Part II. Self-Assessment

The Town of Billerica has completed the required self-assessment and has determined that our municipality is in compliance with all permit conditions.

Part III. Summary of Minimum Control Measures

1. Public Education and Outreach

BMP ID #	BMP Description	Responsible Dept./Person Name	Measurable Goal(s)	Progress on Goal(s) – Permit Year 3 (Reliance on non-municipal partners indicated, if any)	Planned Activities – Permit Year 4
1.3.1 Revised	Partner with local organization	DPW <i>Engineering</i>	Partner with one organization each year.	Continued support and assisted in the development of outreach material with SuAsCo. Partnered with Central Massachusetts Mosquito Control Project.	Continue support and assist in the development of outreach material with SuAsCo. Revisit partnering with O.A.R. for employee training or other activities.
1.3.2 Revised	Public Education Materials	BOH	Stormwater brochure and booth at Health Fair	Continued participation at Health Fair. Provided informational handout regarding Billerica Compost program to residents.	Continue participation at Health Fair. Update stormwater display and pamphlets at Town Hall and Board of Health office.
1.3.3 Revised	Local schools education program	School Dept.	Present stormwater to two schools each year.	Revised dated teaching materials in preparation for classroom implementation.	Implement classroom outreach to 5 th & 6 th grade classes using curriculum developed in BMP 1.3.1
1.3.4 Revised	Stormwater Web Page	Engineering	Develop stormwater web page	Stormwater web page in place.	Update web page and add additional links and information.
1.3.5 Revised	Cable Access TV Show	BOH	Produce stormwater cable access show <i>Select a stormwater program for viewing on Billerica Access TV.</i>	Reviewed available videos for use on Billerica Access TV and selected <i>After the Storm.</i>	Obtain VHS copies of <i>After the Storm</i> from National Service Center for Environmental Publications, or similar relevant productions for Billerica Access TV.

BMP ID #	BMP Description	Responsible Dept./Person Name	Measurable Goal(s)	Progress on Goal(s) – Permit Year 3 (Reliance on non-municipal partners indicated, if any)	Planned Activities – Permit Year 4
1.3.6	Public Access GIS Tool	Engineering	Provide Town Hall access to GIS stormwater mapping Year 2.	A Beta version of the Web GIS is available to Town employees for review/testing before public release.	Seek additional funding for moving forward with Web GIS public release implementation.
Revised			<i>Provide public access to maps of streams, rivers, storm drains and water quality data by Year 5.</i>		
1.4.1	Stormwater flyer to residents	SuAsCo	No Goal(s) for Yr. 3	N/A	N/A
Revised		<i>SuAsCo & DPW</i>			
1.4.2	Stormwater lesson plan	SuAsCo	No Goal(s) for Yr. 3	N/A	N/A
Revised		<i>SuAsCo & DPW</i>			
1.4.3	Stormwater flyer to businesses	SuAsCo	Stormwater flyer to 50% of Town businesses	Received Media Toolkit in April 2006.	Press releases will be distributed to local media. Board of Selectmen will be consulted for appropriate use of “Stormwater Matters” banner supplied by SuAsCo.
Revised	<i>Media toolkit and stormwater powerpoint program</i>	<i>SuAsCo & DPW</i>	<i>Year 3 product changed by SuAsCo</i>		
1.4.4	Stormwater media campaign	SuAsCo	No Goal(s) for Yr. 3	N/A	Media packet to local media
Revised		<i>SuAsCo & DPW</i>	<i>Develop media information packet</i>		
1.4.5	Stormwater video	SuAsCo	No Goal(s) for Yr. 3	N/A	N/A
Revised		<i>SuAsCo & DPW</i>			

2. Public Involvement and Participation

BMP ID #	BMP Description	Responsible Dept./Person Name	Measurable Goal(s)	Progress on Goal(s) – Permit Year 3 (Reliance on non-municipal partners indicated, if any)	Planned Activities – Permit Year 4
2.3.1 Revised	Partner / Support a Watershed Organization	DPW <i>Engineering</i>	Partner with one local organization each year.	Continued partnership with SuAsCo.	Continue partnership with SuAsCo. Revisit partnering with O.A.R. for employee training or other activities.
2.3.2 Revised	Storm drain stenciling program	Engineering	Develop & Implement drain stenciling program	Reviewed stenciling implementation and safety issues.	Implement drain stenciling program.
2.3.3 Revised	Stormwater Public Meetings Program	Engineering	Discuss stormwater at one public meeting each year <i>Discuss stormwater at one or more public meetings each year</i>	Stormwater issues discussed at neighborhood meetings held on Michael Road and Cook Street/Alexander Road projects.	Continue to invite public discussion of stormwater at public meetings.
2.3.4 Revised	Recognition Programs	DPW	Recognize one stormwater savvy business each year	Developed criteria for selecting stormwater savvy businesses	Recognize one stormwater savvy business.
2.3.5 Revised	Recreation Department Public Education Program	DPW <i>Engineering</i>	Involve Recreation Department in stormwater public education program each year.	Reviewed stormwater literature to be included in Recreation Department mailing. Participated in the review of the Recreation Department's Lampson Field renovations project, which includes various stormwater improvements.	Review/revise stormwater literature to be included in Recreation Department mailing. Continued involvement in the Lampson Field renovations project.

BMP ID #	BMP Description	Responsible Dept./Person Name	Measurable Goal(s)	Progress on Goal(s) – Permit Year 3 (Reliance on non-municipal partners indicated, if any)	Planned Activities – Permit Year 4
2.3.6	Annual “Clean the Stream” program	Recreation	Recruit volunteers for each years’ stormwater cleaning effort	Held annual Town wide “Green-up” and Town wide “Clean-up” events. Contracted with the Commonwealth of Massachusetts Middlesex Sheriffs Office for assistance with cleaning and preparations of parks, playgrounds, and beach. Contracted with Central Massachusetts Mosquito Control Project to clean 4,770’ of streams.	Continue annual Town wide “Green-up” and Town wide “Clean-up” events. Continue affiliations with Central Massachusetts Mosquito Control Project.
Revised					
2.4.1	Stormwater traveling display	SuAsCo	No Goal(s) for Yr. 3	Maintained stormwater display and pamphlets at Town Hall and Board of Health office.	N/A
Revised		<i>SuAsCo & DPW</i>			
2.4.2	Stormwater poster contest	SuAsCo	Poster contest winners selected	Year 3 product eliminated by SuAsCo.	N/A
Revised		<i>SuAsCo & DPW</i>	<i>Year 3 product eliminated by SuAsCo</i>		
2.4.3	Stormwater photo contest	SuAsCo	Photo contest advertised	Year 3 product eliminated by SuAsCo.	N/A
Revised		<i>SuAsCo & DPW</i>	<i>Year 3 product eliminated by SuAsCo</i>		
2.4.4	Stormwater summit special event	SuAsCo	No Goal(s) for Yr. 3	N/A	Review “Stormwater Matters” PowerPoint and Media Toolkit and promote stormwater summit.
Revised		<i>SuAsCo & DPW</i>	<i>Promote stormwater summit</i>		
2.4.5	Stormwater super summit	SuAsCo	No Goal(s) for Yr. 3	N/A	N/A
Revised		<i>SuAsCo & DPW</i>			

3. Illicit Discharge Detection and Elimination

BMP ID #	BMP Description	Responsible Dept./Person Name	Measurable Goal(s)	Progress on Goal(s) – Permit Year3 (Reliance on non-municipal partners indicated, if any)	Planned Activities – Permit Year 4
3.4.1	Asset Management Program	DPW	Develop stormwater Asset Management program.	Funding not available to incorporate A/M into capital improvement planning	Pursue funding to incorporate A/M into capital improvement planning.
Revised		Engineering			
3.4.2	Storm Drain Map	DPW	GPS field effort of drainage structures.	Verified accuracy and completeness of consultant's drain map. Efforts not complete.	Pursue funding to continue efforts. Continue to verify accuracy and completeness of consultant's drain map.
Revised		Engineering			
3.4.3	TMDL, Critical Habitat, Historic Property	DPW	Monitor changes in TMDL, Critical Habitat & Historic Site	Continued to monitor changes in TMDL, critical habitats, and historic sites.	Continue to monitor changes in TMDL, critical habitats, and historic sites.
Revised		Engineering			
3.4.4	Stormwater By-Law	DPW	Develop stormwater by-law	Continued to review existing by-laws, regulations and policies regarding drainage and stormwater management and continued discussions on proposed changes.	Develop stormwater requirements for inclusion into Board of Health Regulations.
Revised		Board of Health	Develop stormwater requirements regulated by Board of Health		
3.4.5	Illicit Discharge Detection Program	DPW	Develop phased illicit discharge detection program.	Funding not available to develop illicit discharge detection program.	Pursue funding and work with Woodard & Curran to develop and implement illicit discharge detection program.
Revised					
3.4.6	Illicit Discharge Elimination Program	DPW	No Goal(s) for Yr. 3	N/A	Enforce stormwater regulations to correct detected illicit discharges
Revised			Enforce stormwater regulations to correct detected illicit discharges		

BMP ID #	BMP Description	Responsible Dept./Person Name	Measurable Goal(s)	Progress on Goal(s) – Permit Year3 (Reliance on non-municipal partners indicated, if any)	Planned Activities – Permit Year 4
3.4.7	Resident education program		Develop and distribute fliers defining illicit discharges and summarizing the Town By-Law	N/A. Dependent on progress of 3.4.5.	N/A. Dependent on progress of 3.4.5.
Revised			<i>Develop and distribute fliers defining illicit discharges and summarizing the Town Stormwater Regulations</i>		

4. Construction Site Stormwater Runoff Control

BMP ID #	BMP Description	Responsible Dept./Person Name	Measurable Goal(s)	Progress on Goal(s) – Permit Year 3 (Reliance on non-municipal partners indicated, if any)	Planned Activities – Permit Year 4
4.2.1	Regulatory Controls	Board of Health	Develop “Erosion & Sediment Control” by-law	Drafted Board of Health guidelines for in-house review.	Review and finalize erosion & sediment control regulations
Revised					
4.2.2	Review and site inspection procedures	Board of Health	Sanctions developed and included in regulations to ensure compliance	Drafted Board of Health guidelines for in-house review.	Review and finalize guidelines.
Revised					
4.2.3	Enforcement procedures	Board of Health	Develop and implement enforcement procedures and sanctions for stormwater violators	Drafted Board of Health guidelines for in-house review.	Review and finalize guidelines.
Revised					
4.2.4	Procedures for Handling Public Comments	DPW	Develop & implement public comment procedure	Complaints & comments taken online or through complaint tracking form when received by phone call or over the counter.	Continue development of procedures for receipt and consideration of information submitted by public.
Revised		<i>Board of Health</i>			

5. Post-Construction Stormwater Management in New Development and Redevelopment

BMP ID #	BMP Description	Responsible Dept./Person Name	Measurable Goal(s)	Progress on Goal(s) – Permit Year 3 (Reliance on non-municipal partners indicated, if any)	Planned Activities – Permit Year 4
5.3.1	Structural stormwater controls	Planning Board	Revise subdivision rules and regulations with new BMP's	N/A. Completed Year 2.	N/A
Revised					
5.3.2	Zoning Requirements	Zoning Board	Evaluate Zoning By-laws	Zoning by-laws, reviewed to determine where improvements might be made.	Implement findings and revise Zoning by-laws.
Revised					
5.3.3	Planning Strategies	DPW	Review Current Town Master Plan	Began review of the current Master Plan as it pertains to stormwater. Efforts not complete.	Continue review of the current Master Plan as it pertains to stormwater.
Revised		Engineering			
5.3.4	Conditions for private stormwater systems	Engineering	Develop maintenance requirements for private stormwater systems	N/A	Develop maintenance requirements for private stormwater systems
Revised					
5.3.5	Stormwater infrastructure inspection program	Engineering	Develop technology based inspection program	N/A	Develop technology based inspection program.
Revised					

6. Pollution Prevention and Good Housekeeping in Municipal Operations

BMP ID #	BMP Description	Responsible Dept./Person Name	Measurable Goal(s)	Progress on Goal(s) – Permit Year 3 (Reliance on non-municipal partners indicated, if any)	Planned Activities – Permit Year 4
6.3.1	Pollution Prevention Planning	Highway Dept.	Conduct DPW meeting on stormwater pollution prevention	Conducted a DPW meeting on stormwater pollution prevention.	In coordination with Woodard & Curran, develop a Stormwater Pollution Prevention Plan.
Revised			<i>Develop a Stormwater Pollution Prevention Plan</i>		
6.3.2	Employee Training Program	DPW	Train Division Leadership	Commenced development of a training program and training tracking system for department employees.	Finalize development of a training program and training tracking system for department employees.
Revised			<i>Implement employee training program</i>		Implement employee training.
6.3.3	Recycling Program	Highway Dept.	Monitor recycling program & enhance if necessary	Annual hazardous waste day and continuously operated oil recycling program available on monthly basis.	Monitor and enhance recycling program.
Revised					
6.3.4	Catch Basin Cleaning Program	Highway Dept.	Clean catch basins each year	Continuous catch basin cleaning by Highway Department.	Clean catch basins and use A/M tool to monitor pounds of cleanings removed.
Revised			<i>Use asset management tool to monitor pounds of sediment removed from Town catch basins</i>		
6.3.5	Street Sweeping Program	Highway Dept.	Sweep Streets each year.	Street sweeping across 440 lane miles by Highway Dept.	Sweep streets each year.
Revised			<i>Use asset management tool to monitor pounds of sediment removed during street sweeping</i>		

