Re: Pilgrim Nuclear Power Station

Dear Ms. Coniaris:

I am writing to support the tentative determination by the Massachusetts Department of Environmental Protection (MassDEP) to deny Holtec's application for a modified Surface Water Discharge Permit that would allow it to discharge radioactive and chemically contaminated wastewater into Cape Cod Bay.

MassDEP's tentative determination that the requested discharge is prohibited by the Massachusetts Ocean Sanctuaries Act is entirely correct. That act prohibits the "dumping or discharge or commercial, municipal, domestic or industrial waste" into an Ocean Sanctuary. Cape Cod, Plymouth, Kingston, and Duxbury Bays are all protected ocean sanctuaries under the act. The proposed discharge is therefore illegal.

Holtec's proposed discharge is illegal. The Department's final determination should deny its application.

Thank you,

Mark Cleveland

Re: Wastewater from Pilgrim Nuclear Power Station

Dear Commissioner Heiple:

I strongly support the MassDEP's initial determination denying Holtec International's permit application to discharge wastewater from the Pilgrim Nuclear Power Station into Cape Cod Bay and a final determination that would deny the application, preventing Cape Cod Bay from becoming a dumping ground for radioactive wastewater.

Clean water is a necessity and a right. The consequences of contamination of Cape Cod Bay are serious. Radioactive waste poses a significant public health risk and threatens to harm ocean wildlife and the seafood that comes from Cape Cod Bay. Our local economy, the fishing and shellfishing industries, and tourism will be adversely affected. The reputational harm alone to Cape Cod Bay as a toxic dumping ground for radioactive wastewater from an abandoned nuclear power plant would be severe and long-lasting.

There are reasonable alternatives to dispose of wastewater without damaging our natural resources other than Holtec's preferred course of action (dumping 1.1 million gallons of radioactive wastewater into Cape Cod Bay), which is driven solely by costs and the desire to maximize its shareholders' return. Holtec is seeking to profit at the expense of the Commonwealth, its citizens, our environment, and the Cape Cod economy.

The MassDEP must deny Holtec's permit application.

Respectfully,

Doug Lester

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Hello,

As a citizen of Sandwich, MA, I am in alignment with putting an end to Holtec's plan to dump their waste water in Cape Cod Bay. The impact to Holtec's workforce and the delays they have/will experience is nothing in comparison to the havoc the dumping would create with our sea life and human life. Any level of radioactive materials dumped into the Bay is not acceptable. Why chance it. Deny the dumping.

Thanks for your time.

Andrea Stupka
Sandwich, MA

Dear Ms. Coniarias,

I am writing to support the tentative determination by the Massachusetts Department of Environmental Protection (MassDEP) to deny Holtec's application for a modified Surface Water Discharge Permit that would allow Holtec to discharge radioactive and chemically contaminated wastewater into Cape Cod Bay.

MassDEP's tentative determination that the requested discharge is prohibited by the Massachusetts Ocean Sanctuaries Act is entirely correct. That act prohibits the "dumping or discharge or commercial, municipal, domestic or industrial waste" into an Ocean Sanctuary. Cape Cod, Plymouth, Kingston, and Duxbury Bays are all protected ocean sanctuaries under this act, making Holtec's dumping plan illegal

Because Holtec's proposed discharge is illegal, the Department's final determination should deny its application. Thank you for enforcing the law to protect our ocean sanctuaries.

I know this is from the template of what to write, but all waterways are critical to our lives, that of plants and wildlife and polluting of this vital resource should be a crime.....to any extent of 'safe' polluting.....that does not exist. There has to be accountability for the wastewater and this must be enforceable and enforced for the sake of the world community and that of ours here.

Sincerely,

Star Smith

To Whom it may concern,

As a life long resident and fisherman of Massachusetts. I am asking that you enforce the temporary order to Stop Holtec from dumping radioactive contaminated water into Cape Cod Bay. We already are dealing with a Very Bad situation with the new Hypoxia problem. We need to stop using the Bay as a toilet. I don't have a solution for the problems we are already facing. But I am 100% positive that dumping contaminated water into Cape Cod Bay so that a Billionaire can make more money is not the right thing to do. PLEASE DO NOT LET THEM DUMP IN CAPE COD BAY.

Thank You ahead of time because I know you'll do the right thing.

Mark Creedon

Deny Holtec again permently

I ask that Massachusetts authorities prohibit Pilgrim from discharging nuclear waste into our waterways!

Let's find more creative solutions to disposing of nuclear waste safely. There is still so much unknown about the effects of nuclear waste disposal, and its effect on our health and the health of our planet.

Let's not make money our priority! Let our priorities be health and safety. We can be really intelligent about this issue, or we can let greed, complacency and expedience lead the way. Let's be intelligent and creative, and respect our planet and its current and future inhabitants.

Dear Commissioner Heiple,

I strongly agree with the Massachusetts Department of Environmental Protection's draft determination to deny Holtec International's permit application to discharge wastewater from Pilgrim Nuclear Power Station into Cape Cod Bay. DEP's permit denial correctly interprets the Ocean Sanctuaries Act, which explicitly states that discharges such as the one pursued by Holtec are prohibited under state law. I urge DEP to move forward in finalizing its draft decision based on state law requirements and issue a permit denial to Holtec that prevents Pilgrim's wastewater from being released into the Cape Cod Bay Ocean Sanctuary.

Sincerely,

Dear Ms. Coniaris and Mass DEP:

This is to add my voice to the vast number of Mass citizens who are opposed to the dumping of hazardous water in Plymouth Bay. There are other, environmentally acceptable disposal options for Holtec to pursue.

Direct disposal in the ocean of *anything* that even has the *possibility* of being hazardous is simply unconscionable.

Thank you for protecting the citizens of Massachusetts from such permanently disastrous consequences.

Respectfully,

I read in the Falmouth Enterprise that you are accepting public comment on this issue. I moved to the Cape in 2022 not realizing how many serious threats there are to its residents. We have just been able to take a breath about the gun range and the water supply issue. Now there's discussion of the discharge of radioactive wastewater to the ocean. Mean time, water levels are rising and people need to make plans for that. Yet more threats.

I write in support of the Mass DEP's DENIAL of the Holtec request. Our waters have too much nitrogen run off in them as DEP has been telling us, let's not make matters worse by allowing the introduction of radioactive wastewater.

Dear Ms. Coniaris:

I am writing to **support the tentative determination** by the Massachusetts Department of Environmental Protection (MassDEP) to **deny Holtec's application** for a modified Surface Water Discharge Permit that would allow Holtec to discharge radioactive and chemically contaminated industrial wastewater into Cape Cod Bay.

MassDEP's tentative determination that the requested discharge is prohibited by the Massachusetts Ocean Sanctuaries Act is entirely correct. That act prohibits the "dumping or discharge or commercial, municipal, domestic or industrial waste" into an Ocean Sanctuary. Cape Cod, Plymouth, Kingston, and Duxbury Bays are all protected ocean sanctuaries under the act.

The MassDEP final determination must be to deny Holtec's application. Thank you for enforcing the law to protect our ocean sanctuaries.

Sincerely,

Charlene S. Zicko

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Dear Ms. Coniaris:

I am writing to support the determination by the Massachusetts Department of Environmental Protection (MassDEP) to deny Holtec's application for a modified Surface Water Discharge Permit that would allow Holtec to discharge radioactive and chemically contaminated wastewater into Cape Cod Bay. Discharge from that plant has gone on long enough.

Mass DEP's tentative determination that the requested discharge is prohibited by the Massachusetts Ocean Sanctuaries Act is entirely correct. That act prohibits the "dumping or discharge of commercial, municipal, domestic or industrial waste" into an Ocean Sanctuary. Cape Cod, Plymouth, Kingston, and Duxbury Bays are all protected ocean sanctuaries under this act, making Holtec's dumping plan illegal. The effects of a discharge like this could be disastrous to sea life and the environment around the plant.

Because Holtec's proposed discharge is illegal, the Department's final determination should deny its application. Thank you for enforcing the law to protect our ocean sanctuaries.

Yours truly,
Catherine Joyce

Re: Pilgrim Nuclear Power Station – DEP's Tentative Determination to Deny Holtec's Application for a Modified Permit

Dear Ms. Coniaris:

I am writing to support the tentative decision by the Massachusetts Department of Environmental Protection (MassDEP) to deny Holtec's application for a modified Surface Water Discharge Permit that would allow it to discharge radioactive and chemically contaminated wastewater into Cape Cod Bay.

MassDEP's tentative determination that Holtec's requested current discharge is prohibited by the Massachusetts Ocean Sanctuaries Act is correct. This proposed discharge is clearly illegal and I strongly urge the MassDEP to uphold state law and deny Holtec the full Surface Water Discharge permit as their final determination.

Thank you,

NOT ONE DROP!

Thank you,
Debbie Crawford

What are the regulatory definitions of “unwanted, discarded, or environmentally harmful solid, liquid, or gaseous materials? **As currently written, Section 15: Prohibited Activities in Ocean Sanctuaries, and 301 CRM 27.02 are very vague and therefore subject to different interpretations.** The definition should clearly state the constituents and their levels to allow for easy and accurate perception or interpretation of these items.

The Massachusetts Maximum Contaminant Levels (MMCLs) are specifically defined as well as level for what is considered a hazardous waste.

Why is this not the same case in the two regulations referenced below?

Section 15: Prohibited Activities in Ocean Sanctuaries

Section 15 of the Act prohibits Holtec’s proposed discharge. Section 15 of the Act contains a broad prohibition on discharges of wastes to ocean sanctuaries: “Except as otherwise provided in this section, the following activities shall be prohibited in an ocean sanctuary: . . . (4) the dumping or discharge of commercial, municipal, domestic or industrial wastes” The Regulations define “wastes” as:

any unwanted, discarded, or environmentally harmful solid, liquid, or gaseous materials resulting from commercial, municipal,

domestic, or industrial Activities, including, but not limited to garbage, snow, thermal discharges, saline discharges, and sewage. Waste does not include approved and licensed dredge spoils, approved and licensed stormwater discharges, or snow disposal consistent with Department guidance.

