

## Appendix M

### *Effects - MagTool and R-Plots*

This appendix is divided into the following sections:

#### Output from MagTool Runs

- Amphibians (Terrestrial)
- Birds
- Mammals
- Reptiles

#### R-Plots and Summary Tables of Effects Data by Taxonomic Group

- Amphibians (Terrestrial and Aquatic)
- Arachnids
- Clams (Bivalves, Mussels)
- Crustaceans
- Fishes
- Insects
- Snails
- Plants

For R-Plots: For species wholly in California, the usage data provided on the R-plots was not used. Instead, California Pesticide Use Reporting (CalPur) data was used in the final effects determinations as discussed in the Integration and Synthesis summaries for each taxa group. For species primarily in California, standard data and CalPur data were used. The Use and Usage tables for each species in the Integration and Synthesis summaries indicate when CalPur data was used rather than or in addition to standard data for these species.
