

**TOWN OF NATICK
MASSACHUSETTS**

March 28, 2012

Glenda Velez
US EPA
5 Post Office Square – OEPO6-01
Boston, MA 02109-3912

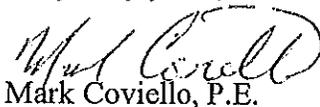

Subject: Year End Report NPDES Permit Number: MAR041139 Town of Natick

Dear Glenda:

Please find enclosed the ninth annual report from the Town of Natick regarding the above subject NPDES permit. Due to the fact that the new general permit for which we are eligible will not be effective as of May 1, 2012, it is our understanding that all municipalities covered under the 2003 Small MS4 General Permit are required to submit a ninth annual report covering our activities during the period since the last report (May 1, 2011 to April 30, 2012)

Attached to the end of the annual report you will find a "Revised Composite BMP Schedule" dated as of 5/1/12. This schedule is a management tool used by the Town for planning the implementation of the various BMPs. We will assume that unless we hear from you in the contrary, that the submitted annual report and the attached BMP schedule meets with your approval. We are also submitting this package as a PDF file via electronic mail.

Very truly yours,

Mark Coviello, P.E.
Town Engineer

cc: Martha White, Natick Town Administrator
Bill Chenard, Director of Public Works
Bob Bois, Environmental Agent
Jim White, Board of Health

**TOWN OF NATICK

Subject: Year End Report NPDES Permit Number: MAR041139 Town of Natick

Dear Fred:

Please find enclosed the ninth annual report from the Town of Natick regarding the above subject NPDES permit. Due to the fact that the new general permit for which we are eligible will not be effective as of May 1, 2012, it is our understanding that all municipalities covered under the 2003 Small MS4 General Permit are required to submit a ninth annual report covering our activities during the period since the last report (May 1, 2011 to April 30, 2012)

Attached to the end of the annual report you will find a "Revised Composite BMP Schedule" dated as of 5/1/12. This schedule is a management tool used by the Town for planning the implementation of the various BMPs. We will assume that unless we hear from you in the contrary, that the submitted annual report and the attached BMP schedule meets with your approval. We are also submitting this package as a PDF file via electronic mail.

Very truly yours,

Mark Coviello, P.E.
Town Engineer

cc: Martha White, Natick Town Administrator
Bill Chenard, Director of Public Works
Bob Bois, Environmental Agent
Jim White, Board of Health

Part II. Self-Assessment

The Town of Natick has completed the required self-assessment and has determined that our municipality is in substantial compliance with all permit conditions. Although we are not required to assess ourselves in regards to the BMP implementation, goals and schedule within this section, the Town would like to note that due to staffing and budgetary constraints during the stormwater management program, our plan of action had to be modified and schedules shifted. During that time, the Department of Public Works (the department responsible for the implementation of the NPDES Permit for the Town) lost their Stormwater Coordinator and numerous members of the Highway Department (one of the divisions tasked with assisting the Engineering Division with managing the program) and the positions were not filled (due to budget cuts). The duties of these positions were distributed to other personnel within the Department of Public Works and Community Development, but with the staffing and budgetary constraints, both departments are operating beyond their means. The Town of Natick was still committed to meeting all requirements of their permit, and believes that they have substantially completed all the required tasks set forth within the program.

Even with the budget cuts and staffing issues, the Natick Stormwater Committee has been pro-active in trying to ensure that all the scheduled tasks were completed by the end of the Permit and have gone as far as to revise their plans on multiple occasions during the past few years. Although many of the tasks were already completed prior to this report, continued implementation and upgrading has been a focus for the Town to make sure that they are remaining compliant with the scope and intent of the stormwater permit. Two such tasks are BMP 1-2 and 1-4 (Storm Water Flyer to Community Residents and Businesses respectively). Although these items were completed during previous years of the permit, the Town is always looking for opportunities to further educate the residents of Natick on Stormwater and what they can do to help keep it clean. During Year 9 of the permit, the Town of Natick has been working with the SuAsCo Watershed Council on developing a new storm water flyer for both residents and businesses. While it will not be complete by the end of Year 9, it is anticipated that it will be complete and ready for distribution during the early stages of Year 10 of the permit.

