

REGION 6 ADMINISTRATOR

DALLAS, TX 75270

September 30, 2026

The Honorable Jeffrey Landry
Governor of Louisiana
P.O. Box 94004
Baton Rouge, Louisiana 70804-9004

Dear Governor Landry:

The purpose of this letter is to inform you of the U.S. Environmental Protection Agency's (the EPA or the Agency) intended approach for finalizing area designations for Louisiana for the 2024 primary annual fine particulate matter (PM_{2.5}) National Ambient Air Quality Standard (NAAQS or standard).

On February 7, 2024, the EPA promulgated a revised primary annual PM_{2.5} NAAQS of 9.0 micrograms per cubic meter (µg/m³).¹ The EPA's promulgation of the NAAQS initiated the designations process in accordance with Clean Air Act (CAA) section 107, which is intended to identify areas of the country as either meeting or not meeting the NAAQS.² Under CAA section 107(d)(1)(A), the Governor of each State was required to submit a list of initial designations for all areas in their State to the EPA by February 7, 2025. The EPA received a letter dated February 7, 2025, containing the list of initial area designations for Louisiana. In its letter to the EPA, Louisiana submitted an initial area designation of attainment for fifteen parishes (Ascension, Calcasieu, East Baton Rouge, Jefferson, Lafayette, Lafourche, Livingston, Orleans, Ouachita, Rapides, St. Bernard, St. Tammany, Tangipahoa, and Terrebonne Parishes) and a designation of unclassifiable for all other parishes in the State.

On July 17, 2026, the Northern District Court of California ordered the EPA to publish final designations for all areas of the country no later than February 6, 2027.³ The EPA is appealing that court order. On November 24, 2025, the EPA filed a motion asking the U.S. Court of Appeals for the D.C. Circuit to vacate the 2024 PM_{2.5} NAAQS thereby relieving the EPA of the obligation to make designations in furtherance of an unlawful standard. The D.C. Circuit subsequently upheld the 2024

¹ 89 FR 16202 (Mar. 6, 2024).

² CAA section 107(d)(1)(A)(i)–(iii) defines: (i) nonattainment, any area that does not meet (or that contributes to ambient air quality in a nearby area that does not meet) the NAAQS, (ii) attainment, any area (other than an area identified in clause (i)) that meets the NAAQS, or (iii) unclassifiable, any area that cannot be classified on the basis of available information as meeting or not meeting the NAAQS. The EPA uses the category of attainment/unclassifiable for an area that is meeting the NAAQS and does not contribute to ambient air quality in a nearby area that does not meet the NAAQS.

³ *All. of Nurses for Healthy Env'ts v. Zeldin*, No. 26-cv-03118-HSG.

PM_{2.5} NAAQS, but on August 28, 2026, State and industry petitioners filed two petitions with the United States Supreme Court for writ of certiorari, seeking to appeal that decision. Absent relevant action from the judiciary, the EPA intends to finalize designations for the 2024 annual PM_{2.5} NAAQS based on the most recent monitoring data (2023-2025 data) and any other relevant information available at that time. The majority of Governors' initial designations were based on 2021-2023 data. That being the case, we recognize that the EPA is evaluating two additional years of data beyond those that Governors had available at the time of their initial area designations submissions.

Our preliminary review of the 2023-2025 monitoring data indicates that your State has one or more monitors with invalid design values. If valid data becomes available and design values do not meet the 2024 annual PM_{2.5} NAAQS, without any further information or processing, such as a determination that air quality data was influenced by an exceptional event, then the area, including nearby areas that contribute to the area not meeting the NAAQS, may be designated as nonattainment. This outcome could be a modification of the State's initial area designation submitted February 7, 2025.