301 CMR 27.02: “Wastes means any unwanted, discarded, or environmentally harmful solid, liquid, or gaseous materials resulting from commercial, municipal, domestic, or industrial Activities.”
“Activities means activities, uses, or facilities described in M.G.L. §§ **12** through 16K and 18.”

Chief Seattle once said, "Teach your children what we have taught our children: that the earth is our mother. Whatever befalls the earth, befalls the children of the earth." Yet sadly, even a casual observer of United States' history knows ancient wisdom has often been disregarded; our hubris tends to dismiss such ardent defenders of the earth as well-meaning but naive; instead, we have been taught to prioritize human progress particularly when it enhances perceived national or corporate interests (read: the often unexamined financial imperative to maximize profits and prioritize shareholder gains). Yet an increasing number of our fellow citizens are realizing the steep environmental toll such thinking has engendered; indeed, it is jeopardizing our very earth. But to be candid, haven't we wanted each subsequent generation to be better off financially? Now nature has starkly replied: can wealth exult on a despoiled endangered planet?

Let's be blunt. This crisis means one thing: the planet and its people require conscientious advocates to prevent further *ecoside* - a word meaning the "destruction of the natural environment by deliberate or negligent human action." Yet tragically, such behaviors are still proposed and, unless checked, silently enacted. But Commonwealth residents should be proud to note our Department of Environmental Protection embraces its mission of safeguarding our waters very seriously; as a body, it is doing what every environmental steward should do; and clearly, it is a voice for the voiceless. For in denying Holtec International's proposal to introduce radioactive water into Cape Cod Bay, it has delivered a resounding judgment. A judgment in favor of our precious fragile ocean and the innumerable creatures and residents dependent on its continued well-being. A judgment for sanity.

In closing, despite our history of exploiting natural resources and the lure of short-term economic gain, the earth must be safeguarded; the ocean must be reclaimed. A concerted movement that advances and defends these needs is our sole, desperate hope. And to succeed, it will take each of us doing what we can while there is time. A time we mustn't squander.

Allain

Comments submitted to the Massachusetts Department of Environmental Protection on the Subject of Potential Waste Water Release from Pilgrim Station

The following information is respectfully submitted to the Massachusetts Department of Environmental Protection on the issue of the potential discharge of waste water from Pilgrim Station, Plymouth, MA. Pilgrim Station is currently in the process of decommissioning, pursuant to the Rules and Regulations of the United States Nuclear Regulatory Commission (USNRC) and the United States Environmental Protection Agency (USEPA).

My name is Dr. Thomas Sowdon. My background, education, training and experience encompass the issues at hand in the above specific and related issues, regarding the behavior, impact and effect of the release of radioactive materials to the environment resulting from light water reactor operation.

I am an Environmental Scientist and I believe that science should serve man, and potentially significant environmental decisions involving potentially harmful materials should be based on reliable scientific knowledge and principles.

I also believe it is an incontrovertible statement that science possesses more reliable information on the effects of ionizing radiation on biota than any other environmental pollutant on our planet. Much of this information, unfortunately, resulted from the use of atomic weapons in the last World War. About 120,000 survivors of those events have been followed for over 70 years¹; the individual doses they received have been calculated and their personal health status has been aggressively monitored. It is difficult to identify another environmental pollutant for which any experimental data exists over this range of doses, over this period of time, in these study subject numbers and with this depth of health outcome information.

In addition, we have experiences over much of the last century from a variety of medical and industrial exposures which have added greatly to our knowledge of the effects of very specific exposures to radioactive materials in specific sub-populations and by specific radiation types.

We have also learned how hard it is to find any unexposed population group on this planet for comparison, due to the ubiquitous nature of both natural terrestrial radiation, cosmic radiation and cosmogenic radioactive material. Nevertheless, we have abundant and reliable scientific information and studies to allow us to estimate the effect of projected releases on local populations and sea life.

Our world has become a very complex place. It is essential that decisions that affect our environment and the health and safety of our society take into account all of the available knowledge and supporting scientific facts and data that we have, much of which has been accumulated over decades of study and investigation.

I am NOT advocating either for or against the release of any contaminated material of any type into Cape Code Bay.

¹ See the [Radiation Effects Research Foundation \(RERF\)](https://www.rerf.org.jp/en/) at <https://www.rerf.org.jp/en/> for a description of its charter, function, publications and history.

What I am advocating for is that we not disregard existing historical scientific knowledge and experience in making any decision regarding the best disposal option and the impact of that choice on the local human population and Cape Cod Bay as follows:

1) Whatever decision is made, it should be based on a scientific and fact-based evaluation of the potential impact of each possible waste water processing option on both humans and the marine environment of Cape Cod Bay and the ocean as a whole. We have the science and the tools to reliably perform such an evaluation.²

2) State, local and federal authorities should also employ that approach before making regulatory decisions or attempting to create new laws that might affect the local environment.

3) The final decision of how to process the waste water should be based on the option that objectively results in the least (or an insignificant) impact to any affected person or population.

I have heard and seen information that embraces the philosophy of “NIMBY” - which is an acronym for “Not In My BackYard”. To some scientists, this phrase means “I don’t care about the impact as long as it affects someone else”.

This always seemed to me to be a somewhat unenlightened position to take on environmental issues. To a scientist, people’s health and lives are all of equal value, regardless of who they are or where they live. Because life, all life, is of unique and inestimable value. To this end, it is very hard to argue that the best solution to an environmental issue is anything other than the one that impacts the fewest number of people, in the least amount, for the shortest period of time. That principle should apply here as well and is what demands that whatever decision is made is firmly rooted in the principles, knowledge and tools that science offers us.

We all wish for a world absent of pollutants of any kind. That is unrealistic. Indeed, the advent of electric cars, windmills, solar panels, fission and fusion power reactors and countless other innovations is evidence that we as both a race and a society value, strive for, and respect efforts to reduce environmental pollutants (which affect the entire planet) to the lowest possible levels achievable and thereby protect human life.

Although the net effect of these technologies is almost always positive on society as a whole, they often introduce new environmental risks that result in potential effects that impact some people more than others. Electric cars and solar panels require mining and disposal of elements that were not commonly encountered by large segments of the population in the past. Wind Turbines are said (with dubious basis) to cause cancer, but more likely just present a small risk of catastrophic failure and/or fire to a very small local population.³ We do not summarily reject these technologies because they may be associated with some very small risk to some people. Instead, we evaluate them scientifically for overall population

² See BEIR VII, “Biological Effects of Ionizing Radiation” by the National Academies of Science. For example, based on reliable data the best estimate (including uncertainty) of the upper limit of hypothetical lifetime risk of cancer to an individual with a whole body concentration of tritium the same as that currently found in ocean water is about 1 chance in 20,000,000. The lifetime risk of cancer from all causes unrelated to radiation is about 1 chance in 2.5.

³ Even ambulances that indisputably save human lives, do, in fact, result in about 40 traffic fatalities each year in this country.

risk and, if warranted, accept, reject or constrain them based on our conclusions using known fact. This is because, although they may result in some risk to us as groups of individuals, the net effect on society as a whole is positive and our standard is not, and must not be – our own personal best interests – but the best interests of society. To reject any plan, process or activity based solely on NIMBY is a disservice to the collective interests of society and an affront to science. Instead, we should apply our best science to determine the potential health and environmental impact of a proposed solution and determine if the projected impact is the lowest achievable for everyone, (or possibly just diminishingly small to anyone), and, if so, we generally adopt the process or technology, sometimes with constraints.

We should not stray from that approach and philosophy in the matter at hand.

Perhaps the right answer is to completely prohibit the discharge of any and all pollutants to Cape Cod Bay, but let's apply the same philosophy and assessment methods to ALL pollutants consistently and make decisions based on knowledge and science, rather than on vague and unfounded assumptions and emotion.

Respectfully tendered,

A handwritten signature in black ink, appearing to read "Tom Sowdon". The signature is fluid and cursive, with the first name "Tom" being more prominent.

Ms. Cathy Coniaris
MassDEP Surface Water Discharge Program
100 Cambridge Street
Boston, MA 02114

Re: Pilgrim Nuclear Power Station – DEP's Tentative Determination to Deny Holtec's Application for a Modified Surface Water Permit.

Dear Ms. Coniaris:

We write regarding DEP's tentative decision to deny Holtec's application for a modified Surface Water Discharge Permit that would allow it to discharge radioactive and chemically contaminated wastewater into Cape Cod Bay.

In the Selectboard's view, DEP's tentative determination that the requested discharge is prohibited by the Massachusetts Ocean Sanctuaries Act is entirely correct. That Act prohibits the "dumping or discharge of commercial, municipal, domestic or industrial waste" into an Ocean Sanctuary. Cape Cod, Plymouth, Kingston, and Duxbury Bays are all protected ocean sanctuaries.

We suggest that, in its final decision, the DEP should also deny Holtec's requested permit for at least two other reasons.

The first reason is that several other laws, including the Massachusetts Endangered Species Act (ch 131A), the Crimes Against Public Health Act (ch 270, sec 16) and the Massachusetts Oil and Hazardous Material Release Prevention Act (ch 21E) also prohibit Holtec's requested discharge.

The Endangered Species Act prohibits altering the habitat of any endangered or threatened species, including the right whale, roseate tern, least tern, piping plover, and loggerhead turtle that live in and along the shores of Cape Cod Bay, including along Duxbury's coastline. Massachusetts state regulations are explicit: the discharge of waste, wastewater, toxic or hazardous materials shall always be considered alterations of habitat.

The Crimes Against Public Health act prohibits discharging any waste into the waters of the Commonwealth.

878 Tremont Street, Duxbury, MA 02332 Telephone: 781-934-1100 x5401 Fax: 781-934-9011

Chapter 21E says that anyone who discharges, or threatens to release, any "hazardous material" into any of the "waters of the Commonwealth" is liable to both the Commonwealth and any person damaged by the release or threat.