Another task that the Town has been working and improving upon is BMP 2-5 (Storm Water Drain Marking Kits). The DPW has been working with local groups (including middle schools, watershed groups and local Eagle Scout candidates) on using the kits (as well as Storm Water Stencils) that the town has to help educate not only the people using them but also their friends and neighbors. The Town will continue to make these marking kits and stencils available for use by Natick Residents. BMP 6-3 (Investigate Town Owned BMP's for Retrofit Opportunities) is a task that the town is always trying to investigate. During the course of this permit, the town has spearheaded a couple drainage and roadway improvements projects in which structural BMP's have been incorporated. Last summer, the Town began work on the Oak Street Roadway project. Some of the BMP's that are being incorporated into that project are deep sump catch basins and hoods with the basins. It is important to note that on every new development, the Town is requiring developer to incorporate structural BMP's into their storm drainage designs. As a result of these improvements, local street flooding has diminished in many areas and the quality of the drainage discharge for these areas has improved.

The Town was very active in regards to locating and mapping our storm drainage system during the stormwater permit. The town was not only active in mapping the locations of our outfalls but also other drainage structures including pipes, catch basins, etc. (which was not required under this permit). These structures were located using GPS technology which has allowed the town to produce 40 scale drawings which the Town can use in cases of emergency or problems with the storm drainage system or to assist the Town in marking out the storm drains for contractors performing excavation work near the system. Knowing the locations of the storm drainage pipes and structures will minimize the likelihood that contractors will damage our storm drainage system during their excavation work thus protecting water bodies downstream. During the subsequent stormwater permit, it appears that the mapping of all drainage structures will be required (subject to change in the final permit). The Town is ahead of the curve in this item but will work to ensure that the present information is correct as well as obtaining the remaining information.

As of the writing of this report, 505 outfalls have been identified in our system. This includes both town owned and maintained outfalls as well as outfalls in subdivisions that are not currently under the control of the Town but will ultimately be. Of the 505 outfalls, approximately 15 remain to be located using GPS. The locations of these outfalls are generally known; however due to terrain and safety issues, we are unable to locate these outfalls. We are still working to record the locations of these structures but it is unclear if this will be possible. 446 of the 505 outfalls have been fully inspected and entered into our database. The majority of the remaining 59 outfalls have been inspected during field location work; however follow-up detailed inspections and data entry into our database remain. It is important to note that there are many areas where the state drainage system discharges into the Town of Natick (Portions of Speen Street, Route 9, Mass Pike). Although GIS information on their system has been requested by the Town, the state has not given the Town any of this information. This is being mentioned to detail our concern that no matter how much work the Town performs to limit contaminants into our drainage system, there are other entities that are impacting our system beyond the town's control.

The town has also been very active in locating and inspecting culverts within the Town as well which is beyond the scope of this BMP, but it is the feeling of the Town that identifying the entire system as a whole (and all its components) is vitally important to ensuring that the system is managed and maintained in the best possible fashion. Presently 181 culvert inlets and 98 culvert outlets have been identified in our system. Of these, 173 of the 181 inlets and 96 of the 98 outlets have been fully inspected and entered into our database.

Part III. Summary of Minimum Control Measures

1. Public Education and Outreach

BMP ID #	BMP Description	Responsible Dept./Person Name	Measurable Goal(s)	Progress on Goal(s) - Permit Year 9 (Reliance on non-municipal partners indicated, if any)	Planned Activities - Future Years
1-1	Website Modifications	Department of Public Works	<p>Update Website with</p> <ul style="list-style-type: none"> • New Info • New Contacts • New Links <p>Continue monitoring the website to ensure that it is up to date and current including all links.</p>	<p>During Year 9 (as in past years), the Town's Stormwater Management Website was reviewed to ensure that the residents have a very user-friendly experience. Contact information and links were verified and new information was added and out of date information was removed from the site.</p>	<p>To ensure that this site is effective, it will be reviewed on a regular basis to make sure that information is current and that links are working. If new information is available that may be useful to residents, it will be included within the website. The assumption is that this task will be continued under the 2012 permit under review by EPA.</p>
1-2	Storm Water Flyer to Community Residents	Engineering Department	<p>Distribute flyer to 75% of Natick Residents; Compile and Consider "Survey" results</p>	<p>The original flyer was created and distributed to residents during Year 1. During Year 9, the Town is working with the SuAsCo Watershed Council on developing a new storm water flyer for residents. These flyers will be distributed to Natick residents during meetings and within Tax Bills.</p>	<p>Goal Completed While it wasn't required, the Town worked with SuAsCo to revamp the storm water flyer for residents to incorporate current initiatives and BMP's. The Town will continue to have these flyers available for all residents.</p> <p>Goal Completed/Ongoing Implemented Program</p>
1-3	Storm Water Lesson Plan for Fifth Grade Students	Engineering Department	<p>Develop and Distribute lesson plan for Grade 5 level (Use plan to teach 1 or more Grade 5 classes)</p>	<p>No work performed for this BMP during Year 9. The lesson plan was developed, distributed and taught to fifth graders during Year 2 of the permit.</p>	<p>No future work is planned for this BMP.</p> <p>Goal Completed</p>

