

Presented below are water quality standards that are in effect for Clean Water Act purposes.

EPA is posting these standards as a convenience to users and has made a reasonable effort to assure their accuracy. Additionally, EPA has made a reasonable effort to identify parts of the standards that are not approved, disapproved, or are otherwise not in effect for Clean Water Act purposes.

WYOMING SURFACE WATER DESIGNATIONS

Water Quality Division Surface Water Standards

August 2025

Originally Published June 21, 2001

Previously Updated March 16, 2021

1.0 Summary

As provided in Wyoming Water Quality Rules, Chapter 1, Wyoming Surface Water Quality Standards (Chapter 1), *Wyoming Surface Water Designations* contains the designated uses assigned to Surface Waters of the State under the jurisdiction of the State in Wyoming. Designated uses are revised when an updated version of this document is incorporated by reference upon adoption of Chapter 1. Updates may address errors or reflect modifications to designated uses made through the processes outlined in Chapter 1, Section 12. Changes made to designated uses that were supported by a use attainability analysis are labeled “UAA.” Recreation designated uses are available via the Recreation Designated Uses Web Map on the Wyoming Surface Water Quality Standards webpage.

2.0 Organization of the Designations

Wyoming Surface Water Designations is divided into two parts, Table A and Table B. The waters in Table A are those that are either named on the United States Geological Survey (USGS) 1:500,000 scale hydrologic map of Wyoming or have been specifically designated by the Department. The waters are organized by river basin in a downstream to upstream where an indented entry is tributary to the previous entry. The waters listed in Table B are those that were included in the Wyoming Game and Fish Department’s Streams and Lakes Inventory Database¹ as of June 2000. Table B is organized alphabetically by water name. A Game and Fish Department identification number included with each entry can be used as a cross-reference to the Game & Fish Department Stream and Lakes Inventory Database for information on the specific fish species that serve as the basis for the aquatic life use designation.

Most of the waters in Table A are also contained in Table B and in most cases the use designations are the same. There are circumstances, however, where the designated uses may differ between the two tables. Where there is a difference in designated uses in Table A and Table B, Table A always takes precedence.

3.0 Designated Uses

The designated uses assigned to Wyoming surface waters are described in Chapter 1, Section 11 and include aquatic life (i.e., coldwater, warmwater, limited, effluent-dependent, or modified), drinking water, human consumption of fish, human consumption of effluent-dependent fish, industry,

¹ The “Streams and Lakes Fish Inventory Database” used to derive these classifications is available upon request from the Wyoming Department of Environmental Quality, Water Quality Division, 200 W. 17th Street, Cheyenne, Wyoming.

irrigation, livestock, recreation (i.e., full body contact water recreation or limited body contact water recreation), scenic value, and terrestrial wildlife. Table 1 includes the surface water designated uses and abbreviation codes used in Table A and Table B.

Table 1. Surface water designated uses and abbreviations.

Designated Use Category	Designated Use	Abbreviation
Aquatic Life Uses	Coldwater	CW
	Warmwater	WW
	Limited	L
	Effluent-Dependent	ED
	Modified	M
	No Aquatic Life	N
Other Uses	Drinking Water	DW
	Human Consumption of Fish	FC
	Human Consumption of Effluent-Dependent Fish	EDFC
	Industry	IN
	Irrigation	IR
	Livestock	LV
	Terrestrial Wildlife	TW
	Scenic Value	S

4.0 Assignment of Designated Uses to Surface Waters of the State

All Surface Waters of the State are designated as follows:

(a) Waters in Table A and Table B.

(i) Waters in Table A and Table B are assigned the aquatic life, drinking water, and human consumption of fish uses specified by the abbreviations listed next to the water. Consistent with the classification system used until the revision of Chapter 1 in 2025, waters designated for coldwater, warmwater, or limited aquatic life are also designated for terrestrial wildlife, industry, irrigation, livestock, and scenic value, unless otherwise noted. Where there is a difference in designated uses in Table A and Table B, Table A always takes precedence.

(b) Unlisted Waters. Table A and Table B do not include an exhaustive listing of all the Surface Waters of the State. Those waters which are not specifically listed are designated as follows:

(i) All waters having any species of cold water game fish present in the Wyoming Game and Fish Department's *Streams and Lakes Fish Inventory Database*¹ as submitted to the Department of Environmental Quality in June 2000 are designated for coldwater aquatic life. Consistent with the classification system used until the revision of Chapter 1 in 2025, these waters are also designated for drinking water, human consumption of fish, industry, irrigation, livestock, terrestrial wildlife, and scenic value, unless otherwise noted;

(ii) All waters shown as having warm water game fish, but not cold water game fish present in the Wyoming Game and Fish Department's *Streams and Lakes Fish Inventory Database*¹ as submitted to the Department of Environmental Quality in June 2000 are designated for warmwater aquatic life. Consistent with the classification system used until the revision of Chapter 1 in 2025, these waters are also designated for drinking water, human consumption of fish, industry, irrigation, livestock, terrestrial wildlife, and scenic value, unless otherwise noted;

(iii) All waters shown as having nongame fish species but no other fish species present in the Wyoming Game and Fish Department's *Streams and Lakes Fish Inventory Database*¹ as submitted to the Department of Environmental Quality in June 2000 are designated for warmwater aquatic life. Consistent with the classification system used until the revision of Chapter 1 in 2025, these waters are also designated for human consumption of fish, industry, irrigation, livestock, terrestrial wildlife, and scenic values, unless otherwise noted;

(iv) All waters that did not have fish or were not present in the Wyoming Game and Fish Department's *Streams and Lakes Fish Inventory Database*¹ as submitted to the Department of Environmental Quality in June 2000 are designated for limited aquatic life. Consistent with the classification system used until the revision of Chapter 1 in 2025, these waters are also designated for industry, irrigation, livestock, terrestrial wildlife, and scenic value, unless otherwise noted.