}

BMP ID #	BMP Description	Responsible Dept./Person Name	Measurable Goal(s)	Progress on Goal(s) – Permit Year 3 (Reliance on non-municipal partners indicated, if any)	Planned Activities – Permit Year 4
6.3.6	Operations and Maintenance	DPW	Inventory ongoing stormwater maintenance activities	Invited the <i>Commonwealth of Massachusetts Executive Office of Environmental Affairs Office of Technical Assistance</i> to visit the Town's Highway Department to provide an opinion regarding the Department's existing maintenance operations.	Inventory ongoing stormwater maintenance activities. Develop measures to reduce sources of pollutant runoff.
Revised					
6.3.7	Reporting	DPW	Continue to track stormwater management activities and submit annual report	Continued to track stormwater management activities and submitted annual report.	Continue to track stormwater management activities and submit annual report.
Revised					

6a. Additions

BMP ID #	BMP Description	Responsible Dept./Person Name	Measurable Goal(s)	Progress on Goal(s) – Permit Year 3 (Reliance on non-municipal partners indicated, if any)	Planned Activities – Permit Year 4
6.3.8	Mosquito Control Project & Drainage System Maintenance	Engineering	Record of improved drainage system inspection and maintenance.	Through the efforts of the Central Massachusetts Mosquito Control Project, brush and other accumulated debris was removed from culverts and streams.	Continue with Mosquito Control Program.
Revised					

7. BMPs for Meeting Total Maximum Daily Load (TMDL) Waste Load Allocations (WLA) <<if applicable>>

BMP ID #	BMP Description	Responsible Dept./Person Name	Measurable Goal(s)	Progress on Goal(s) – Permit Year 3 (Reliance on non-municipal partners indicated, if any)	Planned Activities – Permit Year 4
7.2.1	Monitor Current Impairment Lists	DPW	Continue to monitor TMDL studies annually and develop programs as appropriate.	Continued to monitor TMDL studies.	Continue to monitor TMDL studies annually and develop programs as appropriate.
Revised					

7b. WLA Assessment

Part IV. Summary of Information Collected and Analyzed

N/A

Part V. Program Outputs & Accomplishments (OPTIONAL)

Programmatic

Stormwater management position created/staffed	Yes	
Annual program budget/expenditures	\$60,000	

Education, Involvement, and Training

Estimated number of residents reached by education program(s)	100 % of 12,145 Households	
Stormwater management committee established	No	
Stream teams established or supported	Yes	
Shoreline clean-up participation or quantity of shoreline miles cleaned	Yes, 4,770'	
Household Hazardous Waste Collection Days		
▪ days sponsored	1 event	
▪ community participation	350	
▪ material collected	1,500 gal	
School curricula implemented	Partial	

Legal/Regulatory

	In Place Prior to Phase II	Under Review	Drafted	Adopted
Regulatory Mechanism Status (indicate with "X")				
▪ Illicit Discharge Detection & Elimination		X		
▪ Erosion & Sediment Control		X		
▪ Post-Development Stormwater Management		X		
Accompanying Regulation Status (indicate with "X")				
▪ Illicit Discharge Detection & Elimination		X		
▪ Erosion & Sediment Control		X		
▪ Post-Development Stormwater Management		X		

Mapping and Illicit Discharges

Outfall mapping complete	Yes	
Estimated or actual number of outfalls	>1,120	
System-Wide mapping complete	85%	
Mapping method(s)		
▪ Paper/Mylar		
▪ CADD		
▪ GIS	100%	
Outfalls inspected/screened	60%	
Illicit discharges identified	Underway	
Illicit connections removed	0	
% of population on sewer	65%	
% of population on septic systems	35%	

Construction

Number of construction starts (>1-acre)	(#)	
Estimated percentage of construction starts adequately regulated for erosion and sediment control	(%)	
Site inspections completed	(# or %)	
Tickets/Stop work orders issued	(# or %)	
Fines collected	(# and \$)	
Complaints/concerns received from public	(#)	

Post-Development Stormwater Management

Estimated percentage of development/redevelopment projects adequately regulated for post-construction stormwater control	(%)	
Site inspections completed	(# or %)	
Estimated volume of stormwater recharged	(gpy)	

Operations and Maintenance

Average frequency of catch basin cleaning (non-commercial/non-arterial streets)	(times/yr)	1
Average frequency of catch basin cleaning (commercial/arterial or other critical streets)	(times/yr)	1
Total number of structures cleaned	(#)	3,800 approx.
Storm drain cleaned	(each)	50 approx
Qty. of screenings/debris removed from storm sewer infrastructure	(lbs or tons)	Not Available
Disposal or use of sweepings (landfill, POTW, compost, recycle for sand, beneficial use, etc.)		Disposal
Cost of screenings disposal	(\$)	Not Available

Average frequency of street sweeping (non-commercial/non-arterial streets)	(times/yr)	1
Average frequency of street sweeping (commercial/arterial or other critical streets)	(times/yr)	1
Qty. of sand/debris collected by sweeping	(lbs or tons)	Not Available
Disposal of sweepings (landfill, POTW, compost, beneficial use, etc.)		Disposal
Cost of sweepings disposal	(\$)	Not Available

Vacuum street sweepers purchased/leased	(#)	1 owned
Vacuum street sweepers specified in contracts	(y/n)	Y

Reduction in application on public land of: ("N/A" = never used; "100%" = elimination)		
▪ Fertilizers	(lbs or %)	N/A
▪ Herbicides	(lbs or %)	N/A
▪ Pesticides	(lbs or %)	N/A

Anti-/De-Icing products and ratios		
Pre-wetting techniques utilized	(y/n)	No
Manual control spreaders used	(y/n)	No
Automatic or Zero-velocity spreaders used	(y/n)	Yes
Estimated net reduction in typical year salt application	(y/n)	Not Available
Salt pile(s) covered in storage shed(s)	(y/n)	Yes
Storage shed(s) in design or under construction	(y/n)	In place

SuAsCo Watershed Community Council

A community-based alliance that promotes the sustainable economic and environmental well-being of the Sudbury-Assabet-Concord River Watershed

RECEIVED
05 NOV 14 PM 1:39
PUBLIC WORKS DEPT.
BILLERICA, MASS.

November 11, 2005

Dear SWCAP Client:

Welcome to Year 3 of the SuAsCo Stormwater Community Assistance Program (SWCAP)!

a shipping and handling charge to cover

As you know, SWCAP is designed by the SuAsCo Watershed Community Council to help Massachusetts' municipalities annually comply with the outreach and participation control measures of the NPDES Stormwater Phase II Regulations. Our goal is to provide you with a cost-effective, strategic program that you can easily implement in your community to educate and involve the public in stormwater management and meet regulatory requirements.

The Year 3 product is a "Stormwater Matters" Power Point Presentation and a Media Tool Kit. The power point program is geared for the lay public, but may be tailored to any audience depending on your needs. You will also receive a mounted aerial photo map of your community and a stormwater matters banner that will be useful when you present the power point program. As with the Year 1 and Year 2 products, the power point program and media tool kit have been created by experienced watershed professionals and will be pre-reviewed by both EPA and DEP. The expected delivery date of these materials is February of 2006.

It is estimated that it would cost at least twice as much were a community to design and produce these high quality materials using their own paid staff or consultants. SWCAP keeps the costs low by developing the materials with volunteer assistance and by experiencing economies of scale from providing the products to many communities. The more municipalities that purchase SWCAP products, the more we can keep our costs down, so please let your colleagues in other communities know about our program!

I have enclosed an invoice for this year's program. We are offering a discounted price of **\$2,500** to communities from whom we receive payment by **December 30**. Please note that if payment is received after December 30, the price is \$2,900. Please add **\$50** for shipping & handling and mail payment to our address in Stow. If you have difficulty meeting this deadline, please call me as soon as possible.

Thank you for your continued participation in this exciting new program! Please don't hesitate to call me if you should have any questions, or if you would also like to order additional Year 1 or Year 2 materials.

Sincerely,

Nancy A. Bryant, Executive Director

Invoice for payment to the SuAsCo Watershed Community Council for the Year 3 products under the "Stormwater Community Assistance Program":

The "Year 3" products are:

- ❖ Stormwater Matters Power Point Presentation (digital and hard copy) with an aerial photo map of Billerica and a Stormwater Matters banner; and
- ❖ Stormwater Matters Media Tool Kit (digital and hard copy).

These BMP products are designed for compliance with the Public Education & Outreach and Public Involvement & Participation control measures of the NPDES Stormwater Phase II Program. Implementation of these tools is the responsibility of the community.

Cost: \$2,500 if payment is received by December 30, 2005
[NOTE: Cost is \$2,900 if payment is received after December 30, 2005]
Plus Shipping & Handling: \$50

Expected delivery date of Year 3 products is February 2006

Payable immediately. Please make check payable to: "SuAsCo Watershed Community Council"
(The SuAsCo Watershed Community Council federal tax ID # is 04-3535560.)

A GUIDE TO USING MUNICIPAL SLUDGE COMPOST PRODUCT

Join the growing list of responsible Farmers, Topsoil Manufacturers, Contractors, Landscapers and Nurseries already benefiting from quality recycled products.

BILLERICA COMPOST

GENERAL DESCRIPTION

The Billerica Compost Facility on Letchworth Ave. began operations in August, 1990. The Town has been composting sludge, and wood ash to produce a finished compost that meets all State and Federal standards for land application.

The Massachusetts Department of Environmental Protection (DEP) encourages composting sludge to produce a safe, quality product for beneficial use. Billerica compost soil amendment is suitable for use in residential and commercial landscaping.

Sludge compost is not recommended for use in vegetable gardens or for any food or forage crop.

The Town of Billerica and the D.E.P. encourage proper landscape management practices to prevent erosion and surface runoff.

Billerica Compost is a soil enhancing material that will improve soil condition by improving drainage and moisture retention, maintaining an even soil temperature, improving aeration, retaining and distributing plant nutrients and creating a favorable environment for microorganisms, earthworms and other beneficial soil organisms.

HOW TO USE BILLERICA COMPOST AS A SOIL AMENDMENT

Perennial and annual flower beds

Mix 1/3 Billerica Compost with 2/3 garden soil to produce an excellent flower growing medium, or top dress flower beds with compost.

Tree & Shrub Plantings

Mix 1/3 Billerica Compost with 2/3 existing soil in a prepared hole for trees or shrubs.

New Lawns

Mix 1/3 Billerica Compost with 2/3 topsoil and seed or sod immediately. Apply lime and fertilizer as recommended for best results. For seeded lawns, prevent erosion with straw mulch.

Existing Lawns

After aeration, spread Billerica compost lightly over lawn and rake in immediately. Water thoroughly and apply recommended amounts of lime and fertilizer.

Christmas Trees and Other Tress Plantations

Spread Billerica Compost lightly over areas to be planted and till in. In established plantings, spread a layer of compost as a soil-enhancing mulch, starting two or three feet from trunk and extending to the drip-line around each tree.

MAKING COMPOST AT HC

What Is Composting?

Composting is a means of managing the natural process of organic decay. A great variety of microorganisms, earthworms and other very small animals naturally present in the environment break down the organic materials added to the compost pile, turning them into a fragrant, brown, soil-enhancing material. The composting organisms will do their work naturally if they are provided with food, water, air and a source of nitrogen.

Natural rainfall or an occasional hosing will provide water. Proper construction of the pile and occasional turning with a garden fork will provide adequate aeration. Supply nitrogen by adding grass clippings and small amounts of fresh or dry barnyard manure, or a sprinkling of commercial fertilizer to the pile from time to time. The food will be supplied by the various materials you add to your compost pile.

What Goes Into Compost?

A wide variety of kitchen, yard wastes and garden waste can be recycled through your backyard compost pile: leaves, weeds, garden trimmings, grass clippings, evergreen needles, kitchen scraps, leftover food, coffee grounds, egg shells, contents of the vacuum cleaner bag, ashes from the wood stove or fireplace. If you trim your own hair or clip your pets, the hair will make a fine, high-nitrogen addition to your compost pile!

What To Leave Out

Don't add meat scraps, fat, grease or bones to the compost pile. Avoid human wastes, coal ashes and clippings or trimmings from lawns and gardens that have been treated with pesticides or herbicides.

