

# BIOLOGICAL CRITERIA

Water Quality Standards Academy

February 2026

# DISCLAIMERS

- This presentation does not:
  - Impose any binding requirements
  - Determine the obligation of the regulated community
  - Change or substitute for any statutory provision or regulatory requirement
  - Change or substitute for any Agency policy or guidance
- The views expressed in this presentation are those of the author(s) and do not necessarily represent the views or policies of the U.S. Environmental Protection Agency

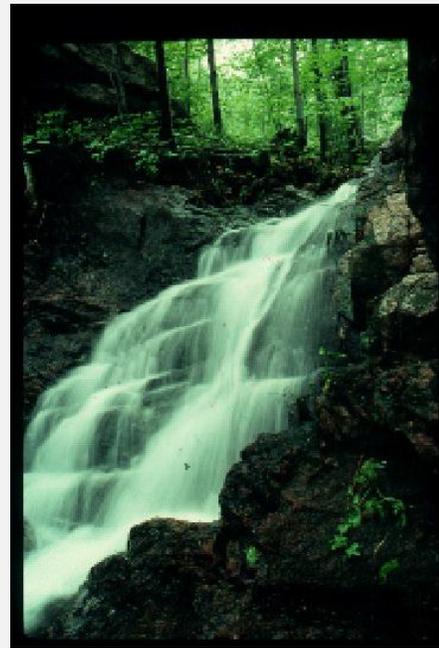

# WHAT ARE BIOCRITERIA ?

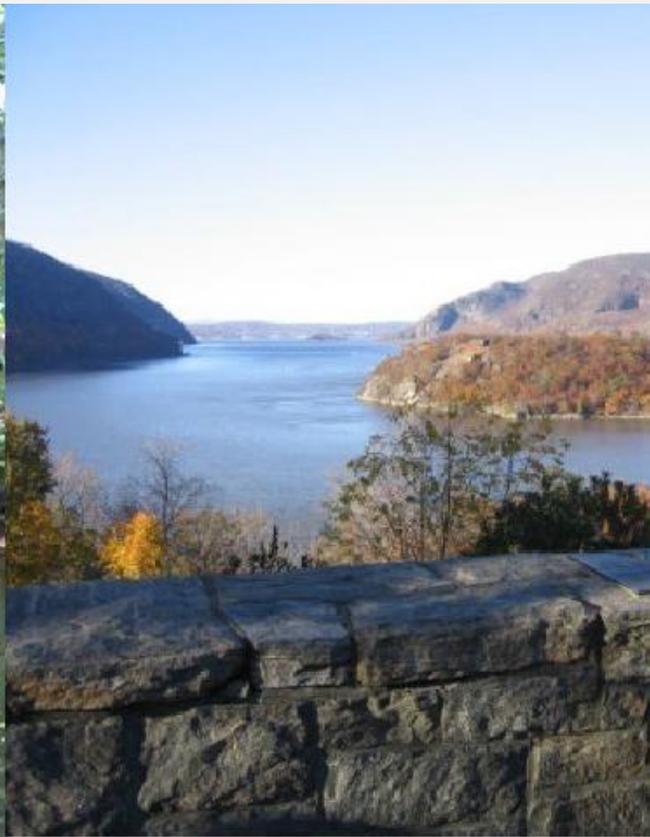

NARRATIVE EXPRESSIONS OR NUMERIC  
VALUES CHARACTERIZING THE AQUATIC  
COMMUNITIES PROTECTED BY THE  
DESIGNATED AQUATIC LIFE USE

# STATUTORY BASIS: CWA SECTION 101

## Objective

To restore and maintain the chemical, physical, and *biological integrity* of the nation's waters.

## BIOLOGICAL INTEGRITY

The capability [of an aquatic ecosystem] to support and maintain a balanced, integrated, adaptive community of organisms having a composition and diversity comparable to that of the natural habitats of the region (adapted from Frey 1977 – see slide listing references at end of this presentation).

What we measure

BIOLOGICAL  
INTEGRITY

The capability [of an aquatic ecosystem] to support and maintain a balanced, integrated, adaptive **community of organisms having a composition and diversity** comparable to that of the natural habitats of the region (adapted from Frey 1977 – see slide listing references at end of this presentation).

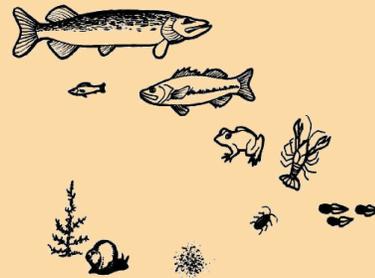

# BIOLOGICAL INTEGRITY

The capability [of an aquatic ecosystem] to support and maintain a balanced, integrated, adaptive community of **organisms having a composition and diversity** comparable to that of the natural habitats of the region.

Benthic Macroinvertebrates

Fish

Diatoms

# BIOLOGICAL INTEGRITY

The capability [of an aquatic ecosystem] to support and maintain a balanced, integrated, adaptive community of **organisms having a composition and diversity** comparable to that of the natural habitats of the region.