1-4	Storm Water Flyer to Community Businesses	Engineering Department	Distribute flyer to a minimum of 50% of Natick Storm Water Businesses, Log Water displayed by half of the businesses receiving the flyer	The original flyer was created and distributed to businesses during Year 4. During Year 9, the Town worked with the SuAsCo Watershed Council on developing a new storm water flyer for community businesses. These flyers will be distributed to Natick businesses during meetings and within Tax Bills.	The town will keep these flyers available for whatever business or resident requests them and will continue to work with the residents and businesses of Natick to educate them about keeping their storm water clean.
1-5	Storm Water Media Campaign	Engineering Department	Deliver media information packet to the local media, Issue 4 press releases to local and major media outlets	No work performed on this BMP during Year 9. Informational packets were delivered to media (local and major) outlets during Year 3 of the permit.	Goal Completed/Ongoing Implemented Program No future work is planned for this BMP.
1-6	Storm Water Video	Engineering Department	Show Storm Water Video at a minimum of 1 public meeting, and air Storm Water Video at least once on the local cable channel	The Stormwater Infomercial that was developed during Year 5 of the program and showcased during Year 6 was still being shown on Natick Pegasus (The local access station). During Year 7, a new infomercial was also created and broadcast that dealt with Green and LID practices. These infomercials were still being aired during Year 9 to the residents of Natick on a semi-regular basis on Natick Pegasus.	Goal Completed The Town will continue to work with the local cable channel to ensure that these mini infomercials are being shown at certain timeframes. Also it has been discussed that a follow-up interview by a member of the Stormwater Committee may occur to discuss Stormwater more in depth.
Revised	Storm Water Infomercials	Engineering Department	Take postcards created under the revised BMP 2-7 and turn them into mini infomercials on the local cable channel to increase awareness of storm water issues both locally and in general		Goal Completed

2. Public Involvement and Participation

BMP ID #	BMP Description	Responsible Dept./Person Name	Measurable Goal(s)	Progress on Goal(s) – Permit Year 9 (Reliance on non-municipal partners indicated, if any)	Planned Activities – Future Years
2-1	Storm Water Committee	Stormwater Committee	Establish a Stormwater Committee, Hold Quarterly meetings at a minimum	The Stormwater Committee was established during Year 1 of the permit. As was the case in previous years, the Stormwater Committee met during this past year (Year 9) of the permit.	The Stormwater Committee will continue to meet as regularly as possible to ensure that the storm water issues of the Town are being addressed and discussed. Also, with the next draft permit under review by EPA, the Stormwater Committee will be meeting to determine the impacts this will have on the town and how best to deal with them.
2-2	Community Hotline	Department of Public Works	Establish a Hotline; Residents Use Hotline and Phone calls indicating suspicious activities are investigated	During Year 9 of the permit, the hotline remained an important part of the Stormwater program. The Hotline phone numbers and email addresses of appropriate contacts in cases of flooding, illicit discharges and construction concerns were checked to ensure that they are active to allow resident to continue to report suspicious activity and storm water concerns.	Ongoing Implemented Program The Town will continue to monitor the hotline to determine the best possible way to ensure that residents can report suspicious activity in an effective way. If modifications need to be made to how this is done, the Town will update accordingly.
2-3	Stormwater Traveling Display	Department of Public Works	Storm Water Display circulates around Natick for at least 3 months; Display is Posted at a minimum of 3 different public locations; Posted in public places or at storm water events	The traveling display was purchased during Year 1 of the permit with an additional display being purchased during Year 4. Since its purchase the original display has been located primarily	Goal Completed The Town will continue bringing the stormwater display to town-wide events and other gatherings where it will be seen by a large number of residents at one time.