How To Make Compost

Make your compost in a pile on the ground or in a bin specially designed for the purpose. Snow fencing, recycled lumber, conventional fencing materials, concrete blocks and other inexpensive materials can be used to construct a compost bin. Many department stores and garden centers carry pre-fabricated composting bins.

Locate the compost pile in a well-drained spot in partial shade if possible. The average household can compost all of its yard and kitchen waste in a 5' x 5' x 5' high pile or bin. If your pile gets more than five feet high, begin a new one.

Add materials to your compost pile as they accumulate, making sure to mix coarse and fine materials to achieve good aeration throughout the pile. (A thick layer of leaves or grass clippings, for instance, will mat down and slow the composting process). Periodically add a thin layer of animal manure or commercial fertilizer to supply nitrogen. For best results keep the compost pile thoroughly moist at all times, but never soggy.

Turn the pile thoroughly with a garden fork from time to time. More frequent turning will speed the composting process, but composters who remember to turn their piles only occasionally will also be rewarded with fine compost that simply takes longer to make.

A good composting operation will generate plenty of heat inside the pile. The heat is produced by microorganisms at work breaking down organic matter.

ME

How To Use Homemade Compost

Homemade compost is highly recommended for use on vegetable gardens, fruit trees, berry bushes and other food crops.

Vegetable Gardens

Spread compost 1-3 inches deep and leave as a surface mulch or till in. Use compost in place of soil to fill holes when transplanting seedlings. Top dress mature plantings with compost in midsummer.

Fruit Trees, Berry Bushes and Strawberry Beds

Mix equal parts compost and topsoil to add to prepare planting holes when setting out fruit trees, cane fruits, blueberries or strawberry seedlings.

Flower Beds, Shrubs and Ornamentals

Mix equal parts compost and topsoil to add to prepare planting holes when setting out seedling, shrubs, trees and other ornamentals.

New and Existing Lawns

Apply a thin layer of compost and till in before seeding a new lawn, or spread compost lightly over lawn after aeration and rake it.

IT'S A DIRTY JOB, BUT WE LOVE IT

- Composting saves tax dollars. The more materials residents recycle through home composting operations the less materials Billerica will need to handle at the curb, transport and pay to process.
- Compostable organic materials, some times called "green waste" collectively make up over one-third of Billerica's waste stream.
- Home composting does not require a lot of space! As organic materials in the pile decompose their volume will decrease dramatically.
- Compost is good for the environment. Composting is a managed process of breaking down organic materials into dark stable humus. Among its many important functions humus in the soil helps retain and distribute moisture and plant nutrients, prevents erosion, buffers the soil from temperature extremes and helps create a loose, open condition that favors easy penetration by plant roots.
- Why buy potting soils and loam when you can make your own compost?
- If you live in a multi-family complex, we will work with you to set up a composting program for your development.

STORMWATER MATTERS LESSON PLAN FOR 5th or 6th GRADE

TABLE OF CONTENTS

- 1. Introduction**
- 2. Stormwater Matters Master Lesson Plan**
- 3. Assessment Materials for Master Lesson Plan:**
 - ✓ **Writing Assignments**
 - ✓ **Stormwater Survey**
 - ✓ **Stormwater Word Search**
- 4. Teacher's Background Information:**
 - ✓ **Vocabulary List**
 - ✓ **Teacher's Guide to Using the Maps**
 - ✓ **Discussion on Why Stormwater Matters**
 - ✓ **Storm Drains**
 - ✓ **Stormwater Education Resources on the Web**
- 5. Supplemental Lesson Ideas:**
 - ✓ **Discussion on the Power of Water and Erosion**
 - ✓ **Exploring the Flow of Water Over Different Surfaces**
 - ✓ **Making a Watershed Model**
 - ✓ **Investigating the School Grounds for Stormwater Pathways**
 - ✓ **Water Quality Monitoring: Identifying Stormwater Pollutants**
 - ✓ **Storm Drain Stenciling**
 - ✓ **Guest Speaker**

Front Pocket: CD with Lesson Plan in a pdf File Format

INTRODUCTION

Polluted stormwater is one of the biggest causes of water quality degradation or impairment. This lesson is intended to introduce students to the concept of stormwater, to teach them that storm drains usually transport stormwater to water bodies without treatment, and to help them find things that they can do to reduce stormwater pollution in their community.

Teaching this lesson may lead to many student questions about stormwater and water pollution, as well as related topics such as wastewater treatment and drinking water supply. Several supplemental lesson ideas are provided in this notebook in case you would like to teach additional material beyond the master lesson plan. Teacher background information is also provided, including a list of websites as a useful reference tool for even more detailed information.

Please note that this lesson plan is appropriate for teaching in any watershed.

This stormwater lesson plan material is intended for use only within your community's school system. The lesson plan complies with federal and state permit requirements that mandate community outreach and involvement on stormwater issues.

This lesson plan was created by the SuAsCo Watershed Community Council under its "Stormwater Community Assistance Program". The Council is a non-profit alliance of businesses, municipalities, environmental organizations, and state/federal/regional government agencies in the Sudbury-Assabet-Concord River Watershed in Massachusetts. For more information about stormwater and the Council, you can visit the SuAsCo website at www.suasco.org.

Thank you for taking the time to teach this important lesson. We hope that you and your students will enjoy learning about stormwater!

STORMWATER MATTERS MASTER LESSON PLAN

Grade Level: recommended for 5th or 6th grade

Objectives:

To learn what stormwater is and where it goes.

To learn that most storm drains transport stormwater to water bodies without treatment.

To identify how people's actions affect the quality of stormwater.

To identify how students can help to reduce water pollution from stormwater.

Connection to the Massachusetts Science and Technology Frameworks:

Strand 1: Earth and Space Science:

Grades 3 – 5: Weather, The Water Cycle, Earth's History

Grades 6-8: Mapping the Earth, Earth's History

Time Needed:

This basic lesson is expected to take 45 minutes to one hour to teach. The exact length of this lesson will depend on the extent of discussion and the time allotted for group exploration. Depending on your students' interest and knowledge, you may elect to speed up or slow down the various parts of this lesson plan. The lesson has many obvious breaking points should you elect to divide it into smaller content periods. For instance, you may elect to spend one class period just on examining the maps (Procedure Parts 1 and 2), and spend the next class on the stormwater discussion (Procedure Parts 3 through 8).

Materials:

Map of major watersheds in Massachusetts

Town map showing water resources

Notebook containing:

- Master lesson plan: 45-minute class time minimum
- Assessment materials
- Teacher's background information
- Seven supplemental lesson ideas

You will also need:

- Sponge
- Water bottle with drip spout

Note: As a participating community in the SuAsCo Stormwater Community Assistance Program, your town was given five sets of these materials. In teaching this lesson, you may wish to obtain the other sets in order to have more maps to use with your class.

Please contact your local stormwater coordinator if so interested.

WHAT IS A STORMWATER MANAGEMENT PLAN?

The Environmental Protection Agency (EPA) has mandated that certain communities such as Billerica must file for a permit under the Phase II National Pollutant Discharge Elimination System (NPDES) program. This program requires communities such as Billerica to create a Stormwater Master Plan that address six Minimum Control Measures.

These measures will be addressed by the Town implementing Best Management Practices (BMPs) appropriate for Billerica's community. The BMPs will commence according to the schedules provided in the NPDES Phase II Permit. The six Minimum Control Measures for stormwater enhancements are as follows:

- Public Education & Outreach
- Public Involvement & Participation
- Illicit Discharge Detection & Elimination
- Construction Site Stormwater Runoff Control
- Post Construction Stormwater Runoff Control
- Good Housekeeping in Municipal Operations

For any questions or comments about the Town of Billerica's Stormwater Management Program, please contact Paul Starratt, program coordinator, by email at pstarratt@town.billerica.ma.us or by phone at 978-671-0955.

STORMWATER COMMUNITY ASSISTANCE PROGRAM

“YEAR 3” IMPLEMENTATION POINTERS

Note: these materials have been reviewed and praised by EPA and DEP

MEDIA TOOLKIT:

- A hard copy of the Media Toolkit is provided in this folder – the digital version on the CD is in Microsoft Word and is labeled as “**mediatk.doc**”
- The five press releases are intended to serve as a series on stormwater topics that you can sequentially submit to the local newspapers and cable stations
- The press release templates are intended to be modified - copy the digital file on to your system and edit as needed
- All template areas in **underlined bold** must be customized to your community
- The templates may also be further modified according to your needs and situation

STORMWATER POWERPOINT PROGRAM:

- A hard copy of the PowerPoint program is provided in this folder – the digital version on the CD is in Microsoft PowerPoint and is labeled as “**storm.ppt**”
- Please note that “Talking Points” have been provided to aid in the delivery of the PowerPoint Program – the talking points are in hard copy in this folder, and on the CD in Microsoft Word and labeled as “**talkpts.doc**”
- The PowerPoint Program can be delivered to any audience of any background or age by tailoring your comments to the knowledge level of your audience
- Please **only** present this PowerPoint Program in your community

STORMWATER SUMMIT TIPS:

- It is recommended that you organize a Stormwater Summit for your community
- The Summit Agenda may include: delivery of the PowerPoint Program, a speaker to explain what your community is doing to comply with the Stormwater Phase II regulations, a discussion on any proposed local stormwater and erosion control bylaws, and a question and answer session
- Potential Summit speakers include representatives from the department of public works, conservation commission, board of health, etc.
- Be sure to advertise the Stormwater Summit – use the summit press release in the media toolkit – contact the local newspapers and cable station and use any other means of meeting notification
- Film the Stormwater Summit so that it can be aired on your local cable station

ADDITIONAL MATERIALS FOR DISPLAY:

- 2006: “Stormwater Matters” Banner and Aerial Photo Map
- From previous years: tabletop display and any remaining year 1 flyers
- Display at: PowerPoint presentation, stormwater summit, town events, meetings, etc.

**To purchase extra materials or for any questions,
call Nancy Bryant, SuAsCo Watershed Community Council at 978-461-0735**

STORMWATER MATTERS

MEDIA TOOLKIT

MEDIA TOOLKIT IMPLEMENTATION POINTERS:

- A hard copy of the Media Toolkit is provided in this folder – the digital version on the CD is in Microsoft Word and is labeled as “**mediatk.doc**”
- The five press releases are intended to serve as a series on stormwater topics that you can sequentially submit to the local newspapers and cable stations
- The press release templates are intended to be modified - copy the digital file on to your system and edit as needed
- All template areas in **underlined bold** must be customized to your community
- The templates may also be further modified according to your needs and situation

Editor's note: this article is part of a series on "Stormwater Matters" to help inform the public on the effects and clean up of stormwater.

WHAT IS STORMWATER AND WHY DOES IT MATTER?

Stormwater is the runoff water from rain and snowmelt. Stormwater picks up pollutants from developed land and carries these pollutants to our streams, ponds, wetlands and the ocean. Stormwater pollutants include litter, sand, bacteria, and chemicals such as fertilizer and herbicides from lawns and oil and gas from cars.

Runoff from paved or impervious surfaces, such as roads, parking lots, driveways and rooftops, can contribute large amounts of polluted stormwater. To prevent flooding, parking lots and streets are often lined with storm drains to quickly move stormwater off the pavement. Because storm drains have underground pipes that channel the stormwater directly to a nearby water body, whatever flows down a storm drain comes out in the closest wetland, stream, or pond, usually with little or no treatment.

Stormwater pollution is one of the most difficult sources of water pollution to control. Because stormwater pollution is caused by the daily activities of people everywhere, public awareness of the steps citizens can take to prevent stormwater pollution will help to protect our water resources. By putting fewer pollutants on the land, stormwater will be cleaner as it flows into our lakes, rivers and the ocean.

Clean water is necessary for drinking, swimming, fishing, boating, and for protecting wildlife. It is far less costly to prevent pollution to waterways than it is to clean them up after the fact. Keeping stormwater clean not only benefits our neighborhood and community, it benefits the entire network of water bodies and land that make up our watershed.

Include a local quote

Keeping stormwater clean is a community-wide effort. Town/city is required to comply with State and Federal regulations on managing stormwater. Residents can help by properly caring for their lawns and cars, not littering, never putting anything down storm drains, and taking part in local "Stormwater Matters" outreach and education activities.

Watch for the stormwater logo and help spread the word: stormwater matters!

Nancy Bryant, 978-461-0735

Editor's note: this article is part of a series on "Stormwater Matters" to help inform the public on the effects and clean up of stormwater.

TIPS FOR REDUCING STORMWATER POLLUTION

Stormwater is the runoff water from rain and snowmelt. Stormwater picks up litter, sand, bacteria and chemicals from developed land and carries these pollutants to our streams, ponds, wetlands and the ocean. Stormwater pollution is one of the most difficult sources of water pollution to control.

Runoff from paved or impervious surfaces, such as roads, parking lots, driveways and rooftops, can contribute large amounts of polluted stormwater. To prevent flooding, parking lots and streets are often lined with storm drains to quickly move stormwater off the pavement. Storm drains have underground pipes that channel the stormwater directly to a nearby water body, usually with little or no treatment.