The second reason is the antidegradation provisions of DEP's own regulations (314 CMR 4) and the Implementation Procedures for the Antidegradation Provisions of the Surface Water Quality Standards. 314 CMR 4.00.

These antidegradation regulations prohibit granting Holtec's requested permit. One regulation prohibits Holtec's discharge unless the department finds the new discharge would be insignificant, and Holtec demonstrates "that the discharge is necessary to accommodate important economic or social development in the [Cape Cod Bay] area." The illegal dumping of 1.1 million gallons of radioactive and chemically contaminated water is not "insignificant." Neither is Holtec's planned discharge necessary – for any reason. Holtec has other NRC-approved ways to dispose of its water; and dumping it into Cape Cod Bay accommodates nothing but Holtec's profit.

The other regulation requires DEP to determine that the discharge is "for the express purpose and intent of maintaining or enhancing" Cape Cod Bay. Holtec's "express purpose and intent" is to save money; it clearly is not to either maintain or enhance Cape Cod Bay.

In addition to denying Holtec's application on the basis of the Ocean Sanctuaries Act, DEP's final determination should deny Holtec's application for these other reasons also.

Thank you for your time and consideration in this matter. We look forward to your early response.

Respectfully,

DUXBURY SELECTBOARD

Dear Commissioner Heiple,

I strongly agree with DEP's draft determination to deny Holtec International's permit application to discharge wastewater from Pilgrim Nuclear Power Station into Cape Cod Bay. DEP's permit denial correctly interprets the Ocean Sanctuaries Act, which explicitly states that discharges such as the one pursued by Holtec are prohibited under state law. I urge DEP to move forward in finalizing its draft decision based on state law requirements and issue a permit denial to Holtec that prevents Pilgrim's wastewater from being released into the Cape Cod Bay Ocean Sanctuary.

Thank you,

Noah Drake

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

To the Massachusetts Department of Environmental Protection

As a resident of Mashpee on Cape Cod, I just want to take this opportunity to thank the DEP for your recent decision in support of the 1971 state law that prohibits dumping or discharging industrial wastes into Massachusetts waters. I was happy to hear of DEP's decision some weeks ago but did not realize until reading an article in this past Friday's Mashpee Enterprise, that the decision is not yet final. Since I strongly oppose the possible dumping of radioactive wastewater into Cape Cod Bay, I feel compelled as an ordinary citizen to speak out in opposition to Holtec's plan. We all know that radioactive waste is harmful to humans as well as to marine life. Shouldn't it be our first priority to safeguard and protect our waterways from further pollution?

With every hope that there will be no dumping of radioactive wastewater into Cape Cod Bay,

Sincerely,

Ilse Fersing

Dear Ms. Coniaris:

I am writing to support the tentative determination by the Massachusetts Department of Environmental Protection (MassDEP) to deny Holtec's application for a modified Surface Water Discharge Permit that would allow Holtec to discharge radioactive and chemically contaminated wastewater into Cape Cod Bay.

Please use your power to protect our water. I have seen first hand what pollution does to the shore along the gulf coast of Florida. The Red Tide that was once considered a benign substance is now getting a closer look as an insidious toxin. It affects everyone's breathing. Dumping from the sugar industry/factories into Lake Okeechobee and the release from there has greatly effected the shoreline. Take a moment to Google Lake O. and the sugar industry. There are plenty of articles, and Lake O. is the most polluted Lake in a state that boasts the most polluted lakes in the country.

I can remember having to leave the beach because I could not control the coughing, sneezing and watery eyes that resulted from just a short visit in 2010. It's much worse now. Ralph Nader said, You cannot ask the corporations to do something, you have to tell them. You have a huge responsibility in making this decision but it is time for our leaders to stop allowing this kind of irresponsible dumping. I can imaging that what Holtec wants to do will have a much worse effect.

I hope you will do the right thing. The way we treat our natural resources determines how they will treat us in return. We are witnessing evidence of that now.

MassDEP's tentative determination that the requested discharge is prohibited by the Massachusetts Ocean Sanctuaries Act is entirely correct. That act prohibits the "dumping or discharge or commercial, municipal,

domestic or industrial waste” into an Ocean Sanctuary. Cape Cod, Plymouth, Kingston, and Duxbury Bays are all protected ocean sanctuaries under this act, making Holtec's dumping plan illegal.

Because Holtec's proposed discharge is illegal, the Department's final determination should deny its application. Thank you for enforcing the law to protect our ocean sanctuaries.

Att: Ms. Cathy Coniaris

Please register my strong objection to Holtec's plan to release contaminated and radioactive water into Cape Cod Bay. This may "take care of the problem" and is quicker than waiting 10,000 years but it represents an unnecessary health hazard to all of us who care deeply about the state of the ocean. Why gamble with such a vast resource as the sea? The issue appears to be the same halfway around the world with the proposed dumping of Fukushima's radioactive water. I object to that as well. Please do not allow this action in the name of expediency. It sets a terrible example.

Re: Pilgrim Nuclear Power Station – DEP's Tentative Determination to Deny Holtec's Application for a Modified Permit .

Dear Ms. Coniaris:

I am writing to support DEP's tentative decision to deny Holtec's application for a modified Surface Water Discharge Permit to discharge 1.1 million gallons of radioactive and chemically contaminated wastewater into Cape Cod Bay.

DEP's tentative determination that the state's Ocean Sanctuaries Act prohibits this discharge is correct:

- **The Massachusetts Ocean Sanctuaries Act** prohibits the "dumping or discharge or commercial, municipal, domestic or industrial waste" into an Ocean Sanctuary. Cape Cod, Plymouth, Kingston, and Duxbury Bays are all protected ocean sanctuaries.

In addition:

- **The Massachusetts Endangered Species Act** prohibits altering the habitat of any endangered or threatened species, including the right whale, roseate tern, least tern, and loggerhead turtle that inhabit Cape Cod Bay. The discharge of waste, wastewater, toxic, or hazardous materials is considered alteration of habitat.
- **The DEP's regulations also include antidegradation provisions** that prohibit Holtec's discharge:
 - *unless the discharge would be insignificant.* The discharge of 1.1 million gallons of contaminated water is in no way 'insignificant.'

- *unless the “discharge is necessary to accommodate important economic or social development in the [Cape Cod Bay] area” or ‘for the express purpose and intent of maintaining or enhancing” Cape Cod Bay.* This discharge will not enhance but only harm the beautiful coastal waters that we love and that drive our local economy through tourism, fishing, and recreation.

Holtec’s proposed discharge is illegal. The department’s final determination should deny the application.

Thank you.

Dear Ms. Coniaris:

I am writing to support DEP's tentative decision to deny Holtec's application for a modified Surface Water Discharge Permit to discharge 1.1 million gallons of radioactive and chemically contaminated wastewater into Cape Cod Bay.

DEP's tentative determination that the state's Ocean Sanctuaries Act prohibits this discharge is correct:

- **The Massachusetts Ocean Sanctuaries Act** prohibits the "dumping or discharge or commercial, municipal, domestic or industrial waste" into an Ocean Sanctuary. Cape Cod, Plymouth, Kingston, and Duxbury Bays are all protected ocean sanctuaries.

In addition:

- **The Massachusetts Endangered Species Act** prohibits altering the habitat of any endangered or threatened species, including the right whale, roseate tern, least tern, and loggerhead turtle that inhabit Cape Cod Bay. The discharge of waste, wastewater, toxic, or hazardous materials is considered alteration of habitat.
- **The DEP's regulations also include antidegradation provisions** that prohibit Holtec's discharge:
 - *unless the discharge would be insignificant.* The discharge of 1.1 million gallons of contaminated water is in no way 'insignificant.'
 - *unless the "discharge is necessary to accommodate important economic or social development in the [Cape Cod Bay] area" or "for the express purpose and intent of maintaining or enhancing" Cape Cod Bay.* This discharge will not enhance but only harm the beautiful coastal waters that we love and that drive our local economy through tourism, fishing, and recreation.

Holtec's proposed discharge is illegal. The department's final determination should deny the application.

Thank you.

Peter Agoos

Re: Pilgrim Nuclear Power Station

Dear Ms. Coniaris:

I am writing to support the tentative determination by the Massachusetts Department of Environmental Protection (MassDEP) to deny Holtec's application for a modified Surface Water Discharge Permit that would allow it to discharge radioactive and chemically contaminated wastewater into Cape Cod Bay.

MassDEP's tentative determination that the requested discharge is prohibited by the Massachusetts Ocean Sanctuaries Act is entirely correct. That act prohibits the "dumping or discharge or commercial, municipal, domestic or industrial waste" into an Ocean Sanctuary. Cape Cod, Plymouth, Kingston, and Duxbury Bays are all protected ocean sanctuaries under the act. The proposed discharge is therefore illegal.

Holtec's proposed discharge is illegal. The Department's final determination should deny its application.

Thank you,

It is more than ironic that Holtec is seeking permission to dump its toxic waste into MA waters, with Japan wanting to do the same thing with their waste water from the Fukushima disaster.

From what I have read, Scandinavian countries have solved the problem of radioactive waste water without polluting their waters.

For Holtec to be permitted to do this will also encourage other countries to use the same method - using the oceans as a garbage dump.

Do not allow Holtec to modify any plan in order to permit this poisoning of the waters around Massachusetts.

Dear Ms. Coniaris:

The Plymouth Board of Health is writing to you to express our strong support for the tentative decision by the Massachusetts Department of Environmental Protection (MASS DEP) to deny Holtec's application for a modified Surface Water Discharge Permit that would allow it to release radioactive and chemically contaminated wastewater into Cape Cod Bay. The Plymouth Board of Health voted unanimously to support the DEP's tentative decision on August 9, 2023.