Benthic Macroinvertebrates

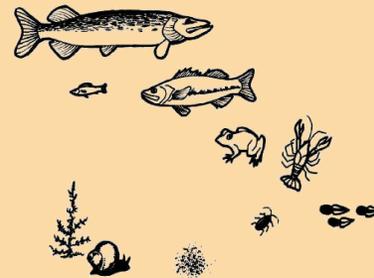

Fish

Diatoms

Amphibians

Birds

Aquatic Macrophytes

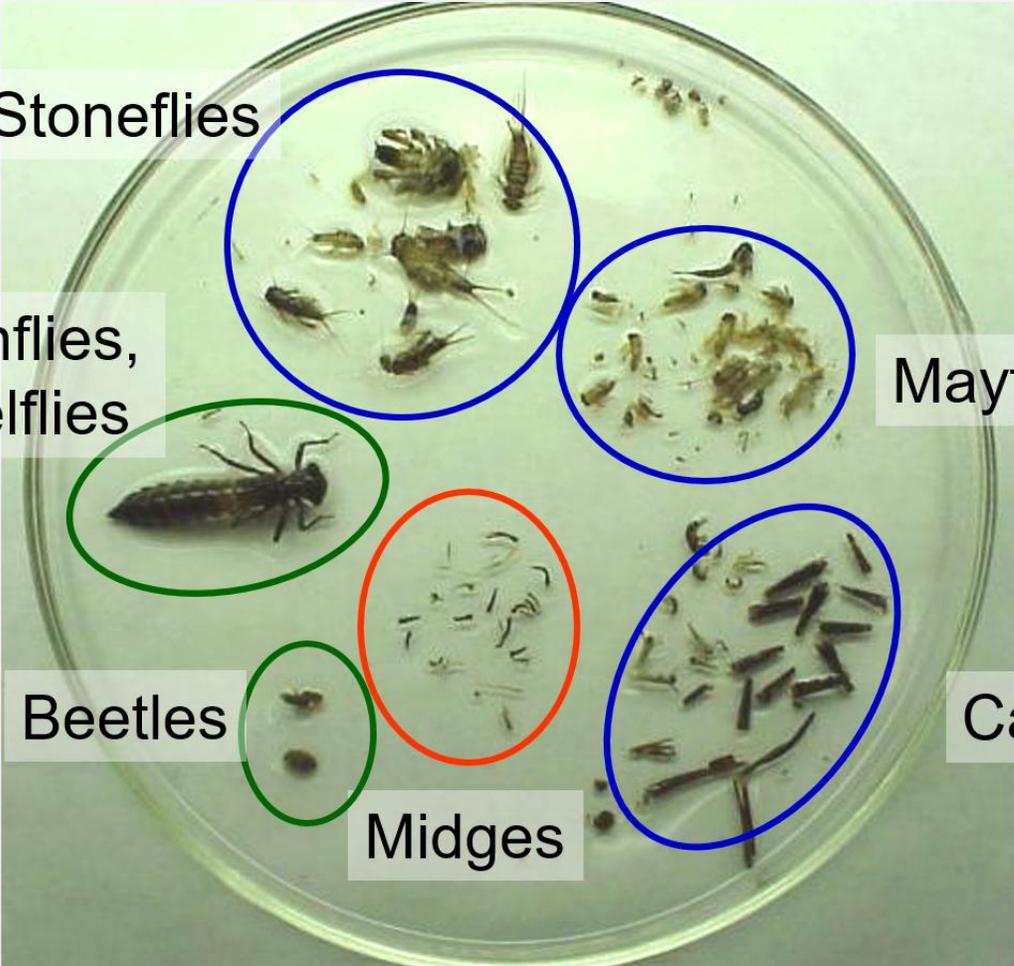

## EX: BENTHIC MACROINVERTEBRATES

- Animals without backbones, living in or on the sediments for one or more life stages
- Large enough to be seen by the unaided eye.
- Are susceptible to degradation of water quality and habitat, and therefore serve as good indicators of environmental conditions.

# HOW DO WE MEASURE?

## DATA

Bioassessments are evaluations of the biological condition of a waterbody using surveys of the structure and function of a community of resident biota.

## Invertebrate community bioassessment using a Surber sampler

Invertebrate community bioassessment using a kicknet

## Fish community bioassessment

# Lake sediment diatoms in paleolimnology

## HOW DO WE INTERPRET THE DATA?

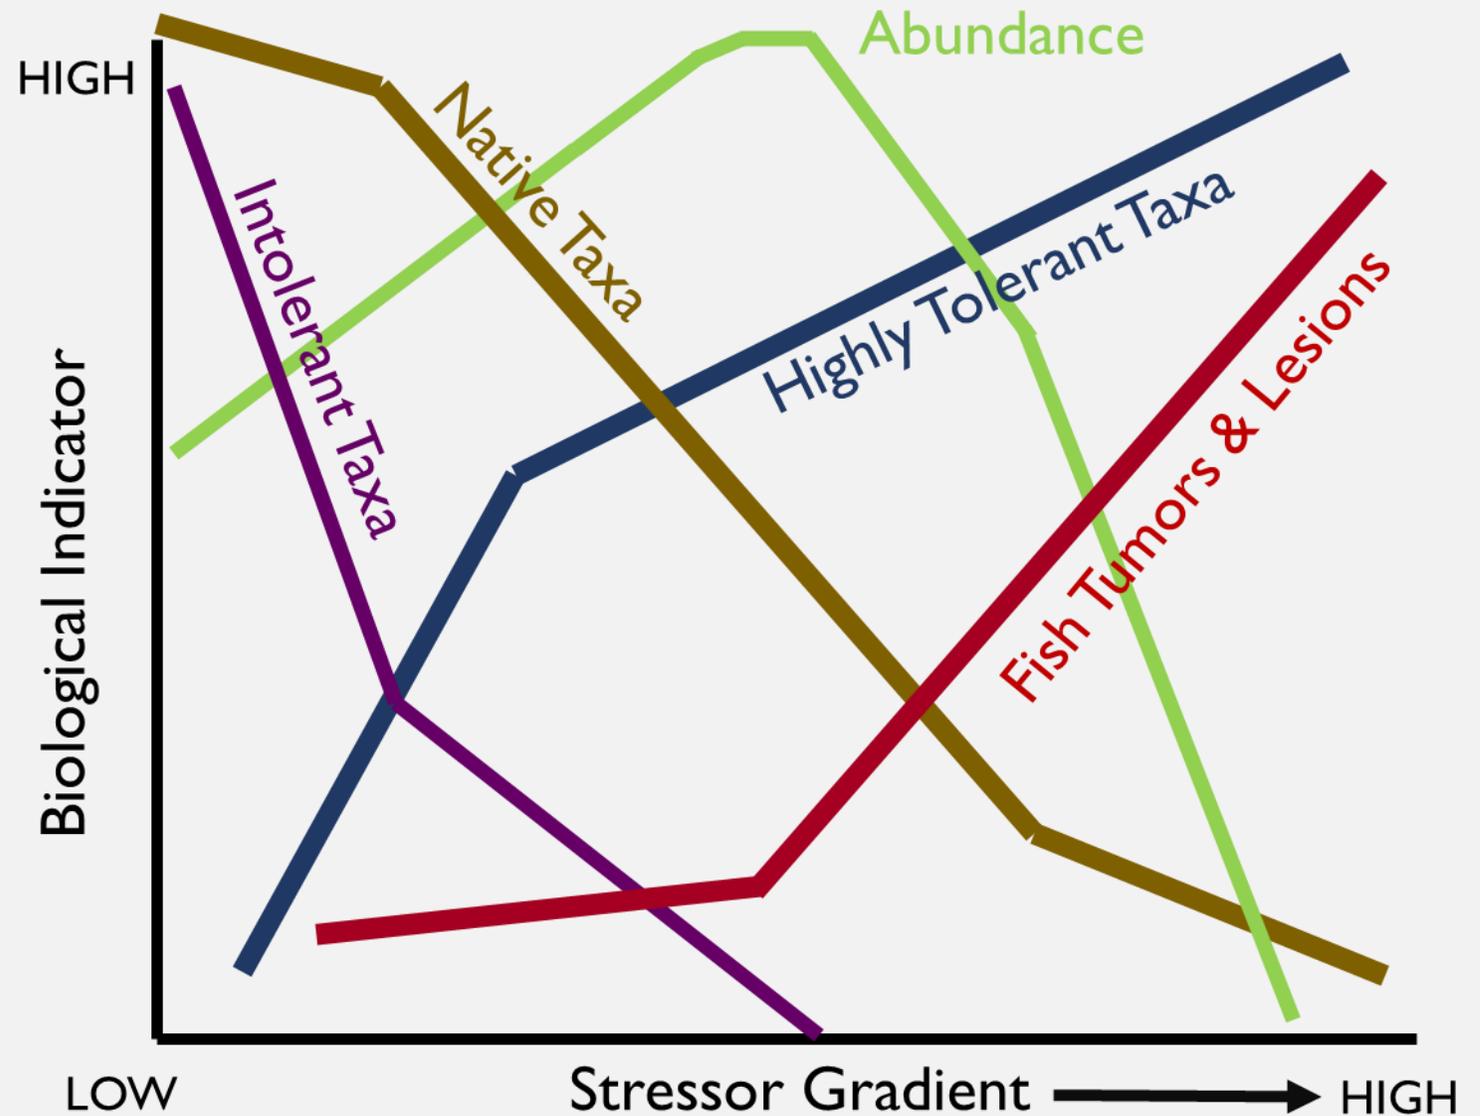

- **Attribute: any measurable component of a biological system.**
- **Metric: attribute that shows a quantitative change in value along a gradient of human influence.**
- **Multimetric index: a number that integrates several biological metrics to express a site's condition or health (ex. Index of Biological Integrity).**

## HOW DO WE INTERPRET THE DATA?

- Attribute: any measurable component of a biological system.
- **Metric: attribute that shows a quantitative change in value along a gradient of human influence.**
- Multimetric index: a number that integrates several biological metrics to express a site's condition or health (ex. Index of Biological Integrity).

