Mr. Vincent Tutiakoff, Mayor
City of Unalaska
P.O. Box 610
Unalaska, Alaska 99685

Re: Geothermal Power Project with Chena Power and Ounalashka Corporation

Dear Mayor Tutiakoff:

American President Lines, LLC, is very much in support of the City of Unalaska going green by means of geothermal power from the Ounalashka Corporation and Chena Power (OCCP, LLC) at Makushin Volcano. Their development of the geothermal resource as well as installation and distribution of clean energy is a critical foundation for taking action to reduce emissions.

Geothermal power can provide the community with enhanced electrical production which can increase energy security. Unalaska's businesses and private individuals can look forward to a lower electric bill and consistent rates. In addition to powering the City, geothermal power can stimulate Unalaska's involvement in additional sustainable industries such as agriculture, accommodating advanced technologies, installing energy infrastructure, and appealing to eco-tourism. Currently, the City's grid cannot efficiently add customers because of limited capacity. Geothermal power could change that imbalance.

Ounalashka Corporation, through its joint venture with Chena Power, is not only presenting the City of Unalaska with an opportunity to participate in this historic moment, but the Venture is also willing to finance the project and accept the associated risk. As one of the City's bigger users of power, APL encourages the City of Unalaska to form an agreement with OC and Chena Power to bring clean energy to Unalaska.

Sincerely,

AMERICAN PRESIDENT LINES, LLC.

E. R. (Gene) Makarin