As the Board of Health is charged with protecting the health and welfare of Plymouth's residents, we have found that any such release would likely have a potentially significant negative impact not only upon our economy and environment, but also on the health of both our residents and visitors. Radioactive Tritium can not be easily removed from the water, can become bound to sediments in the Bay, incorporated into phytoplankton, and enter the food chain. Both pregnant women and children would be especially susceptible to mutational damage caused by any internalized, organically bound isotope resulting in increases in cancer rates, developmental abnormalities, and miscarriages. On March 29, 2023, the Plymouth Board of Health sponsored a public forum on this topic which can be viewed at: <https://archive.org/details/g-ply-boh-032923>.

Not only is the proposed release illegal under the Massachusetts Ocean Sanctuaries Act, but the contaminated water could also harm the marine life of numerous species and will likely evaporate into the atmosphere from the rapidly warming ocean, eventually returning to the groundwater and water supplies in the form of fog and rainfall.

We certainly hope that the tentative determination by the DEP will be finalized as soon as possible.

Thank you,

Dear Commissioner Heiple,

I strongly agree with DEP's draft determination to deny Holtec International's permit application to discharge wastewater from Pilgrim Nuclear Power Station into Cape Cod Bay. DEP's permit denial correctly interprets the Ocean Sanctuaries Act, which explicitly states that discharges such as the one pursued by Holtec are prohibited under state law. I urge DEP to move forward in finalizing its draft decision based on state law requirements and issue a permit denial to Holtec that prevents Pilgrim's wastewater from being released into the Cape Cod Bay Ocean Sanctuary.

Thank you,

Greetings,

Given the current discussion regarding the declining state of our planet , there is absolutely no argument Holtec can conjure to justify dumping the waste in Cape Cod Bay. Our beautiful bay is already suffering , the dead zones being an example. Commerce, recreation, fishing , runoff from the coast are sufficient to have created this. Remedies may eventually be employed. But Holtec's waste would never be abated. It's unconscionable that this was or is being considered.

Sincerely from South Yarmouth, MA,

Victoria Milne

It is insane to be reading the line about Holtec's application for modified Surface Water Discharge Permit that "would allow it to **discharge radioactive and chemically contaminated WASTEWATER** into Cape Cod Bay".

Massachusetts is smarter than this. It is WASTEWATER, how is that not enough to end Holtec's plan immediately? What they want to do is illegal and it will affect wildlife and people and the economy for years to come. This would be criminal if allowed to happen, we are smarter than this and have to be the positive example in this situation.

Please do something to stop holtec and their plan to discharge once again; RADIOACTIVE WASTEWATER, into plymouth bay. Disgusting and criminal.

Thank you!

Re: Pilgrim Nuclear Power Station – DEP's Tentative Determination to Deny Holtec's Application for a Modified Permit .

Dear Ms. Coniaris:

I am writing to support DEP's tentative decision to deny Holtec's application for a modified Surface Water Discharge Permit to discharge 1.1 million gallons of radioactive and chemically contaminated wastewater into Cape Cod Bay.

DEP's tentative determination that the state's Ocean Sanctuaries Act prohibits this discharge is correct:

- **The Massachusetts Ocean Sanctuaries Act** prohibits the "dumping or discharge or commercial, municipal, domestic or industrial waste" into an Ocean Sanctuary. Cape Cod, Plymouth, Kingston, and Duxbury Bays are all protected ocean sanctuaries.

In addition:

- **The Massachusetts Endangered Species Act** prohibits altering the habitat of any endangered or threatened species, including the right whale, roseate tern, least tern, and loggerhead turtle that inhabit Cape Cod Bay. The discharge of waste, wastewater, toxic, or hazardous materials is considered alteration of habitat.
- **The DEP's regulations also include antidegradation provisions** that prohibit Holtec's discharge:
 - *unless the discharge would be insignificant.* The discharge of 1.1 million gallons of contaminated water is in no way 'insignificant.'
 - *unless the "discharge is necessary to accommodate important economic or social development in the [Cape Cod Bay] area" or "for the express purpose and intent of maintaining or enhancing" Cape Cod Bay.* This discharge will not enhance but only harm the beautiful coastal waters that we love and that drive our local economy through tourism, fishing, and recreation.

Holtec's proposed discharge is illegal. The department's final determination should deny the application.

Thank you.

We shouldn't let big companies like Holtec to dump polluted water into Cape Cod Bay and destroy the beautiful environment that is so important to the ecosystem of our area! Doing this would put our local area at risk to impact everything from the whales, the seals, the fish and the seaweed. Each one of these things alone, if they are impacted, would also impact the rest of the ecosystem. It is already so fragile that we cannot take a chance that chemicals will not be detrimental and cause everything to collapse as far as the natural conditions of Cape Cod Bay. I encourage you to strongly prevent this from happening.

To: Mass DEP,

I am a concerned resident of Plymouth ma. I heard that the Plymouth Nuclear Power Plant Co. Is going to release Radioactive waste into the water or air. I am very concerned and also my neighbors about our environment I have 4 children and 9 Grand children

That live in Plymouth mass. Why are they going to do this or even thinking of it can't they find another way of storing it or disposing it. I am really worried for the children. And worried about our environment and the health of the population. Our food source we already have to limit fish and shell fish because of pollution. As a Business owner in Plymouth for 40 years and have lived in Plymouth for 58 years. I knew a few men that worked at the Power Plant.

And they all died just before retirement of cancer.

Thank you,

Candyce McEnroe

Re: Pilgrim Nuclear Power Station – DEP’s Tentative Determination to
Deny Holtec’s Application for a Modified Permit .

Dear Ms. Coniaris:

UU Mass Action is a state-wide spirit-based non-profit organizing
Unitarian Universalists for justice and love.

I am writing to support DEP’s tentative decision to deny Holtec’s
application for a modified Surface Water Discharge Permit that would
allow it to discharge radioactive and chemically contaminated wastewater
into Cape Cod Bay.

DEP’s tentative determination that requested discharge is
prohibited by the Massachusetts Ocean Sanctuaries Act is entirely correct.
That act prohibits the “dumping or discharge or commercial, municipal,
domestic or industrial waste” into an Ocean Sanctuary. Cape Cod,
Plymouth, Kingston, and Duxbury Bays are all protected ocean
sanctuaries.

DEP should also deny Holtec’s requested permit for at least two
other reasons.

The first is that the Massachusetts Endangered Species Act
prohibits altering the habitat of any endangered or threatened species,
including the right whale, roseate tern, least tern, and loggerhead turtle
that live in and along the shores of Cape Cod Bay. Massachusetts state
regulations are explicit: the discharge of waste, wastewater, toxic or
hazardous materials shall always be considered alterations of habitat.

The second is the antidegradation provisions of DEP’s own
regulations.

One prohibits Holtec’s discharge unless the discharge would be
insignificant and Holtec demonstrates “that the discharge is necessary to
accommodate important economic or social development in the [Cape Cod
Bay] area.” The discharge of 1.1 million gallons of radioactive and
chemically contaminated water that, harms the economy, ecology,

recreational/ascetic interests is not “insignificant.” Holtec’s planned discharge is not necessary – for any reason. Holtec has other options. Increasing Holtec’s profit is not an important economic or social development.

The other regulation requires DEP to determine that the discharge is “for the express purpose and intent of maintaining or enhancing” Cape Cod Bay; something Holtec’s planned discharge plainly will not do.

DEP’s final determination should deny Holtec’s application for all of these reasons.

Thank you,

Claire Karl B.W. Miller
Movement Building Director

UU Mass Action

To:MassDEP NPDES (DEP) <MassDEP.NPDES@mass.gov>

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Dear DEP Representative Cathy Coniaris,

As a local real estate professional, I am writing to urge you to uphold your initial denial of Holtec's request to modify their wastewater discharge permit.

The Ocean Sanctuaries Act was designed to protect our coastal environments and their natural beauty - factors that directly impact property values and the real estate market here. We have already seen concerning declines in demand that we believe are tied to the ongoing decommissioning activities. Granting this permit modification could worsen the situation.

I ask that you stand firm in your original determination to prohibit the discharge of pollutants into Cape Cod Bay. The DEP has an important role to play in restoring consumer confidence by enforcing environmental protections that preserve our coastline and waterways.

Please do not allow the proposed permit changes. We are relying on you to safeguard our region's environment and real estate market.

Thank you for your consideration.

Sincerely,

Maria Giovanni [REDACTED]

Deny a permit to
Holtec to dump!!

Watch out that the EPA does not yield to the power of wealth, bribes, and profit motives of Holtec.

As a public health expert and full-time resident on Cape Cod I insist upon the enforcement of The Ocean Sanctuaries Act and Fed. EPA regulations to protect the health of our citizens from industrial wastewater of the Pilgrim plant —the impact of which has been insufficiently studied!!!

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Dear Commissioner Heiple,

I strongly agree with DEP's draft determination to deny Holtec International's permit application to discharge wastewater from Pilgrim Nuclear Power Station into Cape Cod Bay. DEP's permit denial correctly interprets the Ocean Sanctuaries Act, which explicitly states that discharges such as the one pursued by Holtec are prohibited under state law. I URGE DEP to issue a permit denial to Holtec that prevents Pilgrim's wastewater from being released into the Cape Cod Bay Ocean Sanctuary. Our Cape waters and the sea life within deserve more respect than to intentionally pollute them with nuclear-tainted wastewater, don't they?

Thank you for your attention to this very important issue.

Re: Pilgrim Nuclear Power Station – DEP's Tentative Determination to Deny Holtec's Application for a Modified Permit .

Dear Ms. Coniaris:

I am writing to support DEP's tentative decision to deny Holtec's application for a modified Surface Water Discharge Permit to discharge 1.1 million gallons of radioactive and chemically contaminated wastewater into Cape Cod Bay.

DEP's tentative determination that the state's Ocean Sanctuaries Act prohibits this discharge is correct:

- **The Massachusetts Ocean Sanctuaries Act** prohibits the "dumping or discharge or commercial, municipal, domestic or industrial waste" into an Ocean Sanctuary. Cape Cod, Plymouth, Kingston, and Duxbury Bays are all protected ocean sanctuaries.

