▪ GIS	100%	100%
Outfalls inspected/screened	100%	100%
Illicit discharges identified	0	0
Illicit connections removed	N/A	N/A
% of population on sewer	0	0
% of population on septic systems	100	100

Construction

Number of construction starts (>1-acre)	Approx.124	8 SFD 2015
Estimated percentage of construction starts adequately regulated for erosion and sediment control	95%	95%
Site inspections completed (estimated between Planning Board, Engineer, Bldg Insp., Conservation)	100%	100%
Tickets/Stop work orders issued	0	0
Fines collected	0	0
Complaints/concerns received from public	1	0

Post-Development Stormwater Management

Estimated percentage of development/redevelopment projects adequately regulated for post-construction stormwater control	30%	0 *
Site inspections completed		0 *
Estimated volume of stormwater recharged	Not known	Not known
* We do not have post-construction Stormwater control regulations		

Operations and Maintenance

Average frequency of catch basin cleaning (non-commercial/non-arterial streets)	Twice/year	Twice/year
Average frequency of catch basin cleaning (commercial/arterial or other critical streets)	Twice/year	Twice/year
Total number of structures cleaned	162	Update not yet available
Storm drain cleaned	Regularly	Same
Qty. of screenings/debris removed from storm sewer infrastructure	Not known	Not known
Disposal or use of sweepings (landfill, POTW, compost, recycle for sand, beneficial use, etc.)	Compost	Compost
Cost of screenings disposal	No cost	No cost

Average frequency of street sweeping (non-commercial/non-arterial streets)	N/A	N/A
--	-----	-----

Average frequency of street sweeping (commercial/arterial or other critical streets)	Once/year	Once/year
Qty. of sand/debris collected by sweeping	3 tons	3 tons
Disposal of sweepings (landfill, POTW, compost, beneficial use, etc.)	Landfill	Landfill
Cost of sweepings disposal	No cost	No cost
Vacuum street sweepers purchased/leased	N/A	N/A
Vacuum street sweepers specified in contracts	N/A	N/A

Reduction in application on public land of: (“N/A” = never used; “100%” = elimination)		
▪ Fertilizers	N/A	
▪ Herbicides	N/A	
▪ Pesticides	N/A	

Anti-/De-Icing products and ratios	% NaCl % CaCl ₂ % MgCl ₂ % CMA % Kac % KCl % Sand	
Pre-wetting techniques utilized	N/A	N/A
Manual control spreaders used	Yes	Yes
Automatic or Zero-velocity spreaders used	No	NO
Estimated net reduction in typical year salt application	5-10%	5-10%
Salt pile(s) covered in storage shed(s)	Yes	Yes
Storage shed(s) in design or under construction	No	No

Keep Gasoline From Your Drinking Water

Gasoline is one of the most dangerous products commonly found around the home, yet people sometimes use it and store it with little care. Some of the more toxic chemicals in gasoline that have been found in drinking water include benzene, toluene, and MtBE. Even very small gasoline spills can contaminate your drinking water wells or a public water supply.

How to Protect Your Drinking Water from Gasoline

Avoid spilling gasoline on the ground, especially near wells

- Don't top off your fuel tank when filling your lawn mower, snow blower, etc.
- Keep refueling and engine work away from water supply wells. Do the work over a concrete floor or similar barrier, and immediately clean up any gas or oil spills.
- Don't drain gasoline from these machines onto the ground.
- Don't ever use gasoline to burn brush.

Avoid spilling gasoline in lakes, ponds, and rivers

- Fill portable tanks from outboard boat engines on shore, not near water. If you own a larger boat, make sure it has no-spill tank vents.
- Keep special gasoline-absorbing pads on your gas-powered boat; know how to use them.
- Refuel snowmobiles and ice augers onshore; do not take gasoline storage tanks onto ice-covered ponds.

Store gasoline properly

- Use a clearly-labelled container made for gasoline, with a spout to avoid spills.
- Keep gasoline containers in a dry, well-ventilated shed or detached garage away from water supply wells. Don't keep metal gasoline cans on a dirt floor for extended periods.

Dispose of waste gasoline properly

- Handle old or dirty gasoline as hazardous waste. Bring it to a household hazardous waste collection site in a proper gasoline container.

What To Do If A Petroleum Spill Occurs

First, stop the discharge and prevent any further spillage. Then contact your local fire department. If the spill impacts any surface or groundwater, or if the spill is greater than 25 gallons, you must also notify the N.H. Department of Environmental Services at 271-3644, or the N.H. State Police at 1-800-346-4009.

