

March 28, 2024

Mr. Dewayne McDonald
President and CEO
WRECC
951 Fairview Ave
Bowling Green, KY 42101

Dear Mr. McDonald:

As Bowling Green Municipal Utilities' (BGMU) long-time colleague and partner, you know that we see ourselves as more than just a provider of safe, reliable utility service; we are part of the community. BGMU employees live and work in Bowling Green and Warren County. We know that taking an active role in supporting our community is important to future growth. BGMU strives to improve our customers' quality of life, making Bowling Green a great place to live and work. Our employees invest hundreds of hours of volunteer time, skills and financial resources in various organizations, civic groups, community events and programs both collectively and individually. We feel that community involvement is part of our responsibility to our neighbors and our community.

For these reasons, we are so pleased to partner with you and the Bowling Green Metropolitan Statistical Area (MSA) in implementing a community solar project that will increase renewable energy production and transmission in the MSA and reduce greenhouse gas emissions. BGMU serves approximately 30,000 electric customers and our Electric Division maintains 363 miles of distribution lines. The opportunity to have additional renewable energy traverse these lines is something BGMU and its customers are excited to see implemented.

BGMU is committed to working with WRECC and the Bowling Green MSA starting with community outreach and continuing throughout to the life of the community solar project. Our staff's expertise and involvement in the community will be of great benefit in the successful implementation of the project.

We look forward to strengthening our relationship with WRECC and the Bowling Green MSA through the implementation of projects outlined in the BG MSA's Priority Climate Action Plan.

Sincerely,

Mark Iverson
General Manager
Bowling Green Municipal Utilities
