Re: City of Albuquerque Climate Pollution Reduction Grant Application

Dear Denise,

EnergyWorks is proud to support the City of Albuquerque Climate Pollution Reduction Grant (CPRG) application. EnergyWorks has previously worked with the City of Albuquerque and Prosperity Works to reduce the energy burden for income qualified residents of the community by providing utility-funded energy efficiency services and expanded services through funding from the city. The CPRG funding would make a profound impact to reduce energy consumption, reduce the energy burden, and reduce pollution.

Since 2010, EnergyWorks has provided energy efficiency service to thousands of families and to help them "Save Money! Save Energy! Save the Planet!". Reducing utility costs through energy savings creates a positive economic and environmental impact for our customers and communities. EnergyWorks provides efficiency services through programs with New Mexico Gas Company, PNM, Albuquerque Bernalillo County Water Utility Authority, and El Paso Electric. In partnership with Prosperity Works, we have increased the energy efficiency of over 600 homes in the last several years.

Prosperity Works has been the leader in New Mexico to reduce the energy burden of families and create equitable access to clean energy resources. The organization has been instrumental in passing significant legislation, creating new funding, and providing direct services to hundreds of families. Their extensive experience will support the CPRG project and ensure residents receive all the available resources to reduce energy use and costs.

We strongly support this application. Thank you!

Respectfully,
