To Whom It May Concern,

Subject: Letter of Commitment for CPRG Application and the Development of Renewable Heating Oil (RFO) Projects in Maine and Washington (each, a "Project")

Ensyn Corporation ("Ensyn") is pleased to reaffirm our commitment and support for the Projects, which are being led by The Habematolel Pomo of Upper Lake, that will use Ensyn's proprietary technology, known as the RTP® technology, to convert biomass into biofuels. Ensyn's participation in the Projects will include the provision of services with CastleRock Green Energy, LLC during the Projects' development, construction, and commissioning. The parties' participation in the Projects is a testament to our shared goals of reducing greenhouse gas emissions and promoting renewable energy sources.

Our commitment to the Projects includes the following key components:

- 1. Technology Provision and Support:** Ensyn will license the RTP technology for use in the Projects to enable the conversion of woody forest residue into pyrolysis oil that can replace traditional petroleum-based heating oil or natural gas. Ensyn's RTP technology has been proven at a commercial scale in Canada and the U.S. over the past 35 years, with eight operating facilities currently showcasing our technology's efficacy.
- 2. Engineering Support:** Ensyn will be providing comprehensive engineering support throughout the development and operational phases of the Projects under a technical services agreement. This includes site feasibility support, advice regarding RTP technology process design and procurement of RTP equipment, and assistance in overseeing detailed design activities.
- 3. Project Execution Support:** Under a services agreement, our team will assist in the negotiation of contracts and provide requested support in all aspects of project development and contract execution. In that regard, we recognize the importance of ensuring that the Projects adhere to the highest quality standards regarding construction and operations.
- 4. Training and Capacity Building:** Under a technical services agreement, Ensyn will provide equipment commissioning and start-up and personnel training for the Projects by leveraging our extensive experience in RTP facility operations. Furthermore, we are committed to supporting continuous education programs to ensure all employees are equipped with the most up-to-date knowledge and skills required for their job functions.

Our collaboration with The Habematolel Pomo of Upper Lake, Castlerock Green Energy, LLC, and other Project stakeholders, including educational institutions and local communities, is a cornerstone of our approach to ensuring the Projects' success. Ensyn is dedicated to supporting the achievement of the Projects' goals, including the significant reduction of greenhouse gas emissions and the promotion of sustainable, high-quality jobs within the renewable energy sector.

Ensyn is fully committed to the Projects and to our collaboration with The Habematolel Pomo of Upper Lake. We look forward to providing our technology, expertise, and support to realize the vision of a sustainable and renewable energy future.

Sincerely,

A handwritten signature in black ink, appearing to read 'R. Pirraglia', with a stylized flourish at the end.
