK where it is composted.

5. Constructive Engagement by Relevant Stakeholders

Source Reduction Partners

GROW Windham's Windham Youth CORE

CLiCK also regularly partners with GROW Windham's Windham Youth CORE, a youth food system cooperative which builds career skills through social justice and food projects, including several community gardens in Windham. Using the CLiCK kitchen, the Youth CORE produces their own hot sauce, which is sold at the local farmers market and Willimantic Food Coop. However a majority of their produce is distributed through the WCFN's Community Table/Mesa Comunitaria program. Their crop production is informed with WCFN food preference survey data ensuring they grow culturally relevant food for our community which prevents waste through source reduction.

Willimantic Food Co-op (WFC)

Acts our procurement entity with over 40 years of contracting and purchasing from local farmers, expanding from a small local buyers club years ago to a thriving retail store with over 6,000 members today and long standing relationships with vendors. CLiCK began as a result of WFC members and others meeting together in 2009 to discuss the possibilities of a shared-use kitchen and ways to benefit local farmers. The WFC serves as a model and mentor in assisting CLiCK to achieve goals of expanding food aggregation and distribution in the community.

Waste Diversion and Distribution Partners

Willimantic Public Library

The Willimantic Public Library hosts the WCFN's seed library. The seeds, that have been gleaned from local farmers and nurseries, are put in a year round display where anyone (no library card required) can come pick out a selection of seeds they'd like to grow. This program helps support the WCFN's Plant-A-Row program that provides free gardening materials to community members to grow food to feed their families and donate any extra back to their community.

Willimantic Whitewater Partnership

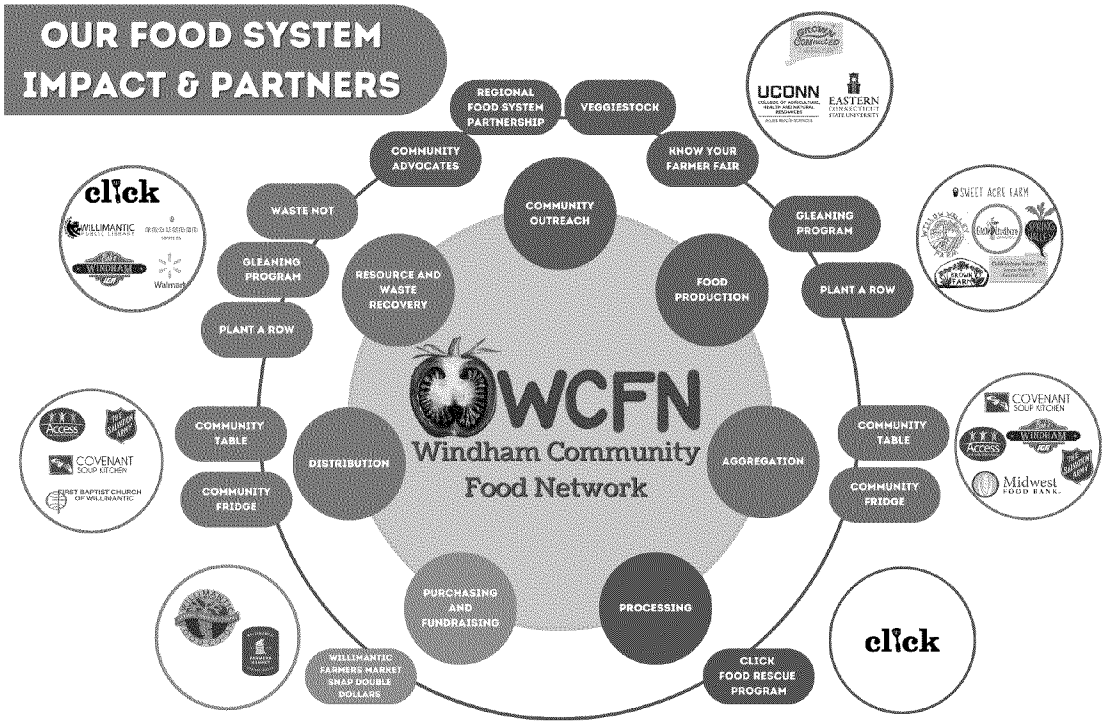
The Willimantic Whitewater Partnership serves as the host site for the WCFN's Community Fridge Pantry. They provide a shelter and electricity while the WCFN maintains and stocks the fridge. The fridge, and its adjacent shelves, serve as a 24/7 pantry for community members who have trouble accessing traditional pantry models. No paperwork is required and recipients are allowed to take or donate as much as they would like. This has become a drop off site for community gardeners participating in our Plant-A-Row program and farmers with leftover produce after the Willimantic Farmers Market. In addition to residing in the same park as the Willimantic Farmers Market, it is also strategically placed near a largest homeless campsite ensuring increased access to food to these individuals.

Covenant Soup Kitchen

Realizing that people can be impoverished physically, mentally, emotionally, spiritually, socially and financially, Covenant Soup Kitchen provides food and access to basic services in an environment of care, love, support and safety to those individuals and families from the greater Windham community who come through our doors. They provide breakfast and lunch daily, dinner Friday and Saturdays and a food pantry open six days a week. As a gleaning recipient they are able to use the produce to stock their pantry for clients and use it in their meal preparations.

The Salvation Army

The Salvation Army food pantry operates food distributions to families in the Windham area twice a week. Their involvement in the gleaning program goes beyond just being a recipient of produce. They also provide the WCFN's Community Table/Mesa Comunitaria pantry with their own excess products. This allows their clients access to more fresh produce and our clients more access to items that we cannot source locally from our existing gleaning farms, such as milk or meat. The reciprocal exchange of resources allow both programs to more effectively feed our community and reduce food waste.



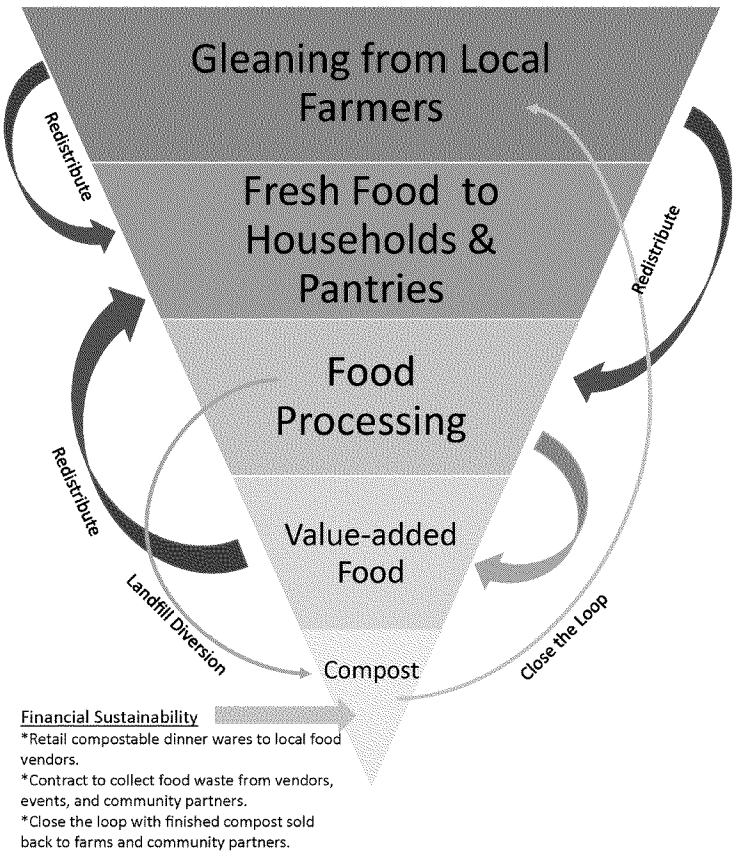
Access Agency

Access Agency operates food pantry sites in Willimantic and Danielson, CT along with a Mobile Food Van making stops in food insecure communities through Windham and Tolland counties. Like the Salvation Army, we hold a similar reciprocal relationship where we exchange needed food resources between the programs. Access

Agency also assists the WCFN to move large quantities of rescued food to its intended destinations with their Mobile Food Van.

First Baptist Church

The First Baptist Church in Willimantic operates the Community Suppers Ministry that networks local churches throughout Eastern Connecticut to provide dinner 5 nights a week. Volunteers from various partnering churches will cook in the First Baptist Church's community kitchen and serve meals to the public in their community space. During the early days of the COVID-19 pandemic when churches were not able to provide volunteers the WCFN organized a fundraiser to pay local restaurants to continue to cater these meals, providing much needed income to small businesses and emergency food assistance to community members. As churches have been allowed to reopen and host volunteers the WCFN continues to support their program by providing gleaned produce to ease their shopping budget, allowing them to serve more meals.



6. Evaluation Our evaluation activities are integrated into every step of our proposed project. Our academic partners at Eastern Connecticut State University are providing technical assistance, both in the preparation of our proposal to the process and evaluation measures for the environmental results and performance measurement plan. These evaluation efforts are most clearly seen in our logic model and in the project activities and milestone schedule.

Project Activities / Milestone Schedule / Detailed Budget Narrative

Due to the inherent interconnectedness of food systems, actions around food are uniquely suited to creating impact at the nexus of climate mitigation, resilience, health, and equity. Support from the EPA would elevate the community's enthusiasm around

this effort to generate deep buy-in and participation in a joint planning process and the implementation that will follow, and it would help us collectively move forward, re-energize stakeholders, and help maintain momentum. Funding of this project would expand our gleaning operation that collects excess seeds, seedlings, and produce from local nurseries, farmers and community members and redistributes them to individuals and pantries in need in our community. Excess produce that is collected that cannot be immediately distributed is processed by CLiCK into value-added products to be used at a later date. We believe developing a compost program is essential to building a closed loop alternative food system that **minimizes food waste** from our community and provides **resiliency within the food system** to mitigate the impact of climate change and other crises. A model of our proposed work is below:

Proposed Activities and Personnel

- *Proposed Project-Funded Personnel:* As evidenced in our narrative of the work we have done using the EJCPS model framework, the WCFN is committed to addressing the needs and wants of our community. Community members are provided stipends to participate in the administration of WCFN projects, ensuring a diverse set of voices beyond traditional service providers. Decisions are made collectively and informed through community wide surveying efforts. We practice transparency through public meetings and requesting solicitation for feedback on projects, materials and other resources from partners and community members via our listserv. Revisions are made based on these suggestions. Most recently the

WCFN has developed a rubric for community voice that was written collaboratively with food system stakeholders throughout Eastern Connecticut. The document outlines our priorities and values as well as a measurement system we can use to evaluate our work regularly to ensure we are honoring these commitments. Community equity is at the core of our engagement values and thus personnel are a key resource for this project.

- *Windham Community Food Network Coordinator* will act as the backbone for this project and will facilitate all the relationships between our partners (farmers, UConn student farmers, Eastern sustainability students, CT/MC shareholders and CLiCK). Our existing four farm partners have committed to staying a part of this project through the 2024 growing season. These roles will be responsible for project outcomes in coordination with the evaluator, will maintain communication between coordinators and develop training manuals/modules. They will also serve as oversee the professional development (education) for coordinators and administer & summarize community surveys about (1) Food insecurity (2) consumer preferences (3) pantry products. This person will host 36 strategic workshops for Coordinators (Gleaning, Processing, Composting), conduct 3 annual survey deployments, present results to Coordinators, project partners and stakeholders; build long-term database of key metrics including survey results, pounds harvested, and fresh/processed deliveries to all constituents, create a formal training manual/module for Coordinator Positions, standardization of survey deployment and routine use of results. These activities will ensure that underrepresented populations are leading in decision-making through surveying and outreach, that there is stability of the coordinator positions through use of training manuals/modules, continuity of community partnerships and communication and that the pantry deliveries respond to client needs/preferences through data-driven decisions based on community survey responses. The impact of these activities will be enduring reduced food insecurity and food waste, and an increase in community resilience to crisis and climate change.

- *Community Advocates (gleaning, processing, composting):* The "Community Advocate" Program was created in 2018 as an effort to involve more community members in the WCFN's work. This role is vital to our mutual-aid framework. We provide stipends to individuals who would not normally have the luxury of volunteering their time due to hectic work schedules, family and income needs. In exchange for this stipend, each Community Advocate devotes 10 hours a month towards bettering our local food system. Community Advocates serve as the line of communication between the WCFN and the community. They bring their issues to the WCFN table, where we work as a team to address them, and in return they inform their neighbors about WCFN projects, resources and initiatives.

Depending on which phase the advocates are working in (distribution, processing, composting), their role will vary. Distribution advocates would be responsible for the weekly distribution of food, gleaned by Spring Valley Student Farmers from our 6 farm partners, to 35 low-income households and 5 food pantries,

community fridge and CLiCK processing. Processing advocates will become Servsafe-certified, which is a technical training in food processing to promote food safety. This will increase the number of hours of kitchen use, which in turn increases the number of individuals receiving shelf-stable food. Additionally, they would train interns and community advocates to divert event compostables to CLiCK compost pile, train interns to maintain compost pile, recruit event organizers and local businesses, and sell the compostable products to the vendor. Composting advocates will be trained to collect food waste from community events and educate community members on-site. They will work with the Eastern Connecticut State University composting interns to have the knowledge, skills and ability to compost food waste. educate vendors, businesses, and households on compostable products, serve as the retail outlet for cost-effective compostable products to vendors, businesses, and households and provide compost buckets to vendors/restaurants to collect prep and post-event food waste.

The goals of the Community Advocate Program are to:

– Expand Community Voice, both by supporting more community members to participate in WCFN projects and decision-making, and, in turn, supporting them to survey and engage their own neighbors and networks.

-- Empower Local Leaders, by supporting advocates to envision and develop projects that will promote food justice in their community.

- *Gleaning Activities and Personnel: Gleaning* offers an alternative to food waste and food insecurity which are concurrent environmental issues. The practice of gleaning offers a mechanism to combine the problems of food insecurity, food waste and the environmental impact of both to create a synergistic solution.

  Gleaning Coordinator will act as a point person liaison to oversee and coordinate all gleaning activities. They will recruit farmers to participate in gleaning efforts, goal to increase by 2 participating farms, train 3 Student Farmers from UConn's Spring Valley Student Farm to travel to participating farms to harvest produce for distribution, communicate with gleaning farms to inform planting plans (using survey data), recruit community advocate gleaners to distribute and produce training manual/module, develop collaboration with Eastern food pantry and grow culturally relevant fresh food for pantries and processing based on survey data. They will produce a harvest and gleaning manual for SVF students so the students are trained to harvest, wash, and transport the gleaned produce from local farms. These activities will improve the economic viability of farmers, Increase volume of food delivered to pantries, households and processing (see below), provide fresh and processed local food delivered to Eastern's food pantry and implement sustainable farming practices at SVF to supply UCONN food service.

  Gleaning Impacts Together, the formalized process and structure for the Gleaning Network provides continuity of support to the food system, **reduces food waste,**

addresses food insecurity, and increases community resilience to crisis and climate change. Supporting student farmers assists to train the next generation of student farmers and educate students involved at the SVF and increases regional capacity for sustainability-minded food production and systems. The impact will be a closed loop of farmer production, distribution, and survey responses to ensure the appropriate amount and type of food is available to pantries and households and provides economic security to farmers.

- *Food Distribution and Processing Activities and Personnel*
  Fresh Food to Households and Pantries: Excess food from gleaning activities will be distributed to food insecure families so they have access to fresh varieties of foods, instead of processed foods, thereby reducing the likelihood of diet related illnesses such as diabetes, high blood pressure and obesity.

  Food Processing: Through engaging partners to accept, store, and process fresh produce from local farms, stores, and restaurants to ensure that excess food that cannot be used by food pantries due to large quantities.However even when lightly-processed, there is still a great deal of gleaned produce we receive that is not desired by the community. Items like garlic scapes, kale and collard greens are not desired amongst our pantry stakeholders, but there are markets for processed versions of these items amongst different demographics. We have plans to develop our own line of items, like garlic scape powder or frozen kale, to be sold at the Willimantic Food Coop and other businesses in town. Using funds from this program will allow us to expand this project that ultimately results in revenue generated from product sales to continue to pay stipends to farmers and community members to keep our gleaning, CT/MC pantry, Plant-A-Row and processing programs running.

  Value-added Food to Pantries Activity: The Windham Community Food Network is focused on redistributing resources already in our community to build a sustainable alternative food system. As a result we host a gleaning operation that collects excess seeds, seedlings and produce from local nurseries, farmers and community members and redistributes them to individuals and pantries in need in our community. Excess produce that is collected that cannot be immediately distributed is processed by CLiCK into value-added products to be used at a later date, such as surplus tomatoes into tomato sauce or frozen kale. We believe developing a compost component is the next step in building a closed loop alternative food system that allows us to further eliminate waste from our community and use it to continue to grow food locally.

  Processing Coordinator, similarly to the gleaning coordinator, will act as a point person liaison to oversee and coordinate all processing activities. This includes recruiting and training community advocate processors, developing and managing a scheduling tool for utilizing CLiCK's processing facility, developing a community advocate processing training manual, obtaining processing supplies such as bags, jars, labels and developing a collaboration with Eastern food pantry to identify which value-added items would be most desirable for their clients. Providing Eastern's

pantry with locally grown items in the past has been difficult as their largest demand is during the school year which only briefly overlaps with New England's growing season. Furthermore, many students who utilize the pantry have limited access to full kitchens due to living in dorms, making it difficult for them to cook fresh produce. Building out this relationship further will allow the processing program to develop items that can be used, and are desired, by students, ensuring they have access to healthy food in an accessible form.

Impact of Food Distribution and Processing Activities

- *Compost Activities and Personnel*
  If food is unable to be consumed either in shelf-stable or fresh form, it can be sustainably composted. Through this project, WCFN would have increased capacity to contract with local businesses to develop commercial composting protocols. We are currently working with one business to pick up their compost weekly for our compost pile housed at CLiCK. We are in discussions with another restaurant, a local university greenhouse and other community event organizers about expanding these services but seek financial support to expand these initiatives in our community. Funding for coordinating these activities would significantly increase our capacity to make an impact.

  Our overall vision for the program is to have all community events and businesses in Willimantic to require sustainable waste management provided by our Waste-Not Tents/community advocate program and the compost created by our initiatives to be redistributed to be used in our community. We plan to do this by expanding the outreach through our community advocates and working with event organizers and businesses to develop policies in our community. With this funding we will be able to expand our event outreach from 3 to 8, business composting hauling services from 1 to 5, compostable product clients from 5 to 10 and sell compost generated back to the community.

  Our project will become financially sustainable through a diverse range of income opportunities. We will charge events to have our Waste-Not services, which will be a sliding scale based on size and budget and subsidized by grant/fundraising. We will continue to charge monthly fees for compost pick up from businesses. We will sell the compost we create. We will generate a profit on compostable materials we sell to food vendors at events. This project would scale up this production, enabling CLiCK to collaborate with more producers, expand food distribution partnerships across a broader region, avoid duplication of efforts among community partners, and create long-term marketing opportunities through the Coop.

  Composting Coordinator similarly to the gleaning and processing coordinators, will act as a point person liaison to oversee and coordinate all processing activities. This includes educating vendors, businesses, and households on compostable products, serving as the retail outlet for cost-effective compostable products to vendors, businesses, and households, providing compost buckets to vendors/restaurants to collect prep and post-event food waste, training interns and community advocates to divert event compostables to CLiCK compost pile. Additionally, training interns to

maintain the compost pile, collaborating with interns to develop a tracking tool for revenue source development, and recruiting event organizers and local businesses to become partners. Also, acquiring and distributing composting processing supplies.

Community Compost Advocates will be trained to collect food waste from businesses and community events and educate community members on-site. They will work collaboratively with other community advocates, as well as identifying opportunities for increased composting activities.

Compost Interns will be trained to collect food waste from community events, educate community members on-site and maintain the compost pile at CLiCK.

Composting Impacts: through these efforts, we will have an increased capacity to collect and process compostable products, which is the last opportunity to **divert food waste thus reducing the community footprint and taking action to combat climate change.**

- *Evaluation and Capacity Building Partners, Eastern Connecticut State University* As a hispanic-serving public liberal arts institution, Eastern has the capacity to partner with community members, as well as serve our students. By investing in these activities, we are building community capacity to bring sustainable practices to many communities across the region.

  Internship Coordinator: This position will be responsible for recruiting, supervising, and evaluating student interns who bridge the composting project between the community and the university; develop campus and community educational events and initiatives such as food waste mitigation, community gardening, and introduction to composting. They will collaborate with the campus food pantry to accept fresh and processed food to address student food insecurity and launch a pilot food waste diversion to the CLiCK compost program to reduce food waste. Finally, the coordinator will supervise the development of a tool to track outputs of project activities, collaborate with stakeholders to develop evaluation plans and join quarterly working group meetings with all coordinators to measure progress and set goals.

  Evaluation Leader. A public health trained faculty will collaborate with stakeholders to develop and execute evaluation plans and support public health students to gain applicable skills for project evaluation. The leader will disseminate project outcomes to stakeholders.

  Evaluation and Capacity Building Impacts: These activities will empirically demonstrate effectiveness of programs**,** student interns gain applicable and translatable skills for project evaluation. Together, these activities will **increase waste diversion and sustainability efforts on campus minimizing solid waste generation through source reduction, recycling and reuse or composting.**

INSTITUTE FOR
SUSTAINABILITY
EASTERN CONNECTICUT
STATE UNIVERSITY

April 14, 2023

United States Environmental Protection Agency
Office of Environmental Justice and External Civil Rights
Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program

Dear Grant Review Panel:

I write to convey Eastern's enthusiasm for and commitment to the collaborative project: **Nourishing A Community: Growing Solutions to Food Insecurity, Food Waste, and Community Resilience to Climate Change and Crisis.**

As Connecticut's only public liberal arts institution, Eastern is home to many Hispanic students and is situated in the multicultural rural community of Willimantic. The university has the capacity to partner with community members, as well as serve our students, and seeks meaningful project such as this one. By investing in these project activities, we are building community capacity to bring sustainable practices and resiliency to our community.

The Institute for Sustainability leads Eastern's campus sustainability initiatives. In 2022, we were recognized by the Association for Advancement of Sustainability in Higher Education with a Gold rating, and for thirteen years, noted on the Princeton Review list of Green Colleges. The Institute aims to connect individuals, non-governmental organizations, businesses, and communities in Connecticut to meet the challenges of our changing climate and to provide high-impact experiences for Eastern students to apply their learning about sustainable development with our community partners.

Partnering with the Windham Community Food Network and CLiCK for this project, we commit to recruiting, supervising, and evaluating student interns; develop campus and community educational events and initiatives such as food waste mitigation, community gardening, and composting; collaborate with the campus food pantry to accept fresh and processed food to reduce underserved student food insecurity; launch a pilot food

INSTITUTE FOR
SUSTAINABILITY
EASTERN CONNECTICUT
STATE UNIVERSITY

waste diversion to the CLiCK compost program for residence hall students and Eastern greenhouse waste; and develop a tool to track outputs of project activities.

An Institute-affiliated, public health trained faculty member will develop and execute the project evaluation plan; train public health students to gain applicable skills for project evaluation and formally integrate project evaluation into the public health curriculum; and disseminate project outcomes to stakeholders.

Collectively, we aim to contribute to the creation of a self-sustaining local food system that centers those most affected by the current inequity in the mainstream food system. We aim to address public health, food systems, climate mitigation and resilience, and collaborate to address the environmental and public health impact of reducing food waste. This project will fill a gap by creating a self-sustaining gleaning and composting program that benefits both farmers and marginalized/ low-income individuals in Eastern Connecticut.

Thank you for your consideration of our Partnership Project.

Warm Regards,

Patricia Szczys, Ph.D.
Professor of Biology
Executive Director, Institute for Sustainability

Reducing Food Waste and Insecurity: Processing for Longevity					
Processing Coordinator	*Recruit community advocate processors *Developing scheduling tool for processing facility *Train 2 community advocates in food processing *Develop community advocate processing training manual *Obtain processing supplies: bags, jars, labels (see budget) *Reserve processing time at CLiCK *Develop collaboration with Eastern food pantry (see below).	*Monthly (36) workshops with community advocates *2 trained community advocate processors *Training manual/module for community advocate processors	*Community advocates with food safety and processing training *Training Manual as a long-term resource *Finalized business plan for shelf-stable food sales strategy to generate revenue	*Increased volume of processed, shelf-stable food delivered to pantries, households, community fridge, and consumer sales. *Processed products informed by community surveys (see WCFN above)	*Financially self-sustaining processing operation through sales to consumers. *Increased capacity for processing excess produce for later distribution **reduces food waste, addresses food insecurity, and increases community resilience to crisis and climate change.**
Community Advocate Stipend-Processors (0 increase to 2)	* staff becomes ServSafe-certified * technical training in food processing	* increased number of hours of kitchen use *increased number of individuals receiving shelf-stable food	* increased capacity to produce shelf-stable food to supply pantries		

Resource Investment	Project Activities	Outputs	OUTCOMES		
			Nov 2023 - June 2024	July 2024 - July 2025	July 2025- December 2027
Further Minimizing Food Waste: Composting					
*Compost Coordinator	*Educate vendors, businesses, and households on compostable products *Serve as the retail outlet for cost-effective compostable products to vendors, businesses, and households *Provide compost buckets to vendors/restaurants to collect prep and post-event food waste *Train interns and community advocates to divert event compostables to CLiCK compost pile. *Train interns to maintain the compost pile. *Collaborate with intern to develop a tracking tool for	*8 local events contracted for waste diversion and sustainability efforts. * 10 local businesses acquire compostable products from CLiCK. *5 local businesses collect prep and post-event compostable waste *10 people trained to collect compostables from community events/food processing *Increase capacity to accept food waste from local restaurants and other sources	*Food vendors for all community events will be knowledgeable about compostable products and waste diversion. *Community businesses will be knowledgeable about compostable products and waste diversion. *University knowledge for university Skills Awareness *Capacity to process compostable dinnerware (supplies include a shredder)	*Increase the number of contracts for waste diversion and sustainability efforts at community events from 3 to 8 to minimize local solid waste generation through source reduction, recycling and reuse or composting. *Increase number of local businesses acquiring compostable products from 5 to 10. *Increase the number of compost hauling accounts with local businesses from 1 to 5 to reduce solid waste generation and increase compost production. *Increase Waste diversion at current community events from 30% to 50% *Increase compost production for viable value added products for purchase by local gardens. *Increase in compostable food waste from events collected	*Develop a community culture (individuals and businesses) of composting to reduce food waste and associated greenhouse gas emissions. *Financially self-sustaining composting operation through: ● Increased event waste-diversion contracts ● Restaurant compost hauling accounts ● Sale of compostable wares ● Sale of compost to consumers *Increased capacity to collect and process compostable products is the last opportunity to **divert food waste thus reducing the community footprint and taking action to combat climate change.** Reduced waste event becomes a revenue generating service

	revenue source development *Recruit event organizers and local businesses to bec *Acquire Compost Supplies *e.g.* shredder, buckets, etc (see budget)	*Outreach/education to community members at events about composting/waste reduction			
Community Advocates - Compost	* 2 community advocates trained to collect food waste from community events and educate community members on-site.	20 people trained to staff events in the community	Knowledge Skills Awareness of composting		
Compost Interns	*Interns trained to collect food waste from community events and educate community members on-site. *Interns trained to maintain compost pile	4 people trained to staff events and tend compost pile	increase the number of people knowing how to compost		

Resource Investment	Project Activities	Outputs	OUTCOMES		
			Nov 2023 - June 2024	July 2024 - July 2025	July 2025- December 2027
Technical Assistance - Institute for Sustainability, Eastern Connecticut State University					
Intern Coordinator	*Recruit, supervise, and evaluate 5 Interns *Campus Educational Events/Initiatives *e.g.* food waste, community gardening, composting) *Collaborate with campus food pantry to accept fresh and processed food (see above). *Launch pilot food waste diversion to CLiCK compost program for residence hall students and Eastern greenhouse waste. *Collaborate with Project evaluator to formally integrate project evaluation into public health curriculum	*5 Interns are knowledgeable about food waste diversion and composting *12 University events increase general campus awareness and knowledge of food waste, alternative food systems, and impact on food insecurity and climate change *Kitchen scrap and greenhouse waste delivered to compost pile weekly *Monthly (36) meetings with WCFN Coordinator *Weekly meetings with Project Evaluator	*Intern job description, placement, and training *Schedule and topics for Campus educational events *One Kick-Off event completed *At least 15 students sign agreements to collect and submit kitchen scraps *Integrated as a working group member with WCFN increases capacity for grant seeking and revenue development *Increased capacity to support project evaluation curriculum	*Increasing awareness of and interest in Intern positions *Increasing awareness of and interest in expanded campus food waste diversion *Increasing awareness of and interest in reducing food insecurity on campus and in the community *Empirically demonstrate effectiveness of programs	*Student Interns gain applicable skills for project evaluation *Disseminate project outcomes to stakeholders *2 generations of Public Health students gain practical experience developing and executing project evaluation methods ***Reduced food insecurity on campus.** ***Increased waste diversion and sustainability efforts on campus minimizing solid waste generation through source reduction, recycling and reuse or composting.**

Interns	*Collect food waste from community events and educate community members on-site *Maintain compost pile *Collect food waste from select campus events and assist educate the university community. *Develop a tool to track	*Knowledge of food system waste and waste diversion methods. *Knowledge of composting methods. *Tracking tool for revenue source development	*Increase in amount of food waste diverted to compost from community events *Increased amount of food waste diverted to compost from campus.		
Project Evaluator	*Collaborate with stakeholders to develop and execute evaluation plan *Join quarterly working group meetings with all Coodinators to measure progress and set goals.	Students conduct small portions of evaluation plan *Collect metrics for all project outputs	*Train public health project evaluation students to increase capacity. *Availability of raw data (project outcome metrics)		

Project Budget		
Category	**Description**	**Total**
Personnel	• WCFN Coordinator - $30/hour 15 hour/week • Gleaning Coordinator - $26/hour 12 hour/week • Processing Coordinator - $26/hour 12 hour/week • Compost Coordinator - $26/hour 12 hour /week • 6 Farmer Gleaning Partners - $1000 annually • 3 Student Farmer Gleaning Partners - $15/hour 4 hour/wk 28 weeks • 6 Community Advocates - $250/mo 10 hrs/mo • Interns (5 students at $15/hour 4/week 52 weeks)	$377,436
Fringe Benefits	• WCFN Coordinator • Processing Coordinator • Compost Coordinator	$ 21,781
Education	• Food Waste Education and Compost Pilot @ Eastern	$ 9,360
Supplies	• Compost Shredder ($700), • 2 sets Clear Stream Event/business collection bins ($325 each) • recycling/compost bags • Processing: jars, bags, labels ($3500/yr) • Processing time in CLiCK Kitchen ($20/hour 10 hour/week)	$ 45,550
Mileage	• 1500 miles at 65.5 cents (federal rate)- transport gleaning, compost and value added products throughout community	$ 982
In-Kind	• Eastern Student Intern Coordinator + Educational Events ($35/hour at 5/hour week) • Compost Coordinator $25/hour 10/week • PRocessing Coordinator $25/hour 7/hour week • Compost Supplies ($9300) • Processing Time ($1000) 50 hours (~1 hour/week) matched by CLiCK •	$ 59,700
Total Project Budget		514,809
Total Budget Request		455,109

Rooting Deep and Scaling Up: Partnership Agreement

Project Description.
"Rooting Deep and Scaling Up: A Roadmap for Food System Equity and Viability in Eastern CT" is a partnership facilitated by the Windham Community Food Network, FRESH New London, the CT Food System Alliance, and Community Foundation of Eastern CT, that convenes producers, community members, stakeholders and allies to capture community-level food system innovation and momentum and scale it up to strengthen regional food system resilience. ***Specifically, the partnership will explore and develop opportunities that integrate viability for small-scale producers in Eastern CT with equitable access to healthy food and food system decision-making for the diverse residents of the region.***

Purpose of this Agreement.
This agreement sets the values, norms and processes for our partnership: ie, why and how we will go about working together, with the purpose of laying a foundation for collaboration both during and beyond this funding period. It includes Values, 4 "Priorities" for our Food System Network, and then for each Priority, "Actions" and "Measures", that operationalize and hold us accountable to our values and priorities.

How it was Developed.
The Agreement is informed by the *"Whole Measures for Community Food Systems"* planning tool. This draft is based on input from partners from the initial project survey and first convening, as well as discussions among the Planning Team. "Core Partners" - those who are written into the grant proposal - are required to commit to this Agreement. Other partners are encouraged and welcome.

How it Will Be Used.
This Partnership Agreement is a living document that will be amended over the course of the two year funding period. We will check in every six months to revise it and measure how well we are meeting the standards we set for ourselves, using the Tools and Norms Rubric in Section III of the Agreement.

We will focus on the different tools during different stages of the project. For example:

- We are currently in survey mode, so using tools # 1, 2, and 7 to inform our work.
- When we convene in September to analyze data and identify leverage points for our work, and will focus on tools # 4, 5, and 6.
- When we convene working groups in December, we will focus on tool #3…

Partnership Agreement.

I. Partnership Values.

This agreement is rooted in our collective values listed below. *(These values are derived from input from the initial partner survey, first and second convenings, and discussions among the project team. A more detailed explanation is found in the table at the end of this document.)*

- **Dismantling Racism and Being Anti-Racist** in our processes and projects
- **Equitable Access** to food system resources and decision-making power
- **Viability and Sustainability** of producers, projects, partners, and our ecosystem
- **Relationship-Building and Collaboration** among partners, community members, and communities
- **Resourcefulness and Resilience** through mutual aid and leveraging and integrating resources and opportunities
- **Culture-Shift**, within and among individuals, organizations, institutions, communities and systems.

II. Partnership Priorities.

Through our participation in "Rooting Deep, Scaling Up" we are committed to building a Regional Food Network that:

1. **Contributes to healthy communities by improving equitable access to food resources and responding to community food needs.** *We will act on this priority by:*
    - **a.** Being responsive to our communities' definitions of health and well-being.
    - **b.** Capturing, leveraging and re-investing local resources to reduce dependence on outside funding and the non-profit/service infrastructures.
    - **c.** Integrating our work with other sectors and networks that address the intersectional barriers our communities face, so we can build sustainable projects for and by our communities.
    - **d.** Supporting local businesses (that are locally-owned and invest locally).

2. **Promotes viability of small-scale producers in the region.** *We will act on this priority by:*
    - **a.** Supporting projects that support farmers' wellbeing, rights, and financial prosperity.
    - **b.** Centering sustainable practices to create sustainable ecosystems through our projects.
    - **c.** Addressing the need for access to land and resources for new producers, particularly BIPOC producers.
    - **d.** Uplifting opportunities to support existing food system initiatives that center farmer viability, such as EBT at farmers markets and farm to school.

3. **Builds diverse and collaborative relationships, trust, and reciprocity.** *We will act on this priority by:*
    - **a.** Naming and addressing systemic inequities that create and propagate the segregation of our community spaces, institutions, and opportunities; Centering community members' lived experiences with inequitable systems.
    - **b.** Promoting shared work and power through collective decision-making that intentionally increases the connection between community members, local food producers and food projects.
    - **c.** Moving away from White Supremacy Culture, and instead move towards norms and communication that intentionally increase connection and participation and are accessible for the communities being impacted.
    - **d.** Shifting existing norms so they center those outside of spaces in power by holding accountable imposing food system institutions and their privileged participants.

4. **Supports community voice, political empowerment, and local leadership.** *We will act on this priority through:*
    - **a.** Diverse Participation: Building capacity for diverse community members to participate in government and decision-making through recognizing and addressing barriers to participation in our work and food systems change more generally.
    - **b.** Transparency in Decision-Making: Being transparent around decision-making: asking who is there, who is not, who is impacted, what decision is being made, how we are making that decision, and who has power
    - **c.** Relocating Spaces of Power and Decision-Making in the Food System: Restructure existing spaces of power within the food system so they are intentionally made safe for marginalized community members; Building power with other networks and spaces and populations within the community being affected by this project.
    - **d.** Accountability of Public Institutions: Build capacity of institutions and organizations to listen to ensure that public institutions and local businesses support a just community food system.
    - **e.** Advocating at the local, state, and federal levels for comprehensive food systems policy change that aligns with our values.
    - **f.** Contributing our goals, priorities, and values to state-level food action planning.

I commit to the values and priorities of this agreement, and to measuring and improving our shared work according to the Tools and Norms laid out below.

Click here to virtually sign this agreement

III. Tools and Norms to measure our work. *We will use these to self-evaluate during the project.*

1. Community Voice "Legitimacy Test".	**Negative Impact -3**	**Neutral 0**	**Some Impact +3**	**Strong Impact +5**	**Highest Impact 10**	Overall rating:
Results: ● The people who provided input reflect the full diversity of the communities impacted by this work. ● A feedback loop was established so that community members can offer input at various stages of the project. ● Key organizations and project representatives have established strong relationships with leaders and others in the impacted communities. ● The results of surveys, focus groups and other established feedback initiatives were shared with the communities (people) who provided input. ● The programs/projects/policy initiatives created reflect the input from communities most impacted.						
How to approach the community: (We did this by…) ● Participants were surveyed in their native language by people who speak the language, whenever possible ● Feedback opportunities were clear, accessible, and easy to for people to participate ● Transportation/childcare were not barriers to providing input ● Survey and focus group questions reflect projects and ideas that are realistic and actionable. People are not asked to give ideas or opinions that could not be incorporated. ● Participants should provide different levels and media of input (spoken, written, digital…) People could participate in surveys and/or deeper, qualitative data collection. ● Information collected did not include unnecessary, personal details (or at least this part was optional and reasons for these questions were clear). ● We ensured that the survey reflects a clear "ask" and gathers new information that has not been recently collected by other organizations						
When to pursue funding or support for a project or initiative: Does it:						

• Reflect a specific need or opportunity articulated by the community? • Sustain or advance an already-established mission or goal? • Build resilience and sustainable growth?						
This tool is an effective measure						
We have made progress in this norm						

2. Language Accessibility. "Language Justice"	**Negative Impact -3**	**Neutral 0**	**Some Impact +3**	**Strong Impact +5**	**Highest Impact 10**	Overall rating:
Communication (both within the partnership and public-facing): • Is clear and avoids jargon • Is multi-lingual, depending on the community						
This tool is an effective measure						
We have made progress in this area						

3. Rubric for New Project Opportunities.	Negative Impact -3	Neutral 0	Some Impact +3	Strong Impact +5	Highest Impact 10	Overall rating:
Create a checklist for new project opportunities that: • Aligns with project priorities (access, viability) • Aligns with partnership values • Advances needs or opportunities stated by the communit(ies) and farmers involved • Integrates intersectional partners and services • Cultivates local funding opportunities • Explores policy change needs/opportunities • Addresses unjust systems (from Food Justice 101) • Power mapping around barriers and policy changes						
This tool is an effective measure						
We have made progress in this area						

4. New Farmer Opportunities.	Negative Impact -3	Neutral 0	Some Impact +3	Strong Impact +5	Highest Impact 10	Overall rating for this norm:
Projects and initiatives: • Directly address needs and opportunities articulated by farmers and farmworkers. • Expand the definition of who is a farmer: identifying small-scale growers who are outside of the current farmer networks • Expand and strengthen farmer-retail connections						

This tool is an effective measure						
We have made progress in this area						

5. Power Mapping. *This is part of the New Project Rubric.*	**Negative Impact -3**	**Neutral 0**	**Some Impact +3**	**Strong Impact +5**	**Highest Impact 10**	Overall rating for this norm:
The New Project Rubric will include barriers and challenges articulated through surveying, and, for these: • Identify the policies and norms that create those barriers and challenges. • Name the institutions that set those policies and priorities. • Identify individuals who hold power to change or remove those barriers.						
This tool is an effective measure						
We have made progress in this area						

6. Decision-Making Checklist. (ongoing)	Negative Impact -3	Neutral 0	Some Impact +3	Strong Impact +5	Highest Impact 10	Overall rating for this norm:
Decision-making is: **Transparent.** Those who are making decisions: ● Communicate what is at stake in a clear and timely manner. ● Name who is taking power in the decision and in what ways. **Accessible.** Those who are impacted: ● Are informed. ● Are engaged to participate in spaces and contexts and language that are accessible.						
Democratic. ● For simple decisions: thumbs up/5-finger vote ● For complex decisions:* (does anyone already have a process for this?) ○ A clear question is articulated ○ Time and space for individual reflection ○ Input from all participants is gathered before discussion ○ Decisions are time-bound and open to review						
This tool is an effective measure						
We have made progress in this area						

7. Relationship Building. (ongoing)	**Negative Impact -3**	**Neutral 0**	**Some Impact +3**	**Strong Impact +5**	**Highest Impact 10**	Overall rating for this norm:
The partnership prioritizes relationship-building by: ● Within the partnership, through relationship building activities and making space for connecting during "shared work" sessions ● With the community, by engaging and compensating diverse community members to broaden participation and avoid burnout ● Between the partnership and the public, through storytelling that captures the experience of farmers and community members						
This tool is an effective measure						
We have made progress in this area						

8. "Food Justice 101" Resources *that articulate the history and systems that govern our food system.*	**Negative Impact -3**	**Neutral 0**	**Some Impact +3**	**Strong Impact +5**	**Highest Impact 10**	Overall rating for this norm:
Compile a set of "Food Justice 101" resources that: ● Are accessible to partners and the public (on WCFN website - shared with all partners to link or post on their own) ● Are integrated into public-facing education shared by partners through their social media ● Are integrated into our discussions and meeting spaces (the what and why) ● Inform our work - to intentionally address and dismantle this						

history and systems (in the New Project Rubric - for working groups)						
This tool is an effective measure						
We have made progress in this area						

Letter of Support

To Whom It Concerns:

We have participated in the Windham Food Network's Gleaning Program for 2 years running. It is very well-run and easy to be a part of, and I imagine it's a great resource for the organizations receiving the fresh food that is gleaned. There is always excess food on a farm, no matter the size, that is headed for the compost pile or just left in the field. We are so glad to see the food we don't have a market for going to good use in our community. We are thrilled that the highest quality food can reach the homes of socially disadvantaged people who otherwise wouldn't have access to it.

The Gleaning team has been responsive and respectful when working on our farm. They are hard-working and well-coordinated. With a continued funding source they will continue to do high-quality impactful work in the Eastern CT food shed. I highly recommend that they receive funding to continue their good work.

Sincerely,

Charlotte Ross

Owner/Farmer at Sweet Acre Farm

Ex. 6 - Personal Privacy (PP)
Ex. 6 - Personal Privacy (PP)

To Whom It Concerns:

As a small, diversified vegetable farmer, I am keenly aware of any waste produced on our farm. We try our best to find appropriate outlets for extra produce, and the Windham Community Food Network's gleaning program has helped us tremendously to make use of extra produce while it is still fresh. We have been participating in this program for several years – having someone come to our farm to pick up and/or harvest extra vegetables has made it possible for products to find good homes instead of ending up in our compost pile. Our busy schedules don't allow the time to do this work ourselves while still being productive and profitable.

This program helps meet our needs, as farmers, while providing much healthier options to local families and pantries in need. Most local food distributions are unable to provide/distribute fresh food due to refrigeration and facilitation constraints. The gleaning program makes it possible for more families to eat healthy without the cost and transportation barriers that they may be used to.

Thank you for considering our proposal!

Sincerely,

Jackie Kulig

To:
From: Jessica Larkin-Wells
Re: Food System Capacity Building Grant Letter of Support
Date:

Dear ____,

I would like to offer Spring Valley Student Farm's support for the Windham Community Food Network's Food System Capacity Building Grant proposal to expand their gleaning and processing programs. Spring Valley Student Farm (SVSF) is UConn's small vegetable farm, where 11 undergraduate students live and work to grow produce for UConn's Dining Services. SVSF student farmers engage with the local community to learn, grow, and support. We are lucky to be neighbors and partners with the Windham Community Food Network, a fantastic organization that sets the example for community-centered food systems change.

We are a strong supporter of the Windham Community Food Network's gleaning program, and we are committed to working with the WCFN throughout program expansion. Last summer, we harvested 1,000lbs of produce before the drought set in, and we are excited to resume gleaning next spring. We will continue to support the project through volunteer gleaning work from SVSF-affiliated UConn students. We also intend to expand the gleaning program on our end by developing gleaning curricula and internship opportunities for student volunteers through the SVSF Gleaning Corps.

The WCFN has demonstrated their commitment to food system resiliency in the greater Windham area and deserve more resources to grow this program. Again, we at SVSF feel honored to participate in the wonderful work being done by the WCFN in our part of the state.

Sincerely,

Jessica Larkin-Wells, Farm Manager

Ex. 6 - Personal Privacy (PP)

To Whom It Concerns:

I am the co-owner and farmer of Brown Farm in Scotland CT. We are a small diversified farm and have been part of the Windham Community Food Network's gleaning program for several years. This program has helped us with our excess produce by coordinating produce pick-ups and even helping with harvesting. The gleaning program then distributes the produce from our farm (and others like us!) to families in need in our community.

The positive impact this program has on both the farmers and the families is huge. During the season farmers do not have the bandwidth to seek additional sales channels for excess produce, so most of the time it goes to waste. WCFN consistently and efficiently picks up our extra produce and gives me peace of mind knowing that it's going to families in need. The families that receive the produce are grateful to have access to fresh, local, nutrient packed fruits and vegetables to offset their food bill.

I look forward to continuing to be a part of the Windham Community Food Network's gleaning program for years to come – food, and all of the labor to grow it, cannot be wasted when there are hungry families to feed and in need.

Sincerely,

Jenna Aldrich

Farmer / Co-Owner Brown Farm

Letter of Support

3/31/2023

To Whom It Concerns:

I am the owner/farmer of Cobblestone Farm, a mixed vegetable operation in Mansfield Center. Cobblestone Farm has been working with the Windham Community Food Network (WCFN) since 2019 to connect area residents with high quality local produce. Through the WCFN's gleaning efforts, Cobblestone Farm has directed 100's of heads of lettuce, nearly 1000 lbs of tomatoes, and other vegetables to community soup kitchens and food insecure families. Just this week, volunteers from our local high school will work with WCFN to harvest and wash 500 lbs of turnips that will be distributed throughout the winter. Without WCFN, all these vegetables would have gone to waste. And with the grants WCFN has secured in the past, farmers are compensated for participating in the gleaning projects, which is very valuable as it does take extra time to coordinate gleanings.

WCFN is well-poised to continue and grow their gleaning efforts. They have a clear track record of success, have been excellent partners to work with, and are responsive to community needs. WCFN has a strong connection with our local community kitchen (CLiCK), our local food co-op, and other community partners that will help them see their project to fruition. The idea of processing gleaned produce into value-added products that will support WCFN's fundraising efforts is an excellent way to capitalize on some of the less popular produce. The Windham region is very responsive to community support projects, and I'm sure WCFN will be successful in selling any value-added products they produce.

On behalf of Cobblestone Farm, I enthusiastically look forward to continued work with WCFN in their gleaning efforts.