(c) Recreational Uses. Recreational designated uses can be accessed from the Recreation Designated Uses Web Map on the Wyoming Surface Water Quality Standards webpage.

(d) Wetlands.

(i) Adjacent wetlands. Consistent with the classification system used until the revision of Chapter 1 in 2025, adjacent wetlands shall be designated for the same uses as the surface waters to which they are adjacent, unless otherwise noted.

(ii) Non-adjacent wetlands. Consistent with the classification system used until the revision of Chapter 1 in 2025, non-adjacent wetlands shall be designated for limited aquatic life, industry, irrigation, livestock, terrestrial wildlife, and scenic value, unless otherwise noted.

TABLE A

PRIMARY DESIGNATIONS

5.0 Table A.

Waters in each drainage are listed from downstream to upstream, with the most downstream waterbody at the top of the table. An indented entry is tributary to the previous entry.

TABLE B

Derived from the

**WYOMING GAME AND FISH DEPARTMENT
STREAMS AND LAKES INVENTORY DATABASE**

Submitted in June 2000

6.0 Table B - Wyoming Fish Inventory Database

The waters in Table B can only be used to determine the designated uses of waters that are **not listed** in Table A. Most of the waters in Table A can also be found in Table B and the designated uses will usually be the same. There are circumstances, however, where the designated uses will differ. In such circumstances, the designated uses in Table A takes precedence.

Waters with Multiple Classifications

The Township, Range and Section information shown in Table B describes the location where the Game and Fish Department collected the fish inventory data. The legal description refers to the lowermost point of the stream segment to which the fish inventory applies. There may be multiple sites shown for some waters, particularly the larger mainstem rivers and streams that traverse long distances through the state. The designated uses shown in the table is based on the fish species data that was collected at that particular site and may result in different designations for different stream segments. The designated uses for waters that have multiple segments shown in this table can be determined as follows:

1. The water must be cross-referenced with Table A. A positive reference can usually be made by matching both the water name and tributary. The location information (County, Township, Range, and Section) can also be used to identify the appropriate watershed in Table A. If the water appears in Table A, the Table A designated uses apply regardless of the information in Table B.
2. If the water is not listed in Table A, the designated uses shown in Table B apply. For streams with different designated uses, the designated uses are to be applied in a downstream to upstream manner. The designated uses shown for the most downstream sampling site applies to the stream segment from its lowest point to the first upstream sampling site that has different designated uses. At that point, the new designated uses apply in an upstream direction. This process continues until the stream ends.
3. An impoundment that is specifically listed in the tables may have different designated uses than the stream on which it is located. In these circumstances, the designated uses of a stream segment is not affected by the existence of a reservoir on that segment nor are the designated uses of the reservoir affected by the designated uses of the stream segment upon which it is located. Both are designated independently.
4. Where an impoundment is not specifically listed, the impoundment shares the same designated uses as the stream segment on which it is located.
5. Where a still body of water (lake, pond, reservoir) has multiple designations shown in Table B, only the highest designated uses apply.

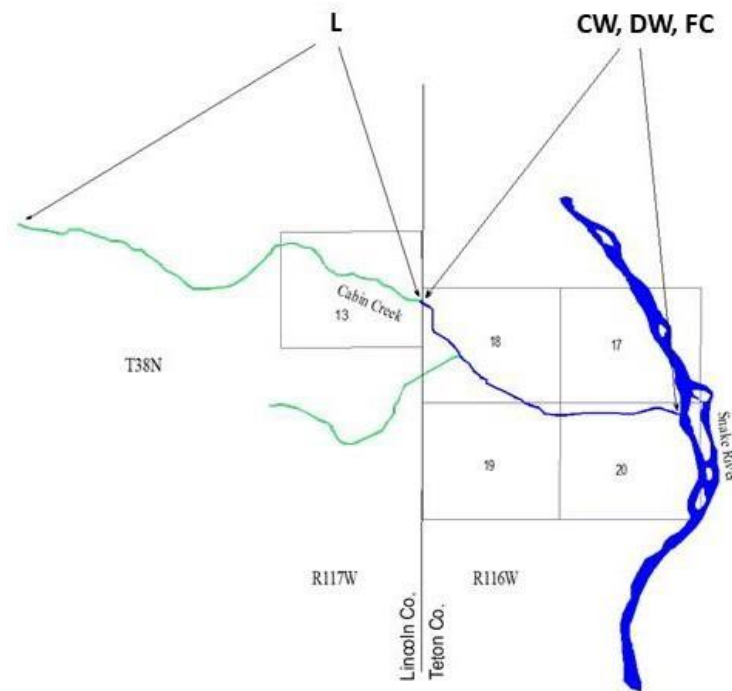

Figure 1. Designated uses applicable to Cabin Creek in the Snake River Basin. Cabin Creek is not listed in Table A and is listed in Table B as follows:

WATER NAME	TRIBUTARY TO	COUNTY	TWP	RANGE	SEC	CLASS	NOTE	G&F ID
CABIN CREEK	SNAKE RIVER	LINCOLN	38	117	13	[L]		JN913190LN
CABIN CREEK	SNAKE RIVER	TETON	38	116	20	[CW, DW, FC]		JN813190TN

The stream segment between the Snake River and the sampling station in Lincoln County (*T38N, R117W, Sec. 13*) is designated for coldwater aquatic life [CW], drinking water [DW], and human consumption of fish [FC], and the segment above this point is designated for limited aquatic life [L].