Revised	Stormwater Committee	Purchase Additional Traveling Display	at the Department of Public Works year round. During special events (Town Meeting, Storm Water events, etc), the additional display has been set for viewing by the residents or other attendees of the meeting. During Year 9, the Town worked with the SuAsCo Watershed Council to replace some of the panels on one of the displays that was starting to come apart.	Ongoing Implemented Program/ Goal Completed No future work is planned for this BMP.
2-4	Department of Public Works	Hold poster Contest, receive entries and judge submissions	No work was planned for this BMP during Year 9.	Goal Completed
2-5	Department of Public Works	Hold Photo Contest, receive entries and judge submissions	This BMP was changed in Year 4 to be a storm drain marking kit. The kits were received in the end of Year 4 and were used by a couple groups (girl scouts) during Year 5 to help educate not only themselves but also their neighborhoods on not dumping anything down their catch basins. Additional groups (watershed groups, middle schools and Eagle Scouts) have inquired about the kits and they will be used during the end of Year 9 and beyond.	Goal Completed The Stormwater Committee will continue to work to determine the best way to implement this task and get more community groups involved with this BMP.
Revised	Department of Public Works	Install labels on approximately 200 catch basins		
2-6	Stormwater Committee	Hold a Local Storm Water Summit	No work performed for this BMP during Year 9. The summit was coordinated and held during Year 3 of the permit schedule.	Goal Completed Although this task was completed during Year 3, the town is always looking for opportunities to work with groups to educate them on stormwater management.

2-7	Participate in SuAsCo Storm Water Super Summit and Conduct an Evaluation and Assessment of Public Awareness of Storm Water	Engineering Department	Participate in Storm Water Super Summit; Storm Water Self Test distributed to a minimum of 75% of Natick residents, Compile and consider "Self Test" Results	During Year 6, the Town worked with SuAsCo to create postcards that focused on "Green" initiatives and what each resident could do. Also, a survey was created to test the resident's Stormwater IQ. During Year 7, these postcards were made available to all town residents as well as putting them on the town website so that residents can learn about green initiatives.	The Town will continue to work with SuAsCo and other organizations to come up with new and innovative ideas to educate the residents and businesses within Natick on stormwater and new technologies and ideas that can help people on an "every day basis" deal with stormwater. During Year 9, the practice of making the postcards available to residents at Town Hall and DPW continued.
Revised	Storm Water Postcards	Engineering Department	Create specially designed postcards and send them out via tax bills to all the residents in Natick		Ongoing Implemented Program

3. Illicit Discharge Detection and Elimination

BMP ID #	BMP Description	Responsible Dept./Person Name	Measurable Goal(s)	Progress on Goal(s) - Permit Year 9 (Reliance on non-municipal partners indicated, if any)	Planned Activities - Future Years
3-1	Illicit Discharge Bylaw	Board of Health/Engineering	Develop Illicit Discharge Bylaw and Present it to Town Meeting	No work was performed for this BMP during Year 9. The Department of Public Works and the Conservation Commission will work together to continue implementing the bylaws, rules, and regulations set forth as part of this BMP.	No work is planned for this BMP in the future. Goal Completed

<p>Inspect and Sample Town Discharges</p>	<p>Engineering Department</p>	<p>Inspect all Town Discharges; Identify outfalls that indicate potential sewerage or illicit discharges; If Schedule and budget allows, conduct follow-up testing and inspection at discharges with the potential of illicit discharges and/or sewage contamination</p>	<p>The DPW has focused a large amount of resources on completing the inspection of all town outfalls. Budget constraints and loss of the storm water coordinator for the town have made it harder to complete, but the DPW personnel have been working hard to locate and inspect all the outfalls. As of the writing of this report, 446 of the 505 outfalls have been FULLY inspected and entered into our database. The remaining 59 have been inspected during field location work; however, follow-up detailed inspections and data entry remain.</p>	<p>The next permit from EPA is going to stress testing of the outfalls during both dry and wet weather. The Town will use the information collected during the initial permit to assist us in better inspecting and analyzing the data collected during the next permit cycle.</p>
<p>System Mapping and Evaluation</p>	<p>Department of Public Works</p>	<p>Complete system map, structures, pipe databases and coverages; Locate all known discharges with GPS; Conduct Hydraulic modeling of flood prone areas; Add soils and land use to base mapping; Map septic system and provide pumping history</p>	<p>The Town has been very active in completing the mapping of our Storm Drainage system. During this permit, outfalls were located using GPS technology. Also, basins, manholes, culverts, etc were located. By doing this, the town can create 40 scale drawings which can be used by the DPW to locate the system in cases of emergency or it can be available to contractors to assist them in knowing the location of the storm drains during their projects which will limit the amount of damage they can do to the system. The remaining outfalls that have not been located using GPS or surveying may not be able to be located due to terrain and safety issues.</p>	<p>Ongoing Implemented Program It is the DPW's belief that all outfalls that CAN be located have been located. There are still outfalls that the Town is unable to locate due to field conditions and/or access (as previously mentioned). Hydraulic analysis/modeling of flood prone areas, using the drainage mapping will continue through the end of the current calendar year. The draft permit from the EPA stresses mapping of the entire drainage system. The Town will be "ahead of the curve" in that task but will continue to work to cross reference our information to make sure our drainage information is as correct as possible.</p> <p>Ongoing Implemented Program</p>