Sincerely,

Diane Dorfer

Owner-farmer

NON-PROFIT DEVELOPMENT PROFESSIONAL

Work History

PHILANTHROPY OFFICER

One Tree Planted, Inc. | March 2023 - Present

- Write grant proposals for government and institutional entities.
- Collaborate on grant award, monitoring, and reporting process.
- Regularly solicit five-, six-, and seven-figure gifts from government entities, foundations, and corporate institutions.
- Develop and manage grant calendar for individual portfolio, as well as seek new institutional prospects.
- Manage pipeline of funders.

DEVELOPMENT MANAGER

National Audubon Society - Audubon Florida | 2021 - Present

- Manage a major donor and prospect pipeline of up to 125 accounts, including foundations, corporations, and out-of-state donors.
- Regularly solicit five-, six-, and seven-figure gifts from individuals, corporations, foundations, and other institutions.
- Manage over 30 institutional accounts, including developing proposals, submitting and reporting on grants, and stewarding relationships.
- Develop and manage grant calendar for individual portfolio, as well as seek new institutional prospects.
- Facilitate the cultivation and elevation of relationships with major donors through the in-person or virtual meetings, correspondence, distribution of materials, and regular event-oriented updates.
- Spearhead state-wide efforts to source prospects from regional donor advised funds (DAFs) managed by foundations and banking entities.
- Collaborate in collateral development regarding regional programs.
- Lead and participate in Audubon Florida's Equity and Diversity group, as well as the Latino affinity group, Alianza Latina.

DIRECTOR OF COMMUNITY ENGAGEMENT

Early Learning Coalition of Pinellas | 2019 - 2020

- Launched first-ever board giving campaign with a 100% giving rate.
- Spearheaded a full organizational re-branding, including managing and creating items such as website copy, logo, collateral, and giveaways.
- Secured five- and six-figure grants at local, regional, and state levels from foundations and corporations.
- Managed major gifts initiatives with a portfolio of 250 donors, soliciting five- and six-figure gifts.
- Implemented prospect research practices, resulting in new major donors.
- Organized all fundraisers, micro-events, and community outreach efforts.
- Led public relations efforts, creating 9 new local partnerships and a marked increase in visibility via earned media.
- Supervised social media platforms and edited posting schedule as needed.

Work History (continued)

DEVELOPMENT COORDINATOR

Aging True Community Senior Services | 2015 - 2019

- Developed and implemented fundraising strategy, securing over $750,000 annually from individual and corporate contributions.
- Secured grants at the local, regional, state, and federal levels.
- Successfully advocated for Meals on Wheels program to become an annual line item in the City of Jacksonville's budget.
- Developed outreach initiative "Meals on Wheels Ride-Along Program".
- Stewarded a donor base of 5,000+ and supervised administration of the organization's donor and volunteer database.
- Directed the design, printing, and distribution of all collateral.
- Managed all social media accounts and public relations needs.

DEVELOPMENT COORDINATOR

Massachusetts Bible Society | 2014

- Managed a donor base of 3,000+.
- Led organizational re-branding and SEO optimization.
- Created the organization's first comprehensive development and marketing plan for donors in order to establish consistent giving.
- Managed grant applications and reports, as well as institutional relations.
- Responsible for the content, design, and publication of all solicitation materials and event communications, both digital and print.
- Managed Lunch Series and annual fundraiser, as well as all donor appreciation micro-events.
- Increased annual donations by 47.8% in under a year.
- Implemented Raiser's Edge as the organization's fundraising CRM.
- Managed all social media platforms.
- Supervised volunteer recruitment and management.

DEVELOPMENT ASSISTANT

Boston Playwrights' Theatre | 2008 - 2010

- Established donor stewardship process.
- Developed a fund development strategy and calendar.
- Executed a pre-determined marketing calendar.
- Prospected for local and regional grantors supporting the arts.
- Negotiated with third party advertisers and vendors.
- Produced targeted collateral for playwrights, both print and digital.
- Organized and maintained donor database of 2,000+.
- Organized local fundraising initiatives and events.
- Increased donations by an average 26% per fiscal year.

Summary

Established a highly successful business career of people management and sales growth. I am dedicated to developing the greatest potential possible from both including achieving all established goals. After 45 years working in the corporate world I am now extremely grateful to be part of one of the most dynamic non-profit organizations in the world focused on a simple but critical global sustainability need - reforestation of our planet.

Skills

- Team Leadership
- Team Collaboration
- Rapid scaling of enterprise skills
- Team member mentoring and management development

Experience

One Tree Planted | Shelburne, VT
Chief of Sustainability
01/2023 - Current

- Sustain the people and mission of One Tree Planted.
- Work with Founder and team to further develop and guide "Best Practices" of One Tree Planted.
- Responsible for mentoring and building the dynamic success of the Fundraising, Philanthropy and Sports Team.

Eco-Products | Boulder, CO
Director of Sales
10/2009 - 12/2022

- Initially responsible for sales throughout North America. With annual dramatic sales growth and acquisitions , I reduced sales geography responsibility to the eastern US - 33 states, Caribbean & Mexico.
- Coached, developed and motivated sales team to exceed revenue goals every year.
- Initiated and led the development and implementation of an industry first "Product & Zero Waste" specialist team.
- Mentored 5 members of the team to become sales executives at the Director level or above in my last 5 years with Eco-Products.
- Helped establish Eco-Products as the leading brand in the US and globally for environmentally friendly foodservice disposables.
- Directly responsible for the corporate relationships for 7 out of 8 of Eco-Products top volume customers.
- growth from **2009 - $48M to 2022 - $503M**

KeyImpact Sales & Systems Inc. | Odenton, MD
Vice President of Sales
04/1996 - 10/2009

- Designed a cohesive and effective sales organization establishing a non-foods division for KeyImpact Sales, a regional foodservice brokerage company
- Aligned sales objectives with business initiatives using strategic development, forecasting and budgeting.
- Directly managed top accounts until sales growth and geographic expansion drove need for an expanded team.
- Grew the geographic responsibility from the mid-Atlantic region to all US east of the Mississippi river
- The Non-foods Division grew sales from start up to $50M in top line sales from 1996 to 2009.
- Concurrently served on the KeyImpact BOD from 2005 to 2007 as the ESOP

Chairman overseeing the development of the ESOP committee as KeyImpact rapidly expanded from 6 state to over 30 with 12 brokerage business's

My career objective is to secure a challenging position at a reputable organization like One Tree Planted where my passion for urban forestry can drive organizational success

EXPERIENCE

2021 – PRESENT

DIRECTOR OF URBAN FORESTRY, ONE TREE PLANTED

- Lead a growing team in implementing urban forestry projects in the United States and internationally, with a focus on environmental justice & tree equity.
- Build out a network of hundreds of urban forestry planting partners across the globe
- Cross-team collaboration on fundraising efforts to raise over $4mil each year
- Support marketing & communications teams on conveying the impact of our program through digital, social, and video campaigns

2019 – 2021

EASTERN PANHANDLE FIELD COORDINATOR, WV RIVERS COALITION

- Develop and lead a regional conservation partnership focused on conserving land and forests
- Prioritize high-value lands for conservation through GIS analysis and mapping
- Lead project teams in conducting landowner outreach and implementing priority agricultural best management practices, such as riparian forest buffers and conservation easements
- Serve as the state lead in West Virginia for the Choose Clean Water Coalition, assisting local watershed groups with advocating for clean water policy and natural climate solutions
- Facilitate meetings to coordinate with stakeholders on multiple, overlapping projects
- Engage stakeholders in improving and implementing local watershed-based plans, source water protection plans, and West Virginia's Phase 3 Watershed Implementation Plan

2011 – 2019

URBAN WATERSHED FORESTER, CACAPON INSTITUTE

- Developed and led the largest volunteer tree planting & stewardship program in the state of West Virginia – the Carla Hardy WV Project CommuniTree
- Conducted field assessments and outreach to generate and manage over 240 projects
- Engaged more than 15,000 volunteers in planting over 6,800 urban trees
- Led GIS analyses and mapping of urban tree canopy at parks, schools, and municipalities
- Developed best management practice inventory protocols

2010 – 2011

LAND STEWARD, CRAFTWORKS AT COOL SPRING

- Coordinated stewardship projects at the Cool Spring Nature Preserve, including wetlands education, invasive plant management, and grant writing.
- Engaged volunteers in developing hiking trails, maps, and trail signage

2010 – 2011

BIOLOGICAL SCIENCE LABORATORY ASSISTANT, USDA-ARS-AFRS

- Conducted molecular biology research studying transgenic gene functions in plants

2010

BIOLOGICAL SCIENCE FIELD TECHNICIAN, USGS AQUATIC ECOLOGY LAB

- Monitored water quality & trout stream habitat in Delaware Water Gap Nat'l Park

EDUCATION

2006 – 2010

BACHELOR OF SCIENCE IN ENVIRONMENTAL STUDIES, SHEPHERD UNIVERSITY

Concentration in Natural Resource Management. Participated in the Student Conservation Association's 2009 Alternative Spring Break Plant Revegetation Team at the Grant Canyon. Student film on nature deficit disorder shown at the American Conservation Film Festival.

SKILLS

- Experience working with communities and partners in urban forestry
- Developing strong partnerships
- Strong knowledge of urban forestry, tree planting, and stewardship
- Leading and motivating teams
- Proficient in the Climate & Economic Justice Screening Tool, American Forests' Tree Equity Scores tool, and EJSCREEN.
- Volunteer recruitment & retention
- Strong written & verbal communication skills
- GIS mapping and analysis
- Data compilation and management, with strong computer skills
- Conducting landowner outreach & environmental education/training
- Building consensus through diverse voices
- Developing project proposals & budgets
- Project management and oversight
- 10+ years remote work experience
- Efficient time management

ABOUT ME

As a whitewater raft guide in college, I learned first-hand many of the skills that I've carried with me through life – a willingness to form lasting relationships and engage in meaningful experiences with new

people every day, dedication to keeping an open mind to accept bold challenges, and a love for adventure. I have a head for numbers and a heart for people – both of which are needed in the field of urban forestry. I have served on multiple non-profit boards, including the Potomac Valley Audubon Society (2013-2018) and CraftWorks at Cool Spring (2015-2018). I currently also give back to my community by serving as the Chair of our Tree Board and member of our Planning Commission.

I am a certified Arborist [Ex. 6 Personal Privacy (PP)], graduate of the WV Master Naturalist program, graduate of the Jefferson County Chamber of Commerce's 2019 Leadership Jefferson program and hold a Certificate in the Fundamentals of Supervision and Management. I am a devoted husband and proud father of two beautiful daughters, a rescue dog, and a flock of raucous chickens.

Fax Ex. 6 - Personal Privacy (PP)
Telephone Ex. 6 - Personal Privacy (PP)

XI. **If the applicant is an education program or activity, or has 15 or more employees, has it adopted grievance procedures that assure the prompt and fair resolution of complaints that allege a violation of 40 C.F.R. Parts 5 and 7? Provide a legal citation or applicant's/ recipient's website address for, or a copy of, the procedures.**

From SoundWaters Employee Manual
Revised and Approved by Executive Committee of BOD: March 13, 2017
XIV. APPENDIX A: GRIEVANCE PROCEDURES
The Grievance Procedure is a systematic process for the hearing and management of employee complaints concerning the personnel policies and working conditions. A grievance must be given in writing to the employee's supervisor, and must include:
 A statement of the policy, procedure, and/or working condition to be addressed;
 The alleged violation;
 The adverse impact of the violation on the employee.
Employees should discuss work-related questions, concerns and problems with their supervisors in a timely fashion so that resolutions can be reached. In the event of a significant difference of opinion, or when pertinent facts appear to have been overlooked, or where the validity of judgment is questioned, employees may request formal review through the Grievance Procedure. Employees may appeal any matter without jeopardizing job security.

For the Applicant/Recipient

I certify that the statements I have made on this form and all attachments thereto are true, accurate and complete. I acknowledge that any knowingly false or misleading statement may be punishable by fine or imprisonment or both under applicable law. I assure that I will fully comply with all applicable civil rights statutes and EPA regulations.

A. Signature of Authorized Official	B. Title of Authorized Official	C. Date
Eileen McSweeney	President	04/14/2023

For the U.S. Environmental Protection Agency

I have reviewed the information provided by the applicant/recipient and hereby certify that the applicant/recipient has submitted all preaward compliance information required by 40 C.F.R. Parts 5 and 7; that based on the information submitted, this application satisfies the preaward provisions of 40 C.F.R. Parts 5 and 7; and that the applicant has given assurance that it will fully comply with all applicable civil rights statures and EPA regulations.

A. *Signature of Authorized EPA Official	B. Title of Authorized Official	C. Date

Instructions for EPA FORM 4700-4 (Rev. 04/2021)

General. Recipients of Federal financial assistance from the U.S. Environmental Protection Agency must comply with the following statutes and regulations.
Title VI of the Civil Rights Acts of 1964 provides that no person in the United States shall, on the grounds of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. The Act goes on to explain that the statute shall not be construed to authorize action with respect to any employment practice of any employer, employment agency, or labor organization (except where the primary objective of the Federal financial assistance is to provide employment). Section 13 of the 1972 Amendments to the Federal Water Pollution Control Act provides that no person in the United States shall on the ground of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under the Federal Water Pollution Control Act, as amended. Employment discrimination on the basis of sex is prohibited in all such programs or activities. Section 504 of the Rehabilitation Act of 1973 provides that no otherwise qualified individual with a disability in the United States shall solely by reason of disability be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. Employment discrimination on the basis of disability is prohibited in all such programs or activities. The Age Discrimination Act of 1975 provides that no person on the basis of age shall be excluded from participation under any program or activity receiving Federal financial assistance. Employment discrimination is not covered. Age discrimination in employment is prohibited by the Age Discrimination in Employment Act administered by the Equal Employment Opportunity Commission. Title IX of the Education Amendments of 1972 provides that no person in the United States on the basis of sex shall be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity receiving Federal financial assistance. Employment discrimination on the basis of sex is prohibited in all such education programs or activities. Note: an education program or activity is not limited to only those conducted by a formal institution. 40 C.F.R. Part 5 implements Title IX of the Education Amendments of 1972. 40 C.F.R. Part 7 implements Title VI of the Civil Rights Act of 1964, Section 13 of the 1972 Amendments to the Federal Water Pollution Control Act, and Section 504 of The Rehabilitation Act of 1973.

Items "Applicant" means any entity that files an application or unsolicited proposal or otherwise requests EPA assistance. 40 C.F.R. §§ 5.105, 7.25. "Recipient" means any State or its political subdivision, any instrumentality of a State or its political subdivision, any public or private agency, institution, organizations, or other entity, or any person to which Federal financial assistance is extended directly or through another recipient, including any successor, assignee, or transferee of a recipient, but excluding the ultimate beneficiary of the assistance. 40 C.F.R. §§ 5.105, 7.25. "Civil rights lawsuits and administrative complaints" means any lawsuit or administrative complaint alleging discrimination on the basis of race, color, national origin, sex, age, or disability pending or decided against the applicant and/or entity which actually benefits from the grant, but excluding employment complaints not covered by 40 C.F.R. Parts 5 and 7. For example, if a city is the named applicant but the grant will actually benefit the Department of Sewage, civil rights lawsuits involving both the city and the Department of Sewage should be listed. "Civil rights compliance review" means: any federal agency-initiated investigation of a particular aspect of the applicant's and/or recipient's programs or activities to determine compliance with the federal non-discrimination laws. Submit this form with the original and required copies of applications, requests for extensions, requests for increase of funds, etc. Updates of information are all that are required after the initial application submission. If any item is not relevant to the project for which assistance is requested, write "NA" for "Not Applicable." In the event applicant is uncertain about how to answer any questions, EPA program officials should be contacted for clarification.

SoundWaters EPA Environmental Justice Budget Narrative: Taking it to the Streets				
Total Project Amount: $416,622				
Sub-award Amount: $75,000				
Total Project Costs & Justification	**Request to US EPA year 1**	**Request to US EPA year 2**	**Request to US EPA year 3**	**Project Total**
A. Personnel/Salaries:				
Key Staff (list by individual - include resume in Appendix)				
Dr. Shemitz (SoundWaters President) will commit 60 hours, at Ex. 6 Personal Privacy (PP), to the EPA project each year. Dr. Shemitz will be in charge of supervision and evaluation. Mr. Bagley (Vice President, Programs) will devote 90 hours, at Ex. 6 Personal Privacy (PP) to the EPA project each year. Mr. Bagley's time will be split between program design and management. The Community Engagement Coordinator will be a full-time position, and will conduct outreach with partners and the broader community to develop the clean up and outreach activities. Captain Virgilio Gonzalez (Captain of the Schooner, SoundWaters) will devote 150 hours to the project, at Ex. 6 Personal Privacy (PP) each year. Capt Gonzalez, a US Coast Guard Certified Captain, is responsible for managing all aspects of the Schooner from staff training to ship management to driving the ship. Mr. Josh Mayo, Fleet Manager, will devote 12 hours per group per year (60 hours/ year) to manage the community learning at the marine trash skimmer and aboard the kayaks for the community groups.				
Leigh Shemitz, Ph.D. President	$5,400	$5,400	$5,400	$16,200
Mike Bagley, Vice President, Programs	$5,700	$5,700	$5,700	$17,100
Community Engagement Coordinator	$58,000	$58,000	$58,000	$174,000
Virgilio Gonzalez, Captain	$5,700	$5,700	$5,700	$17,100
Josh Mayo, Fleet Manager	$1,500	$1,500	$1,500	$4,500
Support Staff (Educators, Assistants, Etc.)				
Each of the 5 schooner educator/ crew members will commit 25 hours, at $15/ hr, to the project. Each of the 5 schooner educator/ crew members will staff the ship, from the sails to the lines to maintaining a safe learning environment. The educator/ crew members will also lead the educational component of the program.				
Schooner educator/ crew member	$375	$375	$375	$1,125
Schooner educator/ crew member	$375	$375	$375	$1,125
Schooner educator/ crew member	$375	$375	$375	$1,125
Schooner educator/ crew member	$375	$375	$375	$1,125
Schooner educator/ crew member	$375	$375	$375	$1,125
sub total: personnel/ salaries	*$78,175*	*$78,175*	*$78,175*	*$234,525*
B. Fringe Benefits: (Health insurance)				
Fringe benefits, calculated at 19% of salary, will be matched by SoundWaters. This fringe covers health benefits, dental and life insurance. There is no fringe for seasonal employees.				

Dr. Shemitz, President	$1,453	$1,453	$1,453	$4,359
M. Bagley, Vice President, Programs	$1,083	$1,083	$1,083	$3,249
Community Engagement Coordinator	$11,020	$11,020	$11,020	$33,060
Captain Virgilio Gonzalez	$1,083	$1,083	$1,083	$3,249
Josh Mayo, Fleet Manager	$285	$285	$285	$855
sub total: fringe benefits	*$14,924*	*$14,924*	*$14,924*	*$44,772*
C. Travel:				
Travel Indirectly Related to Program Implementation				
Schooner. SoundWaters will welcome each community or organization partner to sail on our 80' Schooner SoundWaters. From decades of experience, we know that enjoying Long Island Sound will build greater awareness, understanding and urgency about environmental protection. . Each community-based organization will bring @ 40 members out each years (5 organizations a year, for three years). The cost is $1,150 per trip, which includes costs of schooner insurance, dockage, fuel and maintenance. There are 5 trips in years 1-3.	$5,750	$5,750	$5,750	$17,250
sub total travel	*$5,750*	*$5,750*	*$5,750*	$17,250
D. Equipment: no equipment costs are associated with this proposal				
E. Supplies				
Note that the supplies for the clean-ups (gloves, bags, trash pickers, etc) will be purchased by the community-based organizations, from the funds in their sub-awards. For each clean-up, each group will be awarded 1,000 to cover costs of outreach, staffing and supplies.				
Kayaks (use of 12 double kayaks ($40 each), five times per year)	$2,400	$2,400	$2,400	$7,200
sub total supplies	*$2,400*	*$2,400*	*$2,400*	*$7,200*
F. Contractual: no contractual costs are associated with this proposal				
sub total: contractual	*$0*	*$0*	*$0*	$0
G. Other: We will partner with 5 local community groups. Below are four groups who have committed to the project (with attached letters of commitment) and a fifth that is pending, to be added to the team in the coming months:				
Building One Community (B1C): B1C is a local non profit that works to advance the successful integration of immigrants and their families in the Stamford community. B1C serves as a welcoming point of entry for newcomers from all parts of the world. B1C will be a project partner in community outreach to groups who traditionally have limited access to the local environment, will coordinate transportation to and from their facility to SW dock and will provide training for SoundWaters staff in best practices for engaging their clientele.	$5,000	$5,000	$5,000	$15,000

Future Five is local non profit working with at-risk high school students to provide support to enable the students to develop the skills and resources to thrive in high school and matriculate to college. Over the last 12 years, Future 5 has helped more than 700+ students achieve their academic, career and life goals by connecting them to Coaches, College, the Community, Careers, and most importantly, their own Character.	$5,000	$5,000	$5,000	$15,000
The Waterside Coalition is an active community nonprofit in Stamford. They are a grass roots umbrella organization that includes representatives from neighborhood associations, concerned residents, as well as business and community leaders who meet regularly to identify community issues and mutual concerns and work together to improve Waterside, a economically distressed neighborhood abutting Stamford Harbor.	$5,000	$5,000	$5,000	$15,000
East Side Partnership. The East Side Partnership's mission is to create an exceptional quality of life for the people who work and live in the eastside of Stamford, Connecticut. Its goal is to create a clean, safe and green environment. This is an active community nonprofit in Stamford that consistently incorporates hands-on activities that pursue positive quality of life outcomes on their streets and for their neighbors.	$5,000	$5,000	$5,000	$15,000
Stamford Boys and Girls Club (SBGC). The SBGC is a local nonprofit that provides afterschool and summer programming for low-income families in our community. The SBGC serves as a community gathering place on the City's West side. *This group is pending (no letter of commitment attached).*	$5,000	$5,000	$5,000	$15,000
sub total: other	*$25,000*	*$25,000*	*$25,000*	*$75,000*
H. Total Direct Charges:	**$126,249**	**$126,249**	**$126,249**	**$378,747**
I. Indirect Charges: (10%)	***$12,625***	***$12,625***	***$12,625***	**$37,875**
J: Totals:	**$138,874**	**$138,874**	**$138,874**	**$416,622**

Revised and Approved by Executive Committee of BOD: March 13, 2017
XIV. APPENDIX A: GRIEVANCE PROCEDURES
The Grievance Procedure is a systematic process for the hearing and management of employee complaints concerning the personnel policies and working conditions. A grievance must be given in writing to the employee's supervisor, and must include:
 A statement of the policy, procedure, and/or working condition to be addressed;
 The alleged violation;
 The adverse impact of the violation on the employee.
Employees should discuss work-related questions, concerns and problems with their supervisors in a timely fashion so that resolutions can be reached. In the event of a significant difference of opinion, or when pertinent facts appear to have been overlooked, or where the validity of judgment is questioned, employees may request formal review through the Grievance Procedure. Employees may appeal any matter without jeopardizing job security.

Project Title: *Taking it to the Streets*

Project Location: Stamford, Connecticut 06901and 06902

Applicant Information: SoundWaters, Inc., 1281 Cove Road, Stamford, CT 06902

Ex. 6 - Personal Privacy (PP) https://soundwaters.org/

Main Contact: Leigh Shemitz, Ph.D., SoundWaters President, 1282 Cove Road, Stamford, CT 06902 Ex. 6 - Personal Privacy (PP) lshemitz@soundwaters.org

About SoundWaters Founded in 1989, SoundWaters is devoted to the protection of Long Island Sound and its watershed by means of access and education for the surrounding community. In pursuit of this aim, SoundWaters hosts shipboard/land-based programs for more than 30,000 preK–12 students each year. SoundWaters provides students with science enrichment, and both children and adults with an understanding of the changes they can make to restore and preserve the Sound and its environment. SoundWaters fosters equity of access to this natural resource and promotes a healthy, resilient future for the Sound, the region and its people.

Project Abstract: *Taking it to the Streets*

Collaborating with Disadvantaged Communities / Local Stamford Neighbors To Take Action Against Our Shared Concerns about Upland Trash

> "Unfortunately, when people come to our neighborhood, they expect to see trash in the streets. We want to change this perception and the reality. Working with SoundWaters on this project will galvanize our community, give our residents a greater sense of control over our quality of life and, at the same time, keep trash from flowing into Long Island Sound, which reflects poorly on our neighborhood and the entire city."
>
> *Virgil de la Cruz, Waterside Coalition, Chair 04.11.2023*

SoundWaters has been conducting coastal clean-ups for three decades - we will conduct over 50 clean-ups in 2023 alone – so we know that we can keep our beaches clean. We also recognize that the true source of environmentally hazardous trash is not our beaches, but rather our upland/inland neighborhoods. Multiple thousands of pounds of trash wash from our streets into Stamford Harbor and Long Island Sound with every adverse weather event. To take on this much wider and much larger challenge, we need to work collaboratively with partners in our community. *Taking it to the Streets* is SoundWaters proposal to, in collaboration with Stamford organizations and neighborhoods, tackle trash before it can do irreparable harm our greatest natural resource. We will focus our initial efforts on working with disadvantaged communities and populations in Stamford not traditionally engaged in environmental protection with the goal of preventing tons of trash from reaching Long Island Sound and promoting and embedding behaviors that will improve the quality of life in our upland neighborhoods.

Are you applying for the Small CBS track for $150,000 projects?..... NO
Type: Demonstration **Environmental Issue:** Trash **Special Considerations:**. NO
Project Partners: (1) Building One Community (local non-profit resource agency for immigrants), (2) East Side Partnership (non-profit community group), (3) Future 5 (local non-profit youth development organization), (4) Waterside Coalition (non-profit community group)

Will SoundWaters develop a QAPP for this project? …..……..……....NO

ED_016126_00000153-00001

b. Environmental Information of the Underserved Community

SoundWaters *Taking it to the Streets* has identified the areas just north and south of Stamford's I-95 corridor and the Metro-North rail route. This includes the downtown business district and the historically designated eastside and westside neighborhoods. These three areas of the City are diverse in every way. There are pockets of wealth that include major retail establishments, a university campus, the headquarters of major corporations and high-rise luxury apartment buildings. However, alongside such prosperity is a desolate shopping mall that is almost empty of retail stores, low-income public housing, empty downtown storefronts and elevated crime rates on the westside south of I-95.

Low-income residents live closer to the highway and a very busy Boston Post Road (U.S.1), while residents that are more affluent have options to live in Stamford's wealthier housing enclaves. Air and trash pollution from the thousands of automobiles that race through this area are a constant threat to the health and quality of life for this low-income population. Our four committed partners and their clients are located in these environmentally vulnerable pockets of Stamford. It is often difficult to connect with residents living in these impoverished sections of Stamford. These residents usually are not integrated into significant City projects because of language barriers, shift work schedules, and social and emotional insecurities.

> Environmental indicators for the Waterside Coalition's westside neighborhood has a hazardous waste proximity of 6 compared to 3 for the state average and 2.2 for the U.S. average. Traffic proximity is rated at 17 compared with 12 for both the state and the U.S. The eastside indicators are similar: proximity to hazardous waste is 4.1, state average is 3, and U.S. average U.S. is 2.2. [EPA EJ Mapping Tool]
>
> 42% of downtown and eastside residents and 54% of westside residents spend more than 30% of their income on housing. Unemployment for the westside is 7%, the eastside, and downtown 5%, higher than the City's overall rate of 4%. [Stamford GIS Mapping Tool]

Neighborhood trash that goes uncollected attracts vermin, is demoralizing and negatively affects residents' health and overall quality of life. As there is a price-tag associated with many outdoor activities in the City, SW, through this project, will be able to offer no-cost opportunities for children and adults to be outdoors and unplugged, learn new skills – such as kayaking, and see first-hand through SW schooner sails and touring the trash skimmer in Stamford Harbor, and learning to kayak, how important their trash removal activities upstream are to the downstream waters of the Sound. *Taking it to the Streets* invites these outsiders to become insiders and enjoy the emotional/social benefits of being part of something important.

c. SoundWaters Historical Connection to Underserved Community

SoundWaters (SW) was founded over three decades ago - when the health of Long Island Sound was in crisis - in the belief that providing access to the Sound would foster education and a culture of stewardship, ultimately leading to a healthier environment and a stronger/thriving community. Private waterfront properties ring Long Island Sound, giving it one of the highest barriers to entry of any body of water in the United States. To overcome this barrier, SW established the principle that *no student or school will be turned away from a SW program for the inability to pay*. Our adherence to this principle is borne out by our commitment to scholarship: annually, over 50% of our 30,000 students who we teach receive partial or full

ED_016126_00000153-00002

scholarship. We have developed a longstanding and trusting relationship with underserved communities, which we have extended into specific programming to engage disadvantaged populations in environmental protection and the benefits of a healthy environment.

In addition to offering scholarships, SW has created programs specifically for underserved populations, some focused on students and others reaching whole families. Our longest standing such program is Young Mariners Academy and eight-week summer program, which focuses on sailing and academics to instill positive academic habits and life skills in middle school students. A learning pipeline, students enter as rising 6th graders and graduate the program four summers later as they head into high school, confident and better prepared academically. Typically, over 90% of Young Mariners students receive scholarships.

Since 2021, we have run the Marine Debris Kayak Program to give underserved communities no-cost access to the health and emotional benefits of Long Island Sound and the opportunity to take an active role in environmental advocacy. Working with four of our five partners on this grant – Building One Community, East Side Partnership, Future Five and the Waterside Coalition – we make our fleet of kayaks available on summer weekend mornings to members of those communities - most of whom have never been in a kayak - to learn and enjoy paddling on the Sound and take part in marine debris clean-up as they go. To date, 486 members of these communities have paddled and pulled 339 pounds of debris from the water.

In 2022, supported by a two-year EPA Environmental Education grant, we started *Sound Families*. Utilizing our 80' Schooner *SoundWaters*, we will sail on multiple occasions exclusively with five partner organizations, including Building One Community and Future Five, representing a wide cross-section of our region's disadvantaged (low income, immigrant, people of color) communities. The objective is to engage families – students, siblings and parents – in a very enjoyable experience on Long Island Sound while introducing them to science concepts of water quality, animal populations and marine debris. To date, over 100 family members have sailed with several hundred more already scheduled for summer, 2023. In the words of one of our Sound Families passengers, "It's so beautiful out here…I feel like I can breathe again."

SW has worked extremely hard to forge deep and strong partnerships with our partner organizations. In addition to our existing work with our partners, we have worked closely with the Waterside Coalition, Building One Community and Future 5 on our regular coastal clean-up activities over several years. They communicate our clean-up programs to their members and organize themselves to participate each month. As we launch *Taking it to the Streets*, we will work closely with each organization to educate, motivate and activate their members support. Heretofore, SW has organized coastal clean-ups for members of the community. Going forward, we will show up and support the upland trash pick-up efforts of our partners. Their respective organizing committees will recruit volunteers, purchase supplies, organize events and document the results, taking full control over how their community is perceived and improve their quality of life.

ED_016126_00000153-00003

d. EJCPS Model

Taking it to the Streets is based entirely on collaboration with underserved communities to solve a problem that affects the broader community, but disproportionately impacts disadvantaged populations.

Coastal clean-ups are well within SW existing capacity; we have been conducting them regularly for over 30 years and they are effective and important. In 2023 alone, we project to organize approximately 40 coastal clean-ups for the public, school and youth groups and the business community, working with an estimated 1,200 people. We are confident that our coastline is as clean as we can safely make it. It is inland, on our neighborhood streets, where we cannot succeed without help.

Our inland streets are a tremendous source of hazardous marine debris, but we can't reach it without collaborating with motivated community partners who live or work in those neighborhoods. *Taking it to the Streets* proposes to partner with local neighborhoods and community organizations to focus efforts to clean a primary source of marine debris – inland neighborhood streets - and to bring underserved communities together to improve their local environment and quality of life.

Working with the EJCPS model, we expect to utilize five of seven elements:

1. Issue Identification, Visioning and Strategic Goal-Setting: The streets are not our space so SW will have to work early, closely and often with neighborhood and organization leaders to design a realistic, effective and sustainable trash clean-up program that will work for them to unite their respective communities behind shared goals to bring about the positive change we collectively seek.

2. Community Capacity-Building and Leadership Development: An effective and sustainable program can only be built from within each local community. SW will work closely with and support neighborhood efforts throughout the project to achieve their goals, but ultimately, success will happen when leaders from each community rally and educate their volunteers and advocate for their neighborhoods. We anticipate that local leadership skills will develop over the three years of this program resulting in increased awareness and participation by volunteers and engagement with city officials.

3. Constructive Engagement with Relevant Stakeholders: Neighborhood leaders live and work in their neighborhoods, care about their neighborhoods and want to bring about positive change in their neighborhoods, but they do not own their neighborhoods. For that reason, the City of Stamford is also a major stakeholder and also will need to engage as a collaborative partner in this effort, whether it be bulk removal of trash following a clean-up event or remediating trash problems that are identified during the course of this project. Either way, neighborhood leaders will be empowered, encouraged and supported by SW in their efforts to work constructively with the City to sustain positive changes that come from this project.

4. Sound Management and Implementation: We recognize that the goals for *Taking it to the Streets* are multi-faceted - clear trash from inland streets, motivate neighborhoods to unite around creating positive change and empower underserved communities to advocate for themselves, not to mention stemming the flow of trash into Long Island Sound – and this project has the potential to accomplish all of these goals, but there is no expectation any of this will be simple. SW will work closely with all partners together on overarching goals and strategies and with each partner individually to design action plans unique to their circumstances.

5. Evaluation: *Taking it to the Streets* will be an iterative project. We will work closely with our partners to plan year one of the project, fully expecting that we will continue to adjust plans as we go through the year. At the conclusion of the year, we will assess results and our working relationships and adjust accordingly to prepare to be better and more productive in years two and three. Ultimate proof of performance will be the sustainability of the project on the neighborhood level after the project has finished.

e. Project Linkages

Achieving Strategic Plan Goal #2, Objective 2.1 is EXACTLY what *Taking it to the Streets* is designed to do. In order for us to achieve our objective to minimize the flow of trash from specific inland neighborhood streets into Long Island Sound, we absolutely have to engage leaders and residents of those neighborhoods. The neighborhoods and organizations we have selected as project partners all qualify as underserved. As we form those relationships, we will empower our new partners with the knowledge, confidence and resources (i.e., capacity) they will need to sustain the actions and behaviors embedded in *Taking it to the Streets* well past the term of the project.

f. Partner and Collaborate

Five committed partners for *Taking it to the Streets* will be managed as subrecipients.

SW will obtain a Memorandum of Understanding (MOU) that outlines the responsibilities of SW, each partner and allowable Participant Support Costs (PSC), as listed in the budget attachment.

SW will track and report each partner's activities and expenses on a regular basis. Allowable expenses include staff time for meetings, community outreach and recruitment, and clean-up supplies.

Committed Partners

SW has recruited a group of partners who are respected in their communities, have a recognized history of community service and work tirelessly to promote EJ opportunities for their clients. Partner organizations are aligned in the environmental challenges that affect their clients. Yet, they serve diverse audiences that include new immigrants, teenagers, and local businesses and residential neighborhoods.

ED_016126_00000153-00005

1. Building One Community (B1C*)* is a committed partner for this project. B1C's mission is to advance the successful integration of immigrants and their families in Stamford, Connecticut. B1C serves approximately 3,400 immigrants each year through English language programs, family, parent and individual support services, immigration legal services and workforce development. B1C's two locations located in the eastside and westside of Stamford are low income sections of the city.

a. B1C staff and participants will help to organize efforts in collaboration with neighborhoods and other organizations. B1C will bring the mostly Hispanic voice to the project; a voice that frequently does not have a platform from which to be heard.

b. B1C represents the many thousands of immigrants who have settled in Stamford in recent years. Stamford Public Schools enrollment reflects this diversity. The District's student body is 46% Hispanic, 14% Black and 4% two or more races.

c. B1C will recruit volunteers for their clean-up events from the neighborhoods surrounding their two facility locations. In addition, B1C's volunteers will record data from their efforts, including amounts of trash collected, number participants, and anecdotal accounts.

d. B1C has a vested interest in *Taking it to the Streets* because a meaningful real and relevant neighborhood clean-up project is a powerful way for B1C families to be truly at home and integrated into their new communities.

e. SW anticipates that not only will it sustain *Taking it to the Streets* with B1C but grow its reach throughout Stamford's immigrant community. SW currently offers two programs that target low income families and, in particular, B1C's immigrant clients: Marine Debris Kayak and Sound Families. This project will continue to help expand SW portfolio of environmental stewardship programs for disadvantaged residents in Stamford.

2. The **East Side Partnership's** mission is to create an exceptional quality of life for the people who work and live in the eastside of Stamford, Connecticut. Its goal is to create a clean, safe and green environment. This is an active community nonprofit in Stamford that consistently incorporates hands-on activities that pursue positive quality of life outcomes on their streets and for their neighbors.

a. The East Side Partnership (Eastside) staff and volunteers will help to organize efforts in collaboration with neighborhoods and other organizations. East Side will promote and recruit their neighborhood volunteers to join this clean-up project and include it in their regular roster of community activities.

b. The East Side demographic profile is 46.2 % of the residents are Hispanic, 34.1% White (non-Hispanic), 11.9 % Black, 7.7% Other. 43% of the households spend 30% or more of their income on housing. The unemployment rate is 5% and 15% of households identify as having limited proficiency in English.

c. East Side will bring all of its organizational skills and neighborhood connections to *Talking it to the Streets*. Its experienced staff leadership will work with other organizations to mobilize their combined efforts to create a successful partnership. In addition, East Side will recruit from its roster of committed volunteers to take action in eastside neighborhoods to prevent trash from washing into Long Island Sound with rainwater.

d. At least 50% of East Side activities concern trash removal from the neighborhood and all of their activities are focused on creating an exceptional quality of life for the people who live and work on the eastside. For example, East Side has placed 22 trash receptacles along East Main Street. *Taking it to the Streets* will broaden the East Side Partnership's connection

ED_016126_00000153-00006

with other organizations that share their concern for clean, green neighborhoods in Stamford.

e. East Side activities align with those of SW, as both organizations engage in removing trash, environmental advocacy and environmental community events. Environmental stewardship is at the heart of both organizations and this project. *Taking it to the Streets* presents a clear pathway to building a long-term association with the East Side Partnership.

3. **Future 5,** a Stamford non-profit organization**,** helps motivated, under-resourced high school students in Stamford connect to the people, resources, and experiences essential to making the transition to post-secondary education and careers. Future 5 serves approximately 300 older high school students. Each year Future 5 offers its students job and college preparation workshops, tutoring, community service, mentors and networking with Future 5 alumni.

a. Future 5 staff and students will organize their clean-up events in collaboration with neighborhoods and other downtown businesses and organizations.

b. Future 5 students represent a group of Stamford high school students who are motivated to prepare for career and college opportunities and to pursue multiple community service projects. Future 5's students are mostly from low-income households and are Black or Hispanic. Their activities take place in all parts of the City with an emphasis on downtown Stamford. Downtown Stamford is a mixed-neighborhood of upscale businesses along with empty storefronts hit by the pandemic to new high-rise residences and low-income public housing.

c. Future 5 students will bring the next generation's views, ideas and energy to the project. Future 5 staff and students will coordinate with project events to remove trash from Stamford's streets before it has the chance to wash into Long Island Sound with storm water. Future 5 volunteers will record data from their efforts, including amounts of trash collected, number participants, and anecdotal accounts.

d. Future 5's interest in this project is to educate and engage its students directly in community service projects that are real, relevant and improve the quality of life in Stamford's neighborhoods. Future 5 believes that *Taking it to the Streets* will give students agency to use their actions and voices to improve their community.

e. *Taking it to the Streets* aligns easily with Future 5's enthusiastic participation in SW weekend coastal clean-ups. SW and Future 5 have partnered successfully over the years on four ongoing SW activities and events, that include 1) at almost every monthly coastal clean-up along Stamford's beaches and coastal parks, 2) during HarborFest, SW all-day free environmental harbor festival, 3) participation in SW Marine Debris Kayak program and 4) upcoming participation in SW Sound Families program during the current sailing season.

Taking it to the Streets will help to reinforce and sustain these mutually beneficial collaborations.

4. The **Waterside Coalition** (Waterside) is a grass roots umbrella organization that includes representatives from neighborhood associations, concerned residents, as well as business and community leaders who meet monthly to identify community issues and mutual concerns and work together to improve Waterside.

a. The Waterside Coalition (Waterside) members and volunteers will help to organize efforts in collaboration with neighborhoods and other organizations. Waterside will promote and

ED_016126_00000153-00007

recruit their neighborhood volunteers and businesses to join this clean-up project and include it in their regular roster of community activities.

b. Most neighborhood students attend Stamford Public Schools, which is rich in diversity and has teachers and students from many cultural socioeconomic backgrounds and geographic locations. Waterside is located in Stamford's westside and its demographic profile is 40.8 % of the residents are Hispanic, 30.6 % Black 23.4% White (non-Hispanic), 5.2% Other. 54.4% of Westside households spend 30% or more of their income on housing. The unemployment rate is 6.7% and 8.3% of households identify as having limited proficiency in English.

c. Waterside will bring all of its organizational skills and neighborhood connections to *Talking it to the Streets*. Its experienced volunteer leadership will work with other organizations to mobilize their combined efforts to create a robust partnership. Also, Waterside volunteers will join in neighborhood project activities to collect trash, to create a cleaner, healthier community and to establish a cadre of environmental stewards for Waterside.

d. Many Waterside neighbors are already passionate about improving quality of life issues in their neighborhood. They have welcomed the City's revitalization of John J. Boccuzzi Park, Waterside's park, and the location of SW new coastal education center, the Cohen SoundWaters Harbor Center. This project offers a diverse group of business and residential residents a way to work together and take part in clean-up efforts that will focus on city streets, in addition to traditional coastal clean-ups along Stamford Harbor.

e. Over 10 years, the Waterside Coalition and SW have developed a strong bond that has been forged from multiple collaborations with neighborhood festivals, beach clean-ups and community meetings. The Waterside community has welcomed SW growth at Boccuzzi Park from its offering one summer program for 100 students to operating a state-of-the art year-round education facility that can accommodate space for hundreds of students, and community meetings and events. These connections make SW confident that having the Waterside Coalition as a project partner will be sustained long after the end of any federal support.

Partnerships Under Development

5. **Boys & Girls Club of Stamford (BGCS)** serves children from ages 6 through 16 and beyond. BGCS provides its children a safe and fun place to grow and thrive. It delivers engaging programs focused on academics, health and leadership. It also offers trained staff who guide, coach and motivate their children to be successful.

a. BGCS staff will help to organize efforts in collaboration with neighborhoods and other organizations. BGCS will promote and recruit families and neighborhood volunteers to join the project and make it a regular activity.

b. BGCS is located on Stamford's westside, where over 70% of the community is categorized as low income. With over 45% of their youth coming from single parent households, many have no adult supervision at home and spend each day at the Club until parents return from work. 42% of these children are African American, 50% Hispanic, 4% Caucasian, 2% multi-racial and 2% from other races. 58% of the members are male and 42% are female.

c. BGCS staff and members will schedule, recruit and manage several neighborhood clean-up events that will mobilize its young people and their families to take part in environmental stewardship and understand the threat that upland trash presents to their coastal Long Island Sound waters. Also, staff and BGCS volunteers will help to manage project reporting data.

d. BCGS believes that *Taking it to the Streets* will be an exceptional project to undertake

ED_016126_00000153-00008

with SW and other local Stamford organizations to advocate for a cleaner city and to guide its boys and girls to become the future stewards of their environment.

e. In 2022 BGCS families took two ecology Sound Families schooner sails. SW will offer parents and children new to Sound Families upcoming opportunities to learn about their Long Island Sound environment. The success of this venture has made BGCS eager to join together again with SW and other local organizations on a family focused project that promotes community engagement for a cleaner city.

2.0 Project Activities/ Milestone Schedule

a. Project Activities

Formalize Partnerships: SW Community Engagement Coordinator will establish formal partnerships, clarify terms and work plan with counterparts at each partner community or organization.

Communities Organize: Working independently, each community will establish its own internal leadership group for the project to organize its *Taking it to the Streets* effort and liaise with SW and other partners.

Project Kick-Off: SW and all project partners will attend a meeting to kick-off *Taking it to the Streets*. Federal, State and City elected officials will be invited to the kick-off to engage with the community and express their support for this collaborative effort. To build community-wide interest and momentum for the project, all members of the community will be invited to the kick-off.

- Education on marine debris ("the issue")
- Overview of the Project ("the solution")
- Description of next steps ("the actions")

Individual Community Planning: Each participating community and organization will work to develop their own action plan for undertaking the project in their neighborhood(s). Action plans will include:

- Promotion & Recruitment
    - Each leadership group will build awareness of the project within their local community. Using primarily digital tools, the goal is to recruit the maximum number of community members possible for all clean-up activities.
- Education
- Action Planning
- Evaluation
    - Partners will assess program effectiveness through the numbers, types and consistency of participants, the amount of trash collected and photos and testimonials from the events and participants.

Clean-Up Activities: We anticipate each partner will organize at least five (5) neighborhood street clean-up events each year for three years preventing trash from ever washing from their local streets into Long Island Sound. Partners will determine their own schedule and logistics that maximize participation and the impact of their events. SW will provide each partner with funds for supplies, promotion and miscellaneous expenses related to their efforts.

ED_016126_00000153-00009

SW will host at least one session per partner each year to work on our Marina Trash Skimmer in Stamford Harbor. The trash skimmer is one of the best tools we know of to educate the public on the extent, sources and hazards of marine debris.

SW will host at least one Marine Debris Kayak event each year for each partner. In these events, which we have been conducting with underserved communities for several years utilizing our fleet of kayaks, we will lead a flotilla of kayaks on a paddling tour of Stamford Harbor with trash pickers and buckets and encourage paddlers to pick up trash as they find it. From our experience, we know this will be the first time in a kayak for most. Therefore, our goal is to provide access to the benefits and beauty of Long Island Sound and at the same time, to understand the downstream trash problem from a totally new perspective.

SW will welcome each partner to sail on our 80' Schooner *SoundWaters* each year. Our schooner can hold 40 adults. From decades of experience, we know that enjoying Long Island Sound from the deck of our schooner will build greater awareness, understanding and urgency about environmental protection.

f. Milestone Schedule

Timeframe	**Milestone Activity**
November, 2023 – March, 2024	Formalize Partnerships: clarify terms and work plan with leadership of each partner community or organization.
January – April, 2024	Communities Organize: Each community establishes its own internal leadership group for the project to organize its effort and liaise with SW and other partners.
January – April, 2024	Individual Community Planning: Each participating community and organization will work to develop their own action plan for undertaking the project in their neighborhood(s). Action plans will include: • Promotion & Recruitment • Education • Action Planning • Evaluation
March-December, 2024	Purchase of supplies, as needed, to run each clean-up event.
April, 2024	City-wide *Taking it to the Streets* kick-off
April – December, 2024	Neighborhood leaders each organize at least 5 local clean-up events and report results to SW: number of participants, amount of trash collected and photos.
June – September, 2024	SW hosts a two-hour Marina Trash Skimmer event for each community partner.