Whatever flows down a storm drain will come out in a nearby water body. Tips for taking care of storm drains include:

- Never put anything down a storm drain, including pet waste, motor oil, paint, litter, leaves, or sand
- Don't block storm drains with refuse or debris.

Cleaning up stormwater pollution is a task that the whole community can take part in. There are many things that residents can do to clean up stormwater quality.

Lawns can contribute stormwater pollutants through fertilizers, pesticides, and herbicides. Steps that homeowners can take to reduce stormwater pollution from lawns include:

- Use fertilizer, pesticides, and herbicides sparingly
- Try using organic lawn care methods
- Mow 2 to 3 inches high to encourage dense growth and deter weeds
- Mulch lawn clippings and leaves
- Do not over-water your lawn
- Reduce lawn size by planting rock gardens, shrubs and trees
- Replant bare areas to stop erosion
- Maintain native vegetation along streams and lakefronts.

Cars can pollute stormwater with gas, oil, antifreeze, metals, and detergents. Steps that car owners can take to reduce stormwater pollution from cars include:

- Keep your car well maintained to prevent fluid leaks
- Recycle motor oil, antifreeze, tires, and batteries
- Use a commercial carwash or wash your car on the lawn using small amounts of low-phosphate detergents.

Other tips to help clean up stormwater include:

- Pick up after pets and dispose of droppings in the toilet or trash
- Aim roof downspouts away from paved surfaces or into a rain barrel
- Dispose of paint, oil, and other household chemicals at a local hazardous waste collection day
- Don't litter – instead recycle paper, cardboard, cans, plastic and glass
- Start stream teams to help care for neighborhood streams
- Coordinate neighborhood storm drain stenciling activities
- Support community efforts to keep stormwater clean.

Cleaning up pollutants on the land and taking good care of storm drains results in cleaner stormwater, and cleaner stormwater means cleaner water for drinking, swimming, fishing, boating and wildlife.

Editor's note: this article is part of a series on "Stormwater Matters" to help inform the public on the effects and clean up of stormwater.

KEEPING UP WITH STORMWATER REGULATIONS

Stormwater, the runoff water from rain and snowmelt, is one of the most difficult sources of water pollution to control. Stormwater picks up pollutants from developed land and carries these pollutants to our streams, ponds, wetlands, and the ocean. Stormwater pollutants include litter, sand, bacteria, and chemicals such as fertilizer and herbicides from lawns and oil and gas from cars.

Runoff from paved or impervious surfaces, such as roads, parking lots, driveways and rooftops, can contribute large amounts of polluted stormwater. To prevent flooding, parking lots and streets are often lined with storm drains to quickly move stormwater off the pavement. Storm drains have underground pipes that channel the stormwater directly to a nearby water body, usually with little or no treatment.

The U.S. Environmental Protection Agency (EPA) and the Massachusetts Department of Environmental Protection (DEP) began regulating stormwater in 1990 under the National Pollutant Discharge Elimination System permit program. Stormwater Phase I targeted large urban areas with populations of 100,000 or greater, which included Boston and Worcester. Stormwater Phase II compliance began in 2003 for urban areas with populations of less than 100,000.

242 of the 351 municipalities in Massachusetts, as well as many public agencies, are now covered under Stormwater Phase I or II. Regulated municipalities are required to implement a Stormwater Management Program by 2008 that addresses the following six "minimum control measures":

- 1) Public Education and Outreach
- 2) Public Involvement and Participation
- 3) Illicit Discharge Detection and Elimination
- 4) Construction Site Runoff Control
- 5) Post-Construction Runoff Control
- 6) Pollution Prevention/Good Housekeeping for Municipal Operations.

"I believe EPA's Stormwater Program has helped many municipalities focus attention on its often long neglected stormwater infrastructure," says David Gray, Environmental Engineer with EPA's Stormwater Program. "Residents play an essential role in

supporting their municipality's stormwater management program by choosing daily behaviors that reduce or eliminate pollution or other problems at the source, thus avoiding more costly or difficult maintenance or remediation of the stormwater system or receiving waters. By complying with EPA's stormwater regulations, a municipality can experience economic benefits from a decrease in flooding and erosion problems, and a reduction in the degradation of its water resources."

In compliance with the Stormwater Phase II program, town/city performs many activities that are critical to keeping stormwater clean. Street sweepers pick up sand and winter debris from the streets so that it won't be washed into storm drains. Storm drains have catch basins, some with sumps to trap heavy particles and hoods to trap oils, that must be cleaned out regularly by the public works department to keep the storm drains clear.

Keeping stormwater clean and complying with the Stormwater Phase II regulations is a community-wide effort. Residents can help by properly caring for their lawns and cars, not littering, never putting anything down storm drains, and taking part in local "Stormwater Matters" outreach and education activities.

PRESS RELEASE

FOR IMMEDIATE RELEASE

Date

For further information contact:

local name and phone number

Nancy Bryant, 978-461-0735

Editor's note: this article is part of a series on "Stormwater Matters" to help inform the public on the effects and clean up of stormwater.

LOW IMPACT DEVELOPMENT

Increasing development brings new challenges on how to manage stormwater, the runoff water from rainstorms and snowfall. Typically, as development increases, impervious surfaces, such as pavement and rooftops also increase, resulting in fewer areas where stormwater can seep back into the ground. More pavement means more stormwater, which leads to more flooding dangers, erosion, sedimentation and surface water pollution.

Planners have coined the phrase "low impact development" or "LID" to refer to a whole suite of new development design techniques that help to reduce stormwater volume and stormwater pollution. LID strategies follow the lay of the land, preserving natural systems that increase recharge to the groundwater, keep streams and rivers cleaner, and give development a more natural appearance.

LID employs landscaping and design techniques that help to capture rainfall and increase recharge. Many LID techniques are non-structural, simple treatment strategies. LID techniques tend to be more aesthetic and less costly than the typical structural means of managing stormwater. Examples of LID strategies include retention ponds, permeable pavement, vegetated swales, rain barrels, green roofs, bioretention areas, rain gardens, downspout (gutter) disconnections, and special roadway and parking lot designs.

According to Martin Pillsbury, Manager of Regional Planning at the Metropolitan Area Planning Council (MAPC) in Boston, "We need to treat stormwater as a valuable resource, to capture it and retain it in its watershed. LID techniques do just this, helping communities conserve water while keeping the water local."

MAPC has published a guide on how to use LID techniques which is available at MAPC's website, www.mapc.org/lid.

Add in your own paragraph here on examples of LID in your municipality and/or new or proposed LID bylaws.

Nancy Bryant, 978-461-0735

Editor's note: this article is part of a series on "Stormwater Matters" to help inform the public on the effects and clean up of stormwater.

TOWN/CITY STORMWATER SUMMIT

The town/city of _____ department of _____ is hosting a "Stormwater Summit" on **date at time at location**. The general public, local officials, businesses, developers, builders, and the media are encouraged to attend.

Stormwater is the runoff water from rain and snowmelt. Stormwater picks up pollutants from developed land and carries these pollutants to our streams, ponds, wetlands and the ocean. Stormwater pollutants include litter, sand, bacteria, and chemicals, such as fertilizer and herbicides from lawns and oil and gas from cars. Stormwater pollution is one of the most difficult sources of water pollution to control because it is so ubiquitous.

Runoff from paved or impervious surfaces, such as roads, parking lots, driveways and rooftops, can contribute large amounts of polluted stormwater. To prevent flooding, parking lots and streets are often lined with storm drains to quickly move stormwater off the pavement. Storm drains have underground pipes that channel the stormwater directly to a nearby water body, usually with little or no treatment.

Because stormwater pollution is caused by the daily activities of people everywhere, public awareness of the steps citizens can take to prevent stormwater pollution will help to protect our water resources. Speakers at the Stormwater Summit will highlight tips that residents can follow to reduce stormwater pollution, explain what our community is doing to comply with State and Federal stormwater regulations, and discuss the importance of water quantity and quality to town's/city's natural resources.

The Stormwater Summit agenda includes a slide show entitled "Stormwater Matters: What is Stormwater and Why Should I Care", a presentation showcasing town's/city's stormwater compliance with State and Federal stormwater requirements, a discussion on the proposed local stormwater bylaw, and a question and answer session. Informational handouts will be available.

Include a local quote

For more information about the Stormwater Summit, contact name at department at phone number or visit the town's/city's website at website address.

#####

Just how much precipitation do we get in Massachusetts?

Annually, Massachusetts receives an average of 45 inches of precipitation, that includes rain and melted snow.

Where all that precipitation goes will depend on how fast it falls...

...and the type of surface it falls on.

Paved surfaces and rooftops generate a lot more stormwater.

Too much stormwater can lead to flooding.

Fast moving stormwater from heavy rains can cause erosion problems.

Stormwater can pick up pollutants from the land and carry them to our lakes, streams and ocean.

Stormwater pollution can increase the temperature of the water, kill fish, cause algal blooms, and make the water unfit for consumption, recreation and wildlife.

So managing stormwater is important to protect water quality and minimize flooding.

Eroded sediment from
construction sites and bare slopes

Litter

Nutrients and bacteria

Gasoline and oil from cars

Lawn fertilizers, herbicides
and pesticides

These and other substances
POLLUTE our freshwater
and our ocean.

- Dispose of paint, oil and other household chemicals at a local hazardous waste collection day
- Recycle paper, cardboard, cans, plastic, and glass

Teach others about stormwater

Take care of storm drains:

- NEVER put anything down a storm drain, including pet waste, motor oil, paint, litter, leaves, sand
- Sweep leaves and debris away from storm drains
- Start a storm drain stenciling program in your neighborhood

Support your town services, such as:

- Street sweeping to pick up sand and winter debris before it gets washed down the storm drain
- Catch basin cleaning to clean out heavy particles caught in the storm drain

A new planning approach called LID or

Low Impact Development

also helps to reduce stormwater volume and pollution. LID strategies are landscaping and design techniques that help to capture rainfall and increase recharge.

Examples of LID strategies include:

- Retention ponds
- Permeable surfaces
- Vegetated swales
- Rain barrels
- Green roofs
- Bioretention areas
- Special roadway and parking lot designs

Good stormwater management
makes sound economic sense —
protecting our water resources
saves taxpayers money.

Our community must comply
with Federal and State
requirements to manage
stormwater quality and flow...

...and we need **YOUR** help.

Cleaning up stormwater benefits
our neighborhoods and our
community by giving us cleaner
water for drinking, swimming,
fishing, boating, and
protecting wildlife.

By putting fewer pollutants on the
land, stormwater will be cleaner,
and so will our streams,
rivers, wetlands, ponds,
lakes and ocean.

Please spread
the word:

*Stormwater matters
to us all!*

“Stormwater Matters” PowerPoint Talking Points

You can tailor this slide show to any audience

Incorporate community-specific information wherever possible

If available, use a remote control to advance the slides and a laser pointer

Depending on your delivery style and the size of the audience, you may want to encourage dialogue during your presentation or take questions and answers afterwards

Make handouts available such as the stormwater flyer from year 1 (if you still have some) and any other relevant materials

Slide 1:

- Introduction: purpose of presentation is to explain what stormwater is, by the end of the talk it is hoped that you will understand why stormwater matters and have many reasons why you should care

Slide 2:

- Precipitation is rain **and** snow

Slide 3:

- Engage audience to answer question if you wish

Slide 4:

- Recharge is also referred to as “infiltration”
- Interesting factoid: Only 0.1% of the total water supply on the planet is available for use by humans - the rest is oceanic salt water, frozen in ice caps and glaciers, located deep underground, or already contaminated*

Slide 5:

- Stormwater is also referred to as “runoff”

Slide 6:

- You may wish to review the water cycle using the diagram
- Make three main points: 1) Define **pervious and impervious**; 2) Point out difference in **amount of pavement and buildings (rooftops)** between the less and more developed land; 3) Note that **runoff is greater on the more developed land** than the less developed
- Point out natural riparian buffer on the less developed land and note importance.