In addition:

- **The Massachusetts Endangered Species Act** prohibits altering the habitat of any endangered or threatened species, including the right whale, roseate tern, least tern, and loggerhead turtle that inhabit Cape Cod Bay. The discharge of waste, wastewater, toxic, or hazardous materials is considered alteration of habitat.
- **The DEP's regulations also include antidegradation provisions** that prohibit Holtec's discharge:
 - *unless the discharge would be insignificant.* The discharge of 1.1 million gallons of contaminated water is in no way 'insignificant.'
 - *unless the "discharge is necessary to accommodate important economic or social development in the [Cape Cod Bay] area" or "for the express purpose and intent of maintaining or enhancing" Cape Cod Bay.* This discharge will not enhance but only harm the beautiful coastal waters that we love and that drive our local economy through tourism, fishing, and recreation.

Holtec's proposed discharge is illegal. The department's final determination should deny the application.

Thank you.

Nancy E. Rufo

DEP's Determination to Deny Holtec's Application for Modified Permit

MaryBeth Sorgi [REDACTED]

Wed 8/23/2023 3:38 PM

To: MassDEP NPDES (DEP) <MassDEP.NPDES@mass.gov>

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Dear DEP Representative Cathy Coniaris,

As a local real estate professional, I am writing to urge you to uphold your initial denial of Holtec's request to modify its wastewater discharge permit.

The Ocean Sanctuaries Act was designed to protect our coastal environments and their natural beauty - factors that directly impact property values and the strength of the real estate market. As real estate professionals, we have already seen concerning declines in demand that we believe are tied to the ongoing decommissioning activities. Granting this permit modification could worsen the situation.

I ask that you stand firm in your original determination to prohibit the discharge of pollutants into Cape Cod Bay. The DEP has an important role to play in restoring consumer confidence by enforcing environmental protections that preserve our coastline and waterways.

Please do not allow the proposed permit changes. We are relying on you to safeguard our region's environment and real estate market.

Thank you for your consideration.

Sincerely,

MaryBeth Sorgi

Massdep.npdes@mass.gov

Re: Pilgrim Nuclear Power Station

Dear Ms. Coniaris:

I unequivocally support the present temporary, and a final, determination by the Massachusetts Department of Environmental Protection (MassDEP) to deny Holtec's application for a modified Surface Water Discharge Permit that would allow it to discharge radioactive and chemically contaminated wastewater into Cape Cod Bay.

MassDEP's tentative determination that the requested discharge is prohibited by the Massachusetts Ocean Sanctuaries Act is entirely correct. That act prohibits the "dumping or discharge or commercial, municipal, domestic or industrial waste" into an Ocean Sanctuary. Cape Cod, Plymouth, Kingston, and Duxbury Bays are all protected ocean sanctuaries under the act. The proposed discharge is therefore illegal.

Allowing such a discharge will jeopardize thousands of people presently living and working on the South Shore, impact future generations, and terminate the bay's robust oyster farming industry, which took decades to build and has a well-respected reputation, shipping mollusks as far away as Florida.

Recently, beaches from the North Shore to greater Boston were closed due to bacteria contamination. This contamination stemmed from the recent heavy rains overflowing drainage systems thereby allowing effluent to leak into our coastal waters. This problem occurred despite the use of sewage treatment plants and Title-V systems. Therefore, it is illogical that any voluntary discharging of radioactive or chemically contaminated waste into local waters is acceptable. This action lacks any facet of common sense, when considering beaches were closed for far less.

Holtec can process the contaminated water via legal and approved storage methods but refuses to do so based upon ease and cost of the dumping. The only thing dumping the contaminated water into the bay will do is "dilute" their legal responsibility because the heavy metals and other radioactive elements of the proposed dumping will settle to the bottom and remain for generations. Comparably, contaminates

were discovered when excavating the Ted Williams Tunnel in Boston Harbor in 1991 from foundries dating back centuries ago.

Additionally, for most of the summer, Duxbury Beach was closed to protect the piping plover population. Yet, you are openly considering allowing thousands of South Shore residents to face irrefutable harm should Holtec be allowed to dump contaminated waste. It is unconscionable that you consider a bird's safety above the Commonwealth's residents.

Holtec's initial application should have been permanently denied upon its submission, thereby forcing Holtec to find a proper solution. The Commonwealth's continued consideration of the application for a modified Permit is giving Holtec false hope, while threatening and potentially harming the people who live and work on the South Shore. Instead of offering false hope, the Commonwealth should have provided Holtec with a solution, i.e. a negotiated disposal plan at an approved Federally licensed storage facility. The Department's determination should deny Holtec's application ad infinitum, as its proposed discharge is illegal and dangerous.

Sincerely,

MAC

I am extremely disturbed and angry to see that despite Maura Healy's public statement regarding the final decision by her administration to not allow toxic waste to be dumped into our ocean , that there is still yet another public meeting to go through this again. Holtec is not concerned about the decision against their dumping or now, venting it out through the smoke stacks. What is going on. Why is the government that is supposed to be protecting us from toxic and irrevocable poisoning letting this drag on. Doesn't the mass epa, etc have any power over such things. Holtec was hired by someone in the government, who? Where is the accountability? Do we have to live in fear of their power, greed and unrelenting sleazy tactics until they finally grease the right palm? Do our politicians have to have a disaster happen right in front of their noses to get serious and end this deadly game? I have absolutely no faith in our government in this state or this country and it makes me sick. Who is going to stand up for the precious environment that is left.

Dear Massachusetts Department of Environmental Protection,

I am a lifelong Massachusetts resident, who has spent a great deal of time on Cape Cod and the South Shore. I was horrified to hear of Holtec's application for a permit to dump 1.1 million gallons of radioactive wastewater in Cape Cod Bay. It has long been established that the Bay is a critical ecological resource on which marine and human life depends, and since 1970, it has been a designated State Ocean Sanctuary in 1970. This designation was intended to protect the Bay from exploitation, development, and other activities that would endanger its ecology.

The Cape Cod Bay beaches, wetlands and offshore waters support biodiverse plant and animal communities. These include commercially-significant species of fish and shellfish, along with numerous marine mammals, sea turtles and birds, several of which are already threatened or endangered. The Bay is a feeding ground for the North Atlantic right whale, which is critically endangered, and perhaps on the brink of extinction, with fewer than 340 remaining worldwide. The endangered Humpback whales migrate to Cape Cod Bay and its surrounding waters annually to feed, while other imperiled whales venture into the Cape's deeper waters.

Numerous snails, mussels and crustaceans are endangered, threatened, or considered to be of special concern in our state. Among Massachusetts shore and seafaring birds, the Saltmarsh Sparrow, Arctic Tern and Upland Sandpiper whose populations are already in decline.

A great deal of effort now goes into preservation of coastal resources, including those aimed at remediating seawater pollution. Such efforts, including the Wellfleet Oyster Reef Restoration, would be jeopardized by the radioactive wastewater discharge. Critical research conducted by National Oceanic and Atmospheric Administration, the Woods Hole Oceanographic Institution and the Marine Biological Laboratory are just a few of the globally-significant activities that stand to be harmed by the release of radioactive wastewater.

I implore you to deny Holtec's permit application.

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Dear MassDEP,

I am writing as a Massachusetts resident and as a primary care physician to oppose the permitting of the dumping of radioactive waste into the Cape Cod Bay by Holtec from the former Pilgrim Nuclear Power Station. The devastation that would be experienced by our shores and our residents would be immense.

The tritiated hydrogen present in the waste water is concentrated in the bodies of mussels and benthic fish by a factor of 1000. This would devastate the fisheries industry. The radioactivity would also be widespread as tritiated hydrogen is readily incorporated into water and can be absorbed by plants and swimmers alike. The radioactivity would significantly increase the burden of cancer of coastal Massachusetts residents and badly damage our tourist industry. Holtec should not be given license to destroy our coast and our seas with its dangerous toxins. The company needs to be held accountable and to contain the nuclear waste and other pollutants it was contracted to safeguard and not release it into the environment. There is no excuse for any other action.

Sincerely,

Susan Racine, MD

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

I fully support the state Department of Environmental Protection (DEP) draft decision to deny Holtec-Pilgrim's permit application to discharge radioactive and chemically contaminated water into Cape Cod Bay. This tentative denial is correctly based on the DEP legal determination that discharge by industrial sites such as Pilgrim is definitely prohibited by the state Ocean Sanctuaries Act. Holtec must comply with state laws. I urge you to fully deny the permit to uphold state regulations so our Ocean Sanctuaries in Plymouth, Duxbury, Kingston, and Cape Cod Bay remain protected.

Dear Ms. Coniaris,

I am writing to support the tentative determination by the Massachusetts Department of Environmental Protection (MassDEP) to deny Holtec's application for a modified Surface Water Discharge Permit that would allow it to discharge radioactive and chemically contaminated wastewater into Cape Cod Bay.

MassDEP's tentative determination that the requested discharge is prohibited by the Massachusetts Ocean Sanctuaries Act is entirely correct. That act prohibits the "dumping or discharge or commercial, municipal, domestic or industrial waste" into an Ocean Sanctuary. Cape Cod, Plymouth, Kingston, and Duxbury Bays are all protected ocean sanctuaries under the act. The proposed discharge is therefore illegal.

Holtec's proposed discharge is illegal. The Department's final determination should deny its application.

Thank you,
Andrew Gordon

Re: Pilgrim Nuclear Power Station – DEP's Tentative Determination to Deny Holtec's Application for a Modified Permit .

Dear Ms. Coniaris:

I am writing to support DEP's tentative decision to deny Holtec's application for a modified Surface Water Discharge Permit to discharge 1.1 million gallons of radioactive and chemically contaminated wastewater into Cape Cod Bay.

DEP's tentative determination that the state's Ocean Sanctuaries Act prohibits this discharge is correct:

- **The Massachusetts Ocean Sanctuaries Act** prohibits the "dumping or discharge or commercial, municipal, domestic or industrial waste" into an Ocean Sanctuary. Cape Cod, Plymouth, Kingston, and Duxbury Bays are all protected ocean sanctuaries.