<p>Illegal Education</p>	<p>Dumping</p>	<p>Stormwater Committee</p>	<p>Educate the public on the hazards of illegal dumping</p>	<p>In conjunction with the educational BMP's listed above, the Stormwater Committee has been continuing to educate the residents of Natick of the hazards of Illegal dumping. During Year 8, the Town put together a Pet Waste Disposal Standard Operating Procedures document for the residents of Natick. This SOP has been continued during Year 9 of the permit.</p> <p>As was the case in previous years, the Town will be holding a Household Hazardous Waste Day in April to collect wastes from residents instead of illegal dumping occurring.</p>	<p>The town is going to continue its efforts of educating residents on the hazards of illegal dumping. This will be done by using all the materials that were obtained by the Town for Permit Years 1 through 9. The town will continue to stress the importance of not dumping illegal and hazardous materials into Natick's storm drain system.</p> <p>The DPW and the Town's Conservation Agent are working with the Town Clerk's office to have the Pet Waste document available to all residents when they obtain a dog license.</p>
<p>3-4</p>	<p>Septic System Controls</p>	<p>Board of Health</p>	<p>Mandate Septic System Maintenance; Create database to track maintenance activities; Update database based on new septic system information</p>	<p>The septic system database is up and running and data entry has been completed; however, the Board of Health is still trying appropriate funds to allow them to work with a consultant to help them with the reporting capabilities of the database.</p> <p>The Board of Health is not sure when they will be able to get this finished which is holding up finalizing of their proposed septic system regulations for approval by the Town. It may be completed at the beginning of Year 10 of the permit.</p>	<p>Goal Completed</p> <p>The Board of Health will continue to update and improve the septic system maintenance database. As soon as the database reporting capabilities are worked out with the consultant, the town will work on submitting Septic System Regulations for adoption by the Town. These new regulations will reduce system failures over time by assuring/ mandating system maintenance, effectively reducing the pollution and public health nuisances associated with such failures.</p> <p>Ongoing Implemented Program</p>
<p>3-5</p>					

4. Construction Site Stormwater Runoff Control

BMP ID #	BMP Description	Responsible Dept./Person Name	Measurable Goal(s)	Progress on Goal(s) – Permit Year 9 (Reliance on non-municipal partners indicated, if any)	Planned Activities – Future Years
4-1	Soil and Erosion Control Bylaw	Conservation Agent/ Department of Public Works	Develop a Soil and Erosion Control Bylaw and present it to Town Meeting	No work performed for this BMP during Year 9. The Soil and Erosion Control Bylaw was created and approved by Town Meeting during Year 3 of the permit. During Years 4-8, the town began implementing this bylaw and has continued to work with the Conservation Commission to ensure that it is being followed during construction activities.	The Department of Public Works and the Conservation Commission will work together to continue implementing the bylaws, rules, and regulations set forth as part of this BMP.
4-2	Construction Inspections	Conservation Agent/Department of Public Works	Town Representative to inspect Construction Activities on Weekly Basis	During Year 9, as was the case in all previous years of the permit, the Town of Natick has been very active in inspecting construction activities within the Town. ALL construction sites in town are inspected and all departments (building, conservation, DPW, Board of Health) make this a priority and it will remain a top priority for the Town even after the conclusion of the EPA permit.	Goal Completed The Town will continue to monitor ALL construction activities within the Town of Natick.