Slide 7:

- Make three main points: 1) Point out **recharge** occurring on less developed land; 2) Note that the **groundwater level is higher under the less developed land** where there is more recharge; 3) Point out **comparison in depth of wells** between less and more developed land

- Discuss the importance of recharge to drinking water sources (wells) and the importance of aquifer protection bylaws

Slide 8:

- Discuss the importance of recharge to the base flow of rivers and streams
- Discuss any local examples of “higher highs” and “lower lows”

Slide 9:

- Engage audience to answer question if you wish

Slide 10:

- Explain that 45 inches is rain and melted snow - note that inches of snowfall are not equivalent to inches of rainfall in terms of the actual amount of precipitation

Slide 11:

- Heavy downpours don't have the time to recharge
- Emphasize the difference between impervious and pervious surfaces

Slide 12:

- Bar graph main point: as pavement increases, recharge decreases (orange bar), runoff increases (red bar), and evapotranspiration decreases (yellow bar)
- Bar graph: note that the landscape type attributed to the pavement percentage was added for illustrative purposes only, not for definition
- Bar graph data source: “Guidance Specifying Management Measures for Sources of Non-Point Source Pollution in Coastal Waters”, U.S. Environmental Protection Agency document # 840-B-92-002 as referenced by “Impervious Surface Coverage: The Emergence of a Key Environmental Indicator”, Journal of the American Planning Association, Vol. 62, No. 2, Spring 1996
- Interesting factoid: urban stream quality begins to decline sharply once impervious cover in a watershed exceeds 10%*

Slide 13:

- Impervious surfaces generate more stormwater
- Interesting factoid: 1600% more stormwater runoff is produced by a one-acre parking lot than by a one-acre meadow*

Slide 14:

- Explain that heavy rains allow little to no recharge, even on pervious surfaces
- The volume & speed of runoff from paved surfaces can greatly increase flooding
- Discuss any local examples of flooding

Slide 15:

- Construction permits and erosion control bylaws are meant to decrease erosion during construction
- Hay bales in this photo are intended to hold back eroded soil

Slide 16:

- Stormwater is also referred to as “non-point source pollution”

Slide 17:

- Discuss any local examples of stormwater pollution

Slide 18:

- Stormwater management can be done both by the community and by individuals – emphasize we're all in this together

Slide 19:

- Discuss storm drain systems
- Purpose of storm drains to prevent flooding of streets and parking lots
- May want to identify local examples of storm drain system

Slide 20:

- Point out the water body in the background as the answer

Slide 21:

- Discuss the "direct pipe" connection from storm drain to receiving water body

Slide 22:

- May want to describe catch basins, sumps and hoods, but acknowledge that treatment is usually minimal

Slides 23 - 29:

- May want to identify local examples of these pollutants

Slide 30:

- Stormwater pollution is difficult to solve as it comes from so many places

Slide 31 & 32:

- Recruit citizen participation in cleaning up stormwater

Slide 33:

- Emphasize to read labels of fertilizer, herbicide, and pesticide products carefully – emphasize that applying more than the label recommends is NOT better

Slides 34:

- Emphasize that most turf grass species are healthiest when grass blades are at least 2 ½ to 3 inches high
- Interesting factoid: one inch of water a week from all sources is all a lawn needs**
- Mention that water bans on lawn watering are sometimes necessary due to a strain on the water supply

Slide 35:

- Interesting factoid: a single quart of motor oil dumped into a storm drain can create a two-acre oil slick in the receiving water body*
- Mention water bans on car washing are sometimes necessary due to a strain on the water supply

Slide 36:

- Interesting factoid: An average-sized dog dropping produces 3 billion fecal coliform bacteria*

Slide 37:

- Mention what the town/city provides for helpful services re: recycling collection, hazardous waste collection days (locations, times), etc.

Slide 38:

- Mention 5th/6th grade classroom curriculum on stormwater

Slide 39:

- Emphasize the connection between the storm drain and the nearest water body
- Mention local activities such as storm drain stenciling

Slide 40:

- Describe DPW services such as street sweepings and catch basin cleanings, describe schedule of how often done, when and where, etc.

Slides 41 & 42:

- Identify any local examples of LID
- Mention if town/city is enacting a LID bylaw

Slide 43:

- Stress the economic benefits of stormwater management – it is always less expensive to prevent pollution than to clean it up

Slide 44:

- Describe components of Phase II compliance, such as 5-year permit requirements, stormwater committee, finding illicit discharges, creating construction bylaws, etc.

Slides 45 – 46:

- Stress the water quality and quantity benefits of stormwater management

Slide 47:

- Overall message: there's a lot citizens and the community can do to clean up and reduce stormwater
- Point out logo as something they've already seen and will continue to see as stormwater matters education is an ongoing program in the municipality

Slide 48:

TOWN OF BILLERICA

DEPARTMENT OF PUBLIC WORKS

365 Boston Road
Billerica, Massachusetts 01821
(978) 671-1313

ABDUL ALKHATIB
Director

January 27, 2006

RE: **DESIGN OPEN HOUSE**
Roadway Reconstruction and Traffic Improvements
Cook Street and Alexander Road

Dear Property Owner:

The Town of Billerica, in conjunction with the Massachusetts Highway Department, is planning to re-design the roadway reconstruction project along Cook Street and Alexander Road in an effort to respond to resident's concerns and make the project more resident friendly.

In general, the project will consist of roadway widening, pavement reconstruction, installation of curb, construction of sidewalks and wheelchair ramps, drainage improvements, as well as new signs and pavement markings throughout.

We will be conducting an **Open House** for you (and any interested residents) to review the plans and become more informed about the project and proposed work. The **Open House** will be held on **Monday, February 6 between 2:00 pm to 4:00pm and 6:00pm to 8:00pm at the Buck Auditorium at Town Hall**. You are welcome to attend at anytime over this period to review the plans and ask any related questions you may have. We will have our consultant present to assist you in locating your property on the maps and to help you understand the nature of the proposed easement on your property.

As noted, the project is still in the design phase. When the design is complete we will be contacting you again for the execution of easements and right of entry authorizations where applicable.

The Cook Street/Alexander Road Project will make very positive improvements to the roadway and its adjacent areas. We encourage you to attend the Open House and learn more about the project. If you have any questions, feel free to contact my office at (978) 671-1313.

Sincerely,

Abdul H. Alkhatib

March 1, 2006

Re: Michael Road Stormwater Improvements

Dear Property Owner:

As you may know, the Town of Billerica is designing improvements to Michael Road and the surrounding neighborhood to eliminate the long-standing drainage issues in the area.

We will be conducting a neighborhood meeting for you and any interested residents to become more informed about the project and the proposed work. The purpose of the meeting is to have our design consultant explain the results of their study, conceptual design, and to solicit input from residents.

The meeting will be held on Thursday, March 9, 2006 at 7:00pm at the Buck Auditorium at Town Hall.

We encourage you to attend the meeting. If you have any questions, please do not hesitate to contact the Engineering Division at 978-671-0955.

Sincerely,

Kelley J. Conway, P.E.
Town Engineer

PRESERVING BILLERICA'S NATURAL TREASURES

TOWN WIDE CLEAN-UP

April 15 to May 6, 2006

It has been a very long winter and much work
is needed to put our best foot forward.

How can you help?

Ask your friends, family, neighbors, co-workers, church group, scout or youth group to help clean-up Billerica.

When?

Select a day and time for your clean-up that works best for your group.

Contact the Recreation Department to register your group.

If you have a location that you wish to clean, just let us know.

Need ideas? We have a list to choose from.

What you will need?

Gloves, rakes, water and snacks. We will provide bags and trash pick-up after clean-up is completed.

Questions or more information!

Call Peggy at Billerica Recreation 978.671.0921.

PRESERVING BILLERICA'S NATURAL TREASURES

TOWN WIDE GREEN-UP May 20, 2006

Help us beautify our town by planting flowers in our parks,
town commons and other public spaces in Billerica.

How can you help?

Ask your friends, family, neighbors, co-workers, church group, scout or youth
group to help plant flowers around Billerica.

Contact the Recreation Department to register your group.

When?

May 20, 2006

Plants will be available at the Town Hall from 8:00-9:00am.

We have a list of sites that you can choose from.

What you will need?

Gloves, shovels, rakes, water and snacks.

Questions or more information!

Call Peggy at Billerica Recreation 978.671.0921.

Commonwealth of Massachusetts
Middlesex Sheriffs Office
Community Work Program
269 Treble Cove Road
Billerica, MA 01862

Dear Mr. Leone,

The Town of Billerica Recreation Department would like to submit a request for a community work crew for 2006. As you know, we do not have any maintenance personnel in our department and have relied upon your work crews to help us through out the year in preparing our parks and playgrounds for use by the citizens of our community.

We would like to request work crews for the weeks of April ^{10th 11th 17th 18th 5th 12th} and 16th; June 4th and 11th; and September 10th and 17th. They would assist with cleaning and preparation of parks, playgrounds, and beach performing such tasks as: trash removal, brush removal, general grounds work, painting, repair work, beach work, and landscaping. This is all work that would not be able to be completed due to financial and personnel limitations.

We would provide all materials and supplies needed for the projects, lunch and a volunteer to work with your supervisor.

Thank you for considering this request. If you have any questions, please contact me or Peggy Hannon-Rizza at 978-671-0921.

Sincerely,

Joe Higgins

Recycling and Trash Collection Guide for Residents

Dear Billerica Residents,

The Town of Billerica is providing this guide to assist you with proper disposal methods and collection dates for weekly solid waste, weekly recycling, CRT disposal, Household Hazardous Waste disposal, leaf collection, and other disposal programs provided for town residents.

The town will still have AW (Allied Waste) collecting solid waste since they are under a five year contract which expires June 30, 2006, and the towns waste will continue to be transported and disposed of at Wheelabrator, a trash incineration plant located in North Andover. We encourage residents to recycle weekly to reduce our tonnage charges at Wheelabrator.

We hope that you find this guide useful and please feel free to contact us if you have any questions or suggestions regarding solid waste collection and disposal in the Town of Billerica.

Sincerely:
Neville Rivet
Solid Waste and
Recycling Coordinator

TRASH COLLECTION RULES AND REGULATIONS

CHAPTER 5, SECTION 5.7.002

5.7.002 Municipal Solid Waste Disposal and Collection: Collection dates and routes will be determined by the Board of Health and may be subject to change pending contractual obligations or other circumstances.

(1) **HOLIDAY COLLECTIONS:** If a holiday falls on the scheduled collection day for a collection route, collection will commence on the following day.

(2) **CURRENT ACCEPTABLE WASTES:** Acceptable wastes shall mean all solid waste which can be placed into acceptable containers, excluding, inherently dangerous, toxic and hazardous wastes which shall from time to time be designated as "hazardous wastes" by State or Federal regulatory authorities having appropriate jurisdiction.

(3) **CURRENT UNACCEPTABLE WASTES:** As of the adoption of this regulation,

- (a) Demolition debris.
- (b) Any of the following, in whole or in part: Auto hulks, engine blocks, transmission blocks, heavy machinery, skimobiles, motorcycles or tractors.
- (c) Stumps, regardless of size, and limbs or branches exceeding two and one half (2½) inches in diameter or four (4) feet in length.
- (d) Pathological wastes.
- (e) Toxic and volatile chemicals, such as but not limited to: Oil based paint, paint thinner, paint remover, insecticides, herbicides, pool chemicals, household solvents, driveway sealers, hazardous craft supplies, wood strippers, or any other household chemicals.
- (f) Explosives.
- (g) Automobile batteries, tires, motor oil and antifreeze.
- (h) Florescent bulbs.
- (i) Propane gas tanks or other flammable materials.
- (j) Items not appearing as unacceptable waste may still be unacceptable. Residents are required to contact the Board of Health or its contractor for the proper determinations.

(4) **CONTAINER:** Shall be a suitable receptacle, with a capacity no greater than thirty-five (35) gallons, constructed of plastic, metal or fiberglass, having handles of adequate strength for lifting and having a tight fitting lid capable of preventing entrance into the container by vectors and spillage. The mouth of a container shall have a diameter greater than or equal to that of the base. The weight of a container and its contents shall not exceed seventy-five (75) pounds. Pasteboard cartons, paper bags, and wooden crates are not suitable receptacles for weekly collection and may not be collected by the contractor. Plastic rubbish bags (3-ply minimum) are acceptable.

(5) Refuse shall be placed curbside no later than 7:00 AM of the day of collection and the contractor shall not commence collection earlier.

(6) Prior to collection it is the resident's responsibility to maintain safe and sanitary conditions at the curbside collection point and to otherwise comply with these regulations.

(7) Containers shall be removed within twelve (12) hours after daily collection and must be stored out of sight of public view in a secure location.

(8) **BULK WASTE COLLECTION:** Residents may place one (1) bulk item curbside weekly for collection and disposal. Bulk items are considered to be sofas, chairs, bed mattresses and boxsprings, tables, desks, etc.

Notice: These Rules and regulations are subject to change.

TRASH COLLECTION RULES AND REGULATIONS

CHAPTER 5, SECTION 5.7.002

(cont'd)

(9) **LEAF COLLECTION:** Leaf and other yard waste will be collected curbside during special collections in the fall and spring or as otherwise determined by the Board of Health. These items may not be placed curbside for weekly collection and must be collected during special collection periods. Leaf and yard waste must be placed in paper biodegradable bags.

(10) **APPLIANCES/WHITE GOODS:** Items such as, but not limited to, refrigerators, freezers, washing machines, dryers, hot water heaters, ovens, dishwashers, air conditioners, trash compactors, dehumidifiers, etc., are collected bi-weekly and require a permit from the Board of Health. The fee for a permit shall be in accordance with the most current Board of Health fee schedule.

(11) **CATHODE RAY TUBES (CRT) ITEMS:** Televisions, computer monitors, and other CRT items must be collected separately and is scheduled for collection by the Board of Health. Residents must contact the Board of Health or the Town's current Solid Waste Disposal Contractor to schedule pickup and disposal.

