Part IV. Summary of Information Collected and Analyzed

Freshwater Sampling – The Cape Cod Pond and Lake Stewardship (PALS) are continually sampling the Eastham ponds in an effort to identify possible pollutant and recommend best management practices for containing and eliminating possible pollutants. Eastham has a total of 12 ponds currently being sampled. (<http://www.capecodcommission.org/water/PALS/home.htm>). See attached.

Beach Sampling – Sixteen Eastham beaches (12 saltwater and 6 freshwater) were sampled during the summer months by the Barnstable County Department of Health and Environment. In 2012 over 2234 samples were tested for E. Coli or Enterococci as applicable. In 2012 over 300 weekly samples were tested. Samples exceeding the limits result in the posting of swimming advisory notices and posting on our website. In 2011 only 4 samples exceeded were detected. Repeat samples taken the following day were within acceptable limits in all cases and the beaches were reopened to the public. (<http://www.barnstablecountyhealth.org/bseastham.htm>). See attached.

Groundwater Sampling – The town continued its voluntary sampling project to evaluate levels of nitrate in residential wells. Each year one-third of the town is sampled allowing for a three-year sampling rotation schedule. We are experiencing a return of approximately 60% of the vials mailed.

Year	# Samples Returned
2013	1761
Below 2	991
2 to 5	542
5 to 10	185
Above 10	43

Shellfish Sampling – The Natural Resources Office continues to test for Red Tide and participate in shellfish sampling in coordination with Massachusetts Division of Marine Fisheries on a weekly basis through the Spring, Summer and Fall.
