

Appendix B

Status of the Species and Critical Habitat

The Status of the Species and Critical Habitat accounts in this appendix were initially collected by consultants and U.S. Fish and Wildlife Service staff between 2014 and 2017 and updated in 2024 for use in the national pesticide consultations, though they were created in a manner to be used for any consultation. Listed and proposed species and their critical habitats current as of July 1, 2024, and covered in this biological opinion, should have a Status of the Species and Critical Habitat account. The accounts represent point-in-time information, predominantly from publicly available data, and typically from U.S. Fish and Wildlife Service listing decisions, recovery plans, 5-year reviews, species status assessments, etc.

Animal taxa are divided into the following categories:

- Amphibians
- Arachnids
- Birds
- Bivalves
- Crustaceans
- Fishes
- Insects and Arachnids
- Mammals
- Reptiles
- Snails

Plant taxa are divided into the following categories:

- Conifers and Cycads
- Dicots
- Ferns and Allies
- Lichens
- Monocots

U.S. Fish and Wildlife Service listing and recovery documents (i.e., listing rules, five-year reviews and other status reviews, recovery plans, etc.) supporting this appendix are viewable on species profile pages at <https://ecos.fws.gov/ecp/>.