# HOW ELSE DOES THE CWA INFORM DEVELOPMENT OF BIOCRITERIA?

## BIOLOGICAL INTEGRITY

The capability [of an aquatic ecosystem] to support and maintain a balanced, integrated, adaptive community of organisms having a composition and diversity comparable to that of the natural habitats of the region (adapted from Frey 1977 – see slide listing references at end of this presentation).

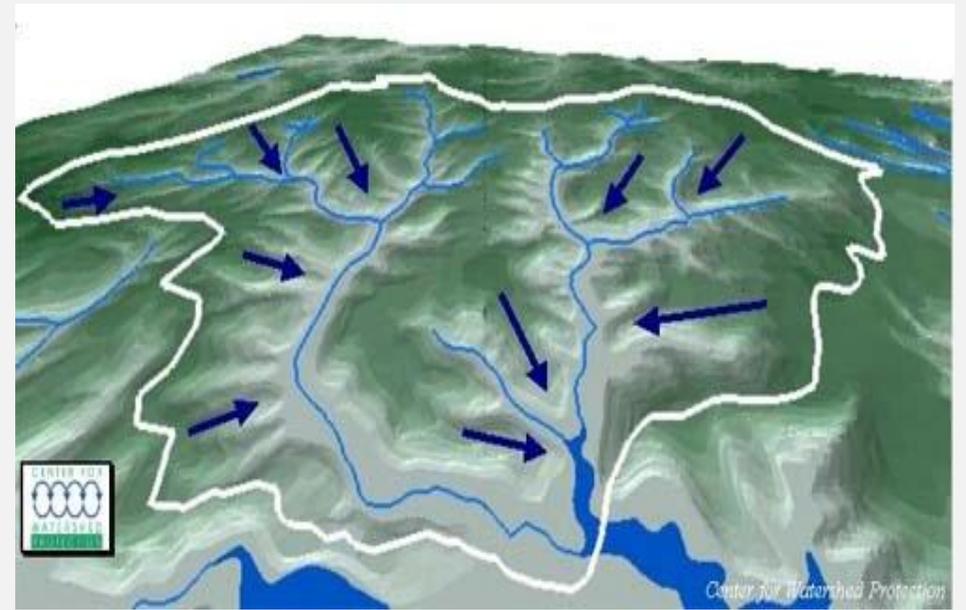

# Classification

## BIOLOGICAL INTEGRITY

The capability [of an aquatic ecosystem] to support and maintain a balanced, integrated, adaptive community of organisms having a composition and diversity comparable to that of the **natural habitats of the region** (adapted from Frey 1977 – see slide listing references at end of this presentation).