Certain events, including prescribed fires and wildfires, have the potential to impact air quality monitoring data across many regions of the country. Based on a screening analysis using the EPA's exceptional events technical tools, there are over 9,000 site days that could be submitted as Tier 1 or Tier 2 exceptional events, potentially affecting the design value at every monitor with a current 2023-2025 design value over 9 µg/m³. In addition, several States and organizations have communicated to the EPA that the Teledyne T640 and T640x PM mass monitors, which are prevalent in the southern and eastern parts of the U.S., have a high bias and are affecting the ability to evaluate attainment of the 2024 PM_{2.5} annual standard.⁴ The EPA is working to complete an assessment of the issues raised and any potential effect on the quality of the measurements. States can also request an exclusion of the monitoring data from being compared to the NAAQS if they demonstrate a high bias (*i.e.*, above 10%).⁵

Given the expedited deadline that the EPA is operating under, the Agency acknowledges that the EPA may be lacking relevant information or demonstrations that would lead to a different

⁴ See letter to the EPA from Enterprise Quality Management Division, titled "Request for Correction under the Information Quality Act of: (1) EPA's Approval of Four Modification Requests for the T640-T640x PM FEM Monitors; and (2) EPA's Retroactive Application of the Approved Modification of the T640 and T640X Monitors to Concentration Data for PM_{2.5} in EPA's Air Quality System (AQS)", dated January 6, 2026. Available at <https://www.epa.gov/system/files/documents/2026-01/nr3-rfc-1-6-26-c.pdf>.

⁵ 40 CFR 58.11(e) and Appendix A to 40 CFR Part 58.

designation. As a result, the EPA is notifying you that the Agency may designate the aforementioned areas attainment/unclassifiable if sufficient and appropriate information is received or becomes available prior to February 6, 2027, to support such a designation. This outcome would be a modification of the State's initial area designation submitted February 7, 2025.

Further, the Agency also recognizes the difficulties associated with gathering and processing the information necessary for the designation process within such an abbreviated timeline. As a result, it is possible that the Agency would determine that areas in your State cannot be classified on the basis of available information as meeting or not meeting the NAAQS, which would result in a designation of unclassifiable for areas in your State. This outcome would be a modification of the State's initial area designation submitted February 7, 2027.

If you have additional information that you would like the EPA to consider for final designations, including information related to exceptional events, please submit it to the public docket for these designations, EPA-HQ-OAR-2024-0078, located at www.regulations.gov. If you think any modification of your recommendation is not appropriate, please also provide reasoning as to why that is the correct outcome. Submission of this information no later than November 1, 2026, will help ensure the EPA has sufficient time to take this information into account in the Agency's final designation decision. Such additional information provided to the EPA could result in a designation of attainment/unclassifiable, nonattainment, or unclassifiable.

Should you have any questions, please contact me at (214) 665-2211. Alternatively, you may have a member of your staff reach out to James McDonald at (214) 665-3150.

Sincerely,

Scott Mason IV
U.S. Environmental Protection Agency
Region 6 Administrator

ENCLOSURE

1. Louisiana's Initial Area Designation Submission for the 2024 Annual PM_{2.5} NAAQS and Counties that Contain Violating Monitors

cc: Courtney Burdette
Secretary, Louisiana Department of Environmental Quality

Jason Meyers,
Administrator, Air Planning and Assessment Division, Louisiana Department of Environmental Quality

Enclosure 1:

**Louisiana's Initial Area Designation Submission for the 2024 Annual PM_{2.5} NAAQS and
Counties that Contain Violating Monitors**

Identified Parishes	Identified CBSA	State Initial Designation Category	State Initial Designation Boundary	Does the parish contain a valid monitor with a DV that may not meet the NAAQS?	Is the parish part of a CBSA that has a monitor located in another State that may not meet the NAAQS?
Caddo Parish	Shreveport- Bossier City, LA	Unclassifiable	Caddo Parish	No*	No
All parishes in the rest of the State**	N/A	Attainment or Unclassifiable	None	N/A	N/A

* The State has one or more monitors with insufficient data to calculate a valid design value. The reasons for this may vary. EPA is flagging these counties as an opportunity for the State to provide additional information to inform final designations.

**The EPA intends to designate the rest of the State attainment/unclassifiable.