ED_016126_00000153-00010

June – September, 2024	SW hosts a one-hour Marine Debris Kayak event for each community partner.
June – September, 2024	SW hosts a two-hour sail on the Schooner *SoundWaters* for each community partner.
December, 2024-February, 2025	Evaluation of program and consideration of changes for year #2.
March, 2025	Kick-off year #2 of program
March – December, 2025	Partners each organize at least 5 local clean up events and report results to SW.
January 2026 – November 30, 2026	Project continues Year #3.

3.0 Environmental Results

a. Logic Model Attached

b. Performance Measurement Plan

What We Are Measuring?	**How We Are Measuring?**
Data	We will track key data points over the three-year term of the project to gauge how well our action plan is performing: 1) Number of events, including planning meetings, kick off events, clean-ups and related education events; 2) Number of participants and 3) Amount of trash collected. Our objective is for these numbers to increase event to event and year over year as the project gains traction, leadership teams gain experience and confidence and community volunteers gain awareness and motivation.
Quality of Relationships	Relationships are key to the success of this project: 1) SW with community partners; 2) Between community partners; 3) Community Partners with City officials. Improving relationships may correlate with increasing data, but we will also measure relationship strength qualitatively, through testimonials, anecdotes and personal observations. We expect improvement over time as the project gains momentum and partners gain experience and confidence in themselves and trust in their counterparts. Establishing and strengthening these relationships are primary goals for this project because strong relationships will sustain and hopefully expand neighborhood-led efforts beyond the term of this project.

ED_016126_00000153-00011

c. Sustainability Plan and Community Vision

Sustainability and vision of are wrapped up together in *Taking it to the Streets*. SW's long term vision for the project is a community where residents are motivated to clean trash from their streets because doing so will improve their neighborhoods and their quality of life AND because they understand that doing so will protect Long Island Sound, a resource we hope they will come to know and appreciate over the course of this project. If we can engage neighborhoods in that manner, it will be much more likely that neighborhoods will sustain the actions, behaviors and benefits of *Taking it to the Streets* long after the initial project term.

4.0 Programmatic Capability

a. SoundWaters Experience and Reach

SW has demonstrated the capability and experience to complete successfully similar federally funded projects.

1. Coastal Clean-up Experience. SW conducts more than 40 Long Island Sound coastal clean-ups each year and welcomes hundreds of Stamford volunteers. SW provides local environmental information and guidance, along with safety gear and supplies for each clean-up. The enthusiasm for these events grows each year. For example, on February 5, 2023, 70 adults and children gathered at Stamford's West Beach Park and collected 424 lbs. of trash - trash that will not reach the waters of Long Island Sound. 135 people already have registered for the April 15 Cove Island Clean-up.

2. Environmental Justice (EJ) Activities.

a. *SoundWaters Research Intensive* (SRI) program for upper grade students incorporates environmental justice discussions throughout the year. This approach gives voice to our SRI interns in order for them to develop the skills needed to address EJ issues and achieve community health and sustainability.

b. *Marine Debris Kayak (*MDK) successfully worked with Building One Community and Future 5 in 2021 and 2022 to welcome families and high school students who learned to kayak with SW on summer weekends and collect, weigh and record any marine debris they find as they paddle along Stamford's coastline. In 2022 119 (60 children, 59 adults) collected 62 lbs of marine debris that was floating, light in weight and small in size. MDK will continue in 2023 and is part of our ongoing summer programming.

c. *Sound Families* started in fall 2022 to complement our already successful MDK summer program for Stamford's low-income and immigrant residents. SW schooner crew created a "science light" program, and 101 people were introduced to the intertidal zone, hauled in the trawl net, examined creatures of the Sound, and set the schooner's sails. Our Sound Families learned and soaked in the beauty of the Sound and laughed and enjoyed each other's company and, mostly, had fun. This SW experience allowed our passengers to join their neighbors in starting the journey towards becoming environmental advocates for and stewards of their new community through increased environmental knowledge and opportunities for volunteer activities. Sound Families will continue in spring 2023.

d. *Marina Trash Skimmer* In partnership with Clean Ocean Access (COA), SW installed and operated a Marina Trash Skimmer (MTS) on the west branch of Stamford Harbor at Harbor Point Marina in early October, 2019 to remove marine debris and improve habitat. SW will continue to operate the MTS and will use it as part of this project's community education component. Several community groups helped SW to make the MTS a success including the Harbor Point Marina, Stella Mar Oyster Co. and the Stamford Harbor Commission. Visitors to the MTS are always engaged with

ED_016126_00000153-00012

the why, how and when of the MTS at Stamford's Harbor Point development.

e. *The scale of SoundWaters is tremendous*. SW reaches more than 30,000 students each year, one half of whom attend SW programs at no or highly reduced cost. SW is accustomed to working with disadvantaged populations of children and adults, from across the Long Island Sound region, to introduce them to the science of their natural world, enhance their daily lives and bolster their academic achievement.

b. Staff Experience and Qualifications of Project Manager (PM)

1. Recognized as a nonprofit leader, Leigh Shemitz, Ph.D. has been president of SW since 2005. Dr. Shemitz' responsibilities for SW include setting strategic direction, developing programs, creating partnerships, overseeing operations, and managing the SW staff and budget. Dr. Shemitz currently serves on two local Boards: the Stamford Environmental Protection Board (since 2007) and the Bartlett Arboretum and Gardens (since 2016). Dr. Shemitz earned a Bachelor of Arts degree in history and literature from Harvard University, a Master's degree in forest science from Yale University, and a Ph.D. in environmental health, also from Yale University.

   Dr. Shemitz created the blueprint for *Taking it to the Streets* and will focus on start-up partner outreach and communications, and project evaluation. Through her reputation as a leader who follows through on her commitments to the community, the environment and students, Leigh has already started seeing success in recruiting community leaders who are ready to commit to this new neighborhood initiative that has long-term positive consequences for improved quality of life and environmental stewardship in Stamford's low-income neighborhoods.

2. SW Vice President, Programs, Michael Bagley, is U.S. Coast Guard licensed captain, and responsible for SW land and ship programming. Prior to joining SW, with 20 years in experiential learning, he led outdoor education programs for thousands of children and adults with a specialty in school-based training for at-risk youth in urban classrooms. He holds a BA in psychology from Hartwick College.

   Mike's time will be split between program design and supervision. Mike will recruit for the position of Community Engagement Coordinator for the program. Mike has an impressive portfolio of EJ programs that he has created and is managing for SW:

   a. Harbor Corps This year-round program targets Fairfield County, Connecticut young adults, 18–26 year old men and women, who need assistance to overcome extraordinary barriers to employment. Many recruits are enrolled in pre-release/re-entry programs at community organizations, such as AIC (Alternative Incarceration Center). This population is traditionally poor and 100% are unemployed with limited job skills.

   b. Young Mariners Academy This year-round program combines a math and science-based curriculum, while at the same time includes emotional and social support, and self-confidence through outdoor activities and sailing for students entering 6th grade through 9th grade. More than 90% of Young Mariners attend with scholarship support.

   c. Marine Debris Kayak and Sound Families were both designed and managed by Mike. Mike's program design for both of these programs were tailored for Stamford's lower income and immigrant families. He recognized the need for bilingual instructors/staff to work with this audience that has contributed to the popularity of both programs.

   Mike's daily, hands-on experience with low-income residents and innovative programs that address EJ struggles in the Stamford community make him a recognized leader in this arena.

ED_016126_00000153-00013

2. Community Engagement Coordinator Mike Bagley will recruit an individual for this position who has the following capabilities:

- Commitment to the SW belief that a healthy community is a human right, and works every day to make this a reality.
- Experience in mission-based conservation and/or EJ programs.
- A comprehensive understanding of coastal resiliency and marine debris issues.
- A proven track record of leadership in coalition-building and related management of successful projects.
- A strong public speaker, able to communicate effectively with diverse audiences.
- Excellent written and verbal communication skills, and strong interpersonal skills to share *Taking it to the Streets* activities and vision.
- Excellent field skills to develop and sustain a citywide neighborhood project.

SoundWaters Community Engagement Coordinator will have the leadership skills and the ability to be a positive representative for SW and *Taking it to the Streets*. This will be a full time position and will continue after an EPA EJ grant award.

5.0 Past Performance Federal and non-federal funded assistance agreements that SoundWaters performed from 2020 – 2023:

1. **EPA Environmental Education Award No. NE-00A00402 09/01/2019 - 08/31/2022 A Demonstration Bio-extraction Seaweed Farm**

a. SW successfully completed a 36-month environmental education project, to site and establish a seaweed farm in Stamford Harbor, Connecticut that created a locally focused project that led community members, including seven farm managers, to take sustainable actions that will lead to long-term environmental protection of coastal habitats.

b. SW met all reporting requirements on time and consistently reported challenges that involved the Joint Agency Application process to obtain a permit for the farm site and how SW staff managed the process to a successful conclusion. SW received a one-time no-cost 12 month extension because of delays in the Joint Agency Application process.

c. Due to COVID-19 restrictions, SW successfully reported its shift from in-person student education to its distance learning program, *Virtual Field Trips*. *S*everal distance learning units focused on watershed management, coastal aquatic plants and animals, and bioremediation efforts in LIS and its watershed. 47,000 and 780 teachers took advantage of SW on-line science instruction. SW *Virtual Field Trips* brought students to the farm virtually and provided teachers with on-going aquaculture units and supporting materials. The entire SW staff participated in this intensive effort and were proud of this accomplishment.

d. SW received final approval for close-out of this agreement on January 5, 2023. The SW Kelp Farm currently is in its fifth growing season. There were no final technical reports required under the agreement.

2. **NOAA Award No. NA19NMF0080091 08/01/2019 - 07/31/2022 One Million Bottle Caps! Meaningful Environmental Education and Stewardship for Middle School Students and Teachers**

a. SW successfully engaged 4,000 Stamford Public Schools sixth grade students and 14 middle school teachers over three-years to study different aspects of human impact on our environment, and learned about the connection between the single bottle cap dropped in a city street with marine animal health, water quality and quality of life issues.

ED_016126_00000153-00014

b. This project included a hands-on field study component, the Bottle Cap Challenge, and tasked students to collect one million bottle caps for a district-wide recycling project.
c. Through on-going hands-on activities, in-person and distance learning presentations, SW facilitated Stamford sixth grade students to collect more than two million bottle caps over three years (averaging 500 caps/student).
d. Two Stamford middle schools took part in the Design Challenge and over eight weeks, students met remotely with experts from different fields and helped to create a small tray and larger bin from the recycled caps. All 4,000 Stamford students who were part of this project received the final product of their efforts.
e. Due to COVID-19 restrictions, SW successfully reported its shift from in-person student education to its distance learning program, *Virtual Field Trips. S*everal distance learning units focused on watershed management, coastal aquatic plants and animals, and bioremediation efforts in LIS and its watershed. All 14 middle school science teachers took advantage of SW on-line professional development provided specifically for the Bottle Cap Challenge. SW *Virtual Field Trips* brought students outdoors virtually and provided teachers with on-going human impact units and supporting materials.
f. During the COVID-19 pandemic, SW educators used more than 100 NOAA online assets to create customized NGSS-based lesson modules, including video lessons, support materials, worksheets and a short quiz. SW virtual content for the NGSS recommended middle grades curriculum included three topics: Humans and our Environment, Coastal Field Study and Science on the Sound. The students and teachers remained engaged with the project throughout the pandemic.
g. SW met all reporting requirements on time and consistently reported challenges that related only to the pandemic. The successful close-out date for this agreement was December 19, 2022. SW continues to provide all current 4,000 6th grade Stamford students with environmental instruction and hands-on field study in 2022-2023 school year. There were no final technical reports required under the agreement.

3. **Long Island Sound Stewardship Fund 2021 4/1/2021–4/3/2022**
Marine Debris Kayak (MDK)

a. SW successfully completed a pilot program that addressed two major and interrelated problems plaguing the Long Island Sound community and leverage them against each other to work towards a joint solution: 1) High levels of marine debris and 2) Low levels of access by communities of color to enjoy the benefits of Long Island Sound or to engage in environmental advocacy.
b. SW worked with two local organizations: Building One Community (immigrant resource center) and Future 5 (career goal resource center for high school students) to welcome hundreds of members of their community to enjoy the benefits of Long Island Sound and engage in environmental protection and 2) Remove floating trash from Stamford Harbor over a four-month period.
c. MDK trash collection numbers: 62 lbs. collected, by 119 kayakers (60 children, 59 adults) over 9 sessions. This trash was mostly very small pieces of lightweight plastic, such as bottle caps, paper, cigarette butts, fish lines and Styrofoam.
d. The program was delivered as originally proposed and approved. We met our stated goals and conducted all activities as anticipated. The Marine Debris Kayak program is entering its third season starting this June 2023.

ED_016126_00000153-00015

The above projects indicate that SW has the ability to successfully complete and manage large projects, meet reporting requirements, achieve expected outputs and outcomes, and successfully continue these projects at the end of grant funding. SW has the organizational and staff expertise for timely and successful achievement of the objectives of our proposed project: *Taking it to the Streets.*

Partnership Letter of Commitment for SoundWaters "Taking it to the Streets"
Funding Opportunity Number: EPA-R-OEJECR-OCS-23-02

As Deputy Director of Building One Community in Stamford, Connecticut, I am writing this letter to you to express my commitment to collaborate with SoundWaters and other community organizations in establishing a citywide neighborhood trash removal initiative, "Taking it to the Streets."

The mission of Building One Community-The Center for Immigrant Opportunity (B1C) is to advance the successful integration of immigrants and their families. Our vision is one welcoming community in which all immigrants are thriving and contributing members. Since its inception more than 11 years ago, B1C has served more than 15,200 immigrants who speak 47 different languages and originate from 117 countries with an array of research-based programs proven to accelerate their integration and success.

Partnering with SoundWaters, B1C staff and members will develop and organize efforts in collaboration with neighborhoods and other organizations to remove trash from our streets before it has the chance to wash into Long Island Sound with storm water. We will record data from our efforts, including amounts of trash collected, number of participants, and anecdotal accounts.

B1C has a history of participating in neighborhood activities with SoundWaters. Our members volunteer at SoundWaters weekend coastal clean-ups and have benefitted from SoundWaters' Marine Debris Kayak program, which offers our families a morning on the Sound, learning to kayak and collecting marine debris as they paddle. B1C will bring all of its organizational skills, neighborhood connections and motivation to "Taking it to the Streets."

I fully support the SoundWaters application for an EPA Environmental Justice Grant and look forward to partnering with them.

Sincerely,

Donald S. Strait
Deputy Director

EAST SIDE PARTNERSHIP

A Neighborhood with a Vision

April 6, 2023

USEPA Region 1 – New England
5 Post Office Square - Suite 100
Boston, MA 02109-3912

Partnership Letter of Commitment for Sound Waters "Taking it to the Streets"
Funding Opportunity Number: EPA-R-OEJECR-OCS-23-02

As Chairman of the East Side Partnership in Stamford, Connecticut, I am writing this letter to you to express my commitment to collaborate with Sound Waters and other community organizations in establishing a citywide neighborhood trash removal initiative, "Taking it to the Streets."

The East Side Partnership's mission is to create an exceptional quality of life for the people who work and live in the east side of Stamford, Connecticut. Our goal is to create a clean, safe and green environment.

In partnering with Sound Waters, the East Side Partnership will contribute to the project as follows:

- Member leadership involvement and expertise to the project to develop, design and engage with other community organizations to mobilize our combined efforts to understand and take action in our neighborhoods to prevent trash from being washed into Long Island Sound with rainwater.

- East Side Partnership members schedule, recruit and manage several neighborhood clean-up events that will mobilize our neighbors to engage in environmental advocacy and understand the threat that upland trash presents to our coastal Long Island Sound waters.

- East Side members will manage reporting data that may include amounts of trash collected, demographics of participants and neighborhoods, along with anecdotal accounts.

The East Side Partnership is an active community nonprofit in Stamford. We consistently incorporate hands-on activities that pursue positive quality of life outcomes on our streets and for our neighbors. Our activities align with those of Sound Waters, as we both engage in removing trash, environmental advocacy and environmental community events. It would be an exciting undertaking to join with Sound Waters and other community organizations to promote trash-free streets and a community of environmental stewards for Stamford. The East Side Partnership will bring all its organizational skills and neighborhood connections to "Taking it to the Streets."

I fully support the Sound Waters application for an EPA Environmental Justice Grant and look forward to partnering with them.

Sincerely,

James Grunberger

Boston, MA 02109-3912

Partnership Letter of Commitment for SoundWaters "Taking it to the Streets"
Funding Opportunity Number: EPA-R-OEJECR-OCS-23-02

As Deputy Director of Future 5 in Stamford, Connecticut, I am writing this letter to you to express our commitment to collaborate with SoundWaters in establishing a citywide neighborhood trash removal initiative, "Taking it to the Streets." Future 5 helps motivated, under-resourced high school students in Stamford connect to their full potential, leading to independence and productive citizenship. Our goal is to connect our students to the people, resources, and experiences essential to making the transition to post-secondary education and careers. Partnering with SoundWaters, Future 5 staff and students will develop and organize efforts in collaboration with neighborhoods and other organizations to remove trash from our streets before it has the chance to wash into Long Island Sound with storm water. We will record data from our efforts, including amounts of trash collected, number participants, and anecdotal accounts.

Future 5 students have a history of participating in SoundWaters coastal clean-ups and we recognize the need now to move our clean-up efforts inland, to our streets and closer to the primary source of the trash. Our objectives in taking these actions are to improve the quality of life in our neighborhoods and to educate and engage our community directly in the protection of our local environment. Taking it to the Streets will motivate our students and give them agency to use their actions and voices to improve our community. Taking it to the Streets will be an excellent fit for Future 5 staff and our students, and we will bring all of our organization skills and neighborhood connections to the project.

I fully support the SoundWaters application for an EPA Environmental Justice Grant and look forward to partnering with them.

Sincerely,

Chris Jackson
Deputy Director

WATERSIDE COALITION

April 6, 2023

USEPA Region 1 – New England
5 Post Office Square - Suite 100
Boston, MA 02109-3912
Partnership Letter of Commitment for SoundWaters "Taking it to the Streets"
Funding Opportunity Number: EPA-R-OEJECR-OCS-23-0

As City Representative for the Waterside District, and Chair for the Waterside Coalition in Stamford, Connecticut, I am writing this letter to you to express my commitment to collaborate with SoundWaters and other community organizations in establishing a citywide neighborhood trash removal initiative, "Taking it to the Streets."

The Waterside Coalition is an active community nonprofit in Stamford. We are a grass roots umbrella organization that includes representatives from neighborhood associations, concerned residents, as well as business and community leaders who meet regularly to identify community issues and mutual concerns and work together to improve Waterside.

In partnering with SoundWaters, the Waterside Coalition will contribute to the project as follows:

- Member leadership involvement and expertise to the project to develop, design and engage with other community organizations to mobilize our combined efforts to understand and take action in our neighborhoods to prevent trash from being washed into Long Island Sound with rain water;
- Waterside Coalition members schedule, recruit and manage several neighborhood cleanup events that will mobilize our neighbors to engage in environmental advocacy and understand the threat that upland trash presents to our coastal Long Island Sound waters; and
- Waterside Coalition members will manage reporting data that may include amounts of trash collected, demographics of participants and neighborhoods, along with anecdotal accounts.

We have been working with SoundWaters for more than a decade on community projects such as the revitalization of Stamford's Boccuzzi Park, diversity and environmental festivals, along with coastal cleanup events at Stamford Harbor. "Taking it to the Streets" would provide our Coalition members another compelling project that will help to unite our neighbors in ways to improve the area's quality of life and grow our cadre of committed environmental advocates for the west side.

As City Representative for the Waterside District and Chair of the Waterside Coalition, let me convey our community's complete support for SoundWaters and their application for an EPA Environmental Justice Grant and I look forward to partnering with them.

Sincerely,

Virgil de la Cruz

Preaward Compliance Review Report for All Applicants and Recipients Requesting EPA Financial Assistance

Note: Read Instructions before completing form.

I. A. Applicant/Recipient (Name, Address, City, State, Zip Code)

Name: Suenos Basketball

Address: 2 Linden Street

City: Lawrence

State: MA: Massachusetts Zip Code: 01841

B. Unique Entity Identifier (UEI): N16VENDNA8R9

C. Applicant/Recipient Point of Contact

Name: Joselyn Marte

Phone: Ex. 6 Personal Privacy (PP)

Email: Ex. 6 - Personal Privacy (PP)

Title: Grants Manager

II. Is the applicant currently receiving EPA Assistance? ☐ Yes ☒ No

III. List all pending civil rights lawsuits and administrative complaints filed under federal law against the applicant/recipient that allege discrimination based on race, color, national origin, sex, age, or disability. (Do not include employment complaints not covered by 40 C.F.R. Parts 5 and 7.)

None

IV. List all civil rights lawsuits and administrative complaints decided against the applicant/recipient within the last year that alleged discrimination based on race, color, national origin, sex, age, or disability and enclose a copy of all decisions. Please describe all corrective actions taken. (Do not include employment complaints not covered by 40 C.F.R. Parts 5 and 7.)

None

V. List all civil rights compliance reviews of the applicant/recipient conducted under federal nondiscrimination laws by any federal agency within the last two years and enclose a copy of the review and any decisions, orders, or agreements based on the review. Please describe any corrective action taken. (40 C.F.R. § 7.80(c)(3))

None

VI. Is the applicant requesting EPA assistance for new construction? If no, proceed to VII; if yes, answer (a) and/or (b) below.

☐ Yes ☒ No

a. If the grant is for new construction, will all new facilities or alterations to existing facilities be designed and constructed to be readily accessible to and usable by persons with disabilities? If yes, proceed to VII; if no, proceed to VI(b).

☐ Yes ☐ No

b. If the grant is for new construction and the new facilities or alterations to existing facilities will not be readily accessible to and usable by persons with disabilities, explain how a regulatory exception (40 C.F.R. 7.70) applies.

VII. **Does the applicant/recipient provide initial and continuing notice that it does not discriminate on the basis of race, color, national origin, sex, age, or disability in its program or activities? (40 C.F.R 5.140 and 7.95)** ☒ Yes ☐ No

a. **Do the methods of notice accommodate those with impaired vision or hearing?** ☒ Yes ☐ No

b. **Is the notice posted in a prominent place in the applicant's/recipient's website, in the offices or facilities or, for education programs and activities, in appropriate periodicals and other written communications?** ☒ Yes ☐ No

c. **Does the notice identify a designated civil rights coordinator?** ☒ Yes ☐ No

VIII. **Does the applicant/recipient maintain demographic data on the race, color, national origin, sex, age, or disability status of the population it serves? (40 C.F.R. 7.85(a))** ☒ Yes ☐ No

IX. **Does the applicant/recipient have a policy/procedure for providing meaningful access to services for persons with limited English proficiency? (Title VI, 40 C.F.R. Part 7, *Lau v Nichols* 414 U.S. (1974))** ☒ Yes ☐ No

X. **If the applicant is an education program or activity, or has 15 or more employees, has it designated an employee to coordinate its compliance with 40 C.F.R. Parts 5 and 7? Provide the name, title, position, mailing address, e-mail address, fax number, and telephone number of the designated coordinator.**

N/A

XI. **If the applicant is an education program or activity, or has 15 or more employees, has it adopted grievance procedures that assure the prompt and fair resolution of complaints that allege a violation of 40 C.F.R. Parts 5 and 7? Provide a legal citation or applicant's/ recipient's website address for, or a copy of, the procedures.**

N/A

For the Applicant/Recipient

I certify that the statements I have made on this form and all attachments thereto are true, accurate and complete. I acknowledge that any knowingly false or misleading statement may be punishable by fine or imprisonment or both under applicable law. I assure that I will fully comply with all applicable civil rights statutes and EPA regulations.

A. Signature of Authorized Official	B. Title of Authorized Official	C. Date
Stephanie Estrada	Grants Manager	04/14/2023

For the U.S. Environmental Protection Agency

I have reviewed the information provided by the applicant/recipient and hereby certify that the applicant/recipient has submitted all preaward compliance information required by 40 C.F.R. Parts 5 and 7; that based on the information submitted, this application satisfies the preaward provisions of 40 C.F.R. Parts 5 and 7; and that the applicant has given assurance that it will fully comply with all applicable civil rights statures and EPA regulations.

A. *Signature of Authorized EPA Official	B. Title of Authorized Official	C. Date

Instructions for EPA FORM 4700-4 (Rev. 04/2021)

General. Recipients of Federal financial assistance from the U.S. Environmental Protection Agency must comply with the following statutes and regulations.
Title VI of the Civil Rights Acts of 1964 provides that no person in the United States shall, on the grounds of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. The Act goes on to explain that the statute shall not be construed to authorize action with respect to any employment practice of any employer, employment agency, or labor organization (except where the primary objective of the Federal financial assistance is to provide employment). Section 13 of the 1972 Amendments to the Federal Water Pollution Control Act provides that no person in the United States shall on the ground of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under the Federal Water Pollution Control Act, as amended. Employment discrimination on the basis of sex is prohibited in all such programs or activities. Section 504 of the Rehabilitation Act of 1973 provides that no otherwise qualified individual with a disability in the United States shall solely by reason of disability be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. Employment discrimination on the basis of disability is prohibited in all such programs or activities. The Age Discrimination Act of 1975 provides that no person on the basis of age shall be excluded from participation under any program or activity receiving Federal financial assistance. Employment discrimination is not covered. Age discrimination in employment is prohibited by the Age Discrimination in Employment Act administered by the Equal Employment Opportunity Commission. Title IX of the Education Amendments of 1972 provides that no person in the United States on the basis of sex shall be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity receiving Federal financial assistance. Employment discrimination on the basis of sex is prohibited in all such education programs or activities. Note: an education program or activity is not limited to only those conducted by a formal institution. 40 C.F.R. Part 5 implements Title IX of the Education Amendments of 1972. 40 C.F.R. Part 7 implements Title VI of the Civil Rights Act of 1964, Section 13 of the 1972 Amendments to the Federal Water Pollution Control Act, and Section 504 of The Rehabilitation Act of 1973.

Items "Applicant" means any entity that files an application or unsolicited proposal or otherwise requests EPA assistance. 40 C.F.R. §§ 5.105, 7.25. "Recipient" means any State or its political subdivision, any instrumentality of a State or its political subdivision, any public or private agency, institution, organizations, or other entity, or any person to which Federal financial assistance is extended directly or through another recipient, including any successor, assignee, or transferee of a recipient, but excluding the ultimate beneficiary of the assistance. 40 C.F.R. §§ 5.105, 7.25. "Civil rights lawsuits and administrative complaints" means any lawsuit or administrative complaint alleging discrimination on the basis of race, color, national origin, sex, age, or disability pending or decided against the applicant and/or entity which actually benefits from the grant, but excluding employment complaints not covered by 40 C.F.R. Parts 5 and 7. For example, if a city is the named applicant but the grant will actually benefit the Department of Sewage, civil rights lawsuits involving both the city and the Department of Sewage should be listed. "Civil rights compliance review" means: any federal agency-initiated investigation of a particular aspect of the applicant's and/or recipient's programs or activities to determine compliance with the federal non-discrimination laws. Submit this form with the original and required copies of applications, requests for extensions, requests for increase of funds, etc. Updates of information are all that are required after the initial application submission. If any item is not relevant to the project for which assistance is requested, write "NA" for "Not Applicable." In the event applicant is uncertain about how to answer any questions, EPA program officials should be contacted for clarification.

April 14, 2023

To Whom It May Concern,

I am the founder and President of Time For Change Ministry, Inc. Time for Change Ministry Inc. is an organization that supports individuals and their families in the pursuit of lifelong recovery from addiction. We understand addiction to be a disease that impacts those who experience it personally, their families, and their communities. We also understand that recovery happens with support and care. Through three weekly support groups we engage individuals struggling with addiction and their family members in the Greater Lawrence community, with respect for all and with a focus on our faith in God, regardless of race, national origin, religion, disability, age, sexual orientation, or gender identity.

We are part of a network of activist organizations focused on systemic change in the Greater Lawrence Area. Sueños Basketball has been a driving force for positive change with our at-risk youth in our community. We are excited to partner with Sueños Basketball on the EPA grant to address Environmental Justice in our community.

Sincerely Yours,

Ana Javier

Expiration Date: 06/30/2024

Preaward Compliance Review Report for All Applicants and Recipients Requesting EPA Financial Assistance

Note: Read Instructions before completing form.

I. A. Applicant/Recipient (Name, Address, City, State, Zip Code)

Name: Woonasquatucket River Watershed Council

Address: Ex. 6 Personal Privacy (PP)

City: Providence

State: RI: Rhode Island Zip Code: 02909-1082

B. Unique Entity Identifier (UEI): S1DDHS4KYA59

C. Applicant/Recipient Point of Contact

Name: Alicia J. Lehrer

Phone: Ex. 6 Personal Privacy (PP)

Email: alehrer@wrwc.org

Title: Executive Director

II. Is the applicant currently receiving EPA Assistance? ☒ Yes ☐ No

III. List all pending civil rights lawsuits and administrative complaints filed under federal law against the applicant/recipient that allege discrimination based on race, color, national origin, sex, age, or disability. (Do not include employment complaints not covered by 40 C.F.R. Parts 5 and 7.)

N/A

IV. List all civil rights lawsuits and administrative complaints decided against the applicant/recipient within the last year that alleged discrimination based on race, color, national origin, sex, age, or disability and enclose a copy of all decisions. Please describe all corrective actions taken. (Do not include employment complaints not covered by 40 C.F.R. Parts 5 and 7.)

N/A

V. List all civil rights compliance reviews of the applicant/recipient conducted under federal nondiscrimination laws by any federal agency within the last two years and enclose a copy of the review and any decisions, orders, or agreements based on the review. Please describe any corrective action taken. (40 C.F.R. § 7.80(c)(3))

N/A

VI. Is the applicant requesting EPA assistance for new construction? If no, proceed to VII; if yes, answer (a) and/or (b) below.

☐ Yes ☒ No

a. If the grant is for new construction, will all new facilities or alterations to existing facilities be designed and constructed to be readily accessible to and usable by persons with disabilities? If yes, proceed to VII; if no, proceed to VI(b).

☐ Yes ☐ No

b. If the grant is for new construction and the new facilities or alterations to existing facilities will not be readily accessible to and usable by persons with disabilities, explain how a regulatory exception (40 C.F.R. 7.70) applies.

VII. Does the applicant/recipient provide initial and continuing notice that it does not discriminate on the basis of race, color, national origin, sex, age, or disability in its program or activities? (40 C.F.R 5.140 and 7.95) ☒ Yes ☐ No

a. Do the methods of notice accommodate those with impaired vision or hearing? ☒ Yes ☐ No

b. Is the notice posted in a prominent place in the applicant's/recipient's website, in the offices or facilities or, for education programs and activities, in appropriate periodicals and other written communications? ☒ Yes ☐ No

c. Does the notice identify a designated civil rights coordinator? ☒ Yes ☐ No

VIII. Does the applicant/recipient maintain demographic data on the race, color, national origin, sex, age, or disability status of the population it serves? (40 C.F.R. 7.85(a)) ☒ Yes ☐ No

IX. Does the applicant/recipient have a policy/procedure for providing meaningful access to services for persons with limited English proficiency? (Title VI, 40 C.F.R. Part 7, *Lau v Nichols* 414 U.S. (1974)) ☒ Yes ☐ No

X. If the applicant is an education program or activity, or has 15 or more employees, has it designated an employee to coordinate its compliance with 40 C.F.R. Parts 5 and 7? Provide the name, title, position, mailing address, e-mail address, fax number, and telephone number of the designated coordinator.

Liza Baptista, Finance and Human Resources Director, WRWC, Ex. 6 Personal Privacy (PP) Providence, RI 02909-1082,ebaptista@wrwc.org, Ex. 6 Personal Privacy (PP) (phone).

XI. If the applicant is an education program or activity, or has 15 or more employees, has it adopted grievance procedures that assure the prompt and fair resolution of complaints that allege a violation of 40 C.F.R. Parts 5 and 7? Provide a legal citation or applicant's/ recipient's website address for, or a copy of, the procedures.

Yes. Please email ebaptista@wrwc.org for a copy of the procedures.

For the Applicant/Recipient

I certify that the statements I have made on this form and all attachments thereto are true, accurate and complete. I acknowledge that any knowingly false or misleading statement may be punishable by fine or imprisonment or both under applicable law. I assure that I will fully comply with all applicable civil rights statutes and EPA regulations.

A. Signature of Authorized Official	B. Title of Authorized Official	C. Date
Alicia J Lehrer	Executive Director	04/14/2023

For the U.S. Environmental Protection Agency

I have reviewed the information provided by the applicant/recipient and hereby certify that the applicant/recipient has submitted all preaward compliance information required by 40 C.F.R. Parts 5 and 7; that based on the information submitted, this application satisfies the preaward provisions of 40 C.F.R. Parts 5 and 7; and that the applicant has given assurance that it will fully comply with all applicable civil rights statures and EPA regulations.

A. *Signature of Authorized EPA Official	B. Title of Authorized Official	C. Date

Instructions for EPA FORM 4700-4 (Rev. 04/2021)

General. Recipients of Federal financial assistance from the U.S. Environmental Protection Agency must comply with the following statutes and regulations.
Title VI of the Civil Rights Acts of 1964 provides that no person in the United States shall, on the grounds of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. The Act goes on to explain that the statute shall not be construed to authorize action with respect to any employment practice of any employer, employment agency, or labor organization (except where the primary objective of the Federal financial assistance is to provide employment). Section 13 of the 1972 Amendments to the Federal Water Pollution Control Act provides that no person in the United States shall on the ground of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under the Federal Water Pollution Control Act, as amended. Employment discrimination on the basis of sex is prohibited in all such programs or activities. Section 504 of the Rehabilitation Act of 1973 provides that no otherwise qualified individual with a disability in the United States shall solely by reason of disability be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. Employment discrimination on the basis of disability is prohibited in all such programs or activities. The Age Discrimination Act of 1975 provides that no person on the basis of age shall be excluded from participation under any program or activity receiving Federal financial assistance. Employment discrimination is not covered. Age discrimination in employment is prohibited by the Age Discrimination in Employment Act administered by the Equal Employment Opportunity Commission. Title IX of the Education Amendments of 1972 provides that no person in the United States on the basis of sex shall be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity receiving Federal financial assistance. Employment discrimination on the basis of sex is prohibited in all such education programs or activities. Note: an education program or activity is not limited to only those conducted by a formal institution. 40 C.F.R. Part 5 implements Title IX of the Education Amendments of 1972. 40 C.F.R. Part 7 implements Title VI of the Civil Rights Act of 1964, Section 13 of the 1972 Amendments to the Federal Water Pollution Control Act, and Section 504 of The Rehabilitation Act of 1973.

Items "Applicant" means any entity that files an application or unsolicited proposal or otherwise requests EPA assistance. 40 C.F.R. §§ 5.105, 7.25. "Recipient" means any State or its political subdivision, any instrumentality of a State or its political subdivision, any public or private agency, institution, organizations, or other entity, or any person to which Federal financial assistance is extended directly or through another recipient, including any successor, assignee, or transferee of a recipient, but excluding the ultimate beneficiary of the assistance. 40 C.F.R. §§ 5.105, 7.25. "Civil rights lawsuits and administrative complaints" means any lawsuit or administrative complaint alleging discrimination on the basis of race, color, national origin, sex, age, or disability pending or decided against the applicant and/or entity which actually benefits from the grant, but excluding employment complaints not covered by 40 C.F.R. Parts 5 and 7. For example, if a city is the named applicant but the grant will actually benefit the Department of Sewage, civil rights lawsuits involving both the city and the Department of Sewage should be listed. "Civil rights compliance review" means: any federal agency-initiated investigation of a particular aspect of the applicant's and/or recipient's programs or activities to determine compliance with the federal non-discrimination laws. Submit this form with the original and required copies of applications, requests for extensions, requests for increase of funds, etc. Updates of information are all that are required after the initial application submission. If any item is not relevant to the project for which assistance is requested, write "NA" for "Not Applicable." In the event applicant is uncertain about how to answer any questions, EPA program officials should be contacted for clarification.

PROVIDENCE, RI 02909-0000

Dear Applicant:

Our letter dated December 2001, stated you would be exempt from Federal income tax under section 501(c)(3) of the Internal Revenue Code, and you would be treated as a public charity, rather than as a private foundation, during an advance ruling period.

Based on the information you submitted, you are classified as a public charity under the Code section listed in the heading of this letter. Since your exempt status was not under consideration, you continue to be classified as an organization exempt from Federal income tax under section 501(c)(3) of the Code.

Publication 557, Tax-Exempt Status for Your Organization, provides detailed information about your rights and responsibilities as an exempt organization. You may request a copy by calling the toll-free number for forms, Ex. 6 - Personal Privacy (PP) Information is also available on our Internet Web Site at www.irs.gov.

If you have general questions about exempt organizations, please call our toll-free number shown in the heading.

Please keep this letter in your permanent records.

Sincerely yours,

Lois G. Lerner
Director, Exempt Organizations

Preaward Compliance Review Report for All Applicants and Recipients Requesting EPA Financial Assistance

Note: Read Instructions before completing form.

I. A. Applicant/Recipient (Name, Address, City, State, Zip Code)

Name: Amy Halsted

Address: 565 Congress St Ste 200

City: Portland

State: ME: Maine Zip Code: 04101

B. Unique Entity Identifier (UEI): PL4UYNH9C223

C. Applicant/Recipient Point of Contact

Name: Rachel Ackoff

Phone: Ex. 6 - Personal Privacy (PP)

Email: rachel@mainepeoplesalliance.org

Title: Campaign's Director

II. Is the applicant currently receiving EPA Assistance? ☐ Yes ☒ No

III. List all pending civil rights lawsuits and administrative complaints filed under federal law against the applicant/recipient that allege discrimination based on race, color, national origin, sex, age, or disability. (Do not include employment complaints not covered by 40 C.F.R. Parts 5 and 7.)

None

IV. List all civil rights lawsuits and administrative complaints decided against the applicant/recipient within the last year that alleged discrimination based on race, color, national origin, sex, age, or disability and enclose a copy of all decisions. Please describe all corrective actions taken. (Do not include employment complaints not covered by 40 C.F.R. Parts 5 and 7.)

None

V. List all civil rights compliance reviews of the applicant/recipient conducted under federal nondiscrimination laws by any federal agency within the last two years and enclose a copy of the review and any decisions, orders, or agreements based on the review. Please describe any corrective action taken. (40 C.F.R. § 7.80(c)(3))

None

VI. Is the applicant requesting EPA assistance for new construction? If no, proceed to VII; if yes, answer (a) and/or (b) below.

☐ Yes ☒ No

a. If the grant is for new construction, will all new facilities or alterations to existing facilities be designed and constructed to be readily accessible to and usable by persons with disabilities? If yes, proceed to VII; if no, proceed to VI(b).

☐ Yes ☐ No

b. If the grant is for new construction and the new facilities or alterations to existing facilities will not be readily accessible to and usable by persons with disabilities, explain how a regulatory exception (40 C.F.R. 7.70) applies.

VII. **Does the applicant/recipient provide initial and continuing notice that it does not discriminate on the basis of race, color, national origin, sex, age, or disability in its program or activities? (40 C.F.R 5.140 and 7.95)** ☒ Yes ☐ No

a. **Do the methods of notice accommodate those with impaired vision or hearing?** ☒ Yes ☐ No

b. **Is the notice posted in a prominent place in the applicant's/recipient's website, in the offices or facilities or, for education programs and activities, in appropriate periodicals and other written communications?** ☒ Yes ☐ No

c. **Does the notice identify a designated civil rights coordinator?** ☒ Yes ☐ No

VIII. **Does the applicant/recipient maintain demographic data on the race, color, national origin, sex, age, or disability status of the population it serves? (40 C.F.R. 7.85(a))** ☒ Yes ☐ No

IX. **Does the applicant/recipient have a policy/procedure for providing meaningful access to services for persons with limited English proficiency? (Title VI, 40 C.F.R. Part 7, *Lau v Nichols* 414 U.S. (1974))** ☒ Yes ☐ No

X. **If the applicant is an education program or activity, or has 15 or more employees, has it designated an employee to coordinate its compliance with 40 C.F.R. Parts 5 and 7? Provide the name, title, position, mailing address, e-mail address, fax number, and telephone number of the designated coordinator.**

N/A

XI. **If the applicant is an education program or activity, or has 15 or more employees, has it adopted grievance procedures that assure the prompt and fair resolution of complaints that allege a violation of 40 C.F.R. Parts 5 and 7? Provide a legal citation or applicant's/ recipient's website address for, or a copy of, the procedures.**

N/A

For the Applicant/Recipient

I certify that the statements I have made on this form and all attachments thereto are true, accurate and complete. I acknowledge that any knowingly false or misleading statement may be punishable by fine or imprisonment or both under applicable law. I assure that I will fully comply with all applicable civil rights statutes and EPA regulations.

A. Signature of Authorized Official	B. Title of Authorized Official	C. Date
Allison Riddle	Administrative Director	04/11/2023

For the U.S. Environmental Protection Agency

I have reviewed the information provided by the applicant/recipient and hereby certify that the applicant/recipient has submitted all preaward compliance information required by 40 C.F.R. Parts 5 and 7; that based on the information submitted, this application satisfies the preaward provisions of 40 C.F.R. Parts 5 and 7; and that the applicant has given assurance that it will fully comply with all applicable civil rights statures and EPA regulations.

A. *Signature of Authorized EPA Official	B. Title of Authorized Official	C. Date

Instructions for EPA FORM 4700-4 (Rev. 04/2021)

General. Recipients of Federal financial assistance from the U.S. Environmental Protection Agency must comply with the following statutes and regulations.
Title VI of the Civil Rights Acts of 1964 provides that no person in the United States shall, on the grounds of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. The Act goes on to explain that the statute shall not be construed to authorize action with respect to any employment practice of any employer, employment agency, or labor organization (except where the primary objective of the Federal financial assistance is to provide employment). Section 13 of the 1972 Amendments to the Federal Water Pollution Control Act provides that no person in the United States shall on the ground of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under the Federal Water Pollution Control Act, as amended. Employment discrimination on the basis of sex is prohibited in all such programs or activities. Section 504 of the Rehabilitation Act of 1973 provides that no otherwise qualified individual with a disability in the United States shall solely by reason of disability be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. Employment discrimination on the basis of disability is prohibited in all such programs or activities. The Age Discrimination Act of 1975 provides that no person on the basis of age shall be excluded from participation under any program or activity receiving Federal financial assistance. Employment discrimination is not covered. Age discrimination in employment is prohibited by the Age Discrimination in Employment Act administered by the Equal Employment Opportunity Commission. Title IX of the Education Amendments of 1972 provides that no person in the United States on the basis of sex shall be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity receiving Federal financial assistance. Employment discrimination on the basis of sex is prohibited in all such education programs or activities. Note: an education program or activity is not limited to only those conducted by a formal institution. 40 C.F.R. Part 5 implements Title IX of the Education Amendments of 1972. 40 C.F.R. Part 7 implements Title VI of the Civil Rights Act of 1964, Section 13 of the 1972 Amendments to the Federal Water Pollution Control Act, and Section 504 of The Rehabilitation Act of 1973.

Items "Applicant" means any entity that files an application or unsolicited proposal or otherwise requests EPA assistance. 40 C.F.R. §§ 5.105, 7.25. "Recipient" means any State or its political subdivision, any instrumentality of a State or its political subdivision, any public or private agency, institution, organizations, or other entity, or any person to which Federal financial assistance is extended directly or through another recipient, including any successor, assignee, or transferee of a recipient, but excluding the ultimate beneficiary of the assistance. 40 C.F.R. §§ 5.105, 7.25. "Civil rights lawsuits and administrative complaints" means any lawsuit or administrative complaint alleging discrimination on the basis of race, color, national origin, sex, age, or disability pending or decided against the applicant and/or entity which actually benefits from the grant, but excluding employment complaints not covered by 40 C.F.R. Parts 5 and 7. For example, if a city is the named applicant but the grant will actually benefit the Department of Sewage, civil rights lawsuits involving both the city and the Department of Sewage should be listed. "Civil rights compliance review" means: any federal agency-initiated investigation of a particular aspect of the applicant's and/or recipient's programs or activities to determine compliance with the federal non-discrimination laws. Submit this form with the original and required copies of applications, requests for extensions, requests for increase of funds, etc. Updates of information are all that are required after the initial application submission. If any item is not relevant to the project for which assistance is requested, write "NA" for "Not Applicable." In the event applicant is uncertain about how to answer any questions, EPA program officials should be contacted for clarification.

EXPERIENCE

Executive Director — March 2008 to Present

Woonasquatucket River Watershed Council — Providence, RI

The Woonasquatucket River Watershed Council (WRWC) officially incorporated in 2001 when the Woonasquatucket was designated one of only 14 American Heritage Rivers in the United States because of its historic role as the power behind much of RI's Industrial Revolution. WRWC Creates positive environmental, social and economic change by revitalizing the Woonasquatucket River, its Greenway and its communities. WRWC is also an official RI River Council and has review authority on all projects within watershed communities.

The WRWC Executive Director:

- Oversees and often plays a major role in all Council programs and projects.
- Hires and supervises employees and volunteers.
- Works with board of directors to develop strategic and annual business plans and monitor and develop organizational direction.
- Oversees all WRWC programs and projects.
- Oversees all fundraising and grant management.
- Reports on all programs and projects to board of directors, community partners, funders.
- Represents WRWC to the public, the press, online, and in all other ways.

District Manager — July 1998 to March 2008

Southern RI Conservation District (SRICD) — Warwick and Wakefield, RI

SRICD is a quasi-state governmental organization that works with landowners and land users throughout Rhode Island to protect soil and water resources. SRICD's activities include: storm water planning, management and implementation; educational programs targeted at teachers, students and the general public; and habitat restoration. SRICD collaborates closely with DEM, NRCS, the communities of RI and many other state, local and national agencies and organizations to design and implement projects to protect natural resources.

The SRICD District Manager:

- Oversaw and often plays a major role in all district programs and projects.
- Hired and supervises employees and volunteers.
- Works with board of directors to develop strategic and annual business plans and monitor and develop organizational direction.
- Organized annual meeting and open house.
- Managed organizational finances, produces cash flow reports and financial reports.
- Wrote annual reports, project reports, newsletters, event publications, and marketing materials.
- Spearheaded fundraising and grant management. Since 1998, successfully wrote, managed and completed more than 25 federal, state, municipal and private grants ranging from $5,000 to $130,000.

