

Building Statewide Resiliency to Environmental Hazards

2025 Update

Building off the resiliency-focused projects from 2022 and 2024, which explored [Resiliency and Vulnerable Communities](#) and [Resiliency in the Face of Complex Disasters](#), ECOS and ASTHO partnered again in 2025 to develop a State Resiliency Hub.

Each year, the resilience of states and island jurisdictions is tested by hurricanes, floods, extreme heat events, droughts, destructive wildfires, and other natural disasters and homeland security threats. These events require support from state health and environmental agencies to address not only the immediate challenges of the communities, but also longer-term recovery efforts. There are numerous resources available to support state and territorial health agencies and their environmental counterparts in these efforts. This resource hub contains links to state resiliency plans and guidance documents, outreach and training materials, tools, case studies, and additional resources to support jurisdictions in their disaster resiliency planning and implementation.