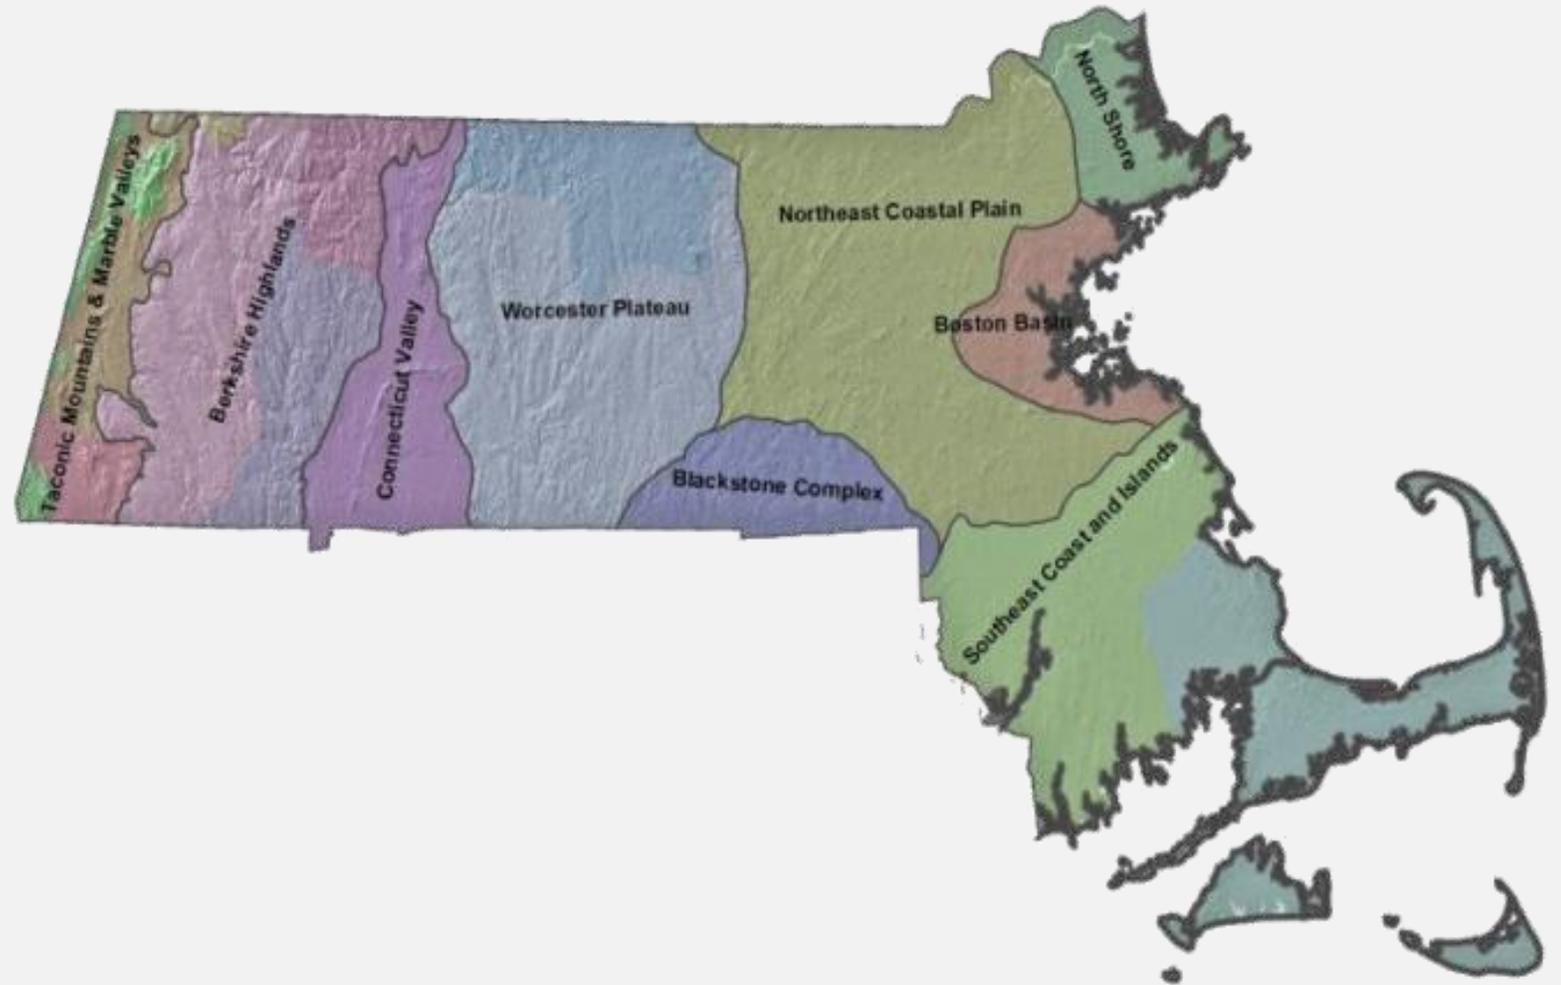

# WATERBODY CLASSIFICATION

- Biota vary naturally in different environments.
- Classification of waterbodies allows you to compare waterbodies with similar biological expectations.
- Some ways to classify waterbodies are by aquatic resource type and ecological region.

# ECOREGIONS

Ecoregions: areas of relative ecosystem homogeneity. They are based on soils, geology, elevation, climate, and other factors.

Reference

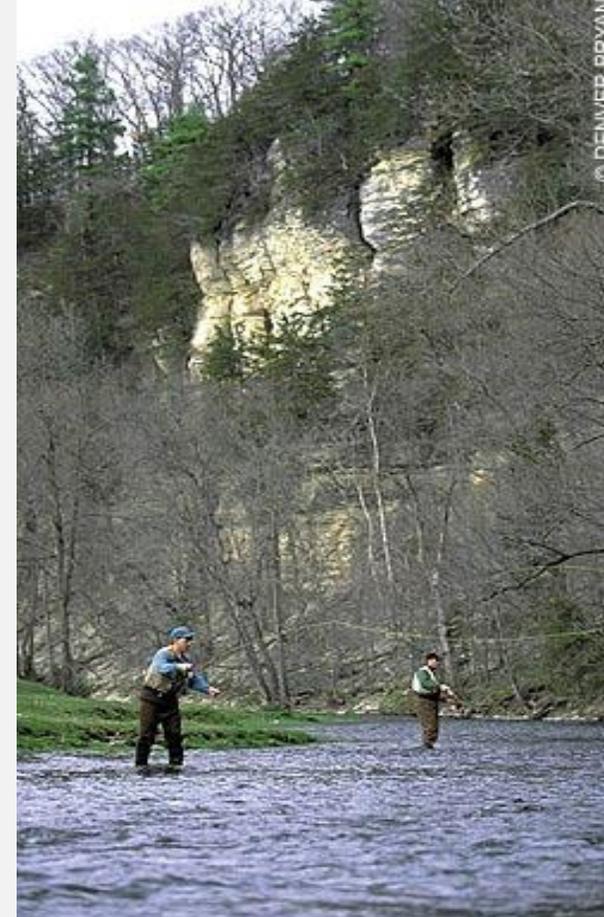

## BIOLOGICAL INTEGRITY

The capability [of an aquatic ecosystem] to support and maintain a balanced, integrated, adaptive community of organisms having a composition and diversity comparable to that of the **natural** habitats of the region (adapted from Frey 1977 – see slide listing references at end of this presentation)

# REFERENCE SITES AS A BENCHMARK

## What is reference condition?

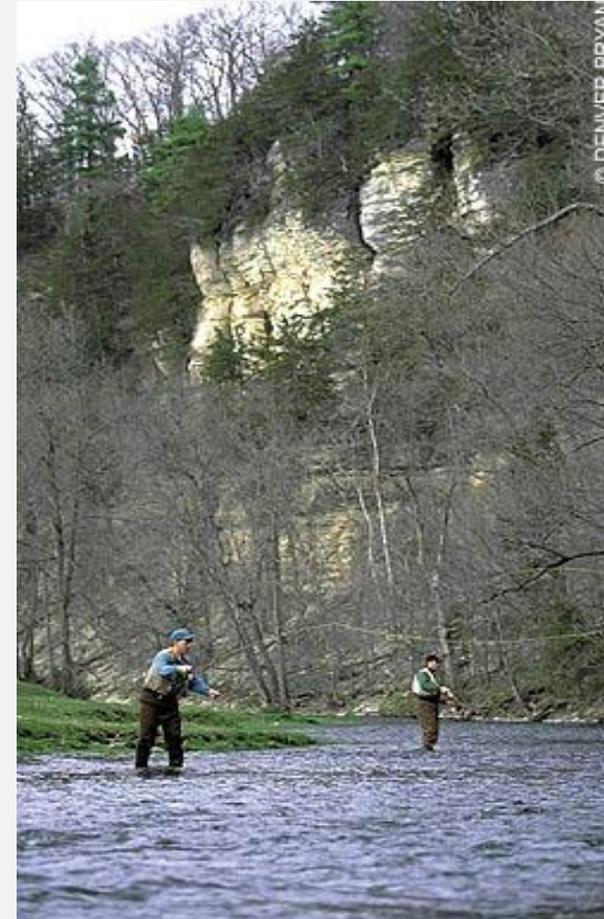

- **The biological expectation for a given waterbody type in a given region that would occur with no or minimal human disturbance.**

