RE: Letter of Commitment
Climate Pollution Reduction Implementation Grant (CPRG) - Decarbonize DRCOG

Go Electric Colorado is committed to actively supporting the success of the Decarbonize DRCOG proposal. Our organization is dedicated to reducing GHG emissions in the residential housing and personal transportation sectors across the Denver Metro area and Colorado. In this capacity, we currently work closely with several DRCOG agencies and partners to deliver energy and climate literacy, data, and homeowner decarbonization advising across the proposed target region.

We support this funding as we welcome the opportunity to extend our services to more low-income and disadvantaged communities. We are committed to providing our whole home energy advising throughout the proposal period to meet the carbon and pollution reduction, environmental and community benefit objectives outlined.

Go Electric Colorado provides a full suite of decarbonization advising services free of charge to residential property owners. We help homeowners navigate the breadth of home decarbonization processes including energy audits, efficiency, and electrification measures, solar, EV charging, energy storage options, and supporting measures like electric service upgrades and smart panels. Key to our success is providing customized home retrofit project plans that chart a path to full decarbonization. We then offer follow on services helping vet installers; compare quotes; identify financing and incentive opportunities; and even post-installation support and guidance (as needed).

We recognize the value of collaborative action and targeted funding to achieve meaningful climate goals. We believe the Decarbonize DRCOG initiative effectively addresses these critical needs. Once funded, our team of specialized building performance and electrification advisors are committed to contributing our expertise, tools, and resources to the goals of this groundbreaking initiative.

We are eager to support this initiative from start to finish by:

- *Providing residential energy efficiency and electrification advising for owners.*
- *Provide direct decarbonization advising services within the region's Justice40/LIDACs.*
- *Participating on the program's Advisory Board, contributing to co-creation, collaboration, and informed decision-making.*
- *Supporting the creation of instructional resources to educate clients and entry-level workforce prospects on the latest technologies and best practices in building decarbonization.*
- *Collaborate with Decarbonize DRCOG on the design of programs and initiatives to host community and networking events, job fairs, and workshops.*
- *Engage in community outreach to raise awareness about the value and process of building decarbonization and promote career opportunities in the field to members and the broader community.*
- *Provide direct decarbonization advising services within the region's Justice40/LIDACs.*

We are excited about the transformational potential of this initiative and look forward to working closely with DRCOG and other stakeholders to advance our collective climate mitigation efforts and improve the region's air quality and environment.

Should you have any inquiries regarding our support for this funding application, please feel free to contact me by phone or email.

Sincerely,

Nick Stevens
Board President