5. Post-Construction Stormwater Management in New Development and Redevelopment

BMP ID #	BMP Description	Responsible Dept./Person Name	Measurable Goal(s)	Progress on Goal(s) – Permit Year 9 (Reliance on non-municipal partners indicated, if any)	Planned Activities – Future Years
5-1	Bylaw for Post Construction Runoff	Conservation Agent/Department of Public Works	Develop a bylaw to limit runoff from post construction areas and present it to Town Meeting	No work performed for this BMP during Year 9. The Post Construction Runoff Bylaw was created and approved by Town Meeting during Year 3 of the permit. During Years 4 through 9, the town implemented this bylaw and has been working with the Conservation Commission and Building Department to ensure it is being followed during construction.	The Department of Public Works and the Conservation Commission will work together to continue implementing the bylaws, rules, and regulations set forth as part of this BMP.

Goal Completed

Ongoing Implemented Program

5-2	BMP Inspection and Maintenance	Conservation Agent/Department of Public Works	Inspect all town maintained structural BMP's over a Two Year period; Document any problems with BMP and investigate possible modifications	During the inspections of the Town's outfalls, the town's BMP's have also been inspected and their condition noted.	There has been no indication as to what the next 5 year permit will entail; however, the Town will continue to make sure that the locations and conditions of their BMP's are noted and observed and if any new information is available to include it within the database. Goal Completed
-----	--------------------------------	---	--	---	--

6. Pollution Prevention and Good Housekeeping in Municipal Operations

BMP ID #	BMP Description	Responsible Dept./Person Name	Measurable Goal(s)	Progress on Goal(s) - Permit Year 9 (Reliance on non-municipal partners indicated, if any)	Planned Activities - Future Years
6-1	Catch Basin Cleaning	Highway Department	Clean 1/3 of all catch basins per year	Starting in April 2012, a subcontractor will be commencing with the cleaning of approximately 1/3 of all catch basins within Natick. It is scheduled to be completed by the end of Year 9 of the permit or shortly thereafter. This will be done as the second year of a 3 year contract for the Town to have a subcontractor perform catch basin cleaning throughout Natick.	In early 2011, the town bid a 3 year catch basin cleaning contract that will run through June 2013. 1/3 of the basins in Natick will be cleaned each year. The quantity of materials removed will be noted and the material disposed or properly (for beneficial use if testing yields no contaminants or disposed of out of town at a proper disposal site) Ongoing Implemented Program

6-2	Street Cleaning	Highway Department	Sweep all town owned streets and parking lots once per year; Sweep downtown areas once per month (Apr-Nov); Sweep Major Streets twice per year; Sweep Town Parking Lots twice per year; Document amount of collected debris; and BUD for Street Sweeping Material Collected	All town streets were swept at least once during Year 9 of the permit. Downtown streets were swept once per month (April to November) while major town streets as well as all town owned parking lots were swept twice per year. The amount of street sweepings and catch basin sediment that was collected was documented by the DPW.	The town will continue its yearly maintenance of the roadways by cleaning the streets per the schedule that was noted in the Year 9 description until new parameters are established under the new stormwater permit under consideration by EPA. The amount of sediment and debris collected will be documented as was the case in every other year of this permit.
6-3	Investigate Town Owned BMP's for Retrofit Opportunities	Department of Public Works	Implement two retrofit projects (based on inspections conducted in BMP 5-2)	As noted in previous submittals, this BMP was completed during Permit Year 4 (ahead of the originally scheduled timeframe).	<p>Ongoing Implemented Program</p> <p>The Town is always looking for opportunities and places to install retrofit projects and will continue this endeavor in the future.</p> <p>The Town has just begun the second construction season for a Roadway and Drainage Improvements project on Oak Street in Natick that incorporates structural BMP's (such as deep sump catch basins, hoods, etc) to be installed. It is important to note that on every new development, the Town is requiring developers to incorporate structural BMPs into their storm drainage designs. As a result of these improvements, local street flooding was eliminated and the quality of the drainage discharge for these areas was improved as a result of the BMP's used.</p> <p>Goal Completed /Ongoing Implemented Program</p>