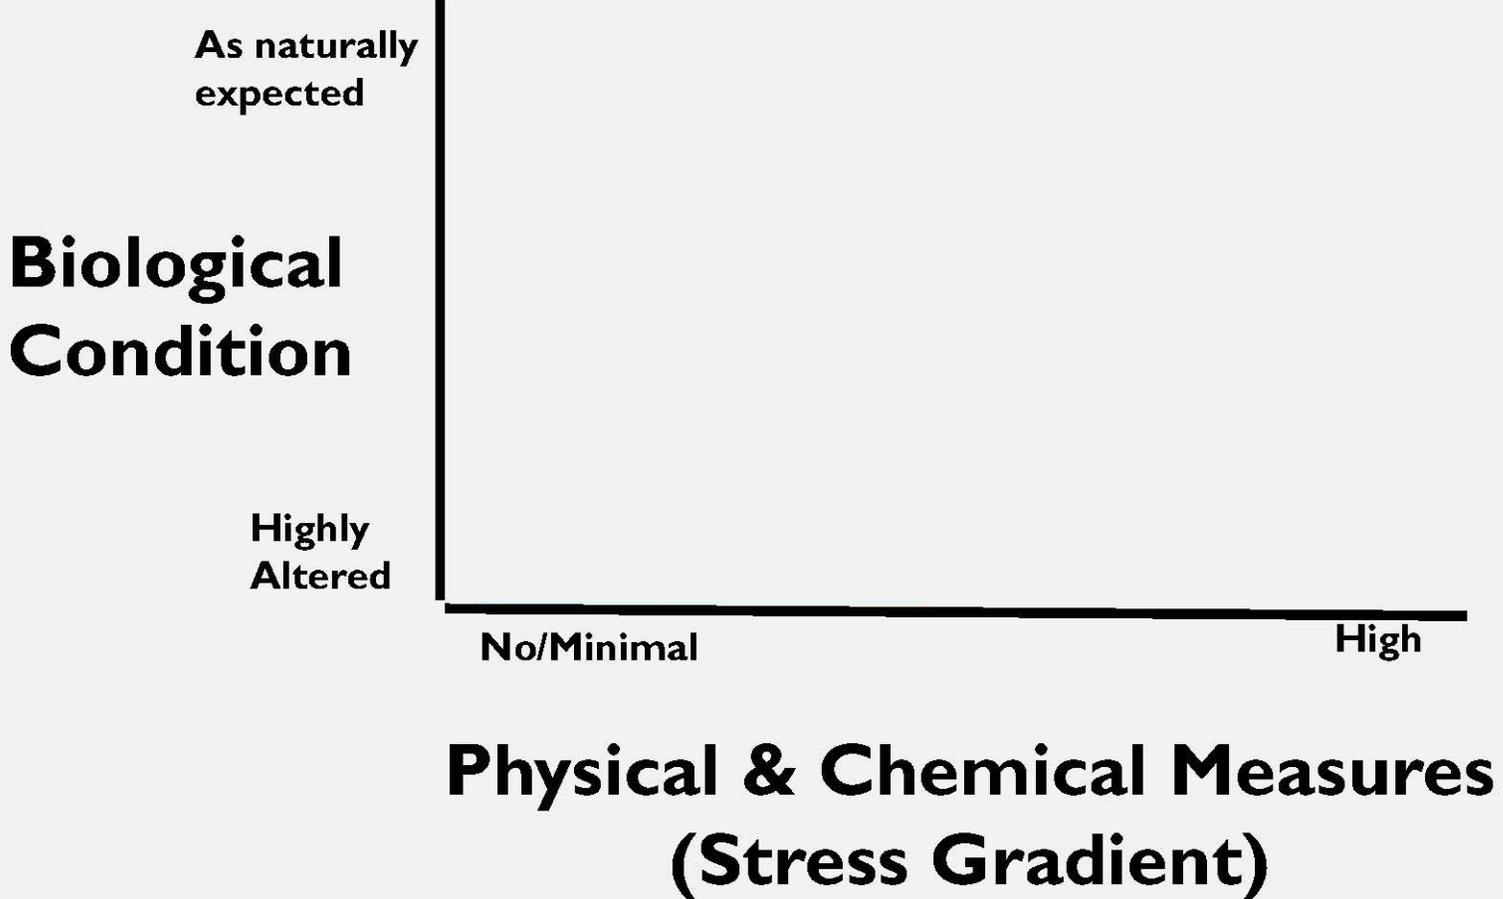

# REFERENCE SITES AS A BENCHMARK

## What is reference condition?

# CWA SECTION 101

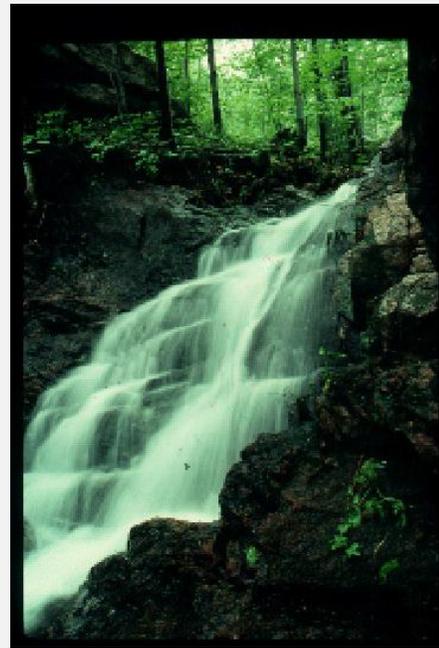

## Objective

To restore and maintain the chemical, physical, and *biological integrity* of the nation's waters.

## 101(a)(2) Goal

Protection and propagation of fish, shellfish, and wildlife

...