(12) **CONSTRUCTION AND BUILDING MATERIALS INCLUDING EARTH AND GRAVEL WILL NOT BE COLLECTED:** Building contractors will be responsible for the proper disposal of all construction and building material or other debris resulting from work performed around residences. Residents performing home improvements are responsible for proper disposal of building materials. Residents cannot dispose of these materials with weekly curbside pick up.

Notice: These Rules and regulations are subject to change.

DISPOSAL OF AUTOMOBILES

To dispose of working or non-working automobiles you can make a donation to the Billerica Boys and Girls Club by calling 1-800-246-0493. Inform the company that the donation is provided for the Billerica Boys and Girls Club. A local towing company will then schedule to pickup the automobile for you.

RESIDENTIAL WASTE OIL

To dispose of Waste Oil you may bring it to the DPW Yard located at 250 Boston Road every third Saturday of the Month from 9:00 am to 1:00 pm. Oil will only be accepted in regulation DPW issued containers available for sale at the DPW (978-671-0951)

The following sizes and prices are available:
5 gallon container for \$12.60*
Payable only by check.

*These prices are subject to change without notice.

DISPOSAL OF PROPANE TANKS

You may dispose of propane tanks at the following locations:

O'Connors Hardware
446 Boston Road
Billerica, MA
978-663-3520

There is a fee of
\$5.00*
Call for times
of operations

Taylor Rental
61 Parkhurst Road
Chelmsford, MA
978-937-5544

There is a fee of
\$5.00*

Small propane cylinders that are completely empty and with the valve removed can be recycled at a scrap metal facility (see Metal Items) or placed in the normal trash collection.

CAR TIRES AND BATTERIES

To dispose of car tires and batteries, you may bring these items to Holland's Auto Parts on Treble Cove Road every third Saturday of the month from 9:00 am to 1:00 pm.

This collection is for the months of March - October only.

There is a \$1.00 charge per tire on or off the rim.

*These prices are subject to change without notice.

LEAF AND YARD COLLECTION

The 2006 Spring and Fall Leaf Collection dates are: May 1 - June 3 and October 30 - December 1. Leaf pickup is on your **FORMER** trash pickup day, instead of every Monday.

All leaves must be placed curbside in Bio-degradable paper bags or leaves can be placed in covered trash barrels clearly labeled **YARD WASTE** with no plastic liners.

If you have any problems with leaf pickup call BFI at 1-800-442-9006, Customer Service Dept. or Neville Rivet at 978-436-9178.

DISPOSAL OF BULK ITEMS

You are allowed to dispose of one bulk item a week with your normal trash curbside. The following items are considered bulk items:

Mattress	Recliners
Box Spring	Table
Chairs	Love Seat
Sofa	etc.

CHRISTMAS TREE REMOVAL

To discard Christmas Trees, you must place the bare tree curbside. It will be collected the same day as trash collection during the first two weeks of January.

NO WREATHS WILL BE ACCEPTED

LATEX PAINT

COLLECTED AT CURB

LATEX PAINT & LATEX PAINT CANS
Dried out latex paint may be taken with weekly trash if lid is removed & paint is completely dried out. Kitty litter may speed drying. Do NOT dump paint down your drain. It will harm your septic system.

(Latex paint is not accepted at the Household Hazardous Waste Drop-off)

COMPOST BINS AVAILABLE

Compost Bins are now available for purchase for the discounted price of \$25.00 per bin. Please contact Neville Rivet for more information at 978-436-9178.

MERCURY RECOVERY PROGRAM

Do not throw products containing mercury in the trash such as thermostats, mercury switches, glass mercury thermometers or button cell batteries found in watches, cameras, calculators, hearing aids, and personal organizers. To properly dispose of these items or exchange your glass fever thermometer, while supplies last, bring it to the Board of Health Office Monday - Friday 8:30 am - 4:00 pm.

SMOKE ALARMS

Old Smoke and Fire alarms may be returned to the manufacturer. Newer models may be disposed of in your trash.

FIRE EXTINGUISHERS

Home Use extinguishers that are completely empty may be placed in the normal trash. These are only the small Kitchen Type Extinguishers. Industrial Type Extinguishers must be disposed of as scrap metal.

MOSQUITO CONTROL

The Board of Health coordinates annual aerial spraying and catch basin treatments for West Nile Virus Mosquitoes. The State West Nile Virus phone number is 1-866-627-7968. All dead birds must be reported to them before the Board of Health. Please obtain a case number from the State before reporting dead birds to the Board of Health.

BEAVER CONTROL

The Board of Health responds to flooding problems caused by beaver dams. These problems should also be reported to the Billerica Conservation Commission at 978-671-0966. All permits issued for Beaver Control by the Board of Health are subject to review and approval by the Conservation Commission according to the state law.

WHITE GOODS PICKUP

To dispose of white goods you must purchase a White Good Sticker from the Treasurers Office located at the Town Hall for a fee of \$5.00* per item. After purchasing a sticker, you must call BFI to make arrangements for the pickup. Please make sure appliance is curbside by 7:00 a.m. the day of the pickup and the sticker is visible.

The following is a list of appliances that require stickers:

Air Conditioners
Cast Iron Tubs
Copy Machines
Dehumidifiers
Dishwashers
Dryers
Freezers (doors removed and in upright position)
Furnace
Hot Water Heater
Metal File Cabinet
Metal Table
Ovens
Refrigerators (doors removed and in upright position)
Snowblower & Ride-On lawnmowers
(remove cover & drain fluids)
Steel Sinks/Steel Tubs
Table Saw
Trash Compactors
Treadmill
Washing Machines
Water Coolers
Wood Burning Stove

- **Please contact AW at 1-800-442-9006 if you have an appliance not listed to see if a sticker is required.**
- **Microwave ovens do not require a White Good Sticker to be disposed of. Please place microwave oven curbside with regular trash.**
- **Refrigerators and Freezers must be kept in an upright position with Doors removed. DO NOT LAY DOWN**
- **If pickup falls on or after a holiday, pickup will be delayed one day (please refer to calendar)**

CRT AND TV PICKUP

Computer monitors and televisions do not require disposal stickers. You must call BFI at 1-800-442-9006 to schedule a pickup. Please refer to collection 2006 calendar for exact dates.

CONSTRUCTION & DEMOLITION DEBRIS (NOT COLLECTED CURBSIDE)

April 6, 2006

Abdul Alkhatib
Director of Public Works
Town of Billerica
365 Boston Rd.
Billerica, MA 01862

Dear Mr. Alkhatib,

Thank you for inviting the Massachusetts Office of Technical Assistance (OTA) to visit the Town of Billerica's Highway Department. Enclosed is information which our office determined would be most useful to consider for your facilities' operations.

I. Stormwater Management

The majority of the Town of Billerica is designated as a Regulated Small MS4 by the National Pollutant Discharge Elimination System (NPDES) Stormwater Phase II Final Rule. The Phase II Rule defines a small MS4 stormwater management program as a program comprising of six elements:

1. Public Education and Outreach
2. Public Participation/Involvement
3. Illicit Discharge Detection and Elimination
4. Construction Site Runoff Control
5. Post-Construction Runoff Control
6. Pollution Prevention/Good Housekeeping

Particular attention should be paid to item 6, as it applies to municipal operations in order to improve or protect receiving water quality by altering municipal operations. Attachment A to this report is the EPA fact sheet detailing this minimum control measure.

Listed below is a summary of Best Management Practices and Good Housekeeping Measures covering the categories of stored fill, stored deicing chemicals (salt), and proper catch basin operation that are recommended for your site:

Stockpile of Fill:

- Spread grass seed onto the stockpile to stabilize the surface and prevent sediment erosion from the pile. The only area that does not need stabilizing is the active borrow area of the

pile. Also, if the pile remains inactive during the winter season, temporarily seed the entire pile in the fall so that the pile is stabilized for the inactive period.

- Install a filter berm (Attachment B) of crushed stone along the Jersey barrier that lines the unnamed tributary that cuts through the DPW site. This will help filter sediment from the stormwater runoff from the stockpile.

Salt Pile Storage:

Salt storage buildings should be designed to provide sufficient capacity, protection of salt, and easy access. Salt piles should be stored on impermeable surfaces. Salt piles should not be located adjacent to surface waters.

- Attachment C is a DEP Guideline document for Deicing Chemical Storage
- Doors to the salt storage building should be kept closed when loading/unloading is not taking place.
- Provide adequate space for storage piles to prevent salt from spilling out of the storage building.
- Any salt material spilled during loading/unloading should be swept back into the storage building.
- At a minimum the emergency salt pile shed that is located adjacent to the unnamed tributary should have a door that is kept closed when not in use. The door should be effective in keeping any salt inside the structure. We also recommend that this shed be moved to a less sensitive location.
- We recommend that the deicing chemical storage tanks located adjacent to (within a few feet) the unnamed tributary should be moved to a less sensitive location.

Stormwater Catch Basin:

- There is one stormwater catch basin located on the site, in a high traffic area that could be receiving stormwater runoff from the garage. A catch basin insert should be installed that can handle the removal of oil/grease, sediment, and other potential pollutants. A list of technologies that can be used in this situation can be found at www.mastep.net.

II. Street Sweepings

The Town of Billerica also collects street sweepings for reuse and incorporates the street sweepings into the stockpile of fill. Attachment D is a MA DEP policy on the "Reuse and Disposal of Street Sweepings". This policy restricts the reuse of street sweepings.

Street sweepings can be used as fill in public ways and amended to compost – however in both circumstances they can not be used in residential areas, not used within the 100 foot buffer zone of a wetland or within wetland resource areas including riverfront areas, and not used within 500 feet of a ground or surface drinking water supply. Therefore residents of the municipality should not be permitted to use compost/fill amended with the street sweepings.

The temporary storage of collected street sweepings is allowed if specific conditions are satisfied. The storage pile must be protected from wind and rain to prevent dust, erosion and off-site migration. The storage pile can not be stored within the 100 foot buffer zone of a wetland or within 500 feet of a ground or surface water supply.

Based upon this policy, the Billerica Highway Department cannot allow members of the community to use the fill if you amend your stock pile with street sweepings. Regardless, the Highway Department should ensure that the fill pile is not located within the 100 foot buffer zone of a wetland or within 500 feet of a ground or surface water supply, and must move the pile if it does not meet with this requirement.

III. Motor Vehicle Storage

In addition to the potential for pollution of the waterways and wetlands surrounding the site mentioned above, there is one other obvious source. There are numerous old or inoperable pieces of equipment and machinery, including motor vehicles, stored on the property. There is no provision to catch any potential leaks of motor vehicle oil, antifreeze, battery acid or other fluids. All of this machinery is stored on the ground, where leaking material could permeate through to groundwater and to the surrounding wetlands.

IV. SPCC Plan and Fuel Dispensing

Spill Prevention Control & Countermeasures (SPCC) Plans:

SPCC plans are required for certain facilities that have storage capacity for large quantities of oils which is interpreted to include gasoline, diesel, animal or vegetable oils, and motor oils. Facilities meeting all three of the following criteria must have an SPCC plan:

- it must be non-transportation related
- it must have an aggregate aboveground storage capacity greater than 1,320 gallons or a completely buried storage capacity greater than 42,000 gallons, and
- there must be a reasonable expectation of a discharge into or upon navigable waters of The United States or adjoining shorelines.

The Billerica Highway Department facility appears to meet all three of these criteria. The requirements of an SPCC plan are included in Attachment E.

Diesel Dispensing:

During OTA's visit, you asked whether your current diesel dispensing equipment is acceptable. In 1997 the Massachusetts Department of Fire Services issued an advisory stating that fueling motor vehicles from a tank vehicle is allowed under certain conditions. Please find enclosed with this letter as Attachment F a copy of the advisory and review it carefully to be sure that you are meeting all of these requirements.

V. Lead-acid Battery Management

Although lead-acid batteries contain lead and sulfuric acid, both of which are considered hazardous, environmental regulations allow these batteries to be treated as a "universal waste" to encourage recycling. In order to meet the requirements of universal waste regulations, batteries must be stored in a separate area marked "Universal Waste Accumulation Area" and individual batteries or containers of batteries must be marked "Universal Waste--Battery(ies)," or "Universal Waste--Waste Battery(ies)," or "Universal Waste--Used Battery(ies)". In addition, any battery that shows evidence of leakage, spillage, or damage that could cause leakage under reasonably foreseeable conditions must be put into a container. This container must be closed, structurally sound, compatible with the contents of the battery, and sufficiently contain anything that might leak from the battery. Waste batteries cannot be kept for longer than one year, and you are required to keep information to document this.

VI. Safety

Cylinder Safety:

Fire prevention regulation 527 CMR 14.03(12)(d) requires that flammable gases be stored in approved cylinders which shall be adequately capped or regulated and secured to prevent falling or being knocked over. "Empty" cylinders should be handled with the same care as full cylinders since they cannot be emptied completely and there will still be some remaining product in them.

