Education

UNIVERSITY OF IDAHO, MOSCOW, IDAHO
BACHELOR OF ARCHITECTURE, 2001
MASTERS IN ARCHITECTURE, 2002

Licensure

Licensed Architect (2011)
State of Idaho, #AR-984857

Experience

Public Works, Facility Program Management, City of Boise

Role: Senior Project Manager
March 2023 - Present

As a senior project manager for the Facility Program Management Division of Public Works at the City of Boise, I lead planning, design and construction projects related to City assets for a variety of City departments. Aligning initial design concepts, all the way through construction with a focus on city climate goals and initiatives is a large focus for all projects. Currently I am Implementing an electrification project that includes three city buildings that were initially part of a multiple building study to help prioritize which buildings would be a good fit for ARPA funding and converting building systems over to electricity. This \$2.8 Million electrification project will upgrade the Boise Depot, Vista housing, and City Hall West helping the City of Boise reach the 2035 carbon neutral city government goal. Construction is anticipated to start in August 2024 and wrap up in under 12 months. Currently, we are working to study additional facilities to electrify, and I am overseeing the process with the design and construction manager team. I am eager to also manage and coordinate adding EV stations at selected sites as that funding and project gets started.

Division of Public Works, State of Idaho

Role: Project Manager
August 2018 - Present

I have been working as a project manager for the Division of Public Works for the State of Idaho Department of Administration for the last six months. As a project manager I have been assigned 19 active projects ranging in size from small to large while working with a variety of agencies around the state of Idaho. I have been successful at getting all projects through the initial design phases of work as required and into review with Division of Building Safety and out to bid. I have reviewed several sets of drawings and effectively communicated comments back to the agencies and design professionals. I have been continuing to learn the DPW process and software used daily to manage and track projects. I enjoy working with my fellow project managers, coordinators, and field representative in house as well as the array of consultants I have the pleasure to encounter through design professional selection process and design work.

Cushing Terrell, (CTA,INC.)

Role: PROJECT ARCHITECT | ASSOCIATE
OCTOBER 2006 –August 2018

My role at CTA was working as project architect on rural healthcare projects, typically with multiple phases for budget and construction reasons. The work tends to start at a master planning level with big picture goals and visioning being a priority with clients and communities. My role as project architect includes coordinating and organizing user meetings during the planning phase, helping as a healthcare planner and designer, and coordinating a large team of architectural staff and engineers, both in house and consultants to successfully get construction documents out to permit, bid, and through construction. I have worked on large scale facilities down to small scale tenant improvements. This role takes great communication skills and dedication to keep team members on task, deadlines met, and projects on budget and profitable. I traveled to two times a month to my project sites for various project related meetings whether with clients, contractors, or building officials. I also helped to create and facilitate our in-house mentoring program at CTA, which fosters and grows young and not-so-young staff by providing training. The program also teams them with mentors to learn from; how to understand the company as a whole; resources available to them; and their role on projects. I was the studio leader for the Boise Healthcare group, which consists of myself and five studio members, whom I was responsible for keeping engaged on projects that meet their skill set and passions. As an Associate, I was responsible for conducting “touchpoints,” with fellow architecture staff members which are quarterly check-ins with various team members (not just my studio members). I then report our conversations to their supervisors and Human Resource. These conversations range from goal setting to problem solving. My unofficial role at CTA is Cultural Ambassador as I feel the success of a company starts with having a great office culture that aligns with the organizations overall vision and mission.

HUMMEL ARCHITECTS

Role: ARCHITECT IN TRAINING
2003-2006

Worked as a project architect in training on education projects with in-house team of production to design staff and consulting engineers. From small remodels and additions to large scale brand new high schools, I coordinated the design team’s efforts to produce construction documents, specifications and drawings from schematic design through construction administration. During this time, I also worked on several government jobs, including various remodels of state and county court facilities.

CSHQA

Role: SUMMER INTERN | ARCHITECT IN TRAINING
2001-2003

As a senior in high school I job shadowed with a handful of professionals at CSHQA to learn more about the day to day aspect of life in an architecture firm. After staying connected with one of the leaders, I was able to secure a summer internship and intern part-time as I finished my master’s degree locally in Boise at the Idaho Urban Research Design Center (University of Idaho’s satellite studio focused on urban planning – IURDC). I continued to work full-time as an intern after graduating for over a year. During this time, I worked on several different projects with varying levels of introductory responsibilities. I honed skills ranging from drafting details to understanding construction and timelines, budgets, and deadlines.

Memberships +Honors

Leadership Boise Graduate (2018)
Idaho Business Review – Accomplished 40 under 40 Award Recipient (2018)
Evidence-Based Design Accreditation and Certification (EDAC) from Center for Health Design (2016)
