Monterey One Water  
5 Harris Court  
Monterey, CA 93940

PG&E is supportive of Monterey One Water's Climate Pollution Reduction Grants application to fund enhanced renewable natural gas (RNG) conditioning as part of the *Monterey Renewable Energy and Utility Reliability Program*. Monterey One Water's Program closely aligns with PG&E's interest in maintaining the reliability of local power sources and our own commitment to a net zero energy system by 2040 and a climate-positive energy system by 2050.

As California's largest energy utility, PG&E has a proven performance record of providing clean energy, delivering electricity that was 95% GHG emission-free in 2022. In a similar interest, Monterey One Water provides utility services for Monterey County residents. They seek to reduce GHG emissions through their current proposed plan thus supporting PG&E's service area and climate goals.

Our support of the *Monterey Renewable Energy and Utility Reliability Program* also closely aligns with our True North Strategy for clean fuels. We will continue to provide reliable and climate-friendly sources of energy to the community while coordinating to meet climate-resilient goals on an expedited timeline. Enhanced conditioning - and the development of RNG - would be significant and beneficial for the communities residing in the Monterey One Water and PG&E service areas.

PG&E has a long history of working with Monterey One Water and is working with its team on this renewable energy project. PG&E remains committed to continued collaboration with Monterey One Water and wholeheartedly supports their funding application to the EPA as part of a climate beneficial strategy.

Sincerely,

Austin Hastings  
Senior Director, Gas Strategy Execution & System Planning