Flammable Storage:

According to 527 CMR 10.04 requirements:

Flammable or combustible liquids stored or transported in other than a cargo tank, portable tank or transfer tank shall be in approved containers. Approved containers shall include those built to U. S. DOT standards, listed and labeled by an NRTL, or approved by the State Fire Marshal. When not in use, containers shall be in a secured, upright position with all openings tightly closed.

In addition, according to 527 CMR 14.03(8), facilities are required to have a permit from the fire department specifying the quantities of flammable or combustible materials allowed at the location and the conditions for keeping and storing of these quantities. This regulation applies to locations which have a total gasoline can storage capacity of 7 gallons or more.

Fire Extinguishers

According to OSHA regulation 1910.157, if your portable fire extinguishers are intended for use by Town of Billerica employees, you must have both a written emergency action plan and a written fire prevention plan which you have reviewed with your employees, and must also:

- 1) Provide portable fire extinguishers and mount, locate, and identify them so that they are readily accessible to employees without subjecting the employees to possible injury, and
- 2) Assure that portable fire extinguishers are maintained in a fully charged and operable condition and kept in their designated places at all times except during use.
- 3) Annually train employees in fire extinguisher use and the hazards associated with fighting the fires where they might use a portable extinguisher.

This forbids the practice of storing fire extinguishers behind trash cans or other obstructions and would require that if you have a "fire extinguisher" sign posted, there must actually be an extinguisher at that location.

A fire extinguisher must be located between 10 and 25 feet away from any flammable or combustible liquid storage area at your facilities. An exception to this would be if these liquids were stored in a fire resistant storage room, the extinguisher would need to be outside the room and not more than 10 feet from its door.

We hope that the information provided is useful and assists you with meeting your compliance and pollution prevention efforts. If you have further questions concerning the items in this report or if any additional issues arise that you would like OTA's assistance with, please do not hesitate to contact us.

Sincerely,

Scott Fortier

Industrial "No Exposure"

4.0 – Conditional No Exposure Exclusion for Industrial Activity

This fact sheet profiles the Pollution Prevention/Good Housekeeping for Municipal Operations minimum control measure, one of six measures the operator of a Phase II regulated small municipal separate storm sewer system (MS4) is required to include in its storm water management program to meet the conditions of its National Pollutant Discharge Elimination System (NPDES) permit. This fact sheet outlines the Phase II Final Rule requirements and offers some general guidance on how to satisfy them. It is important to keep in mind that the small MS4 operator has a great deal of flexibility in choosing exactly how to satisfy the minimum control measure requirements.

Why Is Pollution Prevention/Good Housekeeping Necessary?

The Pollution Prevention/Good Housekeeping for municipal operations minimum control measure is a key element of the small MS4 stormwater management program. This measure requires the small MS4 operator to examine and subsequently alter their own actions to help ensure a reduction in the amount and type of pollution that: (1) collects on streets, parking lots, open spaces, and storage and vehicle maintenance areas and is discharged into local waterways; and (2) results from actions such as environmentally damaging land development and flood management practices or poor maintenance of storm sewer systems.

While this measure is meant primarily to improve or protect receiving water quality by altering municipal or facility operations, it also can result in a cost savings for the small MS4 operator, since proper and timely maintenance of storm sewer systems can help avoid repair costs from damage caused by age and neglect.

What Is Required?

Recognizing the benefits of pollution prevention practices, the rule requires an operator of a regulated small MS4 to:

- ☐ Develop and implement an operation and maintenance program with the ultimate goal of preventing or reducing pollutant runoff from municipal operations into the storm sewer system;
- ☐ Include employee training on how to incorporate pollution prevention/good housekeeping techniques into municipal operations such as park and open space maintenance, fleet and building maintenance, new construction and land disturbances, and stormwater system maintenance. To minimize duplication of effort and conserve resources, the MS4 operator can use training materials that are available from EPA, their State or Tribe, or relevant organizations;
- ☐ Determine the appropriate best management practices (BMPs) and measurable goals for this minimum control measure. Some program implementation approaches, BMPs (i.e., the program actions/activities), and measurable goals are suggested below.

Attachment B

Maintenance

Respray area as necessary to keep dust to a minimum.

Filter Berm

A filter berm is a temporary ridge constructed of loose gravel, stone, or crushed rock. It slows and filters flow, diverting it from an exposed traffic area. It is used to retain sediment from traffic areas.

**Where Practice Applies**

Where a temporary measure is needed to retain sediment from rights-of-way or in traffic areas on construction sites.

Advantages

This is an efficient method of sediment removal.
Reduces the speed of runoff flow.

BUREAU OF RESOURCE PROTECTION
DRINKING WATER PROGRAM
GUIDELINES ON DEICING CHEMICAL (ROAD SALT) STORAGE

Effective Date: December 19, 1997

Guideline No. DWSG97-1

Applicability: Applies to all parties storing road salt or other chemical deicing agents.

Supersedes: Fact Sheet: DEICING CHEMICAL (ROAD SALT) STORAGE (January 1996)

Approved by: Arleen O'Donnell, Asst. Commissioner for Resource Protection.

PURPOSE: To summarize salt storage prohibition standards around drinking water supplies and current salt storage practices.

APPLICABILITY: These guidelines are issued on behalf of the Bureau of Resource Protection's Drinking Water Program. They apply to all parties storing road salt or other chemical deicing agents.

DEICING CHEMICAL (ROAD SALT) STORAGE

- I. **The Road Salt Problem:** Historically, there have been incidents in Massachusetts where improperly stored road salt has polluted public and private drinking water supplies. Recognizing the problem, state and local governments have taken steps in recent years to remediate impacted water supplies and to protect water supplies from future contamination. As a result of properly designing storage sheds, new incidents are uncommon. These guidelines summarize salt storage prohibition standards around drinking water supplies and current salt storage practices.
- II. **Salt Pile Restrictions in Water Supply Protection Areas:** Uncovered storage of salt is forbidden by Massachusetts General Law Chapter 85, section 7A in areas that would threaten water supplies. The Drinking Water Regulations, 310 CMR 22.21(2)(b), also restrict deicing chemical storage within wellhead protection areas (Zone I and Zone II)

REUSE AND DISPOSAL OF STREET SWEEPINGS
DEPARTMENT OF ENVIRONMENTAL PROTECTION
BUREAU OF WASTE PREVENTION
FINAL POLICY # BWP-94.092

This Policy provides guidance on the Department of Environmental Protection's requirements, standards, and approvals for handling, reuse and disposal of street sweepings.

Date

By Signature on Original
Carl F. Dierker,
Assistant Commissioner,
Bureau of Waste Prevention

1 POLICY STATEMENT AND SCOPE

This Policy explains the Department of Environmental Protection's requirements for managing street sweepings. Street sweepings are solid waste subject to the Massachusetts solid waste regulations. The options for managing street sweepings are as follows.

1. Use the street sweepings in accordance with the pre-approved uses described in Section 4 of this policy.
2. Use the street sweepings for a beneficial use after obtaining prior approval from the Department under the provisions of the solid waste regulations, 310 CMR 19.060, Beneficial Use of Solid Wastes.
3. Dispose of street sweepings at a permitted solid waste landfill.

The provisions and requirements for managing street sweepings under these options are the subject of this policy.

2 APPLICABILITY

This policy applies to the reuse or disposal of street sweepings that are generated in the ordinary and customary maintenance of roadways.

The policy does not apply to catch basin cleanings or street sweepings mixed with catch basin cleanings or other wastes. The policy does not apply to the material generated as the result of the clean up of an oil or hazardous material spill.

Street sweepings are not exempt from the Hazardous Waste Regulations, 310 CMR 30.000, and must be handled as hazardous waste when they exhibit any of the characteristics of a hazardous waste. If there is no evidence of unusual contamination, the Department does not require street sweepings to be routinely tested, but, as is the case with any waste, the generator has the ultimate responsibility for determining whether the waste is a hazardous waste.

3 DEFINITIONS

Department or DEP means the Massachusetts Department of Environmental Protection.

Public Way means the strip of land over and under a publicly owned, paved road or highway and includes the publicly owned land adjacent to the road or highway.

Street Sweepings means materials consisting primarily of sand and soil generated during the routine cleaning of roadways but may also contain some leaves and other miscellaneous solid wastes collected

Street sweepings shall be used as an additive to compost without prior approval from the Department only when the following restrictions and conditions are observed:

The sweepings have not been collected from Urban Center Roads (see definition);

The compost is used only in public ways;

The compost is not used in residential areas;

The compost is kept above the level of the groundwater;

The compost is not used in designated "No Salt Areas";

The compost is not used within the 100 foot buffer zone of a wetland or within wetland resource areas including bordering vegetative wetlands and riverfront areas;

The compost is not used within 500 feet of a ground or surface drinking water supply.

5 OTHER USES

Any use not pre-approved in the preceding section requires prior Department approval under the Beneficial Use provisions of the Solid Waste Management Facility Regulations at 310 CMR 19.060. A "Beneficial Use Determination" or BUD can be made only after the submission of an application characterizing the waste and describing the proposed beneficial use.

6 DISPOSAL

While the beneficial use of street sweepings is strongly encouraged, the Department does not prohibit the disposal of street sweepings. Street sweepings may be disposed in either lined or unlined permitted solid waste landfills without prior approval from the Department.

7 HANDLING

7.1 Collection of Street Sweepings

Although DEP does not regulate the collection of street sweepings, collection practices should be compatible with intended uses. For example, sweepings from Urban Center Roads are not approved for the uses allowed for sweepings from other areas. Keeping sweepings from

7.2 Storage

Street sweepings shall be temporarily stored prior to use, only when the following conditions are satisfied:

Storage must be at the site where the sweepings are generated (in the public way) or at a location, such as a DPW yard, that is under the control of the governmental entity which is doing the sweeping or has contracted for the sweeping;

The sweepings shall be protected from wind and rain to the extent necessary to prevent dust, erosion and off-site migration;

The sweepings shall not be stored within the 100 foot buffer zone of a wetland or within wetland resource areas including bordering vegetative wetlands and riverfront areas;

The sweepings shall not be stored within 500 feet of a ground or surface drinking water supply;

Storage shall incorporate good management practice and result in no public nuisance;

Storage must be temporary. Street sweepings shall be used within one year of collection unless the DEP Regional Office in the region where the sweepings are stored grants a written extension. An extension may be granted when it is demonstrated that all storage conditions will continue to be satisfied and the stored sweepings will be put to a specific identified use prior to the expiration of the extension period.

7.3 Preparation Prior to Use

Solid waste, such as paper, auto parts and other trash, shall be removed from the sweepings prior to use. Leaves, twigs and other organic matter should also be removed when good engineering practice indicates this is necessary to produce a material that is suitable for the intended use.

8 BACKGROUND

The Department has consistently classified street sweepings as solid waste subject to Massachusetts General Law Chapter 111, Section 150A and the Massachusetts Solid Waste Regulations (Site Assignment Regulations for Solid Waste Facilities, 310 CMR 16.00 and Solid Waste Management Facility Regulations, 310 CMR 19.000). There has been confusion among some in the regulated community about this classification.

9 ADDITIONAL INFORMATION

For additional copies of this policy, permit application forms or other DEP documents (except regulations) call any DEP Regional Office and ask for the Service Center or call the DEP Infoline in Boston. The permit application number for a Beneficial Use Determination is BWP SW-13 (Major) and BWP SW-30 (Minor).

Many DEP documents, including this policy, are available via modem from the DEP electronic bulletin board system, (617)292-5546. Information about the DEP and some documents are also available from the DEP's internet site at <http://www.magnet.state.ma.us/dep>.

Copies of all Massachusetts regulations, including the solid waste regulations, may be purchased from the State House Bookstore, (617)727-2834. The solid waste regulations are:

310 CMR 16.000, Site Assignment Regulations for Solid Waste Facilities

310 CMR 19.000, Solid Waste Management Facility Regulations

Questions about the Provisions of the Policy

If you have technical questions about the policy, please call any DEP office and ask to speak with a staff member about the provisions of the policy.

What do I have to do now?

A facility which meets the four criteria described above must comply with the SPCC rule. The SPCC rule requires the owner or operator of a facility existing before August 16, 2002, to amend, if necessary, the SPCC Plan on or before February 17, 2003, and to implement the amended Plan by August 18, 2003. The owner or operator of a facility that becomes operational after August 16, 2002, through August 18, 2003, must prepare and implement a Plan on or before August 18, 2003. The owner or operator of a facility which becomes operational after August 18, 2003, must prepare and implement a Plan before beginning operations. This Plan must be prepared in accordance with good engineering practices.

No matter who prepares your SPCC Plan, remember that ultimately it is the owner or operator who is responsible for complying with the rule. A copy of the rule is available on our website at www.epa.gov/oilspill. You may also call or write to the nearest EPA office listed on the following page.