Alicia's Major Accomplishments during Tenure as District Manager:

- Developed present status of SRICD as RI's Storm Water Service Center.
- More than doubled organizational size, budget and capacity.
- Developed strong working partnerships with staff in many RI communities including Narragansett, North Kingstown and Warwick.
- Created and operated GIS open space mapping program for Farm, Forest and Open Space applicants.

Coordinator, Volunteer Environmental Monitoring Network (VEMN) November 1994 to July 1998

Merrimack River Watershed Council — Lawrence, MA

The VEMN includes over 30 groups and more than 1,000 volunteers monitoring hundreds of sites on rivers and lakes throughout the 5010 square mile Merrimack River Watershed of Massachusetts and New Hampshire.

- Lead a steering committee comprised of federal, state and local agencies, non-profit organizations, and educators.
- Designed and established volunteer network to monitor, share data, and technical information about the Merrimack River Watershed.
- Co-authored 10 publications to provide guidance to volunteer monitors (list available upon request).
- Worked with more than 10 volunteer groups to train them and help them start and design their own monitoring programs involving the following:
  - community organizing
  - writing grant proposals
  - writing quality assurance project plans
  - holding training for in-stream water quality monitoring, habitat assessment, streamside benthic macroinvertebrate assessment, data management, data interpretation and action planning
- Organized and presented two watershed-wide volunteer monitoring conferences and lead sessions at many others.

Graduate Research Assistant — July 1990 to December 1993

University of Rhode Island, Dept. of Natural Resources Science — Kingston, RI

URI Cooperative Extension Watershed Watch/Citizen Volunteer Monitoring Program -- July 1990 to August 1992

- Set up laboratory and trained volunteers to monitor for fecal coliform and *E. coli* in lakes and rivers.
- Wrote parts of the 1990 and 1991 annual Watershed Watch report and fact sheet on bacterial monitoring.
- Analyzed water samples for pH and alkalinity, phosphorus, nitrate-nitrogen, sodium, chloride, calcium, magnesium, fecal coliform, *E. coli* and chlorophyll samples for chlorophyll A.

EDUCATION

Master of Science — December 1993

University of Rhode Island — Kingston, RI
Department of Natural Resources Science
Area of Specialization: Water Quality

Bachelor of Arts — May 1988

Barnard College, Columbia University — New York, NY

EDUCATION

University of Rhode Island — Kingston, RI
Bachelor of Science (B.S.)

PROFESSIONAL EXPERIENCE

City of Providence — Providence, RI
Sustainability Policy Associate — **NOV 2021 - Present**

- Develop and oversee the implementation of policies of the Department of Sustainability in accordance with the City of Providence, Climate Justice Plan and the agenda related to environmental justice, climate resilience, adaptability, energy efficiency, racial and economic equity.
- Spearhead citywide projects, programs and initiatives i.e. establishing resilience hubs in frontline communities, increasing public access to the working waterfront, planning and hosting an inaugural youth climate summit, ensuring environmental standards in port lease negotiations, updating Comprehensive Plan to include objectives from the Climate Justice Plan, and developing zoning ordinances to address cumulative health impacts from industry.
- Support the development of legislative or regulatory briefings, public comments, fact sheets, support letters, and other tools to educate policymakers and the public on issues relevant to the mission of the current Administration.

Human Relations Commissioner — **MAR 2021 - Present**

- Advocate for policies that codify and protect the civil rights of Providence residents including housing, language access, education, and environmental pollution.
- Investigate and adjudicate discrimination complaints; support the work of the Anti-Racism, Language Access and Education & Outreach Committees.

Woonasquatucket River Watershed Council — Providence, RI
Board Member — **AUG 2022 - Present**

- Community & Education Committee: Improve diversity, access, and inclusion (to youth/adult programs and job training) organization-wide.

Director, Community Programs — **MAR 2021 - FEB 2022**

- Build urban community leadership and partnership with organization initiatives including climate resilience, recreation, fundraising and Greenway expansion.
- Facilitate relationship-building across all watershed community residents, businesses, government and non-government partners.
- Research, plan, develop and implement organization's community programs (i.e. community engagement, education, recreation, internships).

A Study Group, LLC. — San Francisco, CA
Lead, Prospecting & Finance Team | Member, Co-founders Planning & Development Working Group — **JUL 2020 - AUG 2021**

- Identify and select potential funders; organize, execute and manage prospect research and tracking.
- Research and curate culturally relevant content for Black and Latine demographics.
- Liaise between members of underrepresented racial, cultural and socioeconomic backgrounds.
- Arrange timeline for research deliverables (5-8 virtual meetings/ weekly) and organize meetings, facilitate discussions and build rapport with 15+ group members.
- Provide insights for designing a measurable user experience and metrics of customer satisfaction.

Animal Internal Medicine & Specialty Services (AIMSS) — Millbrae, CA
Surgical Veterinary Assistant — **AUG 2019 - MAR 2020**

Balboa Pet Hospital — San Francisco, CA
Veterinary Assistant — **AUG 2018 - AUG 2019**

Wildlife Learning Center — Sylmar, CA
Wildlife Biologist — **AUG 2017 - AUG 2018**

- Provide meaningful and educational engagement for guests i.e. site tours, wildlife interaction opportunities.
- Prepare on/off-site educational presentations and Q+A sessions for public and private guest experiences.
- Organize annual fundraiser through outreach and communication with potential donors to secure fiscal year funding.Coordinate calendar invites and scheduled presentations and guided tours (100+/ weekly).

Whispering Pines Conference Center — West Greenwich, RI
Environmental Educator — **SEP 2015 - AUG 2017**

- Guide educational tours (4-8/ daily) of preserved on-site hiking trails; engage with 5+ guests per tour.
- Manage all forms of company social media platforms; Twitter, Facebook, Instagram.
- Increase accessibility; showcase diverse populations in digital posts to reach demographics.
- Update blog and create digital content promoting diversity, inclusion and team building.
- Administrative duties, coordinating events, scheduling corporate groups and guest services.

HONORS | AWARDS

Rhode Island School of Design (RISD) — **FEB 2023**
Social Practice: New Directions in Community-Engaged Art and Design
Panelist. A discussion on methods and pedagogies of social practice across disciplines. Organized by Intercultural Student Engagement and Center for Complexity.

Lincoln Institute of Land Policy — **JUL 2022**
Building Trust and Taking Action: Local Climate Justice Initiatives in Legacy Cities
Speaker. A presentation on the City of Providence's Climate Justice Plan, the link between planning and public health, and how municipal actors can promote climate justice through stronger community engagement to ensure that local governments respond directly to the needs of diverse communities. Co-sponsored by the Future of Small Cities Institute, this webinar was the final installment in the Greening America's Small Cities series.

Pulitzer Center — **DEC 2021**
Two Sides of the Climate Coin: Sea-Level Rise and Extreme Weather
Panelist. A conversation featuring perspectives on the topics of coastal communities, sea-level rise, extreme-rain events and the interacting crises compounding flood risks and presenting challenges for infrastructure, environmental justice, public safety, and local economies. Co-sponsored by the Metcalf Institute.

University of Rhode Island — Kingston, RI
Coastal and Environmental Research Fellowship — **MAY 2016 - MAY 2017**
There's No Place Like Home: An Exploration Into the Habitat Management of the Eastern Towhee
Habitat loss has led to a decline in the population of many Eastern Towhees (Pipilo erythrophthalmus), a migratory, early-successional forest bird that breeds through the northeastern United States. With funding already being provided to aid conservation efforts for the American Woodcock (Scolopax minor), an opportunity exists for other early-successional forest birds to benefit.

SUMMARY

15 years as a skilled campaigner working successfully with coalitions covering a wide range of issues including climate change, workers' rights, and racial justice. Proven track record of concrete improvements in people's lives.

AREAS OF EXPERTISE

Coalition Building • Campaign Strategy • Community Organizing • Civic Engagement • Leadership Development • Team Building • Training • Event Planning

PROFESSIONAL HISTORY

Maine People's Resource Center, Portland, Maine 2018-present
Campaign Director

- Work with senior management team to develop long-term strategic plans for MPRC
- Design and manage MPRC's campaigns, including setting the overall strategy, goals, targets, timelines and creating project plans
- Develop and track project budgets with senior management team
- Coordinate and prioritize work across departments within MPRC, and across organizations in collaborative projects, ensuring that deliverables are met
- Convene several coalitions that MPRC anchors including the Maine Frontline Climate Formation and represent MPRC at several other coalitions
- Create cohesion and vision between departments on campaign priorities
- Build and leverage strong, strategic relationships within Maine and nationally
- Spearhead continuous learning and evaluation of our work
- Report on MPRC activities to funders and stakeholders

Bend the Arc: A Jewish Partnership for Justice, New York, NY 2015-2018
Deputy Field Director 2016

- Responsible for leading an effective, aligned, and collaborative field team for a national progressive organization.
- Ran ground game for national electoral campaign to defeat Trump and his hateful agenda.
- Developed national grassroots organizing and advocacy strategy in consultation with senior leadership.
- Supervised and mentored organizing staff.
- Built relationships of trust with diverse coalition partners.
- Collaborated effectively with communications, development, and advocacy teams.
- Initiated cross-departmental national campaign selection process.

Senior Organizer 2015

- Managed an intergenerational team of volunteers to build the New York Chapter of Bend the Arc.
- Built activist base by leveraging Voter Activation Network (NGP VAN).
- Orchestrated grassroots advocacy efforts to pressure NY State senators to support $15 minimum wage.
- Designed an organizing and advocacy-training curriculum and trained our staff as trainers of the curriculum.

American Jewish World Service (AJWS), New York, NY 2014-2015
Senior Organizer

- Managed a team of volunteers to build the base of AJWS supporters in metro NYC.
- Spearheaded the creation of an organizing and advocacy training curriculum and trained hundreds of organizers.
- Oversaw remote field staff, providing mentorship and support.
- Ran a fellowship for top Jewish opinion leaders.

- Secured support of 3 of 4 target Members of Congress for the International Violence Against Women Act.
- Successfully persuaded the Obama Administration to appoint the first-ever Special Envoy for Global LGBT Rights.
- Integrated Jewish texts and ritual into our campaign to inspire action.

Sierra Club, Washington, DC 2009-2011
Associate Washington Representative, Labor and Trade Program

- Represented the nation's oldest, largest, and most influential grassroots environmental organization to Capitol Hill on global economy issues.
- Designed legislative advocacy strategy and built relationships with congressional offices.
- Coordinated team of long-time volunteer leaders to implement national field strategy.
- Represented the Sierra Club to national coalitions.
- Campaigned for the successful passage of a landmark piece of legislation creating a new international standard for transparency in the oil, mining, and gas industries.
- Managed national speaker tour for Sierra Club and Steelworkers members in timber trade towns.
- Implemented earned media strategy to place op-eds and letters to the editor in target news outlets.

U.S. Student Association, Washington, DC 2007-2009
Electoral Project Director

- Oversaw a $500K budget for a national electoral program targeting primarily working class students, students of color, and LGBT students on 54 campuses in 10 states.
- Created and implemented a national field plan.
- Hired and supervised four full-time field staff.
- Registered over 110,000 student voters and established over 220,000 direct GOTV contacts.
- Represented the organization to national student vote coalitions.

Sierra Student Coalition, National 2001-2007
Volunteer leader

- Served as a national leader of the student-arm of the Sierra Club throughout high school and college.
- Chaired the board for many years, hired staff, and project managed campaign teams.

EDUCATION

New York University, New York, NY May 2014
Master of Public Administration and Master of Arts in Jewish Studies
Lisa Goldberg Fellow with a management specialization.

Swarthmore College, Swarthmore, PA May 2007
Bachelor of Arts

SUMMARY

Community leader committed to advancing social and environmental justice. Experienced educator with proven skills in teaching, partnership building, and creative curriculum development. Trained historian with wide-ranging expertise and a determination to use lessons of the past to inform today's decisions and future generations.

EDUCATION

Brown University - Doctorate in History, 2015
Brown University - Master of Arts, History, 2009
Colby College - Bachelor of Arts, *magna cum laude,* 2008

ACADEMIC AND TEACHING EXPERIENCE

Associate Director of Community-Engaged Learning and Research, Bates College **2015-Present**

- Collaborates with Bates faculty and community partners on approximately 30 course-based community-engaged learning opportunities and 20 student research theses annually
- Builds and sustains partnerships with a wide range of nonprofits, governmental agencies, and grassroots organizations working in areas including immigrant integration, public health, prison reentry, and environmental justice.
- Co-creates and facilitates faculty development workshops that support community-engaged learning
- Orients students to Lewiston history through in-class presentations and discussions, walking tours, and field trips
- Represents the Harward Center for Community Partnerships at numerous community stakeholder meetings
- Co-facilitates the annual Community-Engaged Research Fellows program, a bi-weekly seminar that provides a learning community and support for thesis students as they undertake research with local partners
- Supervises ten Community Outreach Fellows and Harward Center Communications Intern
- Lead organizer for numerous panels and events. Past events included 2022 Martin Luther King Day Panel, "Decolonization of Africa: Perspectives from the African Diaspora," and a daylong 2015 symposium, "Chaos or Community: Conservations on Justice Reform in Maine."

Lecturer in Humanities, Bates College **2019-Present**

- Teaches the first-year seminar, "Lewiston: A Local Lens on Global Issues," which invites students to explore topics including indigenous sovereignty, poverty, immigration, and environmental justice by engaging with Lewiston and its history. The course has been offered each fall semester since 2019.
- Serves as academic advisor to 15 first-year seminar students until they select a major in their sophomore year

Visiting Lecturer, Brown University Department of History **Spring, 2014**

- Designed and taught, "Plague, War, Famine, and Death: Crisis in the Late Middle Ages"

Summer at Brown Pre-college Program Instructor **2013–2015**

- Co-instructor for "A People's History of War" and "Evil: The History of an Idea." My co-instructor Wanda Henry and I designed and taught these intensive pre-college courses for high school students. In 2015, we won Brown's prestigious Archambault Award for Teaching Excellence in the summer program.

Teaching Assistant, Brown University Department of History **2009-2014**

- Led discussion sections, provided feedback on papers, and offered occasional lectures for courses on topics ranging from the History of Brazil to the Early Middle Ages

Research Assistant to Professor Linford Fisher, Brown University Department of History **2011-2013**

- Assisted professor Ex. 6 Personal Privacy (PP) on his study of Native American slavery in colonial New England, contributing to publication of "Dangerous Designes: The 1676 Barbados Act to Prohibit New England Slave Importation," *William and Mary Quarterly* 71 (2014), 99-124.

COMMUNITY LEADERSHIP & ORGANIZING

Androscoggin Literacy Volunteers Board of Directors **Member, 2016-2019**

The LVA offers free one-on-one tutoring and other educational services to help adults and families in Androscoggin County acquire the basic reading, writing, math and life skills to enhance their lives.

- Recruited instructors and other volunteers for Workplace Literacy program for immigrants
- Led modernization of LVA logo and co-developed Lagers for Literacy Fundraiser with Baxter Brewing

Auburn Conservation Commission **Member, 2018-Present; Chair, 2020-Present**

The Auburn Conservation Commission is an appointed committee in the City of Auburn that promotes responsible stewardship of the environment through research, advocacy, and education.

- As Chair, creates agendas, facilitates meetings, presents annual report and advisory opinions to the City Council
- Organizes public outreach events and initiatives, including workshops on managing invasive species, nature walks, annual Earth Day Community Clean-ups, and tours of waste management facilities and new solar developments
- Led collaborative process to submit a federal grant to NOAA to remove the defunct Littlefield Dam to restore fish passage on the Little Androscoggin River; funding decision expected in January, 2023.

Bates Educators and Staff Organization (BESO) Organizing Committee **October 2021-present**

Worked with colleagues in departments across campus to lead a major campaign to unionize Bates staff members and contingent faculty as a single bargaining unit. We are awaiting the results of our January 2022 election.

- Numerous one-on-one conversations with workers from a wide variety of backgrounds; built significant skills talking about the importance of union representation for pay, benefits, and working conditions
- Worked with the BESO organizing committee and MSEA organizers to identify campus leaders and engage potential supporters among students and the wider Lewiston and alumni communities
- Firsthand experience navigating personal and political complexities of a union drive

Maine Community Integration (MCI) Board of Directors **January, 2016-present**

This refugee-led organization supports the integration of immigrants into the Lewiston community through education, enrichment and civic engagement programming, with a special focus on empowering women and girls.

- Initiated ongoing partnerships between MCI and Agassiz Youth Camp in Poland, Maine and Valo, in Yarmouth, to help immigrant-youth gain access to water safety education and other nature-based learning opportunities.

Maine Humanities Council Veteran Book Group Facilitator & Curriculum Designer **2019-2020**

This program helped veterans process their experiences of conflict and connect with peers by reading and discussing historical and literary texts ranging from the diary of a Napoleonic foot soldier to the *Illiad*.

- Served as a facilitator for two six-week sessions; the program has been on hiatus since 2020 due to COVID
- Created reading list and discussion guide for female-identifying veterans in the Maine State Prison, and served on advisory board for this program.

Stanton Bird Club Board of Directors **August, 2016-2020**

As stewards of the 372-acre Thorncrag Nature Sanctuary in Lewiston, the Stanton Bird Club promotes conservation, nature education, and recreation in our community.

- As organizer for the monthly public lecture series, I identified and coordinated speakers for public lectures and annual meetings on topics ranging from native plants and pollinator health to the vascular systems of trees.

Valo Board of Directors, Secretary **2018-present**

Valo offers free weekend retreats and in-school workshops that promote social and emotional health and connection among Maine teens through conversation, hands-on learning, and time in nature.

- Created partnership with Valo, Whiting Farm in Auburn, and MCI, to coordinate programs that offer low-income youth from Lewiston opportunities to learn skills for growing their own food

LANGUAGES

- Fluent in spoken and written French; extensive experience translating written French to English

Ex. 6 Personal Privacy (PP)

Ex. 6 Personal Privacy (PP)
Lewiston, Me USA 04240
Ex. 6 - Personal Privacy (PP)
Ex. 6 - Personal Privacy (PP)

Skills / Activities:

- **Community organizing**
- Public relations
- Fluent in English, **French**, **Somali** and **Arabic** languages and possess a vast knowledge of each one of these language cultures

Education/ Certificates

- In addition to 2 weeklong trainings of intensive political education, I have attended more than 15 short trainings in different leadership skills
- GED, 2013, Lewiston, Maine, USA.
- Center National d'Enseignement a Distance (CNED, Toulouse 2001-2003 Certain College)
- DALF (Advanced Certificate of French Language, 2001)
- Management and public administration course by the **Institute of Administrative Development** in Doha, January 2010, 30-hours.
- Strategic Management conducted by the **Institute of Administrative Development** in Doha, from January 5 to June 8, 2009.

Work and Volunteer Experiences

- **Maine People's Alliance / Maine People's Resource Center – August 2016 - Present**

Community Organizer

I work organize people around a common vision to solve issues that matter for communities of color and limited income, such as climate and racial justice, income inequality, worker rights etc.

- **Maine Immigrant and Refugee Services – March 2016 to August 2016**

Family and Youth Coordinator

I was responsible of programs related to immigrant families and youth support. I made sure to respond the daily crises families face and provide assistance and guidance to the best of my ability. I was in charge of the juvenile justice program and worked closely with local juvenile court to find solutions for youth re-integration programs. This also included working with organizations on restorative justice. I participated in conferences in the state of Maine around restorative justice and played an important role bridging between parents and experts.

- **United Somali Women of Maine April 2014 - March 2016**

Education and Prevention Coordinator

I ran the education programs of the organization to educate the immigrant community male population around Domestic Violence and Sexual Assault crimes. I previously also occupied the position of Program Coordinator to monitor grant goals and achievement of the agency programs.

- **Trinity Jubilee Center in Lewiston Maine August 2012 – April 2014.**

Interpreter / on duty staff/ Social worker

I provided services as an interpreter and administrative assistance at the Trinity Jubilee Center in Lewiston. I did translation of documents and assisted in filling out job applications for those who don't speak English. I also assisted immigrant communities through the process of every type of administrative or paperwork procedures they are going through.

- **Embassy of Djibouti in Qatar, January 2009 - Feb 2012**

Consular Affairs Assistant

Head of the Consular Department, responsible for issuance of birth certifications, passports and visa. I also organized daily meetings with staff to discuss about the daily assignments. I was responsible of daily briefing of the ambassador on the daily activities.

- **Embassy of Djibouti in Qatar, April 2007 - Feb. 2009**

P.R.O & Cultural Affairs Officer; my duty also included ensuring the quality of correspondences and memos before being mailed or released. Head of the public relations, responsible of organizing press interview for the ambassador. Head of Cultural Affairs at the Djibouti Embassy in Qatar.

- **Titan, Doha and the FCC, Doha Aug 2003-Sept 2006**

Arabic-English Translation

I worked as a linguist at the US Military Base in Qatar, translated documents from Arabic to English and occasionally from French to English under a fast paced and demanding work environment. This also included translations on official and non-official documents dealing with all sort of topics.

I also worked as freelancer for the **French Cultural Center in Doha/Qatar** from English to French and French to English for French groups who in several occasions played shows at the Qatar National Theatre.

1. PROGRAM OBJECTIVES

a. Project Summary –

Project Title: Frontline Communities First! Resident Leaders Build Climate Resilience in Providence, Rhode Island (FCF!)

Project Location: Olneyville neighborhood of Providence, Rhode Island, 02909

Applicant Information: Woonasquatucket River Watershed Council (WRWC), 45 Eagle Street, Suite 202, Providence, RI 02909, Ex. 6 Personal Privacy (PP) alehrer@wrwc.org, nuevasvoces@wrwc.org

Brief Description of Applicant Organization: The Woonasquatucket River Watershed Council (WRWC) creates positive environmental, social, and economic change by revitalizing the Woonasquatucket River, its Greenway and its communities. WRWC incorporated in 2001 when the Woonasquatucket was designated one of only 14 American Heritage Rivers in the United States. WRWC works toward safe and clean waters, environmental justice, and climate resilience throughout our watershed:

- We invest in resident and youth leadership.
- We install, maintain, and activate urban parkland, a greenway and nature-based stormwater systems.
- We restore and monitor urban river waters and habitats.
- We provide environmental education and community engagement at all levels.

Are you applying for the Small CBO Set Aside Track for $150,000 projects? No

Project Abstract: FCF! expands capacity across Olneyville and Central Providence for resident leaders and partners to:

- Prepare for climate challenges this neighborhood already faces - Olneyville is disproportionately impacted by climate change related flooding from both excessive stormwater and sea level rise, poor water and habitat quality, urban heat island, and other current and legacy challenges.
- Engage, educate, and organize their neighbors in building and advocating for environmental justice and resilience where they live – WRWC and our partners believe resident leadership in our organizations, communities, municipal governance, and interconnected sectors is critical to lasting impact.

Towards these ends, this project focuses on

1. Creation of an **Olneyville Resilience Hub** with co-leads Providence Emergency Management Agency (PEMA) and City of Providence Department of Sustainability (SustainPVD), local partners including grassroots groups.
2. Creation of an **online data and storytelling hub** we call **"VECINA"** (Neighbor) with Bates College and the Mathematics and Data Justice Collaborative (MDJC), comprised of academic researchers, innovation labs and web-developers.

Resident leaders catalyzed these initiatives toward greater power sharing, decision making and problem solving. The "Providence Climate Justice Plan" and "Central Providence Roadmap" inform this approach. Headway on both hubs to "launch ready" status was completed prior to this request. Actions feature hiring a new shared staff person to oversee the resilience hubs, convening community/partner oversight bodies, "train-the-trainer" sessions in preparation for "VECINA" launch, other steps and activities detailed below. These community-driven EJ interventions/promotions work together with existing leadership and technical training programs to accelerate resilience and adaptation to climate change.

Project Type(s): Emergency Preparedness and Disaster Resiliency, Equitable Development, Stormwater Issues and Green Infrastructure.

Special Considerations: This project qualifies for **Climate Change/Disaster Resiliency**

Environmental Issue: Water

List of Project Partners: WRWC will convene partners and coordinate this collaborative project with our lead and committed partners: PEMA (govt.), SustainPVD (govt.), Bates College (academia), MDJC (academia), ONE Neighborhood Builders (ONE NB) (Community Development Corporation), Olneyville Neighborhood Association (ONA) (grassroots non-profit), the Providence Racial and Environmental Justice Committee (REJC) (grassroots non-profit). Letters of Commitment are included as attachments with this application.

Numerous additional partners are supporting and already engaged, or aware of and planning to participate in aspects of this project, including but not limited to: Joslin Recreation Center (community center

ED_016126_00000194-00001

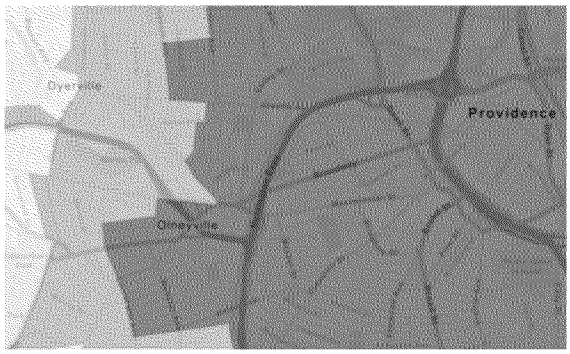
run by Providence Recreation Department), Institute for Computational and Experimental Research in Mathematics at Brown University (ICERM) (academia), Institute for Mathematical and Statistical Innovation at The University of Chicago (IMSI) (academia), Groundwork RI (workforce development non-profit organization), WaterFire Arts Center (arts non-profit), Developing and Engaging Latinos in America (DELIA) (non-profit), and Greater Providence Hispanic Chamber of Commerce (Business). Letters of support from these partners can be provided upon request.

Will you need to develop a QAPP for your project? No

b. Environmental and Public Health Information of the Underserved Community –

Our target communities, disproportionate environmental and/or public health harms and risks, and how our we are impacted by those harms and risks: Central Providence (CP) is a constellation of nine racially and socioeconomically diverse neighborhoods in the heart of Providence, Rhode Island (RI). Olneyville is the economic center, the core of the of historically/geographically significant Woonasquatucket River Valley, and the primary focus of this project along with nearby Manton. Located near polluting industries and highways, and subject to severe storms and flooding, Olneyville and Manton are hardest hit with EJ and climate related disproportionate impact. Portions of Olneyville lie in the flood plain of the Woonasquatucket River. Olneyville Square, where 7 streets and major thoroughfares meet, is the industrial, commercial, and transportation hub of Providence's west side, walkable to downtown. Densely developed with numerous minority-owned restaurants and businesses, office and studio spaces, and a host of community organizations addressing the needs of the local population and beyond, flooding has dire impacts on community life.

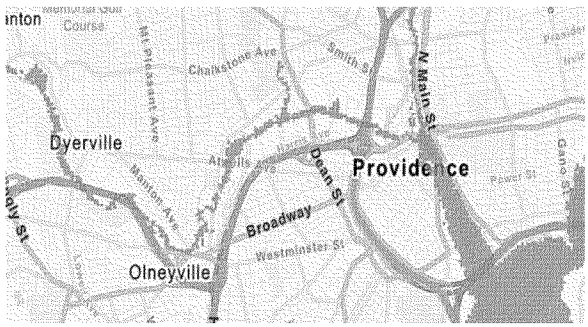
Three parks connected by the Woonasquatucket River Greenway form the only pervious relief from crowded streets and vast swaths of mills sprawling atop giant paved lots. Paving, congestion, and proximity to hazards also have dire impacts on community health. The REJC, instrumental in the creation of the City of Providence's "CLIMATE JUSTICE PLAN Creating an equitable, low-carbon, and climate resilient future" in 2019, further identifies Olneyville as one of two highest priority frontline Providence neighborhoods due to location in a high use traffic corridor and acute flooding. All Central Providence neighborhoods grapple with the crises of ecology, economy, and civil rights. As stated in the "Central Providence Roadmap 2023-2032," "In Central Providence, community-level conditions rooted in structural racism — such as poverty, inequitable access to quality education and jobs, out-of-reach or unsafe housing, and others — impede many individuals and families from living healthy, economically stable lives. This is evidenced by disparities in health and economic outcomes for Central Providence residents compared to Providence and RI as a whole."



Environmental health problems affecting urban communities in RI, particularly low-income people of color, are well-documented. Health indicators, ranging from asthma to lead poisoning to low life expectancy, show significant race and income-based disparities that reflect the differing environmental conditions. In the target neighborhoods in and around Olneyville, over 60% of the population identifies as black or latine - 84% in Olneyville proper. From ONE NB data, we know 82% of homes in Olneyville are renter-occupied, and almost 60% of households are without a vehicle. Olneyville has also, for many years, attracted artists and developers with no ties to resident communities or cultures. This population has mainly been white and higher income, driving displacement and concerns among residents about gentrification.

The neighborhoods of Central Providence tell a story of both immigration and segregation. Six of the nine communities show a higher proportion of Hispanic/Latine residents than the City of Providence overall. In Olneyville and Manton, primary target communities built upon lands important to Narragansett, Wampanoag, Pokanoket, and Nipmuc Peoples, are the homes of predominantly Indigenous, African, Black, Latine, and White communities, many members of which are refugees and immigrants, people who speak languages other than English, and LGBTQIA+ individuals. Residents living in Olneyville and Central Providence neighborhoods – environmental justice communities also designated as the Central Providence Opportunities – Health Equity Zone (CPO-HEZ) - are underserved and highly vulnerable members of the community**.** The average median household income across the 9 neighborhoods is $46,942, as compared with $53,359 for the city as a whole and $56,167 for the state; in Manton, however, where developer driven gentrification and displacement have yet to occur, the median is $29,798. Olneyville, in particular, receives more than its share of flooding. WRWC used the EPA's EJScreen tool to characterize the neighborhood. The area's overall demographic index is 90th percentile in the state and 89th percentile in the nation. For the state of RI, Olneyville is 89th for People of Color, 96th both for limited English Speaking Households and Low Life Expectancy, and the 83rd for Low Income. EJSCREEN also identifies Olneyville as the 99th percentile for Air Toxics Cancer Risk (lifetime risk per million) and Air Toxics Respiratory HI for RI and the

ED_016126_00000194-00002



nation. Manton shares a similar profile, including as 99th percentile for Air Toxics Cancer Risk and Air Toxics Respiratory HI, with additional notable RI rankings in Superfund Proximity (91st) and Unemployment Rate (91st).

Environmental/public health issues our project seeks to address: In general, paving and congestion throughout CP neighborhoods result in well-documented negative impacts on local air, waterways, and resident health. Mixed industrial and residential use, a legacy of contamination from industries active in the past, a long history of childhood lead poisoning, and lack of employment in the wake of the mills have resulted in decades of decline, with the result, per above, that a significant number of residents live at or below federal poverty lines. As a result of these factors, in FCF! target Olneyville and Central Providence neighborhoods, in addition to socioeconomic and health disparities, the hazards and disparities related to climate change, transportation and environmental harms are experienced at high (80 to 90th percentile) and highest rates (90 to 100th percentile) in the nation and in our state. These include all but one of the EJSCREEN Environmental Justice Indexes of Pollution and Sources, almost all the Socioeconomic Indicators and Health Disparities per above, and Climate Change Data: Coastal Flood Hazard, 100 Year Flood Plain and Sea Level Rise (NOAA).

Hazardous Waste Proximity, depicted left from EJScreen, is one example, with highest rates in the nation depicted in red. **100 Year Flood Plain** along the Woonasquatucket River in Olneyville depicted in blue below, is another.

In March 2010, Rhode Island was dramatically hit by a severe storm that flooded many parts of the state; no part of Providence was damaged more greatly than Olneyville. Homes, businesses, and public parks all were damaged by standing floodwater that lasted for many days. Compounding the problem, dioxin contaminated river sediments were left behind as floodwaters retreated. As a coastal state, Rhode Island will experience an increased frequency of storm events and Nor'easters, and Providence, sitting at the head of Narragansett Bay, will not be spared. Providence's long industrial history has led to an urban landscape dominated by impervious surfaces, exacerbating **flooding and poor local river water quality**, and primary environmental and health-related impacts of climate change like **major storm events.** Without frontline voices imprinting their visions, plans, projects, ideas and initiatives into resilience and adaptation, history tells us effective urban problem solving related to these issues is unlikely to occur.

Environmental/public health results our project seeks to achieve and how our communities will benefit: WRWC has worked for over 20 years to come to the current point in the organization's history and work where we have the talent, partnerships and collective will to center resident aspirations and concerns in co-governance with municipal and state agencies, academic partners and environmental coalitions and groups to ensure those who are most impacted by EJ and climate concerns end up with the greatest say over resilience and adaptation in their neighborhoods. CP communities will benefit greatly from this project in a number of critical ways: 1) Through continuation of and building upon resident leadership programs with existing and new trainings, and knowledge sharing especially fostered through the "VECINA" site, collaborators and new audiences will gain considerable understanding of how the issues of stormwater impact local water quality, why and how the neighborhoods have become so vulnerable to flooding, and practices such as installation of green infrastructure that can help reduce these adverse impacts; 2) Through Resilience Hub development, supplies, and preparedness training, residents and community will build confidence in their ability to keep their families safe and healthy with plans in place for how to best prevent flooding and water quality impacts, and best practices and action plans to cope with them when they arise; 3) Residents will build relationships and connections with local partners and city government that ensure that their recommendations are incorporated into community investment and problem solving with regard to the resilience and adaptation issues of stormwater, flooding, preparedness and heat island; and 4) The relationships built between the residents, community and local partners through the hubs will be long-term and sustainable, based on trust, commitment, shared knowledge, resources and capacity. We know the effects of climate change and extreme weather events adversely impact the most vulnerable communities and populations disproportionately, and that the

threats in our target communities are pressing and real. No community is ready. Due to all the vulnerabilities and yet to be tapped power explored above and below, frontline communities must especially prepare.

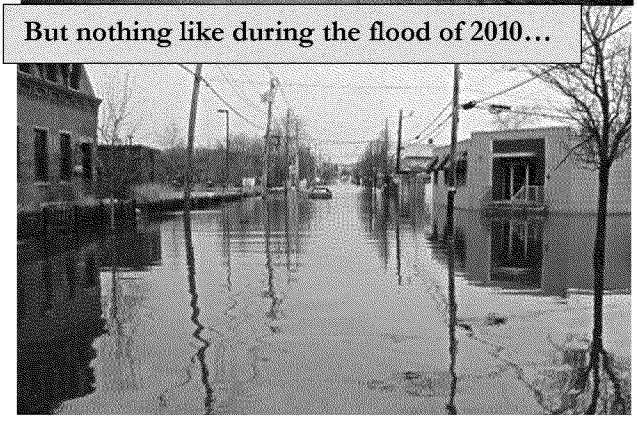
Special Consideration for our Project Focus on Climate Change and Disaster Resiliency: The purpose of this project is to expand leadership, capacity, and shared resources among communities of color and low-income communities in Olneyville and other Central Providence neighborhoods through the creation of physical and online resilience hubs. The hubs create new opportunities for training, organizing and community action in tandem with partners and plans, but ultimately rely on direct knowledge and experience as the problem-solving foundation. For instance, the "VECINA" online data and advocacy tool is being developed through a participatory design process that engages community leaders in the design and testing of the tool, pairing the community organizing expertise of Nuevas Voces (an eight-month cohort leadership training centered around climate justice) and the data and technology expertise of the MDJC. The results we seek to achieve include:

- Residents and partners develop sufficient shared knowledge and climate literacy to take decisive actions that build resilience to extreme weather and climate change while also contributing to community health, social cohesion, and socio-economic equity.
- Through shared knowledge and capacity building, residents and partners develop and activate shared resources that are distributed and organized in such a way that the varying access, or lack thereto, to education and resources, and the various abilities and priorities of residents, partners and stakeholders can work in concert to contribute to overall well-being.

As stated so clearly by ONA in a sentiment shared across CPO HEZ, "We recognize environmental and climate harms and hazards as a critical and on-going component of marginalization that must be addressed."

This is a critical moment for justice, resilience, and adaptation concerns to be effectively addressed to improve entrenched and unacceptable disparities and outcomes in and beyond Providence's most vulnerable neighborhoods. At the nexus of new openings for frontline voices, and the onset of planning and investment decisions that will shape the future of Providence and RI communities for decades, frontline voices co-leading the following provide the best chance of bending the arc of planning/action toward equity/justice:

- Woonasquatucket Watershed-Wide Flood Resilience Project (currently underway)
- Providence's Comprehensive Plan Update (currently underway)
- Build Out of Central Providence Roadmap (currently underway)
- PEMA's collaboration with FCF! related to the Resilience Hub launch, the PVD Hazard Mitigation Plan and Community Emergency Response Team (CERT), will connect residents in this highest priority area to leadership and all-hazards emergency management.
- Working with ONE NB through their Resident Advisory Council to guide Central Providence Opportunities Initiative funds toward resilience and mitigation efforts.
- Targeting the recently formed governor's Executive Climate Change Coordinating Council (EC4) governance/advocacy body to demand inclusion of frontline leadership at proportionate representation to experience of harms and ability to bounce back from hazards, and to implement more policies that allow all City of Providence and State of Rhode Island residents, regardless of socioeconomic status, to thrive and be resilient.
- Directing Investment to EJSCREEN Frontline Communities / REJC Green Justice Zones
- Direction of RI Green Infrastructure Coalition (GIC)



The hubs are an outgrowth of and work together with recently launched WRWC and partner resident leadership and technical training programs like Nuevas Voces (NV), Campeones de Combate Climático (Campeones) and REJC's Green Justice Zone (GJZ) training on the Climate Justice Plan. To uplift and amplify climate justice and resilience from within, WRWC launched NV in 2019 and Campeones in 2022. These resident-to-resident run programs offered in community and school settings target adult and older youth populations, successfully expanding climate literacy and resilience problem solving to ensure resident leaders emerge with the required skills, motivation, and confidence to educate and inspire others. These leaders build greater connection with community resources. New connections with elected officials and local and state government staff forge pathways for frontline community knowledge and experience to drive municipal-, watershed- and state-wide planning and decision- making. Social and active learning steeped in an equity praxis, primary language delivery and multi-year engagement ensure previously marginalized residents can collectively exercise their rights to self-determination in resilience building and problem solving.

ED_016126_00000194-00004

Major storms flood local streets and greenway.

But nothing like during the flood of 2010…

Prior to the launch of NV, WRWC and ONE NB conducted community surveys to determine existing knowledge related to climate and environmental justice issues. One primary questionnaire, written in both Spanish and English surveyed 87 Olneyville residents, 45% of whom identify as Hispanic or Latine living in areas that already have experienced extreme flooding incidences and higher temperatures than other neighborhoods. In response to questions that helped gauge knowledge and perceptions of climate change, more than 63% believe the climate is changing but less than 24% understood to what degree and why or how to prepare. This finding showed WRWC and our partners that education and engagement toward EJ and climate literacy had to be first steps in collaborative efforts. This observation catalyzed NV; NV leaders catalyzed the hubs.

Bolstered by existing and new programs, trainings, and leadership and organizing opportunities made possible through the hub approach, residents, partners and stakeholders can now - develop sufficient shared knowledge and capacity to take decisive actions that build resilience to extreme weather and climate change in ways that contribute to community health, social cohesion, and socio-economic equity - through shared knowledge and capacity, residents and partners can develop and activate shared resources that are distributed and organized in such a way that the varying access, or lack thereto, to education and resources, and the various abilities and priorities of residents, partners and stakeholders can work in concert to contribute to overall well-being. Because this project will engage innovative approaches to expanding green infrastructure, emergency preparedness, and other climate resilience and adaptation interventions, alongside expansions in community knowledge, power, and action, resulting in new shared resources and capacities, in addition to **impaired waters and flooding related concerns**, the project will also address the issues of **urban heat island, poor air quality, access to transportation alternatives, green jobs promotion, etc**. More greenspace activation, plants and trees are one result of shared endeavor that is already in the works before the hub has even opened its doors. Next level living wage green jobs development for graduates of numerous green jobs training programs, including those of WRWC, is the next collaboration hurdle.

c. Organization's Historical Connection to Underserved Community –

History of WRWC's involvement with Olneyville, Manton, Hartford, Valley and other CP neighborhoods: WRWC has been at work in the Olneyville neighborhood of Providence for over two decades. During that time, we restored 75 acres of parkland, built the 7-mile Woonasquatucket River Greenway (multi-use trail) to connect Olneyville to downtown Providence, reclaimed tens of acres of brownfields as parkland, restored fish passage at the first five dams on the river, co-founded the Olneyville Collaborative and engaged thousands of residents and students in education, restoration and recreation. Our superpower is building partnerships and relationships locally, regionally, statewide, and nationally.

Although our work, like many of our local partners', began in Olneyville, over time, we expanded our focus to include nearby neighborhoods with similar challenges. We expanded the Greenway, EJ organizing, K-12 education, and monitoring and stewardship engagement upriver into other impaired watershed communities like Manton and Hartford, then into Johnston and North Providence, RI, recently watershed wide through pilot watershed outreach and flood mitigation planning. In ONE NB's case, expansion of the Olneyville HEZ launched in 2015 to the CPO HEZ in 2018, achieved this shift. Over the last decade, many FCF! partners have been collaborating to address broader disproportionate impact through such efforts as the CPO HEZ Road Map, the Valley Visioning Group, RI Green Infrastructure Coalition, REJC Climate Justice Planning WRWC's work with the Tri-County HEZ serving Johnson, North Providence and Smithfield and others. WRWC has been at the forefront or active participants in all of these, prioritizing resident delegation, for instance on the Road Map Pillar 3 – Building Power and Capacity workgroup, which also seeded this application. WRWC has led

ED_016126_00000194-00005

stormwater education and nature-based clean water and climate adaptation projects, in addition to co-building public park spaces and multi-use trails, that engage local communities and artists for nearly two decades. These projects exemplify the type of solutions supported through the resilience hubs, now with expanded resident leadership in tandem with NV, Campeones, GJZ training and other partner efforts.

How WRWC has worked with Olneyville/CP residents and organizations to address local environmental and public health issues currently or in the past and what are some of the results: WRWC has been working in Olneyville for 25 years. We helped form the Olneyville Collaborative (OC), attending about one hundred resident meetings in libraries, churches, and community centers through that process. For our earliest work, we hung around outdoors and anywhere where residents gathered and just listened to the issues that residents faced as they expressed them in daily life arising from being new to the United States, finding adequate housing, or keeping families safe and fed. When we had built up community trust, we held focus groups to find out more about the issues we could address to improve quality of life in ways best aligned with our environmental mission. Three topics came out on top:

1) Safe places for kids and families to play. At that time, one neighborhood park, Donigian Park, was called "Needle Park." Residents stayed away from activity centered around prostitution and drugs. Another large park, Merino Park, was closed by the City Parks Department and all access was blocked off for a number of years. The area next to the river was comprised of a mill complex that burned down twice, leaving a pile of rubble next to a dead-end street; the area was so high in drugs and crime, it received 80% of all police calls for the service area, even though it comprised only 6% of physical space. The largest park in Providence, Rogers Williams Park, was almost inaccessible by public transit. Residents told us that it took them 1 hour and two busses just to get to there. So, there was a real need for local, accessible parks.

2) Safe alternative transit. In the early 1990s and well into the 2000s, at least 40% of Olneyville residents had no access to a motor vehicle. Their only transit options were public transit, walking and biking. Olneyville Square, the village center for the community with shops and eateries had, and still has, difficult traffic patterns that make bikers and walkers feel unsafe. Children living in Hartford, adjacent to Olneyville, went to the Olneyville elementary school William D'Abate, and had to cross a busy state highway to get to school because the pedestrian bridge across the highway collapsed.

3) Flooding. Residents, businesses, faith and community centers have consistently recounted their ordeals with flooding as long as we have been in existence. Door of the Refuge Church, a site of nature- based stormwater solution, joins in our efforts because of on-going flooding related problems in their building. As discussed above, this topic has become much more important recently due to major floods. As we learn more working with additional partners such as Brown University, currently organizing a Providence task force to develop plans for long term flooding and predicted sea level rise, we have come to understand that these will become gigantic issues in downtown Providence, Olneyville and Manton within the next 35 years.

We listen to Olneyville, so we worked with residents to address the issues:

1) Together, we created safe places for kids and families to play. Every project we undertook, we did as a community building project. To reclaim Donigian Park, we worked with residents to clear brush along the Woonasquatucket River, catalyzed a friends group, raised playground funds, brought in local artists to work with kids on mosaics and fence decorations, hosted movies in the park, and built a canoe launch. We convinced the parks department to reopen Merino Park and worked with hundreds of neighbors to clean and beautify it. The brownfield pile of rubble that was once Riverside Mills became a brownfield showcase community. It is now the site of the 12-acre Riverside Park and the trailhead of the Greenway. We worked with ONE Neighborhood Builders (then Olneyville Housing Corporation) to design the area, so it was safe for police and rescue to serve new affordable housing with ample new green space. Riverside Park is a success story that people from around the nation visit to see how community collaboration can transform a neighborhood.

2) We raised our voices to ensure safe alternative transportation. WRWC advocated for the Woonasquatucket River Greenway (Greenway) to begin in Olneyville to address the transportation needs of residents. Originally, the Greenway was going to begin in a more rural part of the watershed. The 5-mile off-road multi-use trail opened in 2007. From the start, we created safe on-road routes from Olneyville to downtown Providence so residents could get to jobs and the central public transit hub at Kennedy Plaza. The Greenway is now 7 miles, with several new spurs and separated multi-use trails.

3) We invest in nature-based stormwater systems to educate, infiltrate, beautify and reduce flow. Since the major 500-year flood of 2010, WRWC has been working with residents, businesses and property owners to identify opportunities to infiltrate and treat stormwater in place and reduce flooding impacts. While we know we must work upriver too, reducing the 90% impervious cover in CP neighborhoods is critical to local health. Our K-12 STEM, EJ

ED_016126_00000194-00006

and leadership programs engage over 600 CP students annually, and another 400+ upriver teaching them about the effects of stormwater on flooding and water quality and nature-based stormwater systems as an available solution. Once students learn about these topics, they enthusiastically plant rain and pollinator gardens, pick up trash, create outdoor art to teach others how to keep river waters cleaner. WRWC is currently working with Olneyville business owners through our Greening the Greenway initiative (see below) to site green infrastructure on their property to capture, clean and reduce stormwater flows.

Efforts in the community that address the disproportionate issues described above: Recent efforts to address disproportionate climate impacts such as severe storms and flooding, intensively focua on resident leadership. Leading up to hub development, recent WRWC programs support resident-led resilience planning, design, implementation, and leadership in organizing and engaging their neighbors: 1) WRWC's innovative Nuevas Voces/New Voices program, now in its third year, intensively engages frontline residents on environmental justice, climate and public health issues that affect their communities, and amplifies their leadership and advocacy on these issues by connecting them to changemakers, and helping them gain roles on decision-making boards, commissions, and groups. 2) Campeones de Combate Climático (Climate Action Champions) is a new frontline leadership initiative that trains NV graduates to design and build out nature-based watershed resilience projects that: 1) Protect their neighborhoods from climate change related flooding from excessive stormwater and sea level rise; 2) Reduce extreme heat; 3) Improve water and habitat quality; and 4) Improve neighborhood look and feel. By the end of 2022, as two cohorts of NV leaders and advocates gained greater access to power, many stepped up to the next level to work through WRWC's "Greening the Greenway" (GTG) program to participate in nature-based stormwater systems/GI projects over 2023-2025. Technical training for effective project siting and design is provided in partnership with Groundwork RI. Once trained, resident leader teams will begin developing projects working directly with consultants and engineers, and through new pathways like the Resilience Hub.