6-4	Municipal Employee Training	Conservation Agent	Continue town's current practices	During Year 9 of the permit, the town will perform the required municipal employee training on two separate days (April 17 th and 19 th). Training included: Hazard Communication, Spill Prevention Control and Countermeasures, Storm Water Management, Stage II Vapor Recovery and "Right to Know". New hires are trained in these areas within their first 30 days of employment.	The training of personnel is important and the Town will continue to be progressive in training its personnel on these very important issues. Ongoing Implemented Program
-----	-----------------------------	--------------------	-----------------------------------	---	---

6a. Additions

6-5	DPW – General Notice of Intent (GNOI)	Department of Public Works	File a NOI for Routine DPW Operations and Maintenance Activities	Even after its approval at the beginning of Year 5 of the permit and amendment in Year 8, the DPW has continued to work with the Conservation Commission to ensure that the goals of the GNOI are being met.	The DPW will continue to work with the Conservation Commission (through the Conservation Agent) to implement this General Notice of Intent and modify as is deemed necessary. Goal Completed
-----	---------------------------------------	----------------------------	--	--	--

7. BMPs for Meeting Total Maximum Daily Load (TMDL) Waste Load Allocations (WLA)

Not applicable. TMDL's have not been developed for any of the water bodies in Natick.

Part IV. Summary of Information Collected and Analyzed

There is no information or data that was collected during Permit Year 9 that is not included elsewhere in this report.

Part V. Program Outputs & Accomplishments (OPTIONAL)

(Since beginning of permit coverage unless specified otherwise by a **, which indicates response is for period covering May 1, 2011 through April 30, 2012)

Programmatic

	(Preferred Units)	Response
Stormwater management position created/staffed	(y/n)	N
Annual program budget/expenditures **	(\$)	80,000
Total program expenditures since beginning of permit coverage	(\$)	Unknown ^{Note 1}
Funding mechanism(s) (General Fund, Enterprise, Utility, etc)		General

Note 1: The annual stormwater program budget of \$80,000 covers only the costs for outside services. All other work performed was completed using Town personnel; equipment; and materials. These costs were not tracked.

Education, Involvement, and Training

Estimated number of property owners reached by education program(s)	(# or %)	Unknown
Stormwater management committee established	(y/n)	Y
Stream teams established or supported	(# or y/n)	N
Shoreline clean-up participation or quantity of shoreline miles cleaned **	(y/n or mi.)	N
Shoreline cleaned since beginning of permit coverage	(mi.)	7
Household Hazardous Waste Collection Days		
▪ days sponsored ** (See Note A)	(#)	1
▪ community participation ** (See Note B)	(# or %)	Unknown
▪ material collected ** (See Note B)	(tons or gal)	Unknown
School curricula implemented	(y/n)	N

Note A: The Household Hazardous Waste Collection Day for 2012 will be held on April 21, 2012.

Note B: The April 2012 Collection Day is occurring during the reporting period of this report, but after this report is being submitted so it is unclear of what the community participation will be and how much material will be collected.

Legal/Regulatory

Regulatory Mechanism Status (indicate with "X")	In Place Prior to Phase II	Reviewing Existing Authorities	Drafted	Draft in Review	Adopted
▪ Illicit Discharge Detection & Elimination					X
▪ Erosion & Sediment Control					X
▪ Post-Development Stormwater Management					X
Accompanying Regulation Status (indicate with "X")					
▪ Illicit Discharge Detection & Elimination					X
▪ Erosion & Sediment Control					X
▪ Post-Development Stormwater Management					X

Mapping and Illicit Discharges

	(Preferred Units)	Response
Outfall mapping complete	(%)	98
Estimated or actual number of outfalls	(#)	505
System-Wide mapping complete (complete storm sewer infrastructure)	(%)	99
Mapping method(s)		
▪ Paper/Mylar	(%)	Yes
▪ CADD	(%)	Yes
▪ GIS	(%)	Yes
Outfalls inspected/screened **	(# or %)	0
Outfalls inspected/screened (Since beginning of permit coverage)	(# or %)	446
Illicit discharges identified **	(#)	0
Illicit discharges identified (Since beginning of permit coverage)	(#)	0
Illicit connections removed **	(#); and (est. gpd)	0
Illicit connections removed (Since beginning of permit coverage)	(#); and (est. gpd)	0
% of population on sewer	(%)	87
% of population on septic systems	(%)	13