Although each SPCC Plan is unique to the facility, there are certain elements that must be included in order for the SPCC Plan to comply with the provisions of 40 CFR 112. Three areas which should be addressed in the Plan are: 1) operating procedures the facility implements to prevent oil spills; 2) control measures installed to prevent oil from entering navigable waters or ad-

joining shorelines; and 3) countermeasures to contain, cleanup, and mitigate the effects of an oil spill that has an impact on navigable waters or adjoining shorelines. Some other important elements of an SPCC Plan include, but are not limited to, the following:

- Professional Engineer certification
- Plan must follow the sequence of 40 CFR 112.7 or provide cross-references to the requirements in 40 CFR 112.7
- Facility diagram
- Oil spill predictions
- Facility drainage
- Facility inspections
- Site security
- Five-year Plan review
- Management approval
- Appropriate secondary containment or diversionary structures
- Loading/unloading requirements and procedures for tank car and tank trucks
- Personnel training and oil discharge prevention briefings
- Brittle fracture evaluations
- Bulk storage container compliance
- Transfer procedures and equipment (including piping)

ADVISORY

To: Head of Fire Departments
From: Stephen D. Coan, State Fire Marshal
Date: August 26, 1997
Re: Fueling Motor Vehicles from a Tank Vehicle

Fueling Motor Vehicles from a Tank Vehicle

It has been brought to our attention that many fleet operators are seeking alternatives to storing motor fuel in underground storage tanks. One of the options is to fuel motor vehicles from a tank vehicle.

Be advised 527 CMR 5.08:(6) of the board of Fire Prevention Regulations allows the dispensing of motor fuel in the open from a tank vehicle to a motor vehicle or other motorized equipment located at commercial, industrial, governmental, construction sites, or manufacturing establishments not open to the public, and intended for fueling vehicles used in connection with their businesses, provided:

- An inspection of the premises and operations has been made by the head of the fire department.
- A permit has been obtained by the owner/operator of the premises for such fueling operation from the head of the fire department of the city or town where the fueling is to take place.
- The tank vehicle must comply with 527 CMR 8.00: TRANSPORTATION OF FLAMMABLE AND COMBUSTIBLE LIQUIDS.
- The tank vehicle operator or other competent person must be in constant attendance at the dispensing nozzle during the filling operation and must have a copy of the permit in his possession.
- The dispensing nozzle must be a listed self-closing type without a hold-open clip.
- Deliveries must be made in adequately lighted areas.
- The tank vehicle flashing lights must be in operation while dispensing.
- Fuel expansion space must be left in each tank being filled to prevent overflow in event of temperature increases.
- Smoking or the use of open flames within 25 feet of the fueling operation and related equipment shall be prohibited.
- Filling operations must be carried out in an outdoor area. Filling vehicles inside garages is prohibited.

Further, the head of the fire department may prescribe conditions under which the fueling may be conducted.

If you have any further questions, you may call Wayne Delaney, Compliance Officer, Office of the State Fire Marshal, at 978-567-3300.

ANNUAL REPORT 2005

PREFACE

The 2005 Annual Report of the Central Massachusetts Mosquito Control Project (the Project) has been prepared to provide the citizens and officials of the member cities and towns with information pertaining to the Project's control procedures and related activities.

As you read through this report you will notice that the Project is committed to an Integrated Mosquito Management (IMM) program. IMM utilizes a variety of control techniques and evaluation procedures. All control efforts are undertaken only after surveillance data has been collected and analyzed. This allows control decisions to be made based on the exact need that exists at each specific site. Environmental considerations are paramount when prescribing various control techniques.

The CMMCP Board of Commission is appointed by the State Reclamation and Mosquito Control Board to represent your community's interest. The Commissioners meet with the Executive Director and Director of Operations on a regular basis to discuss and formulate policies, and to provide their expertise in the operation of the Project. The Commissioners welcome your input, and we encourage you to schedule an appointment to visit our Project headquarters.

Copies of this report are distributed to key officials and departments in our member communities, as well as to the public libraries. We would encourage officials to take time from their busy schedule to read this report. Project personnel are available to answer questions you may have, and to meet with you to discuss out procedures and techniques. The Project's website at www.cmmcp.org has extensive information on mosquito control in Central Massachusetts.

The Project's goal is to provide effective and environmentally sound mosquito control, reducing mosquito annoyance and the potential for the transmission of mosquito-borne diseases. Our staff of competent, well-trained employees are known throughout the member communities as individuals who take great pride in their work.

Thank you,

Richard J. Day, Chair
Board of Commissioners
Central Massachusetts Mosquito Control Project

MOSQUITO CONTROL ACTIVITIES

One basic fact of the mosquito's biology is the dependence on still, stagnant water to complete its life cycle from egg to adult. Currently, there are two basic control methods practiced by the Project to disrupt this process. The first and most permanent method is called "*water management, source reduction or wetlands restoration*". This method reduces or eliminates the source of a potential mosquito problem, and consists of cleaning road-side ditches and culverts, removal of brush and accumulated debris from streams, and removal of containers which contain water. All of the above mentioned methods serve to accomplish the same goal - they permit water to flow freely, and reduce the likelihood for stagnant areas, areas in which the mosquito needs to reproduce. Source reduction is practiced year-round, and is done only after extensive examinations, and permission is received by the property owner(s).

There are places where water management is neither practical nor feasible for one reason or another. In these situations, we practice a method called *larviciding*. After a field technician has determined that larval mosquitoes are present, a small amount of environmentally sensitive product is applied to the area according to label directions. This is often a very effective control method, reducing the emergence of the adult mosquito from that area. Larviciding is practiced from late-March to September. Bti is the product of choice for larviciding in wetlands.

A third method is to attempt to control the adult mosquito. The control of adult mosquitoes is done on a request-only basis, and the presence of adult mosquitoes is confirmed before any application is done. Adulticiding can be an effective method of *temporary* control, which can be beneficial prior to public gatherings, outdoor events and festivals, or when mosquito populations have been determined to be intolerable. Since this part of the program is done ~~onponrt~~, this allows the individual resident to have the ultimate discretion on mosquito spraying in their area - how much or how little. Exemptions for spraying are handled through the City/Town Clerk and the Project office, and are updated each year. Adulticiding is done from approximately Memorial Day to Labor Day, depending on prevalent mosquito populations and the mosquito-borne disease situation.

All products used by the Project have been extensively tested by manufacturers, the US government and mosquito control agencies for many years. They are registered by the EPA and the Mass. Pesticide Bureau. Labels and fact sheets are available upon request to the public from the Project's office, or from our website.

We operate a full surveillance program in our service area. The landing rates performed by our field staff are brought back to the Project lab to be keyed out to species, allowing us to tailor our larviciding program and reduce future dependence on adulticides. We have a mobile team of specialized mosquito traps, called *gravid traps*, designed to capture virus-bearing mosquitoes. These mosquito collections, called *pools*, are sent into the Mass. Dept. of Public Health (MDPH) laboratory in Jamaica Plain for testing of West Nile Virus, Eastern Equine Encephalitis, and other arboviruses of concern by MDPH. These traps are used in a rotation throughout our service area, and are then concentrated in areas showing arboviral activity to supplement MDPH's collection protocols. Additional trap types are utilized in suspect areas to monitor and evaluate the risk of viral transmission to the local populace.

A comprehensive educational program is offered to area schools and civic groups. The program is aimed towards mosquito biology, mosquito habitat, and efforts citizens can undertake to reduce the potential for mosquito populations in their own neighborhood. This program is tailored to suit the requirements of the individual group, from elementary school children, to high school, to adult groups.

PROGRAM EVALUATION

This is a part of the program which many people involved directly never see. It must begin with a carefully planned program, one designed so that the data obtained during surveys before treatment and the surveys taken after treatment can be analyzed by statistically sound methods. Only by doing this can the value of a mosquito control program be determined. We will then know what type (species) of mosquito we are dealing with; what the population density is; what method(s) of control provide the most economical and efficient results.

Then and only then can we say that we have or have not affected mosquito control on a level that is acceptable to the community.

SEASONAL OUTLINE OF MOSQUITO CONTROL PROGRAM

1. Vehicle and equipment repair and storage - November through March
2. Wetlands Restoration - throughout the year
3. Program Preparation - December through March
4. Map compilation and training - throughout the year
5. Larviciding - May through September
6. Adulticiding - June through September
7. Catch Basin Treatment - May through September

Any mosquito control being done by individual member communities must, by law, be coordinated through the Central Massachusetts Mosquito Control Project.

2005 SUMMARY

The Central Massachusetts Mosquito Control Project (the Project) currently provides its services to 36 cities and towns throughout Middlesex and Worcester Counties. The Project's headquarters is located at 111 Otis Street, Northboro, MA. Tours of the headquarters or visits to field work sites may be arranged by calling the office in advance. Please call (508) 393-3055 during business hours for more information. The Project practices Integrated Mosquito Management (IMM), blending state of the art methods and techniques with expertise, experience, and scientific research to provide our member communities with environmentally sound and cost effective mosquito control.

During 2005 the Project received seven thousand and eighty five (7,085) requests for service from town residents and officials. A total of over six thousand (6,000) pounds of Bti (*Bacillus thuringiensis israelensis*) was applied by helicopter in 2 towns, Chelmsford & Billerica, and seven thousand, two hundred and ninety nine (7,299) pounds by hand throughout our service area were applied to area wetlands to reduce the emergence of adult mosquitoes. This represents over two thousand and sixty (2,060) acres of wetland that was treated with this mosquito-specific bacterium, significantly reducing adult mosquito populations in these areas. Thirty two thousand, four hundred and forty four (32,444) catch basins were treated with larvicidal product to control the mosquitoes that seek out these cool dark wet areas to breed, including the *Culex* mosquito, a major target for West Nile Virus transmission. Seven thousand, seven hundred and thirty seven (7,737) culverts were cleaned in an attempt to eliminate unnecessary standing water and reduce mosquito breeding. This work was done in conjunction with cleaning, clearing, and digging of one hundred and sixty eight thousand, three hundred and fifty two (168,352) feet of streams, brooks and ditches. This represents almost thirty two (32) miles of waterways which were cleaned and improved by Project personnel in 2005.

The Mosquito Awareness Program which we offer to elementary schools and other civic organizations in our district has become very popular. Project staff meets with students, teachers or concerned residents to discuss mosquito biology, mosquito habitat, and control procedures. Much of the presentation is directed towards what children and their families can do to prevent mosquitoes from breeding around their homes. Slides, videos, coloring books and other handouts make this an interesting program. This program is tailored to meet the needs of the specific audience. One thousand, six hundred and nineteen (1,619) students attended these programs.

As part of our effort to reduce the need for pesticides we continue to expand our wetlands restoration program. By cleaning clogged and overgrown waterways, mosquito breeding can be reduced and drainage areas are restored to historic conditions.

Bti mosquito larvicide is used to treat areas where mosquito larvae are found. We routinely check known breeding sites kept in our database, but also encourage the public to notify us of any areas they suspect could breed mosquitoes. Our field crews will investigate all such requests and treat the area only if surveillance gathered at the time shows an imminent threat of mosquito emergence.

Our goal is to manage all mosquito problems with education, wetlands restoration or larviciding, but we recognize that there are times when adult mosquito spraying is the only viable solution. In such cases specific areas are treated with either hand-held or pickup truck mounted sprayers if surveillance gathered at the time exceeds a pre-determined threshold to warrant an application. This program is offered on a **request-only** basis, and the exclusion process allows residents and/or town officials to exclude areas under their control from this or any part of our program.

The Project's surveillance program monitors adult mosquito and larval population density, and is the backbone for prescribing various control techniques. Specialized mosquito traps are deployed throughout the Project's service area to sample for mosquitoes that may be transmitting mosquito-borne diseases. In conjunction with the Mass. Dept. of Public Health we sample in areas suspected of harboring WNV and other viruses. One thousand, one hundred and fifty three (1,153) pools (collections) of mosquitoes totaling eleven thousand, nine hundred and twenty eight (11,928) specimens were tested for mosquito-borne viruses this year. Two (2) pools of *Cs. melanura* in Westborough were confirmed to be infected with the EEE virus. 6 pools of West Nile Virus were confirmed, 4 in Westborough (3 *Culex* and 1 *Cs. melanura*) and one each in Holliston and Wilmington, both *Culex* species. MDPH identified EEE in Holliston but subsequent surveillance did not confirm any additional virus isolates. No human or horse cases were identified with WNV or EEE in 2005 in our service area.

Educational pamphlets are available to anyone interested in learning about mosquito control and the services provided by the Project, and these items are routinely stocked in member Town/City Halls and libraries. Display boards with information on our program are rotated through area Town Halls throughout the year. We also have a website, www.cmmcp.org that has extensive information on mosquito biology, our control procedures, etc. This website has become a model for other Mosquito Projects and has been widely used throughout our service area and beyond.

We would like to thank you for your support during 2005 and we look forward to helping you and your community with its mosquito problems in 2006 and beyond.