# CWA SECTION 303

## CWA Section 303(c)(2)(B):

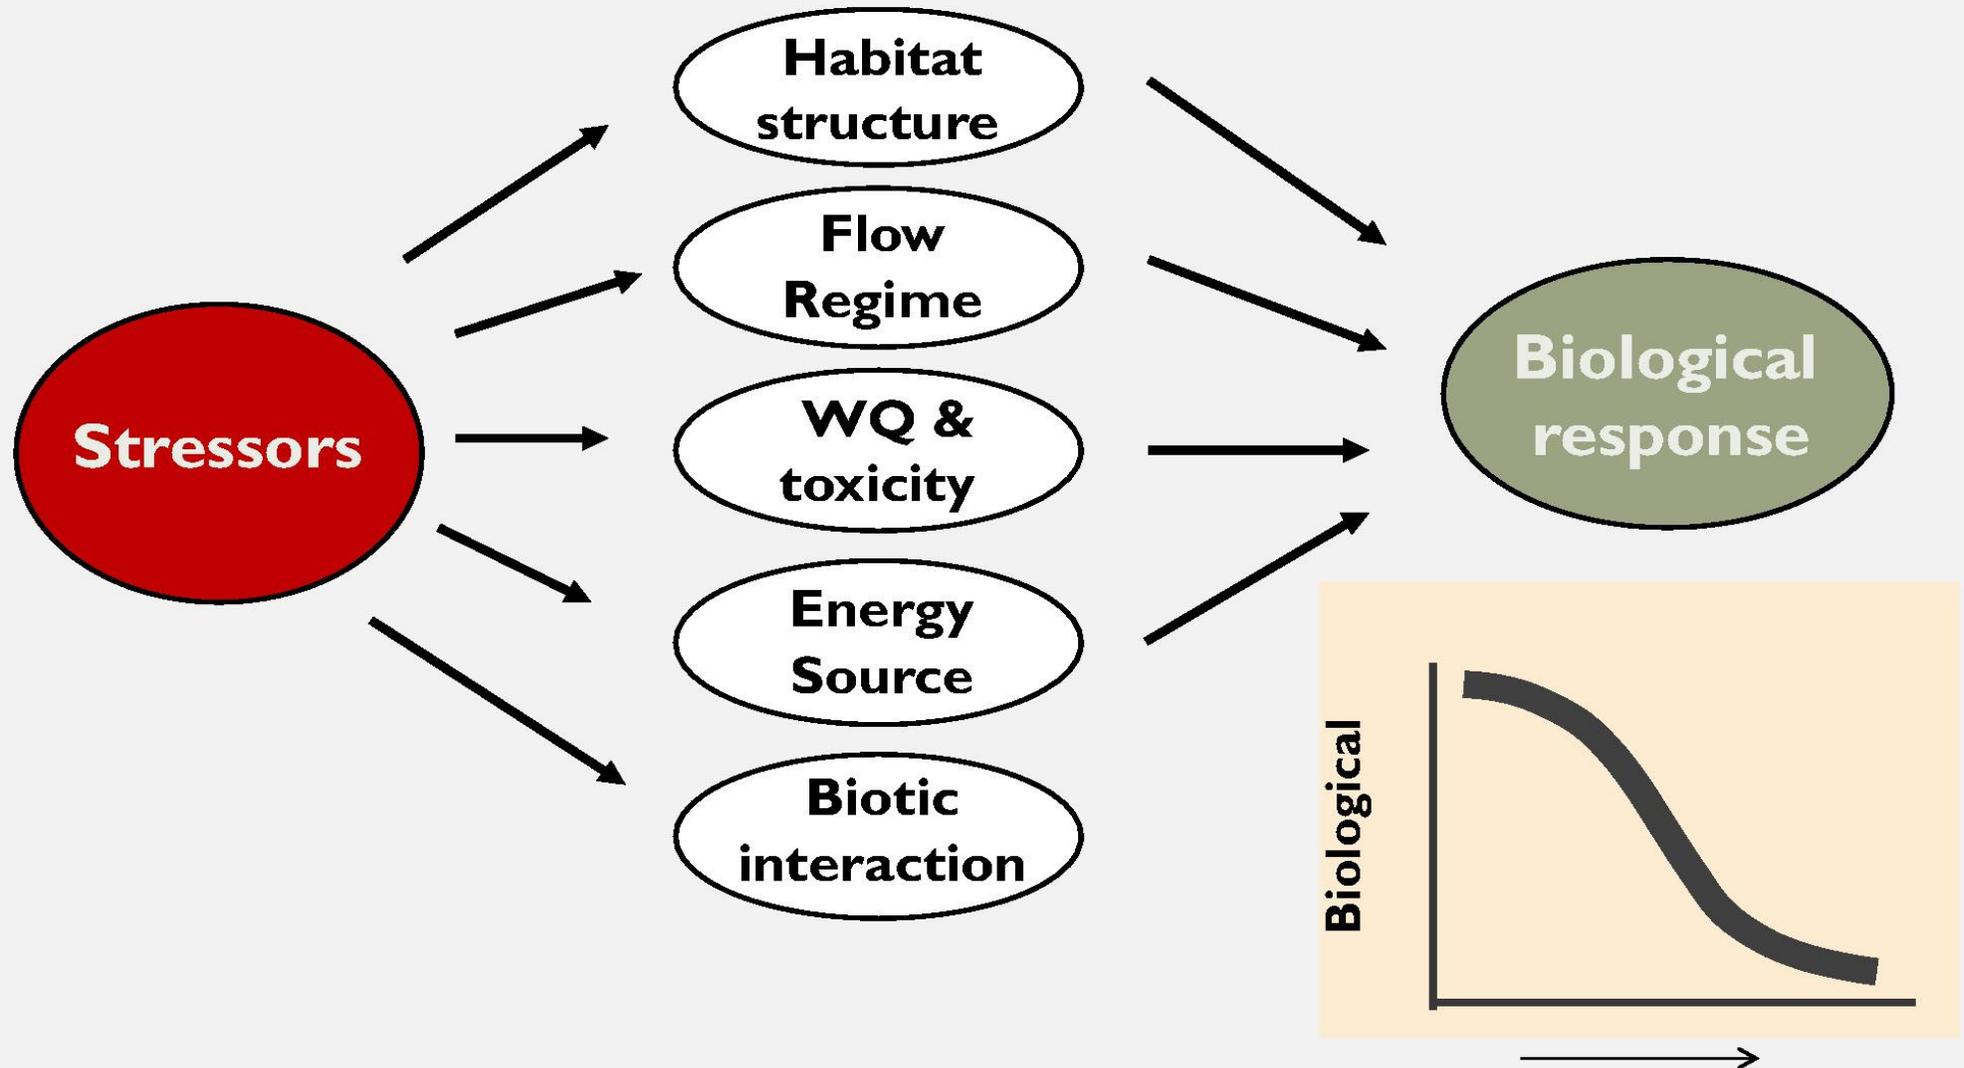

“Where such numerical criteria are not available, whenever a State reviews water quality standards pursuant to paragraph (1), or revises or adopts new standards pursuant to this paragraph, such State shall adopt criteria based on biological monitoring or assessment methods consistent with information published pursuant to section 1314(a)(8) of this title.”