Place on electrical box (fuse box) or other convenient location.

Project ID: 8857000 - PHILLIPS POND SEELEY TB - SANDOWN

Dear PARKS AND REC DEPARTMENT:

Enclosed are the analytical results for the sample(s) received by the laboratory on Wednesday, Aug 26, 2015. Unless indicated as exceptions, the sample(s) met EPA requirements for hold times, preservation techniques, container types and other receipt conditions. Please contact us if you need measurement uncertainty values associated with radiological parameters. Results reported conform to the most current NELAC standard, where applicable, unless otherwise narrated in the body of the report. Any results reported for samples subcontracted to another laboratory are indicated on the report. Please refer to <http://www2.des.nh.gov/CertifiedLabs/Certified-Method.aspx> for a copy of our current NELAP certificate and accredited parameters.

We appreciate the opportunity to provide this analytical service for you. If you have any questions regarding this report or your results, please feel free to contact us.

The following signature indicates technical review and acceptance of the data.

DATA QUALIFIER DESCRIPTIONS

Workorder: A507382 - EPABEACH

Project ID: 8857000 - PHILLIPS POND SEELEY TB - SANDOWN

The following are a list of some column headers and abbreviations with their meanings as used throughout the analysis report. Referring to them will assist you in interpreting your report.

RDL= The lowest value the laboratory calibrates its instrumentation for this parameter. Any instrumental estimate of results below the Report Limit is reported as Not Detected (ND).

DF= For some heavily contaminated samples, the laboratory must dilute samples to keep the final number within its calibration scale. This is referred to as the Dilution Factor. Final results and reporting limits are adjusted relative to the DF used.

QUAL= Indicates that the result has been qualified. Refer to the Analytical Report Comments and Qualifiers page for details.

LIMIT= Reflects the Maximum Contamination Level (MCL), if one exists, a secondary or recommended level or another State or Federal action level.

Surrogates = For some analyses, the laboratory adds a number of compounds to monitor analytical performance. These results are provided for your information.

> = Greater than

< = Less than

mg/L = milligrams per Liter

ug/L = micrograms per Liter

mg/kg = milligrams per kilogram

ug/kg = micrograms per kilogram

P-A = Present/Absent

CTS/100 mL = Counts per 100 milliliters

CFU = Colony forming unit

MPN = Most Probable Number

pCi/L = picoCuries per Liter

J = Estimated value; analyte detected at less than the Reporting Limit but greater than the laboratory's Method Detection Limit.

B = Analyte detected in the method blank for the batch of samples. Its presence in the sample may be suspect.

E = Estimated value; result exceeded the upper calibration level for the parameter.

Radiological results are expressed as a number + an uncertainty factor. Uncertainty is a calculated measure of the precision around the reported value.

All results for pH and residual chlorine samples analyzed more than 15 minutes after time of collection shall be considered QUALIFIED.

Designated Use	Parameter	Category	Comments
Aquatic Life	Phosphorus (Total)	Slightly Bad	The calculated median is from 5 or more samples and is > indicator and the chlorophyll a indicator is exceeded.
	pH	Slightly Bad	>10% of samples exceed criteria by a small margin (minimum of 2 exceedances).
	Oxygen, Dissolved	Encouraging	There are < 10 samples with 0 exceedances of criteria. More data needed.
	Dissolved oxygen saturation	Cautionary	There are < 10 samples with 1 exceedance of criteria. More data needed.
	Chlorophyll-a	Slightly Bad	The calculated median is from 5 or more samples and is > indicator.
Primary Contact Recreation	Escherichia coli	Very Good	Where there are no geometric means, all bacteria samples are < 75% of the geometric mean. Where there are geometric means all single bacteria samples are < the SSMC and all geometric means are < geometric mean criteria.
	Cyanobacteria hepatoto	Slightly Bad	Cyanobacteria bloom(s).
	Chlorophyll-a	Good	There are at least 10 samples with one, but < 10% of samples, exceeding indicator.

BEACH PRIMARY CONTACT ASSESSMENT STATUS

PHILLIPS POND - SEELEY TOWN BEACH	Escherichia coli	Good	There are geometric means and all geometric means are < geometric mean criteria; and there has been a single sample exceedance.
PHILLIPS POND - SEELEY TOWN BEACH	Cyanobacteria	Slightly Bad	Cyanobacteria bloom(s).