Construction

	(Preferred Units)	Response
Number of construction starts (>1-acre) **	(#)	5
Estimated percentage of construction starts adequately regulated for erosion and sediment control **	(%)	100
Site inspections completed **	(# or %)	100
Tickets/Stop work orders issued **	(# or %)	1
Fines collected **	(# and \$)	0
Complaints/concerns received from public **	(#)	4

Post-Development Stormwater Management

Estimated percentage of development/redevelopment projects adequately regulated for post-construction stormwater control	(%)	100
Site inspections (for proper BMP installation & operation) completed **	(# or %)	100
BMP maintenance required through covenants, escrow, deed restrictions, etc.	(y/n)	Y
Low-impact development (LID) practices permitted and encouraged	(y/n)	Y

Operations and Maintenance

Average frequency of catch basin cleaning (non-commercial/non-arterial streets) **	(times/yr)	Once/3 years
Average frequency of catch basin cleaning (commercial/arterial or other critical streets) **	(times/yr)	Once/3 years
Qty of structures cleaned **	(#)	1,270
Qty. of storm drain cleaned **	(LF)	410
Qty. of screenings/debris removed from storm sewer infrastructure **	(tons)	555.79
Disposal or use of screenings (landfill, POTW, compost, beneficial use, etc.) **	(location)	New Bedford

Basin Cleaning Costs

• Annual budget/expenditure (labor & equipment)**	(\$)	20,256.50
• Hourly or per basin contract rate **	(\$ per basin)	15.95/basin
• Disposal cost**	(\$)	Appr. \$4,450
Cleaning Equipment		
• Clam shell truck(s) owned/leased	(#)	1
• Vacuum truck(s) owned/leased	(#)	2
• Vacuum trucks specified in contracts	(y/n)	N
• % Structures cleaned with clam shells **	(%)	80
• % Structures cleaned with vacor **	(%)	20

	(Preferred Units)	Response
Average frequency of street sweeping (non-commercial/non-arterial streets) **	(times/yr)	1
Average frequency of street sweeping (commercial/arterial or other critical streets) **	(times/yr)	2
Qty. of sand/debris collected by sweeping **	(tons)	2,279
Disposal of sweepings (landfill, POFW, compost, beneficial use, etc.) **	(location)	New Bedford
Annual Sweeping Costs		
• Annual budget/expenditure (labor & equipment)**	(\$)	No Assigned Budget
• Hourly or lane mile contract rate **	(\$/hr. or In mi.)	Not Calculated
• Disposal cost**	(\$)	No Cost
Sweeping Equipment		
• Rotary brush street sweepers owned/leased	(#)	2
• Vacuum street sweepers owned/leased	(#)	0
• Vacuum street sweepers specified in contracts	(y/n)	N
• % Roads swept with rotary brush sweepers **	%	100
• % Roads swept with vacuum sweepers **	%	0

Reduction (since beginning of permit coverage) in application on public land of:

▪ Fertilizers	(lbs. or %)	0
▪ Herbicides	(lbs. or %)	0 - Rarely Used
▪ Pesticides	(lbs. or %)	0 - Rarely Used
Integrated Pest Management (IPM) Practices Implemented	(y/n)	Y

Average Ratio of Anti-/De-Icing products used **	(Preferred Units)	Response
(also identify chemicals and ratios used in specific areas, e.g., water supply protection areas)	% NaCl % CaCl ₂ % MgCl ₂ % CMA % Kac % KCl % Sand	55% 5% 40%
Pre-wetting techniques utilized **	(y/n or %)	Y
Manual control spreaders used **	(y/n or %)	Y
Zero-velocity spreaders used **	(y/n or %)	N
Estimated net reduction or increase in typical year salt/chemical application rate	(±lbs/ln mi. or %)	Approx 60% Decrease from last year
Estimated net reduction or increase in typical year sand application rate **	(±lbs/ln mi. or %)	Approx 78% Decrease from last year
% of salt/chemical pile(s) covered in storage shed(s)	(%)	100
Storage shed(s) in design or under construction	(y/n or #)	N
100% of salt/chemical pile(s) covered in storage shed(s) by May 2008	(y/n)	Y

Water Supply Protection

Storm water outfalls to public water supplies eliminated or relocated	# or y/n	N
Installed or planned treatment BMPs for public drinking water supplies and their protection areas	# or y/n	N
<ul style="list-style-type: none"> Treatment units induce infiltration within 500-feet of a wellhead protection area 	# or y/n	N