To lift the "green ceiling," these programs compensate resident leaders for participation and expand access to jobs and careers:

- Former participants are now WRWC staff members leading the NV program, helping to run and teach Campeones, others sit on our board, and are compensated through WRWC to also sit on municipal and state agency commissions, committees, and boards post-graduation.
- More than half of NV graduates have gained new employment and/or board/commission seats out of participation, for example on the City's Human Rights Commission and on staff leading ONA.
- NV Año Dos Program filled beyond capacity within 48 hours of open enrollment.
- NV Año Tres began in April 2023 over-enrolled at 24 participants.
- Bilingual/Spanish language outreach, recruitment and program delivery quickly highlighted how critical this capacity is; all our work can now be promoted/delivered equally as well in Spanish as in English.
- Critical perspectives/ideas of NV and Campeones leaders spawned new partnerships/initiatives including the hubs featured in this application.

Community Driven Participation: How underserved community residents and organizations were involved in developing our project plan and are part of the decision-making process: Resident knowledge, vision and leadership have been drivers of the hub approach since the beginning of our planning process. Members of many of the groups and organizations listed above met in various configurations to develop this project plan. Resident leaders and or/staff persons from the neighborhoods were present in every meeting, including with city agencies. In the partner section below, we describe roles and contributions that will assure this project's success. Resident teams oversee both hubs and resident leadership is prolific on the steering and evaluation teams. The preparatory work of the community and academic partners primarily focused on the VECINA launch is described in full in the Letter of Commitment from Bates College, and in the sections below. Olneyville Resilience Hub planning commenced with a brainstorming session among resident leader teams working at WRWC and at ONA to 1) examine existing capacity, programs and plans related to climate justice and resilience already creating impact on "Buen Vivir,"[1] 2) to identify unmet needs across the gamut of environmental, climate, health and barriers to opportunity, and 3) to share ideas that have been percolating out of both organizations' overlapping EJ initiatives and partnerships that could bundle our successes to better meet unmet needs and expand shared capacity and empowerment impact. Challenges currently experienced by family members, neighbors, faith and social circles of the resident leaders were brought to the table; positive and empowering

[1] "Buen Vivir" translates as rights - health, education, freedom, participation, and principles - dignity, gender equity, and social justice, towards - "the good life" - true well-being.

ED_016126_00000194-00007

resilience building experiences among the same also contributed to the final plan. The resilience hub idea emerged over the past few years of NV and PEMA collaboration. New growth at ONA indicates need for additional space. New SustainPVD staff with strong ties to WRWC/NV and ONE NB have connected with a national network of sustainable city directors pursuing resilience hubs as power sharing and co-governance spaces that accelerate the ability of people and their communities to anticipate, accommodate and positively adapt to or thrive amidst changing climate conditions and hazard events.

Along with WRWC, many of the FCF! partners are robustly catalyzing resident leadership in their work in staff positions, on boards, advisory councils, etc. ONA and REJC are 100% BIPOC resident founded, run, staffed, and led organizations. WRWC works hard to continuously earn and keep long and trusted connections with the mostly BIPOC residents we serve and the organizations of all sizes and configurations that are our partners. Resident leaders work as and with staff to keep creating paid next level opportunities for expanding numbers of their neighbors and joining partner staff and boards on our recommendation. WRWC is known for our dedication to the neighborhoods, through reopening parks, Greenway extension and improvement, installation of powerful and aesthetically pleasing gardens and public art – all of which make a visible positive impact on health and quality of life – and for our innovation in reparative and restorative EJ through compensated resident-led urban GI and positions of power and voice across our organization. We know there is more to do. With the FCF! project we are decisively and collaboratively acting.

d. EJCPS Model – This project will undertake **EJCPS Elements 4, 5, 6,** and **7**.

Element 1 - Issue Identification, Community Vision, and Strategic Goal Setting and Element 3 - Consensus Building and Dispute Resolution were undertaken through City of Providence Climate Justice Plan co-developed with REJC; and through ONE NB-led CPO-HEZ Road Map 2023-2032 development that deliberately addressed power divides to engage resident advisors so they could more effectively lead alongside multi-sector organizational partners. Element 2 - Community Capacity-Building and Leadership Development is the foundation of this project, exemplified by the wildly successful launches of WRWC's NV program in 2019. **Element 4 - Multi-Stakeholder Partnerships and Leveraging of Resources** and **Element 5 - Constructive Engagement by Relevant Stakeholders** are in progress and embodied in our workplan. A common vision, goals, and objectives for this project among the partners has already been created (leaving wiggle room for additional resident leader cohorts and partners to revisit and contribute to final plans, goals, and objectives once full funding is secured.) Non-community stakeholders from government, academia, business and arts sectors are invested as partners at all levels and committed to project success over all three grant years. Sources of pending and secured funds are already allocated to aspects of the project from various partners, including from WRWC. SustainPVD allocated privately sourced funds for a new position at WRWC to be hired by WRWC in 2024 to oversee successful hub launches, operations, and sustainability. **Element 6 - Sound Management and Implementation** is built into the project design and workplan, also detailed in the activities/milestone chart and logic model, along with **Element 7 - Evaluation, Lessons Learned, and Replication of Best Practices** – a strategic goal with short- and long-term implications as the partnership rolls out the hubs, documents every step of the process, and replicates existing and new best practices emergent from previously completed and current Element undertakings. In brief:

- Multi-stakeholder partnership and leveraging capacity is the backbone of our project, already in place;
- An overall project Steering Committee, a Community Resilience Committee overseeing the Resilience Hub, and a community-run VECINA workgroup will add to the existing efforts of the NV/Campeones steering team to track progress and outcomes in accordance with dedicated plans, adjust and improve each component along the way as needed, and keep best practices up to date to ensure long term partnership and project success; and
- Formative and summative evaluation will be designed and conducted under the leadership of a dedicated FCF! Evaluation Team comprised of multi-stakeholder resident/organization leads, an REJC designee(s) acting as equity consultant, a Lead Evaluator TBD, hired through the connections of academic and EJ partners, additional analytical and design posts as needed from among the stakeholder community.

These oversight committees, collaboratively run, act together to ensure focused decisive action toward mutually agreed upon, measurable targets and goals without over burdening any one team or partner; and they bolster self-determination, social connection, and long-term success, essential to the resilience hub model. Finally, transferring results was a very successful aspect of the NV launch through our previously funded EJCPS project, and it remains an on-going endeavor in our EJ capacity-building efforts. Over each reporting period for this project, we will share opportunities to: 1) Present on methods, successes and lessons learned, 2) Participate in funder and partner learning

ED_016126_00000194-00008

networks, 3) Submit updates in newsletters, and 4) Respond to requests from outside our communities/region for information and work products related to the program, such as curriculum plans, modules, and models for resident leadership structure and compensation. We allocated funds in our budget to present the results of this project at one national conference. This will enable replication of our best practices, methods, and success.

e. Project Linkages –

This project supports **EPA Strategic Plan Goal 2, Objective 2.1 - Promote Environmental Justice and Civil Rights at the Federal, Tribal, State, and Local Levels** particularly as related to EPA's long-term Climate and Environmental Justice Objectives 1 and 2. In relation to Objective 1.2, our project takes place in, capacitates and empowers **"communities that are underserved and disproportionally at risk from climate change, to take action to anticipate, prepare for, adapt to, or recover from the impacts of climate change"** through the creation of resilience hubs that are specifically designed by residents, partners and stakeholders around this shared alignment. Related to Objective 2.2, our collaborative activities, and the shared resources we are developing for broad community deployment and use, seek to **"reduce disparities in environmental and public health conditions,"** in our case primarily but not exclusively by addressing flooding, poor river water quality, heat island and major storm events.

These issues also connect our project to the **qualified environmental issue identified in our Project Summary - Water**. The workplan centers on stormwater, flooding, resiliency and adaptation. Our project provides new shared community anchors to vulnerable residents and their community partners supported by multi-sector stakeholders. It empowers community leaders and new audiences to take decisive action toward long-term planning, mitigation, preparation, and emergency response.

f. Partner and Collaborate – Table 1. FCF! Partners can be found on pages 14-16 of this work plan.

Our project's lead partners and stakeholders, listed in **a. Project Summary** and **Table 1.**, represent Government, Academia, Community Development, Environmental Justice, and Grass Roots sectors. We are proud of the way that academic and government stakeholders come into this collaboration already recognizing resident voices as the leading voices in setting priorities and strategic direction. In the "Other Narrative Attachments" form, we submitted letters of commitment from six partners representing diverse stakeholder groups. Numerous additional partners, also represent the Workforce, Business and Arts sectors. For this project, we will have at least two subgrantees. We will develop MOUs with each and determine billing and reporting times and methods in compliance with applicable EPA requirements.

2. PROJECT ACTIVITIES / MILESTONE SCHEDULE / DETAILED BUDGET NARRATIVE:

a. Project Activities: This project builds on the success of several programs that provide cohorts of student and resident leaders from among the populations most impacted with the critical understanding and skills they need to make informed decisions, engage others and participate in and/or lead resilience efforts. WRWC's Environmental Leaders (EL) at The Met School, now in its eighth year, gives high school youth from underserved climate justice communities the opportunity to explore environmental concepts and become true change makers in the community. Youth participate in a year-long "Learn One, Do One, Teach One" program, where ELs use their interests, ingenuity, and lived experiences to investigate environmental and earth systems science and EJ issues, and then develop their passions and research into a community-based project. One project had students create a Story Map documenting and communicating community experiences with floods and sea-level rise in Olneyville, and the ongoing work we are doing to build climate resiliency in this vulnerable neighborhood. Another, by the very creative Allonna, had 4th grade students draw storm drain murals, and with the help of a college art student, she combined the work of three classes into three beautiful murals that were then painted by the students at Riverside Park. NV, now in its third year and run entirely by resident program graduates, engages frontline residents in delving into environmental justice, climate and public health where they live and amplifies their leadership and advocacy on these issues by connecting them to change makers and helping them gain roles on decision-making boards, commissions, and groups.

Ready for collaborative problem-solving opportunities, NV grads worked with WRWC to launch Campeones, to train resident leaders to become full partners in developing nature-based climate adaptation and clean water projects. Campeones participate side by side with WRWC using our Greening the Woonasquatucket River Greenway (GTG) projects as a curriculum. Now in its fifth year, GTG builds climate resilience using nature-based stormwater capture and treatment systems and streambank restoration along the Woonasquatucket

ED_016126_00000194-00009

River and its parks and multi-use trail. WRWC has built GI into the fabric of CP neighborhoods over the last eight years that we also use as a training tool. Our first GI showcase at a well-used local park adjacent to the river, Riverside Park, was created in 2014. We have built out five significant GI projects since then, and four more are in various stages of design to be implemented in 2023 to 2025. To impact frontline downstream flooding, we would need storage for five square miles of stormwater runoff - about 600 projects of a similar scope to our "Greening the Greenway" pilot project disbursed throughout the watershed. The Olneyville Resilience Hub is an ideal platform for championing opportunities and engaging others to join in catalyzing projects and investment for much more nature-based climate adaptation over the next decade to protect our collective future.

To bolster and solidify resident leadership, self-determination, power sharing and co-governance within a strong network of collaborating partners building resilience to extreme weather and climate change where they live, while also contributing to community health, social cohesion, and socio-economic equity, the FCF! project primarily focuses on creation of: 1)The **Olneyville Resilience Hub** to be located at the Joslin Community Center, and 2) **"VECINA,"** (Neighbor) an **online data and storytelling hub**. Primary activities include:

1. **Kickoff/Formation of Steering and Equity Evaluation Teams:** Partners meet to form project Steering and Equity Evaluation teams, sign MOUs as needed, clarify goals, steps and intended results, solidify alignment with Climate Justice Plan/Road Map, and finalize plans to launch FCF! hubs. Oversight teams and committees provide a sound platform for management, tracking, adjustment, evaluation and sharing results over the project period.
2. **NV/Campeones & GJZ Programs:** WRWC and REJC continue running resident and resident-led environmental/climate/EJ literacy and leadership programs targeting older youth and adults in disproportionately impacted frontline neighborhoods. These programs invest in empowered, climate literate community leaders who join and expand resilience and adaptation efforts through the FCF! hubs.
3. **Community Resilience Committee (CRC) Formation:** Olneyville Resilience Hub anchors – PEMA, WRWC and SustainPVD convene a Community Resilience Committee (CRC), and hold a work session to review facility and community needs assessments with new members, work together to create or refine protocols, agreements, performance standards, and set goals in relation to desired outputs and outcomes to ensure the needs and goals represented by each partner are equal drivers of hub outputs and function. The CRC will be based out of the Resilience Hub, and is comprised of community leaders and designees, who meet regularly – an agreed upon number of meetings per month – and work closely with the Resilience Hub Manager to develop a Resilience Hub Operations Manual, build/manage partnerships, identify unmet needs, conduct outreach, coordinate services and more.
4. **Resilience Hub Facility Upgrade:** SustainPVD, Joslin, PEMA and the CRC work together to upgrade the facility as needed using an agreed upon facility plan and set of services in preparation for launch.
5. **Resilience Hub Activation:** Following ribbon cutting, PEMA, WRWC, REJC, ONA, ONE NB and other partners that provide training and programs aligned with the Reslience Hub model and goals, and that conduct regular aligned community committee/workgroup meetings, move their trainings and programs, launch new trainings and programs, and join the project specific teams in conducting their business through the Hub. New partners, leaders, talent and volunteers are continuously informed about and welcomed into project learning/training opportunities, activities, collaborative management and oversight, over the project period to ensure capacity, resources, opportunity and results are equitable and widely dispersed across CP neighborhoods.
6. **VECINA Data Hub Development & Launch:** The Bates/MDJC and NV collaborators convene the VECINA workgroup bringing additional leaders and talent to the table to support this online and open-source tool **for Visualizing Environmental and Community Information for Neighborhood Advocacy – VECINA**. The work group conducts Beta testing, refines the user interface, content upload ease of use, and automatic data streams with resident feedback, develops engagement and Train-the-Trainer curriculum and plan, as facilitated by our Bates partners. They identify technical/administrator and video storytelling content creation trainers/helpers from among partner talent and networks and prepare for 2025 launch.
7. The work group will **engage residents in VECINA content development and use training,** including a much asked for Data Literacy for the People Who Most Need It series, with enrollment sourced through existing resident leader and partner networks, programs and alumni. This will prepare the community to deploy and share the tool widely following the 2025 VECINA launch.

ED_016126_00000194-00010

8. **Quarterly Team Meetings:** Steering, Equity Evaluation and Community Resilience Teams meet quarterly. Regular team meetings ensure the project design, trainings/activities/outputs, etc., capitalize continuously on opportunity/input over the project period to assure hubs meet learning, skill, engagement, impact goals/outcomes empowering leaders as resilience builders and agents of change in on-going EJ/resilience/adaptation organizing and action.
9. **Project Evaluation, Reporting and Sharing Results:** WRWC will work with committees to develop quarterly and final reports, evaluate all aspects of the project and share results.

b. Milestone Schedule: The table on pages 17-18 of this workplan reflects our milestones and timelines related to each of the above activities, using descriptive language and identifying additional Anticipated Products/Results when appropriate. The timelines primarily guide the first two project years. In our experience, acceleration is an accurate descriptor for the pace CP resident leaders are maintaining. Resident-led organizing, capacity and NV offshoots have dramatically outpaced WRWC's projections, administrative processes, and funding cycles, but not our commitment to frontline leadership, greenspace activation and resilience practice. In the words of Nuevas Voces and Campeones, Co-Facilitator, María José Gutiérrez, who completed NV in 2021, "I want to create ways to get into the systems of power!"

Table 2. FCF! Milestone Schedule can be found on pages 17 and 18 of this workplan.

c. Itemized Budget Sheet / Budget Narrative: See attached detailed budget in the "Other Attachment" portion of Narrative form.

3. ENVIRONMENTAL RESULTS – OUTPUTS, OUTCOMES, AND PERFORMANCE MEASURES (LOGIC MODEL)

a. Environmental Results (Logic Model) – Please see the attached Logic Model in the "Other Attachment" portion of Narrative form.

b. Performance Measurement Plan – Performance measurement will take place throughout the project period. WRWC will kick off the project with all project partners including already self-selected and new resident leaders. We will go over all desired outputs and outcomes, the workplan and current evaluation methods. From this initial meeting, we will create shortlists for the Steering and Evaluation Committees to assure project tracking, evaluation, and course corrections if needed. Each hub will also benefit from dedicated resident oversight councils that meet regularly. On a quarterly basis, prior to quarterly and final project reporting, the Steering Committee will meet to review progress, evaluate results to date, and make course correction recommendations as necessary. As described above, we will track project outputs and progress toward outcomes. We will track participation through sign-in and attendance sheets for oversight meetings, info sessions, tours, training and learning program enrollment and sessions, and through documentation and work products related to on the ground resilience building results. We will evaluate the overall program success through one-on-one evaluations with our resident and student leaders that participate in the oversight, training and project teams. We will record the evaluations electronically either through survey monkey or google forms to determine what was learned in trainings and what was created as outputs. Resident leadership of programs and trainings of the project ensures community comfort level with materials used, clarity of materials and any suggested changes for future work. Intention to continue as part of the committees/teams through hubs construction and launch, participation in next step decision making for neighborhood wide and/or watershed wide future projects, and feedback related to perceptions that their input truly made an impact in the results of the current actions will be used as additional indicators of authentic leadership and engagement of frontline voices.

To recap undertakings related to CPS Elements 4, 5, 6 and 7: a project Steering Committee, Community Resilience Committee, and a community-run VECINA workgroup will add to the efforts of the Nuevas Voces/Campeones steering team to track progress and outcomes in accordance with dedicated plans, adjust and improve components along the way, and keep best practices up to date to ensure long term success. Formative and summative evaluation will be led by the FCF! Evaluation Team with REJC serving as equity consultant, and a Lead Evaluator TBA. Oversight committees act together to ensure focused decisive action toward agreed upon, measurable targets and goal. Replicating success/transferring results will remain an on-going endeavor throughout the project period. Each report will feature the speaking, presentation, interview and article opportunities that engaged leader and partners in sharing information, methods and work products with interested parties.

ED_016126_00000194-00011

c. Sustainability Plan and Community Vision: The programs springboarding this project have wildly exceeded our expectations, in no small part due to the people who self-select to join them. NV quickly morphed into a new area of operations within WRWC with newly funded positions reserved for BIPOC bi-lingual residents. The community was ready and already full of leaders. What was missing was the opportunity. Leveraging capacity enabled this work to change lives and the shape of the organization. By year two, teams of graduates and bilingual staff fully took charge of the program, content, speakers, investigations, and very successful new initiatives emerging from the core. New focus, capacity and cultural drivers of our work opened new avenues for others to learn how to more effectively incorporate the needs and concerns of residents into their programming too. Residents soon learned about and developed a stake in a wider swath of opportunities, assets and leadership in city and civic life. Proof of concept happened quickly as NV grads took on new roles in the EJ and flood mitigation sectors. Rave reviews from partners, and requests to learn from our programs come from near and far. We predict this level of momentum and success will continue indefinitely until equity and justice are dispersed across our city.

4. PROGRAMMATIC CAPABILITY

a. Organizational Experience related to the proposed project and their infrastructure as it relates to their ability to successfully implement the proposed project: Since 2019, WRWC has invested in community capacity, organizing and technical skills for frontline residents to direct plans, projects and resources promoting climate resilience and "Buen Vivir" in their neighborhoods. "Buen Vivir" translates as rights to health, education, freedom, participation, and principles like dignity, gender equity, and social justice, towards - "the good life" - true well-being. With significant and impactful resident engagement leading the way on WRWC work described throughout this application, WRWC now has the talent, partnerships and momentum to turn the tide on equity and justice in this urban watershed. This proposal supports resident leadership as a lead-source environmental justice intervention and has mechanisms in place to ensure any resident of Olneyville, Manton and beyond, who wishes to join these efforts can do so regardless of any challenging circumstances in their life. Resident-led programs are conceived and delivered in partnership with REJC, CPO HEZ, ONA and other groups. WRWC enjoys strong and trusted connections with residents and partners, reflected by full enrollment in our program rosters year after year; sustaining multi-year partnerships with schools and community groups; growing resident attendance at tours, celebrations, etc. In resident programs, Social and active learning steeped in an equity praxis, primary language delivery and multi-year engagement connect residents to positions of power and new jobs.

b. Staff Experience / Qualifications of Project Manager (PM) - Why the PM and associated staff are qualified to undertake the project: Alicia Lehrer, WRWC's Executive Director and PM for the proposed project, has 25 years of nonprofit management experience and has successfully managed and completed work for dozens of grants, many of them through federal government agencies, including EPA. She is a water quality scientist, spearheaded nature-based climate adaptation pilots and the ongoing GTG program in Providence and Johnston and launched NV & Campeones. Rebekah Greenwald, serves both as WRWC's Grants Manager and as support to the Community Programs team that leads NV and Campeones. Rebekah has been with WRWC since 2018 and was Executive Director of RiverzEdge Arts, another RI non-profit for ten years. Rebekah co-developed and supported the NV program from its inception and will work with Alicia on assuring quality evaluation and reporting on all aspects of the project thanks to her more than 20 years of program evaluation and reporting experience. Jenny Mercado and Maria Jose Gutierrez graduated from the first NV cohort and distinguished themselves as leaders throughout the program. They are both community organizers in their own right working with their Nicaraguan and Bolivian communities respectively to help new immigrants from their home countries. They completed one year of NV program facilitation and built strong and trusting relationships with participants, delivering the program they helped to revise based on their own experiences. Through their leadership, they joined WRWC's staff and helped us develop the Campeones program as the natural next step.

Illustrating the PM's ties/historical connection to the community and the applicant organization: Alicia Lehrer, the PM, has led WRWC and worked extensively in the Olneyville neighborhood of Providence since 2008. Alicia received the 2020 Urban Waters Learning Network "Learning Network Signature Award," for commitment to improving the Woonasquatucket River and revitalizing the communities around it; and RI Clean Water Action's 2019 "Community Builder of the Year Environmental Champion Award." During her tenure, WRWC won four "Ovie" Awards (Olneyville neighborhood awards) for exemplary community programming and engagement. She has seen firsthand the impacts of severe flooding on homes, businesses and access to roads and parks. Ms. Lehrer is a long-standing representative to the CPO-HEZ and serves on the CP RoadMap Power Sharing Committee. She is a

ED_016126_00000194-00012

long-time member of the OC, a co-organizer of the Valley Visioning group, and a member of River Network's national Flooding and Equity cohort.

c. Expenditure of Awarded Grant Funds: The Woonasquatucket River Watershed Council has successfully managed and implemented many government, and specifically EPA, funded projects in the past. We maintain meticulous internal controls as guided by our Internal Control Memo updated in 2022 (available upon request). We track all grant expenditures separately using a QuickBooks bookkeeping system assigning both a customer (EPA in this case) and a class (Community Programs/Resilience Hub in this case) for each new grant. We manage dozens of grants simultaneously and have systems in place to expend funds and invoice in a timely manner. We bill out most of our grants quarterly and expect to do so for this one. For this project, we will have several subgrantees and at least one contractor. We will develop contracts or MOUs with each as appropriate and determine billing and reporting times and methods for each. We keep meticulous records of all grant expenditures on file for at least five years and keep our electronic bookkeeping files indefinitely.

5. PAST PERFORMANCE

WRWC has successfully completed, or is on track to successfully complete, the following EPA assistance agreements including meeting all reporting requirements and submission of acceptable final technical reports. Our experienced staff is a well-oiled machine in managing grants, tracking funding sources and producing results:

1. EPA Healthy Communities Grant Program HC-00A00989-0 for $30,000, awarded 10/01/2022: **Frontline Communities First! Residents Build Climate Resilience in the Woonasquatucket River Watershed.** The purpose of this grant is to build capacity of resident and student leaders in Olneyville, Manton, Rhode Island to develop and plan projects that address stormwater, sea level rise, poor water, habitat quality, urban heat island and riverbank erosion and scouring. This is the funding source that has allowed WRWC to kick off the Campeones program described above in c. above. Campeones is off to a great start, and we are on track for timely reporting, grant drawdowns and successful project completion in September 2023.
2. EPA Southeast New England Coastal Watershed Restoration Pilot Watersheds Program SE-00A00969-0 for $900,000, awarded 03/01/2022: **Turning the Tide in the Woonaquatucket River Watershed: Safe and Clean Waters, Environmental Justice and Climate Resilience, and Sustainable Funding.** As one of the first recipients of this new source of funding, WRWC is just completing year one of this six-year grant program. This project seeks to demonstrate solutions to the common challenge of restoration of an impaired urban watershed by incorporating solutions that offer social and economic benefits as well as protect and improve water quality and/or habitat. Overall, this award will allow WRWC to (1) better incorporate the community in planning and restoration activities, (2) provide opportunities for public training events, (3) continue monitoring our watershed, and (4) install nature-based stormwater control measures. WRWC and our grant managers are excited about progress and results in year one and WRWC is up to date on quarterly project funding drawdowns and semi-annual project reporting.
3. EPA Environmental Justice Collaborative Problems Solving EC-00A00720-0 for $120,000, awarded 10/01/2020: **New Voices at the Water Table: Leadership Development for Olneyville Youth and Residents**. This grant was successfully closed out with all grant funds expended and all reports and federal forms submitted. The previous EPA EJ CPS award helped WRWC build out and establish the NV program with amazing results. Thanks to this source, WRWC's engagement with BIPOC community members gained rapid momentum. We hired bilingual BIPOC staff for our Community Programs Director Position, graduated two cohorts of our NV Program, brought our two graduate program co-facilitators on staff and supported other graduates to serve on important committees and strong community organization boards, including our own. This proposal is built on the success of the accomplishments funded through this grant.
4. EPA Environmental Education Grant NE-00A00401-0 for $100,000, awarded 08/01/2019: **Bringing New Voices to the Water Table in Community-Based Environmental Education.** This grant was successfully closed out with all grant funds expended and all reports and federal forms submitted. This funding sources helped WRWC develop and kickoff our NV Program. Our middle and high school education programs helped create online storymaps we still use to train our NV participants about the industrial history and current threats of climate change in Olneyville. Students and project partners completely developed the NV curriculum and took it through successful graduation of our first cohort of residents.

Quality Assurance Project Plan (QAPP) Information: This project will not require a QAPP as it will involve only the use of existing environmental data.

ED_016126_00000194-00013

Table 1. FCF! Partners

Due to space limitations, we have listed here only partners with key project roles. Many others will sit on teams and support and give input to the project.

Partner	Stakeholder Group	Activities for which Partner is Responsible	Partner Resources & Vested Interest	How WRWC will Maintain Partnership
PEMA	Government	• Help convene/participate on Community Resilience Committee (CRC) • Oversee Resilience Hub Manager • Provide Emergency and Hazard Response Training • Facilitate formation of Community Emergency Response Team • Active participation on project Steering Committee	• Funding for training w/stipends for resident participation, and for PEMA coordinator to provide emergency and hazard response services, manage supply inventory, develop kits for Hub • Vested through Hazard Mitigation Plan, as Hub backbone/early proponent • Opportunity to effectively work w/disproportionately impaired, climate justice community	WRWC has long worked with PEMA. NV collaboration deepened this partnership. Olneyville Resilience Hub actively aligns missions. WRWC will maintain this partnership through ongoing training/preparation/response on the ground in Olneyville.
SustainPVD	Government	• Collaborate with PEMA and WRWC as Olneyville Resilience Hub backbones • Oversee Resilience Hub Manager in collaboration/consensus with PEMA and WRWC • Help convene/participate on CRC • Active participation on project Steering and Equity Evaluation Teams	• Funding from the Barr foundation for Resilience Hub Manager position for two years, and facility improvements, to increase supply of emergency/ hazard response materials/kits • Vested through mission, fulfillment of Climate Justice Plan and shared position supervised housed at WRWC	WRWC has worked closely with this office since it began in 2012. Our missions intersect so we will maintain our relationship by continuing to develop projects together and otherwise supporting each other's capacity and fulfillment of goals in line with our missions.
Bates College/ MDJC	Academia	• Continued facilitation of VECINA development, MDJC collaboration and student support of project success • Facilitate development of Train-the-Trainer sessions/curriculum • Foster local connections to math, data and justice champions for the Nuevas Voces leaders • Active virtual participation on project steering committee • Collaboration with Nuevas Voces to convene, train and support a community-run VECINA Workgroup	• Originator of collaboration with Nuevas Voces/WRWC • Stakeholder invested in project development/success from onset • Convener of MDJC • Staff time and course/student time as in-kind support • High-level provider of and connector to mathematics and data science communities, academic innovation labs, knowledge and expertise • Forerunner in applied mathematics and data science for social justice nationally	This partnership was formed by a connection made through the sister of our Bates lead, who had long worked with WRWC through positions at RI Department of Environmental Management and now at RIDOT. Many of the MJDC members have current or historic ties to Providence. NV/WRWC will maintain this partnership through to VECINA hand-off/project completion.

REJC	Environmental Justice Non-Profit	• Serve as the Racial and Environmental Equity Consultant • Help all partners/activities incorporate /model a race equity-centered praxis in all that we collaboratively do • Help form/oversee an Equity Evaluation Team • Continue jointly developing/ recruiting/delivering WRWC's NV, Campeones and EL, and REJC's GJZ Visioning/Cohort Programs • Cross-referrals to leadership and emergency trainings and placements	• Subgrantee • Co-founder of FCF! • Forum for connecting underserved populations in Providence to decision-making on EJ issues • Vested interest in empowering residents of EJ areas • Vested interest in pilot partnership with WRWC as "ally" or "kin" but not BIPOC or BIPOC majority led organization	REJC is and has been a subgrantee of WRWC on recent grants, and a partner on many. WRWC maintains this singularly important partnership through continuous adoption and improvement of anti-racist policies, practices, performance with specific targets/measurement. WRWC is currently engaged in shared development of equity/equity evaluation praxis in our frontline work that we are rolling out and measuring across our work.
ONA	Grassroots Non-Profit	• Sharing our long-standing credibility to spread reach/results of hub launches, leadership development, technical training, infrastructure projects • Encourage members to join in trainings, programs, workgroups, especially those neighborhoods situated in Woonasquatucket River flood zone • Share ONA opportunities like recent Driver License support for new residents training	• Subgrantee • Grassroots anchor for marginalized Spanish speaking residents, providing training, connecting them to legal help, health, other "buen vivir" support • Serves many of the same residents as WRWC – two NV grads on ONA staff • Has secured funds for EJ education • Mission is to empower residents of area	WRWC has worked with ONA for 25 years but ramped up our partnership through NV. WRWC maintains this partnership by helping ONA build back capacity and resources in any way they need and by listening to/learning from, centering, and handing off leadership to neighborhood residents as much as we possibly can, including by hiring them.
ONE NB	Community Development/ Affordable Housing	• Convene CPO HEZ/OC • Convene Road Map Resident Advisory Council and Pillar Work Groups • Connect residents to project through existing relationships and regular outreach • Promote resident leadership on councils/committees and participation in training and programs among HEZ/OC partners	• Paid staff time for outreach and connecting residents, HEZ/OC members to project • Sharing updates, resources, and strategies across common focus areas • Vested interest in healthy, safe Olneyville community.	ONE NB (and its predecessor, Olneyville Housing Corporation) and WRWC are one of the oldest and most effective partnerships in Olneyville. Housing and environment will always work together in Olneyville.
Groundwork RI	Workforce Development	• Provide technical GI training to Campeones/Hub programs/projects funded through other sources	• Staff time as subgrantee from other grant sources to provide training • Vested interest in improving Olneyville • Likely to utilize hubs in future work	WRWC and Groundwork have been collaborating for decades in EJ sector, through GIC, shared funding /projects, mutually supportive but not necessarily overlapping services/

		• Empower Latino EJ community workforce/collaborate to create living wage jobs • Partner when possible, on GI projects		programs. This is a high function, consistent, exemplar partnership.
Joslin Recreation Center	Community Center	• House Olneyville Resilience Hub • Participate on CRC • Work with Backbone Partners, Hub Coordinator, WRWC Community Programs Director to create dedicated community run space aligned with community vision/need, PEMA and SustainPVD requirements.	• Building and campus • Facilities management • Vested interest in expanding services to reach new target age groups and residents with diverse backgrounds • Vested interest in improving "buen vivir" for the thousands of youth come through their doors	WRWC has run in-school STEM education programs at William D'Abate Elementary School, connected to Joslin Rec Center for a a decade. Many NV/other resident leaders have children who attend. WRWC will maintain this partnership in tandem with other city agencies, and through community networks.
Innovation Labs at University of Chicago/IMSI and at Brown University/ ICERM	Academia	• Share project literature, stories, podcasts, articles, out to wider math/statistics/data academic communities • Share own role in early stages of project as innovative and successful social justice collaboration • Refer upcoming students and researchers to partners	• Connections with professors, students, and academic institutions • Vested as early and catalytic supporters of VECINA development • Welcomed Nuevas Voces frontline residents in winter and summer 2023 institutes as non-traditional but esteemed participants	Primarily NV partners, this relationship will be maintained through duration of the project under the leadership and organizing of Bates/MDJC. WRWC is profusely grateful for their generosity to the NV program and leaders.
Rhode Island Hispanic Chamber of Commerce	Business	• Connecting local businesses/members to hub resources, training, opportunity • Connecting Hub to community assets and resources • Outreach and promotion to members	• Network of businesses with concern about improving neighborhood condition, access to resources/ opportunity particularly related to starting/running successful businesses as effective strategy to higher income • Vested in reducing severe storms/flooding impact on businesses/commerce	WRWC is a member of this organization and has collaborated for many years on outreach and engagement to local Latine businesses and entrepreneurs. WRWC maintains partnership attending events, sharing opportunities, and a recent grant through Commerce RI that brings new customers to local businesses.

Other partners that will be involved in the project that we did not have space to describe fully include: The WaterFire Arts Center (arts/community space host), the Rhode Island Green Infrastructure coalition (cross-state collaborative that will engage with the hubs), CPO-HEZ (health), Valley Visioning Group (community development collaborative), United Way of Rhode Island (philanthropy and Olneyville property owner and resilience project partner).

Table 2. FCF! Milestone Schedule

Project Activities	Milestone(s)	Timeframe	Anticipated Products/Results
1. Partners meet to form project Steering and Equity Evaluation teams, sign MOUs, clarify goals, steps and intended results, solidify alignment with Climate Justice Plan/Road Map, and finalize plans to launch FCF! hubs.	• Partner project kick-off meeting held • Steering and Evaluation teams are formedform • MOUs are signed	November to December 2023	• Sound platform for management, tracking, adjustment, evaluation and sharing results over the project period. • Clear pathway to meet the program objectives and execute the project with agreed upon goals, steps and intended results. • Alignment with local and city-wide plans and frameworks to leverage collective impact.
2. WRWC and REJC continue running resident and resident-led environmental/climate/EJ literacy and leadership programs targeting older youth and adults in disproportionately impacted frontline neighborhoods.	• NV/Campeones & GJZ run according to each program's timeline and design • Target numbers of residents and students complete programs	October 2023 to September 2024 and each year thereafter May 2024 for EL @ The Met October 2024 for NV Año 3 TBD for Campeones and GJZ	• Investment in empowered, climate literate community leaders. • New leaders join and expand resilience and adaptation efforts through FCF! hubs. • 60 self-selected frontline community members prepare to make informed decisions, engage others and lead resilience efforts each year of the project period.
3. Olneyville Resilience Hub anchors convene the CRC and hold a work session to review facility and community needs assessments with new members, create or refine protocols, agreements, performance standards, and set goals in relation to desired outputs and outcomes.	• Community Resilience Committee Formed • CRC is comprised of community leaders and partner designees	January 2024	• PEMA, WRWC and SustainPVD work seamlessly as supported by residents and partners to ensure the needs and goals represented by each partner are equal drivers of hub outputs and function. • CRC/staff collaboration ensures residents inform creation of the Resilience Hub Operations Manual, build/manage partnerships, identify unmet needs, conduct outreach, coordinate services, etc.
4. SustainPVD, Joslin and PEMA work with the CRC to upgrade the facility using a plan created through participatory design.	• Resilience Hub facility is upgrade**d**	Upgrades completed by May 2025	• Agreed upon plan and set of services in preparation for Hub launch centers broad community voices/needs in tandem with emergency preparedness/response, resilience training, education and projects.
5. Following ribbon cutting, PEMA, WRWC, REJC, ONA, ONE NB and other partners, conduct aspects of their business through the Hub.	• Resilience Hub activated • Partners move training/ programs to Hub • New trainings/ programs are launched	Full activation by October 2025 continuing indefinitely	• New partners, leaders, talent and volunteers are continuously engaged. • Shared resources and opportunities engage larger numbers of residents and partners. • Collaborative management and oversight ensure capacity, resources, opportunity, and results are equitable and widely dispersed across CP neighborhoods. • Resilience and adaptation preparation and projects accelerated.

ED_016126_00000194-00017

6. VECINA Data Hub Development & Launch VECINA – Visualizing Environmental and Community Information for Neighborhood Advocacy	• MDJC and NV collaborators convene VECINA workgroup • Beta testing for user interface, content upload ease of use, and automatic data streams with • Train-the-Trainer curriculum delivered	January 2024 May/June 2024 July/August 2024	• Additional leaders/talent support this online open-source tool. • Technical maintenance and site administration is supported by trainers/helpers from among partner talent and networks. • Preparation for launch activities help to close digital divides and knowledge gaps and empower widespread tool use. • Workgroup is well-prepared to take over hosting and control of the site. • Training the trainers replicates NV success in rapid transition to residents leading, facilitating and teaching resident programs and trainings.
7. The work group engages residents in VECINA content development and use training, preparing the community to deploy and share the tool widely following the 2025 VECINA launch.	• Data Literacy for the People Who Most Need It series delivered • Trained trainers train peers to develop content and use tool • Tool Launch	June/July 2024 September 2024 to March 2025 April 2025	• Video storytelling is supported by trainers/helpers from among partner talent and networks. • Enrollment sourced through existing resident leader and partner networks, programs and alumni is another best practice replication. • Training the trainers expands reach broadly to residents and students in diverse settings. • Community-generated, curated content democratizes data use, problem identification and solving, while preserving the site as a resident riven discursive space.
8. Steering, Equity Evaluation and Community Resilience Teams meet at least quarterly or more frequently in accordance with their workplans	• Regular Team Meetings	October 2023 to September 2026 (throughout project period)	• Nimble projects and components able to capitalize on opportunity and input. • Capitalizing on opportunity and cross-pollination assure hubs meet learning, skill, engagement, impact goals. • Empowered leaders become resilience builders and agents of change predicated on decisive EJ, resilience, adaptation and organizing.
9. Project Evaluation, Reporting and Sharing Results:	• WRWC works with teams/committees to track, document, evaluate/ share results of all aspects of project • Quarterly and final reports and invoices submitted to EPA	October 2023 to September 2026 (throughout project period) Jan, April, July and October 2024 to January 2027	• Idea inspiration, replication of best practices, high visibility, and impact. • New shared tools and capacity for partners to communicate impact individually and collectively. • Project results shared with EPA in regular and timely manner. • Project funds expended in regular timely manner.

Internal Revenue Service

Department of the Treasury

35 Tillary St., Brooklyn, N.Y. 11201

District
Director

Date: JUL 14 1986

Maine People Resource Center
P.O. Box 2490
Augusta, ME 04330

Employer Identification Number:
22-2536108
Our Letter Dated:
April 1, 1985
Person to Contact:
D.M. Hamilton
Contact Telephone Number:
Ex. 6 Personal Privacy (PP)

Dear Applicant:

This modifies our letter of the above date in which we stated that you would be treated as an organization which is not a private foundation until the expiration of your advance ruling period.

Based on the information you submitted, we have determined that you are not a private foundation within the meaning of section 509(a) of the Internal Revenue Code, because you are an organization of the type described in section 509(a)(1) & 170(b)(1)(A)(vi). Your exempt status under section 501(c)(3) of the Code is still in effect.

Grantors and contributors may rely on this determination until the Internal Revenue Service publishes notice to the contrary. However, a grantor or a contributor may not rely on this determination if he or she was in part responsible for, or was aware of, the act or failure to act that resulted in your loss of section 170(b)(1)(A)(vi) status, or acquired knowledge that the Internal Revenue Service has given notice that you would be removed from classification as a section 170(b)(1)(A)(vi) organization.

Because this letter could help resolve any questions about your private foundation status, please keep it in your permanent records.

If you have any questions, please contact the person whose name and telephone number are shown in the heading of this letter.

Sincerely yours,

District Director

April 14, 2023

Alicia Lehrer, Executive Director
Woonasquatucket River Watershed Council (WRWC)
45 Eagle Street, Suite 202
Providence, RI 02909

Dear Alicia:

The Racial and Environmental Justice Committee is pleased to expand our Frontline Communities First! partnership with WRWC, along with the other committed and community partners working in Olneyville and Central Providence neighborhoods.

We believe the launch of resilience hubs and community resilience and oversight committees, the continuation of WRWC and REJC's effective EJ leadership and technical training programs, and our collaborative efforts to seed resident leadership across our sector will effectively enable residents and their partners to take decisive action to advance environmental justice aligned with the Just Providence Framework we helped to develop in The City of Providence Climate Justice Plan.

We look forward to working with the resident leaders and partners with the goals to increase community resilience. By ensuring frontline communities who will deal with extreme weather and climate change have sufficient environmental literacy, that cultivate individual's expertise based on their lived experience and offer a pathway to cooperative civic engagement.

Ensure all frontline Providence residents are equipped and empowered to take action affecting climate change in their community; build resilience to extreme weather and climate change in ways that contribute to community; health, social cohesion, and socio-economic equity; and Effectively center resident voices, visions and priorities as drivers accelerating resilience and adaptation to climate change.

REJC enthusiastically supports this innovative approach and shares the project goals, and we believe we have a unique role to play related to equitable development and problem solving.

As such, our commitment, bolstered by our existing MOU with WRWC now expanded as a subgrantee to include this project, we commit to serving as the Racial and Environmental Equity Consultant helping all partners and activities incorporate and model a race equity-centered praxis in all that we collaboratively do for the project.

In this role, we will help to form and oversee an equity evaluation team, we will continue jointly developing, recruiting and delivering your Nuevas Voces, Campeones and Environmental Leaders, and our Green Justice Zone Visioning and Cohort Programs, we will help populate your community resilience and oversight teams, new trainings offered by PEMA and SustainPVD and we will reserve spaces in our trainings for FCF! engaged leaders too.

In numerous critical ways these align closely with the goals of our work to create cross-sector equitable governance.

Sincerely,

April Brown

Re: WRWC Proposal – Frontline Communities First! Residents Build Climate Resilience in Providence, Rhode Island

Dear Alicia:

Olneyville Neighborhood Association (ONA) is pleased to submit this letter of commitment as a partner and subgrantee on Woonasquatucket River Watershed Council's (WRWC) proposed EJ Collaborative Problem Solving project – "Frontline Communities First! Residents Build Climate Resilience in Providence, RI."

Olneyville Neighborhood Association (ONA) began informally in the 1990's, housed out of a local church, as a forum for neighbors in one of Rhode Island's most marginalized barrios to address day-to-day living conditions. These leaders, primarily of Guatemalan, Puerto Rican, Dominican, and Mexican descent, realized outside forces were driving displacement by eliminating local jobs, raising housing prices, and creating a cultural war against immigrants and people of color, young and old. In 2005, new leaders led a challenging "rebirth" process as they clarified the organization's mission, vision, and organizing methods. ONA has created a vehicle for community members and allies to organize community defense initiatives and direct-action campaigns, with a particular focus on protecting and advancing the rights of undocumented immigrants.

Recently, in partnership with WRWC, Sierra Club, SustainPVD and other environmental and advocacy groups, ONA has taken action to get our members and allies engaged in climate resilience and justice efforts too, recognizing harms and hazards as a critical and on-going component of marginalization. ONA appreciates the ways WRWC is anchoring engagement of Olneyville residents, many of whom are our members, in leading resilience and adaptation, and the steps WRWC is taking to ensure residents take on greater and more engaged leadership throughout the opportunities WRWC provides. We are impressed with the programs and planned hub launches resident leaders are catalyzing, which we will also support through steering committee participation, member engagement and volunteer support.

As a subgrantee and primary partner on WRWC's FCF! project, ONA commits to sharing our long-standing credibility with families, other BIPOC organizations, and business owners in Olneyville Square - "mom & pop" shops - to help spread the reach and results of hub launches, leadership development and technical training, infrastructure projects catalyzed and completed with resident leadership at every stage, etc. Olneyville Square and portions of the resident neighborhoods we serve are situated in the Woonasquatucket River flood zone and are disproportionately affected by severe storms and flooding.

WRWC and the other FCF! partners can count on ONA also to ensure our members join in trainings and participate in all aspects of project and project component completion and success. We very much want our members know they have an important role to play in learning the issues, participating in training, planning, outreach, stewardship and other expressions of leadership and advocacy related to "buen vivir." By becoming part of the leadership for downstream resilience, we are protecting ourselves and our neighborhood's future. We look forward to working together with WRWC and the other partners on this much needed project.

Sincerely,

Yuselly Mendoza, Program Coordinator
Olneyville Neighborhood Association (ONA)
122 Manton Avenue, Unit 611
Providence, RI 02909

Re: Letter of Commitment to **Frontline Communities First! Resident Leaders Build Climate Resilience in Providence, RI** application to EPA's EJCPS Cooperative Agreement Program

Dear Alicia,

ONE Neighborhood Builders, on behalf of the Central Providence Opportunities Health Equity Zone (CPO-HEZ), is excited to support the Woonasquatucket River Watershed Council (WRWC) and the other lead and community partners, on your Frontline Communities First! project. We very much share your commitment to achieving intended results with residents leading the way.

As you may know, we recently rolled out our Central Providence Roadmap, the product of many years of work, engagement of a Resident Advisory Council and 45 community partners, and network-wide collaboration through CPO-HEZ. Using our Theory of Change and the collective impact model as a guide, the Roadmap outlines a path forward for CPO-HEZ and its Collaborative members. In collaboration with partners, we identified our shared visions, aspirational conditions, and the metrics we will track to understand our progress towards them. We express these as Pillars, guided by North Stars - ambitious yet achievable conditions - with strategies and tactics identified to achieve specific outcomes. These Pillars are meant to reflect the work currently happening in CPO-HEZ, as well as drive new strategies going forward.