# CWA SECTION 304(A)(I)

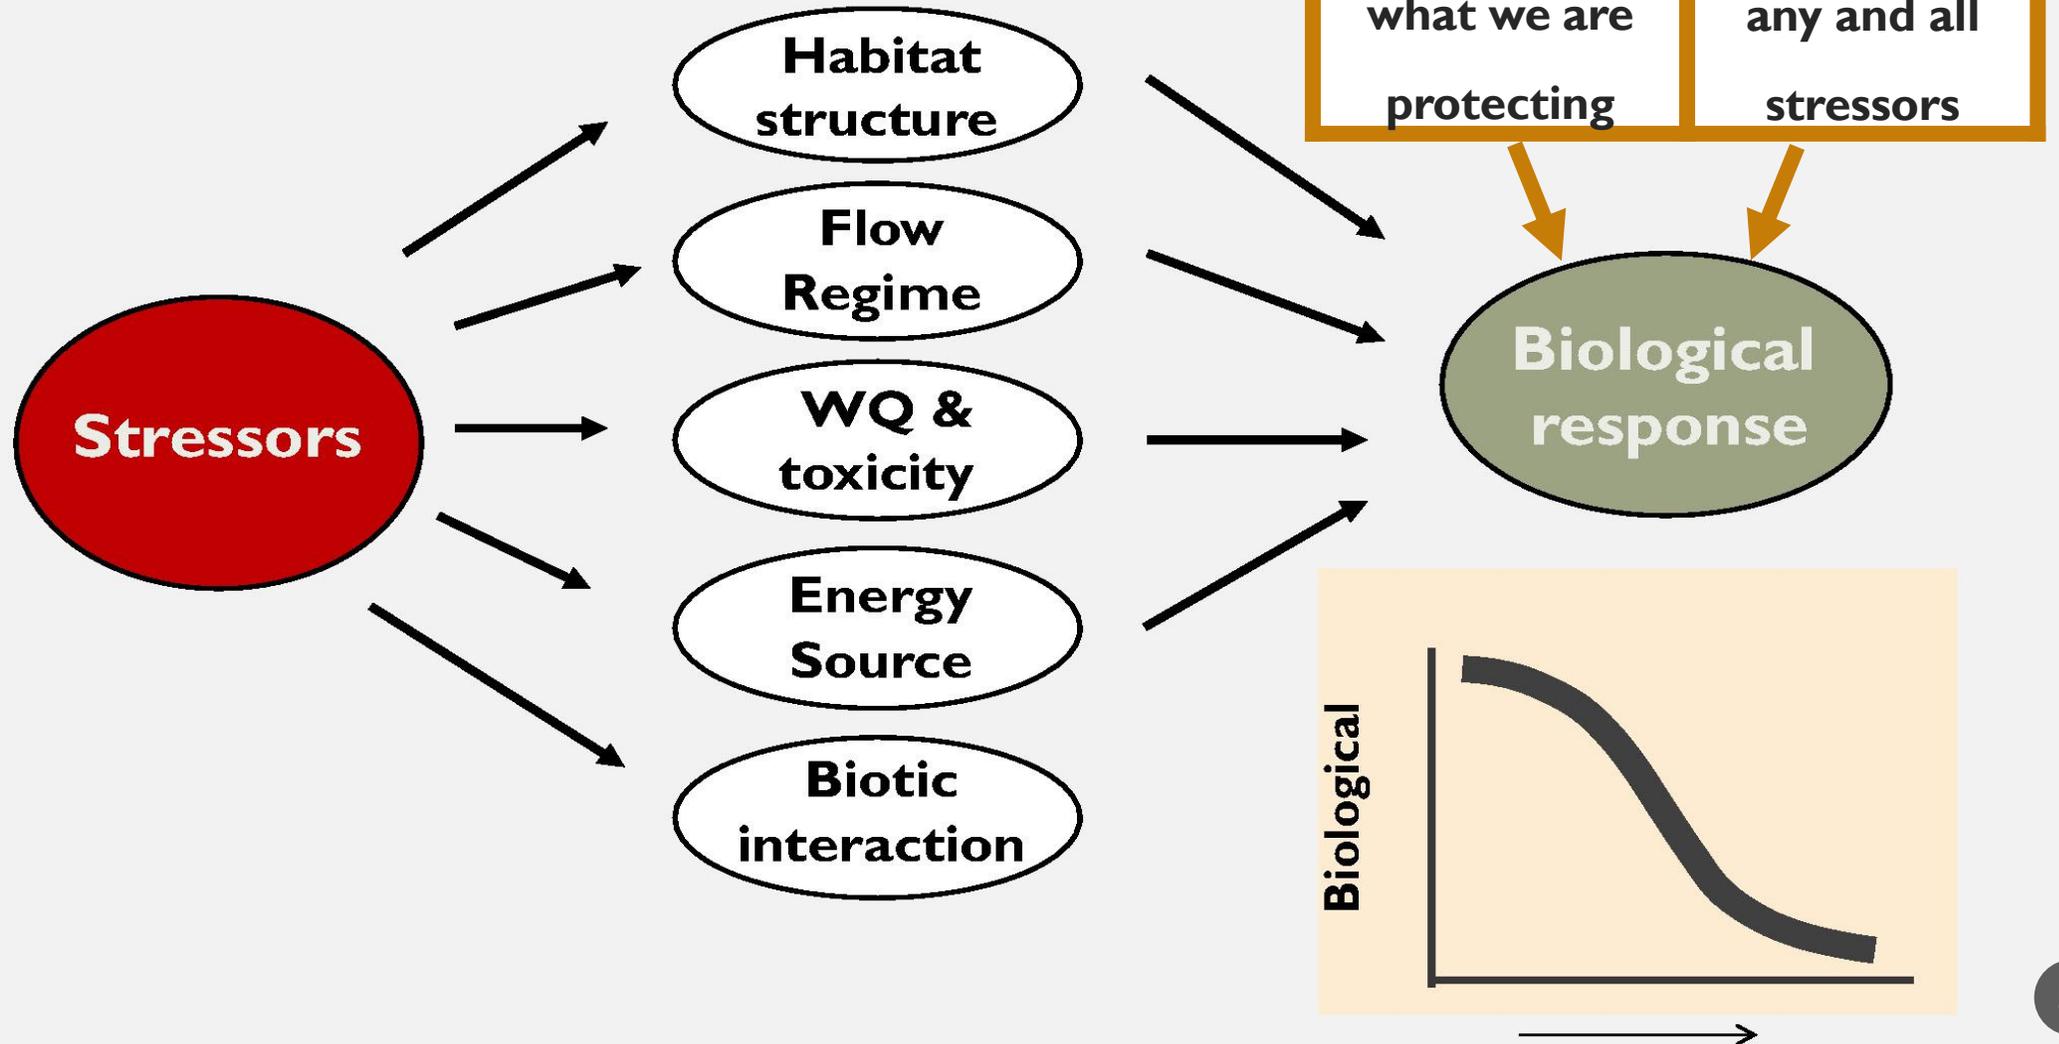

CWA Section 304(a)(1)(C):

“... on the effects of pollutants on biological community diversity...”

# PAIRING BIOLOGICAL CONDITION WITH ECOSYSTEM SERVICES

## Gains and losses:

- outdoor experience (e.g., birdwatchers, kayakers, hikers)
- recreational fisheries
- commercial fisheries
- service industry
- property values
- city or county tax income

# COMPREHENSIVE TOOLBOX: STRESSOR ID, WQ CRITERIA, AND BMP

What is the cause of biological impairment?

What are management options?

How track progress?

WHAT DOES A BIOCRITERIA  
LOOK LIKE?

A GENERAL EXAMPLE

# AQUATIC LIFE USES AND BIOCRITERIA

- Management Goals ideally developed for protection and restoration of aquatic life
  - General description of the expected biological characteristics of a waterbody
- Narrative descriptions/quantifiable thresholds

*designated  
aquatic life uses*

*biocriteria*

# NARRATIVE BIOLOGICAL CRITERIA

Narrative Biocriteria - Written statement describing the structure and/or function of aquatic communities in a waterbody that support a given designated ALU (e.g., “as naturally occurs,” “balanced community of taxa,” lists of expected taxa and/or verbal description of type of aquatic community expected).

# NUMERIC BIOLOGICAL CRITERIA

- Written statement describing the structure and/or function of aquatic communities in a waterbody that support a given designated ALU and **with method for quantification cited**.
- Specific quantitative measures (e.g., metrics) of desired level of biological condition for a given ALU designated.

## EXAMPLE: DESIGNATED ALU

Minimal changes in structure of the biotic community - native taxa are maintained with some changes in biomass and/or abundance.

## EXAMPLE: NARRATIVE BC

### **Narrative BC for cool-cold water streams (MW)**

Overall taxa richness and density is as naturally occurs (e.g., moderate to high levels). Most sensitive taxa and native taxa are present and make up a significant fraction of the total richness and abundance.

## EXAMPLE: NARRATIVE BC

### **Narrative BC for cool-cold water streams (MW)**

Overall taxa richness and density is as naturally occurs (e.g., moderate to high levels).

Most sensitive taxa and native taxa are present and make up a significant fraction of the total richness and abundance. (e.g., *Trichoptera: Glossosoma, Rhyacophila, Lepidostoma, Dolophilodes; Ephemeroptera: Ephemerella, Epeorus; Plecoptera: Leuctridae*).

## EXAMPLE: NARRATIVE BC

### **Narrative BC for cool-cold water streams (MW)**

Overall taxa richness and density is as naturally occurs (e.g., moderate to high levels).

Most sensitive taxa and native taxa are present and make up a significant fraction of the total richness and abundance. (e.g., *Trichoptera: Glossosoma, Rhyacophila, Lepidostoma, Dolophilodes; Ephemeroptera: Ephemerella, Epeorus; Plecoptera: Leuctridae*).