WATERSHED LAND USE SUMMARY

VOLUNTEER LAKE ASSESSMENT PROGRAM INDIVIDUAL LAKE REPORTS

PHILLIPS POND, SANDOWN

2015 DATA SUMMARY

RECOMMENDED ACTIONS: Pond and tributary conductivity levels have increased, although not significantly, since monitoring began. Educate and encourage local road agents and winter maintenance companies to obtain a Voluntary N.H. Salt Applicator license through UNH Technology Transfer Center's Green SnowPro Certification program. Turbidity and phosphorus were elevated in the Inlet following significant storm events. Identify potential areas of erosion and stormwater runoff in the sub-watershed and implement stormwater best practices to try and reduce stormwater runoff to the tributary. Educate lake and watershed residents on ways to reduce stormwater runoff from their properties utilizing DES' "N.H. Homeowner's Guide to Stormwater Management". Continue milfoil management activities but keep an eye on how this may impact pond water quality. Keep up the great work!

OBSERVATIONS (Refer to Table 1 and Historical Deep Spot Data Graphics)

- ◆ **CHLOROPHYLL-A:** Chlorophyll levels were slightly elevated in May and June, decreased to moderate levels in July and August, and then increased to elevated levels in September. The 2015 average chlorophyll level increased from 2014 and was greater than the state median. Visual inspection of historical data indicates relatively stable chlorophyll levels since monitoring began.
- ◆ **CONDUCTIVITY/CHLORIDE:** Deep spot and tributary conductivity and chloride levels remained elevated and much greater than the state medians. Visual inspection of historical data indicates increasing (worsening) epilimnetic (upper water layer) conductivity since monitoring began.
- ◆ **TOTAL PHOSPHORUS:** Epilimnetic phosphorus levels were moderate in May and June, increased in July and August, and then decreased back to moderate levels in September. Average epilimnetic phosphorus remained stable with 2014 and was slightly greater than the state median. Visual inspection of historical data indicates decreasing (improving) epilimnetic phosphorus since monitoring began. Hypolimnetic (lower water layer) phosphorus was moderate in May and increased to elevated levels as the summer progressed potentially due to phosphorus release from bottom sediments as dissolved oxygen levels are depleted, a process called internal loading. Inlet phosphorus was elevated in August following a significant storm event. Metacomet Inlet and Outlet phosphorus levels were slightly elevated in June and elevated in July as tributary flows decreased.
- ◆ **TRANSPARENCY:** Transparency was low in May and June when algal growth was higher, increased (improved) in July and then decreased slightly in September as algal growth increased. Average transparency decreased slightly from 2014 and was less than (worse than) the state median. Visual inspection of historical data indicates relatively stable transparency since monitoring began. Transparency measured with the viewscope (VS) was much better than that measured without and likely a better representation of conditions.
- ◆ **TURBIDITY:** Epilimnetic turbidity was within an average range from May through August and was elevated in September when algal growth was elevated. Hypolimnetic turbidity was elevated from June through September and laboratory noted cloudy water with organic matter in some samples indicating the formation and accumulation of organic compounds in hypolimnetic water as summer progressed and dissolved oxygen levels were depleted. Inlet turbidity was slightly elevated in June and August following significant storm events and Outlet turbidity was also elevated in June.
- ◆ **PH:** Epilimnetic pH fluctuated below the desirable range 6.5-8.0 units and hypolimnetic pH was less than desirable on each sampling event. Metacomet Inlet and Outlet pH were also less than desirable and slightly acidic. Inlet pH was generally within the desirable range. Visual inspection of historical data indicates relatively stable epilimnetic pH since monitoring began.

NH Water Quality Standards: Numeric criteria for specific parameters. Results exceeding criteria are considered a water quality violation.

Chloride: > 230 mg/L (chronic)

E. coli: > 88 cts/100 mL – public beach

E. coli: > 406 cts/100 mL – surface waters

Turbidity: > 10 NTU above natural level

pH: between 6.5-8.0 (unless naturally occurring)

NH Median Values: Median values for specific parameters generated from historic lake monitoring data.

Alkalinity: 4.9 mg/L

Chlorophyll-a: 4.58 mg/m³

Conductivity: 40.0 uS/cm

Chloride: 4 mg/L

Total Phosphorus: 12 ug/L

Transparency: 3.2 m

pH: 6.6

Station Name	Table 1. 2015 Average Water Quality Data for PHILLIPS POND								
	Alk. mg/l	Chlor-a ug/l	Chloride mg/l	Cond. uS/cm	Total P ug/l	Trans. m		Turb. ntu	pH