Throughout the creation of the Roadmap, we benefitted from WRWC's participation in relation to PILLAR 3: BUILDING POWER AND CAPACITY, such as through local civic participation and other democratic structures. Community "power and capacity" refers to the resources, organizing, and influence required for residents to meet collective goals. WRWC's Nuevas Voces graduates on the work group brought forward a host of welcome strategy and tactic ideas now encompassed in the plan. We look forward to their continued involvement on this Working Group.

Our partnership with WRWC goes back to 2017, when we first worked together to canvass neighbors to learn what they knew about the history of neighborhood flooding and predicted climate issues. CPO-HEZ has become a model in Rhode Island and beyond for engaging and serving our communities by centering resident voices and prioritizing equity and justice so the

people most affected by health, economic and environmental disparities and harms have the greatest say in their solutions.

CPO-HEZ will continue to convene community residents and partners, sharing updates, resources, and strategies across common focus areas. When relevant, Frontline Communities First! opportunities, activities and results will be featured in our newsletters and monthly communications to our 40 partner organizations and hundreds of residents and local businesses. Our Resident Advisory Council monthly meetings, HEZ quarterly meetings and any participatory budgeting or other resident led processes will also provide regular forums for sharing needs, ideas, opportunities and important information emerging from programs and training.

Part of this communication to our partners will also include sharing opportunities for resident leadership on the Community Resilience Council, Vecinos Steering Committee, Equity Evaluation Team and other bodies that emerge as the project progresses out to all CPO-HEZ members to help build strong local coalitions prepared to advance environmental justice and civil rights and support the Climate Justice Plan.

Your proposed project is the right project for the right place at the right time and we look forward to our continued partnership.

Sincerely,

Jennifer Hawkins

PROVIDENCE EMERGENCY MANAGEMENT AGENCY

April 12, 2023

Alicia J. Lehrer, Executive Director
Woonasquatucket River Watershed Council (WRWC)
45 Eagle Street, Suite 202
Providence, RI 02909

Re: WRWC's **Frontline Communities First! Resident Leaders Build Climate Resilience in Providence, Rhode Island** application to EPA's EJCPS Cooperative Agreement Program

Dear Ms. Lehrer:

The Providence Emergency Management Agency (PEMA) is an enthusiastic partner with Woonasquatucket River Watershed Council (WRWC) and the other committed and community partners on your proposal to the EPA's Environmental Justice Collaborative Problem Solving project, Frontline Communities First!

Nothing is more important to PEMA than engaged, informed community members stepping up as leaders, especially in underserved and vulnerable climate justice communities. At PEMA we cannot do our job effectively without local leadership and input. The creation of resilience hubs is among the most effective means of accomplishing PEMA's goals. We could not be more thrilled and committed to the realization of the Olneyville Resilience Hub launch and process, which we first generated as an idea many years ago.

PEMA's Multi-Hazard Mitigation Plan identifies the frontline communities of Olneyville and Central Providence as high priorities for protection from the impacts of climate change, especially related to sea level rise, riverine flooding and extreme heat. In 2010 Olneyville was devastated by a major riverine flooding event that took multiple years and millions of dollars to complete recovery efforts. In coming years as climate change impacts increase, it is highly likely that the vulnerable community members of Olneyville and Central Providence will experience increasing risks from flooding and extreme heat. As a partner in previous WRWC frontline engagement and leadership programs, PEMA is well placed not only to alert residents about concerns like storms, extreme heat and other environmental hazards, but also to provide much needed services to residents, now housed in one well-equipped and well-sited location, with supportive programs, resources and outreach contributing to its success.

We enthusiastically share the goals of the project to activate residents of frontline Providence neighborhoods to become agents of change in and for their communities, to accelerate community resilience and adaptation to climate change in ways that align with PEMA's Multi-Hazard Mitigation Plan and the Providence Climate Justice Plan. PEMA's work must be equity centered because our most vulnerable and underserved community members will continue bearing disproportionate impacts from increasing climate change-related risks and hazards.

PEMA's commitment to Frontline Communities First! will feature:

- **Tri-Partite oversight of the Resilience Hub Manager** position with WRWC and SustainPVD, employed by and housed at WRWC with funding from SustainPVD.
- **Emergency and Hazard Response Training** – PEMA will work closely with resident resilience teams, WRWC and partners to provide Emergency and Hazard Response training and supplies to community residents and participants of Nuevas Voces, Campeones de Combate Climático, and the

Vecinos train-the-trainer programs. Training will be provided at the Resilience Hub site. Resident trainees will be compensated with stipends for their participation.

- **Oversight and training of a dedicated Community Emergency Response Team** through the Olneyville Resilience Hub comprised of residents who choose to train for, form and act as a cadre of volunteers engaging in recognized practices and standards to work with agencies and systems active during disasters to best meet the needs of their neighbors. Training covers: Disaster Preparedness, Fire Suppression, Medical Operations, Light Search and Rescue Operations, Psychology and Team Organization, and Disaster Simulation. PEMA will work with WRWC to provide translation and with project partners to secure additional and ongoing support for the team and its operations.
- **Active participation on project Steering and Equity Evaluation** oversight committees, meeting with the committees quarterly, coordinating internally to make sure we are offering the fullest staff and agency resources to Frontline Communities First! resident leadership with the partners, trainings, cohorts, actions and events, etc.

PEMA estimates $15,000 per year in in-kind staff time related to the above to support the outputs and desired outcomes of the project. We will remain committed to continue visiting with the cohort programs, training interested community members and inviting them to join our activities and exercises. Co-leadership and high levels of engagement with frontline residents is among our highest priorities. Together, we can collaboratively support and assist our residents in the greatest need when disasters occur.

We appreciate the opportunity to meet people where they live and incorporate their needs and priorities so PEMA can do our job to the best of our ability.

Sincerely,

Clara Decerbo, PhD, CEM

Director Providence Emergency Management Agency

MAYOR BRETT P. SMILEY

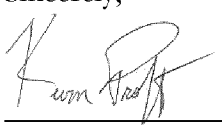
Re: WRWC's **Frontline Communities First! Resident Leaders Build Climate Resilience in Providence, Rhode Island** application to EPA's EJCPS Cooperative Agreement Program

Dear Alicia,

The City of Providence Department of Sustainability is proud to partner with the Woonasquatucket River Watershed Council (WRWC), Providence Emergency Management Agency (PEMA), the City's Department of Recreation, the Olneyville Neighborhood Association (ONA) and other community partners working collaboratively on the **Frontline Communities First!** project. This opportunity coincides with ongoing efforts by this coalition to launch the Olneyville Resilience Hub. If awarded, the project will help implement key strategies of the Providence Climate Justice Plan.

The Climate Justice Plan is the guiding document of the Department of Sustainability. It includes seven key objectives, 20+ targets, and over 50 strategies to create an equitable, low-carbon, climate resilient city, with a focus on addressing the concerns of frontline communities. The Community Health section of the Plan calls for the City to create a network of Resilience Hubs. As stated in the Plan;

> *Resilience Hubs are defined as: Community-serving facilities augmented to support residents and coordinate resources distribution and services before, during or after a natural hazard event. They leverage established, trusted, and community-managed facilities that are used year-round as neighborhood centers for community-building activities. Designed well, Resilience Hubs can equitably enhance community resilience while reducing GHG emissions and improving local quality of life. They are a smart local investment with the potential to reduce burden on local emergency response teams, improve access to health improvement initiatives, foster greater community cohesion, and increase the effectiveness of community-centered institutions and programs. Moreover, Resilience Hubs provide an opportunity to build local community power and leadership.*



As such, the Department of Sustainability commits Elder González Trejo, Sustainability Policy Associate, to assist WRWC's proposed project in the following ways:

- **Work to Establish the Olneyville Resilience Hub**. This includes fostering partnerships with local community assets to provide a variety of services before, during, and after environmental disruptions. Services may include public charging stations, educational programming, workforce development opportunities, emergency preparedness training, among others.
- **Hire and train a Resilience Hubs Manager.** Through funding from The Barr Foundation, the Department of Sustainability will hire a full-time Resilience Hubs Manager (2-year term). The position will operate out of WRWC. WRWC will co-facilitate the hiring process and co-manage their employment. The Resilience Hubs Manager will manage partnerships, services, community outreach, organize events, and work closely with site manager(s) and Community Resilience Committees (see below). This position will be supervised by the Department of Sustainability and PEMA.
- **Develop a Community Resilience Committee (CRC).** Funded in whole by this grant opportunity, the Community Resilience Committee (CRC) is based out of the Resilience Hub and will work closely with the Resilience Hubs Manager to develop a Resilience Hub Operations Manual, build/manage partnerships, identify community needs, conduct outreach, coordinate services and more. Community Resilience Committee members will be residents of the Resilience Hub's service area and will receive stipends for their work.

The Department of Sustainability will also participate in the project's Steering and Equity Evaluation Committees with WRWC and the other partners. This committee is aligned with the goals of the Collaborative Governance section of the Climate Justice Plan, which aims to ensure residents are engaged continuously with the City in co-leadership and power sharing, and that residents' voices have a meaningful impact on the work of their government.

We look forward to continuing our partnership to make the Olneyville neighborhood more environmentally and socially resilient in the years to come.

Sincerely,

Kevin Proft

Alicia J. Lehrer, Executive Director
Woonasquatucket River Watershed Council (WRWC)
45 Eagle Street, Suite 202
Providence, RI 02909

Re: WRWC's **Frontline Communities First! Resident Leaders Build Climate Resilience in Providence, Rhode Island** application to EPA's EJCPS Cooperative Agreement Program

Dear Ms. Lehrer:

The Mathematical and Data Justice Collaborative (MDJC) teams I have led at the National Science Foundation-funded Mathematics Institutes at Brown University (ICERM) and the University of Chicago (IMSI) have benefited tremendously from our partnership with Nuevas Voces and WRWC. We began collaborative conversations with WRWC and Nuevas Voces in the summer of 2022 at ICERM in Providence, RI. First, we asked the Nuevas Voces leaders "what case do you have to make over and over again to convince people your experience matters?" Their answer: There is a misnomer among those in Rhode Island that climate change is not a social justice issue, because it is a coastal flooding issue that only affects wealthy beach communities. However, some of the most severe flooding has been experienced along the Woonasquatucket Watershed in downtown Providence. This flooding is aggravated by increased frequency due to climate change and inadequate infrastructure investment. The experience of flooding impacts, however, needs the perceived legitimation of data for both policy makers and for people at risk.

In February 2023, at the end of our time at IMSI together in Chicago, we launched the first prototype stage of VECINA, an online and open source tool for Visualizing Environmental and Community Information for Neighborhood Advocacy. This tool meets a need at the intersection of the human-technology frontier, taking advantage of data aggregation work EPA's EJScreen has harnessed, but translated to meet place-based community needs and integrate community knowledge as a direct result of a participatory design process with Nuevas Voces and WRWC. Since the launch, the process of creating VECINA has taken center stage in a co-hosted podcast, a paper on data science for social justice work for mathematicians (in press), an invited paper (due in a few weeks), and multiple national talks.

In my mathematics and data science communities, there are so many researchers, including undergraduate and graduate students, who are interested in creating and pursuing new opportunities for data science and mathematics application to equity and justice. The MDJC-Nuevas Voces/WRWC co-development of VECINA is helping guide this new research community emerging in mathematics. Funding and support for developing the full potential of research-community partnerships is unfortunately rare in mathematics and computer science, but our experience here has already resulted in meaningful and innovative work that can serve to pave the path for others. The work we have completed to date in preparation to launch the new tool across Central Providence, and all that will entail over 2024 and beyond, makes us very proud. Out of this groundbreaking partnership and work, we enthusiastically commit to expanding and deepening our partnership through WRWC's EPA Environmental Justice Collaborative Problem Solving project, Frontline Communities First! VECINA is aligned with, and helped to inform, the overall project strategies and goals, and it syncs perfectly with the other partnership-driven Olneyville Resilience Hub launch.

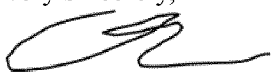
As I return from sabbatical at the mathematics institutes, I have been excited to imagine how I can continue to collaborate with WRWC and Nuevas Voces. I grew up just outside of Central Providence as the child of a Latino immigrant to the US, and the Hispanic community in Providence has always been a special part of the family that I grew up with. In addition, my own training has been in mathematical ecology, and before arriving at Bates I worked for nearly a decade at two environmental liberal arts schools in Maine. I specialized in training future environmental, wildlife, and life science professionals in the data, computational, and quantitative skills needed to understand climate change, manage our natural resources, and make a difference. Now at Bates College, my work also includes interdisciplinary and inclusive STEM education research and I teach digital and computational courses which seek to understand and critically interrogate the relationship between humans and technology. Nothing could be more important to Bates College than engaged collaboration with communities on projects with real world impact - especially in impaired and vulnerable climate justice neighborhoods. Last year, Bates committed funds to support Nuevas Voces community members' time at IMSI, and will again be committing funds for this upcoming summer's work and launch at ICERM. In addition, Bates College faculty recently voted to add two new general education requirements for graduation which focus on racism, colonialism, power, and privilege - one of which needs to be grounded in the students' major. Continuing my collaboration with WRWC and Nuevas Voces via my teaching of future mathematicians, computer scientists, and data scientists is not just of interest to the students, but now an imperative.

As the MDJC team is constructing back-end site development, community content and data feeds, we also have put together a roll out, ownership and maintenance plan for the new hub to assure its efficacy in enabling Nuevas Voces and other communities to use data to legitimize their experiences and drive decision-making and advocacy, and in relation to the practices involved in community-driven research with social justice impact. This is a relatively new field for the broader mathematical sciences community. This work is an opportunity to illustrate how mathematicians can work with interdisciplinary teams and with the community on local justice issues. Our research goals are:

- To explore how open-source technological tools developed in one community context might be adapted to other community contexts;
- To explore how community advocates want to leverage technological tools to both access the data they need and contribute the data they have collected; and
- To illustrate how mathematicians can responsibly and ethically work with local underserved and underinvested communities to help them achieve their goals around environmental and social justice.

With funding for continued collaboration through FCF!, on behalf of Bates College, I am committed to the following contributions to the project:

- Continued facilitation of VECINA development and collaboration with MDSJ through beta testing completion over the end of 2023 and Winter 2024 and lead a course-based student team at Bates College in fall 2023 to assist (DCS/MATH 316 Preparation for in Industrial Careers in Mathematics)
- Facilitating development of the Train-the-Trainer sessions/curriculum to implement Summer 2024 and lead a course-based student team in Winter 2024 to assist (GSS/DCS 3xx The Future of Work at the Human-Technology Frontier);
- Fostering local connections to math, data and justice champions for the Nuevas Voces team;
- Active virtual participation on the project steering committee with the other committed partners and community leaders that will meet every other month for the duration of the project.



- Collaboration with Nuevas Voces team leads to convene, train and support a community-run VECINA Committee that will oversee content development (videos, photos, stories) curation and upload, administration and maintenance. Our plan is to meet at the Olneyville Resilience Hub, where we ultimately hope to house the tool, once potential needs are assessed and upgrades in place through the adjacent Resilience Hub development process.

As a fluent Spanish speaker and Latina from Rhode Island, and a recognized national equity and justice advocacy leader in STEM higher education with a decade of experience in bringing together communities around online tools, I am well prepared to work with Central Providence residents to bring this online hub into full fruition over the next three years. My aim is to work with the project partners, committees and community leads to put policies, practices and protocols in place so that resident concerns like storms, extreme heat and transportation hazards remain at the forefront of deployment, and also that the community is well prepared to use, run and sustain the site so that their voices and stories can be lifted and heard. Any resident will be able to share strengths and opportunities - "fuerzas" - they identify, risks and challenges they want their neighbors to be aware of, and showcase solutions they are implementing to improve prospects and conditions where they live.

The power and empowerment provided by these shared resources is immense, from better connecting residents to much needed services and circles of support, to providing an innovative "one stop shop" directly connecting interested parties from outside the neighborhoods with resident knowledge, concerns and voices.

I estimate that these activities supporting residents to become agents of change in and for their communities to accelerate community resilience and adaptation to climate change, will total $50,000 per year in in-kind staff and student time on the project. We appreciate the opportunity to work with these superstars where they live, collaborating to empower their visions, voices and resources for the local good.

Very sincerely,

Nuevas Voces

Partnerships with mathematics for community advocacy, data agency, and environmental justice

Overview: The Mathematics and Data Justice Collaborative (MDJC) and Nuevas Voces are collaborating to support the development of a community-driven, data-driven advocacy tool. This tool will empower community leaders in low-income neighborhoods of Providence, Rhode Island to effectively advocate for their communities, particularly in the context of climate change, and tell their stories to encourage investment in their neighborhoods.

Simultaneously, the process of working towards social justice centering community partners helps MDJC develop and support a more equitable and ethical community of mathematicians interested in computation, modeling, and data science research. We propose to use this community-based action research as a case-study to document how mathematicians can responsibly engage in social justice research.

Background: Nuevas Voces is a environmental justice leadership program sponsored by the Woonasquatucket River Watershed Council (WRWC). The Woonasquatucket River was once the most dioxin-contaminated waterway in the country. Nuevas Voces provides cohort support for leaders from one of the hardest hit and unserved communities in the watershed - Olneyville. This is a neighborhood with a primarily rental base(the rental community is 84% BIPOC), and as an illustration, Nuevas Voces meetings are held in Spanish. This is in contrast to the East Providence neighborhood which encapsulates Brown University, up on a hill, across the bay, and is 83% White. Nuevas Voces are the leadership team, literally the “new voices” in Providence we should be actively working with and supporting.

Members of the MDJC gathered in Providence this summer to gain momentum building a research network. While there, we were introduced to WRWC and members of Nuevas Voces. We asked “what case do you have to make over and over again to convince people your experience matters?” Their answer: there is a misnomer among those in Rhode Island that climate change is not a social justice issue, because it is a coastal flooding issue that only affects wealthy beach communities. However, some of the most severe flooding has been experienced along the Woonasquatucket Watershed in downtown Providence. This flooding is aggravated by increased frequency due to climate change and inadequate infrastructure investment. The experience of flooding impacts, however, needs the perceived legitimation of data for policy makers.

We are bringing together the community expertise of Nuevas Voces and the data and technology expertise of the MDJC to co-create a community-driven, data-driven advocacy tool.

Project: The Nuevas Voces data advocacy tool will be developed through a participatory design process that engages community leaders in the design and testing of the tool. This will ensure that the tool meets the needs of Nuevas Voces and is usable and accessible. In this participatory research, developing a plan to create a data tool with Nuevas Voces, there are expected questions related to climate change and advocacy that this tool should address, such as: How do I know if my apartment is at risk for flooding? Who is the representative for my district if I have questions?

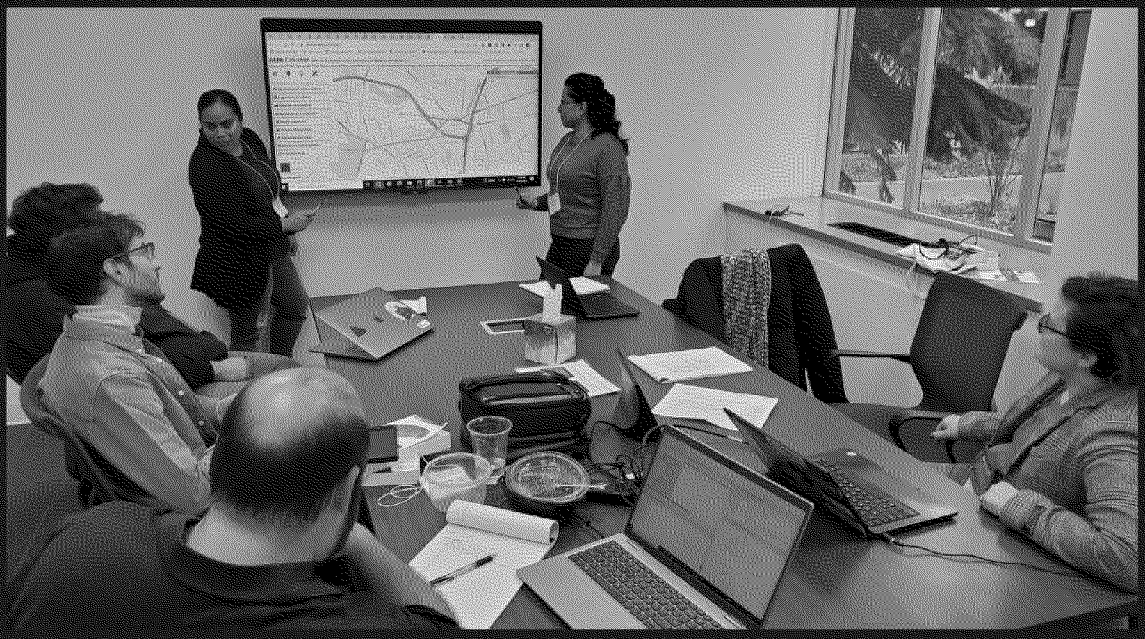
The advocacy tool will be developed through a participatory design process that engages community leaders in the design and testing of the tool. This will ensure that the tool meets the needs of Nuevas Voces and is usable and accessible. In this participatory research, developing a plan to create a data tool with Nuevas Voces, there are expected questions related to climate change and advocacy that this tool should address, such as: How do I know if my apartment is at risk for flooding? Who is the representative for my district if I have questions?

During our time at IMSI, we have already identified clear needs that are not available with existing tools. For example, Nuevas Voces knows the interface needs to be mobile-friendly and bilingual. They want the opportunity to share stories, such as a video of flooding in their neighborhood. They want to know resources for immigration and healthcare. Instead of information about schools being limited to the address and phone number, we are including state testing information about math and English language proficiency with respect to emerging multilingual students and English-speaking only students.

We are not advocating for funding a proliferation of tools, but for an investment in understanding the process of adopting other open source data and tools, customization, usability, and user communities. The WRWC is currently seeking funding to support the continuation and expansion of Nuevas Voces programming to include a training and capacity-building component to ensure that community leaders have the skills and knowledge needed to use the tool effectively and communicate the impact of climate change on their communities.

"I want to create ways to get into the systems of power"

MARIA JOSÉ
NUEVAS VOCES CO-FACILITATOR



ED_016126_00000196-00017

Research Impact

All tools will be freely available, continue to be open source (subject to the licensing requirements set forth by the authors), and available on GitHub. Any manuscripts will be posted to an archive server such as biorxv or arxiv and/or published Open Access. We will also consider other aspects of accessibility, such as mobile phone compliance, as well as open practices which respect data sovereignty and stewardship.

Overall our research goals are:

1. To explore how open source technological tools developed in one community context might be adapted to other community contexts;
2. To explore how community advocates want to leverage technological tools to both access the data they need and contribute the data they have collected; and
3. To illustrate how mathematicians can responsibly and ethically work with local underserved and underinvested communities to help them achieve their goals around environmental and social justice.

Social Impact

This project will have a significant impact on the ability of community leaders in low-income neighborhoods of Providence to advocate for their communities in the context of climate change and secure the resources and investments they need. By providing them with a data-driven advocacy tool and training, we will empower them to use data to tell their stories and make their voices heard in decision-making processes. This will lead to more effective advocacy, increased investment in low-income neighborhoods, and improved outcomes for residents, particularly in the context of climate change. Additionally, the project will provide community leaders with the tools and knowledge to improve the environment and access to safe recreation and education in their neighborhoods. Our hope is to enable Nuevas Voces and other communities to use data to legitimize their experiences and drive decision-making and advocacy.

WRWC

WOONASQUATUCKET RIVER
WATERSHED COUNCIL

Woonasquatucket River Watershed Council

WRWC believes watershed residents who live on the frontlines of the crises of ecology, economy, and democracy deserve to take a lead role in building justice and resilience in their neighborhoods. Frontline knowledge, voices, and decision making in planning and action are critical to effective and lasting change. Toward this end, WRWC houses and runs Nuevas Voces; an initiative led by staff and program graduates who are Spanish-speaking residents of impaired downriver neighborhoods.

The Initiative: Nuevas Voces is a program and a network that builds leadership and advocacy for environmental justice among the residents of Olneyville, Manton, and Hartford. These neighborhoods, near downtown Providence, RI, experience acute public health, stormwater, flooding, transportation, toxic exposure, and heat challenges. These challenges relate to climate change, the legacies of an industrial past, and segregation by design in city planning.

Nuevas Voces centers resident aspirations and concerns in co-governance with municipal and state agencies, and environmental coalitions and groups. Resident leaders work to ensure those most impacted have the greatest say in community development, resource allocation, and emergency preparedness at all levels, including in WRWC's work. Residents are compensated for their participation and on-going efforts, and provided additional supports such as childcare, Chromebooks, and hotspots to ensure even marginalized self-selected leaders can step up.

The Present: Nuevas Voces, now in its third year, consists of a 10-month resident-to-resident training and empowerment program delivered in Spanish, monthly community gatherings featuring guest speakers, and placement and on-going support for graduates in seats of advocacy and power. Participants now lead the program, sit on WRWC's board, and are compensated through WRWC to also sit on municipal and state agency commissions, committees, and boards. Examples of key placements include:

- Marisabel Ayala hired as Community Health Coordinator for Olneyville Neighborhood Association
- Elder González Trejo hired by SustainPVD the City of Providence's Sustainability Office
- Delia Rodriguez Masojan hired as Director of Family and Community Engagement for Providence Schools
- Yuselly Mendoza appointed to Policy Committee of Providence's Human Relations Commission
- Waleska Pinto appointed to Racial and Environmental Justice Committee's Olneyville Green Justice Zone Steering Team
- Miriam and Gloria Morales invited to serve on the Comité Directivo of Providence Tree Plan's Neighborhood Planting Program

The Future: Nuevas Voces is a successful springboard for expansion and replication. The following activities are already transitioning from planning to launch, pending sufficient funding:

1. Development of a community-driven data and advocacy tool in collaboration with The Mathematics and Data Justice Collaborative (MDJC). This tool will empower local leaders to advocate for their communities in the contexts of environmental and social justice. Residents can tell their stories to provide vital information to neighbors and encourage investment. Cohort members are excited to create videos in the languages most accessible to their neighbors and upload them to the site, which will also feature curated data streams made accessible to the people who need them most.
2. Scaling and formalizing collaborative program and community development in partnership with The Racial and Environmental Justice Committee (REJC) also targeting Providence's other Green Justice Zone, Lower South Providence. Lower South Providence is another transportation hotspot that is home to 95% BIPOC residents living along the city's toxic waterfront.
3. Bringing on a dedicated equity and outcome evaluation team to work with Nuevas Voces and the Green Justice Zones to design an evaluation process and present formative and summative findings in comprehensive reports. This is a critical next step to secure new and larger sources of funding.
4. Publishing our program frameworks, curricula, and evidence-based results, so others may replicate our programs and impact, while acknowledging WRWC and REJC as the sources of the model and methods. This creates a solid and possible fiscal foundation to sustain this partnership and work.

WRWC's mission is to create positive environmental, social, and economic change by revitalizing the Woonasquatucket River, its Greenway and its communities.

The Ask: WRWC is seeking funds in particular to support:

- Our collaborations with MDJC and REJC
- Full evaluation launch in collaboration with an equity evaluation consultant team
- On-going and/or sustaining funds for Nuevas Voces program and network expenses

Connecting to the Woonasquatucket River becomes routine, and yet another benefit of involvement in WRWC's work!

Title: Executive Director

II. Is the applicant currently receiving EPA Assistance? ☐ Yes ☒ No

III. List all pending civil rights lawsuits and administrative complaints filed under federal law against the applicant/recipient that allege discrimination based on race, color, national origin, sex, age, or disability. (Do not include employment complaints not covered by 40 C.F.R. Parts 5 and 7.)

None

IV. List all civil rights lawsuits and administrative complaints decided against the applicant/recipient within the last year that alleged discrimination based on race, color, national origin, sex, age, or disability and enclose a copy of all decisions. Please describe all corrective actions taken. (Do not include employment complaints not covered by 40 C.F.R. Parts 5 and 7.)

None

V. List all civil rights compliance reviews of the applicant/recipient conducted under federal nondiscrimination laws by any federal agency within the last two years and enclose a copy of the review and any decisions, orders, or agreements based on the review. Please describe any corrective action taken. (40 C.F.R. § 7.80(c)(3))

None

VI. Is the applicant requesting EPA assistance for new construction? If no, proceed to VII; if yes, answer (a) and/or (b) below.

☐ Yes ☒ No

a. If the grant is for new construction, will all new facilities or alterations to existing facilities be designed and constructed to be readily accessible to and usable by persons with disabilities? If yes, proceed to VII; if no, proceed to VI(b).

☐ Yes ☐ No

b. If the grant is for new construction and the new facilities or alterations to existing facilities will not be readily accessible to and usable by persons with disabilities, explain how a regulatory exception (40 C.F.R. 7.70) applies.

VII. **Does the applicant/recipient provide initial and continuing notice that it does not discriminate on the basis of race, color, national origin, sex, age, or disability in its program or activities? (40 C.F.R 5.140 and 7.95)** ☒ Yes ☐ No

a. **Do the methods of notice accommodate those with impaired vision or hearing?** ☒ Yes ☐ No

b. **Is the notice posted in a prominent place in the applicant's/recipient's website, in the offices or facilities or, for education programs and activities, in appropriate periodicals and other written communications?** ☒ Yes ☐ No

c. **Does the notice identify a designated civil rights coordinator?** ☒ Yes ☐ No

VIII. **Does the applicant/recipient maintain demographic data on the race, color, national origin, sex, age, or disability status of the population it serves? (40 C.F.R. 7.85(a))** ☐ Yes ☒ No

IX. **Does the applicant/recipient have a policy/procedure for providing meaningful access to services for persons with limited English proficiency? (Title VI, 40 C.F.R. Part 7, *Lau v Nichols* 414 U.S. (1974))** ☒ Yes ☐ No

X. **If the applicant is an education program or activity, or has 15 or more employees, has it designated an employee to coordinate its compliance with 40 C.F.R. Parts 5 and 7? Provide the name, title, position, mailing address, e-mail address, fax number, and telephone number of the designated coordinator.**

NA

XI. **If the applicant is an education program or activity, or has 15 or more employees, has it adopted grievance procedures that assure the prompt and fair resolution of complaints that allege a violation of 40 C.F.R. Parts 5 and 7? Provide a legal citation or applicant's/ recipient's website address for, or a copy of, the procedures.**

NA

For the Applicant/Recipient

I certify that the statements I have made on this form and all attachments thereto are true, accurate and complete. I acknowledge that any knowingly false or misleading statement may be punishable by fine or imprisonment or both under applicable law. I assure that I will fully comply with all applicable civil rights statutes and EPA regulations.

A. Signature of Authorized Official	B. Title of Authorized Official	C. Date
Renee Igo	Executive Director	04/13/2023

For the U.S. Environmental Protection Agency

I have reviewed the information provided by the applicant/recipient and hereby certify that the applicant/recipient has submitted all preaward compliance information required by 40 C.F.R. Parts 5 and 7; that based on the information submitted, this application satisfies the preaward provisions of 40 C.F.R. Parts 5 and 7; and that the applicant has given assurance that it will fully comply with all applicable civil rights statures and EPA regulations.

A. *Signature of Authorized EPA Official	B. Title of Authorized Official	C. Date

Instructions for EPA FORM 4700-4 (Rev. 04/2021)

General. Recipients of Federal financial assistance from the U.S. Environmental Protection Agency must comply with the following statutes and regulations.
Title VI of the Civil Rights Acts of 1964 provides that no person in the United States shall, on the grounds of race, color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. The Act goes on to explain that the statute shall not be construed to authorize action with respect to any employment practice of any employer, employment agency, or labor organization (except where the primary objective of the Federal financial assistance is to provide employment). Section 13 of the 1972 Amendments to the Federal Water Pollution Control Act provides that no person in the United States shall on the ground of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under the Federal Water Pollution Control Act, as amended. Employment discrimination on the basis of sex is prohibited in all such programs or activities. Section 504 of the Rehabilitation Act of 1973 provides that no otherwise qualified individual with a disability in the United States shall solely by reason of disability be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance. Employment discrimination on the basis of disability is prohibited in all such programs or activities. The Age Discrimination Act of 1975 provides that no person on the basis of age shall be excluded from participation under any program or activity receiving Federal financial assistance. Employment discrimination is not covered. Age discrimination in employment is prohibited by the Age Discrimination in Employment Act administered by the Equal Employment Opportunity Commission. Title IX of the Education Amendments of 1972 provides that no person in the United States on the basis of sex shall be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity receiving Federal financial assistance. Employment discrimination on the basis of sex is prohibited in all such education programs or activities. Note: an education program or activity is not limited to only those conducted by a formal institution. 40 C.F.R. Part 5 implements Title IX of the Education Amendments of 1972. 40 C.F.R. Part 7 implements Title VI of the Civil Rights Act of 1964, Section 13 of the 1972 Amendments to the Federal Water Pollution Control Act, and Section 504 of The Rehabilitation Act of 1973.

Items "Applicant" means any entity that files an application or unsolicited proposal or otherwise requests EPA assistance. 40 C.F.R. §§ 5.105, 7.25. "Recipient" means any State or its political subdivision, any instrumentality of a State or its political subdivision, any public or private agency, institution, organizations, or other entity, or any person to which Federal financial assistance is extended directly or through another recipient, including any successor, assignee, or transferee of a recipient, but excluding the ultimate beneficiary of the assistance. 40 C.F.R. §§ 5.105, 7.25. "Civil rights lawsuits and administrative complaints" means any lawsuit or administrative complaint alleging discrimination on the basis of race, color, national origin, sex, age, or disability pending or decided against the applicant and/or entity which actually benefits from the grant, but excluding employment complaints not covered by 40 C.F.R. Parts 5 and 7. For example, if a city is the named applicant but the grant will actually benefit the Department of Sewage, civil rights lawsuits involving both the city and the Department of Sewage should be listed. "Civil rights compliance review" means: any federal agency-initiated investigation of a particular aspect of the applicant's and/or recipient's programs or activities to determine compliance with the federal non-discrimination laws. Submit this form with the original and required copies of applications, requests for extensions, requests for increase of funds, etc. Updates of information are all that are required after the initial application submission. If any item is not relevant to the project for which assistance is requested, write "NA" for "Not Applicable." In the event applicant is uncertain about how to answer any questions, EPA program officials should be contacted for clarification.

1.0 PROGRAM OBJECTIVES

a. Project Summary Page

Project Title: Frontline-led clean energy career program for BIPOC job seekers
Project Location: Bangor, ME 04401; Lewiston-Auburn, ME 04240; Portland metro area, ME 04101; Indian Island, ME 04468; Searsport, ME 04974

Applicant Information: Maine People's Resource Center (MPRC), 565 Congress Street #200, Portland, ME 04101, Ex. 6 - Personal Privacy (PP)

Brief Description of the Applicant Organization: MPRC is building a community of Maine people, from all different backgrounds, who believe that we can live in a world where everyone has what they need, everyone contributes what they can, and nobody is left behind. For the past 39 years, MPRC has provided policy research, leadership development, training, coalition-building and other tools to empower everyday people to transform their communities.

Are you applying for the Small CBO Set Aside Track for $150,000 projects? No

Project Abstract: In the most rural state in America, MPRC believes poverty and increasing racial diversity can become a catalyst—not an obstacle--to achieving a just transition. Hungry for good-paying jobs, Mainers from all walks of life—particularly low-income Mainers of color—could create the workforce necessary to catapult our region into its clean energy future. To that end, three years ago MPRC co-founded the Maine Frontline Climate Formation, which brings together union, tribal, and immigrant leaders to engage frontline communities – those impacted first and worst by climate change – to craft solutions like this clean energy career program for BIPOC job seekers. This proposal outlines a community-led program to invest in the workforce development necessary to reduce greenhouse gas emissions and other air pollutants through clean energy projects. This project has a vision to (1) provide clean energy career pathways for marginalized populations in underserved communities (2) develop the leadership and skills of EJ communities to impact clean energy projects and (3) thereby ameliorate economic and health disparities and reduce adverse climate impacts and build climate resilience. This squarely falls into the first project category of "Community-led air and other pollution monitoring, prevention, and remediation, and investments in low- and zero-emission and resilient technologies and related infrastructure and workforce development that help reduce greenhouse gas emissions and other air pollutants."

Project Type(s): clean energy job training

Special Considerations: Maine is the most rural state in the nation. Apart from Portland, Maine (population 68,313), all of the areas where our project plans to do work are rural by the EPA definition and deserve special consideration, particularly Indian Island, a reservation in a rural area.

Environmental Issues: green jobs, greenhouse gas emissions, air pollution, climate resilience

List of Project Partners: Community Organizing Alliance (CBO), Gateway Community Services (CBO), Maine Community Integration (CBO), Maine AFL-CIO (labor organization), Maine Labor Climate Council (labor organization), Maine Youth for Climate Justice (CBO) and Penobscot Nation (tribal govt)

Will you need to develop a QAPP for your project? No

b. Environmental and Public Health information of the Underserved Community:

Our project aims to provide clean energy workforce development to cohorts of primarily BIPOC job seekers hailing from Bangor, Lewiston-Auburn, the Penobscot reservation on Indian Island, Greater Portland, and Searsport, Maine in order to build the skilled workforce necessary to meet Maine's goal of achieving carbon neutrality by 2045. These geographies were selected due to the significant BIPOC population who are currently disadvantaged in the workforce development arena (by lack of education, language barriers, etc.) and simultaneously face disproportionate environmental and public health impacts and risks associated with climate change. With our project, we can leverage what could be seen as deficits (poverty and hunger for good jobs) into assets so that those affected first and worst by climate change are at the forefront of building the clean energy economy in Maine and protecting Maine's buildings and infrastructure, vulnerable ecosystems, iconic species, and public health.

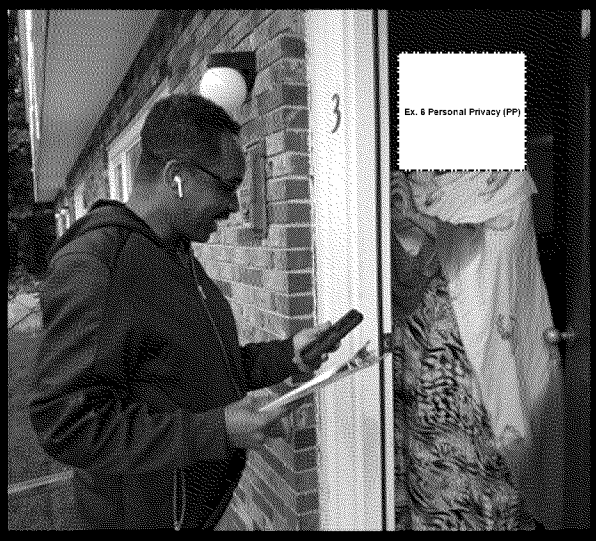
Geographically, our project will serve many census tracts that are overburdened and underserved according to the Climate and Economic Justice Screening Tool. Those census tracts include 23019000900, 23019000200, and 23019000600 in Bangor; 23001020200, 23001020300, 23001020100, 23001020400, and 23001020500 in Lewiston; 23001010300, 23001010100, and 23001010500 in Auburn; 23005000300, 23005000600, 23005000500, 23005002300, and 23005002700 in Greater Portland; 23019940000 the home of the Penobscot Nation on Indian Island; and 23027042000, 23009965300, and 23027047000 covering Searsport, Bucksport, Swanville and nearby towns. All of these tracts are considered low income according to the Climate and Economic Justice Screening Tool, as defined by people in households where income is less than or equal to twice the federal poverty level, not including students enrolled in higher ed. Overall rates of unemployment and underemployment in these tracts are higher than the state average and even higher among communities of color residing in these tracts. Our project will provide essential job training and wrap around services like transportation and childcare to equip residents with the skills they need to succeed in good paying clean energy jobs. Through participation in our project, EJ communities will build community resilience to climate change both through wealth accumulation as well as through the acquisition of leadership and organizational skills.

On top of being economically disadvantaged, the communities who dwell in the above census tracts are disproportionately burdened by environmental harms and risks. Cumulative effects of climate change – like increased air surface temperatures and increased extreme weather events – will have significant negative impacts on the health and wellbeing, economy, and infrastructure in the EJ communities served by our project. Tract 23027047000 covering Swanville and surrounding towns is a rural tract with an expected agricultural loss rate in the 98th percentile, average energy costs in the 93rd percentile, share of asthma in the 92nd percentile, and projected flood risk in the 70th percentile. Tract 23027042000 covering Searsport and surrounding towns is a rural coastal tract with energy costs in the 90th percentile and transportation barriers in the 97th percentile. The Searsport terminal is one of the largest ports for importing fossil fuels into Maine and maritime Canada. Tract 23009965300 covering Bucksport and surrounding towns is a rural tract with energy costs in the 95th percentile and

projected flood risk at the 51st percentile. The three Bangor census tracts we are focused on (all rural by EPA's definition) all have asthma rates above the 93rd percentile; one has flood risk at the 78th percentile and another at the 80th percentile; one has an expected building loss rate at the 84th percentile and another has expected agricultural loss rate at 96th percentile; and two have energy cost rates above the 92nd percentile. The Indian Island census tract, our rural tribal tract, has a projected flood risk in the 79th percentile, energy costs at the 96th percentile, and asthma in the 99th percentile. Of the seven census tracts in Lewiston-Auburn where we plan to focus (all rural by EPA's definition), six have significant flood risk ranging from 77th to 92nd percentile; five of seven have asthma rates ranging from 89th to 98th percentile; and five of seven have significant proximity to hazardous waste ranging from 79th to 93rd percentiles. Of the five census tracts in Greater Portland (the only non-rural tracts), all have asthma rates in the 91st percentile and above, several have significant flood risk and/or significant diesel particulate matter, and several have proximity to hazardous waste facilities and/or risk management plan facilities.

The EJ census tracts in and adjacent to the Searsport and Bangor areas bear particular strategic significance to the project's overlapping goals and the broader aim of GHG emissions reduction. Two sites within Searsport have been identified as the finalist locations for developing a first-of-its-kind, purpose-built offshore wind marshaling and manufacturing hub that, when fully operational, could serve floating offshore wind projects up and down the entire eastern seaboard. Serious workforce development and community organizing will be needed to address strong currents of opposition to siting the port and to meet the enormous needs for skilled labor associated with the buildout and operation of the port.

Our project will reduce environmental harms and risks, including flooding, asthma, and exposure to diesel particulate matter, experienced disproportionately by the above EJ communities as our work contributes to an expansion of clean energy projects, providing the workforce necessary to meet Maine's climate goals. Furthermore, as the workforce we train from the EJ communities attain good jobs and build wealth, the communities will have more resources and capacity to adapt to climate impacts that cannot be avoided.



This project focuses on BIPOC communities in Maine, and a majority of BIPOC Mainers live in the census tracts described above. Maine's median personal income is the lowest among New England states; from 2016-2020, the average incomes of BIPOC (Black, Indigenous, People of Color) and Latino or Hispanic Mainers remained 33% below white Mainers, dramatically short of full equity. BIPOC Mainers experience homelessness at a greater rate than those who are white (Black Mainers, for example, represent 19% of the homeless population in Maine, while only consisting of 1% of the state's total population).

The depth of these disparities, and their negative impacts on health, was evident with the onset of the pandemic in 2020, during which Maine experienced the largest disparity in COVID-19 cases in the nation. The percentage of BIPOC people in Maine who tested positive was 20 times the case rate for white people. Around the same time, a new Permanent Commission on the Status of Racial, Indigenous and Maine Tribal Populations began work to grapple with these

disparities and their impacts and to advise the legislature on policy interventions. Despite recent recognition of the scale of the problem, we have far to go in ending economic disparities for BIPOC people in Maine; for example, in the fourth quarter of 2022, the unemployment rate for Black Mainers was 6.2% (compared to 3.5% for white Mainers). The workforce investments that are part of this project can be a core part of a larger effort to address the structural drivers of these disparities in the state.

c. Organization's Historical Connection to Underserved Community: MPRC's mission for nearly four decades has been to empower Mainers impacted by injustice to lead efforts for change. Our offices are located in Bangor, Lewiston, and Portland, where we have a significant grassroots membership base, with a total of over 32,000 members statewide. We are engaging everyday people in Maine communities every single day. MPRC knocks doors every evening, holds 4-6 community events each month, and brings together community leaders from our various projects twice annually to learn together and plan for future MPRC programs. MPRC's leadership development curriculum is designed to help people from marginalized communities understand the unique power of their perspectives and stories, and to give them the tools to be effective advocates for their community's interests in local and statewide policy-making. MPRC's members have served as leaders in successful local and statewide efforts to expand health care access, reduce toxics use, create affordable housing, and increase the minimum wage.

MPRC Community Organizer Mohamed Ibrahim knocking doors in Lewiston, Maine

Through work on immigrant rights over the past decade, MPRC has built deep ties to Maine growing immigrant communities. MPRC's affordable housing and workforce policy campaigns have provided opportunities each year to grow the base of low-income volunteers who are providing leadership to the direction of our economic justice projects. A longtime ally of Maine's tribal nations, MPRC has worked fervently in recent years to support their efforts for the state of Maine to recognize their sovereignty. This EJCPS project is an extension of MPRC's long-term commitment to building the power of marginalized populations in Maine's economy and democracy.

In 2020, Rachel Ackoff from MPRC, Matt Schlobohm, the director of the Maine AFL-CIO, and Penobscot Nation Ambassador Maulian Dana, founded the Maine Frontline Climate Formation. Each project partner in the EJCPS proposal serves on the seven-member steering committee. The formation brings together impacted communities to listen, learn, and act together to achieve solutions for the intertwining crises of climate change, economic inequality, and racial injustice. Frontline communities are those impacted first and worst by climate change: tribes,

people of color, low-income Mainers, immigrants, youth, and workers including those in organized labor. Over the past three years, we have had success building equity and EJ considerations into clean energy workforce development and labor standards in Maine by engaging EJ communities in the policy-making process that led to LD 1969, "An Act Concerning Equity in Renewable Energy Projects and Workforce Development." This EJCPS project proposal represents the vision of those frontline communities whose leaders were directly involved in developing the current project plan and who make the formal decisions guiding the project through their seats on the Maine Frontline Climate Formation steering committee.

d. EJCPS Model

1. Issue identification, community vision, and strategic goal setting:

As organizations with deep ties to and constituencies in EJ communities, project partners named in this grant application have collaboratively strategized, envisioned, and begun acting towards a shared definition of climate challenges and solutions that are driven by working people and EJ community members. They have identified two intertwined opportunities and challenges: On the one hand, they see an explosion of clean energy projects – including solar, wind, and offshore wind and their associated infrastructure such as ports. These projects promise not only clean energy, but also vital economic development. On the other hand, frontline communities have limited capacity to meaningfully shape planning and permitting processes, unintentionally creating understandable (albeit avoidable) opposition to clean energy projects. Further, even when members of EJ communities *are* employed on local clean energy projects, there are often few provisions to ensure high job quality (robust training, safety standards, wages, benefits, and dignity). The Inflation Reduction Act's clean energy incentives – and particularly its incentives for development in EJ communities – has intensified both of these contradictory dynamics, raising the stakes for us to enact solutions at scale.