Intermediate sensitive taxa occur in moderate to high #s (e.g., *Ephemeroptera: Paraleptophlebia; Plecoptera: Acroneuria, Isoperla, Paragnetina; Trichoptera: Brachycentrus, Chimarra*).

## EXAMPLE: NARRATIVE BC

### **Narrative BC for cool-cold water streams (MW)**

Overall taxa richness and density is as naturally occurs (e.g., moderate to high levels).

Most sensitive taxa and native taxa are present and make up a significant fraction of the total richness and abundance. (e.g., *Trichoptera: Glossosoma, Rhyacophila, Lepidostoma, Dolophilodes; Ephemeroptera: Ephemerella, Epeorus; Plecoptera: Leuctridae*).

Intermediate sensitive taxa occur in moderate to high #s (e.g., *Ephemeroptera: Paraleptophlebia; Plecoptera: Acroneuria, Isoperla, Paragnetina; Trichoptera: Brachycentrus, Chimarra*).

Tolerant taxa occur in low numbers (e.g., *Oligochaetes, Simuliidae*).

## EXAMPLE: NUMERIC BC

### Narrative BC for cool-cold water streams (MW)

Overall taxa richness and density is as naturally occurs (e.g., moderate to high levels). Most sensitive taxa and native taxa (e.g., *Trichoptera: Glossosoma*, *Rhyacophila*, *Lepidostoma*, *Dolophilodes*; *Ephemeroptera: Ephemerella*, *Epeorus*; *Plecoptera: Leuctridae*) are present and make up a significant fraction of the total richness and abundance. Intermediate sensitive taxa (e.g., *Ephemeroptera: Paraleptophlebia*; *Plecoptera: Acroneuria*, *Isoperla*, *Paragnetina*; *Trichoptera: Brachycentrus*, *Chimarra*) occur in moderate to high numbers. Tolerant taxa occur in low numbers (*Oligochaetes*, *Simuliidae*).

<u>Numeric BC</u>	<u>Cool Water</u>	<u>Cold Water</u>
# Total taxa	≥ 14 (11 – 16)	≥ 20 (16 – 24)
% Most sensitive taxa (Att I + II)	> 10% (7 – 13%)	> 5% (3 – 7%)
% Most sensitive individuals (Att I & II)	-	> 8% (6 – 10%)
% Sensitive taxa (Att II + III)	>30% (25 – 35%)	> 30% (25 – 30%)
% Sensitive individuals (Att II + III)	>30% (25 – 35%)	> 30% (25 – 30%)
% Most dominant tolerant taxa (Att V)	< 5% (3 – 7%)	-
% Sensitive EPT taxa (Att I + II + III)	> 10% (7 – 13%)	> 10% (7 – 13%)

# EXAMPLE: NUMERIC BC

## Narrative BC for cool-cold water streams (MW)

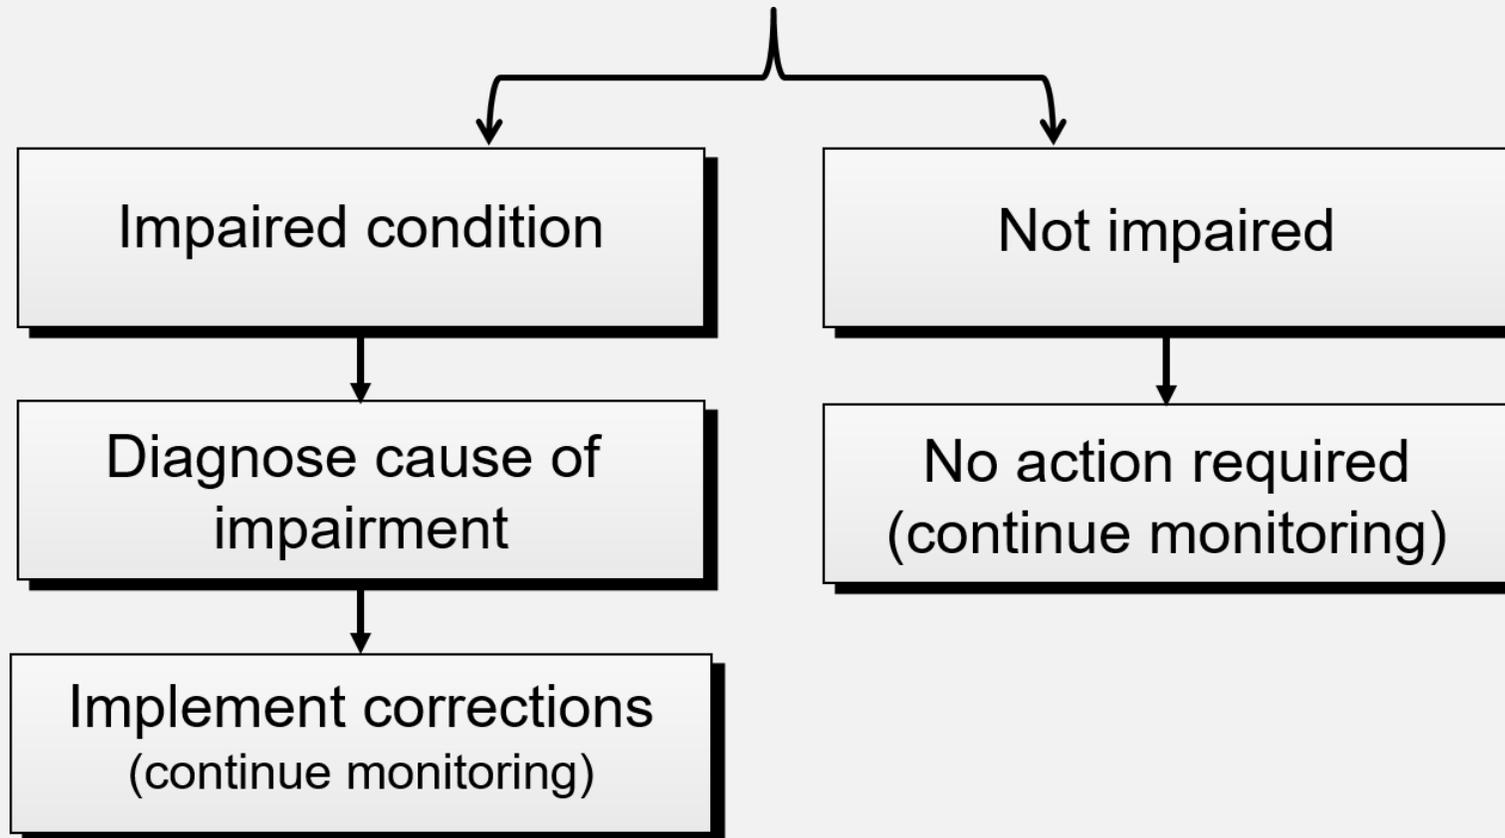

Overall taxa richness and density is as naturally occurs (e.g., moderate to high levels). Most sensitive taxa and native taxa (e.g., *Trichoptera: Glossosoma*, *Rhyacophila*, *Lepidostoma*, *Dolophilodes*; *Ephemeroptera: Ephemerella*, *Epeorus*; *Plecoptera: Leuctridae*) are present and make up a significant fraction of the total richness and abundance.