In addition:

- **The Massachusetts Endangered Species Act** prohibits altering the habitat of any endangered or threatened species, including the right whale, roseate tern, least tern, and loggerhead turtle that inhabit Cape Cod Bay. The discharge of waste, wastewater, toxic, or hazardous materials is considered alteration of habitat.
- **The DEP's regulations also include antidegradation provisions** that prohibit Holtec's discharge:
 - *unless the discharge would be insignificant.* The discharge of 1.1 million gallons of contaminated water is in no way 'insignificant.'
 - *unless the "discharge is necessary to accommodate important economic or social development in the [Cape Cod Bay] area" or "for the express purpose and intent of maintaining or enhancing" Cape Cod Bay.* This discharge will not

enhance but only harm the beautiful coastal waters that we love and that drive our local economy through tourism, fishing, and recreation.

Holtec's proposed discharge is illegal. The department's final determination should deny the application.

Thank you.

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Dear Commissioner Heiple,

This note urges you to deny Holtec International's permit application to discharge over one million gallons of radioactive wastewater from Pilgrim Nuclear Power Station into Cape Cod Bay. DEP's permit denial correctly interprets the Ocean Sanctuaries Act, which explicitly states that discharges such as the one pursued by Holtec are prohibited under state law. Cape Cod bay is too important a natural resource to subject to this danger. I urge DEP to move forward in finalizing its draft decision based on state law requirements and issue a permit denial to Holtec that prevents Pilgrim's wastewater from being released into the Cape Cod Bay Ocean Sanctuary.

Thank you,

Marcie Tyre

Pilgrim Nuclear Power Station - DEP's Tentative Determination to Deny Holtec's Application for a Modified Permit

Ryan [REDACTED]

Thu 8/24/2023 5:04 PM

To: MassDEP NPDES (DEP) <MassDEP.NPDES@mass.gov>

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Dear Ms. Coniaris:

I am writing to support the tentative decision by the Massachusetts Department of Environmental Protection (MassDEP) to deny Holtec's application for a modified Surface Water Discharge Permit that would allow it to discharge radioactive and chemically contaminated wastewater into Cape Cod Bay.

MassDEP's tentative determination that requested discharge is prohibited by the Massachusetts Ocean Sanctuaries Act is entirely correct. That act prohibits the "dumping or discharge or commercial, municipal, domestic or industrial waste" into an Ocean Sanctuary. Cape Cod, Plymouth, Kingston, and Duxbury Bays are all protected ocean sanctuaries." The proposed discharge is therefore illegal.

Because the proposed discharge is illegal, the Department's final determination should deny Holtec's application.

I'd like to add to this letter and say not only is this illegal it is highly unethical. How can you possibly consider letting them do this. The Cape Cod Bay and the neighboring areas are highly sensitive. The shell fishing along the Cape is world renowned, can you image the damage to the resource areas and to the industry if this were to happen? The neighboring Barnstable bay is considered to an ACEC. The majority of the bay is NhESP Priority habitat for many endangered or threatened mammals, shore birds and fish. I work frequently with the DEP in my job and have the utmost respect for them and their mission to protect our Wetlands and Waterways. I would be a hired if this were to be allowed under your watch.

Bonnie Heiple, Commissioner
Department of Environmental Protection
100 Cambridge Street
Boston, MA 02114

Dear Commissioner Heiple:

RE: Proposed modification of Permit No. MA0003557 – Holtec Decommissioning International LLC

I write to support the decision by the Department to deny Holtec Decommissioning International's (HDI) request to modify its Surface Water Discharge permit to allow for the discharge of 1.1 million gallons of industrial waste into Cape Cod Bay. I urge the Department to affirm this Tentative Determination and to issue a Final Determination that closes out the possibility that HDI will move forward with this rash, misguided proposal.

Since the day several years ago that my office learned that Holtec intended to dump this contaminated water into Cape Cod Bay, despite its public statements that it was open to all options, I have worked with my partners in the federal and state delegations, environmental activists and concerned citizens to oppose this scheme. We have recognized the threats that HDI's plan posed to our local natural resources, to our fishing and tourism industries, and to the health and safety of our residents. The Tentative Determination announced by DEP last month recognizes these dangers and correctly adheres to the regulatory framework set out by the Ocean Sanctuaries Act.

The Tentative Determination includes a clear analysis of the Ocean Sanctuaries Act and how it applies to the proposed modification. The water subject to this proposed modification is not the product of electrical power generation; nor does it qualify for any other exemptions mentioned in Section 16 of the Ocean Sanctuaries Act. Therefore, I urge the Department to uphold this preliminary decision and issue a Final Determination prohibiting HDI from discharging this wastewater into Cape Cod Bay or other protected waters. Thank you for your consideration of this letter.

Sincerely,

William R. Keating
Member of Congress

Re: Pilgrim Nuclear Power Station

Dear Ms. Coniaris:

I am writing to support the tentative determination by the Massachusetts Department of Environmental Protection (MassDEP) to deny Holtec's application for a modified Surface Water Discharge Permit that would allow it to discharge radioactive and chemically contaminated wastewater into Cape Cod Bay.

MassDEP's tentative determination that the requested discharge is prohibited by the Massachusetts Ocean Sanctuaries Act is entirely correct. That act prohibits the "dumping or discharge or commercial, municipal, domestic or industrial waste" into an Ocean Sanctuary. Cape Cod, Plymouth, Kingston, and Duxbury Bays are all protected ocean sanctuaries under the act. The proposed discharge is therefore illegal.

Japan has started releasing the same radioactive water from their disabled Fukushima nuclear plant into the ocean (a process expected to take decades). Immediately, China called this action 'extremely selfish' and has banned imports of Japan's seafood. This is not what we want for our Cape seafood, the waters it all flourishes in and the beaches on which our children play.

Holtec's proposed discharge is illegal. The Department's final determination should deny its application.

Thank you,

Adele and Ken Gillis

Thu 8/24/2023 5:53 PM

To: MassDEP NPDES (DEP) <MassDEP.NPDES@mass.gov>

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

I agree with MassDEP's Tentative Determination to Deny the permit sought by Holtec to allow it to dump water from the Pilgrim Nuclear Power Station into Cape Cod Bay and surrounding waters.

As a resident of a nearby town bordering Kingston Bay and Cape Cod Bay, My family and I use these waters recreationally for swimming, and we eat fish and shellfish from Kingston Bay. We would be directly impacted by exposure to radioactive materials, and I think it is unconscionable that the Holtec's management is even pursuing this license. Holtec has publicly acknowledged that it has other more costly alternatives to removing the wastewater. Their desire to dump water into our public waters is borne solely of a financial motivation to shift these costs to the public, irreparably damaging the waters we depend on and harming the public. This is exactly the type of harm that the Clean Water Act and Ocean Sanctuary Acts are meant to protect the public from.

I believe MassDEP is correct in its assessment that the impacted water is within Cape Cod Ocean Sanctuary and would impact the waters and Massachusetts countless residents and visitors who use it or who consume shellfish from it. The Tentative Determination to Deny should be made final, as the request cannot be justified in accordance with the Massachusetts Clean Water Act.

Given the commentary from medical experts on the dangers of releasing radioactive contaminants into public waterways, I wonder if Holtec has made misrepresentations in its filings. Thus, I also encourage MassDEP to carefully evaluate Holtec's filings to determine if any misrepresentations have been made that warrant a criminal referral.

Thank you,
Garry Boyle

Public comment on Holtec disposal of Pilgrim low-level radioactive waste water

Mike Beckerle [REDACTED]

Thu 8/24/2023 8:55 PM

To: MassDEP NPDES (DEP) <MassDEP.NPDES@mass.gov>

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

To whom it may concern,

I live on Cape Cod.

People seem to be lining up to try to block sensible disposal of low-level radioactive waste water in the ocean.

I am NOT in the camp of blocking/preventing progress here. A few million gallons of this waste water is a non-issue.

I am in favor of them disposing of it in the Cape Cod bay soon, as it will be rapidly diluted to background radiation levels in the ocean.

It is important to get this waste water off the land before it spills or something, because on-land it doesn't dilute rapidly to background levels. Rather it concentrates in the topsoil.

I view all the opposition to this specific wastewater disposal as an overreaction by people who simply do not have the skills or abilities to understand the huge dilution, the threat of this amount of radiation, etc.

We have many far greater priorities environmentally that are urgent and they should demand our attention far more than this near-meaningless amount of low-level radioactive waste water.

Thank you for your attention.

Michael Beckerle
Falmouth, MA

MANOMET VILLAGE STEERING COMMITTEE

Town of Plymouth
26 Court Street
Plymouth, Massachusetts 02360
(508) 747 - 1620 ext. 10147

Thursday, August 24, 2023

Greetings:

At the August 24, 2023, meeting of the Manomet Village Steering Committee, members voted unanimously to draft this letter in supporting the Massachusetts Department of Environmental Protection's tentative determination to deny Holtec International's application to modify their permit to discharge pollutants to surface water into Cape Cod Bay from the former Pilgrim Nuclear Power Station. As an ocean-centered village and the host to the power plant for four decades, members of the community and the steering committee are concerned over the detrimental impact releasing over one-million gallons of contaminated water would have on the region.

We oppose Holtec's proposed plan to dump in our bay for health reasons. Dumping the wastewater would expose residents and visitors to our region to damaging radioactive isotopes, including cesium-137, strontium-90, cobalt- 60, tritium, and plutonium. These chemical compounds have been linked to cancer, and prolonged exposure, inhalation, or ingestion is ill advised.

Moreover, we oppose dumping on environmental and economic principles. Cape Cod Bay is a pristine natural resource. It is the home to thousands of species, notably including bluefin tuna, striped bass, flounder, Atlantic mackerel, scores of shellfish, North Atlantic right whales, humpback whales, harbor seals, grey seals, roseate terns, and piping plover. Many of these species are endangered. Others are commercially harvested, serving as an essential component of the local economy. A disruption in migration, feeding, and birthing patterns for any of these species would devastate the ecosystem and cause joblessness for those who depend on the fishing industry.