Workforce navigators assisted the over 60 BIPOC job seekers who attended our first Clean Energy Career Fair in March 2023

2. Community capacity-building and leadership development:

Some of the work is underway, while the rest will be accomplished throughout the grant period. Work already in progress includes three elements. First, the Maine Labor Climate Council conducted education and coalition-building among its affiliate unions – particularly in the building trades – to bring EJ community members into apprenticeship and pre-apprenticeship programs. Second, Maine Labor Climate Council unions have educated EJ

community organizations on clean energy union careers, and the financial and training resources available to support access to and success in these pathways. Third, partners hosted an inaugural clean energy career fair in early 2023, aimed at EJ community members. Over the course of this grant, future capacity-building will entail: (1) hosting public forums in accessible locations to educate EJ community members on upcoming projects and solicit their preferences on siting, operation, and community benefits (like local hiring); (2) training EJ community residents to act as spokespeople and deliver testimony in clean energy planning processes, like municipal planning board proceedings; (3) providing meeting notice and transportation to enable greater participation from EJ community members in formal project proceedings; and (4) training EJ community members to participate in negotiations with project developers (see Task 2.4 below).

3. Consensus building and dispute resolution:

In the last year, project partners have built strong consensus around (1) collaborating with Maine labor organizations to identify, recruit, and train members of EJ communities for clean energy careers, and (2) increasing EJ community capacity to influence clean energy projects' siting/permitting process to maximize benefits for EJ communities, overcome opposition to projects, and supply the clean energy sector with a highly skilled workforce. Partners have built a significant amount of cross-sector trust. They expect future work to continue deepening this trust. To realize the potential of these twin goals, however, consensus and some level of formal partnership must be built with developers of clean energy projects. Following from some of the capacity-building activities described in Step 2 above, project partners will facilitate the negotiation of Community Benefit Agreements (CBAs) and/or Community Workforce Agreements (CWAs) – which will ultimately be signed by project developers and EJ community groups – to codify and provide accountability for following through with negotiated commitments. CBAs and CWAs typically contain escalating provisions for dispute resolution, from informal mediation to binding arbitration in cases where greater accountability is required.

4. Multi-stakeholder partnerships and leveraging of resources:

Parallel, deep planning processes have led to the formation of the Maine Frontline Climate Formation and the Maine Labor Climate Council and the problem definition and vision articulated in the first two steps of the EJCPS (above). In addition to strategic planning, both coalitions have created governance structures to formalize membership, decision making, and other processes critical to effectively pursuing coalition work. Similar though less structured planning conversions have been had with the AFL-CIO, the Maine State Building and Construction Trades Council, and non-labor organizations who promote equity issues and who bring a tremendous amount of assets to the overall clean energy workforce development ecosystem. The assessment and action-planning activities named in this grant (below), coupled with the negotiation of CBAs and CWAs with developers of clean energy projects, will provide the requisite structure for leveraging resources and formalizing partnerships. Providing support in the form of wraparound services to EJ community members entering registered pre-

apprenticeship and apprenticeship programs – described below in Task 1.3 of the project activities – will leverage the State of Maine's existing Competitive Skills Scholarship Program, which provides up to $6,000 per year in grants to low-income individuals entering high-need occupations including all of those tied to clean energy development. Perhaps most significantly, this project leverages the already existing pre-apprenticeship and apprenticeship infrastructure – e.g., training programs and curricula, training facilities, relationships with contractors and project developers – of the affiliate unions of MLCC and the Maine State Building and Construction Trades Council. Registered apprenticeship programs provide an earn-while-you-learn pathway into high-quality careers in the trades through a structured, multi-year curriculum of classroom and on-the-job-learning supervised by experienced journey-workers. Registered pre-apprenticeship programs provide broad-based exposure and guaranteed placement into registered apprenticeship programs for populations historically or currently underrepresented in the trades, including members of EJ communities. Both apprenticeship and pre-apprenticeship programs are critical to producing a highly skilled renewable energy workforce at scale, and both will be leveraged for this project. We recognize that our project requires leveraging a variety of sources — existing and new, private and public, local, state, and federal funds – and we are poised to leverage all of those.

5. Constructive engagement by relevant stakeholders:

From municipal and county governments, partners anticipate building relationships and engaging their technical assistance with clean energy project siting and planning, including zoning laws and potential tax incentives where applicable, as well as engaging planning boards and city/town councils early in the process. In communities where significant opposition is anticipated for clean energy infrastructure (e.g., building out an offshore wind port), partners plan to educate and build alliances with supportive local business and other civil society organizations (e.g., Rotary clubs) who may carry considerable sway within the community and see economic benefits from a completed project. State government has a significant role to play in both project permitting and enforcement of labor and environmental laws, and partners expect to work closely with relevant state agencies as projects progress, leaning on them to enforce negotiated CBAs and/or CWAs.

6. Sound management and implementation:

Partner organizations involved in this proposal have a solid track record of developing and achieving ambitious strategic plans, and implementing them with work plans that create a coherent framework between goals, intermediate benchmarks, short-term actions, and a clear division of labor. For the proposed work, partners anticipate creating a shared work plan that flows from the goals, tasks, and timeline laid out below. The milestones described below have been designed to allow multiple, intermediate opportunities to both realize and celebrate successes, while creating space for formative evaluation, reflection, and adaptation.

7. Evaluation, lessons learned, and replication of best practices:

In addition to the holistic workforce development landscape assessment described in Task 1.5 below, partners plan on holding monthly project team meetings to discuss progress, plan for future tasks, and debrief past events. Tracking key metrics, described below in the logic model, along with qualitative assessments of progress and barriers to our goals, will be critical. Examples of the former include tracking EJ community member attendance at clean energy career fairs, enrollment in pre-apprenticeship or apprenticeship programs, graduation from those programs, and placements as journey workers. Examples include a holistic, qualitative assessment of where, why and how EJ community members succeed or encounter barriers to success throughout this trajectory, and utilization of these lessons-learned by growing, strengthening, and/or making changes to particular parts of the workforce development ecosystem.

e. Project Linkages:

This project clearly supports the EPA Strategic Plan Goal 2 of taking decision action to advance environmental justice and civil rights. The project accomplishes Objective 2.1 promoting EJ and civil rights at the tribal, state and local levels through work to ensure the benefits of economic growth in Maine's clean energy sector are equitably shared by underserved communities -- simultaneously (1) reducing environmental harms and risks to EJ communities through GHG and air pollution reductions and (2) building climate resilience through BIPOC wealth accumulation and training and leadership development of EJ community members. The project also meets the goal of "ensuring communities have the capacity they need to meaningfully engage government programs" through activities like engaging EJ community members with local planning processes around clean energy projects.

f. Partner and Collaboration:

Three years ago, MPRC co-founded the Maine Frontline Climate Formation, which brings together union, tribal, and immigrant leaders to engage frontline communities – those impacted first and worst by climate change – to craft solutions like this clean energy career program for BIPOC job seekers.

Community Organizing Alliance (COA) is a BIPOC-led CBO. COA will leverage their existing relationships with their BIPOC and low-income members to engage BIPOC job seekers in our frontline-led clean energy career program. One of the biggest challenges facing their members is the lack of employment for youth and people of color, especially immigrants and refugees. COA will also play a key role in our assessment of barriers facing BIPOC job seekers in the clean energy field in Maine and will contribute to an action plan to address them.

Gateway Community Services of Maine is a BIPOC-led CBO. Gateway will leverage their existing relationships to engage BIPOC job seekers in our frontline-led clean energy career program. Gateway's peer workforce navigator, Au-Lionne N. Agatako, originally from Kigali-Rwanda, understands how hard it can be for people, especially vulnerable populations, to secure good jobs. The frontline-led clean energy program will be a key way Gateway can

connect community members to good, quality jobs and education and training opportunities to promote career advancement and economic security. Gateway will also play a key role in our assessment of barriers facing BIPOC job seekers in the clean energy field in Maine and will contribute to an action plan to address them.

Maine Community Integration (MCI) is a BIPOC-led CBO. MCI will leverage their existing relationships to engage BIPOC job seekers in our frontline-led clean energy career program. MCI serves immigrants and refugees, many of whom have been driven from their homes by climate change. The immigrants and refugees MCI serves are seeking careers in their new home and many are inspired to tackle the climate crisis while making a livelihood. MCI will also play a key role in our assessment of barriers facing BIPOC job seekers in the clean energy field in Maine and will contribute to an action plan to address them.

The Maine AFL-CIO is the state's largest union organization representing the interests of some 180 labor organizations with more than 40,000 members. The surge of recent investment in solar and wind power and energy-efficient building construction has created a huge demand for skilled workers, and the members of the Maine AFL-CIO including Maine's Building Trades Unions are eager to train and hire new members. The Maine AFL-CIO's Apprenticeship, Workforce & Equity Director, Sam Boss, works in partnership with the Maine Building and Construction Trades Council and others to coordinate an equity focused pre-apprenticeship program. The frontline-led clean energy career fairs will directly feed into that program. The Maine AFL-CIO will also play a key role in implementing the recommendations in the action plan to address barriers facing BIPOC job seekers in the clean energy field in Maine.

Maine Labor Climate Council (MLCC) is a growing coalition of public and private sector labor unions working together to address the twin crises of climate change and broader inequality. MLCC staff plan to play a key role liaising with frontline community leaders and residents, labor organizations, and developers of clean energy projects. This will ensure meaningful participation of frontline communities in clean energy project siting/planning, and maximize project benefits for frontline communities–including employment. The MLCC will also play a key role in implementing the recommendations in the action plan to address barriers facing BIPOC job seekers in the clean energy field in Maine. MPRC is the fiscal sponsor of MLCC.

Penobscot Nation is a tribal government that has inhabited its ancestral homeland situated within the drainage area of the Penobscot River since time immemorial. The Penobscot Nation's Department of Education and Career Services can connect indigenous job seekers from amongst its 2,398 citizens, primarily residing on Indian Island, to the frontline-led clean energy career program. Penobscot citizens desire pathways to clean energy careers with family-sustaining wages and dignity in the workplace. Penobscot Nation will also play a key role in our assessment of barriers facing indigenous job seekers in the clean energy field in Maine and will contribute to an action plan to address them.

MPRC plans to make subawards to COA, Gateway, MCI, Maine AFL-CIO, and MLCC under this grant. These subawards will go towards personnel expenses to provide the necessary staff time to accomplish the project goals. The subawards will not be spent on participant support costs as outlined in EPA guidance.

MPRC has partnered with each of these partner organizations for three years in the Maine Frontline Climate Formation, where MPRC leads joint fundraising to ensure sustainable partnerships. Far beyond the length of this grant, there are plans for these groups to continue listening, learning, and acting together to solve the intertwining crises of climate change, economic inequality, and racial injustice.

2.0 Project Activities / Milestone Schedule / Detailed Budget Narrative

a. Project Activities

Goal 1: Pilot, assess, and make plans to scale a clean energy career program designed to identify, recruit, and place members of environmental justice communities into unionized clean energy career pathways -- specifically via union Registered Pre-apprenticeship and Registered Apprenticeship programs -- and support these individuals to thrive all along the way.

Task 1.1 Planning and implementing career fairs. Plan and organize 12 career fairs designed to expose members of EJ communities to union pre-apprentice and apprenticeship programs in unions that have substantial market share in clean energy sectors. Target demographics within EJ communities are those who are currently underrepresented in clean energy careers, including Black, Indigenous, and People of Color, and women. Union affiliates who work in clean energy sectors and who have Registered Apprenticeship programs include the Seafarers International Union and the twenty affiliates of the Maine State Building and Construction Trades Council, who also run the Union Construction Academy Registered Pre-apprenticeship program that places graduates into Registered Apprenticeship programs. Fairs will be conducted once per quarter over the duration of the grant period, with an attendance goal of 50-60 individuals per fair, and timed to coincide with the application process for participating apprenticeship and pre-apprenticeship programs. Fairs will be held at facilities operated by supporting community partners in Auburn/Lewiston, Bangor/Indian Island, greater Portland, and the Searsport area.

Task 1.2 Following through and ensuring participant placement. One-on-one follow-up with career fair attendees will be done to ensure participants can successfully navigate the application and placement process, whether they are pursuing the pre-apprenticeship route or going straight into an apprenticeship program.

Task 1.3 Helping participants access wraparound services. Several state and non-state programs exist to provide need-based financial and other wraparound services (e.g., childcare, transportation, learning materials, etc.) to individuals pursuing training in high-demand fields

such as clean energy. These include the Fund for Frontline Power's grant money to the Frontline Climate Coalition, the State of Maine's Competitive Skills Scholarship Program, and General Assistance. However, without help identifying these programs and navigating their application processes, these resources can be overlooked and underutilized, potentially placing barriers in the way of EJ community members succeeding in pre-apprenticeship and apprenticeship programs. In partnership with Peer Workforce Navigators, who are employed by Gateway Community Services Maine and the Maine AFL-CIO, we will maximize the amount of resources career fair attendees are able to access.
Milestone 1: First career fair completed, first cohort of career fair attendees placed into a registered pre-apprenticeship or apprenticeship program, and attendees who need them are successfully connected to support resources and/or wraparound services.

Task 1.4 Ensuring EJ participants' success in pre-apprenticeship and apprenticeship programs. Although a large body of data show that union careers broadly – and in the clean energy sector specifically – provide by far one of the most successful ways to close the gender and racial wealth gaps and ensure physical safety and dignity on the job, numerous barriers exist that can hinder the ability of individuals in EJ communities to complete Registered Apprenticeship programs and access these high-quality careers. Registered Pre-apprenticeship programs are specifically designed to help overcome some of these barriers (e.g., providing soft skills, entry-level certifications such as OSHA-10, and guaranteed placement), and accessing wraparound services additionally helps. However, based on prior experience with other known barriers, partners associated with this grant application will collaborate with Registered Apprenticeship programs and relevant State of Maine licensing entities (e.g., Maine Electricians Licencing Board) to provide language interpretation for English Language Learners, and translation assistance on any written tests.

Task 1.5 Workforce development landscape assessment. Near the end of Year 1 of the grant, the Frontline Climate Coalition will convene all project partners – including leadership from the Maine AFL-CIO, the Maine State Building and Construction Trades Council, Peer Workforce Navigators, Maine Labor Climate Council, and participating community partner organizations – for a full-day workshop to conduct a formative assessment of the clean energy career fair program, alongside an assessment of broader clean energy workforce development landscape. The core goals of the workshop will be to create an action plan for sustaining the work, consolidating strengths, addressing weaknesses, and covering gaps. For example, participants will rigorously explore where workforce development bottlenecks exist across the full arc of EJ community members' trajectory into and through careers, from initial program recruitment, capacity in pre-apprenticeship/apprenticeship programs, capacity of training facilities, journey worker ratios, and all the way through the number and reliability of job placements.
Milestone 2: Landscape assessment completed; EJ community workforce development strengths, weaknesses, opportunities, and gaps identified, and an action plan created. Completion of first four clean energy career fairs.

Task 1.6 Refinement and expansion. Following the assessment described in Task 1.6, project partners will revise and refine the clean energy career fair model, and expand it to additional EJ

communities in other geographies within our state, including Maine's federally recognized Tribes. Communities will include Bangor, ME 04401; Lewiston-Auburn, ME 04240; Portland metro area, ME 04101; Indian Island, ME 04468; and Searsport, ME 04974. We intend to hold one fair per quarter in conjunction for the recruitment period for cohorts entering the Union Construction Academy of Maine pre-apprenticeship program.

Task 1.7 Implementation of state-level policy supporting clean energy labor and equity provisions. Several pieces of legislation, such as LD 1969, "An Act Concerning Equity in Renewable Energy Projects and Workforce Development," have recently passed or are currently being considered by the Maine Legislature to build equity and EJ considerations into clean energy workforce development and labor standards. All legislation that is enacted into law must go through a public rule-making process before it can fully take effect. Rule-making can be a consequential process when it comes to day-to-day implementation and the overall impact of the legislation. Partners named in this proposal will work together to leverage our organizational capacities in any rule-making processes, both with respect to the substantive policy issues at play and with respect to supporting the involvement of EJ community members in the proceedings (e.g., providing training and travel assistance to enable testimony from EJ community members in a rule-making proceeding). Engaging in rule-making is *not* lobbying and is a permissible 501(c)3 activity.
Milestone 3: Rule-making finalized for previously passed legislation.
Milestone 4: Completion of second set of four clean energy fairs.
Milestone 6: Completion of third set of four clean energy fairs.

Goal 2: Add critical organizing capacity in environmental justice communities to maximize the clean energy and economic benefits they derive from clean energy projects.

Task 2.1 Hire a field organizer. Maine Labor Climate Council will hire a field organizer to work as a convener and liaison between civil society stakeholder groups and leadership of environmental justice communities, labor organizations and their (pre)apprenticeship programs, and developers of clean energy and energy efficiency projects sited in environmental justice communities.

Task 2.2 *Identify priority renewable energy projects in EJ communities early in the planning process*. Use existing state databases and permitting processes to identify early-stage clean energy projects planned for EJ communities on which members of EJ communities – including those attending clean energy career fairs and registered apprenticeship and pre-apprenticeship programs – could be employed.

Task 2.3 Identify clean energy project priorities from EJ community stakeholders. The organizer will provide additional capacity to increase community and labor participation in project planning, siting, and for identifying consensus-based community goals and benefits from projects, such as the hiring of local residents and investment that supports their participation in registered apprenticeship and pre-apprenticeship training programs. Specific added capacity for participation will include but not be limited to: (1) hosting public forums in accessible locations

to educate EJ community members on upcoming projects and solicit their preferences on siting, operation, and community benefits such as local hire; (2) training EJ community residents to act as informed community spokespeople and deliver testimony in formal clean energy planning processes, such as municipal planning board proceedings; (3) providing meeting notice and transportation (where appropriate) to enable greater participation from EJ community members in formal project proceedings; and (4) training EJ community members to participate in negotiations with project developers (see Task 2.4 below).

Task 2.4 Obtain commitments from project developers. To ensure community needs and priorities are realized, the Field Organizer will liaise with EJ community and labor organizations to provide critical capacity for negotiating and securing binding commitments from project developers in the form of community benefit and/or community workforce agreements.

Task 2.5 Build grassroots community support for projects. Following the successful negotiation of community agreements, the Field Organizer will mobilize grassroots support for the clean energy project(s) among the leadership and constituencies of EJ stakeholder communities. Grassroots mobilization may take the form of door-to-door canvassing, coordinated and supportive public comment in front of local or state permitting bodies, and other actions critical to clean energy projects actually getting built.

Milestone 5: Community benefits agreement or community workforce agreement completed and signed by all parties; project receives its final permits, including local approvals, and breaks ground.

Task 2.6 Provide accountability to ensure commitments are kept. Once projects break ground, the Field Organizer will continue to act as a liaison between EJ community stakeholder groups, labor organizations conducting project work, and project developers and contractors overseeing the clean energy project to provide public accountability for the latter following through on their community benefit and/or community workforce commitments.
Milestone 6: EJ community members are trained, hired onto local clean energy projects, and projects are completed.

c. Itemized Budget Sheet / Budget Narrative

See Attached Budget and Budget Justification

2.0 Environmental Results – Outputs, Outcomes, an Performance Measures (Logic Model)

a. Environmental Results (Logic Model)

See Attachment

b. Performance Measurement Plan

Program partners will meet monthly to report on progress and plan for upcoming project activities. Twice annually, we will organize longer in-person evaluation meetings, which will be preceded by circulation of a survey for program partners to summarize progress, successes, challenges, learnings and adaptations; individual responses will be compiled to inform areas of focus for ensuring project success. Partners will also survey all job-seekers involved in program activities to share their experiences with the program and suggest areas for improvement. Metrics to measure success will include an assessment of to what degree the project is meeting goals for:

- Percentages of job fair participants successfully applying for apprenticeship and pre-apprenticeship programs
- Number of individuals who successfully complete apprenticeship and pre-apprenticeship programs, and secure actual job placements
- Number of EJ community members engaged in local clean energy planning processes
- Number of EJ community members trained to participate in negotiations with project developers, and the strength of CBAs and CWAs that result
- Increasing the percentage of clean energy jobs held by EJ community members statewide
- Number of staff and EJ community members engaging in rule-making processes to implement clean energy and workforce development legislation that have EJ and equity provisions
- Dedicating project staff time in a way that effectively builds the capacity in partner organizations to sustain the work beyond the grant period

c. Sustainability Plan and Environmental Justice Integration

Once partners demonstrate project success, we will have a strong case to make to other funders. The Maine People's Resource Center Co-Directors have decades of experience in private foundation fundraising at MPRC, and MPRC has raised over $35 million in private foundation grants since its founding. Partners have a demonstrated history of securing funds for registered apprenticeship programs through the state budget process. Partners also have strong ties to the Permanent Commission on the Status of Racial, Indigenous and Maine Tribal Populations, and the Maine Climate Council, who could each recommend this use of state resources. Project labor agreements (PLAs), community benefit agreements (CBAs), and community workforce agreements (CWAs) are also proven mechanisms to secure on-going financial resources from project developers for registered apprenticeship and pre-apprenticeship programs. Finally, as partners successfully grow union market share and develop a proven track record of negotiating strong PLAs, CBAs, and CWAs, we expect these developer

investments to become an industry standard, not just in Maine, but nationwide. We recognize that our project requires leveraging a variety of sources — existing and new, private and public, local, state, and federal funds, and we intend to leverage all of those for maximum impact.

Beyond financial sustainability, our project will provide the knowledge, training, and leadership development to equip grassroots EJ leaders to continue the work on these issues. Our engagement with rule-making processes to ensure strong equity provisions in policies and programs that govern the clean energy economy in Maine will further solidify this work in Maine. And the commitments we will obtain from project developers will ensure the long-term success of this work beyond the grant period.

The project will further integrate environmental justice principles in government operations in Maine. Implementing these clean energy job training programs in underserved communities, under the leadership of the Maine labor community, will ensure that environmental justice concerns are integrated into ongoing job training programs. The proliferation of CBAs and CWAs with clean energy developers in Maine will further integrate environmental justice principles in hiring and training in the clean energy sector and will serve as a replicable model. Policies and regulations at the state level will further cement environmental justice principles in state and local rules governing the clean energy economy.

4.0 Programmatic Capability

a. Organizational Experience

For nearly 40 years, MPRC has worked with people from marginalized populations to develop their leadership and increase their agency in shaping systemic solutions to the injustices they face. Since MPRC's founding, it has worked with thousands of people of low income and BIPOC Mainers, from over 100 Maine towns, in both rural communities and urban centers. MPRC's community organizing program (led by seven full-time staff) works with people from vulnerable populations to understand their personal circumstances in the context of structural/societal failures, and to learn the skills to effectively advocate for changes in local, state and deferral policy. MPRC conducts regular training for community leaders to learn the drivers of inequity, and the specific policy levers for advancing racial equity. MPRC excels at bringing people together across lines of class and race to identify shared challenges and build solidarity around finding solutions. It evaluates its programs by the degree to which they build the power of marginalized populations to lead and win similar efforts in the future. In the past seven years, its largest programs engaged: low-wage workers in leading efforts for minimum wage reform and paid time off, homecare providers in advocating for improved access in-home care, Medicaid recipients in making the case for accepting federal funds to expand Maine's Medicaid program, and local residents with health impacts from mercury pollution in leading an effort to hold the polluter accountable. MPRC doesn't believe in advocating *for* the interests of vulnerable populations; instead, it works *with* people to become advocates in their own right.

b. Staff Experience / Qualifications of Project Manager (PM)

Rachel Ackoff has been MPRC Campaigns Director for five years. She co-founded the Maine Frontline Climate Formation, alongside the tribes and the unions, and her relationships with the individuals who serve on the steering committee continue to serve as a connective tissue for the formation. In her role at MPRC, Rachel focuses on coalition-building, project management, and strategic campaign planning. She has spent the past 15 years working for national, state, and local non-profit organizations. Rachel earned masters degrees in Nonprofit Management and Jewish Studies at New York University as a Wexner Fellow, Truman Scholar, and Lisa Goldberg Fellow. She earned a bachelor's degree in Political Science from Swarthmore College as a McCabe Scholar and Udall Scholar. Rachel first got involved with environmental justice as a high school student concerned about a carcinogen leaking into local drinking water, and her high school self would be very proud of the work she gets to do today.

Jennie Pirkl, MPRC Special Projects Coordinator, has worked with MPRC for thirteen years. With a Master's Degree in Social Work, Jennie worked for many years as MPRC's Organizing Director, supervising our community organizing team and providing leadership to MPRC's community engagement and leadership development programs. In 2018, Jennie received a national "Health Advocate of the Year" award from Families USA for her work empowering Medicaid recipients to provide leadership in the expansion of Medicaid coverage in Maine. As Special Projects Coordinator, Jennie now oversees the implementation of MPRC's grant-funded projects, helping to track project deliverables, budgets and data.

Mohamed Ibrahim has worked as a community organizer with Maine People's Resource Center since 2016, after several years serving as an MPRC volunteer community leader in the Lewiston/Auburn region. He came to America from Djibouti in 2012, and has spent the last decade working with members of Maine's immigrant communities on efforts for integration and empowerment. He speaks four languages and has strong relationships with immigrant leaders, especially in Androscoggin and Cumberland counties. His success in building relationships with immigrant leaders in Maine positions him well to recruit job seekers of color and immigrants to registered apprenticeships and union jobs in the green economy in Maine.

Sam Boss is an experienced educator and organizer who is committed to building partnerships that advance social and environmental justice. He joined the Maine AFL-CIO as the Apprenticeship and Workforce Equity Director in January of 2023, and in this capacity he is coordinating the Union Construction Academy pre-apprenticeship program, which provides hands-on training and multiple certifications that will help BIPOC individuals, women, formerly incarcerated individuals, people from rural areas, and other underrepresented groups as they enter Union jobs in building and construction. Before joining the Maine AFL-CIO, Sam spent fifteen years working in higher education. He served as the Associate Director of Community-Engaged Research and Learning at Bates College, co-creating projects that support student learning while addressing community-identified needs. He was also a lecturer at both Bates College and Brown University, where he earned his PhD in history in 2015. Sam serves as the Chair of the Auburn Conservation Commission and is also active with the Lewiston-Auburn Community Forest Board.

c. Expenditure of Awarded Grant Funds

Maine People's Resource Center has extensive experience managing grant spending. It uses QuickBooks to manage income and expenditures. The Bangor Savings Bank assists it with payroll. It contracts with an accountant at The Bottom Line who supports both budgeting and expenditures. The accountant and co-directors review both organizational and major project budgets on a bi-weekly and monthly basis. The co-directors approve all outgoing expenses, and credit card purchases require pre-approval. MPRC will use the timeline in the work plan to help ensure that we expend the funds in a timely manner.

5.0 Past Performance

MPRC has extensive experience in managing collaborative multi-organization private grants: MPRC has served as the fiscal manager for six multi-partner grants in the past three years, successfully coordinating organizational activities, budget tracking and grant reporting.
In 2021 MPRC received two federally-funded grants through Partners in Health and Public Health Institute to support its work engaging people from targeted populations, largely door-to-door, in conversations about the benefits of accessing COVID-19 vaccines. It met all project goals and reporting requirements.

Dear Applicant:

We are pleased to inform you that upon review of your application for tax exempt status we have determined that you are exempt from Federal income tax under section 501(c)(3) of the Internal Revenue Code. Contributions to you are deductible under section 170 of the Code. You are also qualified to receive tax deductible bequests, devises, transfers or gifts under section 2055, 2106 or 2522 of the Code. Because this letter could help resolve any questions regarding your exempt status, you should keep it in your permanent records.

Organizations exempt under section 501(c)(3) of the Code are further classified as either public charities or private foundations. We determined that you are a public charity under the Code section(s) listed in the heading of this letter.

For important information about your responsibilities as a tax-exempt organization, go to www.irs.gov/charities. Enter "4221-PC" in the search bar to view Publication 4221-PC, Compliance Guide for 501(c)(3) Public Charities, which describes your recordkeeping, reporting, and disclosure requirements.

Sincerely,

Tamera Ripperda

Re: EPA-R-OEJECR-OCS-23-01: ENVIRONMENTAL JUSTICE COLLABORATIVE PROBLEM-SOLVING (EJCPS) COOPERATIVE AGREEMENT PROGRAM

To whom it may concern,

On behalf of the Oxford Hills School District, please accept this letter of support for the Center for an Ecology-Based Economy's proposed project, Increasing Community Resilience Across Municipalities, Schools, and Public Land through Education, Planning and Technical Assistance, for the Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program.

CEBE and our district have a history of collaboration, from installation of solar powered EV chargers at the Oxford Hills Comprehensive High School to educator trainings on outdoor learning. Recently, CEBE has completed draft energy assessments of all of the district's buildings and transportation infrastructure and is developing a plan to transition our buildings to renewable energy and electrify our transportation fleets. Partnership on CEBE's proposed project will enable our district to begin implementation of these recommendations.

In partnering with CEBE on this project, our district will provide time during school board and committee meetings for school officials to learn more about the renewable energy options available and associated costs and benefits. The school board will offer a meeting space and their communications platform for sharing information with families, staff, and school board officials. The district will provide access to buildings and pertinent energy use information for use in reports on renewable energy, energy efficiency, and weatherization projects.

We look forward to continuing to explore options for our district's energy transition and setting an example for the region through collaboration with CEBE on this project.

Thank you,

Heather Manchester

April 4, 2023

Scott Vlaun, Executive Director
Center for an Ecology-Based Economy
447 Main St.
Norway, Maine 04268

Dear Scott,

Oxford County Soil & Water Conservation District is pleased to both support and work alongside CEBE as an actively participating community partner on your "Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program" Project here in Oxford County. As an agency dedicated to the conservation of natural resources, we have long recognized the value of healthy watersheds and forests in mitigating pollution and contributing to climate change resiliency. We are prepared to offer our assistance in providing information and expertise to help towns in the community increase their capacity to deal with climate change and develop climate change action plans, and help citizens better understand what they can do to increase the resiliency on the properties they own or manage.

As you know, CEBE and Oxford County SWCD are already working in partnership developing an Agroforestry and Climate Resiliency Demonstration project at the District's Tenmile River Demonstration Forest. This project centers around educating forestland owners about ways they can make their forestland more resilient to climate change, increase carbon sequestration and promote biodiversity. Since Oxford County is over 94% forested, with most of that land in private ownership, outreach and education for forestland owners and managers is vitally important. Our Demonstration Forest will be an excellent educational resource area to show ways that we can adapt our forestry practices to combat climate change and become more resilient.

Oxford County SWCD is well-positioned to provide outreach to Oxford County towns and communities about watershed protection. For decades we have worked with lake associations and watershed groups across the entire county addressing and mitigating non-point source pollution in USEPA funded 319 projects. By providing technical assistance and education programming, we help citizens better understand their role in protecting water quality and small towns address stormwater infrastructure improvements. We look forward to being able to expand the capacity to deliver informational resources and technical knowledge to encourage the wider use watershed protection practices in community climate action plans.

We look forward to working with CEBE on this project and are confident that together we can increase the capacity for climate change resiliency throughout our Oxford County community.

Sincerely,

Michele A. Windsor

Michele Windsor, OCSWCD District Manager

CONSERVATION - TECHNICAL ASSISTANCE – EDUCATION

All programs and activities of the Oxford County Soil & Water Conservation District are offered on a non-discriminatory basis without regard to race, ethnicity, color, national origin, religion, gender, age, sexual orientation, marital or family status, political belief, citizenship status, veteran's status or disability.

WESTERN FOOTHILLS LAND TRUST

April 12, 2023

U.S. Environmental Protection Agency
Office of Environmental Justice and External Civil Rights.

Re: EPA-R-OEJECR-OCS-23-01: ENVIRONMENTAL JUSTICE COLLABORATIVE PROBLEM-SOLVING (EJCPS) COOPERATIVE AGREEMENT PROGRAM

To Whom it May Concern:

The Western Foothills Land Trust (WFLT) is 36 years old and currently protects over 8000 acres of land in a ten-town region of western Maine. We believe that there is a relationship between the ill health of our human communities and the ill health of our earth's natural species and systems, and that reducing the gap between human and wild communities is necessary for rebalancing unhealthy lives and changing the trajectory of a warming climate.

WFLT works within two community-based partnerships, Maine West (MW) and Sebago Clean Waters (SCW). Both MW and SCW have developed online analytical mapping tools: MW values community health and recreation, working forest and farm landscapes in this region. The SCW mapper values water quality, fisheries values, wetlands, and connected forestlands.

Working together with the four area land trusts in the Sebago Lake watershed, we have evaluated our collective portfolio of conserved lands through the lens of TNC's Resilient and Connected Landscapes and other existing datasets. Conservation of these areas will contribute to carbon sequestration and support water quality and human community resilience.

The climate-informed conservation planning effort is a first step toward more fully integrating climate change into our organizations' work and into the planning and governance of our rural municipalities. Partnering with the Center for an Ecology Based Economy on the proposed project titled: "Increasing Community Resilience Across Public Land Through Education, Planning and Technical Assistance" will provide an opportunity to share our experience, knowledge and capacity with the committees, planning boards, and decision makers in our municipalities.

Roles and Responsibilities:

- WFLT will conduct presentations for area municipalities and landowners on the importance of identifying and protecting watersheds, rivers and streams, aquifers, significant natural habitats, and prime agricultural soils when developing land-based projects and managing forested lands.
- WFLT will share information resources and other expertise with municipalities within this project scope to help with land-based projects as they related watersheds, river and streams, aquifers, significant natural habitats, prime agricultural soils.
- WFLT will promote all workshops, webinars and other public events regarding this project to its members and networks.

Sincerely,

Lee Dassler
Executive Director

Western Foothills Land Trust — PO Box 107 Norway, ME 04268 — Ex. 6 - Personal Privacy (PP) — staff@wfltmaine.org

Town of Norway

Town Manager
Tax Collector
Town Clerk
Assessor
Public Works

Police Department
Fire Department
Code Enforcement
Sewer Department
Park & Recreation

To whom it may concern,

On behalf of the Town of Norway, please accept this letter of support for the Center for an Ecology-Based Economy's proposed project, *Increasing Community Resilience Across Municipalities, Schools, and Public Land through Education, Planning and Technical Assistance,* for the Environmental Justice Collaborative Problem-Solving Cooperative Agreement Program.

CEBE supported Norway in applying for our first community action grant, and they are now helping with implementation of a social vulnerability assessment, formation of a municipal climate committee, and applications for additional grants. We hope to continue this collaboration through resilience project implementation, development of a climate action plan, and incorporation of climate into our comprehensive plan.

In partnering with CEBE on this project, Norway will provide meeting space and help publicize public meetings to develop a town climate action plan. Norway's Climate Action Advisory Committee will coordinate with CEBE to complete the climate action plan and will work with the comprehensive planning committee and town manager to incorporate that plan into the comprehensive plan.

To help CEBE complete the proposed project activities, we will offer access to our mailing list and official communications channels to promote climate action plan engagement meetings. We will also offer the public meeting space at the town office. As the project progresses, we will make the following resources available to other towns in the region: templates and models for projects such as climate action plans specific to our rural inland towns, vulnerable population assessments, vulnerable infrastructure assessments, and landfill solar.

We look forward to continuing to build Norway's climate resilience, and that of the surrounding region through collaboration with CEBE on this project.

Dennis Lajoie

Town Manager

OMB Control No. 2030-0020
Approval expires 06/30/2024

Preaward Compliance Review Report for All Applicants and Recipients Requesting EPA Financial Assistance

Note: Read Instructions before completing form.

This collection of information is approved by OMB under the Paperwork Reduction Act, 44 U.S.C. 3501 et seq. (OMB Control No. 2030-0020). Responses to this collection of information are required to obtain an assistance agreement (40 CFR Part 30, 40 CFR Part 31, and 40 CFR Part 33 for awards made prior to December 26, 2014, and 2 CFR 200, 2 CFR 1500, and 40 CFR Part 33 for awards made after December 26, 2014). An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The public reporting and recordkeeping burden for this collection of information is estimated to be 0.5 hours per response. Send comments on the Agency's need for this information, the accuracy of the provided burden estimates and any suggested methods for minimizing respondent burden to the Regulatory Support Division Director, U.S. Environmental Protection Agency (2821T), 1200 Pennsylvania Ave., NW, Washington, D.C. 20460. Include the OMB control number in any correspondence. Do not send the completed form to this address.

I. A. Applicant/Recipient (Name, Address, City, State, Zip Code)

Name: Lunt Neighborhood Action Group

Address: Ex. 6 Personal Privacy (PP)

City: Greenfield

State: Massachusetts Zip Code: 01301

B. Unique Entity Identifier (UEI): WPLHYJKKJYD7

C. Applicant/Recipient Point of Contact

Name: Susan Worgaftik Phone: Ex. 6 - Personal Privacy (PP) Email: Ex. 6 Personal Privacy (PP)

Title: Vice President

II. Is the applicant currently receiving EPA Assistance? ☐ Yes ■ No

III. List all pending civil rights lawsuits and administrative complaints filed under federal law against the applicant/recipient that allege discrimination based on race, color, national origin, sex, age, or disability. (Do not include employment complaints, unless covered by 40 C.F.R. Parts 5 and 7.)

None

IV. List all civil rights lawsuits and administrative complaints decided against the applicant/recipient within the last year that alleged discrimination under federal law based on race, color, national origin, sex, age, or disability and enclose a copy of all decisions. Please describe all corrective actions taken. (Do not include employment complaints, unless covered by 40 C.F.R. Parts 5 and 7.)

None

V. List all civil rights compliance reviews of the applicant/recipient conducted under federal nondiscrimination laws by any federal agency within the last two years and enclose a copy of the review and any decisions, orders, or agreements based on the review. Please describe any corrective action taken. (40 C.F.R. § 7.80(c)(3))

None

VI. Is the applicant requesting EPA assistance for new construction? If no, proceed to VII; if yes, answer (a) and/or (b) below.

☐ Yes ■ No

a. If the grant is for new construction, will all new facilities or alterations to existing facilities be designed and constructed to be readily accessible to and usable by persons with disabilities? If yes, proceed to VII; if no, proceed to VI(b).

☐ Yes ☐ No

b. If the grant is for new construction and the new facilities or alterations to existing facilities will not be readily accessible to and usable by persons with disabilities, explain how a regulatory exception (40 C.F.R. 7.70) applies.

VII. Does the applicant/recipient provide initial and continuing notice that it does not discriminate on the basis of race, color, national origin, sex, age, or disability in its program or activities? (40 C.F.R 5.140 and 7.95) ☐ Yes ■ No

a. Do the methods of notice accommodate those with impaired vision or hearing? ☐ Yes ■ No

b. Is the notice posted in a prominent place on the applicant's/recipient's website, in the offices or facilities or, for education programs and activities, in appropriate periodicals and other written communications? ☐ Yes ■ No

c. Does the notice identify a designated civil rights coordinator? ☐ Yes ■ No

VIII. **Does the applicant/recipient maintain demographic data on the race, color, national origin, sex, age, or disability status of the population it serves? (40 C.F.R. 7.85(a))** ☐ Yes ☒ No

IX. **Does the applicant/recipient have a policy/procedure for providing meaningful access to services for persons with limited English proficiency? (Title VI, 40 C.F.R. Part 7, *Lau v Nichols* 414 U.S. 563 (1974))** ☐ Yes ☒ No

X. **If the applicant is an education program or activity, or has 15 or more employees, has it designated an employee to coordinate its compliance with 40 C.F.R. Parts 5 and 7? Provide the name, title, position, mailing address, e-mail address, fax number, and telephone number of the designated coordinator.**

N/A

XI. **If the applicant is an education program or activity, or has 15 or more employees, has it adopted grievance procedures that assure the prompt and fair resolution of complaints that allege a violation of 40 C.F.R. Parts 5 and 7? Provide a legal citation or applicant's/ recipient's website address for, or a copy of, the procedures.**

N/A

For the Applicant/Recipient

I certify that the statements I have made on this form and all attachments thereto are true, accurate and complete. I acknowledge that any knowingly false or misleading statement may be punishable by fine or imprisonment or both under applicable law. I assure that I will fully comply with all applicable civil rights statutes and EPA regulations.

A. Signature of Authorized Official	B. Title of Authorized Official	C. Date
Susan Wagstaffe	Vice President	4/7/2023

For the U.S. Environmental Protection Agency

I have reviewed the information provided by the applicant/recipient and hereby certify that the applicant/recipient has submitted all preaward compliance information required by 40 C.F.R. Parts 5 and 7; that based on the information submitted, this application satisfies the preaward provisions of 40 C.F.R. Parts 5 and 7; and that the applicant has given assurance that it will fully comply with all applicable civil rights statutes and EPA regulations.

A. Signature of Authorized EPA Official	B. Title of Authorized Official	C. Date

1.0 PROGRAM OBJECTIVES

a. Project Summary Page

i) **Project Title:** Lunt Neighborhood Epidemiological Study and Action Plan

ii) **Project Location:** Residential Neighborhoods surrounding the former Lunt Silversmiths at 298 Federal Street, Greenfield, Massachusetts 01301

iii) **Applicant Contact:** Susan Worgaftik, Lunt Neighborhood Action Group, Ex. 6 Personal Privacy (PP) Ex. 6 Personal Privacy (PP) Greenfield, MA 01301; email: Ex. 6 Personal Privacy (PP); phone: Ex. 6 Personal Privacy (PP) cell: Ex. 6 - Personal Privacy (PP)

iv) **Brief Description of Applicant Organization:** The Lunt Neighborhood Action Group (LNAG) formed as a subset of the 115-member Public Involvement Plan (PIP) petitioners who asked the Massachusetts Department of Environmental Protection for an environmental audit of the former Lunt Silversmith site. PIP members recognized a need for an organizational structure to act as a steering committee, to hold regular meetings, and to formulate a campaign to address the Lunt contamination and provide regular community communication.

v) **Are you applying for the Small CBO Set Aside?** Yes, see attached

vi) **Project Abstract:** The Lunt Neighborhood Epidemiological Study and Action Plan is designed to do four things: Investigate the likelihood of serious disease emanating from the Lunt contamination site into the community surrounding it; educate the target community about what has been found in the study; support community residents who need medical testing to determine if they need treatment; and educate other communities about the methodology and findings of the Lunt study for their use.

vii) **Project Types:** Toxics Contamination Assessment and Monitoring, Public Education, Action Plan

viii. **Special Considerations:** Rural Areas, Health Impact Assessments

ix. **Environmental Issue:** Toxic Contamination

x. **Project Partners:** Greenfield Health Department
Valley Medical Group
Community Health Center of Franklin County
Slingshot
Franklin Regional Council of Governments

xi. **QAPP :** Yes

b. Environmental and Public Health Information of the Underserved Community

With a population of 17,456, Greenfield is the largest municipality in rural Franklin County, Massachusetts. At the confluence of four rivers, Greenfield combined farming in the outskirts of town with tool and die and silversmith manufacturing in the downtown area from the industrial revolution until the 1950's. Most of these small manufacturers are now gone. Lunt Silversmith closed its doors in 2009, leaving behind toxic TCE in the ground below its buildings as well as unpaid taxes. In 2010, with the possibility of redevelopment on the horizon, Greenfield endeavored to clean up the site with an EPA grant. In 2013, residents of the

streets surrounding the Lunt site were told that the clean-up had been completed and all was well. In 2021, as the city administration determined that it was time to sell the site to a developer. The residents learned that it was likely that the site had not been adequately cleaned. They demanded a full analysis and appropriate clean-up to take place.

This proposal requests an epidemiological study, health education program and follow-up plan to augment our efforts to clean up the Lunt Silversmith toxic waste site at 298 Federal Street, Greenfield, MA. The disposal site is called the "Former Lunt Silversmith", RTN 1-18869, it is located within an approximately 11 acre area, and with the exception of a small portion owned by a developer. The property is owned by the City of Greenfield, and is bounded by Federal Street (east), Kenwood Street (south), Davis Street (west), and Norwood Street (north). This site is located in a densely developed portion of the City of Greenfield, approximately 1-mile north of downtown. The Lunt site is surrounded on three sides by occupied residential dwellings. There are mostly commercial businesses to the east along Federal Street. A little over half of the western part of the site, which includes land that was formerly dedicated to industrial operations, is currently occupied by three baseball fields actively used by the Greenfield Minor League, a youth league. The eastern half of the site is composed of a complex of brick buildings where most of the industrial fabricating and manufacturing occurred. Some factory buildings were demolished, but most were renovated, and are currently housing The Northern Hope Center/Franklin Recovery Center, run by Behavioral Health Network (BHN) as a residential substance-abuse treatment facility. The BHN operation includes an on-site pharmacy for medically-supported detox and withdrawal treatment. Some building space is occupied by Clinical Support Options (CSO) who operates an Emergency Crisis Stabilization and Respite Center which includes residential treatment. Another portion houses an office of the Massachusetts Department of Transitional Assistance (DTA).

The community surrounding the Lunt site has a population which is 13% over the age of 65 and 7% under the age of 5, with 23% under the age of 18. 43% of the adult residents of this area have a high school diploma or less education. 42% of the households have incomes of less than $50,000 per year and 27% are designated by EJScreen as being low income. This community is very stable. Many of the families have lived here their entire lives and others residing here for 20 years or more.

The residential neighborhood surrounding the Lunt site includes mostly single- and two-family dwellings, along with some moderate-income condominiums. The Commonwealth of Massachusetts documents that 25% of residents of the surrounding area have median household incomes at 65% of the state median income.

For over 100-years the site was operated as an industrial metal-working and manufacturing facility. When it closed in 2009, extensive contamination from heavy metals was found at the site. Also discovered was contamination of the soil and groundwater by several chlorinated solvents used as degreasers during the manufacturing operations. As recently as 2001 the

Lunt operations employed as many as 800 workers, and records indicate that there were at least six different locations at the site where vapor degreaser units were operated. These degreasers used a variety of chlorinated solvents and dense non-aqueous phase liquid (DNAPL) that were subject to spills and leaking. Extensive contamination was discovered, and about 10-years ago limited soil excavation and response activities removed contaminated materials to a depth of approximately two-feet below grade, in at least one identified spent solvent storage location.

The Lunt property is about 1000-feet north of the nearest mapped EJ community in Greenfield. However, the concern is that TCE groundwater contamination has migrated off-site and is moving in a S-SW direction towards this mapped EJ area of Greenfield. An independent LSP to be hired by the Lunt Neighborhood Action Group in April 2023 will do a thorough study to determine size and scope of the contamination plume. The area is served by municipal water and sewer, but many of the residences have basement sump pumps due to the seasonally high-water table throughout the area. At certain times of the year, standing water can be observed for extended periods on or adjacent to the ball fields on the Lunt property, when the local water table is at or near the surface. The LSP analysis is expected to be completed in summer 2023. This past fall/winter the DEP has also recommended that the current LSP evaluate the water profile in a larger scope. This includes movement south as well as deeper into the ground for particulate sediment.