Finally, we oppose dumping in our bay due to the irreparable harm that will be inflicted on our community's public image. Plymouth, as with many other communities situated on Cape Cod Bay, is indelibly connected to the ocean. Our identity as a beach community is a significant draw for tourists and those who wish to live by the water. Dumping in our water would inflict a mortal wound to that identity, from which our community might not recover.

Due to the potential harm to the health, the ecosystem, economic conditions, and public image for citizens and municipalities throughout the Cape Cod Bay area, we hope that the DEP firmly denies the application. We further exhort Holtec International to ship the radioactive wastewater to a facility that specializes in the safe disposal of such materials.

Sincerely,
The Manomet Village Steering Committee

Re: Pilgrim Nuclear Power Station – DEP's Tentative Determination to Deny Holtec's Application for a Modified Permit .

Dear Ms. Coniaris:

I am writing to support DEP's tentative decision to deny Holtec's application for a modified Surface Water Discharge Permit to discharge 1.1×10^6 gallons of radioactive and chemically contaminated wastewater into Cape Cod Bay.

DEP's tentative determination is correct, in finding that the state's Ocean Sanctuaries Act prohibits this discharge:

- **The Massachusetts Ocean Sanctuaries Act** prohibits the "dumping or discharge of commercial, municipal, domestic or industrial waste" into an Ocean Sanctuary. Cape Cod, Plymouth, Kingston, and Duxbury Bays are all protected ocean sanctuaries.

In addition:

- **The Massachusetts Endangered Species Act** prohibits altering the habitat of any endangered or threatened species, including the right whale, roseate tern, least tern, and loggerhead turtle that inhabit Cape Cod Bay. The discharge of waste, wastewater, toxic, or hazardous materials is considered alteration of habitat.
- **The DEP's regulations also include antidegradation provisions** that prohibit Holtec's discharge:
 - *unless the discharge would be insignificant.* The discharge of 1.1 million gallons of contaminated water is in no way 'insignificant.'
 - *unless the "discharge is necessary to accommodate important economic or social development in the [Cape Cod Bay] area" or 'for the express purpose and intent of maintaining or enhancing' Cape Cod Bay.* This discharge will not enhance but only harm the beautiful coastal waters that we love and that drive our local economy through tourism, fishing, and recreation. Of great significance is the oyster farming in Duxbury, which harvests 35 million oysters/year. Regardless of the specific level of radiation, *the perception by buyers that this food is contaminated could kill the industry.*

Holtec's proposed discharge is illegal. The department's final determination should deny the application.

Sincerely,

David P. Corey

Fri 8/25/2023 8:52 AM

To: MassDEP NPDES (DEP) <MassDEP.NPDES@mass.gov>

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Dear DEP Representative Cathy Coniaris,

As a local real estate professional, I am writing to urge you to uphold your initial denial of Holtec's request to modify their wastewater discharge permit.

The Ocean Sanctuaries Act was designed to protect our coastal environments and their natural beauty - factors that directly impact property values and the real estate market here. We have already seen concerning declines in demand that we believe are tied to the ongoing decommissioning activities. Granting this permit modification could worsen the situation.

I ask that you stand firm in your original determination to prohibit the discharge of pollutants into Cape Cod Bay. The DEP has an important role to play in restoring consumer confidence by enforcing environmental protections that preserve our coastline and waterways.

Please do not allow the proposed permit changes. We are relying on you to safeguard our region's environment and real estate market.

Thank you for your consideration.

Sincerely,

Lisa Larkin

Dear Commissioner Heiple

Please deny Holte's plan to discharge wastewater from Pilgram Power Plant into Cape Cod Bay!! This would be illegal because of the Oceans Sanctuary Act, but as a life long lover of these waters whose family has been here since 1860, it should not take a law to prevent what is just plain wrong. Cape Cod Bay should not be a dumping ground for any potentially harmful waste. I have witnessed the drastic decline of life on the flats of Brewster over my 72 years. We need to be in high protection mode, not this opposite.

Respectfully, Mary Ellen (Saint) Bokenkamp

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Dear Ms. Coniaris:

I am writing to support the tentative determination by the Massachusetts Department of Environmental Protection (MassDEP) to deny Holtec's application for a modified Surface Water Discharge Permit that would allow it to discharge radioactive and chemically contaminated wastewater into Cape Cod Bay.

MassDEP's tentative determination that the requested discharge is prohibited by the Massachusetts Ocean Sanctuaries Act is entirely correct. That act prohibits the "dumping or discharge or commercial, municipal, domestic or industrial waste" into an Ocean Sanctuary. Cape Cod, Plymouth, Kingston, and Duxbury Bays are all protected ocean sanctuaries under the act.

The proposed discharge is therefore illegal. Because Holtec's proposed discharge is illegal, the Department's final determination should deny its application.

Yours sincerely,

Sandra Richards

Subject: Pilgrim Nuclear Power Station

Dear Ms. Coniaris:

I am writing to **support the tentative determination** by the Massachusetts Department of Environmental Protection (MassDEP) to **deny Holtec's application** for a modified Surface Water Discharge Permit that would allow Holtec to discharge radioactive and chemically contaminated industrial wastewater into Cape Cod Bay.

MassDEP's tentative determination that the requested discharge is prohibited by the Massachusetts Ocean Sanctuaries Act is entirely correct. That act prohibits the "dumping or discharge or commercial, municipal, domestic or industrial waste" into an Ocean Sanctuary. Cape Cod, Plymouth, Kingston, and Duxbury Bays are all protected ocean sanctuaries under the act.

The MassDEP final determination must be to deny Holtec's application. Thank you for enforcing the law to protect our ocean sanctuaries.

As long time summer residents at Priscilla Beach we strongly support denying Holtec's application. Too many business and people depend on keeping the bay safe. Even the suggestion of poor quality of the water could have a huge impact on many, including the fishing and tourist industries. We feel it is extremely important that the application must be denied.

Sincerely,

Linna and William Kite

Re: Pilgrim Nuclear Power Station – DEP's Tentative Determination to Deny Holtec's Application for a Modified Permit .

Dear Ms. Coniaris:

I am writing to support DEP's tentative decision to deny Holtec's application for a modified Surface Water Discharge Permit to discharge 1.1 million gallons of radioactive and chemically contaminated wastewater into Cape Cod Bay.

DEP's tentative determination that the state's Ocean Sanctuaries Act prohibits this discharge is correct:

The Massachusetts Ocean Sanctuaries Act prohibits the "dumping or discharge or commercial, municipal, domestic or industrial waste" into an Ocean Sanctuary. Cape Cod, Plymouth, Kingston, and Duxbury Bays are all protected ocean sanctuaries.

In addition:

The Massachusetts Endangered Species Act prohibits altering the habitat of any endangered or threatened species, including the right whale, roseate tern, least tern, and loggerhead turtle that inhabit Cape Cod Bay. The discharge of waste, wastewater, toxic, or hazardous materials is considered alteration of habitat.

The DEP's regulations also include antidegradation provisions that prohibit Holtec's discharge: unless the discharge would be insignificant. The discharge of 1.1 million gallons of contaminated water is in no way 'insignificant.'

unless the "discharge is necessary to accommodate important economic or social development in the [Cape Cod Bay] area" or "for the express purpose and intent of maintaining or enhancing" Cape Cod Bay. This discharge will not enhance but only harm the beautiful coastal waters that we love and that drive our local economy through tourism, fishing, and recreation.

Holtec's proposed discharge is illegal. The department's final determination should deny the application.

Thank you.

Pilgrim Nuclear Power Station - DEP's Tentative Determination to Deny Holtec's Application for a Modified Permit

[REDACTED]

Fri 8/25/2023 11:12 AM

To:MassDEP NPDES (DEP) <MassDEP.NPDES@mass.gov>

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Dear Cathy Coniaris, Mass DEP

I fully support the state Department of Environmental Protection (DEP) tentative determination to deny Holtec-Pilgrim's permit application to discharge radioactive and chemically contaminated water into Cape Cod Bay. This decision is correctly based on the DEP legal finding that discharge by industrial sites such as Pilgrim is definitely prohibited by the state Ocean Sanctuaries Act. Holtec must comply with state laws. I urge you to issue a final determination to deny the permit, thereby upholding state regulations so our Ocean Sanctuaries in Plymouth, Duxbury, Kingston, and Cape Cod Bay remain protected.

We need to protect our environment for our children and grandchildren. They will inherit all the damage that we are presently causing to our land and oceans. We need to stop doing what is expedient for us and the companies that provide us services. We owe it to them.

Thank you,
Renate Sands

Re: DEP's Tentative Rejection of Holtec's Application to Dump
Radioactive Water in Cape Cod Bay

Dear Ms. Coniaris:

I was a newspaper reporter who reported on nuclear power plant construction in New England in the late 1970s and early 1980s. In particular, I covered the Clamshell Alliance's (successful) opposition to the construction of a proposed second nuclear power plant in Seabrook, New Hampshire. Those demonstrations were violent and protracted.

If Boston Edison had announced prior to the construction of its Pilgrim nuclear plant that radioactive water would be dumped into Cape Cod Bay upon Pilgrim's decommissioning, Pilgrim would never have been built. Massachusetts politicians – led by Ted Kennedy – would have blocked it. And the fierce Clamshell members would have risked their lives – repeatedly – to prevent its construction.

If the Commonwealth were to endorse Holtec's corporate shortcut proposal, the Commonwealth would be sanctioning a craven betrayal of the public trust.

Sincerely,

James A. Schuh

Pilgrim Nuclear Power Station - DEP's Tentative Determination to Deny Holtec's Application for a Modified Permit

Kirk Is [REDACTED]

Fri 8/25/2023 1:02 PM

To:MassDEP NPDES (DEP) <MassDEP.NPDES@mass.gov>

CAUTION: This email originated from a sender outside of the Commonwealth of Massachusetts mail system. Do not click on links or open attachments unless you recognize the sender and know the content is safe.