In the Lunt community, LNAG has established that there are 2 cases of non-Hodgkin's lymphoma and 2 cases of Parkinson's disease in the projected target area, all of which could be engendered by TCE. We also have anecdotal information about other cancer cases in the Lunt neighborhood. Because this information is anecdotal and we do not have the expertise as an organization to investigate or evaluate it, we are seeking funds to do an epidemiological study of the community to determine the health risks of the residents, what health education must be done, and establish an action plan to respond to any health risks that are found.

c. Organizations Historical Connection to Underserved Community

Ten years ago, the Lunt cleanup efforts by the developer's LSP Phase II ESA was released. Since that time the clean-up has been stalled. The 2012 Environmental Site Assessment called for the installation of four sub slab depressurization systems (SSDS) under all the buildings, and the installation of a groundwater collection and treatment system to address the DNAPL contamination, off-site groundwater migration, and TCE vapor intrusion (on and off-site). Vapor intrusion was detected inside the redeveloped buildings, which were fully occupied prior to the LSP conducting indoor air quality testing, and subsequently Massachusetts Department of Environmental Protection ordered that vapor intrusion mitigation measures be installed to eliminate the public's exposure, since none of these systems were installed during the site redevelopment or prior to full occupancy of the buildings. In 2017 DEP issued an order to the City to install a Sub-Slab Depressurization System after indoor air testing disclosed that an imminent hazard existed due to TCE vapor

intrusion, the hazard levels which are set by the DEP. In 2020 the developer's LSP produced a report Phase II Comprehensive Site Assessment that called for the closure of the site for further testing as the Permanent Solution, leaving the contaminated ground water unabated/untreated while allowing it to continue to spread into the adjacent neighborhood and throughout other areas of Greenfield vial unpermitted storm drain discharge. However, since the soil removal was ordered by the DEP/EPA, the tests at that time were deemed safe. A plan was set forth by the state that anytime soil is disturbed, it is reportable and must be removed safely. The determination from the DEP to the LSP was based on standards at that time and they were unaware of possible release deeper into the soil.

In Fall 2021, the Mayor of the City of Greenfield announced that she wished to transfer the Lunt property to the lessee, 401 Liberty Street LLC, to put the land and buildings at the Lunt site back on the tax rolls. Residents living around the Lunt site had been told in 2013 that the site was cleaned up. To ensure that that was true before this transfer was affirmed by the Greenfield City Council, community residents and some City Councilors asked to review the documents related to the clean-up. Those documents raised more questions than they answered.

In early December of 2021, 36 residents of Greenfield petitioned the Massachusetts Department of Environmental Protection (DEP) to have the Lunt site designated as a Public Involvement Plan (PIP) site under 310 CMR 40.1404. The PIP petition has 115 petitioners, including 8 members of the Greenfield City Council and 4 former Council members. After the submission of the PIP petition, the Mayor of Greenfield turned the entire PIP process over to the Lunt site developer, which has not engaged the community as required under PIP regulations. The State is in contact between the LSP and the PIP group. The State recommends the communication process, this is considered an order and must be followed. There were several public hearings with the city, LSP and State during this time that did not have direct community involvement. The administration of City of Greenfield has not fostered public participation, and the Licensed Site Professional (LSP) who has been designated to clean the site and who works for the developer has ignored the PIP Group. This LSP has been working on this site since 2011, when the site was originally supposed to have been cleaned.

As a result of the submission of the PIP petition, and the serious concerns raised by the Greenfield City Council, in March of 2022 MA DEP notified the City that the DEP Audit Section would conduct a full audit of the Lunt cleanup process. On 5/27/22, DEP issued a Notice of Audit Finding and Notice of Noncompliance (NON) to the City of Greenfield which found that the 2020 Lunt Comprehensive Site Assessment was deficient, and that a revised Phase II Scope of Work would be required that properly identified the sources and extent of the contamination, correctly identified the site boundaries, identified preferred contaminant pathways, and better characterized the hydrological conditions at the site, essentially stating that conclusions reached in the 2020 CSA were based on inadequate information, especially the proposed Permanent Solution. The LSP for the developer submitted a response to the

audit. The Lunt PIP Group conducted a review of the proposed Scope of Work (SOW) and noted that the SOW was inadequate and was not responsive to the issues raised in the NON and Audit. At this point the DEP is reviewing the proposed SOW and the PIP Group is waiting for the DEP response.

The Lunt Neighborhood Action Group (LNAG) formed from a subset of the Public Involvement Plan (PIP) petitioners to provide organizational structure for the PIP Group. This was necessary because the Mayor of Greenfield turned over the entire PIP process to the site developer who dismissed or rejected the concerns of the PIP members and the community. The key petitioners organized the LNAG to act as a steering committee, to hold regular meetings, and to formulate a campaign to address the Lunt contamination. LNAG communicates with the 115 PIP petitioners on a regular basis, and the LNAG holds regular meetings to plan events and implement our campaign. So far, LNAG has generated numerous Letters to the Editor, several longer opinion pieces and press releases and has picketed in front of the Lunt property. A folder of Greenfield Recorder articles, letters, and opinion pieces from our media coverage efforts can be found here.

In June of 2022, the City Council passed a resolution expressing a lack of confidence in the LSP working for the developer. The City of Greenfield has not had an LSP under city contract working on the Lunt cleanup since prior to 2013. The LNAG/PIP repeatedly requested that the city hire an independent LSP to represent the interests of the Lunt Neighborhood residents, but the Mayor of Greenfield did not respond to the public's concerns. The Lunt Neighborhood Action Group, a volunteer organization, was incorporated to apply for and receive funds from the Commonwealth of Massachusetts for the purpose of hiring an independent LSP to respond to community questions. This grant was funded by the MA DEP in December 2022.

Since that time, LNAG efforts expanded to include the health questions in our community that were mentioned in #b above. With this proposal, we are requesting funds to provide health information regarding this site and the target area that the community deserves. The LNAG/PIP Group needs access to epidemiological expertise to better understand the health questions that are being posed by the residents and to understand the best way to respond.

The PIP group and LNAG Steering Committee have developed a long-term campaign that focuses on community involvement and engagement. The LNAG Steering Committee includes the two members of the City Council that are most directly impacted by the Lunt site, Precinct 4, where the Lunt site is physically located, and Precinct 3, which is downgradient and adjacent to the site. In addition, we have canvassed the Lunt Neighborhood, going door-to-door, and with EPA support, we hope to conduct an epidemiological study of the impacted area downgradient as well as around the periphery of the site to establish if the anecdotal information about various illnesses and cancers are related to TCE is coincidental or a mixture of both.

The PIP group and the LNAG are also committed to fully cleaning up the Lunt site while ensuring that the current use of the site remains operational. It is essential that the staff and residents at the treatment center are provided with a safe environment free of chemical contamination. We have been in regular contact with our State Senator and State Representatives to keep them updated because if the independent LSP deems further clean-up is required, we can work with our state representatives to acquire additional state funding to assist with the recommendations.

d. EJCPS Model

Element 1: Issue Identification, Community Vision and Strategic Goal Setting

Issue Identification: In December 2021, 36 community members, including some City Councilors, questioned whether the LSP, O'Reilly, Talbot and Okun (OTO) had adequately completed the remediation and if the site is now in compliance with the clean-up requirements of the Massachusetts Contingency Plan (MCP) site cleanup regulations. The organized community response developed through the Public Involvement Process (PIP) request to the Massachusetts Department of Environmental Protection (DEP).

Community Vision: In February 2022, OTO and its employer, 401 Liberty Street, LLC held a public hearing as required by MCP regulations. In Massachusetts law, there is no requirement that the owner of the property, the City of Greenfield, call the public hearing. At that hearing, residents asked questions, but were given entirely insubstantial or unsatisfactory answers. The PIP requested that the DEP do an environmental audit of the site, which was done in April 2022. The DEP audit report determined that there were serious questions about the safety of the site. The PIP determined that they would continue as an entity to ensure that the site would be cleaned up and developed the Lunt Neighborhood Action Group to coordinate that effort. Our vision is that any hazardous waste on the Lunt property is cleaned up to the fullest extent possible and to ensure that the residents of the surrounding community, the clients and staff at Northern Hope Center/Franklin Recovery Center, as well as those in other social service agencies on this site will not have to be concerned about their health or welfare due to TCE-contaminated groundwater or TCE vapor intrusion emanating from beneath the buildings on the Lunt site.

Strategic Goals: Continued clean-up of the Lunt site, analyze any health and welfare implications caused by the contamination, educate the community about those implications and support residents in medical testing for any contamination related health concerns by assisting with their co-pays.

Element 2: Community Capacity Building and Leadership

Community Capacity Building: The next step for the PIP group was to provide information and education about the toxic chemicals that were used at the Lunt site and how to respond to them. To do that, the PIP created several opportunities for education:

-We partnered with Slingshot.org to educate ourselves about how to organize around this issue, identify key questions about the toxins used at this site, and how to approach the Mayor of Greenfield, OTO, 401 Liberty Street, and the DEP to move forward.

-Members of the PIP brought our concerns to the Greenfield City Council to request further investigation and clean-up of the site if it was deemed necessary. In June of 2022, the City Council voted "no confidence" for the OTO as the current LSP.

-The LNAG/PIP was fortunate in that one of its members had been a soil scientist and Massachusetts Registered Sanitarian (RS) and Certified Health Officer (CHO), prior to his retirement. He educated the members of the PIP about the concerns of this type of contamination, his analysis of the insufficiency of the previous decontamination efforts based on his knowledge and expertise, and how the LNAG/PIP might work with the DEP to ensure an adequate clean-up in the future. He also contacted other colleagues in this field to engage members of our PIP group to learn additional scientific information.

-The members of the PIP group met with the DEP to go through the May 2022 report, which resulted from the April audit to ensure that the PIP had a full understanding of this report and what the next steps may be.

Community Leadership: As a result of this information, two issues became clear: a.) although the 115 members of the PIP wanted to be kept informed and involved, there was a need for a smaller group out of the PIP to concentrate on this issue and b.) since the PIP was not getting the kind of information that it needed from OTO, 401 Liberty Street or the Mayor of Greenfield, the community needed to develop an independent source of information. From this, the Lunt Neighborhood Action Group (LNAG), a volunteer group of residents, was organized and incorporated. This assisted us in obtaining funding for an independent LSP with the expectation that LNAG will hire an independent LSP by spring 2023. The LNAG has continued to organize regular community meetings to educate the PIP group on any updates, and has done door to door canvassing to inform Lunt area residents about the contamination concerns, and to ensure that any work promised by OTO and ordered by the DEP is being done. In the process of one canvass, LNAG members learned of two people with non-Hodgkin's lymphoma residing on one street and two individuals with Parkinson's disease living in the projected target area. There have also been anecdotal reports of undefined cancer in the area. This motivated the LNAG to write this proposal for an epidemiological study to ascertain if the anecdotal disease data are significant to the health and welfare of Lunt area residents or current employees/residents at and near the site.

Element 3—Consensus Building and Dispute Resolution:

Should there be a dispute within LNAG/PIP or between LNAG/PIP and our collaborative partners, our first efforts would be to establish the basis of the disagreement and to see if there are differences that must be considered. If the group determines that there is no way to come to agreement within our usual processes, then we would engage a facilitator for assistance. We would expect the facilitator to establish ground rules for the process which may include an agreement that all parties abide by the decision reached at the end of the process.

Although LNAG/PIP is a large group from throughout the Greenfield community with many different political opinions, we have all agreed on the efforts that have been made. Since the group is concentrating on the clean-up of the Lunt site and to ensure the health and

safety of its residents, we have been quite focused. Our consistent approach to deal with the contamination is to find neutral facts to understand the questions at hand. We would continue to deal in this manner should an internal dispute arise in the future.

Element 4—Multi-Stakeholder Partnerships and Leveraging Resources.

The Lunt Neighborhood Epidemiological Study and Action Plan is designed to involve partners with complimentary skills to create a harmonious process moving forward. LNAG/PIP as a community organization recognizes that we need partners with varied professional experience as well as medical and community education expertise to make this study and action plan a success. Toward that end, we have asked:

The Greenfield Health Department to supervise two consultants for the epidemiological study skills and supervision of the epidemiological study as it moves forward. This will include the gathering of information, interpretation of the data found, interviews with individuals or families about concerns that are uncovered, ensuring that the research meets HIPPA requirements and overall, ensures that information gathering, analysis and interpretation are of a high quality and provided in a form that is useful to the community. This work will take place throughout the 3 years with an emphasis on year 1.

Slingshot, an environmental advocacy and organizing organization, will work with us to design and implement a community education process involving large baseline educational meetings about the nature of the contamination as well as small neighborhood meetings to talk about more specific health issues of residents. This work will largely take place in year 2.

Valley Medical Group and the Community Health Center of Franklin County (CHCFC) will work with us to provide appropriate testing based on the epidemiological results, if the resident chooses to do so. Years 2 and 3.

The Franklin Council of Regional Governments (FRCOG), a voluntary membership organization of involving 26 municipalities of Franklin County, will create a document and provide educational information to the leadership of the 26 municipalities of the region about the epidemiological findings and their implications for similar contamination sites in their areas. Year 3.

Element 5—Constructive Engagement by Relevant Stakeholders

The LNAG will keep several key stakeholders informed about the progress of this epidemiological study including:

The Massachusetts Department of Environmental Protection (MADEP) which is already engaged in the analysis of the contamination of the Lunt Silversmith site.

The Bureau of Environmental Health of the Massachusetts Department of Public Health (MADPH) which has already provided some citywide health data to LNAG.

LNAG expects that both departments will be helpful in the process of directing us to key data or related resources as we move forward.

Element 6—Sound Management and Implementation

Because LNAG is a small volunteer organization, we understand that as we may not have all resources necessary for this epidemiological study and the follow-up the plan by ourselves. To continue this, we will look to the FRCOG's Community Health division to assist us in resolving questions. The FRCOG has historically demonstrated great skill at bringing together the varying needs of the 26 towns in Franklin County. We will look to them to assist us in ensuring that the commitments of all partners are clear, that the structure of the project is well defined and understood by all parties, and that the timelines of all partners are agreed through a common process.

Both Glen Ayers, LNAG President, and Susan Worgaftik, LNAG Vice President, have experience with grant management. Glen recently retired from the Regional Planning Agency where he worked with numerous grants from Federal and State sources, including multi-year FDA grants and grants from the MA Toxic Use Reduction Institute, the MA Department of Public Health, and the Massachusetts Environmental Trust. Prior to retirement, Susan was the Director of Corporate and Foundation Relations at the University of Massachusetts Amherst. Please see the attached resumes for further information. With the assistance of a bookkeeper who LNAG will hire for this project, and the administrative advice that was described during the bidder's conference, we expect that we will be able to meet EPA administrative standards.

Element 7—Evaluation, Lessons Learned, and Replication of Best Practices

Because this is a new area of work for LNAG, we expect to meet monthly with our partners to ensure that we maintain our process and meet our goals.

Every 6 months, we will develop a written review in which all relevant partners provide an analysis of the work that has been done, how it sets the stage for the following 6-month period and its significance to the project overall. It will include any adjustments that are required by the data that is produced.

LNAG expects to provide regular 6-month updates to the PIP and the Lunt community, about the current status and what the next steps are. These reports will also respond to any community questions and concerns.

As part of the overall project, LNAG will work with Greenfield Department of Public Health and the FRCOG to create a template of lessons learned and processes that can be applied to other contaminated sites in the City of Greenfield and throughout Franklin County.

LNAG will work with the City of Greenfield and local media to ensure that the key findings and actions that are taken will be publicly announced on an annual basis or more often if there are issues that must be considered in a timely manner.

e. <u>Project Linkages</u>

The Lunt Neighborhood Epidemiological Study and Action Plan is designed to empower the residents of the target neighborhood to understand and take control of their health outcomes in the face of toxic substance contamination within their community. This project is entirely community driven with the leadership coming from the LNAG. Over the course of learning about the contamination on this site, the LNAG/PIP has learned about the resources available to them to bring unbiased information to the entire community. This has led us to apply for this EPA funding to further understand what health concerns have been caused by the contamination and how we can assist residents in the target area in responding to them.

f. Partner and Collaborate

The Lunt Neighborhood Epidemiological Study and Action Plan encompasses several elements which are embodied in the collaborators in this plan:

1. Research and Analysis: The Greenfield Health Department working with consultants Jennifer Siegel and Jack Sullivan will provide both the oversight of government and the scientific and public health expertise necessary for this project. (Government and Science)

2. Presentations and Community Outreach: Slingshot has great expertise in putting together complicated scientific information in a way which is easy for non-scientists to understand and then create plans for moving forward. (Community Activist Educators)

2a. Lunt Neighborhood Action will work with Slingshot to ensure that community residents learn of this information through zoom and in person educational events (large and small) and door to door involvement with residents (Community Activists)

3. Medical Support: Should residents of the community wish to have testing done to ensure that the understand their medical situations regarding TCE, the Community Health Center of Franklin County and Valley Medical Group will provide medical testing toward that end. (Medical Community)

4. Broader Community Education: Because TCE is a chemical that was commonly used in factories in Franklin County during the late 20th century, the experiences of LNAG and this study would be useful to other communities in our region. The Franklin Regional Council of Governments, a quasi-governmental non-profit which has stepped into the gap when county government was eliminated, will work the LNAG to make presentations for communities around the region. (Quasi-Governmental Non-Profit)

2.0 Project Activities/Milestone Schedule

a. Project Activities

1. Screening—Determination of the need for this epidemiological study has grown out of several concerns:

- the Lunt property was audited by the Massachusetts Department of Environmental Protection (MADEP) where major concerns about the thoroughness of the clean-up have been presented.
- Anecdotal community reporting of two non-Hodgkin's lymphoma cases on a street one block south of the Lunt site, two cases of Parkinson's disease within the projected target area, and several reports of undefined cancer within the target area.
- By July 2023, the area and flow direction of the TCE plume will be clearly identified by the Licensed Site Professional that LNAG has hired. This will identify where the epidemiological study will specifically be targeted. Also, the current LSP with DEP guidance, will also have their water study concluded.

2. Scoping—Jennifer Siegel, Public Health MPH researcher and Jack Sullivan, Public Health epidemiologist will develop a research plan under the supervision of Jennifer

Hoffman, MPH, RVT the Director of the Greenfield Health Department, with involvement of the LNAG Coordinators.

- The research plan will include an analysis of what illnesses could be generated by contact with TCE and any other toxic substances that are found on the property by the Licensed Site Professional.
- The research team will determine what questions should be asked of the community to determine if the illness is caused by environmental factors related to the Lunt site. This process will include determination of the overall scope of the study: period to be analyzed, target area, manner of survey (online, door to door, written), etc.
- Massachusetts Cancer Registry will be analyzed for appropriate data as will data from local hospitals, as is available.
- Preparation of survey and cancer registry research will take place from November 2023-April 2024
- Initial surveys will be deployed in May2024; follow-up surveys in June 2024; door to door follow-up in June 2024. There will also be multiple telephone/email correspondence with the individuals we are surveying.
- All relevant information to be collected by August 2024

3. Assessment-- Jennifer Siegel, Public Health MPH researcher and Jack Sullivan, Public Health epidemiologist will develop a research plan under the supervision of Jennifer Hoffman, MPH, RVT, Director of the Greenfield Health Department, with involvement of the LNAG Coordinators.

- Data will be compiled and analyzed by team noted above September-November 2024
- Presentation of report resulting from the analysis to LNAG members December 2024.

4. Recommendations and Reporting-- Jennifer Siegel, Public Health MPH researcher and Jack Sullivan, Public Health epidemiologist will develop a research plan under the supervision of Jennifer Hoffman, MPH, RVT, Director of the Greenfield Health Department, the LNAG Coordinators and the staff of Slingshot.

- Reports to the target area community and the Greenfield community at large will be developed during December 2024-February 2025.
- Reports will be planned for online and in person presentation for large groups. Written material summarizing the online and in person presentations will also be made available
- Small group meetings of families, individuals or neighbors will be developed to discuss health issues or concerns following HIPPA regulations to ensure privacy. These small meetings may also include medical consultants who are responding to particular concerns of the participants. These meetings will take place March 2025-June 2025.

5. Healthcare Follow-up--Jennifer Siegel, Public Health MPH researcher and Jack Sullivan, Public Health epidemiologist will develop a research plan under the supervision of Jennifer Hoffman, MPH, RVT, the Director of the Greenfield Health Department, the LNAG Coordinators, Valley Medical Group and Community Health Center of Franklin County

- Those community members who wish to pursue medical testing based on the information provided will be encouraged to do so through Valley Medical Group or the Community Health Center of Franklin County during July 2025-November 2025.
- If the community members wish to report their health test findings, the research team will include them in the report to be developed starting in December 2025

6. Report and Evaluation--Jennifer Siegel, Public Health MPH researcher and Jack Sullivan, Public Health epidemiologist will develop a research plan under the supervision of Jennifer Hoffman, MPH, RVT, the Director of the Greenfield Health Department, the LNAG Coordinators, Franklin Regional Council of Governments; Slingshot

- Two final reports will be developed and presented during March -October 2026;
    - Report of the findings of the epidemiological study itself including levels of contamination, scope of reported illnesses, and other information directly relating to the incident of illness related to the Lunt contamination
    - Report of the overall methodology and approach to the study; its relation to the work of the LSP including community involvement and activities; applicability to similar contamination situations, particularly in Franklin County
    - Presentations of both reports to the LNAG members, target community, the Greenfield community at large August-October 2026
    - Presentation of the report on methodology and approach to representatives Franklin County's 26 municipalities late November 2026

3.0 ENVIRONMENTAL RESULTS

a. Logic Model (Attachment D)

b. Performance Measurement Plan

LNAG and our partners will develop specific programmatic objectives and timelines for each element of this project. Through regularly scheduled meetings with our partners, LNAG coordinators will ensure that these timelines and objectives are met as described in the attached Logic Model. There will be strict monitoring of the numbers of contacts that have been made with residents in relation to the plan. Adjustments will be made as required based upon the information received through research and from the LSP. Monitoring will take place through the following mechanisms:

- Monthly meetings of LNAG coordinators with the partners appropriate for that stage of the project.
- Monthly written reports from the partners appropriate for that stage of the project to be received one week prior to the meetings noted above.

These reports will include written documentation of work done in relation to the logic model and adjustments developed through analysis of the work as it is accomplished.

- Monthly financial reports of expenditures and invoices for work done
- Quarterly meetings with all partners active at that stage of the project especially during transition periods where additional partners are joining the work.
- Quarterly presentations will be made the LNAG/PIP membership. The comments from those discussions will be brought back to the partners for incorporation into the work or analysis in relation to it.
- Semi-annual written reports from all partners in accordance with EPA standards and expectations.
- Annual reports will both summarize the semi-annual reports and point to planned next steps.
- At the close of the project, a full 3-year overview of the work done in accordance with EPA standards and expectations will be written. That report will also be summarized and developed for public availability for LNAG/PIP members, residents of the target area, the City of Greenfield and the general public.

c. Stability Plan and Community vision

LNAG has a specific plan for the use of the data that we develop through this study. There is both a micro use of this data, for the purpose of educating residents about their personal health risks and a macro use where we will provide information about our methodology to the leadership of other communities in Franklin County so that they may use that information to similar defunct factories in their municipalities.

In regard to the micro personal use of data (with individual permission), we will provide reports to the target area community and the Greenfield community at large during December 2024-February 2025. These reports will be planned for online and in person presentation for large groups of residents. Written material summarizing the online and in person presentations will also be made available. Because we recognize that families, individuals or neighbors may want to deal with questions specific to them, we develop small group discussions to consider health issues or concerns. These meetings will follow HIPPA regulations to ensure privacy. These small meetings may also include medical consultants who will respond to particular concerns of the participants.

Regarding the macro concerns of Franklin County communities, we will report the findings of the epidemiological study including levels of contamination, scope of reported illnesses, and other information directly relating to the incident of illness related to the Lunt contamination to any community which wishes to review the data. In addition, we will provide a report of the overall methodology and approach to the study; its relation to the work of the LSP including community involvement and activities; applicability to similar contamination situations, particularly in Franklin County. Presentations of both reports to the LNAG members, target community, the Greenfield community at large will be part of our efforts at the close of the grant period.

4.0 PROGRAMMATIC CAPABILITY

The LNAG Steering Committee has gone through the process of organizing and incorporating as a nonprofit and has opened a business checking account. All funds will be kept in the bank account and all expenditures and payments will be tracked using a database software program. Only two members of the Steering Committee will have access to the checking account. A financial report of the organization will be given at every LNAG meeting, disclosing expenses incurred during the interim, and all donations or other sources of income received since the last LNAG meeting. All expenses greater than $500 will be pre-approved by a vote of the Steering Committee, and all expenditures will be documented by receipts that will be kept in the database. Real-time access to the financial tracking software will be provided to all members of the Steering Committee via our Google Drive to maintain full transparency. Finally, the LNAG Steering Committee will conduct periodic reviews of the corporation's financial activities on a regular basis, at least every 6-months.

Both Glen Ayers, LNAG President, and Susan Worgaftik, LNAG Vice President, have experience with grant management. During his professional career, Glen worked with numerous grants from Federal and State sources, including multi-year FDA grants and grants from the MA Toxic Use Reduction Institute, the MA Department of Public Health, and the Massachusetts Environmental Trust. Prior to retirement, Susan was the Director of Corporate and Foundation Relations at the University of Massachusetts Amherst. Please see the attached resumes for further information. With the assistance of a bookkeeper who LNAG will hire for this project, and the administrative advice that was described during the bidder's conference, we expect that we will be able to meet EPA administrative standards.

5.0 PAST PERFORMANCE

Lunt Neighborhood Action Group is a young organization developed to deal specifically with the contamination of the Lunt Silversmith site. In December 2022, LNAG was awarded a $20,000 grant by the Department of Environmental Protection of the Commonwealth of Massachusetts to hire a Licensed Site Professional to provide an unbiased analysis of the contamination of the site. LNAG is presently managing that grant in accordance with the requirements of the Commonwealth.

As an organization, LNAG has not had significant experience managing publicly funded grants, but some of its members have. For more than 30 years, Susan Worgaftik managed a wide variety of public and private grants for Federated Dorchester Neighborhood Houses, a $20 million community service organization located in Boston. She was responsible for management of approximately $4 million in grants annually, including applications, reporting, quality control and general management. Before retiring, Glen Ayers worked with numerous municipalities on grant funded projects, sometimes managing 10 separate grants simultaneously, including developing Continuous Improvement Plans (CIP) that required

planning, implementing, evaluating, and then revising the process to meet identified goals and achieve conformance with National standards. Ayers also worked on highly technical regulatory matters under numerous Federal, State, and local regulatory programs. During his career, he maintained more than a dozen professional certifications in Public Health and Environmental Compliance areas.

Susan Worgaftik and Glen Ayers will be responsible for ensuring that all reporting and financial requirements of this project are met.

JENNIFER A. HOFFMAN, MPH, RVT

Ex. 6 - Personal Privacy (PP)

Ex. 6 - Personal Privacy (PP)

Ex. 6 Personal Privacy (PP)

Greenfield, Massachusetts 01301

PROFILE

My role as the health director for the City of Greenfield has been challenging as well as exciting. I have been honored to work within public health during a pandemic and the aftermath that occurs when life is going back to normal. Besides public health, I am an emergency preparedness partner and used my training during the vaccine roll out by working with others in the City for a robustl vaccine response.

I have over 25-years of healthcare management and patient-care experience. Through my health care and public health education, I have a multifaceted view on social and demographic issues that affect the western Massachusetts population. I enjoy assisting those to make their challenges easier.

EXPERIENCE

Health Director, City of Greenfield 10/2021-Present

I work under the direction of the Mayor and the Board of Health. Since being the interim Health Director and then the Health Director, the health department has become a stable department with established policies and protocols. The Department has obtained multiple grants: the air quality grant (Purple Air), the COVID-19 contact tracing grant and now the Intermunicipal Shared Services grant as well as the CBDG grant for the elderly and hoarding. Two of these grants have established an excellent rapport with other municipalities and together, have been able to promote public health agendas together. This is something that has been difficult to achieve in the past. The health department, although an enforcement agency, focuses on each incident and tries to determine if the issue is a social service issue vs. a code violation vs. both. This delicate touch has served us well in the City where we were able to bring compliance with social service support. In order to prevent animal neglect and abuse we are currently examining a Pound and Field Driver ordinance. Our response time for inspections, Title 5/perc testing has greatly improved. Our follow up to complaints has improved and our legal burden has decreased significantly. By supporting the nurses in the department, we have established great communication with the school system and have educational seminars. We actively work on menstrual inequality by setting up tables at Energy Park and bringing services and supplies to them. We work with the housing crisis by bringing more homes into receivership and implementing a pre-rental inspection to document how the apartments are before moving in (for the safety of the landlord and tenant). The health department has given a voice to the underserved in Greenfield as well as an ear to listen to their needs. Provide MAVEN surveillance of communicable diseases, submit burial permits, follow up on rabies inquiries

Health Care Liaison to the Mayor, City of Greenfield 3/2020 — 9/2021

Working under the direction of the Mayor of Greenfield and the Emergency Command, I was an integral part of the Internal Command Team for the COVID-19 pandemic for the City of Greenfield. My role was to oversee nursing homes, assisted living facilities, the Franklin County House of Corrections, ServiceNet support housing, ARC, Baystate Franklin Medical Center, and all houses of worship. I focused on their care and treatment of COVID patients as well as their protocol adherence set by the state Department of Health. I collaborated daily with different partners from these organizations to assist with policies from the Department of Public Health, the state epidemiologist as well as bilateral communication to the city's leadership team. I advocated the needs of each organization to the Mayor of Greenfield as well as Federal and State leadership. I communicated with the Massachusetts State Senator Jo Comerford, Massachusetts Representative Natalie Blais and United States Representative Congressman Jim McGovern. I provided a daily report to the Mayor and the Emergency Command Team. I worked on communication outreach to educate and inform the public on how to lower the risk of COVID-19. I monitored cluster outbreaks and quarantine, isolation protocols for community residents.

Senior Center Director, Town of Williamsburg — Sept. 2018-Nov. 2019 Networked and partnered with community and regional agencies as well as service providers. Represented the interests of WCOA to state and regional associations as well as advocacy groups. Strived to address/serve unmet needs through grants, volunteer recruitment, program development and collaboration with other organizations, including churches, Board of Health, TRIAD and the Police and Fire Departments. Provided direct service to clients (i.e. case management, referrals etc.) as needed. Lead activities and events as needed. Ensure completeness and accuracy of financial records. Filed annual / quarterly / monthly reports with funding sources as required. Write annual grant proposals/reports for EOEA, HVES and other funding sources. Purchase necessary equipment and

supplies adhering to procurement laws. Develop relationships with charitable organizations, foundations, and potential donors. Track, record and report all statistics to COA Board, Select Board and governing agencies. Prepare and present budget proposals to the COA Board, Select Board and Finance Committee annually.

Summary

Jennifer Siegel has a BA from American University in Washington, DC, and is currently enrolled at George Washington University, pursing her Master's in Public Health. She also has extensive experience in the field of wellness and that of office management, strategic planning, logistics and operations. Most recently, she has worked in the Public Health sector as a COVID Case Manager for the Town of Longmeadow, MA. Her particular interest continues to include the field of general health and wellness, as well as Public Health policy and making a difference in people's lives through community outreach and balancing inequities identified within the communities with which she works.

Skills

- MAVEN Microsoft Excel Microsoft Word
- Google Suite
- MySQL
- Sharepoint
- Microsoft Teams Zoom Skype
- Highly Organized and Detail Oriented
- Able to Work Independently as Well as in a Team Able to Multi-Task Tableau Asana
- Microsoft PowerPoint

Experience

Town of | Longmeadow, MA
Public Health COVID Case Manager
04/2021 - 04/2022

- Supports Longmeadow Public School system in contact tracing, COVID consulting, parental advising as well as helping to implement any DESE/ DPH protocol.
- Makes recommendations, to help lower risk of transmission of COVID-19, based on investigation of COVID-19 cases to stop outbreaks and decrease the risk of future transmission.
- Educates businesses and community leaders on COVID-19 transmission, testing, and strategies to decrease risk of spread in their specific setting.
- Attends all high-level stakeholder and town meetings to advise on COVID-19 and Advises Town, Manager, Fire Chief and Health Director on new CDC, DPH and DESE protocol surrounding vaccination and COVID-19.
- Created and implemented a self reporting system for the 15,000 residents of Longmeadow.
- Created a database and flow chart for HR dept concerning town employees.
- Created a self reporting system for school district, and town.
- Created a workflow and methodology for a "Long COIVD" study of residents.

Partners in Health, Massachusetts CTC
Outbreak Specialist
11/2020 - 04/2021

- Made recommendations to help lower risk of transmission of COVID-19, based on investigation of COVID-19 clusters in order to stop outbreaks and decrease the risk of future clusters.
- Helped guide Massachusetts' response to COVID-19 outbreaks in partnership with public health nurses and epidemiologists.
- Educated businesses and community leaders on COVID-19 transmission, testing, and strategies to decrease risk of spread in their specific setting.

- Lead cluster investigations in the Higher Education division of the CTC, which includes managing teams upwards of 15+ Case Investigators.
- Communications between all stakeholders
- Input all data into MAVEN and the CRM databases,
- Built case maps for both internal and external presentation based on findings of investigation.

Partners In Health
Case Investigator/Unit Lead
09/2020 - 11/2020

- Partners in Health, Massachusetts CTC, Conducted outbound calls relative to cases in efforts to trace exposure to COVID-19.
- Supported cases and contacts in their isolation and quarantine process.
- Provided education to the public surrounding COVID-19 and current isolation and quarantine protocols.
- Supported relationships with students, faculty and their families throughout the quarantine and isolation process.
- Provided administration and logistical support to cluster investigations, Higher Education Case Investigators and Contact Tracers in daily tasks and trainings.

Gift of Health, Chinese Medicine Clinic | Amherst, MA
Office Business Manager
03/2015 - 03/2020

- Was responsible for overall office management, including updating Quickbooks accounts (invoices and payments) , and organizing and updating all patients' records on a regular basis.
- Data entry
- Led marketing and promotions including management of all social media platforms.
- Served as the main interface with patients, scheduling appointments, facilitating communications between patients and the business owner, and driving a strong customer service culture.
- Assisted in making prescriptions for patients.

Raven Crest Botanicals | Berne, NY
Herbal Apprentice
08/2014 - 01/2015

- Herbal Apothecary and Farm
- Assisted master herbalist in making herbal medicinal tinctures, teas and cosmetic products
- Managed herbal gardens and greenhouses
- Sold products and attended to clients
- Contact : -Susana Raeven susanna@ravencrestbotanicals.com
- Achievements/Tasks
- Tasks/Achievements

- Assisted master herbalist in making herbal medicinal tinctures, teas and cosmetic products
- Managed herbal gardens and greenhouses
- Sold products and attended to clients

Santa Teresa | Costa Rica
Clinic Director
03/2012 - 08/2014

- Wellness Institute, with a focus on nutrition and colon hydrotherapy. Made sure monthly/ quarterly budget and goals were met and kept within bounds.
- Managed all bookings and financial transactions.
- Ordered and maintained all inventory.
- Assisted Dr. on site.
- Lead multiple group cleanses, yoga classes and nutrition workshops.

Ranchot Margot, Arenal | Costa Rica
Yoga Teacher/Farm Assistant

- Ran the yoga program and helped in the garden of a 100 acre self sufficient farm/ retreat center in the rainforest of Costa Rica.

11/2010 - 08/2013

- Taught yoga daily.
- Ran yoga programs for visiting groups.
- Worked as an assistant in the garden/farm on property caring for the animals and tending to the vegetables/fruit.
- Brought yoga and herbal medicine to rural communities within Costa Rica.

Profile

Communications professional and recognized investigator with record of success in the public health arena. Successful staff manager who consistently assists others to maximize their abilities.

Professional Highlights

Partners In Health, Community Tracing Collaborative, Boston, MA 2020–2021

Outbreak Specialist—Epidemic Intelligence Unit

- Assisted in identifying potential clusters using various data and investigative methods, including evaluating cluster escalations, data mining in the CRM, and proactively monitoring likely clusters.
- Acted as lead investigator for identified clusters, including coordinating with frontline CIs/CTs, collecting additional information. Created and updated clusters in MAVEN.
- Identified response steps based on cluster origin, what role the CTC had been asked to play in the response, and what local partners the CTC had.
- Extracted data from MAVEN and CRM for analyses and presentation with state and local stakeholders.
- Linked with all relevant local health partners on cluster investigation and response, and liaised with relevant CTC and DPH team members.
- Collaborated with team to identify gaps in cluster response strategy, and implemented solutions.

Contact Tracer / Lead Case Investigator

- Reached out to patients who had tested positive for COVID-19 to offer support and collect information regarding where they had been and who they had been in contact with.
- Investigated close contacts to identify potential carriers.
- Offered information on protocols for safely isolating and quarantining, and performed follow-up monitoring and support calls.

CommonWealth magazine, Boston, MA 2009–2018

Senior Investigative Reporter

- Provided in-depth enterprise and investigative reporting for long-form stories for nonprofit digital magazine focusing on public policy issues in Massachusetts.
- Wrote and reported localized investigative pieces for variety of local media outlets through cooperative and innovative distribution agreement.

Objective: Creative administrator with track record of developing and sustaining innovative projects seeks new challenges. Experienced organizational troubleshooter who has reorganized dysfunctional organizations. Highly developed interpersonal skills working closely with individuals and organizations from many social, racial and ethnic communities. Strong fiscal management and fundraising skills.

Accomplishments: In 8years at University of Massachusetts Amherst, worked with faculty and staff to raise $7 million per year for campus projects.

Prior to work at UMass, developed innovative organization from inception to creation of a project incorporating 7 programs, $750,000 budget, serving approximately 1100 people annually.

Prior to work at UMass, raised over $1 million annually for programming and collaborating organizations through proposals, legislative initiatives, and private foundations

Developed team approaches to the creation and institution of systems, including paper-based and computer-based systems, to support growth of programs.

Reorganized benefits office responsible for $20 million pension fund including the distribution of a concluded defined benefit pension plan; ice supervising $9 million health benefit plan serving 3500 primary and 7000 secondary beneficiaries.

Created administrative systems for new housing and education benefits.

Experience:

2011-present **Retired**

Active in community organizations including Lunt Neighborhood Action Group, Housing Greenfield and Greening Greenfield

2003-2011 University of Massachusetts Amherst, Amherst, MA

Director, Foundation Relations

Worked with faculty and staff on proposals which raised $1.5 million in research and program funds for the Amherst campus. Included in this was more than $750,000 in funds from foundations new to the campus or which had not funded campus projects in 5 years or more.

1992-2003 Federated Dorchester Neighborhood Houses, Inc. Dorchester, MA
Director, Dorchester Center for Adult Education
Created and developed Dorchester Center for Adult Education and its programs including This Neighborhood Means Business!, Dorchester Community Action Network, and the Dorchester Public Media Project

1989-1992 Greater Boston Hotel Employees, Local 26 Trust Funds Boston, MA
Administrator
Reorganized service provision systems for health and welfare, pension, education, legal and housing trust funds.

1977-89 Federated Dorchester Neighborhood Houses, Inc. Dorchester, MA
Development Planner/Contracts Manager
Developed and managed 33 state and city human service contracts totaling $4 million. Wrote proposals for both public sources and private foundations/corporations. Monitoring of service provision.

1980-83 Federated Dorchester Neighborhood Houses, Inc. Dorchester, MA
Director, Multi-Cultural Student Leadership Program of Panel of Agency Executives (on loan half-time from FDNH)
Developed and supervised program involving 120 Boston middle and high school students, 12 teachers, 6 social workers.

1976-77 Division of Alcoholism, Commonwealth of MA Boston, MA
Coordinator of Interagency Relations
Coordinated programs with other state agencies.

1975-76 Boston Community Schools, City of Boston Boston, MA
City-wide Board Coordinator
Coordinated communication and training for 10 local boards.

1974-75 Division of Drug Rehabilitation, Commonwealth of MA Boston, MA
Coordinator, Boston Area Self-Help Coalition
Coordinated communication for community groups dealing with state and city.

1973 Project Turnabout Hull, MA
Director of Education
Developed alternative and vocational education for residents in drug treatment.

Re: Lunt Neighborhood Epidemiological Study and Action Plan

Dear Mr. Burney,

I am very pleased to write this partner commitment letter for the Lunt Neighborhood Epidemiological Study and Action Plan proposal that is being submitted to the by the Lunt Neighborhood Action Group to the EJCPS grant program.

The City of Greenfield's Health Department has been involved with the Lunt Remediation Site, by collecting documents pertinent to the site from the Department of Environmental Protection as well as the Environmental Protection Agency. Although the remediation process is going well, there is a chance that chemicals (TCE) have been released into the soil and possible water supply. Due to the risks that are associated with TCE, we are researching to see if it has caused adverse effects to the population who live in that region.

The Greenfield Health Department will be providing staffing for the study as it progresses. We will have our part time epidemiologist provide hours to analyze the collected data. The data can range from surveys, laboratory values, comparisons with other contaminated sites, etc. We will also be using our graduate student to provide research and data collection. I will be assisting with research and guidance with the team as well as provide education and outreach to our community.

We look forward to working with the Lunt Neighborhood Action Group to educate the residents of Greenfield about the study and it is being done, as well as the results of the study. We plan to work with our partners in the community to provide assistance as needed.

Sincerely,

Jennifer A. Hoffman, MPH
Health Director, City of Greenfield

VALLEY MEDICAL GROUP

Prevention & Medical Care To Help You Live Better, Longer.

March 1, 2023

Mr. Jacob Burney
Manager and Program Analyst
Environmental Protection Agency

Washington, DC 20005

Re: Lunt Neighborhood Epidemiological Study and Action Plan

Dear Mr. Burney:
I am very pleased to write this partner commitment letter for the Lunt Neighborhood Epidemiological Study and Action Plan proposal that is being submitted to the by the Lunt Neighborhood Action Group to the EJCPS grant program.

For more than 25 years, Valley Medical Group health care professionals and staff have dedicated themselves to serving residents of the Pioneer Valley in Western Massachusetts, including Greenfield. Each of our Health Centers has a full range of services right in our buildings including:

- Primary care is provided by Family Practitioners, Internists, Nurse Practitioners, and Physician Assistants
- Eye Care is provided by an experienced Optometrist
- Physical Therapists provide a broad range of outpatient services
- Behavioral Health practitioners include psychiatrists, psychologists, social workers, and counselors providing evaluation and treatment for the full range of mental health problems
- Physician's office laboratory and radiology services (X-ray, mammography, ultrasound, and bone densitometry)

At Valley Medical Group, we are committed to helping our patients live better, longer through early detection and preventive medicine. Our goal is to provide care that is effective in preventing illness and health problems wherever possible.

We are pleased to be a partner in the EJCPS proposal submitted by the Lunt Neighborhood Action Group. The epidemiological study that is part of this project could uncover a possibility that residents of the Lunt neighborhood may have been exposed to toxic chemicals including

TCE. The epidemiological study will give us more answers to the levels of exposure and the potential for related illness.

Should the epidemiological study find that residents of the target area require medical testing to ascertain if they require further treatment or monitoring, Valley Medical Group will provide and/or refer individuals for the appropriate tests. We welcome any role the Lunt Neighborhood Action group may have a chance to provide if they are grant funded to support individuals with the cost of medical care and testing, so all who may need this will seek this out regardless of expense.

We look forward to working with the Lunt Neighborhood Action Group to educate our patients about the results of the study, the testing plan that is specifically designed for each patient and providing their test results so that we can plan the next steps in their health care.

Sincerely,

Gina Campbell MSN, RN
Vice President Clinical Operations
Valley Medical Group
329 Conway Street
Greenfield, Massachusetts 01301

Re: Lunt Neighborhood Epidemiological Study and Action Plan

Dear Mr. Burney:
It is with great pleasure that I write this partner commitment letter for the Lunt Neighborhood Epidemiological Study and Action Plan proposal that is being submitted to the by the Lunt Neighborhood Action Group to the EJCPS grant program.

The Community Health Center of Franklin County's (CHCFC) mission is to care for the health of our community by providing excellent medical care to all our patients, regardless of insurance status or income. We believe patients have the right to care and resources that are dignified, respectful, compassionate, accessible, and trustworthy for all in a safe and non-threatening environment regardless of their age, appearance, diagnosis, addiction, disabilities, gender identity, language, national origin, race, religion, sex assigned at birth, sexual orientation, or weight/size.

We recognize that seemingly small barriers can present major obstacles in getting the care that is needed, so we intentionally implement and participate in programs that meet the needs of our community members who are seeking our care.

It is in that context that we are pleased to be a partner in the EJCPS proposal submitted by the Lunt Neighborhood Action Group. We are aware that there is a possibility that residents of the Lunt neighborhood, approximately a mile from our Greenfield offices, may have been exposed to toxic chemicals including TCE. The epidemiological study that this proposal discusses will give us more answers to the levels of exposure and the potential for related illness.

Should the epidemiological study find that residents of the target area require medical testing to ascertain if they require further treatment or monitoring, CHCFC stands ready to provide the appropriate tests to those individuals. We recognize that medical insurance co-pays could discourage individuals to put off these necessary tests. We will work with the Lunt Neighborhood Action Group to develop a system by which the project will pay for those copays, thus breaking down that barrier to care.

We look forward to working with the Lunt Neighborhood Action Group to educate our patients about the results of the study, the testing plan that is specifically designed for each patient and providing their test results so that we can plan the next steps in their health planning.

We look forward to providing the health care that these residents of our community may require.

Sincerely,

Allison van der Velden, DMD, MPA
Chief Executive Officer

Re: Lunt Neighborhood Epidemiological Study and Action Plan

Dear Mr. Burney:

It is with great pleasure that I write this partner commitment letter for the Lunt Neighborhood Epidemiological Study and Action Plan proposal that is being submitted by the Lunt Neighborhood Action Group to the EJCPS grant program.

Slingshot's mission is to work alongside communities most impacted by environmental threats to take aim at polluters and build community power. Our goal isn't just to win on local environmental problems—we are building a base of long-term member-leaders who can light the fire for change in their state and across the region. We believe in building an organization that is led by residents of the communities most burdened with environmental pollution and that will help combat systemic environmental injustice.

We understand that an essential step in taking action against environmental health threats is access to clear, comprehensive information. As such, we are excited to partner with the Lunt Neighborhood Action Group to develop materials, both written and for online consumption, and assist in the community education process around the Lunt contamination.

We look forward to working with the Lunt Neighborhood Action Group to educate residents about the results of the study, the testing plan that is specifically designed for each patient, and the next steps that are available to them in their health planning. In addition to developing materials, we will work with LNAG volunteers to organize large group and small group meetings, both online and in person, to ensure that the community has a complete understanding of the depth of the contamination risk and their options in dealing with the related health issues.

Sincerely,

Mireille Bejjani
Co-Executive Director