Dear Ms. Coniaris:

I wish to express my support for the preliminary decision by the Massachusetts Department of Environmental Protection (MassDEP) to reject Holtec's request for an amended Surface Water Discharge Permit, which would permit them to release radioactive and chemical wastewater into Cape Cod Bay.

The initial decision by MassDEP, citing that such discharge would violate the Massachusetts Ocean Sanctuaries Act, is spot on. This legislation specifically bans the "release or dumping of any form of commercial, municipal, domestic, or industrial waste" within an Ocean Sanctuary. Notably, Cape Cod, Plymouth, Kingston, and Duxbury Bays are designated ocean sanctuaries in accordance with this act. Hence, Holtec's proposed release would clearly be in violation.

It would be best for the Department to finalize its decision by turning down Holtec's application.

Thank you,
Kirk Israel

To Whom It May Concern: I am a resident of Sandwich, MA and have lived in the shadow of the Pilgrim Power Plant for 48 years. In 1982 I learned of the discharge of nuclear materials into the atmosphere. Recently I learned about Holtec's decision to release nuclear infected wastewater into Cape Cod Bay, the Bay in which thousands of people, including myself, my grandson, my neighbors and Cape Cod visitors swim every summer - the Bay in which the fish that we eat live. I am outraged by this reckless decision and completely opposed to it.

Yesterday I read in the 'Sandwich Enterprise', that, in order to bypass objections to the water release, a whistleblower has discovered that Holtec is now evaporating the water, releasing nuclear materials into the atmosphere for all of us to breathe. If this is true, this nefarious solution is unconscionable behavior on the part of the Holtec and they should be held accountable in a court of law.

If the whistleblower's report is true, I hope that your office looks into this and stops this immediately. I also trust that you will prevent the water from being released into Cape Cod Bay.

Sincerely, Janet B. Rodgers

Re: Pilgrim Nuclear Power Station Dear Ms. Coniaris:

I am writing to support the tentative determination by the Massachusetts Department of Environmental Protection (MassDEP) to deny Holtec's application for a modified Surface Water Discharge Permit that would allow it to discharge radioactive and chemically contaminated wastewater into Cape Cod Bay.

MassDEP's tentative determination that the requested discharge is prohibited by the Massachusetts Ocean Sanctuaries Act (The Act) is entirely correct. The Act prohibits the "dumping or discharge or commercial, municipal, domestic or industrial waste" into an Ocean Sanctuary. Cape Cod, Plymouth, Kingston, and Duxbury Bays are all protected ocean sanctuaries under the act. Any such discharge, including most obviously Holtec's proposed discharge, is illegal waste and illegal discharge as defined by the letter of The Act. The Department's final determination should deny its approval without delay.

Thank you for your concern,

Charles Kane

Cathy Coniaris,

I am writing today in support of the MassDEP tentative determination to deny a surface water Discharge permit modification requested by Holtec International at Pilgrim Nuclear power in Plymouth, Ma.

I would like to first wholeheartedly commend the MassDEP for its attention and efforts with this matter. On Thursday 8/24/2023 a public hearing was held in Plymouth and I thank you and your team for travelling to Plymouth for this.

MassDEP is correct in its tentative denial as the wastewater discharge is illegal under several laws. Those laws include - but not limited to

1. Ocean sanctuaries act
2. Endangered Species act
3. MassDEP antidegradation laws
4. Crimes against public health act

Holtec International willingly signed (June 2020) a settlement agreement which clearly states Holtec will abide by all Massachusetts's laws. This is a valid legal contract.

In addition to the illegality of this planned discharge, Holtec has demonstrated a clear and consistent behavior pattern that includes a complete lack of transparency, misinformation/misleading information, multiple nationwide lawsuits against Holtec in the areas of safety violations and illegal/unfair labor practices.

At the August 24th MassDEP public meeting Mr. Shawn Noyes who identified himself as experienced in the nuclear field. On at least two occasions (in support of Holtec) presented misinformation to the public and to the MassDEP panel conducting the public hearing.

Mr. Noyes made statements to Fox 25 Boston news crew on camera prior to the public meeting stating the discharges have been ongoing for 45 years and doesn't understand why all of a sudden there is a problem. Operational steam cooling discharge is very different than the fuel pool/reactor storage water that is the basis of this permit request.

During the public comments of the public meeting Mr. Noyes explicitly stated this discharge would be eligible for exemption under the Ocean sanctuaries act because it is an ongoing discharge and not a "new source". On page six of the Holtec application, Holtec writes in two separate locations that the water is a new source. I have include a highlighted (partial) screen shot of page six written by Holtec stating this is a "new source". The two highlighted passages also acknowledge Holtec's reference to the new source discharge as "industrial wastewater" which is clearly defined as illegal in the Ocean sanctuaries act. These are Holtec's words;

At best, these statements of misinformation show Holtec's absolute lack of knowledge of Massachusetts law - Holtec simply does not care.

It has also been recently brought to light that Holtec is now expediting the installation of submersible heating elements to evaporate some of the water to reduce the volume. Information contained in a "whistleblower" letter appears to coincide with recent NRC inspection report that confirms the installation of evaporative equipment. Documents show the evaporative steam contains contaminants and is being released through an UNMONITORED stack into the air. This will undoubtedly become an environmental/legal/moral issue moving forward.

Holtec International has an egregious history of lying to the public, providing inaccurate information and is the defendant in many lawsuits in the areas of safety and labor among others. Holtec does not care about laws, the environment, or the health and safety of the neighborhoods it occupies as well as its employees.

I ask you to please deny the Holtec permit request.

Thank you

Leslie Danielson

comment on denial of radioactive waste water release

MassDEP Surface Water Discharge Permitting Program,

I am a citizen who paddles, swims and sails in Cape Cod bay. I believe your finding that release of slightly radioactive waste water is correct. Please continue to deny Holtec International's permit to discharge wastewater from Pilgrim Nuclear Power Station in Cape Cod Bay. I believe you are correct in the interpretation that this would violate state law and protections in the Ocean Sanctuaries Act. I urge you to keep this finding as it is in the draft decision.

Thank you for your time and consideration,

Alan Harris

Dear DEP,

The sensitive ecosystem around Cape Cod already has pollution, climate change, and population to deal with. We are home to a lot of nesting birds and marine life that rely on Cape Cod ecosystem for food, mating and raising their young. We cannot afford to let Pilgrim Nuclear plant to unleash tons of industrial waste into this ecosystem. Tell the owners of Pilgrim Nuclear plant to go back to their chemistry sets and figure out a way to treat this waste and divert it somewhere less sensitive.

Dear Commissioner Heiple,

I strongly agree with DEP's draft determination to deny Holtec International's permit application to discharge wastewater from Pilgrim Nuclear Power Station into Cape Cod Bay. DEP's permit denial correctly interprets the Ocean Sanctuaries Act, which explicitly states that discharges such as the one pursued by Holtec are prohibited under state law. I urge DEP to move forward in finalizing its draft decision based on state law requirements and issue a permit denial to Holtec that prevents Pilgrim's wastewater from being released into the Cape Cod Bay Ocean Sanctuary.

Thank you,

Nancy K. Haley

Statement of Position

August 27, 2023

Re: Disposal of Radioactive and Chemically Contaminated Wastewater into Cape Cod Bay

Six Ponds Improvement Association, an association of neighbors in Plymouth, Massachusetts established in 1951, fully supports the Commonwealth of Massachusetts Department of Environmental Protection (DEP) draft decision to deny the permit application of Holtec Decommissioning International LLC (Holtec) to discharge radioactive and chemically contaminated water into Cape Cod Bay from the now decommissioned Pilgrim Nuclear Power Station. This tentative denial is correctly based on the DEP legal determination that discharge by industrial sites such as that owned by Holtec Pilgrim LLC (Pilgrim) is definitely prohibited by the state Ocean Sanctuaries Act. Holtec must comply with state laws and associated regulations. Six Ponds urges DEP to fully and finally deny the permit application to uphold state law and associated regulations so our Ocean Sanctuaries in Plymouth, Duxbury, Kingston, and Cape Cod Bay remain protected. Rather than disposal as proposed in the permit application, it is suggested that the nuclear waste water be removed from the site and disposed in a proper waste repository with sufficient safeguards to meet long-term public health concerns applicable to radiological waste.

Six Ponds Improvement Association, through the action of its Executive Committee, is issuing this Statement of Position in support of a permanent ban on the disposal of industrial waste from the Pilgrim Nuclear Power Station into Cape Cod Bay, state waters protected by the Massachusetts Ocean Sanctuaries Act and associated regulations.

Re: Pilgrim Nuclear Power Station – DEP's Tentative Determination to Deny Holtec's Application for a Modified Permit

Dear Ms. Coniaris:

I watched the recent DEP hearing at the Plymouth Town Hall online and listened to the public comments about the disposal of Entergy's waste water into Cape Cod Bay. I am writing to support the tentative decision by the Massachusetts Department of Environmental Protection (MassDEP) to deny Holtec's application for a modified Surface Water Discharge Permit that would allow it to discharge radioactive and chemically contaminated wastewater into Cape Cod Bay. MassDEP's tentative determination that requested discharge is prohibited by the Massachusetts Ocean Sanctuaries Act is entirely correct. Most of the citizens who spoke at the meeting also supported protecting our bay.

I live in Plymouth and know many people who are

fishermen or who harvest shellfish as their occupation. Any contamination of Cape Cod Bay will affect their livelihood - as it already has for the people of Fukushima, Japan who depended on the ocean for their living. Since we have do have an ocean sanctuaries act that prohibits the "dumping or discharge or commercial, municipal, domestic or industrial waste" into an Ocean Sanctuary, we need to enforce it. Cape Cod, Plymouth, Kingston, and Duxbury Bays are all protected ocean sanctuaries. The proposed discharge is therefore illegal. Because the proposed discharge is illegal, the Department's final determination should deny Holtec's application.

Thank you,
Janet Alfieri
